When we reftêt upon this circumflance, and confider fow much mankind are the fame in every fociety, we flatl be the leis furprifed to fird, in the literary works of Dr Robertion, an acquaintance with the human licart, and a knowledge of the world, whith we look for in vain in other hiftorians. The man who has ppent his life in the difficult tark of conducting the deliberations of a popular aftembly, in regulating the pallions, the interents, the prejudices, of a numerous faction, has idvantages over the pedant, or mere man of lotters, which no ability, no fudy, no fecond-band information, can ever compenfate.
'Ihe firf work which extended the Dotor's reputation beyond the walls of the general affembly, was a fermon preached at Edinburgh before the fociety for propagating Chriftian knowledge, and afterwards publifhed; the fubjef of which was, 'The nate of the world at the appearance of Jefus Chriat.' The inge. nuity with which a number of detached circumatnces are there colleated, and hown to tend to one fingle point, may porhaps rival the att which is fo much atmired in the bilhop of Meaux's celebrated L'niverfal Hiftory.

This fermon did great honour to the auther ; and it if probably the the reputation he egairce ty it, that we
ought to attribute the unanimity with which he was Roherifou.
 event which happened not long after, vil. in the year 1758. In 1759, he publifhed, in cwo volumes quarto, - The Hitory of Scotland, during the roigns of Cucen Mary and of King James VI, till his Accelfion to the Crown of England, with a Review of the Seotch Hiltory fieviuns to that period.' This work in its Aruqure is one of the muft complete of all modern hiforics. It is net a dry jejune narrative of events, deflitute of ornament; nor is it a mere frothy relation, all glow and colouring. The hiftorian difcovers a fufficient flore of imagination to engage the reader's attention, with it due proportion of judgment to check the exuberance of fancy. The arnangement of his work is admitable, and his defcriptions are animatcd. His fylle is copious, nervous, and correct. He has difplayed confummate fill in rendering fuch patlages of our hiflory as are familiar to our recollection agrecable and entertaining. He has embellifled old materials with all the elcgance of modern drefs. He has very judicioully avoided too circumftantial a detail of trite facts. His narratives are fuccinet and Spirited; his reflections copious, frequent, and generally pertinent. His fentiments refpecting the guilt of Mary have indced been warmly controvested by Mefifs Tytler, Stuart, and Whitaker ; and the general opinion now feems to be, that their vidory is complete. That vidory, however, on the part of Whitaker, is fullied by the acrimony with which he writes. Dr Robertfon was no rancorous or malignant enemy of the mifortunate queen. While relating, what he doubtiefs believed, he makes every poffible allowance for Mary from the circumfances in which the was placed; and his hifory will be read with pleafure by candid men of all parties as long as the language in which it is compefed thall continue to be underfood.

In 1769, Dr Robertfon publifted, in three volumes quarto, The Hiftory of the Reign of the Emperor Charles V. with a View of the Progrels of Society in Europe, from the Subvertion of the Roman Empire to the beginning of the 16th century.-The valt and general importance of the pericd which this hiftory comprifes, together with the reputation which our hiforian had defervedly acquired, coooperated to raife fuch high expectations in the public, that no work perhaps was ever more impatiently withed for, or perufed with greater avidity. The firlt volume (which is a preliminary one, containing the progrefs of lociety in Europe, as mentioned in the title) is a very valuable part of the work; for it ferves not only as a key to the pages that follow, but may be conlidered as a general imtroduction to the fludy of hiftory in that pesiod in which the feveral powers of Europe were formed into one great politicall fy fem, in which each thok a Ration, whercin it has fince remained (till within a very few years at leall) with Iefs alterations than could have been expected, after the thocks necalioned hy fo many internal revolutions, and fo many forciom wars. Ot the biftory itfelf, it may be filficient (o) olferve, that it is jutly ranked among the capital pieces of hiftorical excellence. There is an e!egance ef cxpreflion, a depth of difermment, and a correetneis of judgment, which do honour to the hiforian. The charakters are inimitably penned. They are not contrafed by a fludied antithefis, but by au oppolition which refults from a

\section*{R O B}

Ruberfon. very acute and penetrating infight into the real merits of each character, fairly dednced from the feveral circumfances of his conduct exemplified in the hiftory. For this work the doctor got L. 4500 Sterling.

In 1779, Dr Robertfon publifhed The Hittory of America, in two volumes quarto. This celebrated work may be conlidered with great propriety as a fequel to the preceding hiflory. From the clofe of the 15th century we date the moft flendid era in the annals of modern times. Difcoveries were then made, the influence of which defcended to pofterity; and events happened that gave a new direction to the fpirit of nations.

To the inhabitants of Europe, America was in every refpect a new world. There the face of the earth changed its appearance. The plants and trces and animals were ftrange; and nature feemed no longer the fame. A continent opened that appeared to have recently come from the hands of the Creator, and which fhowed lakes, rivers, and mountains, on a grander fcale, and the vegetable kingdom in greater magnificence, than in the other quarters of the globe; but the animal tribes in a fate of degradation, few in number, degenerated in kind, imperfect, and unfinifhed. The human fpecies in the earlieft flage of its progrefs, vaft and numerous nations in the rudeft form of the favage fate which philofophers have contemplated, and two great empires in the lowett degree of civilization which any records have tranimitted to our review, prefented to the philoophic ere at this period the moft fruitful fubject of ipeculation that was to be found in the anoals of hiftory.

The difcovery of the New World, moreover, was not ouly a curious feectacle to the philnfopher, but, by the change which it effected, an imerefting fpectacle to the human race. When Columbus fet fail for unknown lauds, he little expected that he was to make a revolution in the fyitem of human affairs, and to form the deftiny of Europe for ages to come. The importance and cclebrity therefore of the fubject had attratted the attention of philofophers and hiforians. Views and Tke:ches of the new world had been given by able writers, and fplendid portions of the American fory had been adorned with all the beauties of eloquence. But, prior to the appearance of Dr Robertfon's hictory, no atuthor had beftowed the mature and profound inveftigation which fuch a fubject required, or had finithed, ufon a regular plan, that complete natration and parfect whole which it is the province of the hitorian to tranfinit to pofterity. And as the fubjeet upon which our author entered was grand, his execution was mafterly. The character of his former works was immediately difcerned ia it. They had been read with uncommon admiration. When the Hillory of Scotland was firt publifhed, and the anthor altogether unknown, Lord Chefterfield pronounced it to be equal in eloquence and beauty to the productions of Livy, the pureft aidd moft clafical of all the Roman Hiforians. Lis literary reputation was not confined to his own country: the teftimoay of Europe was foon added to the voice of 13 ritain. It may be mentioned, indeed, as the charasterilic quality of our author's manner, that he poffeffed in no common degree that fiupported elevation which is fuitable to compolitions of the higher clafs; and, in bis Hiftory of Amcrica, he difplayed that hap.
py union of itrength and grace which becomes the ma- Roberifun. jefty of the hiftoric mufe. In the fourth book of his firft volume, which contains a defcription of America when firft difcovered, and a philofophical inquiry into the manrers and policy of its ancient inhabitants, he difplays, moreover, fo much patient inveligation and found philofophy, abounds in fuch beautiful or interefting defcription, and exhibits fuch variety and copioufnefs of clegant writing, that future times will probably refer to it as that part of his works which gives the beft idea of his genius, and is the moft finifhed of all his productions.

In 1787 appeared a tranflation of the Abbé Clavigero's Hiftory of Mexico; in which work the author threw out varions reflections, tending in feveral inftances to impeach the credit of Dr Robertfon's Hiftory of America. This attack induced our learned hiftorian to revife his work, and to inquire into the truth of the charges brought againit it by the hiftorian of New Spain : and this he appears to have done with a becoming attention to the importance of the facts that are controverted, and to the common interefts of truth. The refult be publifhed in 1788 , under the title of Additions and Corrections to the former Editions of Dr Robertfon's Hiftory of America.-In many of the difputed paffages, he fully anfwered the Abbé Clavigero, and vindicated himfelf: in others he candidly fubmitted to correction, and thus gave additional value to his own work.

The literary labours of Dr Robertfon appear to have heen terminated in 179 r by the publication of An Hi florical Difquifition concerning the Knowledge which the Ancients had of Indis, and the progref of Trade with that Country prior to the Difcovery of the Paf. fage to it by the Cape of Good Hope ; with an Appendix, containing Obfervations on the Civil Polity, the Laws, and Judicial Proceedings, the Arts, the Sciences, and Religious Inflitutions of the Indians.The perufal of Major Reunell's Memoir, for illuftrating his Map of Hindoftan, fuggefted to Dr Robertion the defign of examining more fully than he had done, in his Hiftory of America, into the knowledge which the ancients had of India, and of conlidering what is certain, what is obfcure, and what if fabulous, in their accounts of that remote country. Of his various performances, this is not that of which the defign is the moit extenfive, or the execution the mofl elaborate; but in this hiftorical difquifition we perceive the fame patient affiduity in collecting his materials, the fame difcernment in arranging them, the fame perficuity of narrative, and the fame power of illuftration, which fo eminently diftinguifh his other writings, and which have long rendered them the delight of the Britith reader at home and an honour to Britifh literature abroad.

A truly ufeful life Dr Robertfon clofed on the rith of June \({ }^{5} 93\), at Grange-Houle, near Edinburgh, after a lingering illneis, which he endured with exemplary fortitude and refignation. It may be truly obferved of him, that no man lived more refpected, or died more fincerely lamented. Indefatigable in his literary refe.rches, and polfieling fremi nature a found and vigerous underftanding, he acquired a fore of ufeful knowledge, which afforded him ample ficope for theexertion of his extraordinary abilities, and raifed him to the moft diftinguifhed eminence in the republic of letters. As a miniter.

\section*{RO \\ R O 13}
R.Nigus a minifter of the gorpel, he was a faithful paftor, and jnfty merited the eleem and reneration of his tlock. mon word, he may be pronounced to be one of the \(1, \pm\) a laftime characters of the age; and his name will Hiseon ham hirth. ise; his manners aftable, plealing, and endeating.

Dr Robertion left three fons and two daughters. The eldett fon is procumator for the church of Scotland, and an adrocate. The other two are officers in the army ; and une of them dittingu fled himfelf under Lond Corrwallis in fuch : manner as to command the warmeit prate from that illuftrinus general.
robicus and RODIGO, a Roman god and goddefs, who joined in the prefervation of corn from llight. Their feltival was kept on the 25 th of A pril.

ROB1N hnor. See Hood.
Robin Red-Brciaf. See Motacilla.
ROBINTA, false acacia, in botany: A genus of the decandria order, belonging to the diadelphia clafs of plants; and in the natural method ranking under the 32 dordcr, Pafilionacce. The calys is quadrifid; the legumen gibbous and elongated. There are nine lpecies. The moft remarkable are the caragnana andferox, the leaves of the former of which are conjugated, and compofed of a number of fmall folioles, of an oval figure, ard ranged by pairs on one common tlock. The flowers are lequminous, and are cluftered on a filament. Every flower confits of a fmall bell-fhaped petal, cut into four legments at the edge, the upper part being rather the widelk. The keel is fmall, open, and rounded. The wings are large, oval, and a litcle raifed. Within are Io Ramina united at the bafe, curved towards the top, and rounded at the fummit. In the midit of a theath, firmed by the filaments of the ftamina, the piltil is perceivalbe, conlilling of an oval germen, terminated by a kind of button. This germen becomes afterwards an oblong flattifh curved pod, containing four or five feeds, of a lize and flape irregular and unequal ; yet in both refpects fomewhat refembling a lentil.

This thee grows maturally in the fevere climates of Northern Afia, in a fandy foil mixed with black light carch. It is particularly found on the bauks of great sivers, as the Oby, Jenilia, \&c. It is very ravely met with in the inhabited parts of the country, becaufe cattle are very fond of its leaves, and langs of its roots; and it is fo hardy, that the feveref winters do not afteft it. Gmelin found it in the neighourhood of 'robolk, buried under 15 feet of fnow and ice, yet had i. not fuffered the leaft clamage. Its culture confifts in Leing planted or lowed in a lightifh fandy foil, which mult on no nccount have been hitely manured. It alrives beff near a river, or on the edge of a brook or fyeing; bat prefently dies if planted in a marfly font, where the water fagnates. If it is planted on a tich fiil, well tilled, it will grow to the haight of 20 fect, and in a very few years will be as big as a common biech tree.

In a very bad foil this tree degencrates, and becomes a mere flrmb: the leaves grow hard, and their finc leright freen cointr is changed to a dull deep green. The Tongufian 'Tatars, and the inhabitants of the nosthern parts of Sibcri, are very fond of the funt of this tree, it being almot the only fort of pulte they cat. N. Strahlemberg, zuthor of a vicil citomed icfeription
of Siberia, affures us that this frnit is tolernbly pleafant food, and wery nourithing. Thefe pafo are firlt infulcd in boiling water, to take off a certain acrid tufte they have, and are atten wards drefled l:ke common peafe or Windi.r beans; and being ground inio meal, protty good cakes are made of them. The leaves and tender Hoots of this tree make exrellent lodder for feveral forts of cattle. The roots, being fivect ard lucculent, are very well adsuted to fattening bogs; and the fruit is grecdily caten by all forts of poultry. After feveral experiments fomewhat fimilar to the m:thods ufed with anil and indign, a dine blue c lour was procured from its leares. The fmalier kind of this tree feems fill better adapted to anfiwer this purpofe. The friking elegance of its foliage, joined to the pleating yellow colour of its beantiful howers, flould, one would imagine, bring it into requeft for forming nofegays, or for fpeedil) making an clegant hedge.

Befides the qualities above recited, it ponferes the uncommon advantage of growing excecaingly quick, and of being eatily tranfplanted. There are large plantations of it now in Sweden, Norway, Lapland, and Iceland. Linnzus affures us, that, after the I'mis folquinir, erroneoully called the cedar tree of Sikeria, this trec, of all that are to be found in Siberin, is moft worthy of cultivation.
2. The robinia ferox is a beautiful hardy flurub, and, on account ol its robuff frong prickles, might be introduced into this country as a hedge plant, with much propriety. It refifts the fevereft cold of the climate of St Petcriburgh, and perfeets its feed in the garden of the emprefs there. It rifes to the height of fix or cight feet; does not fend out fuckers from the ront, nor ramile fo much as to be with difficulty kept within bounds. Its flowers are yellow, and the general colour of the plant a light pleafing green. A figure of it is given in the Fiora Rufica by Dr Pallas, who found it in the fouthern dillricts, and fent the feeds to St Petcrfourgh, whee it has profpered in a fituation where few plants cua be made to hive.

ROBINS (Benjamin), a moft ingenious mathematician, was born at Bath in 1707. His parents were Quakere, and of low condition, confequently neither able nor willing to have him much inftrufed in human learning. Neverthelefs his own propenfity to feience procured him a recommendation to Dr Pemberton at London; by whofe affifance, while he attained the fublimer parts of mathematical knowledye, he commeneed teaclier of the mathematics. But the butineds of teaching, which required confinement, not fuit ny his actise dippofition, he gradually declined it, and engaged in bulinfs that required more excrefif. Hence he tiod many laborious experiments in granery, from the perfuation that the refiftance of the air has a much greatcr influence on fwitt projectiles than is ecnerally imaiginad. Hence allo he wa; led to confider the mechanic arts hiat depend on mathematical frincipks a as the conArmetion of mills, the building of brideres, the draining (Ifens, the rendering of rivers mavigable, and the making of hasbours. Among other arts, fortification muth engaged his attention; and he mot with opportumitics of perfating himicif by vicwing the principal Arong places of Flancers, in fonce tours be made abrow "ith perfons of cillingtion.

Upon his zeturn from one of thefe cxenrions, \(\therefore\) c
tound
found the learned amufed with Dr Derkeley's work, incitled The Analyf, in which an attempt wis made to explode the methed of luxions. Mr Robins was therefore advited to clear up this affair by giving a dittinct account of Sir Chac New ton's doctrines, in fuch a manner as to obviate all the objections that had been made without naming them. Accordingly he cublified, in 1735, A Dicourlif concerning the Nuture and Certainty of Sir Iface Niswon's Method of Fluxions: and fome exceptions being made to his manner of defending Sir Ifiac Newton, he afterwards wrote two or three additional difcotries. In 1738 he defended the fame grest philofopher againlt an objection contained in a note at the end of a Latin piece, called NHowlo, five Cofinotherriz pucrilis; and the following year printed Remarks on M. Euler's Treatife of Motinn, on Br Smith's Syfem of Optics, and on Dr Jurin's Difcourfe of diftinct and indiftinct Vifion annexed to Dr Smith's work. In the meanwhi'e, Mr Robins did not folely conñine himse'f to mathematical fubjee?s: for in 1739 he publifled three pamphlets on political affars, without his name; when two of them, relating to the convention and negociations with Spain, were fo univerfally efteemed, as to occafion his being employed in a very honourable poft; for on a committee being appointed to examine into the palf conduat of Sir Robert Walpole, he was chofen their fecretary.

In \(1742, \mathrm{Mr}\) Robins publilhed a fmall treatife, intitled Nerw Principles of Gumnery, containing the refult of many experiments; when a Dilcourfe being publifhed in the Philofophical Trarfactions, in order to invalidate fome of his opinions, he thought proper, in an account he gave of his book in the fame Tranfactions, to take notice of thofe experiments ; in confequence of which, leveral of his Differtations on the Refiltance of the Air were read, and the experiments exhibited before the Royal Society, for which he was prefented by that honourable body with a gold medal.

In \(17 t^{8}\) appeared Lord Anfon's Voyage round the World, which, though Mr Walter's name is in the title, has been generally thought to be the work of Mr Robins. Mr Walter, chaplain on board the Cen. turion, had brought it down to his departure from Macao for England, when he propofed to print the work by fubleription. It was, however, it is faid, thought proper, that an able judge fhould review and correat it, and Mr Robins was appointed; when, upon examination, it was refolved that the whole fhould be written by Mr Robins, and that what Mr Walter had done thould only ferve as materials. Hence the introduction entire, and many difertations ia the body of the work, it is faid, were compoled by him, without receiving the leaf alfiftance from Mr Walter's manufcript, which chiefly rclated to the wind and the weather, the currents, courfes, bearings, diftances, the qualities of the ground on which they anchored, and fuch particulars as generally fill up at failor's aicount. No production of this kind ever met with a more favourable reception ; four large impreffions were fold within a twelvemonth; and it has been tranflated into moft of the languages of Eurnpe. The fifth edition, printed at London in 1749 , was revifed and corrected by Mr Robins himfelf. It appears, however, from the corrigendit and addenda to the if volume of the Biographia Britannica, printed in the berinaing of the fourth volume of that work, that

Mr Robins was only confulted with refpect to the difpolition of the drawings, and that he had left England before the book was printed. Whether this be the fact, as it is allirted to be by the widow of Mr Walter, it is not for us to determine.

It is certain, however, that Mr Rcbins acq̧uired the fame, and the was foon alter defired to compofe an apology for the unfortunate affiis a: Prefonoans in Scotland, which was prefixed as a preface to The Report of the Prcceedings of the Board of General Officers on their Examination into the Conduct of LieutenantGeneral Sir John Cope ; and this preface was efteemed at maller piece in its kind. He afterwards, through the intereft of Lord Anfon, contributed to the improvements made in the Royal Obfervatory at Greenwich. Having thus eftablifhed his reputation, he was offered the choice of two confiderable employments; either \(t\), go to Paris as one of the comnmfiaries for adjufting the limits of Arcadia, or to be enginecr-general to the Eaft India company. He chofe the latter, and arrived in the Ealt Indies in 1750; but the climate not agreeing with his conflitution, he died there the year fo!lowing.

ROBINSON (the molt Rev. Sir Richard) arch. bihhop of Armagh and Lurd Rokeby, was immediately defcended from the Robinfons of Robeky in the North Riding of the county of York, and was born in 1709. He was eclucated at Wellminlter fchocl, from whence he was elected to Chritt-Church, Oxford, in 1726. After continuing his fludies there the ufual time, Doctor Blackburne, archbifhop of York, appointed him his chaplain, and collated hin, firf to the rectery of Elton, in the Ealt Riding of Yorkfhire, and next to the prebend of Grindal, in the cathedral of York. In 1751 he attended the Duke of Dorfet, lord-lieutenant of Ircland, to that kingdom, as his firft chaplain, and the fame year was promoted to the bifhopric of Killala. A family connection with the Earl of Holderneffe, who was fecretary of fate that year, with the Earl of Sandwich and other noblemen related to him, opened the faireft profpects of attaining to the firft dignity in the Irifi church. Accordingly in 1759 he was tranflated to the united lees of Leiglilin and Ferns, and in \({ }^{5} 761\) to Kildare. The Duke of Northumberland being appoiated to the lieutenancy of Ireland in 1765, he was advanced to the primacy of Armagh, made lordalmoner, and vice chancellor of the univerfity of Dublin. When Lord Harcourt was lord lieutenant of Ireland in 1777, the king was pleafed by privy-feal at St James's, February Gth, and by patent at Dublin the 26 th of the fame inonth, to create him Baron Rokeby of Armagh, with remainder to Mathew Robinfon of Went Layton, Efq; and in 1783 he was appointed prelate to the mof illuftrious order if St Patrick. On the death of the Duke of Rutland lord-lieutenart of Ireland in 1787, he was nominated one of the lordsjuftices of that kingdom. Sir William Robinfon, his brother, dying in \(5-85\), the primate fucceeded to the title of baronet, and is the furvivor in the direct male line of the Robinions of Roktby, being the 8th in defcent from William of Kendal. His grace died at Clifton near Brinol in the end of Otober 1794.

No primate ever fat in the fee of Armagh who watched more carefully over the intercft of the church of Ireland, as the flatute-book evinces. The ait of the

\section*{\(R \circ 16 \quad\left[\begin{array}{ll}312\end{array}\right] \quad R \circ B\)}

2nobi fo: stth and seth of his prefent majefty, which fecures to tilhops and ecclefiaftical perfons repayment by their fucceffors of expenditures in purchafing glebes and houfes, or building rew houfes, originated from this excellent man, and mut ever endear his name to the clergy. The other ads for repuixing churches, and facilitating the recovery of eccleliaftical dues, were among the many lappy exertions of the primato.

But it was at Armagh, the ancient feat of the primacy, that he difplayed a princely munificence. A ve5y elegant palace, 90 feet by 60 , and 40 high, adons that town; it is light and pleafing, without the addition of wings or leffer parts; which tuo frequently wanting a fufficient uniformity with the body of the edifice, are unconnected with it in effect, and divide the attentiun. large and ample offices are conveniently placed behind a plantation at a fmall difance. Around the palace is a large lawn, which fpreads on every fide nver the hills, fiitted by young plantations, in one of which is a terrace, which commands a molt beautiful view of cultivated bill and dale; this view from the palace is much improved by the barracks, the fchool, and a new churclt at a diftance; all which are fo placed as to be esecedingly ornamental to the whole country.

The barracks were erected under the primate's direction, and form a large and handlome edificc. The fchool is a building of confiderable extent, and admirably adapted for the purpofe; a more beautiful or better contrived one is nowhere to be feen; there are apartments for a mafter, a fchool-rcon 56 feet by 28 , a large dining room and fpacious airy dormitories, with every other necefliary, and a fpacious play-ground walled in ; the whole forming a bandfome front: and attention being paid to the refidence of the matter (the falary is 400 l. a year), the fchnol flourifhes, and muft prove one of the greatelt advantages to the country. This edifice was built entircly at the primate's expence. The church is erected of white fone, and having a tall frire, makes a very agreeable object, in a country where churches and fpires do not abound. The primate built three other churches, and made confiderable reparations to the eathedral; he was alfo the means of erecting a public infirmay y, contributing amply to it himfelf: he likewife conftructed a public library at his own coft, endowed it, and gave it a large collection of books; the room is 45 feet by 25 , and 20 high, with a gallery and apartments for the librarian. The town he ornamented with a market-honfe and fhambles, and was the direct means, by giving leafes upon that condition, of almoft new-building the whole place. Hic found it a neft of mud cabins, and lie lett it a well-built city of ftone and flate. Thefe are noble and fpirited works, in which the primate expended not lefs than L. 30,0ce. Had this fumbeen laid out in improving a pate:nal ellate, even then thes would be deferving great praife; but it is rot for his pofterity but the public grod that his grace was fo munificent. A medal was itruck by the ingenious William Moffop of Dublin, which has on one fide the head of the primate, infcribad "Richard Robinfon, Baron Rokeby, Lord Primate of all Ireland." And on the reverfe, the fouth front of the obfervatory in Armagh, crefled by his grace, with this almirable motro, "The Heavens declare the glory of God." mideclexxix.

Robinson (Robert), a diffenting minifter of confi-
derable sote, was born on the Sth of October 1735 at Swaffham in Norfolk. His father died when he was young ; and his maternal grandfather Robert Wilkin, of Milden-lall, Suftolk, gent. who had ever been ditidlistied with his danghter's marriage, deprived him of his maternal inheritance, cutting him otl with half a guines. His uncle, however, who was a fubftantial farmer, in fome meafure fupplied this lofs. He took Mr Robinfon home, and placed him under the Rev. Joleph brett, at Scarning fchool in Norfolk, with a view to the minitry of the church of Lingland; where he had for one of his fchoul-fellows the lord chancellor Thurlow. When about the age of 15 or 16 , he im . bibed the notions of George Whitfield; on which account he wis difcarded by his uncle, and again expofed to poverty and want. He firlt directed lis thoughts towards the miniftry in the year 1754 , and commenced preacher in the following year at the age of 20 ; preaching his firt fermon to a congregation of poor people at Milden hall. He continued for a year or two as one of Mr Whitficld's pteachers, and during that period he married. In the year 1758, however, he determined to feparate from the Methodifts: after which he \{ettled at Norwich with a fmall congregation formed chiefly of his methoditic friends, being at that time an Independent. In the year 1759 he was invited to Cambridge, and for two years preached on trial to a congregation confiting of no more than 34 people, and fo poor that they could only raife L. \(3: 6: 0\) a quarter for his fubfiftence. In June 1768 he fettled as their paftor, and was ordained in the ufual manner ; at which time we are told he exercifed the office of a basber. In 1774 , his congregation had fo much increafed as to confitt of 1000 fouls, including children and fervants.

In Cambridge Mr Robertfon's talents foon aturacted notice, and he quickly fet up a Sunday evening lecture, which was well attended. His preaching was altogether without notes; a method in which he was peculiarly happs: not by trulting to his memory entirely, nor by working himiclf up to a degree of warmith and paffion, to which the preachers among whom he firl appeared commonly owe their ready utterance ; but by thoroughly ftudying and making himfelf perfectly matter of his fubject, and a certain facility of expreffion which is never at a lofs for fuitable and proper words. In fhort, his manner was admirally adapted to cnlighten the undertanding, and to affect and reform the heart. He tad fuch a plainnefs of speech, fuch an calfy and apparent method in dividing a difcoure, and fuch a farmiliar way of reafoning, as difcovered an heart filled with the tendereft concern for the meanef of his hearers ; and yet there was a decency, propiety, and juftnefs, that the moft judicious could not but approve. Several gentlemen of the univerfity, eminent for character and abilitics, we are told, were his confant hearers.

The circumfances which loft limn his uncle's patronage paved the wi:y for the future crents of his liic. The incident which made hina difard the comnon fontiments on the furbject of baptifm, at once marked the turn of his mind, and fhows what afrarently dight caufes frequently determine the lot and tifefulnefs of our lives. He was invited to the baptifm of a chiid ; the minifter who was to perform the fervice kecping the company in luag expectation of his appearance, fome

\section*{R O B \\ [ 313 ] \\ R O C}

Robinfon, one fuggefted, that fuppofing the child were not baptized at all, he faw not how it could affect bis happi nels. Though the converfation was not purfued, the hint Aruck Mr Rubiutin's mind; and he immedately determincd to read the New Tettament with this particular view, to examine what it faid concernng the baptifm of in ants. He accordingly bega: with the Golpel of Matthew ; and, in fuccellion, perufed the hitorical and epiftolary borks; in expect titon that he fh uld fird in every following part what he had not met with in the preceding pants of the facred volume; namely, palliges recommending and urging this rite. Bu: obferving, on the whole, a tutal filence about it, he thought it his dury to relinquilh the practice, as without foun. dation in the rule of our fath; which appeared to him to freak only of the baptifm of believers.
This change of his fentiments was more unfavourable than the former alterations in his religious judgment to his worldly views; and having married very carly in life from pure affection, he was involved in great difficulties for near 12 years after his fettlement in Cambridge; as, in that courfe of time, his family became numerous, and the fupport of an aced mother, as well as of a wife and ten children, depended upon him. But anexpected fupplies, from quarters of which he was ignorant, frequently relieved his neceffities, and confirmed his truft in Providence: yet the fituation of his family mult, it is eafy to conceive, have much affected his mind. For he appears to have poffeffed great tendernefs and fenfibility, and to have regarded with peculiar endearment his domeftic connections.

It may be reckoned a circumfance worthy of mention, that the folhere of Mr Robinfon's miniftry was the fame in which his great-grandfather Mr Shelly, of Jefus College, and vicar of All-Saints, had, with others, diffufed the principles of the Puritans, about the beginuing of the laif century. The reputation of the Dilfenters in the univerfity and neighbourhood had for almolt a century been finking into contempt, when Mr Robinfon fettled with the baptilt church at Stone-Yard. His abiiities and affiduity, however, raifed their reputation. The piace in which his people affembled, which was at firlt a barn, afterwards a fable and granary, and then a meet ng-hoafe, but ftill a damp, dark, and ruinous place, foon became too fmall for the audience; and feveral of the new auditors being men of fortune, they purchafed the fite, and erected at their own expence a new houfe in the year \(\mathrm{I}_{7} 64\).

His labours as a preacher were not limited to the town of Cambridge; but foon after his coming there, he fet up teveral lcotures in the adjacent villages. His le Stures were either annual or occafional, or flated on fixed days. The ufual time was half an hour after fix in the evening; and fometimes at five in the morning and now and then in the fummer at two in the afternoun, for the fake of thofe who came from a ditance.

Ile died ©il the \(9^{\text {th }}\) of June 1.790 , at the houfe of William Ruilel, Efq; of Showellgreennear 13irmingham. He had laboured under an alarming diforder for fome time betore; but on the Sunday preceding his death he preached a charity fermon. On Monday he was feized with a fit; on Tuelday he recovered and went to bed tolerably well, and was found dead next morning.

The abilities f Mr Robinfon were very confiderable, Von. XVI.
ROL AVA.
as appears from his numerous works; and he peffited Roberanto, the quality of expreffing his innughts in an eafy and Rochefort. a forcible s anner. He is faid to have \(b=e n\) of an unfleady temper, but the frequency with which he changed \(h \cdot s\) religious creed is a proof rather of candour than uIf feadinefs. The acrim ny uith which he treated the Church of England, and his plan of Lectures of the Principles of Norconfornity, for the Inltruation of Catechurnens, have expoted him to much cenfure.

Mr Robinfon's largef work, the Hiftory of Baptifm and of the liaptifts, was publithed fince his death, and is written in the fame Ayle and with the fame ability as his other works. Though we have heard it remarked by a learned profeffor of Theology in the church which he oppofed, it is not a little remarkable that there is in it no argument or fact againft infant baptifms which was not anfwered by Dr Wall nearly 100 years ago, of whofe arguments Mr Robinfon however takes no notice.

ROBORANTS, in plarmacy, medicines which Arengthen the parts, and give new vigour to the conAitution.

ROCHEFORT, a handfome and confiderable town of France in the territory of Aunis. It was conitructed by Louis XIV. and is built in the midtt of marfhes exprefsly drained for that purpofe; and time evinced the utility of the project, for as a port it foen became as neceffary and important to the crown of France as Breft or Toulon. It has a department of the marioe, and has large magazines of taval fores. There is. alfo one of the fineft halls of arms in the kingdom, and a great many workmen employed in making them; there are alfo forges for anchors, and work-houfes for fhip-carpenters, who are employed in every thing that relates to the fitting out of thips that come within the compafs of their province. They likewife caft great guns here; and have artifts, whofe employment is iculpture and painting. There are alfo ftocks for building men of war, rope-walks, magazines of provifions and powder, a manufactory of fail-cloth, an hofpital for failors, and proper places to clean the fhips. Add to thefe, the houfes of the intendant, the fquare of the capuchins, and the fuperb ftructure which contains lodgings for 300 marine guards, where they are taught the bulinefs and exercifes belonging to feamen and officers who go on board the men of war.

Befide the ufual number of workmen which were emplnyed at Rochefort during the monarchy, which amounted to about 900 , there were about 600 galley llaves, occupied in the moft painful and laburious branches of fervice. The town is fituated on the river Charente, about five leagues from its mouth, and was fortified by Louis XIV. at the time he conftructed it; but its fituation is at fo confiderable a diftance from the fea, as to render it fufficiently fecure from any attack, and they have therefire clofed up the battlements, and neglected the fortifications. The town is laid out with great beauty and elegance. The ftreets are all very broad and Atraight, extending through the wholc place from fide to fide ; but the buildings do not correfpond with them in this refpect, as they are moitly low and irregilar. W. Long. O. 54. N. Lat. 46.3.

ROCHEFOUCAULT (Francis earl of), defcended of an illuftrious family, next in dignity to that of

Reck it t- the fovereigns, was chamberlain to king Charles VItll. caute and Lonis XII. His charaher at court was alnnired n ats hireite, generous, upright, and lixeere. In 1494
he A. od diather to Francis I. who, when he came to the thrme, centinned to pay great refpect to that fipiritual relation. He made him his chanbelain in ordinary, and created, in 1515 , the bareny of Rochefoucault into an eanld \(m\); and, in h's writ of erextion, rbferves, that hed d this in momory of the great, honour able, highly ufful, and commendable fervices which the faid Francis had done to lis predecelfors, to the crown of Fratice, and to himfelf. The carl of RocheSoucault died in 151 , leaving behind him an illultrious m:mory, and a charader univerfally refpected. Since his time all the elvef fons of that fanily have taken the name of Francis.

Rochefoucault (Prancis duke de 1:a), prince of Marfillac, governor of Poitou, was born in 1603 . -HIe was the fon of Francis, the firf duke of Rcchefoucault, and was dittinguithed equally by his courage and his wit. Thefe thining qualities endeared him to all the nobility at court, who were ambitious of decorating themfelves at onec with the laurels of Mars and of Apollo. He wrote two excellent works; the one a book of Maxims, which M. de Voltaive fays has contributed more than any thing elfe to form the talte of the French nation; and the other, Memoirs of the Regency of Queen Anne of Auftia. It was partly at the infligation of the beautiful duchefs de Longue. ville, to whom he had been long attached, that the duke de Rochefoucault engaged in the civil wars, in which he fignalized himfelf particularly at the batule of St Antoine. Beholding one day a portrait of this lady, he wrote usderneath it thefe two lines from the tragedy of Alcyorée:
"Pour meriter fon ceur, pour plaire à fes beaus yeaz, "F'ai fuit la guerre aus rois, je l'aurois fait auz d'eus."
Which may be thus rendered in Englith:
"To gain her heart, and picafe her fparkling eyes, "I'vewar'd witl hings, and would have brav'd the fikies."

It is reported, that after his ruptere with Madame Longueville, he parodied the above verfes thus:

\section*{"Pour ce caur inconflant, qu'enfinje conrois mi ux, \\ "Je fais la guerre aux rois, j'en ai perdu les yeux:"}

After the civil wars were ended, he thought of nothing but enjoying the calm pleafures of friendhip and literature. His houfe became the readezvous of every perfon of genius in Paris and Verf.illes. Racine, Boileau, Sivigne, and La Fayette, found in his converiation charms which they \(f\) ught for in vain elfewhere. He was not, however, with all his elegance and genius, at rember of the French Academy. The necelfit" of making a public fpeech the dey of his receptinn was the only caufe that he did not cla madmittance. This nu ble man, with all the courage he had difliged upon various critical occalions, and with his tupe iority of birth and underfanding over the common run of men, did not think himelf capable of facing an audience, to utter only four lines in public, without being out of countenance. He died at Paris in 1682, aged 68 , leaving behind him a charater which hats been varioully
drawn by thofe who during his life were proul of his frimuthip. That he was well atquainted with human noture is certain; and his metis in that temper was fully admitted by Swift, who was himfilf not eafly impored upon by the antificial difguifes of the hypocrite.

ROCHELLEE, a celebrated city of France, capital of the teritory of Aums, with a very conmodious and fafe harbour, which, thuagh it does nnt admit velli's of any confiderable burden, is yet well calculated for trade. "It may be divided (hays Mir Urrax.l) into thare parts ; the bafon, which is the innermof of thefe, is only a quarter of a mile in circumference; and at the entrance are two very noble Gothic towers, called the Tower de St Nicholas, and the Tour de la Chaine. They are now in a fate of decay, but were ancientiy defigned to proteot the town and harbour. Without thefe towers is the Avant Port, extending more than a league, and bounded by two points of land to the north and fouth. Beyond all is the road where the largeft fhips ufuallyanchor, proteqed from the fouth-sweft winds by the iflands of Re, Oleron, and Aix." The celebrated mound ereated by Richlieu extends from fide to fide acrofs the whole harbour, nearly an Englifh mile in length, and when the fea retires is fill wible. "I walked out upon it (fays Mr Wraxal) above 300 feet. Its breadth is at this time more than 150 feet, and it widens continually towards the bafe. No effort of art or power can pollibly imprefs the mind with fo valt and fublime an idea of the genius of Richlien, as dees this bulwark againf the fea. .While I flood upon it, in the middle of the part, between the wawes which rolled on either fide, and contemplated its extent and itrength, I was almof inclined to fuppofe this afonifhing work to be fuperior to human power, and the production rather of a deity than of a mortal. A fmall opening of about 200 feet was left by Pompey Targon, the archited who conftructed it, to give entrance to veffels, and thut up by chains fixed acrofs it. A tower was likewife erect\(\epsilon d\) at each end, no remains of which are now to be feen. Neither the duke of Buckingham, nor the earl of Lindiey, who were fucceffively lent from England to the aid of the befieged by Charles the Firtt, dared to att:ck this formidable barrier: they retired, and left Ruchelle to is fate. In all probability, a thoufand years, aided by forms and all the fury of the fea, will make hatle or no impreflion on this mound, which is defis ined to endure as long as the fame of the Cardinal, its athor."

Befọr the revolution, Rochelle was a bifhop's fee, and contained a college of humanities, an academy, a fchool for medicine, anatomy, and botany, and a mint. It carnot lay claim to any remote antiquity, being merely a little collection of houfes on tho fhore, inhabited by fihermen, when William IX. laft count of Poitou, rendered himfelf mater of it in 1139 . From this Prince it defecnded to his only daughter Elcanor, atterwards queen of Henry 11. of Englind ; and her charter incorpora ing the town is Aill preferved in the regitters of the city. In the ycar 1540, Rochelle was the grand afylum of the Proteltants; and the malficre at Patis was foon followed by the fiege of Rochelle, which began in November 1572, and w'as rifed in June 1573 ; but in 1628, after a moft obltinate refiftance, and a fiege of 13 months, it furtendered to
firit fi. ge, the number of inhabitants in the city amounted to 72,000 : in the fecond they diminifhed to 28,000; and they werc, when Mr Wraxal was there, between 17 and 18,000 , of whicls farce 2000 were Huguennt:. The houles if this city are fine, and fupporred with piazzas, under wi.ich perf ns may walk in all weuthers; and the frects in gen:ral are as flraight as a line. There are feveral handlone churches, and other fiructures, befides a remarkable pump in the fquare of Dauphiny, wh ch throws cut the water through feveral pipes. There are no remains of the old fortifications, except on the fide of the harbour, where there a:e bulwarks and fterng towers in defend the entrance. The new fortifi.ations are in the manner of Vauban. Be!ore Canada was ceded to England, and New Orleansto Spain, the trade of Rochelle w.is very lucrative. It revived about the year 1773 , and, befide that to the coalt of Guinea and the Ealt Indies, the inhabitants carried on a confiderable trade in wines, brandy, falt, paper, linen cloth, and ferge. It is feated on the ocean, in W. Long. 1. 11. N. Lat. 46. 10.

ROCHESTER, a city of Kent, in England, is fituated on the Medway, feven miles and a half north of Maidftine, and 30 from London. It appears to have been one of the Roman Itations, from the bricks in the walls, as well as the Roman cnins that have been fnund abnut it. It has three parilh churches built with fone and fints, befides the ca:hedral, which is but a mean Itructure. This little city, which was made a bithop's fee by king Ethelbert, anno 604, has met with many misfortunes. In 676 , it was facked by Eldred king of Mercia; in 839 and 885 , befieged by the Danes, but refcued by king Alfied. Abjut 100 years after, it was tielieycd by king Eihelred, and forced to pas L. 100. Anro 999 it was taken and plundered by the Danes. Anno 1088 it was befieged and \(t \neq k e n\) by William Rufus. In king John's time it was taken from the Barons, after three month's fiege; and the very next year, viz. 1256 , its cafle, founded by William the Conquercr, was flormed and taken by feveral of the Barons, under the French king's fen. In the reign of H:nry III. it was befieged by Simon Montford, who b:ln: its then wooden bridge and tower, and fpuiled the church and priory, and then marched off. Thi, city has alfe been feveral times deftroyed by fire, vi\% in 1130, on June 3. in 1137, and in 1177 ; after which it is faid to have continued defolate till 1225 , when it was repaire ! ditched, and walled round. In the Saxnn heptarchy there were three mints in Rochef. ter, two for the kiny and one for the hifhop. In 1281, its nld woden bridge was carried off by the ice, in a fudden thaw after a frof which had made the Medway pailable on foot. Another was built in the reign of Richard Il. but pulced down again, on the rumour of an invoffon from France. It was afterwards refored, but fo ofien tubject to expenfive rcpairs, by reafon of the rapid courfe of the river under-it, as well as the great breadh and depth of it, that in the reign of Edward III. it whs refuived to build a new bridge of ftone; and the fame was begun, and in a manner completed, at the experce of Sir John Cobham and Sir Robert Inoules, Edward III.'s generals, out of the fpoils they had taken in France. It has 21 arches. The town is governed by a majcr, recorder, 12 aldermen, 12
common-councilmen, a town-clerk, three fearjcants at Recheficr, mace, and a water-bailiff. To its cathedral belong a Rock. dean and fix prebendiries. Gundulph's cower flands on the rnth fide of the cathedral, and is fuppofed to have been built by the bilhop, as a place of fecurity for the treafures and alchives of that church and fee. Some fuppofe it to have been intended for a bell tower, and others fir an ecelefaltical prifon; but whatever might be its deftination, its machicolations, its loop-hole windows, and the thicknefs of its walls, fhows Atrength and defence were confidered as neceffary. This tower was 60 tert high, but fone part has lately fallen down; the walls are fix fest thick, and contain within them an are: of 20 feet fquare: it was divided into five flnors or ftories of uniqual height, and had a communication with the upper part of the church, by means of an arch or bridge, the fteps of which are fill vifible. It is fuppofed to have been erected after the cathedral was built. For the maintainance of its bridge, certain lands are tied down by parliament, to which it has fent members from the firlt. The town-houfe, built in the year 1687, for the couts, affizes, and feffions, and the charity-fchool, are two of the beft public buildings here.-A mathematical fchool was founded here, and an alms-houfe for lodging iix poor travellers every night, and allowing them 4 d . in the morning when they depart, except perfons contagioufly difeafed, rogues, and protors. In the fummer here are always fix or eight lodgers, who are admitted by tickets from the mayor. The Roman Watling-fteet runs through this town from Shooters-Hill to Dover. The mayor and citizens hold what is called an admitalty-court once a-ycar for regulating the oyfter-filhery in the creeks and branches of the Medway that are within their jnrifdic. tion, and for profecuting the cable-hangers, as they are called, who dredge and fill for oyfters without being free, by having ferved feven years apprenticefhip to is filherman who is free of the fithery. Every licenfed dredger pays 6 s . 8d. a.year to the fupport of the courts, and the fifhery is row in a flourifhing way. Part of the caftle is kept in repair, and is ufed as a magazine, whei \(G\) a party of foldiers do conftant duty. The bridge was repaired in 1744, and pallifadoed with new iron rails. Rochefter contains about 700 houfes, and 2000 inhabitants. It confilts of only one principal Areet which is wide, and paved with flints. The houfes are generally well built with brick, and inhabited by tradefimen and innkeepers. It has alfo four narrow Areets; bat no fort of manufactory is carried on here. Stroud is at the weft end of this place, and Chatham at the ealt. It is 27 miles north-weft by weft of Canterbury, and 30 fouth-eaf by eaft of London. Long. o. 36. E. Lat. 51.23.N.

\section*{Rochester (earl of). See Wilmat.}

ROCK, a large mafs or block of hard tonne rooted in the ground. See Mountain, Petrifaction, and Stone.
Rock, in ornithology, a fpecies of Vulture.
Rock Bujus are cavities or artificial baf ons of different fizes, from fix feet to a few inches diameter, cut Grofitr's in the furface of the rocks for the purpofe, as is fup- Engizond pofed, of collecting the dew and rain pure as it de- and wates. foended from the heavens, for the ufe of ablutions and purifications, prefribed in the druidical religion; thefe, erpscially the dew, being deemed the pureft of all Rr2
fuids.
fluid. There are two forts of thofe bafons, one with lips or communications between the different bafons, the other fimple cavities. The lips as low as the bottom of the baions, which are horizontal, and commanicate with one fonewhat lower, fo contrived that the contents fall by a gradual defcent though al fiecellion of bafons either to the ground, or into a vellel fet to teceive it. The batons without lips might be intended for refervoirs to preferve the rain or dew in its original purity without touching any other velfel, and was perhaps ufed for the druid to drink, or wafh his hands, previons to officiating at any high ceremuny, or clee to mix with their milletoe.

Some of thefe bations are fo formed as to receive the head and part of the human body; one of this kind is found on a rock called king Arthur's bed, in the parilla of North Hall in Cornwall, where are alfo others, called by the country people Arthur's troughs, in which they fay be ufed to feed his dogs.

Rock-Cryfal, in natural hitory, otherwife called piprig-ryflal, a name given to the third order of cryftals, from their being aflised to a rock or other folid body. Sce Crystal.

ROCKET, :n artificial fire work, confifing of a cylindrical cafe of paper, filled with a compofition of certain combuntible ingredients; which, being tied to a ftick, mounts into the air, and then burffs. See Pyrotechny.

Theory of the Fight of Sky-Rockfts. Mariotte takes the rife ot rockets to be owing to the impulfe cr retiftance of the air againt the flame. Dr Defagulier accsunts for it otherwife.

Conceive the rocket to have no vent at the choak, and to be fet on fire in the conical bore; the confequence will be, either that the rocket would burt in the weakeft place, or, if all its parts wcre equally ftrong, and able to fuftain the impulie of the flame, the rocket would burn out immoveable. Now, as the force of the flame is equable, fuppofe its action downwards, or that upwards, fufficient to lift 40 pounds. As thefe forces are equal, but thecir directions contrary, they will deftroy each other's action.

Imagine then the rocket opered at the choak; by this means the action of the flane downwards is taken away, and there remains a force equal to 40 pounds acting upwards, to carry up the rocket, and the flick it is tied to. Accordingly, we find that if the conspofition of the rocket be very weak, io as not to give an impulfe greater than the weight of the rocket and flick, it does not rife at all; or if the compofition be llow, fo that a fmall part of it only kindles at firil, the rocket will not rie.

The flick ferves to keep it perpendicular ; for if the rocket thould begin to ftumble, moving round a p-int in the choak, as being the common centre if gravity of rocket and fock, there would be fo muche friction againf the air by the ftick between the centre and the point, and the point would beat againf the air with fo much velocity, that the frian of the medium y.ould reflore it to its perpendicularity.

When the compofiti \(n\) is burnt out, and the impulfe upwats is ceated, the common centre of gravity is
brought lower towards the middle of the Aick; by which means the velocity of the point of the ftick is decreafed, and that of the point of the rocket increafed; fo that the whole will tumble down, with the rocket end foremof.

All the while the rocket burns, the common centre of gravity is hifting and getting downwards, and ftill the fafter and the lower as the litick is the lighter, fo that it fometimes begins to tumble before it be burnt out; but when the fick is a little too heavy, the weight of the rocket bcating a lefs proportion to that of the ftick, the common centre of gravity will not get fo low but that the rocket will rife Itraight, though not fo faft.

Rocket, in botany. See brassica.
ROCKINGHAM, a town in Northamptonflire, is England, 87 miles from London, fands on the river Welland. It has a charity-fchool, a market on Thurfday, and a fair on Sept. 8. for five days. Its foreft was reckoned one of the largeft and richen of the kingdom, in which William the Conqueror built a calthe; it ex. tended, in the time of the ancient Britons, almof from the Welland to the Nen, and was noted formerly for iron-works, great quantities of flags, i. c. the refufe of the iron-ore, being met with in the adjacent fillds. It extended, according to a furvey in 1641 , near 14 miles in length, from the weft end of Middleton-Woods to the town of Mansford, and five miles in breadth, from Brigfock to the Welland; but is now difmembered into parcels, by the interpofition of fields and towns, and is divided into three bailiwicks. In feveral of its woods a great quantity of charcoal is made of the tops of trees, of which many wagyon-loads are fent every year to Peterborough. There is a facious plain in it called Rockinghamthire, which is a common to the four towns of Cottingham, Rockingham, Corby, and Gretton. King William Rufus called the councilhere of the great \(m \in n\) of the kingdom. W. Long. o. 46. N. Lat. 52. 32.

RODNEY (Gcorge Bridges', Lord Rodney, was born in the ycar 1718 . Of the place of his birth and the rank of his ancellors we have not been able to procure any well authenticated account. His father was a naval officer; and commanding, at the tume of his fon's birth, the yacht in whici; the king, attended by the Duke of Chandos, was pafing to or from Hanover, he anked and chtained leave to liave the honour of calling his infant fon G:orgo Bralges. The royal and noble godfathers advifed Captain Rodney to educate his boy for his own profefion, promiling, as we have been told, to promote him as rapidly as the merit he fhould dif. play and the regulations of the navy would permit.

Of young Rodney's carly excrions in the fervice of lis country, nothing, however, is known to the writer of has ablirack, nor, indecil, any thing of fufficient innportanco to be inferted in articles foncircumpribed as all our Liographical fhetches muft be, till 1751 , when we find him, in the rank of a Conmodore, fent out in make

Rodney.
make aceurate difcoverics refpecling an infand which was fuppofed to lie abcut \(50^{\circ} \mathrm{N}\). L. and about 300 leagues W. of England: but he returned without having feen any fuch ifland as that which he was appointed to furvey. In the war which foon followed this voyage of difcovery, he was promoted to the rank of a rear-admiral, and was employed to bombard Havre-deGrace; which in 1759 and 1760 he confiderably damaged, together with fome flipping. In 1761 he was fent on an expedition againft Martinico, which was reduced in the beginning of the year 1762 , and abont the fame time St Lucia furrendered to Captain Harvey. Both thefeiflands were reftored to the French at the peace of 1763 .
In reward for his fervices, he was created a knight of the bath; but being inattentive, as many feamen are, to the rules of economy, his circumftances became fo embarraffed that he was obliged to fly from his comntry, with very light hepes of ever being able to return. He was io Fratice when the policy of that court induced them take a decided part with America againlt Great Britain; and it is faid that fome men in power, no frangers to the defperate ftate of Sir George's affairs, offered him a high command in the French navy, if he would carry arms againt his own country. This offer he rejected with beccming indignation. Soon af. ter this gallant bchaviour, the Duke de Chartres, af. terwards the infamous Orlears, told Sir Genrge that he was to have a command in the fleet which was to be oppofed to that under the command of his countryman Mr Keppel; and with an infulting air afked him what be thonght would be the confequence of their meeting ? "That my countryman will carry your Highnefs with him to learn Englith." was the high-fpirited reply.When the divifions, which the nutual recriminations of Admiral Keppel and Sir Hugh Pallifer excited in the Britulh navy, made it difficult for the miniltry to procure experienced, and at the fame time popular, com. manders for their flects, Lord Sandwich wrote to Sir George Bridges Rodncy, offering him a principal command: but ihe difficulty was for the veteran to find money to pay bis accounts in France, fo that he might be permitted to leive that kingdom. The money, it has been repeatedly affirmed, was advanced to him by the courtiers whofe offer he had before indignantly rejected. He arrived, therefore, in England, and was again employed in the fervice of his country. His firlt explrit after his appointment was in January 1780 , when he took 19 Spanifl tranfports bound to Cadiz trom Bilboa, together with a 64 gun faip and 5 frigates, their convoy. On the 1 Gth of the fame monih he fell in with the Spanith flect, confifting of is fail of the line, under the commard of Don Juan de Langara; of which one was blown up during the engagenent, five were taken and carried into Gibraltar, among which was the admiral's thip, and the reft were much hattered. In April tice fame year, be fell in with the Freuch flect, under the command of Admiral Guichen, at Martinizn, whom he obliged to fight, and whom he completely beat; though from the thattered ftate of his own fleet, and the unavillingnefs of the enemy to rik another action, he took none of their thips. The fuccefstul efforts of this gallant admiral during the year 1780 were generally applanded through the nation. He received the thanks of both Houfes of Pasliament, and addrefles of thanks from
various parts of Great Britain, and the iflands to which his victories srere more particularly ferviceable. In De. comber the fame year, he made an attempt, together with General Vaughan, on St Vincent's, but failed. In 1781, he continued his excrtions, with much fuccefs, in defending the Weft India illands; and, along with the above named general, he conquered St Eutatius; on which occafion his conduet to the inhabitants has been much, though perhaps unjuftly, cenfured. The ifland was certainly a nett of contraband traders.

On the 12 th of April 1782 , he came to a clofe action with the French fleet under Count de Gralfe; du. ring which he funk one thip and took five, of which the admiral's fibip, the Ville de Paris, was one. The following year brought peace; but, as a reward forlis numerous fervices, he had a grant of L. 2000 a-year for himfelf and his two fucceffors. He had long before been created a baronet, was rear-admiral of Great Britain, and at length was juftly promoted to the peerage, by the title of Baron Rodnes of Stoke, Somerfetfaire, and made vice-admiral of Great Britain. He was once alfo governor of Greenwich Hofpital.

Lord Rodney had been twice married; firft to the fifter of the Earl of Northampton, and fecondly to the daughter of John Clies, Eiq; with whom he did not refide for feveral years before his death, which happened on the 24th of May 1792. He was fucceeded in title and eftates by his fon George, who married in 1781 Martha, daughter of the Right Hon. Alderman Harley, by whom he has iffue.

Of the private life of Lord Rodney we know bur little. His attention to the wants of the feamen, an: the warrant officers ferving under lim, indicated tha: humanity which is always allied to true courage. He has often, from the number of difhes which his rank brought to his table, felected fomething very plain for himfelf, and fent the reft to the midihipmen's mefs.His public tranfactions will tranfmic his name with honour to pnterity; his bravery was unqueftionable, and his fuccefs has been feldom equalied. It has, indeed, been very generally faid, that his fall in naval tactics was not great, and that he was indebted to the fuperior abilities of Capt. Young and Sir Charles Douglas for the mancuvres by which he was fo fucceffful againtt Langara and De Graffe. But, fuppofing this to be true. it detracts not from his merit. A weak or foolifh commander could not always make choice of the ableft officers for his firf captains, nor would fuch a man be guided by their advice.

Whatever was Lord Rodney's fill in the fcience of naval war, or however much he may have been beholden to the counfels of others, he certainly poffeffed himfelf the diftinguilhed merit of indefatigable exertion ; for he never omitted any thirg within the compafs of his powerto bring the enemy to action. He thercfore unqueftionably deforves the refpect and the gratitude of his countiy: In the year \({ }_{17} 83\) the Houfe of Afembly in Jamaica voted L. 1000 towards erecting a marble Itatue to him, as a mark of their gratitude and veneration for his gallant fervices, fo timely and glorionfly performed for the falvation of that ifland in particular, as well as the whole of the Britifh Weit India iflands and trade in general. We have not, however, heard of any fuch tribute being paid to him in Britain either before or fince his death.

ROE

\section*{R O H}

ROE, the fecd or fpown of fifl. That of the male filtes is ufually dilinguithed by the name of foft ree, or p it ; and that of the female, hurl roo, or fpaten. So inconccivably numerous are thecte ovula or fmall eggs, that M. Petit found \(3+2,1+4\) of them in a carp of 18 inches; but M. Lienwenbock found in a carp no more than 211,629 . Th's laft gentlemen obferves, that there are four times this number in a cod ; and that a common one contains \(9 \cdot 3+4,000\) eggs.

Roe, in zoology. See Cervus.
ROELLA, in botany: A gerus of the monogynia order, bele nging to the fentandria clafs of plants; and in the natural nethnd ranking under the 29th order, Cumpanaces. The coroll: is funnel flaped, with its botom thut up by faminiferous valwulus; the figma is bifid; the capfule bilocular, and cylindrical inferior.

ROGA, in antiquity, a prefent which the emperors made to the fenators, magiftrates, and even to the people; and the popes and patriarchs to their clergy. Thefe roga were ditributed by the emperors on the firt day of the year, on their birth-day, or on the maonlis dies of the cities; and by the popes and patriarchs in pation-weck. Roga is alfo ufed for the common pay of the foldiers.

ROGATION (rogatio), in the Reman jurifprudence, a demand made by the confuls or tribunes of the Roman people, when a law was propofed to be paffed. Rogatio is alfo ufed for the decree itfelf made in confequence of the people's giving their allent to this demand ; to diftinguilh it from a fenatus confultwn, or decree of the fenatc.

Rogation. \(W\) cek, the week immediately fucceeding Whitiunday; fo called from the three feafts therein, viz on Monday, Tuedday, and Wednefday.

ROGER de Hoveden, a learned man of the \(13^{\text {th }}\) century, was born in Yorkfhire, moft probably at the town of that name, now called Howden, fome time in the rcign of Henry I. Afeer he had received the firft parts of his education in his native country, he fludied the civil and canon law, which were then become the moft fathionable and lucrative branches of learning. He became domettic claplain to Hensy IJ. who employed him to tranfen feveral ce:lcfiaftical affurs; in which he acquitted himfelf with henour. But his molt meritorivus work was, his Annals of England, from A. D. 731, when Bede's Ecclefiaftical Hiftory ends, to A. D. 1202. This work, which is one of the moft voluminous of our ancient hiftories, is more valuable for the fincerity with which it is writen, and the great variety of facts which it contains, than for the beauty of its Atyie, or the regularity of its arrangement.

ROGUE, in law, an idle fturdy beggar ; who by ancient flatutes is for the firll offence called a rojue of the firf degrce, and punifhed by whipping, and boring through the grifle of the right ear with a hot iron; and for the feconti offence, is termed a rogue of the focond degree, and, if above 18 years of age, ordered to be executed :as a felon.

ROHAN (Peter de), Chevalier de Giê, and mar. fhal of France, better known by the name of Mar/bal de Gie, was the fon of Louis de Rohan, the fult of the name, lord of Gućmené and Montauban, and def. fencled of one of the motancient and moft illufitious damilies of the kingdom. The famly of Roham, before the Revolution, held the rank of prince in IVance
in corfequence of its deriving its origin from the firf folvereigns of Brittany, and clearly admitted by the dukes of 13rittany themfelves in the fates gencral of that province held in 1088. The houfe of Ruhan had nill another advartage, which was common to it wi'h very few families, even the moft diftinguifhed among the princes, \(n\) inely, that inftead of having been aggrandifed by the wealth procured from alliances, it had held in iifelf for feren centuises the larget poffeflions of any family in the kingdom.

One of the moft difinguifhed branches of this family was l'cter, the fubject of the prefent article. Lonis XI . rcwarded his bravery with the Rati of marthal of France in 1475 . We was one of the four loids who governed the bingdom during the indifpolition of that prince at Chinon in 148. Two years afterwards he oppofed the attacks of the archduke of Auftria upon Picardy. He commanded the van-guard at the battle of Fornoue in \(\mathbf{1 4 9 5}\), and Gignalized hmelf much in that engagement. His bravery procured him the countenance and confidence of Louis XII. who appointed him his prime counfellur, and general of the army in Italy ; but thefe advantages he loft, by incurring the difpleafure of Anne ol Brittany the queen.

The marfhal had flopped fome of her equipage on the road to Nantz; for which that vindictive princefs prevailed on lier hufband to enter into a procefs againtt him before the parliament of Touloufe, at that time the moft rigornus and fevere in the kindom. He was on the 15 th of February 1506 found guilty, banifhed from the court, and deprived of the privileges and emoluments of his office for five years. The expence of this profecution amounted to more than 31,000 livres, and it did no honour either to the king or the queer. If indeed it be true, that the qucen was never fo much oclighted as with the humiliation of her cnemies, fle had good reafon to be tati: fied here. John of Authon, who had entered into a pretty full de?al of this affair, reports that G ह́, being removed to the Chateau de Dreus, became an object of ridicule to the witneffes who had fworn ag infl him. He wore a long white beard, and, quite full of the thughts of his difgrace, took it on one occation in his hands and envered his face with it. An ape, belonging to Alain d'Albret, count of Dreux, jumped fiom a bed where his mafter was repoling himfelf, and attacked the beard of G:é, who, with jome difficulty, extricated himfelf. This fene not only occationed much langhter to the whole company who were prefent, but likewife became inflantly the fubject of the farces and mummerics which were then acting in France. Even the tchool-boys made a reprefentation of it, where, alluding to the rame of the quecn, they faid, that there was a marfhal who wihned to thoe an afs (un ane), Lut that he rectived fuch a blow with the foot, as threw him over the wall into the garden. Marefchal de Gié died at Paris, the 22d A. pril 1513, peefoctiy difgunted with courts and gramdeur.

Rohan (Henry duke of), peer of France, and prince of Lenn, was born at th: Chatan de Blein in Britasny in 1579. Henry IV. under whoie eyes lie gave dillinguilhed proo's of his bravery at the fiece of A. miens, when only 16 gears of age, loved lim with as much affection as if he had been his own fon. Atter the daath of Hensy, he became chisf of the Calvinifts
in France; and was equally fornidable for his genius as his fword. In defence of the civil and religious rights of his party, he maintained three wars againlt Lonis XIII. The firf, which terminated to the advantage of the Proteftats, broke our whea that prince wilhed to eftablifh the Romith religion in Le Bearn: the fecond, becaufe of the fiege which Cardinal De Richlieu caufed to be laid to Rocielle : and the third, when that place was belieged a feennd time. The confequences of this war are fufficiently known: Rochelle furrendered: and the duke de Rohan perceiving, that after the taking of this place, the majority of lis party were entdeavouring to make up matters with the court, fucceeded in procuring for them a general peace in 1629 , upon very honourable and advantageous terms. The only facrifice of importance which the Huguenots were obliged to make, was their fortifications; which put it out of their power to renew the war. Some factious perfons, diffatisfied with feeing their fortreffes fall into their enemies' hands, were ready to accufe their general of having fold them. This great man, undeferving of fuch odious ingratitude, prefiented his brealt to thefe enraged malcontents, and faid, "Strike, Atrike! I wifh to die by your hands, after I have hazarded my life in your fervice." The peace of 1629 having entinguithed the flame of civil war, the duke de Rohan, no longer of ufe to his party, and become difagreeable at court, retired to Venice. There is a very particular anecdote of him, extracted from the Memoirs of the duchefs of Rohan, Margaret of Bethune, daughter of the famous Sully: Whillt the duke de Rohan was at Venice, a proporal was made to him from the Porte, that for 200,000 crowns, and an annual tribute of 20,000, the Grand Signior would give him the illand of Cyprus, and fully invelt him with the dignity and prerogatives of king. The duke was warmly inclined to comply with this propofal, and to fettle in the inand the Proteftant families of France and Germany. He negociated this bufinefs at the Porte by means of the intervention of the patriarch Cyril, with whom he had much correfpondence ; but different circumftances, and in particular the death of the patriarch, occurred to break off the treaty. The republic of Venice chofe Rohan for thcir commander in chief againft the Imperialifts; but Louis XIII. tonk him from the Venetians, and fent him ambaffador into Swifferland, and into the Grifons. He wifhed to affif thefe people in bringing back La Valteline under their obedience, the revolt of which the Spaniards and Imper:alifts encouraged. Rolan, being declared general of the Grifons, alter many victories, drove the German and Span:in troops entitely from La Valceline in 1633 . He defeated the Spaniards again in 1636 at the banks of the lake of Come. France, not thinking it proper to withdraw her troops, the Grifons rote up in arms, and the duke de Rohan, not fatistied with the conduct of the court, entered into a feecial treaty with them the 28 th March 1637. This hero, fearing the refentment of cardinal de Richlieu, retired to Geneva, with a view to join his friend the duke of Saxe-Weimar, who wifhed him to undertake the command of his army, then ready to engage the Imperialits near Rhinfield. Althrugh he declined this honour, yet he took the command of the regiment of Naffau, with which he threw the enemy into confufion; but was himfelf wounded, February 28. 1683?
and died of his wounds the \(3^{\text {th }}\) of April following, at the age of 59. He was interted May 27th, in the church of St Picrre in Geneva, where there is a magnificent monument of marble erected to his memory, having on it the moft illuftrious attions of his life. The duke de Ruhan was one of the greateft generals of his time, equal to the princes of Orange, and capable, like them, of fettling a comm nwealth; but more zea. lous than they for religion, or at lealt appearing to be fo. He was vigilant and indefatigable, not allowing himfelf any ple.fures which might take off his attention from his necellay employments, and well quilified for being the head of a party; a puft very difficult to retain, and in which he had to fear equally from his enemies and his friends. It is in this light that Voltaire has viewed this illultrious character, when he compofed the following verfe:

> Avec lous les talens le Ciel l'avoit fait nailre: Il agit en Heros; cn Sage il cicrivit.
> Il fut même grand hoomme cn combattant fon Maître, Et plus grand lorfquil le fervit.
\(H_{i s}\) inilitary virtues were much heightened by the fweetnefs of his difpofition, his affable and courteous manners, and by a generofity which had few examples. Neither ambition, pride, nor a view of gain, could ever be traced in his charafter. He was wont to fay, that "true glory and a zeal for the public good never dwelt where felf-intereft reigned." Rohan had always a particular regard for Henry the Fourth: "Truly (faid he, fometimes after the death of that prince) when I think of him, my heart is ready to break. A wound received in his prefence would have affirded me more fatisfaction than now to gain a battle. I won'd have valued an encomium from him in this art, of which he was the greateft matter of his time, more than the united praifes of all the commanders now living." He wrote feveral interefting performances : 1 . The Interefts of Princes, printed at Cologne in 1666, in \(12 \mathrm{mo}:\) in which work he fully examines the public interelts of all the princes of Europe. 2. The Perfect General, or an abridgment of the wars from Cælar's Commentaries, in 12 mo. In this he makes it appear, that a knowledge of the tadics of the ancients might be of much ufe to the moderns. 3. A Treatife on the Corruption of the ancient Militia, 4. A Treatife on the Government of the Thirteen Provinces. 5. Memoirs; the beft edition of which is in 2 vols 12 mo . They contain the hifory of France from 1610 to 1629 . 6. A Collection of fome Political Difconrfes on State Affairs, from 1612 to \(1629,8 v 0\), Paris, \(16+4,1693,1755\); with the Menoirs and Letters of Henry Duke de Rohan relative to the war of La Valteline, 3 vols \(\mathbf{J} 2 \mathrm{mo}\), Geneva, \(\mathbf{3} 757\). This was the firf edition which appeared of thefe curious memoirs: We owc it to the great attention and diligence of M. le Baron de Zurlauben, who publifhed thenı from different authentic mau'criptsHe likewife ornamented this edition with geographical, hiltorical, and genealogical notes, and a prefice, which contains an abiidged, but highly interelting life, of the duke de Rnhau, author of the memirs. The ablé Púrau has alfo written a life of him, which occupies the 21 it and 22 d volumes of the Hittory of the lilufrious Men of France. Some want of fpilit might he excufed in the detail of wars fanihed upwards of \(\mathrm{I} \neq \mathrm{o}\)
\[

Ruhawit rears ago ; je: the memoirs of the duke de Rohan fill
afford confiderable pleature in the resufal. He tells his fors with huma ur, with fufficient exatnefs, and in
fuch a \(!\) !!!e as procures the confitence of the reader.

ROHALCL'T (Jmes), a celebrated Catelian philnfoph.r, wis the ton of a merchant of Amiens, where he was ho:n in 16zo. He hecame weil tkilled in the mathemancs, and tanght them at Paric, where h becan.e acquainted with M. Clerielier, an advocate, who gave him hiv daughter in Marriage. Rohate alfo taw he phil fophy in the fame city with unc mmon arp ante. He there improved the arts, and gave excelie te lequ es to the artifts and workmen. He died at Pa: is in 1675. He wrote, in French, I. A 'Trearite is Nutural Philof phy. 2. The Elements of the Mathematics. 3. A Treatife on Mechanics, which is ve:y curious. \(\ddagger\) : Philofoplical Converiations; and other works. His Phyfics have been tranflited into Latin, by Dr Samuel Clarke, with notes, in which the Cartctian errors are corrected upon the Newtonian fyltem.

ROLANDRA, in botany: A genus of the polygamia tegregata order, belonging to the fyngenefía clafs of plants; and in the natural method ranking under the the order, Compofite. The common calyx confifts of ditmet \(\beta\) jocull, between each of which are thert Squame, the whole forming a round head. The partial calyx is hivalued. The corolla is fmall and funnel-lhaped, the tube fnall as a thread, the lacinio fhort and acute. The famina are five; the ityle bifid. It has no other feed velfel except the partial calyx, which contains a long three-fided feed. Of this there is only ore fpecies, viz. the Argentea; a native of the Weft Indies, and found in copfes and wafte lands.

ROLI, in manufactories, fumething wound and folded up in a cylindrical form.

Few fulfs are made up in rolls, except fatins, gaufes, and crapes; which are apt to break, and take plaits not calj to be got out, if folded otherwife. Ribbons, laces, gallons, and paduas of all kinds, are alfo thus rolled.

A roll of tobacco, is tobacco in the leaf, twitted on the mill, and wound twift over twit about a nick or roller, A great deal of tobacco is fold in América in rolls of varions keights; and it is not till its antival in England, Spain, France, and Holland, that it is cut.

A roll of parchment, properly denotes the quantity of 60 Rkins.

The ancients made all thcir books up in the form of rolls; and in Cicero's time the libraries confifted wholly of iuch rolls.

Roll, in law, fignifies a fchedule or parchment which may be rolled up by the liand into the form of a pipe.

In thefc fehedules of parchment all the pleadings, memorials, and acts of court, are entered and filed by the proper officer; which being done, they become records of the court. Of thefe there are in the exchequer reveral hinds, as the great wardrobe roll, the cofferer's roll, the fubtidy-soll, \&s.

Roll is alfo ufed for a lift of the names of perfons of the fame condition, or of thofe who have cntered into the fame engagement. 'Thus a court-roll of a manor, is that in which the names, rents, and fervices, of each tenant are copied and enrolled.

Caters-beat Roze, a roll in the two temples, in which every bencher is taxed yearly at 2 s . ce ery barriIter at is. 6 d . and cvery genticman under the bat at is. to thic cock and other oflicers of the houfe, in ennfidetation of a dinner of calres-heads provided in Lalter-term.

Muffer-Rozr, that in which are entered the foldiers of every troop, compariy, regiment, \&ec. As fuon as a foldier's name is written duwn on the roll, it is death for nim to defert.

Roles-O.fice, is an office in Chancery-lane, London, appoiuted for the cuitody of the rolls and records in chancery.

Mafler of the Rolls. Sic Maspre of the Rolls.
Ridr-RoLl, a lchedule of parchment frequently fewed or added to fome part of a roll or record.

Rouss of Parliament, are the manufcript regifters or rolls of the proceedings of the ancient parliaments, which b.fore the invention of printing were all engroffed on parchment, and proclaimed openly in cvery county. In thefe rolls are alfo contained a great many decirions of difficult points of law, which wete irequently in former times referred to the decifion of that high court.

Role, or Roller, is alfo a piece of wood, iron, brafs, scc. of a cylindrical form, ufed in the conitruction of feveral machines, and in teveral works and manufactories.

Thas in the glafs manufacture they have a runningroll, which is a thick cylinder of caft buafs, which ferves to conduct the melted glafs to the end of the table on which large looking-glafies, \&\&c. are caft.

Founders alfo ufe a roll to work the fand which they ufe in making their moulds.

The preffes called calendars, as ferving to calendar Atuffs withal, confift, among other effential parts, of two rollers. It is alfo between the two roilers that the waves are given to filks, mohairs, and other ftuffs proper to be tabbied.

Impieffinns from copper-plates are alfo taken by paffing the plate and paper between two rollers. See Rolling -piefs Pristing.

Rulls, in fatting-mill-, \& 8 . are two iron inftruments of a cylindrical form, which ferve to draw or fretch out plates of gold, filver, and other metals.

Rolls, in fugar-works, are two large iron barrels which ferve to bruife the canes, and to exprefs the juice. 'Thefe are calt hollow, and their carities are filled up with wod, the cylinders of which are properly the rollers.

ROLLER, in furgery, a long and broad bandage, ufually of linen-cloth, rolled round any part of the body, to keep it in, or difpote it to a fate of health.

ROLLI (Paul), was bern at Rome in 1687 . He was the foa of an architen, and a pupil of the celebrated Gravina, who infpired him with a taffe tor learning and poetry. An intelligent and learned Englifh lord having bronght him to London, introduced him to the royal family as at mafter of the Tucan anguage. Rolli remained in England till the death of queen Caroline his protector, and the pat ronefs of literature in general. He returned to Italy in 1747, where he died in 1767, in the soth year of hit age, leaving bchind him a very curious collettion in natural hiftory', sec. and a valuable and well chofen library. His principal works firft ap-

\section*{R OL}
\(\underbrace{\text { Rollin. }}\)
peared in London in 1735 , in 8 ro. They confift of odes in blank verfe, elegies, fongs, and other things, after the manner of Catullus. There is likewif, by him a Collection of Epigrams, printed at Florence in \({ }_{177} 7\). in \(8 v o\), and preceded with his life by the Abbe Fondini. What Martial faid of his own Colleation may be faid of this, "That there are few good, but many indifferent or bad, piece; in it." Rolli, however, bore the character of one of the bett Italian pocts of his age. During his flay in London, he procured editions of feveral authors of his own country. The principal of thefe were, the Satires of Ariofto, the Burlefque Works of Berni, Varchi, \&c. 2 vols, in Sve, which poffefs confiderable merit. The Decameron of Boccace, 1727 , in 4 to and folio; in which he has faithfully copied the celebrated and valuable edition publifhed by the funtes in 1527 : and, latlly, of the elefrant Lucretia of Marchetti, which, after the manuicript was revifed, was printed at Lnndon in 1717 , in 8vo, through the influence and attention of Rolli. This edition is beautiful; but the work is thought of pernicious tendency. There are likewife, by him, tranflations into Italian verfe of the Paradife Loft of Milton, printed at London in folio in 1735 ; and of the Odes of Anacricon, London 1739, in 8vo.

ROLLIN (Charles), a jultly celebrated French writer, was the fon of a cutler at Paris, and was born there on the 30th of January i66r. He ftudied at the college Du Pleffis, in which he obtained a burfary through the intereft of a Benedictine monk of the White Mantle, whom he had ferved at table, and who difonvered in him fome marks of genius. Here he acquircd the regard of M. Gobinet, principal of that col. jege, who had a particular efteem for him. After having fudied bumanity and philofophy at the college of 1) a Pleflis, he applied to divinity three years at the Sorbonne; but he did not profecute this tuady, and never rofe in the church higher than to the rank of a tonfured prieft. He afterwards became profeffor of rhetoric in the fame college; and, in 1688 , fucceeded Horfan, his mafter, as profeffor of eloquence, in the royal college. No man ever exercifed the functions of it with greater eclat: he often made Latin orations, to cclebrate the memorable events of the times; and frequently accompanied them with poems, which were read and efteemed by every body. In 1694, he was chofen rector of the univerfity; and continued in that office two years, which was then a great mark of diftinction. By virtue of his office, he fpoke the annual panegyric upon Louis XIV: He made many very ufeful regulations in the univerfity; and particularly revived the ftudy of the Greek language, which was then much negletted. He fubftituted academical excrcifes in the place of tragedies; and introduced the practice which had been formerly obferved, of caufing the ftudents to get by heart paffages of Scripture. \(\mathrm{H}=\) was a man of indefatigable attention; and trained innumerable perfons, who did honour to the church, the flate, and the army. The firt prefident Portial was pleafed one day to reproach Rollin in a jocular Atrain, as if he exceeded even himfelf in doing bufinefs: to whinm Rollin replied, with that plainnefs and fincerity which was natural to him, "It becomes you well, Sir, to reproach me with this; it is this habit of labour in me which has diftinguifhed you in the place of

Voz. XVI.
advocate-general, which has raifed you to that of firft prefident: you owe the greatnefs of your fortune to me."
Upon the expiration of the rectornhip, cardinal Noailles engaged him to fuperintend the fudies of his nephews, who were in the college of Laon; and in this office he was agreeably employed, when, in 1699, he was with great reluctance made coadjutor to the principal of the college of Beauvais. This college was then a kind of defert; inhabited by very few ftudents, and without any manner of difcipline: but Rollin's great reputation and induftry foon re-peopled it, and made it that flourifhing fociety it lias ever fince continued. In this fituation he continued till 1712 ; when the war between the Jefuits and the Janfenifts drawing towards a crifis, he fell a facrifice to the prevalence of the former. Father le Tellier, the king's confefor, a furious agent of the Jefuits, infufed into his matter prejudices again! Rollin, whofe connections with cardinal de Noailles would alone have fufficed to have made him a Janfeniif; and on this account he lolt his fhare in the principality of Beauvais. No man, however, could have loit lefs in this than Rollin, who liad every thing left him that was neceffary to make him happy; retirement, books, and enough to live on. He now began to be employed upon Quinctilian; an author he juftly valued, and faw neglected not without uneafinefs. He retrenched in him whatever he thought rather curious than ufeful for the inflruction of youth; he placed fummaries or contents at the head of each chapter; and he accompanied the text with fhort feleĉ notes. His ectition appeared in 1715 , in 2 vols 12 mo , with an clegant preface, fetting forth his method and views.

In 1710 , the univerfity of Paris, willing to have a head fuitable to the importance of their interefts in the then critical conjunciure of affairs, chofe Rollin again rector: but he was difplaced in abnut two months by a letter de cacher. The univerfity lad prefented to the parliament a petition, in which it protelled againft taking any part in the adjuftment of the late difputes; and their being congratulated in a public oration by Rollin on this ftep, occafioned the letter which ordered them to choofe a rector of more moderation. Whatever the univerfity might fuffer by the removal of Rollin, the public was probably a gainer; for he now applied himfelf to compofe lis treatife upon the Manncr of Studying and T'eaching the Belles Lettres, which was publifhed, two volumes in 1726 , and two more in \(1728,8 \mathrm{vo}\).

This work has been juflly efteemed for the fentiments of religion which animate its anthor, whofe zeal for the public good prompted him to feleat the choicent paffages of Greek and Latin authors. The Ayle is fufticiently elegant, but the language on fome occafions is not remarkable for delicacy; and in the book altogether there is neither much order nor depth. The author has indeed fpoken of common things agreeably, and has fpoken as an orator on fubjeats which demanded the inreftigation of the philofopher. One can fearcely rcduce any thing in him to principles. - For example, the three fpecies of eloqucnce; the fimpic, the temperate, and the fublime, can fcarcely be undertood from him when we read that the one refenbles a frugal table ; the fecond a heautiful ruin, with green wood growing rwer which overflows every thing that oppofes it.
"he werk, however, has been exceedingly luccefsful, and jultly \(f 0\); and its finceefs encouraged its author to undertale another work of equal ufe and entertainment ; his Hijloire Ancienze, Ece. or "Ancient Hiftory of the Egyptians, Sarthaginians, Afiyrians, Dabylonians, Medes ind Perlians, Macedonians, and Greeks," which he fisified in is rols Svo. and publifhed between 1730 and 1 -3i. M. Voltaire, after having obferved that Rollin wis "the firt member of the univerfity of Paris who wrote French with dignity and correctnefs, fays of this work, that "though the laft volumes, which were witten in too great a hurry, are not equal to the firf, it is reverthelefs the belt compilation that has yet appeared in any language ; becaufe it is feldom that comfilers are eliquent, and Rollin was remarkably fo." This is perhaps faying too much. There are indeed in this work fome palfages very well handled; but they :re nuly firch as he had taken from the ancient authors, in doing jullice to whom he was always very happy. The reader will eafily difover in this work the fame attaliment to religion, the fame defire for the public frood, and the fame love of virtue, which appears in that on the Delles Lettres. But it is to be lamented that his chronology is neither exaf nor correfponding; that he fates fiets inaccurately ; that he has not fufficiently examined the exaggerations of ancient hiftorians; that lie of ten interrupts the molt folemn namations with mere rrifles; that his ftyle is not uniform ; and this want of uniformity arifes from his borrowing from writers of a modern date 40 or 50 pages at a time. Nothing can be more noble and more refined than his reflections; but they are ftrewed with too fparing a hand, and wamt that loely and laconic tum on account of which the hiftodians of antiquity are read with fo much pleafure. He tranfgreffes the rule which he himfelf had eftablifhed in dis 'Ireatife on Studics. "The precepts which have a reipect to manners (fays he) ought, in order to make an impreftion, to be fhort and lively, and pointed like a dart. That is the moft certain method of mahing them enter and remain on the mind." There is a vifible regligence in this diction with regard to grammatical cufton, and the choice of his expreffions, which be does not choofe at all times with fuficient tafte, although, on the whole, he writes well, and has preferved himiclf fiee fron many of the faults of modern authors. While the lut volumes of his ancient hiftory were printince, he pulalimed the firt of his Roman Hiftory; which We lived to carry on, through the cighth and into part uf the nimth, to the war againft the Cimbri, about 70 yeats before the battle of Adium. Mr Crevier, the worthy diciple of Rollin, continued the hiftory to the battle of Astum, which clofes the tenth volume; and has fince completed the original plan of Rollin in is vols 12 mo , which was to bring it down from the foundation of the city wo the reign of Conftantiae the Great. Tllis hifory had not fo great fuccefs as his Amcient Fiftory had. Indeed it is rather a moral and hiftorical cifcoutfe than a furmal hifosy; for the author does latie more than point cut fome more remarkable events, while tio dwells with a fort of prelixity on the fe parts whi h furtith him a free lield for moralizing. It is alternate! ') diffife and harren; and the greateft advantage ct the work is, that there are feveral paffages frem ' \(\Gamma\).

Livy trannated with great elegance into French. He Rollin. alfo publithed A Latin 'Iramfation of moll of the Theological Writings relative to the difputes of the "limes in which he lived. Rollin was one of the moft zealous adherents of deacon Pàris; and before the inclofute of the cemetery of St Medard, this diftinguifhed character might have been often feen praying at the foot of his tomb. This he confelles in his Letters. He publifhed alfo Leffer Picces; containing different Letters, I, atin Harangues, Difcourfes, Complimentary Addreffes, \&c. Paris 1771,2 vols. 12 mo . A collection which might have been contained in one volume, by keeping in only the beft pieces. It is notwithllanding valuable for fome good pieces which it contains, for the favourable opinion which it exhibits of folid probity, found reafon, and the zeal of the author for the progrefs of virtue and the prefervation of tafte. The Latin of Rollin is very corred, and much after the Ciceronian flyle, and embellifhed with moft judicions thoughts and agreeable images. Full of the reading of the ancients, from which he brought quotations with as much propriety as plenty, he expreffed himfelf with much fpirit and excellence. His Latin poems deferve the fame eulogium.

This excellent perfon died in 1741. He had been named by the king a number of the academy of inferiptions and belles lettres in 1701 ; but as he had not then brought the college of Beauvais into repute, and found he had more bufinefs upon his hands than was conliftent with a decent attendance upon the functions of an academician, he begged the privileges of a veteran, which were honourably granted him. Neverthelefs, he maintained his connections with the academy, attended their affemblies as often as he could, laid the plan of his ancient hiftory before them, and dcmanded an academician for his cenfor. Rollin was a man of an admirable compofition; very ingenious, confummate in polite learning, of rigid morals, and eminently pious. Hejwas rather too religious; his religion carrying him into the territories of fuperftition; and he wanted nothing but a mixture of the philofophic in his nature to make him a very perfect character. Nothing could be more benign, more pacific, more fweet, more moderate than Rollin's temper. He fhowed, it muft be owned, fome zeal for the caufe of Janfenifm; but in all other refpects he was exceedingly moderate. The celebrated poet Roufleau conceived fuch a veneration for him, that he came out of banifhment incognito to Paris, on purpofe to vifit him and pay his refpects to hina. He lonked upon his hitories, not only as the beft mo. dels of the hittoric hind, but as a complete fyftem of politics and morals, and a mof inftructive fohool for princes as well as fubjects to icarn all their duties in.

Inftead of blufhing at the lownefs of his birth, Rollin on no oceafion ..efitated to fpeak of it. "It is from the Cyclops's flop (fays he, in a Latin epigram to one of his friends, to whom he had fent a fmall fword) that I have taken my flight towards Parnallus." He was not, however, without fome fhare of vanity, efpecially at hearing mention made of his writings, of which the well timed praifes of his abherents had given him a very high opinion. He fpolie withont any difimulation what he thought; and his opinions were lefs the effect of prefumption than of opennefs of heart. Ile was one of thofe men who are vain without any mixture of

\section*{R O L}

Roiling, pride. Rollin poke pretty well; but lie lad a greater Rollo. readinefs of writing than fpeaking; and much more fatistaction might be derived from his works than from his converfation. His name became famous through. out Europe; feveral princes fought the honour of his freendifip. The duke of Cumberland and the princeroyal of Pruffia (afterwards king) were among the litt of his admirers. This mona:ch honoured him with feveral letters; in one of which he pays him the following compliment, "Men of your character are fit companions for kings." As to the literary merit of this author, it was, we fulpett, ton much extolled in his own time, and has been ton much undervalued in ours.

ROLLING, the motion by which a fhip rocks from fide to fide like a cradle, occafioned by the agitation of the waves.

Rolling, thercfore, is a fort of revolution about an imaginary axis paffing through the centre of gravity of a thip: fo that the nearer the centre of gravity is to the keel, the more violent will be the rolling motion; becaufe the centre about which the vibrations are made is placed fo low in the bottom, that the refiftance made by the keel to the volume of water which it difplaces in rulling, bears very little proportion to the force of the vibration above the centre of gravity, the radius of which extends as high as the maftheads.

But if the centre of gravity is placed higher above the keel, the radius of vibration will not only be diminithed, but an additional force to oppofe the motion of rolling will be commanicated to that part of the Chip's bottom which is below the centre of gravity.

So far as relates to the effect of rolling, when produced by the quality or flowage of the ballaft, and to the manner by which it nay be prevented, viz. a change of the quantity or difpntition of the ballaft, we thall endeavour to explain under the article Trim. It may, however, be neceflary to remark, that the confruetion of the lhip's bottom may alfo contribute to diminifh this movement confiderably.

Many fatal difafters have happened to hips arifing from a violent rolling ; as the lofs of the mafts, loofening of the camnon, and fraining violently on the decks and fides, fo as to weaken the thip to a great degree. Sce Pitching.

Rolling-Prefi. See Rolling Press.
Rolling-Tackle, a pulley or purchafe faftened to that part of a fail-yard which is to the windward of the mait, in order to confine the yard clofe dow: to the leeward when the fail is furled.

It is ufed to prevent the yard from having a great friction againt the maft in a hight fea, which would be equally pernicious to both.

ROLLO, the conqueror of Normandy, was a Norwegian duke, banifhed from his country by Harold Hiatfagre, who conquered Norway in 870 , on account of the piracies he exercifed, He firft retired with his fleet among the iflands of the Hebrides to the northweit of Scotland, whither the flower of the Norwegian nobility had fled for refuge ever fince Harold had become maler of the whule kingdom. He was there received with open arms by thofe warriors, who, eenger for conqueft ald revenge, waited only for a clief to undertake fome glorious enterprite. Rollo fetting himfelf at tlicir head, and feeing his power formidable, f.iled towards England, which had been long as it
were a field open on all fides to the violence of the northern nations. But the great Alfred had fome years before eftablifhed fuch order in his part of the ifland, that Rollo, after feveral fruitlefs attempts, defpaired of forming there fuch a fettlement as fhculd make him amends for the lofs of his own country. He pretended, therefore to have had a fupernatural dream, which promifed him a glorious furtune in France, and which ferved at lealt to fupport the ardour of his followers. The weaknefs of the government in that kingdom, and the confufion in which it was involved, were lill more perfuafive reafons to infure then of fuccefs. Having therefore failcd up the Seine to Rouen, he immediately took that capital of the province, then called Nenffria, and making it his magazine of arms, he advanced up to Paris, to which he laid fiege in form. This war at length ended in the entire cellion of Neuftria, which Charles the Simple was obliged to give up to Rollo and his Normans in order to purchafe a peace. Rollo received it in perpetuity to himfelf and his pofterity, as a feudal duchy dependent on the crown of France. A defeription of the interview between Charles and this new duke gives us a curious picture of the manners of thefo Normans (as they were called by foreigners) ; for the latter would not take the nath of fealty to his fovereign lord any other way than by placing his hands within thofe of the king; and abiolutely refufed to kifs his feet, as cuftom then required. It was with great difficulty he was prevailed on to let one of his warriors perform this ceremony in his fead ; but the officer to whom Rollo deputed this fervice, fuddenly raifed the king's foot fo high, that he overturned him on his back; a piece of rudenefs which was only laughed at: to fuch a degree were the Normans feared, and Charles defpifed.

Soon after, Rollo was perfuaded to embrace Chriltianity, and he was baptized with much ecremony by the archbifhop of Rouen in the cathedral of that city. As fron as he faw himelf in full poffeffion of Normandy, he exlibited fuch virtues as rendered the province hap. py, and deferved to make his former outrages forgotten. Religious, wife, and liberal, this captain of pirates bc. came, after A!fred, the greatelt and molt humane prince of his time.

ROMAN, in general, fomething belonging to the city of Rome. See Rome.
King of the ROMANS, in modern hifory is a prince elceted to be fucceffor to the reigning emperor of Germiny:

ROMANCE in matters of literature, a fabulous relation of certain adventures defigned for the entertainment and inftruction of the readers, and differing from the nored as it always exhibits actions great, dangerous, and generally extravagant. Many authors of the firlt name have written on the ancient Romance. It has exercifed the pen of Hurd, of Warlurton, and of fome ladies, who have not thought it any derogation to the fenfibility of their fex to unite antiquarian refearch with the cultivation of the belles lettres. We have not, however, feen any where fo concife, juft, and elegant an account of the origin and progrefs of romances as in D'Ifraeli's Curiofities of Literature. "R Romance (fays this writer) has been elegantly defined the offspring of fiction and love. Hen of learning have amufed themfelves with tracing the epocha of romances. In this

\section*{に O M}
g ment ; and fome have fancicd that it may have exifted
as fur back as the time of Aritotle; Dearchuc, one of his difciples, having written icveral works of this amu1.ner fpecies.
"I.et us, however, be fatisfied in deriving it from the Thesigenes and Chariclea of Heliodorus, a bithop who lived in the thentury, and whofe work has been lately trantlated. This clegaat prelate was the Grecian Fenelon ( \(A\) ). Beatiful as thefe compofitions are when the imagiation of the writer is fufficiently fored with accurate obtervations on haman nature, in their birth, like many of the fine arts, they found in the zealots of religion men who oppofed their progrefi. However Heliedorus may have delighted thofe who were not infenfible to the felicitic; of a fine imagination, and to the enchanting elegancies of tyle, he raifed himfelf, among his brother ecclefiafics, enemies; who at length fo fur prevailed, that it was declared by a fynod, that his performance was dangerous to young perfons, and that if the author did not fupprefs it, he muft refign his bihnprick. We are told he preferred his romance to his bifhopric. Even fo late as in Racine's time, it was held a caime to perule thefe unhallowed pages. He informs us, that the firf effufions of his mufe were in coniequence of ftud jing that ancient romance, which his matler obferving him to devour with the keennefs of a famifhed man, he fnatched it from his hands and flung it in the fire; a fecond copy experienced the fame fate. What could Racine do? He bought a third, and took the precaution of devouring it fecretly till he got it by leart ; after which he offered it to his mafter with a rmile to burn, if he chofe, like the others.

The decifion of thefe bigots was founded in their v. yiniun of the immorality of fuch works. They alleged, that the writers paint too warmly to the imagination, addrefs themfelves too forcibly to the paffions; and in general, by the freedom of their reprefentations, hover on the borders of indecency. This cenfure is certainly well-founded. Many of the old romances, and even of the dramas, afed in Europe two centuries ago, are fich as common proftitutes would in this age think inLecent. But we are at prefent concerned with the origia of romance.
"The learned Fleury thinks that they were not known bil the ezth century, and gives as their original the t. llory of the dukes of Nurnitndy. Verdier, whofe fpinion is of no great weight, fays the invention of ronance was owing to the Normans of lirunce ; and that thefe fitions being originally written in the old Noraran language, they were entitled Nomances ; the name was afierwards altered to that of Romonces. The Spaniards, who borrowed them from the French, called them Romanzes, which allo did the Italians.
"Dom Riyct, one of the learned affociates of the con-
gregation of St Mur, authors of the Literary Hiftory Romance. Cays rance, fixes their origin in the loth century. He fays, that the moft ancient romance known was one which appeared in the middle of that century, under the title of Philomena, or the Beloved. T' is :omance contains the pretended exploits of Charlemagne before Narbonne. At Touloufe, he tells ae, they have pre. ferved a copy of the Philomena in its original language; that is to fay, the Romaunt or polifhed; fuch as was then fpoken at court. They preferred this language to the Latin, which was then that of the common people, but vitiated with their corruptions.
"So far have we travelled on the road of conjecture : we fhall now turn into the path of fact. It is certain that thefe compolitions derive their name from the language in which they were firt written. Abbe Iraild has given us the charader of the earlieft romances, which we fhall tranferibe; for to add to what is well expreffed, however it may plafe the vanity of a writer, feldom tends to the gratification of the reader.
- The firt romances were a monltrous affemblage of hiftories, in which truth and fiction were equally blended, bnt all withoct probability; a compolition of amorous adventures, and all the extravagant ideas of chivalry. The incidents are infinitely multiplied; deftitute of comection, of order, and art. Thefe are the ancient and milerable romances which Cervantes, in his celebrated fatirical romance of Don Quixote, has covered with an eternal ridicule."
"It is, however, from thefe productions rather in their improsed ftate, that poets of all nations have drawn their richeft inventions. The agrecable wildnefs of that fancy which characterifed the eaftern nations was caught by the crufaders. When they returned home, they mingled in their own the cuftoms of each country. The Saracens, who were men like themfelves, becaufe they were of another religion, and were therefore their enemies, were pictured under the tremendous form of Paynim Giants. The credulous reader of that day followed with trembling anxiety the Red-crofs Knight. It was thus that fietion embellifhed religion, and religion invigorated fition. Such incidents have enlivened the cantos of Ariofto, and adorned the epic of Taffo. Spenfer is the child of their creation; and it is certain that we are indebted to themfor fome of the bold and ftrong touches of Milton."

Other circumftances however have been affigned as the fources of thefe extravagant fictions. "Callies were erected to repulfe the vagrant attacks of the Normans; and in France (from the year \(768(0987\) ) thefe places became fatal to the public repole. The petty defpots who raifed thefe caftles, pillaged whocver palfed, and catried off the females who pleafed then. Rapine, of every kind, was the privilege of Lords! Mezeray obServes, that it is from thefe circumblances Iomances lave
(A) An ingenious and learned friend inquires, 'Is not the romance of the Golden Afs, by Apuleius, to be conlidired as an earlier fpecimen than that of I Ielindorus?" To this our author has no objection; lut be would not warrant any romance to be the forfl that ever was written. It is thas that tome writers, more learned than lagacious, have difcovered the firt iaventor of epiliolary correfpondence. A lady receives this honour : fuch learning is defperate! Irom the Afratic Refearches and other publications on Oriental litcrature, we we led to belicve, that the native country of romance is the caft; where it feems to have flourifed in all its extravagans grandcur from time innmerootial.

Romance. have invented their tales of knights-errant, monfters, and giants.
"De Saint Foix, in his Hiforical Effays on this fubjea, thus expreffes himfelf: 'Women and girls werc not in greater fecurity when they paffed by abbeys. The monks fuftained an affalt rather than relinquifh their prey: if they faw themfelves lofing ground, they brought to their walls the relics of fome faint. Then it senerally happened that the affailants, feized with awful veneration, retired, and dared not to purfue their vengeance. This is the origin of the enchanters, of the enchantments, and of the enchanted caflles, defcribed in romances.'
"To thefe may be added what the author of Northern Antiquities. Vol. I. p. \({ }^{2}+3\), writes, that 'as the walls of the caftles ran wiuding round them, they often called them by a name which fignified ferpents or dragons ; and in thefe were commonly fecured the women and young maids of ditinction, who were feldom fafe at a time when fo many bold warriors were rambling up and down in fearch of adventures. It was this cuftom which gave occafion to ancient romancers, who knew not how to decribe any thing fimply, to invent fo many fables concerning princeffes of grear beauty, guarded by dragons.'
"The Italian romances of the \(14^{\text {th }}\) century were fpread abroad in great numbers. They formed the polite literature of the day. But if it is not permitted to authors freely to exprefs their ideas, and give full play to the imagination, thefe works muft never be placed in the ftudy of the rigid moralif. They indeed pulhed their indelicacy to the verge of groffinefs, and feemed rather to feek than to avoid fcenes which a modern would blufh to defribe. They (to employ the expreffion of one of their authors) were not afhamed to name what God bad created. Cinthia, Bandello, and others, but chiefly Buccacio, rendered libertinifm agreeable, by the fatcinating charms of a polithed ftyle, and a luduriant imagination.
"This however muft rint be admitted as an apology for irmmoral works ; for poifon is ftill poiton, even when it is delicious. Such works were, and fill continue to be, the favourites of a nation which is figmatifed for being prone to illicit pieatires and impure amours. They arc Rill curions in their cditinns, and are not parfinonious in their price for what they call an uncaltra. ted cupy. There are many Italians, nut literary men, who are in polfeffiun of an ample library of thefe cld novelits.
" lif we pafs over the morai irregularities of theie romances, we may ditcover a richr wein of invention, which only requircs to be releafed from that rubbifh which disfigures it to become of an iavaluabie price. The 1)ecamoruns, the Hecatommiti, and the Novellas of thefe writers, made no inconfiderable fiyure in the little library of our Shakelpeare. Chaucer is a uctorious imitator and lover of them; his Knight's Tale is little more than a par uphrafe of Boccacin's 'ilefeoide. Fontaine has caught all their charms with all their licentioufiefs. From fuch works, thefe great poets, and many of their contemporaries, frequently borrowed their plots; not uncommonlr kindled at their flame the ardour of their fellius ; but bending too fubmigively to their own peculiar tafte, or that of their age, in cxtcaning tle cre, they bise not puified i: of the alloy.
"We muft now turn our contemplation to the French Rumance romances of the laft century. They were then carried to a point of perfection, which as romances they cannot exceed. To this the Aftrea of D'Urfé greatly contributed. It was followed by the illuttrious Baffa, the great Cyrus, Clelia, \&cc. which, though not adapted to the prefent age, gave celebrity to their authors. Their Ityle, as well as that of the Aftrea, is diffufe and infipid. Zaide (attributed by fome to segrais, but by Huet to Madame La Fayete) and the princefs of Cleves are tranflated, and though they are mafterpieces of the kind, were never popular in our country, and are little adapted to its genius.
" It is not furprifing that romances have been regarded as pernicious to good fenfe, morals, talte, and literature. It was in this light that they were confidered by Boileau; becaufe a few had fucceeded, a croud imitated their examples. Gomberville and Scudery, and a few more were admired; but the fatirift difolved the illufion. This he did mot effectuall 5 by a dialogue, in which he ridicules thofe citizens of a certain diftrict, whofe characters were concealed in thefe romances, under the names of Brutus, Horace Cocles, Lucretius, and Clelia. This dialogue he only read to his friends, atid did not give it for a long time to the public, as he efteemed mademoifelle de Scudery : but when at length it was publifhed, it united all the romance writers againt our fatirif.
"From romances, which had now exhaufted the pa. tience of the public, fprung novels. They attempted to allure attention by this inviting title, and reducing their works from ten to two volumes. The name of romance difgufted; and they fubitituted thore of hiftories, lives, memoirs, and adventures. In thefe works (obferves Irail) they quitted the unnatural incidents, the heroic projects, the complicated and endless intrigues, and the exertion of noble palfions; heroes were not now taken from the throne, they were fought for even amongt the lowett ranks of the people. On this fubject, I fiall juft obferve, that a novel is a very dangerous poifon in the hand of a libertine; it may be a falutary mediciue in tiat of a virtnous writer." See Novel.

ROMAGNA, a province of Italy, in the pope's territories, bounded on the north by the Ferrarefe, on the fouth by Tufcany and the duchy of Urbino, on tire eaft by the Gulf of Venice, and on the welt by the Bolognefe and a part of Tufcany. It is fertile in corn, winc, oil, fine fruits, and paltures. It has alfo mines, mineral waters, and falt-works, which make its principal revenue. Ravenna is the capital town.

ROMANIA, a province of Turkey in Europe, bounded on the north by Bulgaria, on the eaft by the Black Sea, on the fouth by the Archipelago and the fea of Marmora, and on the weft by Macedonia and Bulgaria; beirg 200 miles in length and 150 in breaduh. It was formerly called Thrace, and is the principal and largeft of all the provinces the Turks porfefs in Europe. It is a fivifful country in corn and patlures, and there are mines of filver, lead, and alum. It is divided into three great governments or fangiacates; namely, Kirkcl, of which Philipoli is the capital; Galpoli, whofe capital is of the fame name ; and Byzantium, or Byzia, or Viza, of which Confastinople is the capital, The Turks befow the

ROM1.1NO (Ginlia), a famous painter, was the difinte of Raphach, who had fuch anf afleation for him, that he appointed him, with John Francis, Pemn, his heir. His conceptions were more extrdordimary and more e!evated th.un even thofe of his malter, but wot do na:trall. He was wonderful in the choice of attitades; but did not perferiy underitand the lights and 1hades, and is frequently lau hand ungraceliu. The foldo of his draperies, fays Du Fremuy, ane neither bsautifill nor great, eafy ner natural, but all extrava\(\mathrm{g}_{\mathrm{an}} \mathrm{an}\), lite the fantallical habits of comedians. He was, husever, fuperior to moft painters, by his profound knowledge of antiquity; and, by converfing with the works of the molt excellent poers, particulaly Homer, he made himferf mafter of the qualifications neceffirily required in agreat defigner. Julio Romano was alfo well ikilled in architecture. He was employed by cardinal de Medicis, who was afterwards pope under the name of Clement VII.; and afterwards went to Mantua, whither he was invited by Frederic Gonzaga, marquis of that city, in order to avoid his being jutly punithed for his having drawn at Rome the detigns of \(20 \mathrm{ob}-\) feenc plates, engraved by Mirk Antony, to which 1. retine :Idded the fame number of fonnets. Julio Romano embellilhed the city of Mantua with many of his performances both in painting and architecture; and clied in that city in 1545 , at \(5+\) years of age, much regretted by the marquis, who had an extraordinary friendhip for him.

ROME, a very ancient and celebrated city of Ita1y, fituated on the siver Tiber, in E. Lung. \(13^{\circ}\). N. Lat. 41.45 . once the capital of the greatelt empire in the world; and famons in modern hillory for boing the centre of an ecclefiatical tyranny, by which for many ages the greateft part of the world was held in fubjec-

The ancient Romans derived their origin from \(\mathbb{E}\) neas the 'Irojan hero : and though fome hitorians pretend to treat his voyage into Italy as a mere fable, yet no fufficient reafons for rejecting this account have been offered, nor has any more probable hiltory of the origin of the Roman name becn given; fo that, without entering into the difpute, we fhall proceed to the hiftory of AEneats and his fuccelfors as they are recorded by the sencrality of Latin writers.

When the Greeks, by the treachery of the fons of Autenor, or by whatever other means it happened, were become maters ot Troy, सneas with the forces under his command retired intu the fortrefs of the city, and deiended it bravely for fome tine ; but yielding at NEnea fies length t) necelfity, he conveycd away his gods, his fafrom Iruy ther, wife, and children, with every thing he had that tomount wats valuabie, and, followed by a numerous crowd of 1 lia.

Trijuns, Hed to the thongy places of Mount Id.. Hither all nofe of his countrymen, who were more anxions than the refl to preferve their liberts, Anched to him frum the feveral triwno of Troas. His army thus al gmented and advantageoufly poned, he continued quite, witing for the dey arture of the Greeh, who, it was imanined, would return home as foom ite they had pilluged the country. But thate, after they had entiched themelve, with the fpoils of Troy and of the neightouring tomis, turned their arms againtt the fu-
gitives, refolving to attack them in their Arong-hold's upon the monnain. AEneas, to avoid the hazard of being forced in his latt retuge, had recourfe to negociation; and, by his heralds, intreated the enemy not to contrain himi to a battle. Peare was granted him, on cunditon that he with his followers quited the Trojan territoties; and we Greeks, on their part, proni- and leaves ted not to molell him in his retreat, but to let him it dafcly pats through any comutry within the extent of their dumination.

Upon this alfurance Aneas eqquipped a fleet, in order to feek a fentement in fome foreign 1 und. We are told, that at his departure he lett his eldelt fon Afcanius with the Daly lites, a people of Bithynia, who defired to have him ior their hing; but that the young prince did not remain long with them: for when Scdmandrius (Allyanax), wita the relt of the Hecturida whom Neoptulemus permitted to return hone from Greece, repairel to him, he put himelf at their head, and led them back to their native country.

The 'Trojan having crolfed the Heliefpont, arrived in the peninfula of Pallenc, where he built a city, called froen hime Encia, and left m it a part of that multitude which had fullowed him. From thenee he failed to Delos: and thence to Cythera, where he ereited a temple to Venus. He buile another to the fame goddefs in Zacynthus, in which ifland he likewife inftituted games, called the rates of JEncas and Vinus: the Itatues of both, fays Dionylius, ate ftanding to this day. In Leucas, where the Trojans landed, was to be feen, in the fame author's time a temple creâcd to Venus the mother of Fixeas. Nor were Actium and Ambracia without monments that teltified his arrival in thofe places. At Dodona were found brazen vafes, upon which the name of the Trojan hero, who had made an olfering of them to Jupiter, was engrayen in old characters. Not far from Buthrotos, in Epirus, a Trojan camp which had eicaped the injuries of time, retained the name of Troja. All thefe antiquities, ftill fublifting in the reign of Augultus, were then looked ufon as indifputable proni's of Aisneas's voyage to Ep:rus: " and that he came into Italy (adds the fame Dionyfus) we have the concurrent tellimony of all the Romans; the ceremonies they obferve in thair facrifices and feitivals bear witnefs to it, as alfo the Sibylline books, the Pythian oracles, and many other things which nobody can reafonably reject as invented merely for omament."

The firtt land of Italy which Eneas male, after crolling the ionian \{ca, was cape Minerva, in lapy:in; and here he went on foore. Sialing afterwards from hence, and coalling along the louth-eatt of Italy and the caft and fouth bides of Sicily, he arrived with his Heet cither by ch ice or by itreis of weather at the port of Drepanum in that ifland. Elymus and Iegetlus, who hal efeaped irum Troy a little before him, had brougit a Trojan colony to this place. Eneas augmented it by a good number if his followers, whom, pleafed to have lound a fafe retting place after many dangers and fatiguing voyages, he willingly left behind him at their requett; thoug certainanhors pretend that he was comtrained to it by the dilliculty of tramporting them, because fome Truju women, weaty of the fed, had burnt a confiderable part dhis thips.

REneas, Javing Drepanum, tleered his courfe for It:ily

\section*{R O M}

Rome.

4 1.ands in Italy.

Italy acrofs the Tyrrhenian fea. To the cape where he firt landed, he gave name Palinurus, from one of his pilots who died there. The little illand of Leucafia, not far diflant, whither he failed next, got its name is like manner from a daughter of IEneas's fitter, who there ended her days. The port of Mifenum, the ifland of Pruchyta, and the promontory of Cajet:i where he fucceffively arrived were fo called from being the but rial places, the firt of a noble Trojan his companion, the fecond of his kirffwoman, and the third of his nurfe. At length the Tr jan prince and his chofen band finithed their tedious and painful voyages on the coafl of the fince famous Latium. This was a fmall territory on the calt fide of the siver Tiber, containirg a part of the profent Caniprgna di Roma: Latinus was the king of it ; his capital town, Laurentum; his fubjects, a people who, till his time called Aborigines, had from him taken the name of Latins. Here, far removed from their implacable ercmies the Greeks, Feneas and his followers undertonk to raife a fecond Troy: they fortified a camp near the month of the Tiber, gave it the name of Tray, and flattered themfelves with the hopes of a quiet fettlment, and a period to :1] their unhappy adventures.

When Nneas arrived in Italy, Latinus was engaged in a war with the Rutuli, a neighbouring people, in which he was attended but with very indifferent fuccefs, when news was brought him that a foreign army had made a defcent on his coal?s, pillaged the maritime part of his dominions, and were fortifying themfelves in a camp at a fmall diftance from the fea. Hereupon he marched againft them with all his forces, hoping to ollize them to reimbark and abandon his dominions, without mecting with any great refiftance from a band of vagabonds, as he fuppofed, or pirates, come only to feck for plunder: but finding them, as he drew near, well-almed, and regularly drawn up, he theught it advitathe to forbear engaging troops that appeared fo well difciplined; and, inftead of venturing a battle, to defire a parley. In this conference Latinus unjerfanding who they were, and being at the fime time flruck with ierror, and touched with compation fir thofe brave but unfortunate men, entered into a treaty with them, and affigned them a traft of la?d for a fettement, on condition that they floculd employ their arms and exert their valour in detence of his donminions, and look upon the Rutuli as a common enemy. This condition AEncas readily accepted ; and complied with his eng, gement fo faithfully, that Latunus came at length to repole an entire confidence in the Trojan: and in promf of it gave him Lavinia, his daughter and only chiid, in marriage, fecuring to him by that me:as the fuccellion to the throne of Latium. Neneas, to tettify his gratinde to Latimus, and affection for Lavinia, gave her name to the camp the had pitclied; and intlead of Troy called it Janirilum. The Trojans followed the example of their leader ;and by making alliances with Lar in families, becume, in a thort lime, one and the fame people with the Latins.

In the mean time Turnus, the queen's nerhew, who hadbeen broughe up in the palace under the eye of Latinus, and entertained hopes of marrying Lavinia and finceediag to the throne, feeing the princets betiowed on a ftringer, :and all his views defcated, went
over to the Rutuli ; and by Aitring them up, brought on a battle between them and the Latins, in which both he and Latinus were killed. Thus Encas, by the death of his tather-in-law, and by that of a troublefome rival, come into the quiet pofieffion of the kingdom of Latium, which he governed with great wifdom, and tranfmitted to his polterity.
Eneas is faid to have reigned three years; during which time he eftablifhed the rorfhip of the gods of his own country, and to the religion of the Latins addeal that of Troj. The two Palladiums, which had been the protectors of that city, became the tutelary deities of Lavininm, and, in after ages, of the whole Roman empire. The worlhip of Vetta was likewife introduced by Aneas; and virgins, from her called Vefals, were appointed to keep a fire continually bunning in honour of that goddets. Jupiter, Venus, and many other deities who had been revered in Troy, became, in all likelihood, known to the Latins by means of Kneas: which gave occafion to the poets of reprefenting him under the charafter of a pious hero.
While 不neas was thus employed, the Rutuli, ancient enemies of the Latin name, entering into an alliance with Mezentius king of the Tyrthenians, took the field with a defign to drive out thofe new-comers, of whofe power they began to conceive no fmall jealoufy. 太neas marched out againft them at the head of his Trojans and Latins. Hereupon a battle enfued, which lafted till night; when EEneas being pufhed to the banks of the Numicus, which ran clofe by Lavinium, and forced into that river, was there drowned. The Trojans conccalcd his body; and pretending that he had vanifhed away on a fudden, made him pafs for a deity among his credulons fubjects, who accordingly erected a temple to him under the title of \(\mathrm{Fup}_{\mathrm{u}}\) iter Indiges.

Upon the death of Reneas, his fon Eurylcon called Succeedec alfo Afcanius and lilius, afcended the throne; but as by his fon the young king did not think it advifable to venture Afcaniuso a battle in the very begiming of his reign, with a formidable enemy, who promifed himfelf great fucce \(f\) from the death of Eneas, he had the prudence to confine himfelf within the walls of Lavinium, and to try whether he could, by an honourable treaty, put an end to fo dingerous a war. But the haughty Mezentius demanding of the Latins, as one of the conditions of a peace, that they fhould pay him yearly, by way of tribute, all the wine producel in the territory of Latium, Alcanius rejeited the propofal with the utmort indigation; and having caufed all the rines throughnut his cominions to be confecrated to Jupiter, and by that means put it out of his power to comply with the enemy's reçneft, he refolved to make a vigorous filli, and try whether he could, by force of arms, bring the infuling fyrthenian to more reafonable terms. The main body of the enemy's army was encarped at fume diltance from Lavinium ; but Laufus, the fon of Mezentius, with the flower of their youth under his command, lay entrencled at the very gates of the city. The Trojans, who had been long accufomed to make vigorous fitlies, marching out in the night, attacked the poft where Laufus commanded, forced his entrenchments, and obliged the tronps he had with him to fave themfelves by flying to the main body of the army entcamped on the plain; but the unerpected arrival and

\section*{K O M} Ruishi.
overthrow of their advance-stuard firtuck them with fuch terror, that, inftead of itclipmg the flight of their companions, they fled with them, in great diforder, in ile neighbouring mountains. The latins purfued them, and in the purfuit Lanfus was killed: whoie death to difoourdged Mezentius, that he inmediately fied for peace ; which was granted him, upon condition, that for the future the 'liber thould be the buundary between the Latin and He:runian territeries.

In the manan time Lavinia, who had been left with child by Eneas, entertaining a frong jealouty of the

His kinsrefito Le vima and hice full.

30 capital This he made the place of his refidence, and the Aiba, from a new kingdom, calling it Alla Lo:tga; fom a white fow, which we :rre told Eneas found in the place trhere it was built ; and Longa, to difinguilh it from arother town of the fame name in the country of the Marfi ; or rather, becaufe it cxtended, without having nuch breadth, the whole length -1"a lake near which it was built. It was 30 years af. ser the buiding of Lavinium that Afcanius fixed his abode at Alba; and there he died, after a reign of about \(3^{8}\) years, 12 of which he had relided at his new irttement. He left a fon called Ioliss ; fo that between hini and Sylvius lay the right of fucceltion to the Latin throne; the latter being the fon, and the former the grandfon of 压neas.
'The Latins not thinking it their intereft to continue divided, as it were, into two fates, refolved to unite Alba and Lavinium into one fovereignty ; and as Syl-
it vius was horn of Lavinia the daughter of Latinus, and Refignsthe had thereby an undoubted title to the kingdom of his big.cm. grandfather, whereas the other was but the fon of a Itranger, the Latins befowed the crown on Sylvius; and, to make lulus fome amends, decreed to him the fovereign power in affairs of religion; a power which thenceturth continued in his family. Sylvius was fucc.ceded by 13 kings of the fame race, who for near 400 years reigncd at Alba: but we fance know any thing of them befid:s their names, and the gears of their refpective reigns. Eicas \(S y l v i u s d e d\), after a reign of 22 years. His fon, called alfo REneas Sylvius, governed Latium 31 years. Latimus Syleius, who fuccceded him, fuased the lepere for the ipace of 51 gearsAlba seigned 39 ; C.ıpetus, by Livy ramed Alys, 26; Capis, 28; and Capetus, 13. 'liberinus, who fucceeded him, engaged in a war which proved fatal to him; for in at battle which wis fought on the banks of
the Albula, lie was forced into thit river and drowned. From lim the river took the rame of Tiler, which it has borne ever fince. Agrippa fucceeded Tiberinus after a reign of eight years; and left the throne, which
he hac' heid 48 rears, to Alladius; who ecigned 87 , and

\section*{Rome.} was fuccceled by A ventinus, who left lis name to the hill Aventinus, where be was interred. l'rocas, who fuccoeded him, ind reigned a 3 years, was the father of Numisor :and \(\Lambda\) mulus ; and at his death begucathed the throne to his elder fon Viumitor. But Amulits, who furpalfed lis bother in counize and underllanding, drove him fiom the throne; and to fecure it to himfelf, murdered NEgeftus, Nomites's anly fon, and confecrated his datullter Rliea Sylvia to the wothip of Vefta, by which lise was cbl:ged in perpetual virginity. But this precaution proved ineffectual; for as the Vertal was going to a neighbonting fpring to fetch water for the perfomance of a focrifice to Mars, fhe was met and ravilhed by a man in a military habit, like that in which the god Mars is reprefented. Some authors think that this counterfeit Mars was a lover cone thither by her appointment ; athers charge Amulius himfelf with uling this violence to his niece, not fo much to giatily his luft, as to have a pretence to deflroy her. For ever after lee caufed her to be carefully watched, till the was delivered of two fons ; and then exaggerating her crime in an aftembly of the people, he prevailed upon them to fentence her to death, and to condenin the fruit of her criminal amrur to be thrown into the Tiber. The fentence againtt Rhea was, according to of Romufome authors, changed by Amulius, at the requeft of lue and Ke lis daughter Antho, into perpetual confinement, but mus. executed againf the twins; who being laid in a wooden trough, and carried to the font of Mount Palatine, were there turned adrift on the 'Iiber, which at that time overflowed its banks. But the wind and ftream proved both in farourable, that at the fall of the water the two infants were Jeft jafe on the ftrand, and were there hap. pily found by Fduftulus, the chief of the king's fhepherds, and fuckles by his wife Acca Lauremria, who for her diforderly life was called Louga; and this probably gave rife to the fabulous miracle of their being nurfed by a wolf.

As Fauftulus was probably well acquainted with the birth of the twins, he took more than ordinary care of their education, and fent them to Gabii to be infructed there in Greek literature. As they grow up, they appeared to liave fomething great in their mien and air which commanded refpect; and the afcendant which they affumed over the other fhepherds made them dreaded in the forcfts, where they exercifed a fort of empire. A quarrel happening between the herdfmen of Amulius and thofe of Numitor, the two brothers took the part of the former againt the latter; and fome blond being fled in the fray, the adverfe party, to be revenged on Romulus and Remus (lor fo the twins were called), on the feftival of Lupercalia, furprifed Remus, and carried him before Numitor, to be punifhed according to his deferts. But Numitor feeling himfelf touched in the prifoner's favour afked him where he was born, and who were his parents. His anfwer immediately fruck Numitor with a lively remembrance of his two grandfons; their age, which was abrut 88 years, pgrecd with the time when the two irfants were expoled upon the Tiber ; and there needed no rioue to change his anger' into tendernefs.

In the nean time Romulus, eager to refue his brother, and purfie thofe who had carried him off, was jreparing to be revenged on them; but Fauthas diffuaded

Rome.
fuaded him from it; and on that occafion, difilofing to him his birth, awakened in his breall fentiments worthy of his estraction. He refolved, at all adventures, to attempt the delivering of his mother and grandfather from oppreffion. With this view he affembled the country people, over whom he had alfumed a kind of fovereignty, and engraged them to come to the city on an appointed daj, and enter it by different gates, provided with arms, which they were to conceal. While Romulus was thus difpoling every thing for the execution of his defign, Numitor made the fame diftovery to Remus concerning his parents, and the oppreffions they groaned under; which fo fired him, that he was ready to embark in any enterprile. But Numitor took care to moderate the tranfports of his grandion, and only delired him to acquaint his brother with what he had heard from him, and to fend him to his houfe. Romulus foon came, and was followed by Fautulus, who took with him the trough or fliff in which the twins had been expofed, to thow it to Numitor: but, as the fhepherd betrayed an air of concern and earneftnefs in his looks, he was ftopped at the gate of the city, led before Amulius, and examıned concerning his burden. It was eafly known by its make and indctiption, which was ftll legible; and therefore Fauftulus owned what it was, and confulied that the twins were living; but, in order to gain time, pretended that they were feeding flocks in a remote defert. In the mean time, the ufurper's death being reiolved on, Remus undertook to raite the city, and Romulus to inveft the king's palace. The country people came at the time appointed, and formed themelves into companies each conlifting of 100 men. They had no other enfigns but bundles of hay hanging upon long poles, which the Latins at that tinue called manipuli; and hence came the name of manipulares, originally given to troops railed in the country. With this tumultuous army Romulus befet the avenues of the palace, forced the guard, and having killed the tyrant, after he had reigned 42 years, reftored his grandfather sumitor to the throne.

Atfairs being thus feitled at Alba, the two bro. thers, by the adrice of Numitor, undertook the found. ing of a new colony. The king beftowed on them thore lands near the Tiber where they had been brought up, fupplied them with all manner of inftrumenis for breaking up ground, with flaves, and bealts of burden, and granted full liberty to his fubjects to join them. Hereupon molt of the Trojans ot whom there fill remained 50 families in Auguilus's time, chole to follow the fortune of Romulas and Remus, as did alfo the inhabitants of Palantiam and Saturnia, two fmall towns. For the mole ipeedy carrying on of the work, it was thought proper to divide thoie who were to be employed in the building of the city into two companies, one under the command of Romulus, the other of Remus; but this divifion, which was defigned purely with a view to the public welfare, and that the two parties might work by way of emulation, gave birth to two factions, and produced a jealouly between the two brothers, which broke out when they came to choofe a place for the building of their new city; for Remus was for the Aventine, and Romulu, for the Palatine mount. Upon which, the matter being referred to their grandfither, he advifed the contending parties to huve recouric to the gods, and to Vol. XVI.
put an end to the difpute by aggury, to which he was himfelf greatly addicted. The day appointed for the ceremony being come, the brothers pulted themfelves each upon his hill; and it was agreed, that whoever fhould fee the firt fight, or the greatel number, of vultures, fhould gain his caule. After the two rivals had waited fome time for the appearance of a favourable omen, Romulus, before any had appeared, fent to acquaint his brother that he had feen tome vultures; but Remus, having actually feen fix, while his brother's meffengers were yet on their way, haftened, on their arrival, to mount Palatine, to examine the truth of what they had told him. He had no fooner got thither, than by an unexpected good fortune twelve vultures appeared to Romulus. Thefe he immediately fhowed to his brother; and, tranfperted with jos, defired him to judge himfelf of the truth of what his meffengers had told him. However, Remus difcovered the deceit; and, being told that Romulus had not feen the twelve vultures till after he had feen fix, he infifted on the time of his feeing them, and the other on the number of birds he had feen. This widened the breach between the two brothers; and, their parties being divided, while each man efpoufed the caufe of his leader, the dipute grew fo warm, that, from words they came at length to blows. The thepherd Fautulus, who was equally dear to both the brothers, endeavouring to part the combatants, was by an unknown hand laid dead on the fpot. Some writers tell us, that Remus Death of likewife lof his life in the fray; but the greater num- Remus. ber place his death later, and fay that he was killed by one Fabius, for having, in derifion, leaped over the wall of the new city: but Livy fays, the more common report was, that Remus iell by the hand of his brocher.

Romulus, being now head of the colony, by having Foundation got the better of his brother's party in the late engage- of Rome. ment, applied his thoughts wholly to the building of the city, which he propofed to call atter his own name. He chose mount Palatine for its fitnation, and performed all thofe ceremonies which the fuperfition of the Hetrurians had introduced. He firt offered facrifices to the gods, and ordered all the people to do the fame: and from that time decreed, that eagles lhould be the aufpices of his new colony. After this, great fires were kindled before their tents, and all the people leaped through the flames to purify themfelves. When this ceremony was over, they dug a trench round the fpot where the alfemblies of the people were atterwards held, and threw into it the firit-fruits of whatever they were allowed to make ufe of for food: every man of the colony was ordered to caft into the fame trench an handful of earth, brought either from his own or tome neighbouring country. The trench they called \(M T\) wndus, that is, the zoorld, and made it the centse round which the city was to be built. Then Romulus, johing an ox and a cow to a plough, the coulter whereof was brafs, marked out, by a deep furrow, the whole compafs of the city. Thefe two animals, the fymbols of marriage, by which cities are pecpled, were afterwards flain upon the altar. All the people followed the plough, throwing inwards the clods of earth which the ploughfhare fometimes turned outwards. Wherever a gate was to be made, the plough was lifted up, and carried; and hence came the Latin word, porta, "a gate," de. \(\underbrace{\text { Rome. }}\) \(\underbrace{\text { Rome. }}\) --

rived from the verb portare, "to carry." As momnt Polatine flood by itfelf, the whole ras inclofed within the line made by the plongh, which formed almot the figure of a fquare ; whence, by Dionylius Halicarnaf fenlis, it is called Roma Dualrata.

As to the exach year of the foundation of Rome, there is a great difagrement among hillorians and chronologers. Fabius littor, the moft ancient of all the Roman writers, places it in the end of the Seventh Olympiad; this is, according to the computation of Ufher, in the year of the world 3250 , of the flood 1600 , and it 8 before the Chriftian zra. The Romans, if we may fo call them, began to build, as Plutarch and others inform us, on the zat of April; which day was then confecrated to Pales, goddeis of the thepherds; whence the feftival of Pales, and that of the formatation of the city, were afterwards jointly celcbrated at Rome.
When Rome had received the utmof perfection which its poor and rude founder could give it, it confinted of about 1000 houfes, or rather huts; and was properly fpeaking a beggarly village, whereof the principal inlahitants followed the plough, being obliged to cultivate wth their owa hands the ungrateful foil of a barren country which they had fhared among themielves. Even the walls of Romulus's palace were made of rufhes, and covered with thatch. As every onc had chofen his ground to build upon, without any regard to the regularity and beauty of the whole, the itrects, it we may fo call them, were both crooked and narrow. In fhort, Rome, till it was rebuilt after the burning of it by the Gauls, was rather a diforderly heap of huts, than a city buite with any regularity or order.

As foon as the building of the city was finilhed, Romulus affembled the people, and defired them to choofe what kind of government they would obey. At that time monarchy was the unanimous voice of the Romans, and Romulus was elected king. Before he afcended the throne, however, he confulted the will of the gods by augury; and having received a favourable anfwer, it thence became an eftablithed cultom to have recourfe to augury before the raifing any one to the dignity of king, prieft, or any public employment. After this he applied himfelf to the eftablifhment of good order and fubordination among his fubjects. He put on a habit of difinction for himfelf, appointed 12 liftors 10 attend him as guards, divided his fubjects, who at this time confifted only of 33,000 men, into curic, decuria, patricians, plebeicnss, putrons, chichts, \&c. for an account of which, dee thefe articles as they occur in the order of the alphabet. After this he formed a fenate conlifting of 100 perfons, chofen from among the patricians; and a gruard of 300 young men called colires, who attended the king, and fought cither on foot or on horfeback as occafion required. The king's office at home was to take care of religious affars, to be the guardian of laws and cufoms; to decide the weightier caufes between man and man, referring thofe of fmaller moment to the fenate ; to call together the fenators, and affemble the perple, firf delivering his own opinion concerning the affair he propofed, and then ratifying by his confent that was agreed on by the majarity. Abrotd, and in the time of war, he was to command the army with abfinhte authority, and to take care of the public money. The fenate were not only to be judges in mattcts of fimall
importance, but to debate and refolve upon fuch public aflairs as the king propofed, and to determine them by a plurality of voices. The people were allowed to crente magiftrates, enact laws, and refolve upon any war which the king propofed; but in all thefe things the confent of the ienate was necelfary.

Romulus nest procceded to fettle the religious af. fairs of his people. Many of the Trojan and Phrygian deities were added to thofe whom the Aborigines or Italian natives already worthipped. He chofe priefts, inflitured fentivals, and laid the foundation of a regular fyttem of religion; after which, as his colony was ftill thinly peopled, he opened an afylum for fugitive flaves, homicides, outlaws, and cebtors. Thefe, however, he did not at firft receive within the walls, Lut appointed for their habitation the hill Saturnius called afterwards Capitolinus, on which te erected a temple to a divinity of his own invention, whom he named the Afylean god, under whofe protection all criminals were to live lecurely. But afterwards, when the city was enlargen, the afylum was inclofed within the wal s, and thofe who dwelt in it included anong the citizens of Rome.

When Romulus had thus fettled every thing relating Rape of the to his new colony, it was found that a fupply of wo- sabine wo men was wanting to perpetuate its duration. This oc- men. cafioned fome difficulty; for the nei hbouring mations refufed to give their daughters in marriage to fuch a crew of vagabonds as had ietuled in Rome; wherefore Romulus at laft retolved on the full wing expedient. By the advice of his grandfather Numitor, and with the confent of the fenate, he proclaimed a folemn fealt and public games in honour of the Equeftrian Nertune called Confus. This occafioned a great concourfe of people, who flocked from the adjacent farts to behold thefe pompous fhows, together with the new city. But, in the midt of the folemnity, the Romans, rufhing in with their fwords drawn, feized all the young women, to the number of 683 , for whom Romu'us chole butands. Among all thofe who were thus feized, only one married woman, named Herfilia, was found; and Romulus is faid to have kept her for himfelf.

This violence foun brought on a war with the neigh- Occafions bouring nations. Acron king of Cænina, a city on war with the confines of Latium, having entered mo a league the neighwith the inhabitants of Crnftuminum and Antenno, bouring invaded the Roman territories. Romulus marched nations. againft them without delay, defeated the confederate army, killed their king in fingle combat, decreed himfelf a triumph, and confecrated the fpoils of Acron to Jupiter Feretrius, under the name of Opima Spolia. The city of Crnina was razed to the ground, and the inhabitants tranfplanted to llome, where they were admitted to the privileges of citizens. The King then marched with one legion (confifting at this time of 3000 foot and 300 horfe) againf the Cruftumini and Antemnates, both of whom he defeated in batte, and tranfplanted the inlabitauts to Rome; which being incapable of holding fuch a number, Romulus took in the hill Sturnius aboven:entioned, on the top of which he built a citadel, committing the care of it to a noble Reman named Iarepeius. The citadel was furrounded on all fides with ramparts and towers, which equally commanded the city and coumry. From the foot of the hill Saturnms a wall was carried on quite to the Tiber, and a gate

\section*{R O M}

Rome. \(\xrightarrow{ }\)
opened in it named Carmentalis, from Carmenta the mother of Evander, who either lived there, or had fome chapel or altar erected to ber.

Romulus had now become fo formidable to his neighbours, and had fo well eftablithed his reputation for clemency, that feveral cities of Hetruria voluntarily fubmitted to him. Colius, an Hetrurian general, led the troops under his command to Rome, and fettled on an hill near the city, which from him took the name of Mount Cxlius. The Sabines, however, not in the leaft difmayed at this increafe of the Roman forces, fent a deputation to Romulus, demanding reftitution of the young women who had been carried off; and, upon his refufal, marched to Rome with an army of

Invafion of their bing Titus Tatius, Romulus, having received the Sa- fupplies trom Numitor and from Hetruria, likewife bines. took the field, with 20,000 foot and 800 horfe, with whom he feized an advantageous poft, and fortified himfelf fo ftrongly, that he could not be attacked. The Sabine monarch, perceiving the military fkill of Romulus, began to be apprehenfive of the event ; but was
\(2 \%\). 2 extricated nut of his difficulties by the treachery of The citadel extricated out of to the governor of the citadel, who agreed to betray that important fortrefs to the enemy, on condition of being rewarded with the bracelets which the Sabines wore on their left arms. But when once they became matters of this impurtant place, they are faid to have crufhed Tarpeia under the weight of their bucklers, pretending that thus they difcharged their promiie, as they wore their bucklers alfo on their left arms. The poffeflion of the citadel enabled the Sabines to carry on the war with more fuccefs; but, at laft, in a general engagement, they had the miffortune to be driven back into the citadel, whither they were purfued by the Romans, who expected to have retaken that important poft ; but the enemy, rolling down great tones from the top of the hill, wounded Rumulus on the head, fo that he was carried infentible out of the field of battle, while, in the mean time, his troops were repulfed, and purfued to the very gates of Rome. However, the king foon recovering himfelf, encouraged his routed troops, and drove the enemy back into the citadel. But while the two nations were thus fiercely contending, the women, for whofe caufe the war had been commenced, undertook the office of mediators; and having obtained leave from the fenate, marched in: a body to the camp of the Sabines, where they pleaded the caule of their hufbands fo effectually, that a treaty of union between the two nations was fet on foot, and a peace was at latt concluded, on the following terms. 1. That the two kings thould reffede and reign jointly at Rome. 2. That the city fhould itill, from Rumulus, be called Rome; but the inhabitants 2 virites, a name till then peculiar to the Sabines. 3. That the two nations fhould become ore; and that the Sabines hould be made free in Rome, and enjoy all the privileges of Roman citizens. As Rome was chiefly indebted for this increafe of her power and fplendor to the Sibine women, honourable privileges and marks of ditinction were allowed them. Every one was commanded to give way to them; in capital caufes they were exempted irom the jurifdiction of the ordinary judges; and their children were allowed to wear a golden ball hanging from their recks,
and a particular kind of robe called pratexta, to difinguilh them from the vulgar.

The two kings reigned with great harmony for the fpace of five years; during which time the only military expioit they accomplifhed was the reduction of the city of Cameria at a fmall ditance from Rome. Four thoufand of the Camerini were tranfplanted to Rome, and a Roman colony fent to repeople Cameria; foon after which the Sabine king was murdered by the Lavinians, on account of his granting protection to fome of his friends who had raviged their territories. The Lavinians, fearing the refentment of Romulus, delivered up the affalins into his hands; but he fent them back unpunifhed, which gave occafion to fufpect that he was not difpleafed with the death of his colleague.

Soon after the death of Tatius, Rome was afllisted with famine and peftilence, which encouraged the Camerini to revolt; but Romulus marching againft them fuddenly, defeated them with the lofs of 6000 men. After which he attacked the Fidenates, whofe city ftood about five miles from Rome, took their capital, and made it a Roman colony. This drew upon him the refentment of the Veientes, a powerful nation in the neighbourhood, who claimed Fidenæ as within their jurifdiction; but their forces being defeated in two engagements, and a great number of them taken prifoners, they were obliged to fue for peace. Romulus granted them a truce for 100 years, on condition that they delivered to him feven fmall towns on the Tiber, together with fome falt-pits near the mouth of that river, and fent 50 of their chief citizens as hoftages to Rome. The prifoners taken in this war were all fold for flaves.

The remaining part of the life of Romulus was fpent in making laws for the good of his people; but towards the latter end of his reign, being elated with fuccefs, he began to enlarge the bounds formerly fet to his prerogative, and to behave in an arbitrary manner. He paid no longer any regard to the voice of the fenate, but affembled them only for form's fake to ratify his commands. The fenate therefore confpired to deAtroy him, and accomplifhed their purpofe while he was reviewing his troops. A violent form of hail and thunder difperfed the army; and the fenators taking this opportunity, when they were left alone with the king, initantly killed him, and conveyed his body out

Rome. Rome. Tardered. of fight. Some writers tell us, that, the better to And likeconceal the fact, they cut his body in pieces, each of wife Rothem carrying away a part under his robe; after which mulus. they told the multitude, that their king was on a fuidden furrounded by flame, and fnatched up into heaven. This fratagem, however, did not fatisfy the foldierj, and violent difturbances were about to enfue, when Julius Proculus, a fenator of great diftinction, having alfembled the Curix, told then that Romulus had appeared to him, and enjoined him to acquaint the people that their king was returned to the gods from whom he originally came, but that he would continue to be propitious to them under the name of Quirinus; and to the truth of this ftory Julius fwore.

Romulus reigned, according to the common computation, 37 sears: but fome hiflorians reduce the length of his reign to little more than 17 ; it being very unlikely, as they obferve, that a prince of fucli an active difpofition flould perform nothing worthy of

\section*{R O M}

His dearh folluwed by an infirregaum
record during a period of 20 yeare. Be this as it will, terscgnum, during which the fenators, to prevent anarchy and confulion, to \(k\) the government into their own hands. 'I'atius added anc ther handred to that body: and thefe \(2 c o\) fenators divided thendelves intu decurics or tens. Thefe decusies drew luts which fhoud gorem firit ; and the decury to whole lot it fell enjoyed the fupreme authosity for five days; yet in fuch a munner, that one perion only of the governing decury had the enligns of iovereignty a: a time. To thelic another decury fucceded, earh of them litting on the throne in his turn, Sce. But the people foon growing weary of fuch frequent change of matters, obliged the fenate to refolve on the election of a kirg. The fenate referred the election to the people, and the people to the fenste, who at laft undertook the talk. Some difficulties, however, occurred: the Romans did not choofe to be fuhject to a Sabine; and the Sabines, as they had been fubject to Romulus after the death of Tatius, infifted that the king floould be chofen out of their nation. At laf it was agreed, that the ling fhould be a Sabine, but that the Romans thould make the choice.

In confequence of this determination, the Romans elected Numa P.mpilius, an aultere philofupher, who had married Tatia, the daughter of Tatius the late king. After the death of his wife, he gave himfelf en-
tirely up to philofophy and fuperfition, wandering from folitude to folitude, in fearch of tacred woods and fountains, which gave the people a great opinion of his fanctity. The philufopher at firl rejected the offer of the kingdom ; but being at laft prevailed upon, he fet out for Rome, where he was received with loud acclamations, and had his election unanimontly confirmed by the fenate.

The reign of Numa is by no means memorable for battles or conquelts. He was averíe to war ; and made it his ftudy to foften the manners of the Romans, rather than to exalt them to fuperionity over their neighbours. He difmiffed the celeres, encouraged agriculture, and divided the citizens into difinct bodies of tradefmer.. This laft meafure he took on purpofe to abolith the diftinction between Romans and Sabines, which had hitherto rent the city into two fastions; and this effectually anfwered his end : for now all of each particular profellion, whether Romans or Sabines, were obliged to affociate together, and had each their refpertive courts and privileges. In this divition the mubians held the firtt sank, becaufe they were emfloyed in the offices of religion. The gol imiths, carpenters, curriers, dyers, taylors, \&c. formed alto diftinct commutites; and were allowed to make byc. laws among therufelves, to have their own fettivals, parsicular facrifices, \&c.

Though Numa himfelf is faid by l'iutarch to have brad pret!y juft nutions of the Supreme Being, he neverthelefs added innumerable fuperfitions to thote he found in Rome. He divided the miniters of religion into eight claftes, appointing to each their office with the grattelt precifion; he crefted a tenyle to Janus, the dymbol of prodence, which was to remain oper, in time of war, and to be that in time of peace. Another temple was crefted to Bona Fides; and he inrented a new kind of deitics called Dii Termini, or
boundaries, which he caufed to be placed on the horders of the Roman ftate, and of each man's particular lands.- 'lhe laft refornation which Numa undertook, was that of the kalendar. Romulus had divided his year into ten months, which, according to llutarch, lad no certain or equal number of days; fome confitting of 20 , fome of 35, \&ic. However, by other hiftorians, we are informed that he allotted to March, May, Ouintilis, and Otober, 31 days; to April, June, Sextilis, November, and December 30 ; making in all 304 days. But Numa being better acquainted with the celeftial notions, added to thefe the two months of January and February. 'To compofe thefe two months he added 50 days to the 304 ; and thus made the year anfwer to the courfe of the noon. He then took fix more from the months that had even days; and added one day merely out of iupernition, that the year might prove fortunate; for the pagans looked upon even numbers as unlucky, but imagined odd numbers to be fortunate. However, he could make out no more that 28 for February, and therefore that month was always reckoned unlucky among the Romans. Befides this, he obferved the difference between the folar and lunar year to be 11 days; and to remedy the incquality, he added an intercalary month named Mercedinus or Mercedonius, of 22 days every two years: but as he knew alfo that the folar year confilted of 365 days 6 hurs, he ordered that every fourth year the month Mercedinus thould confilt of 23 days. The cate of thefe intercalations was left to the priells, who left out or put in the intercalary day or month as they imagined it to be lucky or unlucky ; and by that means created fuch confulion, that the fellivals came in procefs of time to be kept at a feafon quite oppofite to what they had been formerly.

Thele are all the remarkable tranfactions of the Succeeder? reign of Numa, which is faid to have continued 43 by 'rullus years; though fome think that its duration could not be above 15 or 16 . His deatl, was followed by 2 thor interregnum; after which Tullus Hoftlius, the fon or grandfon of the famous Herfilia, was unanimoufly chofen king. Being of a bold and fiery temper, he did not long continue to imitate his peacelul predeceflor. The Albans, indeed, foon gave him an oppurtunity of exercifing his martial difpolition. CocJius, or, as he is called by Livy, Cluilius, who was at the head of the Alban republic, jealous of the growing greatnefs of Rome, privately commiffioned fome of the moft indigent of his fubjents to watte the Roman terstory ; in confequence of which a Roman army entered the territories of Alba, engaged the robbers, killed many, and took a great number prifoners. A war foon commenced, in conficquence of this, between the two nations; but when the armies came in fight of each other, their ardour cooled, neither of them leeming inclined to come to an engagement. This inaction raifed a great difontent in the Alban army againf Cluilius; infomuch that he came io a refolution of glving battle to the Romans noxt morning, or of torming their trenches if they thould decline it. Next morning, however, he was found dead in his bed; after which the Albans chofe in his Read one Mettus Fuffetius, i man remarkible for his hatred to the Roman name, as Ciuilius had been before him. Fuffetius, howerer, continued in the fame

\section*{R O M}

Rome. Atate of inactivity as his predeceffr, until he received certain intelligence that the Veientes and Fidenates had refolved to deltroy both Romans and Albans when they fhould be weakened by a battle. Fuffetus then refolved to came to an accommodation with the Romans; and, having obtained a couference with Tullus, both feemed equally defirous of avoiding the calamities of war. But, in order to eftablifh the peace on the moft perfect foundation, Tullus propofed that all, or at leatt the chief families in Alba, fhould remove to Rome; or, in cafe they were unwilling to leave their native city, that one common council fhould be eftablifhed to govern both cities, under the direction of one of the two fovereigns. Fuffetius took afide thofe who attended him, to confult with them about this propofal; but they, though willing to come to an accommodation with Rome, abfolutely refufed to leave Alba. The only dificulty remaining, then, was to dettle which city fhould have the fuperiority; and, as this could not be determined by argument, Tullus propofed to determine it by fingle combat betwist himifelf and Fuffetius. This propofal, however, the A1ban general thought proper to decline; and it was at lalt agreed, that three champions thould be chofen out of each camp to decide the difference. This produced the famous combat between the Horatii and Curiatii, by which the fovereignty was decided in favour of Rome. See Horatil.

Tullus now refolved to call the Fidenates to an account for their treacherous behaviour during the war with Alba, and therefore cited them to appear before the fenate ; but they, confcious of their guilt, refufed to appear, and took up arms in conjunation with the Veientes. Fuffetius, in obedience to the orders of Tullus, joined him with the Alban troops; but the day before the battle, he acquainted the principal officers with his defign, which was to fand neuter till fortune had declared for one fide, and then to join with the conqueror. This defign being approved, Fuffetius, during the engagement, retired with his forces to a neighbouring eminence. Tulius perceived his treachery; but dilfembling his uneafinefs, told his men that Fuffetius had poffelled himfelf of that hill by his order, and that he was from thence to ruih dewn upon the enemy. The Veientes, in the mean time, who had expected that Fuffetius was to join them, were dilmayed, and the Romans obtained the viftory. After the battle, Tullus returned privately in Rome in the night ; and having confulted with the fenate about the treachery of Fuffetius, returned to the camp by break of day. He then detached Horatius, who had conquered the three Curiatii, with a chofen body of horfe and fout, to demulifh Alba, as lad been concerted at Kome. In the mean time, he commanded both the Roman and Alban troops to attend him unarmed, but gave private orders to the Romans tn bring their fwords concealed under their garments. When they were af-
fembled, he laid open the treachery of Fuffetiu;, and ordered him to be torn in pieces by horfes. His accomplices were all put to the fiword: and the inhabitants of Alba carried to Rome, where they were admitted to the privileges of citizens, and fonic of them even admitted to the fenate.

Tullus now turned his arms againlt Fidenx, which he again reduced under the Roman yol.c; and took

Medulia, a frong city of the Latins; after which he waged a fucceffful war with the Sabines, whofe union with the Romans feems to have ceafed with the time of Numa. This was the laft of his martial exploits; after which we hear no more of him, but that he became extremely fupertitinus in his advanced sears, giving ear to many foolifh flories, as that it rained itones, that miraculous voices were heard from heaven, \&c. and for this he appointed nine days expiatory facrifices; whence it became a cultom to appoint nine days to appeafe the wrath of the gods as often as men were alarmed with prodigies. As to the manner of his death authors are not agreed. Some tell us that Death of he was killed by lightning, together with his wife, Tullus, children, and his whole family; while others are of whu is fucopinion that he was murdered with his wife and chil- cemden by dren by Ancus Martius who fucceeded him. He died Martiue. after a rcign of 33 years, leaving the city greatly increafed, but the dominions much the fame as they hail been in the time of Romulus.

After a fhort interregnum, Ancus Martius, the grandfon of Numa by his daughter Pompilia, and Marcus his relation, was unanimoufly chofen by the people and fenate. Though naturally inclined to war, he began his reign with attempting to refore the ceremonies of Numa, which had been neglected under Tullus Hofilius. He endeavoured alfo to dratw the attention of his people to hufondry and the peaceful arts; advifing them to lay afide all forts of violence, and to return to their former employments. This gained him the affections of his fubjects, but brought upon him the contempt of the neighbouring nations. The Latins, pretending that their treaty with Rome was expired, made inroads into the Roman territories. Ancus, after ufing the ceremonies directed by Numa, His wartook the field with an army confifting entirely of new like exlevied troops, and reduced the cities of Politorium, Tille. pinits and na, and Ficana, tranfplanting the inhabitants to Rome. death. A new colony of Latins repeopled Politorium; but Ancus retonk the place next year, and entirely demolithed it. He then laid fiege to Medulia; which, though it had been ruined by Tullus Holtilius, was now flronger than ever. It fubmitted after a fiege of four years, when Ancus found himfelf obliged to undertake a fecond expedition againft Ficana, which he had before reduced, as we have already related; and it was not without the utmof difficulty that he reduced it a lecond time. After this he defeated the Latins in a pitched battle; vanquifhed the Fidenates, Veientes, and Sabines; and having tiken in the hill Janiculum to be included within the walls, and built the port of Oftia, he died in the 24 th year of his reign.

Ancus Martius left two fons behind him, one ant infant, and the other about 15 scars of age. Both of thefe he put under the tuition of Tarquin, the fon of a rich merchant in Corinth, who had fisd from that city to fecure his wealth from Cypfelns tyrant of the place. He fettled in Tarquinii, one of the principal cities in Hetruria; but finding that he could not there attain His fiong to any of the principal poits in the city on account of his frupplanted foreign certraction, he removel to Rome, where he by Tarquin had been gradually raifed to the rank of partician and 1 . fenator. The death of Ancus Matius gave him an opportusits of afuming the regal dignity, and fetting afide his fupils; and in the boginning of his reign he

\section*{ROM}

to in care to itrengthen lis party in the innate by adding anther hundred to that body. Thefe were called Ratcres minerm: sertin?:, becault they werechofen out of the plebeians; lawever, they hatd the fame authoriry in the fenate as the others, and their claldren were called farrioners.

Targuin was not inferior to any of his predecefors ciber in his incluntion or abilities to carry on a war. . Is foon as lie afiended the throne, he recommenced lokilities with the Latins; from whom he took the cilies of Apiolx, Cinlluminum, Nomentum, and Colla43. The inhabitants of Apiole were fold for flaves ; but thofe of Crufuminum and Nomentum, who had dubmitted affer their revolt, were treated with gieat clamency, The inlabitants of Collatia were d farmed, and obliged to pay a large fum of money ; the fovereignty of it, in the mean time, being given to Egerius, the ion of Alunx, Tarquin's brother; from whence he toot the name of Collatinus, which he tranfmitted to his pofterity. Corniculum, another city of Latium, was taken by form, and reduced to athes. This progrefs having greatly alarmed the Latins, feveral of them joined their forces in order to oppofe fuch a formidable enemy: but being defeated in a bloody battle near li. denx, they were obliged to enter into an alliance with Rome; upon which the Latins having held a national conference, entered into a league with the Hetrurians, and again took the field with a very numerous army. But Tarquin, having defeated the confederate armies in two vely bloody battles, obliged the Latin cities to fubmit to a kind of dependence on Rome; and, baving entered the city in triumph, buit the circus maximus with the fooils which he had taken from the enemy.

The war with the Latins was farce ended, when another commenced with Hetruria. This was ac. counted the moft powerful nation in Italy, and was at rhat time divided into 12 tribes or lucomonies. Thefe appointed a national aftembly, in which it was decreed that the whole force of Hetruria fhould be employed againft Tarquin; and if any city prefumed only to tland newter, it hould be for crer cut off from the national alliance. Thus a great army was raifd, with which they ravaged the Roman territory, and took Fidenæ by the treachery of fome of its inhabitants. Tarquin, not being in a condition to oppofe them at frit, was obliged to fubmit to the lofs occafioned by their ravages for a whole year; after which he took the field with all the forces he conld raife. The Roman army was divided into two bodics, one under the king himfelf, the other commanded by his nephew Collatinus. "The latter, having divided his forces in order to plander the country, vals defeated ; but Tarquin, in two engagements, vanquifhed the army which oppofed lim. He then marched againt Fidenx, where lie gained a third battie; after which he took the city. Sach of the citizens as were fufpected to latve been concorned in betrasing it to the enemy wete whipped to death; the reft were fent into banifhment, and their lands divided by lotamong the Roman fuldiers. Tarquin now hallemed to oppore the new army of the Hetrurians before their fores conld be properly col. leocd; :ud having come up with them at Eisctum, a place about 10 miles from Rume, defented them wid great flaughter, for which victury he was decreed a
triumpin by the fenate; while the erems, diftearteaed by fu many misfortunes, were glad to fue fur peace; which Tatquin radily granted, upon the folc condition of ther owning his fuperiority over them. In complance with this, the Hetrurians fent him all the enfigus of royalty which were in ufe among them, viz. a clown of gold, a throne of ivory, a fecptre with an eagle on the lop of it, a tunic embroidered with gold, and adorned with figures of palm-branclies, together with a purple robe cnriched with flowers of teveral colours. Tarquin, however, would not wear thefe magnificent or naments till fuch time as the fenate and people lad confented to it by an exprefs law. He then applied the regalia to the decoration of his triumph, and never afterwards laid them afide. In this triumph he appeared in a gilt chariot, daturn by four hories, clothed in a purple robe, and a tunic embroidered with gold, a crown on his head, and a fceptre in his hand, attended by 12 littors with their axes and fafces.
'Carquin, having now obtained fome refpite from war, applied himfelf to the beantitying and ornamenting the city. He built the walls of Rome with hewn ftone, and erected thofe famous common fewers which have defervedly been accounted one of the wonders of the world. Rome at this time contained four hills within its compafs, viz. the Palatinus, Tarpeius, Quirinalis, and Coclius. In the valleys between thefe hills, the rain-water and fprings uniting, formed great pools which lad under water the Areets and public places. The mud likewife made the way impaffable, infected the air, and rendered the city urhealthy. Tarquin Euilds the undertook to free the city from this nuifance, by con- commos veying off thefe waters by fubterraneous channels into fewers, and the Tiber. In doing this, it was meceffary to cut thro' hills and rocks a channel large enough for a navigable ftream, and covered with arches frong enough to bear the weight of houfes, which were frequently built upon them, and ftood as firm as on the moft folid foundations. All thefe arches were made of hard ftone, and neither trouble no: expence were fared to make the work durable. Their height and breadth were fo confiderable, that a cart loaded with hay could eafily pafs through them under ground. The expence of conftructing thefe fewers was never fo thoroughly underfood as when it became neceffary to repair them; for then the cenfors gave no lefs than 1000 talents to the perfon appointed for this purpole.

Befides thefe great works, Tarquin adorned the forum, furround ng it with galleries in which were finps for tradefmen, and building temples in it for the youth of both fexes, and halls for the adminiltration of public jullice. He next engaged in a war with the Sabines, on pretence that they had affifted the Hetrurians. Both armies took the field, and came to an engagement on the confines of Sabinia, without any confiderable advantage on either fide; neither was any thing of confequence done during the whole campaign. Tarquin then, conlidering with himfelf that the Ko. nain forces were rery deficient in civalry, refolved to add fome new budies of \(k\) 'ights to thofic already inftituted by Romulus. But this projest net with great oppofition trom the fuperlitious augurs, as the original divifion of horfe into thee bodies had been detumined by auguries; and Actius Navius, the chief of

\section*{R O M}
the diviners at that time, violently oppofed the king's will. On this Tatquin, delirous to expofe the deceit of thefe people, fummoned Navius betore an affembly of the people, and defired him to fhow a fpecimen of his art, by telling the king if what he thought of at that time could be done or not. The augur replied, after conful:ing his birds, that the thing was very porfible. On which Tarquin told him, that he had been thinking whether it was poffible to cut a flint with a razor, pulling at the fame time a razor and fint from below his robe. This fet the people a-laugling; but Nevius gravely defiring the king to try it, he was furprifed to find that the fint yielded to the razor ; and that with fo much eafe as to draw blood from his hand. The pe ple teftified their furprife by loud acclamations, and T'arquin himfelf continued to have a great veneration for augurs cvei after. A fatue of brafs was erected to the memory of Navius, which continued till the time of Auguftus; the razor and fint were buried near it, under an altar, at which wimeffes were afterwards fworn in civil caufes.
This adventure, whatever was the truth of it, cauled Tarquin to abandon his defign of increafing the number of bodies of horfe, and content himfelf with augmenting the number in each body. He then renewed the war with the Sabines, ravaged their country defeated them in three pitched battles, obliging them at lat to fubmit to him and put him in poffeffion of their country. In the decline of life he employed himfelf in further decorating the city, building temples, \&e.

40 Affaffinated by the fons of Ancus Martius.

He was affaffinated in his palace, in the 8oth year of his age, by the fons of Ancus Martius, whom he had originally deprived of the kingdom.

After the death of Tarquin I. his wife Tanaquil preferved the kingdom in her fon-in-law Servius Tullius, by artfully giving out that the king was only funned, and woul foon recover; upon which the fons of Ancus went voluntarily into banifhment. The lecond day after his deceafe, Servius Tullus heard caufes from the throne in the royal robes and attended by the lictors; but as he pretended only to fupply the king's place till he fhould recover, and thought it incumbent on him to revenge the wicked attempt upon his life, he fummoned the fins of Ancus to appear before his tribunal; and on their non-appearance, caufed them to be declared infamous, and their eftates to be confificated. Alter he had thus managed matters for fome time in fuch a manner as to engage the affections of the people, the death of Tarquin was publifhed as a thing that had newly happened, and Servins Tullius affumed the enfigns of royalty, having none to difpute the honour with him.

The new king flowed himfelf every way worthy of the throne. Nu fooner were the Hetrurians informed of Tarquin's death, than they fhook off the yoke; but Servius quickly reduced them to obedience, depriving them of thcir lands, which he fhared among the poor Roman citizens who had none. For this he was decried a triumph by the people, in fpite of the oppofition of the fenate, who could never be brought to approve of his election to the kingdom, though he was. fonn after legally cloofen by the tribes.

After Servius had obtained the fanction of the popular voice, he marched a fecond time againft the revolted Hetrurians; and having again vanquilhed them,
was decreed another triumph. He then applied him felf to the enlarging and adorning the city. To the Ronse. hills Palatinus, Tarpeius, Quirinalis, Colius, and Aven. 142 tinus, he added the Efquilinus and Viminalis, fixing the city, his own palace on the Eiquilinus, in order to draw in- and addsa habitants thither. He likewife added a fourth tribe, fourth tribe which he called Tribus Efquilina, to thofe inllituted by Romulus. He divided alfo the whole Roman ter- ftitudy in ritory into diftinet tribes, commanding that there fhould be at leaft one place of refuge in each tribe, fituated on a riling ground, and Arong enough to fecure the effects of the peafants in cafe of a fudden alarm. Theie frong-holds he called pagi, that is, "villages;" and commanded that each of them fhould have their peculiar temple, tutelary god, and magiftrates. Each of them lad likewife their peculiar feftival, called paganalia; when every perfon was to pay into the hands of thofe who prefided at the facrifices a piece of money, the men of one kind, the women of another, and the children of a third. By this means an exact computation was made of the men, women, and children, in each tribe.

In the mean time, his two wards, Lucius Tarquinitis and Arunx, the grandchildren of Tarquin, being grown up, in order to fecure their fidelity, he married them to his two daughters. And though the elder of thefe daughters, who was of a mild and tractable difpofition, refembled in charader the younger of his pupils, as the elder of his pupils did the younger of his daughters, whe was of a violent and vicious temper, yet he thought it advifable to give his elder daughter to Tarquin, and the younger to Arunx; for by that means he matched them according to their ages, and at the fame time hoped that the elder Tullia's fweet difpofition would temper Tarquin's impetuofity, and the younger Tullia's vivacity roufe the indolence of Arunx.

During the public rejoicing for this douole marriage, the twelve lucumonies of Hetruria uniting their forces, attempted to hake off the Roman yoke; but were in feveral battles defeated by Servius, and obliged to fubmit to him on the fame conditions on which they had fubmitted to his predeceffor. For this fuccefs Servius was honoured with a third triumph.

The ling being thus difengazed from a troublcfome \({ }^{43}\) war, returned to the purfuit of his political fclemes; Refrefmes. and put in execution that mafterpiece of policy which Rome made ufe of ever after, and which eflablifhed a perpetual order and regularity in all the members of the ftate, with refpect to wars, to the public revenues, and the fuffrages of the comitia. The public fupplies lad hitherto been raifed upon the people at fo much an head, without any difinction of rich and poor; wherce it likewife followed, that when levies were made for the war, the fich and poor were equally obliged to take the field, according to the order of their tribe; and as they all ferved at their own expence, the poorer fort could hardly bear the charges of a campaign. Befides, as the moft indigent of the people faw then, felves burdened with the fame taxes as the rich, they pretended to an equal authority in the comitia : fo that the election of kings and magillrates, the making of peace or war, and the judging of criminals, werc given up into the hands of a populace who werc enfily corrupted, and had nothing to lofe. Scrvius formed a panject to rome-

 hw, enjuiniag all the Roman citizens to bring in an acc. wht in whitig of their own names and ages, and oi tha fo of their futhers, wises, and children. By the fann: law, all heads of families were commanded to deliver in upon oath a jult eltimate of their effeds, and to add to it the places ol their abode, whether in town or counary. Whoever did not bring in an account of his effeefs, was to be deprived of his cllate, to be beat with rods, and publicly fold for a flive. Servias, from thele particular accounts, which might be pretty well relied on, undertonk to eafe the pow by burdening the 1 ch, and at the lame time to pleale the latter by increa-

Hisdivitun "To this end, he divided the Roman people into fix or the pee claties; the firl clats confilted of thofe whofe eftates pie wro clalis.
chonging the cumitia by curix, in which every man gave his vote, into conaitia by centuries, in which the majority was not reckencd by lingle perfons, but by centurics, how few fosver there might be an a century. Hence the firt clafs, which contamed more centurics than the other five taken together, had every thing at its difpofal. The votes of this clafs were firft taken; and if the \(9^{8}\) centuries happened to agree, or only 97 of them, the affar was deternind ; becaule thefe made the majority of the 193 centuries which compofed the fix claties. If they difigreed, then the fecond, the third, and the other clalles in their order, were called to vote, though there was very feldom any occafion to go fo low as the fourth clatis for a majority of votes: fo that by this good order Servius brought the affairs of the Aate to be determined by the judgment of the mort confiderable citizens, who urderitood the public inteseft much better than the blind mulutude, liable to be impured upon, and eafily corrupied.

And now the people being thus divided into feveral The cen. orders, according to the cenfus or valuation of their eftates, Servius refolveci to folemnize this prodent relus and luftram. gulation by fome public act of religion, that it might be the more refiefted and the more lalting. Accord. ingly, all the citizens were commanded to appear, on a day appointed, in the Campus Martius, which was a large plain, lying between the city and the Tiber, formenty confecrated by Romulus to the god Mars. Here the centuries being drawn up in battalia, a folemn luftration or expiatory facrifice was performed in the name of all the people. The facrifice contifled of a fow, a fheep, and a bull, whence it took the name of furvetaurilis. The whole ceremony was called luffrum, à luendo; that is, from.paying, expiating, cleaing, or perbaps from the goddeís Lua, who prefided over expiations, and to whom Servius had dedicated a temple. This wife king conlidering, that in the fpace of five years there might be fuch alterations in the fortunes of private perfons as to entitle fome to be raired to an higher class, and reduce others to a lower, enjoined that the cenfus flould be renewed every five years. As the cenfus was ufually clofed by the lufrum, the Romans henceforth began to compute time by luarums, cach luftrum containing the fpice of five ye:ns. Huwever. the lullranas were not always regularly obferved, but often put off, though the cenlus had been made in the fifth year. Some writers are of opinion, that Servius at this time coined the firf money that had ever appeared at Rome; and add, that the circumiltances of the lultrum probably led him to famp the figurcs of the animals there flain on picces of brals of a certain weight.
The government of the city being thus eftablifhed 46 in fo regular a manner, Servius, twuthed wihh compaf- men.
fion for thufe whom the misfortunes of an unfuccelisful war had reduced to flavery, thought that fuck of them as had by long and fathtulf fervices deferved and obtained th. ir freedom, were much more worthy of being made Roman citizens, than untra? ibe vagabonds foom foreiga countries, who were admitted withour diflinction He thecefore gave the freedmen their choice, either to return to \(t\) cir own coun:ry, or continue at Kunie. Thafe who chofe th continue thee, he divided meo four tribes, and fettled them within the city;
of a campaign. As it was but ju: the king dhould matk: t!e firtt clafs amends for the weight latd on it,

\section*{Rome.}
and though they mere diftinguifhed from the plebians by their old name of liberti or freednen, yet they enijoyed all the privileges of free citizens. The fenate took offence at the regard which the king flowed to fuch mean penple, who had but lately flaken off their fetters; but Servius, by a moft humane and judicious difcourf, entirely appeafed the fathers, who palled his intitution into a la \(x\), which fubfifted ever after.

The wife king, having thus eftablifhed order among the people, undertook at latt to reform the royal power itfelf; his equity, which was the main fpring of all his refolutions, leading him to at contrary to his own intereft, and to f:crifice one half of the royal authority to the public good. His predeceflors had referved to themfelves the cognizance of all caufes both public and private; but Servius, finding the duties of his office too much for one man to difcharge well, committed the cognizance of ordinary fuits to the fenate, and referved that only of itate-crimes to himfelf.

All things beins now regulated at home, both in the city and country, Servius turned his thoughts abroad, and formed a fibeme for attaching the Sabines and Latins to the Romans, by fuch focial ties as thould be arengthened by religi in. He fummoned the Latin and Sabine cities to fend their deputies to Rome, to confult about an affair of great importance. When they were come, he propofed to them the building of a temple in honour of Diana, where the Latins and Sabines thould meet once a year, and join with the Romans in offering facrifices to that goddefs; that this feltival thould be followed by a council, in which all difputes between the cities fhould be amicably determined ; that there proper meafures fhould be taken to purfue their common intereft; and, lattly, in order to draw the common people thither, a fait fhould be kept, at which every one might furnifh himelf with that he wanted. The king's defign met with no oppolition: the deputies only added to it, that the temple thould be an inviolable afylum for the united nations; and that all the cities thould contribute toward the expence of building it. It being left to the king to choofe a proper place for it, he pitched upon the Aventine hill, where the temple was built, and affemblies annually heid in it. The laws which were to be obferved in thefe general meetings were engraved on a pillar of brafs, and were to be feen in Augultus's time, in the Latin tongue, but in Greek characters.

But now Servius was grown old; and the ambition Wicked of Tarquin his fon-in-law revived in proportion as the his daugh- king advanced in years. His wife ufed her utmolt enter and run-i:I-Jaw. deavours to check the rafhnefs and fars of her huf.ind, and to divert him from all criminal enterprifes; while her younger filer was ever inftigating Arunx, who placed all his happinefs in a private life, to the moft villanous attempts. She was continually lamenting her fare in being tied to fucl an indolent hufband, and wilhing the had either continued unmarried, or were become a widow. Similitude of temper and manners, formed, by degrees, a great intimacy between her and Tarquin. At length fhe propofed nothing lefs to him than the murdering of her fither, fifter, and hufband, that they two might meet and afcend the throne together. Soon after, they paved their way to an incelluous mariage, he by poifoning his wife, and the her hulbind; and then had the afurane to ank the king's

Vol. XVI.
and queen's confent to their marriagc. Servius and Tarquinia, though they did not give it, were filent, through too much indulgence to a daughter in whom now was their only hope of polterity. But thefe criminal nuptials were only the firt ftep towards a yet greater iniquity. The wicked ambition of the newmarried couple firt fhowed itfelf againt the king: for they publicly declared, that the crown belonged to them ; that Servius was an wfurper, who, being appointed tutor to Tarquin's grandchildren, had deprived his pupils of their inheritance; that it was high time for an old man, who was but little able to fupport the weight of public affirs, to give place to a prince who wiss of a mature age, \&c.

The patricians, whom Servius had taken great pleafure in bumbling during the whole time of his reign, were eafily gained over to Tarquin's party; and, by the help of money, many of the poorer citizens were alfo brought over to his interef. The king, being informed of their treafonable practices, endeavoured to diffuade his daughter and fon-in-law from fuch proceedings, which might end in their ruin; and exhorted them to wait for the kingdom till his death. But they, defpifing his couniels and paternal admonitions, refolved to lay their claim before the fenate ; which Servius was obliged to fummon: fo that the affair came to a formal procefs. Tarquin reproached his father-in law with having afcended the throne without a previous interregnum ; and with having bought the votcs of the people, and defpifed the fuffrages of the fenate. He then urged his own right of inheritance to the crown, and injutice of Servius, who, being only his guardian, had kept poffeffion of it, when he himfelf was of an age to govern. Servius anfwered, that he had been lawfully elected by the people; and that, if there could be any hereditary right to the kingdom, the fors of Arcus had a much better one than the grandfons of the late king, who mult himfelf lave been an ufurper. He then referred the whole to an affembly of the people; which being immediately proclaimed all over the city, the forum was foon fille ; and Servius harangued the multitude in fuch a manner as gained all their affections. They all cried out with one voice, Let Servius reign; let him continue to make the Romans bappy. Amidtt their confufed clamours, thefe words were likewife heard: Let Tarquin perijb; let bim die; let us kill bim. This language frightened him fo, that he retired to his houfe in great hafte; while the king was conduted back to his palace with the acclamations of the people.

The ill fuccefs of this attempt cooled Tarquin's ardent defire of reigning ; but this ambition made him act at hew part. He undertook to regain the faviur of his father-in-law by carelles, fubmiffins, and proteftations of a fincere regard and affection for him; in'omuch. that the king, who judged of the policy of others from his own, was fincerely reconciled to him, and tranquillity re-efablifhed in the royal family. But it was not long ere Tarquin, roufed by the continual reproaches of his wife, began to renew his intrigues among the fenators; of whom he had no fooner gained a confiderable party, than he clothed himfelf in the royal robes, and cauting the fafces to be carried before him by fome of his domeftics, croffed the Roman foram, entered the temple wherc the fenate ufed to meet, and feated him-

Rome. R. felf on the throne. Such of the ienators as were in the fastion he found already in their places (for he had given them private notice to be there eally) ; and the refl, being fummoned to affemble in 'l'arqnin's name, made what halte they could to the appointed place, thinking that Scrvius was dead, fince 'l'arguin athimed the title and functions of hing. When they were all a Fensbled, 'larquin made a long fipeech, seviling his father-in-law, and repeating the investives agamat him, which he hat io often uttered, calling him a fhave, an ufurper, a lavourer of the populace, and an enemy to the finate and paticians. When he was yet feaking, Servius arrived; and, raffly giviag way to the motions of his courdge, without confidering his frength, drew near the throne, to pull Tarquin down from it. This raifed a grate noife in the alfombly, which drew the people int' the temple; but nobody ve:tured to part the two rivals. Tarquin therefore, being more flroing and vigornus, feized the old man by the waint, and, hurrying him through the temp?e, threw him down Irom the tup of the freps into the forum. The king, who was grievoully wounded, raifed himfelf up with fome difficulty : but all his friends laad abandoned him; only two or three of the people, tnuched with compafion, lent him their arms to conduct him to his palace.

As they were leading him on fo flowly, the cruel Tullia appeared in the forum, whither the had haftened in her chariot on the firf report of what had palfed in the fenate. She found her humband on the top of the Reps of the temple; and, tranforted with joy, was the firt who faluted him king. The example was immediately followed by the fenators of 'Tarquin's party. Nor was this ennuglı for the unnatual daughter: fhe tonk afide her hufoand, and fuggefted to him, that he would never be fare folong as he uluper of his crown was alive. Hereupon Tarquin inflantly difpatched fome of his domeftics to take away the remains of the unfortunate king's lifc. The orders for the wicked parricide were no fooner given than Tullia mounted her chariot again, with an air of triumph, to return home. The way to her houfe was throngh a narrow ftreet, called vicus cyspius, or the geo. 1 freet. There the affitfins had left the king's body, which was ftill panting. As this fyght, the charicteer, ftruck with horror, checked his horfes, and made a fop: but Tullia forced him to goon; and the blood of the father is faid to have dyed the wheels of the chariot, and cven the clothes of the inhuman daughter, whence the ftreet was called ever after vicus focleratus.

The new king proved a mort defpotic and cruel tyrant; receiving, in the very begiuning of his reign, the furname of frosd, on account of his capricions humonr and haughty behaviour. All controverlies whatever were decidet by himfif and his friends; and he banithed, fined, and cren executed, whom he pleafed. The cenfus and luntrum, the divifion of citizens into chates and conturies, were abolifhed; and all hinds of . Hemblies, cvea the fe for amuement and recteation, were prohibited, both in town and country. Nay, \(t 0\) winch a height did Tarquin carry his iufolence and eyranny, that the mort virtuous of the finators weat into voluntary banifament ; while many of thofe who remained were cut off on varrious preiences, that the king might enjoy their eftates.

Tarnuin colld not but be fenfible of the extreme dan. cruะl!
ger in which he food by lofing the affections of his people in fuch a manner. He therefore provided a fufficent rumber of foldier, by way of guard, to prevent attenpts upon his perfon; and gave his daughter to OZavius Mamilius, one of the moft confiderable men among the Latins, in order to ftrengthen his intereft by this fureign alliance, in cafe of a revolt among his fuljects. Manilius accordingly procured many friends to his father-in-law, but he had like to have loft them agzin by his haughty behaviour. He had defired the Latins to call a mational council at Ferentinum, where he would meet them on a day appointed by himfelf. The Latins aceordingly met; but after waiting for feveral hours, Tarquin did not appear. On this, one Turnas Herdonius, an enterprifing and eloquent man. who hated T'arquin, and was jealous of M.milius, made a fpeech, in which he inveighed agaiatt the haughty Behaviour of Targuin, fee forth the contempt which he had put upon the Latius, and concluded with defiring the council to bre.sk up and seturn home without t.1king any further notice of him. Mamilius, however, prevailed upon them to return the day following; when Tarquin made his appearance, and told the altembly that his defign in calling them together was to cham his ritht of cnmmanding the Latin armies, which he faid was derived from his grandfather, but which he defired to be confirmed to him by them. Thefe words were fearce nut of his mouth, when Herdonius, rifing up, entered into a detail of 'Tarquiu's tyranny and arbitrary behaviour at Rome, which, be faid, the Latins would fonn feel in an equal degree, if they complied with Tarquin's demand. To this fpeech the king made no reply at that time, but promifed to anfwer him next lay. In the mean time, however, he bribed the domeftics of Herdonius to admit among his baggage a large quantity of arms: and then, telling the Latins that Herdonins's oppufition proceeded only from Tarquin's having refufcd him his daughter in marriage, accufed him of havings laid a plot to cut off all the deputies there prefent, and to ufurp a jurifdiction over the Latin cities; as a proof of which he appealed to the arms hid among the baggage of Herdonius. The accufed, confcious of his imm cence, defired that his baggage might be fearched ; which being acccordingly donc and the arms found, he was hurried away without being allowed to make any defence, and thrown into a baifon at the head of the ijuring of Ferentinum, where a hurdle being laid upon him, and itones laid upon the hurdte, he was preffed down into the water and drowned.

In confequence of this monftrous treachery, Tarquin was looked upon by the Latins as their deliverer, and declarch general of the Latin armies; focn after which, the Hernici and two tribes of the Volici entered into an alliance with him on the fame terms. In order to keep thefe confolerates together, Tarquin, with their corient, erequed a temple to Jupiter Latiazis on an bill near the ruins of Alba, where he appointed ceatain fealts called Ferice Lativise to be held on the 27 th of 1 sin April, where the feveral sations were to facrifice toge- the Frrix ther, and on no account to commit any hothilitiss againf Latina. each cther during thecir continuance. The king tien proceeded to make war on the reft of the Volici who had refufed to enter into an alliance with hins. Some depredations which they had committed in the territo-

\section*{\(\mathrm{K} \cap \mathrm{M}\)}
ries of the Latins ferved for a pretence to begin the war ; but as Tarquin had no enntidence in the Romans, his army was compoled only of a fmall body of them who were incorporated among the Latin auxiliaries. However, be defated the enemy, took one of their cities by form, and gave the bority to his foldiers. He reert turned his arms againlt the Sabines, whom he entircly defeated in two engagements, and made the whole nation tributary ; for which exploits he decreed himeelf two triumphs, and on his return to Rome he employed the populace in finifhing the fewers and circus which had been bergun by his grandfather T'arquin I.

In the mean time, the perlecutions of Tarquin againt his own finbjects daily drove fome of the mont conliderable into banilhment. A great number of patrictans took refuge in Gabii, a city of Latium about 13 miles from Rcme ; where the inhabitants, touched with compafion for their misfortures, not only received them with kindnefs, but began a war with Tarquin on their account. The Gabini feem to have been the moft formidable enennies whom the Romans had hitherto met wilh; fuce Tarquin was obliged to raile a prodigi us bulwark to cover the city on the fide of Gabii. The war tatted leven years; during which time, by the mutuill devaltations committed by the two armies, a great fcarcity of provilions took place in Rome. The people foon grew clamorous; and Tarquin being unable either to quiet them, or to reduce the Gabini, fell upun the following dithonourable and treacherous expedient. His fon Sextus Tarquinius pretended to be on very bad terms with his father, and openly inveighed againt him as a tyrant; on which he was proclaimed a rebel, and publicly beaten in the forum. This being reported at Gabii, by perfons fent thither on purpofe, the inhabit.ints became vely defirous of having Sextus among them; and accordingly he foon went thither, having previoufly obtained a folemn promife from the inbabitants never to deliver him up to his father. Here he made frequent inroads into the Roman territories, and always came back laden with fpoil, his farher fending againt him only fuch weat parties as mult infallibly be wortled. By this means he foon came to have fuch a high degree of creditamong the Gabini, that he was chofen general of their army, and was as much malter at Gabii as Ta:quin was at Rome. Finding then that his authority was fufficiently eftablifhed, he difpatched a flave to his father for intructions; but the king unwilling to return an explicit anfwer, only took the metlenger into the garden, where be ltruck off the heads of the talleft ppppics. Sextus under?tood that by this hint the king defired him tn put to death the leading men in the city of Gabii, which lec inmediately put in execution ; and while the city was in confufion on account of this maffacre, he opened the gates to his father, who twok puffeflion of the city with all the pride of a conqueror. - The inhabitants dreaded every thing from the haughty tyranny of the Roman monarch: however, or this occafion he conlulted bis policy rather than his revenge; granted them their life, liberty, and eftates, and even entered into a treaty of alliance with them. The articles were written on the hide of an ox, which was fill to be feen in the time of Autgutus, in the temple of Jupiter Fidius. After this, however, be made his fon Sextus king of Gabii ; fending off alfo
his two other fons, Titus and Arunx, the cne to build
Ron:ca city at Signia, the other at Circxum, a promonto:y of the Tyrrhene fea, and both thele to keep the Volici in awc.

For fome time '「arquin uow enjoyed a profound peace; the Romans, being accuftomed to oppreflion and the yoke of an imperious mafter, making no oppofition to his will. During this interval Tarquin + Ses sibyt met with the celebrated adventure of the Sibyl \(\dagger\); 55 whofe books were ever afterwards held in high eftima. Eonks of tion at Rome, and Tarquin appointed two perfons of the Sibjls. diftintion to take care of thens. Thefe were called Dumsiri: but thcir number was afterwards increafed to 10 , wher they were called Decenvir! ; and then to 15, when they were termed \(\Omega_{\text {undecmviri. At this }}\) time alfo the written civil law had its origin among the Romans; all the fatutes enacted by the kings beiner collected into onc body; which, from Papirius the name of the collecter, was called the Papirian law. The temple of the Capitol was alfo finifhed; for which per:pofe the moft kilful architeds and workmen were broughat from Hetruria, the populace being obliged to ferve them in the moft laborious parts.

We now come to the important revolution which put Downfal an end to the regal power at Rome, and introduced a of the senew form of government, to which this city is allowed gal power to owe the greateft part of her grandeur. Tarquin, as we have already feen, had left himfelf no friends among the rich citizens, by reafou of the oppreflion under which be made them labour; and the populace were equally difaffected on account of their being obliged to labour in his public works. Among the many perfons of diftinction who had been facrificed to the avarice or fufpicions of Tarquin, was one M. Junius, who had married the daughter of Tatquin I. This nobleman had a fon named \(L\). J̛unius Brutus, who efcaped the cruelty of the tyrant by pretending to be an idiot, which part he had ever fince continued to act. Soon after the finithing of the works abovementioned, a violent plague happening to break out at Rume, Tarquin fent his fons Titus and Arunx to confult the oracle of Delphi; and the princes took Brutus along with them, to divert themfelves with his pretended folly by the way. Brutus chofe for his offering to the Delphic A. pollo a fick of elder; which occafioned much laughter. However, he had the precaution to inclofe a rod of gold within the flick ; and to this probably it was owing that the prieftefs gave the princes the following riddle, that he who thould firlt kifs his mother fhnuld fucceed Tarquin in the government of Rome. This anfwer had been given to their inquiries concerning the fuccellion; upon which the two brothers either drew lots which of them thould kifs ther mother at their return, or agreed to do it at once, that botis might reign jointly: but Brutus, imagining the oracle had another meaning, fell down and kifled the earth, the common mother of all living. This, in all probability, the prieltefs had meant; and had given the anfwer on purpofe to have another proof of Brutus's ingenuity, whicl had already difcovered itfelf, by lis offering the elder fick.

On the return of the princes to Rome, they found their father engaged in a war with the Rutuli. The treafury being exhautted by the fums which Tarquin had expended in his public works, he had marched er

\section*{R O M}
\(\underbrace{\text { Rome. }}\)
Ardea, the capital of that mation, which lay about 20 miles from Rome, in hopes of thangr it without opprolition. Contrary to his expelation, however, lic was obliged to befiese it in form ; and this conlraned him to lay a heavy tax upon his fubjects, which increafed the number of malcontents, and difoled every thing for a revolt. As the fiege was earried on vers flowly, the general officers frequently made entertainments for one another in their quarter:. One day, when Sextus Tarquinius was entertaining his brothers, the converfation happened to turn upon their wives: every one extnlled the good qualities of his own ; but Collatinus betowed juch extravagant padifes on his Lueretia, that the difpute enced in a hind of quarel. It was then refolved that they thould mount their horfes and diuprife their wives by their mexpected return. The bing's daughters-in-law were employed in fating and diverlion, and feemed much difooneerted by the appearance of their huibands; but Lucreti., though the night was far advanced, was found, with hor maids about her, ipinning and working in wool. She was not at all difcompoled by the eompany whom her hulband brought with him, and they were all pleafed with the reception the gave them. As Lueretia wis very beautiful, Sextus Tarquinius conceived a paffion for her, which refolving to faiis'y at ail events, he
was going forward; whieh, as Luerctius had been lelt governor of the eity by 'Tarquin, was put in execution without diffeulty. The eorpfe of Lueretia was then expofed to public view; and Brutus having made a ipeech to the people, in which he explained the myllery of his conduct in eounterfeiting folly for many years paff, proceeded to tell them that the patrieians were come to a refolution of depofing the tyrant, and exhorted them to eoneur in the fame defign. The people teftified their approbation, and ealled out fur arms ; but Brutu did not think proper to truft them with arms till he had firt obtained a decree of the fenate in favour of the defign. '「his was eafily procured: the fenate enacted that Tarquin had forteited all the prerogatives belonging to the regal authority, condemned him aad all his pofterity to perpetual banifhment, and devoted to the gods of hell every Ruman who thould hereafter, by werd or deed, endeavour his reltoration ; and this decree was unanimoully confirmed by the curix.

Tarquin being thius depofed, the form of government The form beeame the next object, Lucretius was for the prefent of governdeclared Interrex; but Brutus being again eonlulted, ment chan declared, lhat though it was by no meaus proper for ged. the fate to be without fuprence magithates, yet it was equally necelfary that the fowet flould not be centered in one man, and that it thoulf not be perpetual. For this reason he propofed, thai two magiftrates, called confuls, thould be elected amually; that the fate theuld thenceforth have the name of republic ; that the enligns of royalty thould be abolifhed; and that the only enfigns of confular dignity thould be an ivory chair, : white robe, and 12 listors for their attendants. How. ever, that he might not utterly abolilh the name of king, he propofed that this title fhould be given to him who had the fuperintendency of religous matters, who fhould thenceforth be called rex facrorum, or king of facred things.

This scheme of Brutus being approved of, Brutus and Tullius Collatinus were propoled by Lucretius as the two firll leares confuls, and unanimoufly aeeepted by the people, who Rome. thought it was impolfible to find more implacable ene. mies to the Tarquins. They entered on their offiee in the year 508 B.C.; and Tullia, pereeiving that now all was loft, thought proper to leave the city, and retire to her hufoand at Ardea. She was fuffered to depart without mulettation, though the populace hooted at her, and curfed her as the wint along. 'iarquin, in the meantime, being informed by forne who had got out of Rome before the gates were fhut, that Pritus was railing comnotions to his prejudice, returnct in hafte to the city, attended only by his fons and a few friends; but, finding the gates thut, ard the people in arms on the walls, he returned again to the camp: but here again, to his furpuife, he found that the eenfuls had taken the opportunity of gaining over the army to their intereft; fo that, being refuled admitance into the camp alfn, he was foreed to fly for reluge, at the age of 76 , with his wife and three fons, to Gabii, where Sextus had been made king. Here he continued for fome time: but not linding the Latins very forward in revenge lis eaufe, he retired intn Hetruiat ; where, being the country of his mother's family, he hoped to find more friends, and a readier affitarice tor attenpting the recovery of his throne.

Rome.
OI State of che Ronsan empire \(2 t\) this time.

The Romans now congratulated themfelves on their happy deliverance from tyranny. However, as Tarquin liad by his policy procured himfelf many friends abroad, thefe now became enemies to the Roman name; and, by the defection of their allies, the Roman dominions were left in much the fame Itate as they had been in the time of Romulus. The territory of Rome had always been confined to a very narrow compars. Though almolt conflantly victorious in war for 243 ycars, they had not yet gained land enough to fupply their city with provitions. The main ftrength of the fate lay in the number of the citizens of Rome; which the cuftom of tranfplanting the inhabitants of the conquered cities thither had fo prodigioufly increafed, that it put the Romans in a condition of ufurping the authority over other nations, the molt inconfiderable of which had an extent of ter ritory far exccedirg theirs. By frequent depredations and incurfions they fo liaraffed the petty ftates of Latium and Hetruria, that many of them were confrained to enter into treaties with Rome, by which they obliged themfelves to furnilk her with auxiliaries whenever fhe fhould be pleafed to invade and pillage the lands of her other neighbours. Submifions of this kind the Romans called making alliances with them, and thefe ufeful alliances fupplied the want of a larger territory; but now, upon the change of her government, all the allies of Rome forfook her at once, and either flood neuter, or efpoufed the caufe of the banifhed king; fo that fhe was now obliged to maintain her liberties as the beft might.

The new confuls in the mean time took the moft effectual methods they could for fecuring the liberties of the republic. The army which had been employed in the fiege of Ardea marched home under the conduct of Herminins and Horatius, who concluded a trace with the Ardeates for 15 years. The confuls then again affembled the people by centuries, and had the decree of Tarquin's banilhment confirmed ; a rex facrorum was elected to prefide at the facrifices, and many of the laws of Servius Tullius were revived to the great joy of the people, who were thus reflored to their ancient right of voting in all important affairs. Tarquin, however, refolved not to part with his kingdom on fuch eafy terms. Having wandered from city to city in order to move compaffion, he at length made Tarquinii the feat of his refidence; where he engaged the inhabitants to fend an embally to Rome, with a modef, fubm:five letter from himfelf, directed to the Roman people. The ambaffadors reprefented in fuch frong terms to the fenate how realonable it was to let the king be heard before he was condemned, and the danger which threatened the flate from the neighbouring powers if that crimmon juftice were seiffed, that the confuls inclined to bring thefe agents before the people, and to leave the clecilion therenf to the curix; but Valerius, who had been very adive in the revolution, Arenuoufly oppofed this, and by his ir.fnence in the fenate got it prevented. As that illuftrious hody had been greatly thinned by the murders committed by Tarouin, new menhers were clected from among the knights, and the ancient number of 300 again completed. The old fenators had been called fatres or "fathers;" and as the aames of the new ores were now witten on the fmall roll, the whole body received the name of patres conjcriztr.

The old king was not to be fcilcd by a fingle at-
tempt. He prevailed on the inhabitants of 'Tarquinii R.anic. to fend a fecond embafly to Rome, under pretence of demanding the eftates of the exiles, but with private infruttons to get the confuls affafinated. The reforation of the ellates of the exiles was oppofed by Brutus, but Collatinus was for complying with it ; whereupon Brutus accufed his colleague of trcachery, and of a defign to bring back the tyrant. The matter was then referred to the people, where it was carried by one vote in favour of the Tarquins. But whilf the people a coripiwere employed in loading carriages with the effects of racy forn:the exiles, and in felling what could not be carried off, ed in his the ambaffadors found means to draw fome of the near. favour. eft relations of the confuls intor a plot with them. Thefe were three young noblemen of the Aquilian family (the fons of Collatinus's fifter), and two of the Vitelli (whofe fifter Brutus had marricd) ; and thefe laft engaged Titus and Tiberius, the two fons of Brutus, in the fame confpiracy. They all bound themfelves by folemn oaths, with the dreadful ceremony of driaking the blond of a murdered man and touching his entrails. They met at the houre of the Aquili, where they wrote letters to Tarquin and gave them to the ambaffadors. But though they ufed all imaginable precantion, their proceedings were orcrheard by onie Vindicius a dave, who immediately communicated the whole to Valerius; upon which all the crimitals were apprehended. Brutus food judge over his own fons; and, Brucu, notwithtanding the interceffion of the whole aftembly, caufes wm and the tears and lamentations of his children, commanded them to be beheaded; nor would he depart till he faw the cxecution of the fentence. Having performed this piece of heroic barbarity, he quitted the tribunal, and left Collatinus to perform the refl. Collatinus, however, being inclined to fpare his nephews, allowed them a day to clear themfelves; and caufed Vindicius, the only witnefs againft them, to be delivered up to his mafters. This roufed the indignation of the people in general, efpecially of Valerius, who had promifed to protect the wincis, and therefore he refufed to deliver him up to the liftors. The maltitnde called aloud for Brutus to rcturn; which when he had done, he told them that he had executed his two fons in confequence of his nwn paternal authority over them, but that it belonged to the penple to determire the fate of the reft. Accordingly, by a decree of the curia, all the delinquents fuffered as traitors exceft the ambaffadors, who were fpared out of refpeet to their character. The flave Vindicins had his liberty granted him; ard was prefented with 25,000 ates of hrafs, in value atout 360 Spanifl dollars. The decrec for reforing the eftates of the exiled Tarquins was annulled, their palaces were defloyed, and their lands divided among the indigent people. The public only retained a piece of gromnd near the Campus Mantius, which the king had ufupped. This they confecrated to Dlars, and it afterwads tecame a common field where the Roman youth exercifed themfelyes in running and wretling. Wut after this confoctation, the filiperfitious Romans fervpled in ufe the corn which they found there rady re:aped to their hands: To that, with fome trees, it k:as thrown into the Jiber : and the water being low, it fopped in thee middle of the river, and bugan of form at tine illand namod afterwards Infula Saruz

fock a term into the Romans, that fuaree any perfon 'uat opmofe lim: and larchore, as he hatci' Collatious, lie cpely accufed him befure 1.e pople, and wi.hout cermboby cenotu lim fron the contifmp, baniking 3eph lis himat the fane time frem Rome. The multitude acquasecel in every thing he liod, and refited to hear Cullatinus fowst: in his cwn defence: io that the eonfit was on the point of being driven out with ignominy and difrace, when Lucretins interpofed. and prewailed
 the fuves, :nd letite of his own accord from the city. Bers:us then, to remore all fupicions of perfonal en-nini-y, procured him a prefent of 20 talents out of the puille prearury, to which he ad.led five of his own. Collo:inus then retired to Lavinium, where te lived in peace, and at latt died of old age.
A.fer the abdication of Collatinus, Valarius was chofen in his room ; and as his temper igreed mnch better with Bresus than that of Collatinu:, the two confuls lived in great harmony. Nothing, however, could make the cie:lronsed king forego the hope al recovering his kingsom by force. He firt engaged the Volfi and Tirquinierís to jnin their forces in erder to fupport his righes. The confuls marched out without delay to meet them. Brutus commanded the horic and Valerius the foot, drawn up in a fquare bit talion. The two armies being in light of each other, Brutus adranced with his civalry, at the fame time that Arunx, one of Tarquin's \(f\) ns, was coming furward with the enemy's horfe, the king himfelf following with the legions. Arunx no fuoner difcuvered Brutus, than he made towards him with all the fury of an enraged en:my. Brutus advanced towards him with no lefs fpeed; and as both were actuated only by motives of hatred, without thoughts of felf.prefervation, hoth of them were pierced laroigh with their lances. The death of the two generals ferved as a prelude to the battle, which continued with the ntmoft lury till night, when it could not be known which lide had got the viany, or which had Inft the greate!l number of men. A report was fpread, however, that a voice had been leard out of a neighbouring wood, declaning the Romans conquerors; and this, probably a Atratagem of Valerius, operated fo powerfully on the fupertitious minds of the Volfei, that they left theit camp in confulion, and returned to oheir cwit country. It is faid that Valerius, having ranfed the dead to be numbered, found that the Tolfci had loft 11,300 men, and the Romans only one fhort of that number.

Valcrius ieing left without a colleague in the confulfo \(p\), and having for fome reafor s delayed to choofe one, began to be fufpeted by the people of afpiring at the fovereignty, and thefe fupicions were in fome meafure countenanced by his building a fine houfe on the fteep part of the hill Palatinus, which overlookel the formm, and was by \(\mathrm{l}_{1} \mathrm{~m}\) confidered as a citadel. But of this Valorius was no fooner informed, than lie canted this lan'e to be pulled down, and immediately called an afticmbly of the perple for the clection of a conful, in which helift them ehtircly frec. Thlicy rhofe lucretius; an 1 , being ath omed of having fupected V.alerius; they complimented him with a large round. plot in an agreable place, whore they buil him of ute. The ew e nfuldied a few diys ater his pon. motion, to that Valerius was once more lfft fole go.
vernor. In tise interval betwixt the death of Lucre. tius and the choice of another conful, Valerius gave the people to many Atriking proofs of his attachment to their interent, that they beltuwed upon him the furname of Pop,itiols or "p ppular;" nor was he evel callcil by another name aftem wards.

Whan Poplicoli's year of confulthip expired, the Romans thought fit, in conicquence of the critical fituation ol affotirs, to cleft him a fecond time, and joined with him T. Lucretius, the brother of the firmous Lucreti.. 'l'h:y beg:n with reftoring the cenius and lutirum; and found the number of Roman citizens, at or above the age ol paberty, to amount to 130,000 . As they appreliended an attack from the Latins on acconnt of l'arquin, they were at grat pains to fortify S nquirinum or Singliuri.1, an important polt on that lide. Contraty to their expeetations, however, the Latins remained quiet; but an hauglaty embalfy was teceived from loriena king of Clufium in Hetruria, commanding them either to take back the Tarquins. to Porfena in= Rome, or to reltore them their eftates. To the firlt K. the of thele domands the confuls retumed an abiolute re. lerritories fufal: and, as to the fecond, they anfleered, that it was impracticable; a part of thofe eftates having been confecrated to Mars, and the reft divided among indigent people, from whom they could not be recovered. The imminent danger which now threatened the city, procured Valerius the honour of a third coufulhip; and with him was joincd Horatius Pulvilius, who hadenjoyed the dignity for a few months before in the interval betwiat the death of Lucretius and the expiration of the firft confulate.

While the Romans were making the mon vizorous And "lepreparations for defence, Porfena, attended by lis fon feats their Arunx and the exiles, marched towards the city at the head of a formidable army, which was quickly joined by a confiderable body of Latins under Mamilins, the fon-in-law of Tarquin. The confuls and the fenate took all imaginable care to fupply the common people with provifions, left famine fhould induce them to open the gates to Tarquin; and they defired the country people to lodge their effects in the fort Janiculum, which overlooked the city, and which was the only fortified place polfelfed by the Romans on that fide the Tiber. Porfena, however, foon drove the Romans out of this fort; upon which the confuls made all their troops pafs the river, and drew them up in order of battle to defend the bridge, while Porfenat advanced to engage rhem. 'The vistory was a long time doubtful, but at laf the Romansfled. Horatius Cocles, nepliew Bravery of to the conful, with Sp. Lirtius and 'T'. Herminius, who had commonded the right-wing, polted themlelves at the entrance of the bridge, and for a long time bravely defended it : but at laft, the defenlive arms of L.trius and Herminius being broken, they retired; and then Horatins deliring them to advife the confuls from him to cut the bridge at the other end, he for a while fuftaned the attact of the enemy alone At laft, being wounded in the thigh, and the ligral given that the bridge was almoft broken down, he leaped into the river, and fivam acrofs it through a fhower of darts. The Romans, in tokc. of gratitude for this eminent fervice, erected a llatue to hims in the temple of Vulcan, give him as much land as h: himfelt wit' one yoke of u.en could plough in one day ; and each of the inhabitants
lent, and give back the feren fmall towns wheh hod been formerly taken from the Veientes. The latter of thefe demands was cheerfully complied with; but the formor was ftill refufed, until Porfena thonld hear t'e ftrong reafons they had to urge againtt it. A tuce being agreed on, deputies were fent to the H trurian camp to pead the Roman caure againt the Tarqums, and wih them ten young men, and as many virg:ns, by was of hoflages for performing the other arr icle.

The reception which Porfens gave the deputies raifed the jealoufy of the Tarquins; who fill retaining their ancient pride, refufed to :tdr it Purlena for is judge beiween tiem and the Romans. Bat the king without any regard to their oppufition, refilved to fatisfy hirnclf, by an exact inçuiry, whether the protection he had given tiee Tarquins was pult. But whale the caluie was ready to be opened before tinc Roman deputies, news were brought that the yrung wemen whom the Romans had fent as hoftages had ventured to fwim acre fs the Tiber, and were returned to Rome. They had gone to bathe in the river, and Clalia hap-
bitants, to the number of \(300,0<0\), gave him the value fight raifed in her a defire of returning to it. She thereof as much food as each confumed in a day. But not- fore ventured to fwim acrofs the river; and having enwithfanding all this, as he bad 1 it one eye, and from couraged her companions to follow her, they all got his wounds continued lame throughnut the remainder fafe to the oppofite thore, and returned to their fathers of his life, thefe defects preventec his ever being raifed to the confulate, or invelted with any military command.

The city was not yet fully invefted; but as it was very difficult to find provifions for fuch a multitude, the inhabitants fon began to be in want. Porfena being informed of their difficulties, told them that he would fupply them with provifions if they would take back their old matters; but to this they replied, that hunger was a lefs evil than flavery and oppretlion. The confancy of the Romans, however, was on the point of failing, when a young patrician, named Mutius Cor. dus, with the comfent of the fenate and confuls, undertook to affalfinate Poifena. He got accefs to the Hetrurian camp, difguifed like a poalint, and made his way to the hing's tent. It happened to be the day on which the troops were all reviewed and paid; and Porfena's fecretary, margnificently dreffed, was titting on Poutes. The return of the hoftiges gave the confill Puplicola great uneafinefs; he was afraid left this rath action might be imputed to want of fidelity in the Romans. To remove therefore all fufpicions, he fent a deputation to the Hetrurian camp, affuring the king that Rome had no fhare in the foolifh attempt of the young women; and promifing to fend them inimediately back to the camp from whence they had fled. Porfena was eafily appeafed; but the news of the fpeedy return of Treachery the hottages being known in the camp, the Tarquins, of the Tarwithout any regard to the truce, or refpect to the king their protefor, lay in ambuht on the road to furprife them. Poplicola having put himfelf at the head of the Roman troops who efcorted them, fuftained the attack of the Tarquins, though fudden ard unexpested, till his daughter Valeria rode full fpeed to the Heirurian camp, and gave notice of the danger her father and companions were in ; and then Arunx, the king's fon flying with a great body of cavalry to their relief, put the a!. greflors to the rout.

This notorions piece of treachery in the Tarquias gave Porfena ftrong fufpicions of the badnefs of their caufe. He therefore affenibled the chief comnianders of the Hetrurians; and having heard in their prefence the complaints of the Romans, and the juftification of their proceedings againt the Tarquins, he was f, ftruc is with horror at the recital of the crimes the Tarquins were charged with, that he immediately ordered them to bandons leave his camp; declaring, that he renounced his alliance with them, and would no longer continue the herpitality he had thown them. He then commanded the ten young virgins to be brought before him and intquired who was the firft author and chief manager of the enterprife. They all kept filence, till Clelid herfelf, with an air of intrepidity, confenfed, that fhe alone was guility, and that the had encouraged the others by her advice. Upon this the king, extolling her refolution above the bravery of Horatius and the intrepidity of Mutins, made her a prefent of a fine horfe, with fumptuous furniture. After this he concluded a peace with the Romans, and rettored to them all their hofages ; declaring, that their bare word was to him a fufficient fecurity for the periormance of the articles.

And now Purfenabeing about to return to Clufium, gave, before his departure, a furticr teitimony of his refped and friendnip tor the Rumans. Ine knew that Rome was greatly diffrefled for want of provilions; but being afraid to offend the inhabitants by reiieving them in a ditet manaer, he ordered his fuldiers to leave behind them their tents and provifions, and to carry rothing with them but their arms. As his camp abouaded wihn all firts of provifinns, Rome was hereby much relieved in her wants. Thie moveabics an: 1 corn of the Hetrurians were fold by auftion to p:is.ate perf us; and onthis occalion the Romans tonk up the cufom cimaking a proclamation by an lecald, whenewis any effects belonging in the publia were io be fold, in the following winds, Theje are Porf na's gao?s. The depening to turn her cyes towards her mative city, that

me innry, a fesmuc, a crulv:l ci go!d, and a tuiumblal rube.
Thus the Romans efeaped the greatelt danger they lad hithe:to been in. However, they did not yet enjoy tanquilits. The Sabines revelted, and continued the war fior fome time with great obtinacy: but being defeated in feveal engagements, they were at latt obliged in fubmit; and farce was this war ended, when another bergan with the Latins, who now declared for king Tarquin. Befire they began this war, however, an embaty was fent to Rome, the purport of which was, that the Romans thould ratie the fiege of lidenx which had revclued, and receive the 'Tarquins; who, on their putt, thould grant a general am:esty. The ambafidurs were to aliow the Romans a whole yearto confider on thnie oversures; and to threaten them with a war in cafe they refufed to comply with them. The chief view of Tarquin and his partians in promoting this enbalfy was, to lay hold of that oportunity to raife a fedition in the city. To the ambaffadore, therefore, of the Latins, he joined fome of his own emillaries, who, on their arrival in the city, found two forts of people difpofed to ente: into their meafures; to wit, the flaves, and the meaner citizens.
The flaves had formed a confpiracy the year before to feize the Capitol, and fet fire to the city in feveral quarters at the fame time. but the plot being difcovered, those who were concerned in it had been all crucifed, and this execution had lighly provoked the whole body of flaves. As to the meaner citizens, who were for the molt part over whelmed with debt, and cruelly uied by their creditors, they wcre well apprifed that there could happen no change in the government but to their advantage. Thefe were the confpirators pitched upon, and to them were given the foljowing parts to act: the citizens were to make themielves matlers of the ramparts and gates of the city, at .n appointed hour of the night; and then to raife a great thout as a fignal to the ilaves, who had engaged in naffacre their matters at the fame inftant: the gates of the city were then to be opened to the Tarquins, who were to enter Rome while it was yet reeking with the blood of the fenators. The confpiracy was ripe for execution, when Tarquin's principal agent, Publius and Marcus, both of his own name and family, being terrified with frightful dreams, had noi courage enough to proceed in their defign till they had confulted a diviner. However, they did not difoover to him the coafpiracy; but only aked him in general terms, what diuccels they might expect in a projeft they had formed? The foohfayer, without the lealt hefitation, returned the following anfwer: Your project rutil ent in jour ruin: difburlen yourféves of fo beavy a bat!. Hereupon the Targuins, le.rring lett fome of the wher confpirator; thould be before hand with them in informing, went immsdistely to s. Snlpitius, the only couful then at Rome, and difoovered the whole mater to hirn. The comitil greatly commended them, and detained thens in his h ufe, till, by private inquiries, he was alfured of the truth of their depofit:ons. Then he allembled the fenate, and gave the Latin ambaffadors their au liznce of leave, with an anfwer to their propufals; which wats, that the Romans wolld neither receive the Tarquins, nor raife the liere of lidena, beng all
to a man reaty to facrifice their lives in defence of their liberties, and will:ng 10 undergo any dangers rather than fubmit to the goverament of a tyrant.

The ambalfadors being difmilfed with this anfwer, and ronducted oct of the city, Sulpitics laid open to the fathers the drcadful conipiracy. It firuck them with horror: but they were all at a lofs in what manner they Chonld apprehend and punih the guilty; fince, by the law of Poplicola, there was an appeal to the penple in all capital cafes; and the two witneffes, who were ftrangers, might be excep'ed againft by Roman citizens. In this perplexity they left the whole conduet of this critical afair to Sulpitius; who took a methad which he thught would equally ferve to prove the guilt and punifh the guilty. He engrged the two informers to affemtle the colifirators, and to appoint a rendczous at midnight in the furum, as if they defigned to take the lait meafures fir the execution of the cnterprife. In the mean time he ufed all proper means to fecure the city, and ordered the Roman knights to hold themfelvesterdy, in the houfes adjoining to the forum, to esecute the orders they frould receive. The confpirators met at the time and place appointed by the two Tarquins; and the knights, upon a fignal agreed on beforehand, invelted the forum, and blocked up all the avennes to it fo clofely, that it was impolible for any of the confpirators to make their efcape. As foon as it was light, the two confuls appeared with a frong guard on the tribunal; for Sulpitius had fent to his colleague Manius, who was befieging Fidenx, defiring him to haften to the city with a chofen body of troops. The people were convened by curix, and acquainced with the confpracy which had been formed againft the common liberty. The acculed were allowed to make their defence, if they had any thing to offer againt the evidence : but not one of them denying the få, the confuls repaired to the fenate, where fentence of death was prononnced againt the compirators, in cafe the people approved it.

This decree of the fenate being read to and approved The confpi by the affembly, the people were ordered to retire, and raturs puthe confpirators were delivered up to the foldiers, who nihed. put them all to the fivord. The peace of Rome was thought fufficiently fecured by this Atroke of feverity; and therefore, thoughall the confpirators were not punilhed with death, it was judged proper not to make any fu:ther inquiries. The two informers were rewarded with all the privileges of Roman citizens, 100,000 afes, and 20 acres of land. Three fettivall-days were appointed for expiatiens, facrifices, and public games, by the way of thanklgiving to the gods. But the gencral joy was difturbed by a melancholy aceident : as the people were conduating Manins Tullius the conful from the circus to his houfe, he fell from his chariot, and died three days after.

The city of Fidenze was not yet reduced: it held out during the foliowing confulthip of T. Rbutins and P. Veturius; but was taken the rext ycar by T'. Lartius, who, together with Q. Clel us, was raifed to the confular disuity. The Lettins, earaged at the lofs of this town, bey in in complain of their leading men; which opportumaty Tarquin and Mamilias improved fo \(f_{\text {at }}\), as to make all the Latin citics, \(2+\) in rumber, enter motu an alluan e againft K mc , and to bind themfelves by oath never to violate their engagements. The La-

\section*{R O M}

Rome．tins made valt preparations，as did likewife the Romars； but the latter could procure no alfitance from their n eighbours．As the Latin nation was much fuperiur to them in Arength，they fent deputies to folicit fuc－ cours from the icveral fates with which they were fur－ rounded：but their negnciations proved every where unfuccefstul；and，what was worfe chan all，the republic had rebellinus fons in her own bofum，who refuiced to lend their aid in defence of their country．The poorer litary oath，or to lerve；alleging their poverty，and the fruitleis hazards they ran in fighting for the defence of a city，where they were nppreifed and enflaved by their creditors．This ipiit ot mutiny fpread among the in－ ferior claffes，moft of theni refuring to lift themfelves， unlefs their delts were all remitted by a decree of the fenate；nay，they began to talk of leaving the cite，and fettling elfe where．

The fenare，apprehending a general infurrection，af－ fembed to deliberate on the means of quieting thofe domenic troubles．Some were tor a free remilfion of all debts，as the fafelt expedient at that juncture；others urged the dangerous con equences of fuch a condefcen－ fion，advifing them to lif fuch only as were willing to ferve，not doubting but thofe who refuled their af－ fiftance would offer it of their own accord when it was nolonger defired．Several other expedients were pro－ pofed ：but at length this prevalled；to wit，that all ataions for debers thould be fufpended till the conclufion of the war with the Latins．But this the indigent debtors thought only a fufpenfion of their mifery ；and therefore it had not the intended effet on the minds of the unruly multitude．The fenate might indeed have profecnted the ringleaders of the fedition；but the law of Poplicolo，called the Valerian lawu，which allowed appeals to the affembly of the people，was a protedion for the fiditious，who were fure of being acquitted by the accomplices of their reballion．The fenate，therefore，to elude the effect of a privilege that put fuch a reltraint unontheir power，refolved to create one fipreme magiftrite，who，with the title of didator， thould have an abfolute power for a time：but as this could not be done without Ariking at the law of Po－ plicola，and transferring the power of the people in cri－ minil caufes to a magiftrate fuperior to all haws，it was necelfary to ufe art fice，in order to obtain the confent of the curix．They therefore reprefuned to them in a public afiembly，that，in fi）defficult a ennjuncture， when they had their domeftic quarre！s to decide，and
lents of his colleague ；nor were they difuppointed in their expectations．But Lartius，with the fame readi－ nef，named Cloclins；and the enly contelt was，which of the two Thould raife the other to the fupreme autho． rity．Each perfifted obtinately in remiteing the dits－ nity to his colleaguc，till Clalius，farting up on a fud． den，abdicated the confulhip，and，after the mamicr of an interrex，proclamed Titus Laytius difator，who thereupon was obliged to take upon him the government of the republic．

Lartius indeed took as much fate upen him，after He choures he liad entered upon lis office，as he had thown mo－a gencral defly in refufing it．He began by creating，without of hurfe． the participation either of the fenite or people，a ge－ neral of the Roman horfe；an affice which lafted only during the dictatornip，and which all fubfequent dic－ tators revived immediately after their el eltion．Sip． Caffius，formerly conful，and honoured with a triumph， was the perfon he advanced to this fecond flation in the republic．Lartius，having by this means fecured the Roman knights，refolved，in the next place，to make the people reipect and fear him．With this view he never appeared in public，without being attended by 24 lictors，to whofe fafces he again added the axes which Poplicola had caufed to be taken from them． The novelty of this fight was alone fufficient to awe the feditious，and，without executions，to fpread con－ fternation throughout Rome．The murmurs of the in－ ferior claffes being by this means filenced，the dictator commanded a cenfus to be taken，according to the in－ flitution of King Servius．Every one，without excep－ tion，brought in his name，age，the particulars of his eftate，\＆ce．and there appeared to be in Rome 1，0，700 men who were paft the age of pubertv．Out of the Number of the dintor form the dime nans． ed himfelf；the fecond he gave to Cloclius his late col league；the third to Sp ．Caffius his general of the horfe； and the fourth he left in Rome，under the command of his brother Sp．Lartius，who was to guard the city． The Latins not being fo forward in their preparations as was expected，all their hoftilities againft Rome this campaign amounted to no more than the fending a de－ tachment into the Roman territory to lay it walte．The dictator gained fome advantage over that party；and the great humanity with which he treated the prifon－ ers and wounded，difpofed the Latins to liften the more readily to the overtures which he at the fame time made them for a fufpenfion of hoftilities．At length a truce was agreed on for a year；and then Lartius，feeing the republic reftored to its former tranquillity，refigned the dictator hip，though the time appointed for its du－ ration was not yet expired．

The following confulhip of Sempronius Atratinus and Minutins Angurinus，produced nothing memor－ able．But the next year the truce expired，when Aulus Poflhumius and T．Virginius took poffefion of the confulhip．Both Romans and Latins were bufied in making the neceffary preparations for war．The nobility of Latimm，who were for the molt part in the intcreft of the Tarquins，having found means to ex－ clude the citizens from the Latin diets，carried all befure them in throfe affemblies：whereupon many of the citizens removed with thcir families to Rome，where they were well receired．The Latins being bent up－ on war，the fenate，notwithtanding the pelfe？har－ oubting bnt Cleelius would yisld to the fuperior ta－ VoL．XVI．

Kome. \(\sim\)
mony that reigned between them and the people, thought it expedient to create a diftator. The two conlit! were therefore impowered to name one of themfelves to that dignity; whereupon Virgirius readily jicded it to his collcague Pollhumius, as the more able commander. The new dietator, having created Fbutius Elwa his general of the horfe, and divided his army into four bodies, left one of them, under the commanal of Sempromius, to guard the city; and with the other three, commaaded by himfell, Virginius, and Ebutius, marched out ag:in?t the Latins, who, with an army of 40,000 frot and 3000 horle, under the command of Sextus Tarquinius, Titus Tarquinius, and Mumilius, had aheady made themfelves mafters of Corbio, a frong-hak! belonging to the republic, and put Lhe gavrifon to the fword. Polthumius encamped in
Virginius on another hill over-again! him. Fbutus
wasordered to march fitently in the night, with the cav.ily and light-armed inf.ntry, to take polfeffion of at thir! hill upon the road, by which provitions mult be brought to the Latins.

Before Ebutius had fortifed his new camp, he was vigoroufly attacked by Lucius Tarquinius, whom he repulfed three times with great lofs, the dictator having fent himatimely remforcement. After this, \(\mathbb{E}\) busius intercepted two conriers fent by the Volici to the Latin generals, and, by letters found upon them, difovered, that a confiderable arny of the Volfci and Herrici were to join the Latin torces in three days. Tpon this intelligence, Pothmmius drew his three bodies of troops together, which amonnted in all to no more than 24,000 font and 1000 horfe, with a defign to enyage the enemy before the arrival of the fucco:rs they ceppeted. Accordingly he encouragad his men, and, with his army in battle array, qivanced to the place where the eneny was encamped. The Latins, who were much fuperior to the Romans in numbers, and befiles began to want provifious, did not decline the engagement. Titus Tarquini:s, at the bead of the Roman exiles and deferters, was in the centre, MamiJius in the right wing, and Sextus Tarquinius in the left. In the Roman army the diqator commanded in thie centre, EJutias in the left wing, and Virginus in the right.

The firlt body which advanced was that of the dictator; and, as foon as it began to march, 'T. 'Tarquirius, fingling out the distator, ram full fpeed againft him. The difator did not decline the encounter, but, fying at his adverfary, wounded him with a javelin in the right fide. Upon thic, the firt line of the Latins ..dvanced to cover their general ; but he heing carried out of the field, they made but a fuint refilance when tharted by the troops of the didator. They were deflituic of al lealer; and therefore began to retire, when Sextu; Tarquinius, taking the place of his brother, brought them back to the charge, and renewed the if ht winh fach vigour, that the victory in the centre vias Rill donbeful. On the fide of Mmilius and Abtutire, beth puries, encouraged by the example of their lenkers, founht with incredible bravery and refolution. Siter a long and bloody contef, the two gencrals at red to determine the dounful wiotry by a fingle c mban: Accordingly the champicis puftued on their If res : mainft cach cther. IEDatius with his lanec
wounded Mamilius in the brealt; and Marnilius with his fword Sbutius in the right arm. Neither of the wounds were mortal; but, both trenerals falling from their horles put an end to the combat. Mancus Valerius, the brother of Poplicola, fupplying the place of Abutius, endeavnured, at the head of the Roman horfe, to break the cnemy's battalions; but was repulfed by the cavalry of the Ro:.an royaliits. At the fume time Mamilius appeared again in the van, with a conflemable body of horfe and light-armed infantry. Valerius, with the alliftance of his two nephews, the fons of Poplicolia, and at chofan troon of volunteere, attempted to break through the Latin battalions, in order to engage Manilius; but, being furrounded by the Roman exiles, he received in mortal wound in his fide, fell from his horle, and die.l. The dead body was carried off by the two fons of Poplicola, in fpite of the utmott efforts of the exiles, and delivered to \(\mathrm{V}_{4}\) lerius': lervants, who conveyed it to the Roman camp; but the young heroes being afterwards iavefted on all fides, and overpowered by numbers, were brth killed on the fpot. Upon their death, the left wing of the Romans began to give grourch, but were fonn brought back by Pofhumins; who, with a body of Roman knights, flying to their affitunce, charged the royalifts withfuch fury, that they were, after an obfinate refiftance obliged to give way, and retire in the utmont confulion. In the mean time Titus Horminius, one of the dietator's lientenants, having rallied thofe who had flect, fell upon fome clofe battalions of the enemy's right wing, which ilill kept their ground under the command of Mamilius, killed him with his own band, and put that body to flight. But while he was buty in Aripping the budy of his enemy, he received himfelf a wound, of which be diad foon after.

Sertus Tarquinius in the mean time mant.ined the fight with great brave y, at the head of the left wing, aginll the confur Virginius; and had even broke thro' the right wing of the Roman army, when the dictator attacked hin urexpedeclly with his vidorious fquadrons. Then Sextus, having loft at once all hopes of vifory, threw himfelf, like one in defpair, into the midit of the Roman knights, and there funk under a multitude of wounds, after he had dittinguifhed himfelf in a molt eminent manner. The death of the threc generals was followed by the catire defeat of the Iatin entirely dearmy. Their camp was taken and plundered, and moft feated, and of their treeps cut in pieces : for, of the 43,000 men who came into the field, fearee 10,000 returned home. The next morning the Volici and Hernici came, according to their agreement, to a!filt the Latins; but finding, upon their arrival, how matters had gone, fome of them were for falling upon the R mans before they could recover from the fatigue of the preceding day : but cthers thought it more lafe to fend ambatadors to the difator, to congratulate him on his viaory, and allure him that they had left thsir own country with no other defignthan to alfint Rome in fo dingerous a war. Puthumias, by producing their couriers and letters, gave them to underfand that he wats well apprifed of their cefigns and weacherous precedings. However, out of a regard to the law of natims, he fent them back unhurt, with a chailenge to their general. to fight the rext day; but the Volfi, and their confederates, not caring to enghege a vivorions army, de. campe.l

Rome. camped in the night, and returned to their refpettive comitries before break of day.

The Latins having now no remedy but an entire
The whole nation fobmite. fubmillion, font ambalfadors to folicit a peace at Rome, yielding themfelves absolutely to the judgment of the fenate. As Rome had long fince made it a maxim to fire the nations that fubmitted, the motion of Titus Lartius, the late dictator, prevailed; and the ancient treaties with the Latins were renewed, on condition, however, that they flould reftore the prifoners they had taken, deliver up the deferters, and drive the Roman exiles out of Latium. Thus ended the lat war which the Romans waged with their neighbours on account of their banifhed king; who, being now abandoned by the Latins, Hetrurians, and Sabines, retired into anta, to Arkodemus tyrant Coma, and there died, in the goth year of his age and \(4^{\text {th }}\) of his exile.

The Romans were no boner freed from there dangerous wars, than they began to oppress one another; and thole domeltic feuds took place which continued more or leis during the whole time of the republic. The firn difturbances were occafioned by the oppreffin of the plebeians who were debtors to the patri- clans. The enate, who were at the head of the patricans, chore to the confulate one Appius Claudius, who violently opposed the pretenfions of the plebeians ; but gave him for his colleague one P. Servilius, who was of a quite contrary opinion and difpolition. The confequence of this was, that the consuls difagreed; the Senate did not know what to determine, and the people were ready to revolt. In the mitt of there distrbanes, an army of the Volsci advanced towards Rome; the people refused to ferve; and had not Servilius procured tome troops who fired out of a personal affecton to himself, the city would have been in great danger.

But though the Volsci were for this time driven back, they hall no intention of dropping their defigns; they engorged in an alliance with them the Hernici and Sabines. In the mean time, the difpu:es at Rome continuel with as much violence ascver. Nay, though they were expressly told that the Volician army was on its way to befiege the city, the plebeians about by refuted to march againit them; flying that it was the fame thing whether they were chained by their own currierymen or by the enemy. In this extremity Scivilius promifed, that when the enemy were repulied the fenate would remit all the debs of the plebe ans. This having engaged them to ferve, the consul marched out at their head, defeated the enemy in a pitched battle, and took their capital, giving it up to be plundered by his folders, without referviag any part for the pubic treasury.

Whatever might have been the reasons of Servilius for this ftp, it turnifhed Appius with a pretence for refuting him a triumph, as a man of a feditious difpofiction who aimed at popularity by an exceflive indulgence and profufencfs to his folders. Servilius, incenfed at this i-jultice, and encouraged by the acclamatons of the popple, decreed himfelf a triumph in fie of Appius and the ferrate. After this he marched againft the A urunci, who had entered Latium; and, in conjunction with Pofthumius Regillens, he utterly defated them, and obliged them to retire into their own country. But neither the fersices of the general nor
his folders could modify the fenate and patrician paly. Appius even doubled the feverity of his judgments, and imprifoned all those who had been fer at liberty during the war. The prifoners cried for relief to Servillus; but he could not obtain the accomplishment of thole promises which the fenate never had meant to perform; neither did he chonfe to quarrel openly with the whole patrician body; fo that, Arriving to preferve the frimdihip of both parties, he incurred the hatred of the one and the contempt of the other. Perceiving therefore that he had loft all his interef with the fieLeans, he joined with the patricians again them; but the plebeians ruching tumultuoully into the forum, made fuch a noife, that no fentence pronounced by the judges could he heard, and the utmof confufion grerailed through the whole city. Several proposals were made to accommodatematiers ; but through the obitnay of \(\Lambda_{\text {prius }}\) and the majority of the fenators, they all came to nothing. In the mean time it was necef. fry to raife an army :against the Sabines, who had invaded the territories of the republic; but the people refufed to force. Minius Valerius, however, brother to the celebrated Porlionla, once more prevailed upon them to march out against the common enemy; having previously obtained allurance from the enate that their grievances should be redreffed. But no fooner had visors declared in favour of the Romans, than the fenate, apprehending that the folders at their return would challenge Valerius, who had beca nominated dectater, for the performance of their promifes, defied him and the two confuls to detain them frill in the foch, under pretence that the war was not quite finish. cd. The consuls obeyed; but the dictator, whore antherity did not defend on the fenate, difbanded his army, and declared his folders free from the oath which they had taken; and as a further proof of his attachmend to the plebeians, he chole out of that order 400 , Whom he intelled with the dignity of knights. After this he claimed the accompl thment of the pronifos made by the fenate; but intend of performing them, he had the mortification to hear himfelf loaded with reproaches; on which he refined his office as dicta. tor, and acquainted the people with his inability to furlfill his engagements to them. No fonder were there tranfactions known in the army, than the folders, to a man, deferted the consuls and other officers, and rectired to a hill called afterwards Mons Sager, three miles to from Rome, where they continued to observe an exact difcipline, offering no fort of violence whatever. The senate, after taking proper meafures for the defence of the city, font a deputation to the maleconterts; but it was anfwered with contempt. In hort, all things tended to a civil war, when at haft matters were compromifed by the inflitution of tribunes of the people, who had power to prevent the fulling of any hae that might be prejudicial to the people, and whore perfons were declared faced, infomuch that whoever offered the leaf violence to the perron of a tribune was dellared accurfed, his effects were to be confecrated to Ceres, and he himself might be killed with impunity; and all the Romans wee to engage themselves, in thin own name and that of their pollerity, never to refs. al this law. The people, after there regulations, crefied an altar to Jupiter the Terrible, on the top of the hill where their camp had food; and when they hat offer-

\section*{Rome.} magiftrates and the deputies of the fenate. permilion from the fenate to clect two perfons as their which they were called fimply adiles. had equal fuccefs. to their craditor.
ed facifices to the god, and confecrated the place of their retreat, they retumed to Rome, led by their new

Thus the Roman conftutuion, which had originally been monarchic, and from thence had paffed into an atiltecracy, began now to verge towards a democracy. The tribunes immediately after thair clection obtained minifiers or affittants, who fhould eafe them a little in the great multiplicity of their affirs. Thefe were callc:l pleleian adiles; and afterwards came to have the intpection of the public baths, aqueducts, with many other offices originally belonging to the confuls, after

All oppolition to the making of regular levies being now at an end, the conful Cominius led an army againft the Volfci. He defeated them in battle, and tow from them Longula and Polufca; after which he befieged Corioli, a city ftrngly fortified, and which might be called their capital. He carried this place, and gained a vilory over the Antiates, the fame d.ly; but Cains Marcius, an eminent patrician, had all the glory cf roth attons. The troops detached by the conful to feale the wails of Corioli being repulfed in their firft affanlt, Marcius rallied the runaways, led them on afreth to the charge, drove back the enemy within their walls, and, entering the city with them, made himfelf mafter of it. This expluit atchieved, he with all expedition put himfelf in the foremolt ranks of the conful's main army, that was juft going to engage with the Antiates, who were come to the relicf of the place ; and there he hehaved with equal bravery, and

The next day the conful, having erented his tribural wefore his tent, called the folliers together. His whole fiecech to them was little more than a panegyric upon Marcius. Ife put a crown upon his head; afligned him a tenth part of all the fpoil ; and, in the name of the republic, made him a prefent of a fine horfe with Itately fumiture, giving lim leave at the lame time to chone out any ten of the pritoaers for himfelf; and lafty, he alloted him as much money as he could carry awsy. Of all thefe offers Marcius accepted only the horfe, and one captive of the ten, an old friend of his funily, that he might give him his liberty. To add to the glory of the brave warrior, the conful bett.wed in him the furname of Coriolanus, transferring the:eby from himfelf to Marcius all the honour of the conqu-it of Coricli. Cominius, at his return to Rome, dibanded his army; and war was fucceeded by works of religion, public games, and treatics of paace. At cenfus and a lutrum clofed the events of this memorable coafuilhip. There appared to be in Rome at this time no more that 1 ro,000 men fit to bear arms; a number by many thoufards lefis than at the hitt enrollment. Doubtlefs great numbers had run away to avoid being laves

Under the following adminiftration of T. Geganius and \(P\). Minuciar, R. ne was terribly amited by a famine, necafoned chietly by the negleot of plonghing and fowing during the late cre ubles; for the fedition had hippencd afier the autumal equiar \(x\), about fow. D2 ing-time, and the acermmodation was not made till at fame ju? bafore the winter illtice. The fenate difputched in the cets.afenets into Heturia, Campanis, the counsry of the

Volfci, ard eren into Sicily, to buy corn. Thofe who Ronic. embarked for Sicily met with a tempelf which retarded their arrival at Syracufe ; where they were confleaned to pars the winter. At Cumæ, the tyrant Ariftedemus fcized the money brought by the conmilitutes; and they themelves with diffintty faved their lives by flight. The Volfci, far from being difpofd to fuc. cour the Romans, would lave marched againf them, if a fudden and moft deffrusive pefiler ce had not de. feated their purpofe. In Hetruria alone the Ruman commiffarics met with fuccefs. They fent a conaderable quantity of grain from thence in Reme in barks: but this was in a fhort time confumed, and the mifery became exceffive: the people were reduced to eat any thing they could get ; and nature in fo great extremity loathed nothing.

During this diftrefs a deputation came from V'ditra a colon \({ }^{93}\) a Volfian city, where the Romans had formerty plant- inn to Veed a colony, reptefenting that mine farts in ten of its liera. inhabitants had been fwept away by a plague, and praying the Romans to fend a new coluny to " \(\varepsilon\) ppople it. The confcript fathers without much hefitation granted the requeft, preffed the departure of the colony, and without delay named three leaders ti) consuot it.

The people at firf were very well pleated with the propofal, as it gave them a profiped of relief in their hunger: but when they reflected on the ternible havoc the plague had made among the old inhabitanis of Velitre, they began to fear that the place might be fill infected; and this apprehenfion bccame fo univerfal, that not one of them would confent to gn thither. Neverthelefs the feate at length publifhed a decree that all the citizens fhould draw lots; and that thofe to whofe lot it fell tu) be of the culony fhonld inftantly march for Velirx, or fuffer the feveref punifiments for their difobedience: fear and hunger made the people comply ; and the fathers, a few days after, fent away a fecond coluny to Norb:1, a confideraible city of Latium. But the patrician; were difappointed as to the benefit they expected from thefe me ifures. The plebeians who remained in Rome being more and more preffed by hunger and want, grew daily mere angry with the fenate. At firt they aftembled in fmall companies to vent their wrath in abufive complaints; and at length, in one great body, ruhhed all together into the forum, c:llling out upoa their tribunes for fuccour.

The tribmes made it their bulinefs to heighten the pinurbangeneral difcontent. Having convened the penple, Spu- ces raifed rins Iciiins, chief of the college of tribunes, inveighed by the trinont hitterly again of the fenate; and when he had end- bunes. ed his hanangue, exhorted nothers to fpeak freely thuir thoughts; particularly: and by name, calling upon Erutus and Sicinius, the ringleaders of the former fedition, and now whlles. Thefe men, far fron attempting to extinguith the fire, added frefh fucl to it: And the more to inflame the fpirits of the multionde, they enumerated all the paft infults which the people had fufferc! from the nobles. Brutus concluded his harangue with loudly theatening, that if the plebeinas would follow his atvice, he would form oblige thofe men who had cauf:d the pretent callmity to fiad a renedy for it ; after which the allembly was difmilled.

The next day, the confuls, greatly alarmed at this commotion, and apprehending from the menaces of Drutus home very mifibievous crent, thought is advi- fable to convene the fenators, that they might confider of the belt means to avert the impending evil. The fathers could not agree in opinion. Sone were for entploying foft words and fair promifes to quiet and gain over the molt turbulent. But Appius's advice prevailed : which was, that the confuls thould call the people together, affure them that the patricians had not brought upon them the miferies they fuffered, and promife, on the part of the fenate, all poffible care to provide for their neceffities; but at the fame time fhould reprove the difturbers of the public peace, and threaten them with the feveref punifhments if they did not amend their behaviour.

When the confuls, towards the clofe of the day, having affembled the pecople, would have fignified to them the difpofition and intention of the fenate, they ware interrupted by the tribunes. A difpute enfued, in which no order or decency wals obferved on either lide. Several fpeaking at the fanie time, and with great vocif:ration, no one could be well underfood by the andience. The confuls judged, that being the fuperior ma. giffrates, their authority extended to all affemblies of the citzens. On the other fide, it was pretended, that the affemblies of the people were the province of the tribunes, as the fenate was that of the confuls.

The difpute g:ew warm, and both parties were ready to come to blows; when Brutus having put forme queftions to the confuls, ended it for that time. Nex: day phateser fhould interupt a tribuse when rpeaking in pengle in:- an affembly of the perp!e; by which means the influcreafes. ence and power of he popular party was conficlerably increafed, and the tribunes becime formidable opponents to the confuls and paticians. An opportunity foon offered for both part:es to try their Arength. A great fleet of thips laden with corn from Sicily, a great part of which was a prefent from Gelon the king of th:a: country to the Romans, and the reft purchafed by the fenate w ith the public money, railed their fipits once more.

But C riolanus incurred their refentm:nt, by infiaing that it fhould not be diftributed till the grievances of the fenate were removed. For this, the tribunes fummoned him to a trial befure the people, under pretence
that he afpired at the fovereignty.
When the appointed day was come, all perfons were filled with the greatef expectations, and a valt concourfe from the adjacent country allembled and filled up the forum. Coriolanus, upon this, prefented him. fuli before the people with a degree of intrepidity that merited better fortune. His graceful perfon, his perfuafive eloquence, the cries of thofe whom be had faved from the enemy, inclined the aditors to relent. Bur being confounded with a new charge which he did not expect, of having embezzied the plander of Antium, the Thibunss immediately took the votes, and Corislaruts was condemned ti) perpetuil exile.

This fentence againft their travef defender Aruck the whole body of the fenate with forrow, confleration, and regret. Coriolanus alone, in the midR of the tumult, feemed an unconcerned fpectator. He returned home, followed by the lamentations of hundreds of the moft reffectable fenators and citizens of Rome, to take a lathing leave of his wife, his children and his mother Veturia. Thus recommending his little children to
their care, he left the citr, without followers or for tune, to take refuge with Tullus Attius, a man of great power among the Volfcians, who took him undet his He lea ves protection, and efpouled his quarrel.
'The firt thing to be done, was to induce the Volfei to break the league which lad been made with Rome; and for this purpofe Tulius fent many of his citizen; thither, in order to fee fome games at that time cele. brating; but at the fame time gave the fenate private information, that the ftrangers had dangerous inter:tions of burnirg the city. This had the defired effect; the fenate iffued an order that all ©trangers, whoever they were, fhould depart from Rome betore funfet. This order Tullus reprefented to his countrymen as an infraction of the treaty, and procnred an embally to Rome, complaining of the breach, and demanding back all the territories belonging to the Volfcians, of which they had been violently difpoffelfed; decliring war in cafe of a refufal: but this maflage was treated by the fenate with contempt.

War being thus declared on both fides, Coriolanus Gains grcat and Tullus were made generals of the Volfcians; and advantazes accordingly invaded the Roman ternitories, ravaging over die and laying wafte all fuch lands as belonged to the p'ebeianc, but letting thofe of the fenators semain untouched. In the mean time, the levies went on very flowly at Rome; the two confuls, who were re-elected loy the people, feemed but little Rkilled in war, and even fared to encounter a general whum they knew to be their fuperior in the fiold. The allies also howed their fears, and flowly brought in their fuccours; fo that Cosiolanus continned t take their towns one afier the other. Fortune followed him in every expedition; and he was now fo f.mons for his ritoriec, that the Volfi left their cowns defencelefs to follow him into the field. The very foldiers of his colleague's almy came cver to him, and would acknowledye no other general. Thus finding himfel! aroppofed in the field, and at the head of a numerous army, he at length invefted the city of Rome itfelf, fully retilved to beliege \(:\) :t. It was then lurctls that the ferate and the penp.e unanimoulfy agreed to city. fend deputies in him, with propotals of refteration, in cafe he fliould draw off his army. Coriolanus received their propofals at tise head of bis principal cficers, and, with the iternnefs of a general that was to give the law, refufed their offers.

Another cmbafly was now fent forth, cr njuring him not to exact from his native city aught but what became Romans tn grant. Coriolanus, however, fill perfifted in his former demands, and granted them Lut three days in which to finith their deliberations. In this cxigence, all that was left was another deputation Atill more folemis than either of the former, compofel of the pontiffs, the priels, and the augurs. Theef, cloathed in their h.bits of ceremony, and with a grave and mournful deportment, iffued from the city, and entercd the camp of the conquacror: but all in vain, they found him fevere and inflexible as before.

When the people faw them return incfertually, they began to give up the commonwealth as lof. Their temples were filled with old men, with women and chitdren, who, proftrate at their altars, put up thair ardent prayers for the prefervation of their country. Nothing was to be heard but anguifh and lamentation, nothing to be feen but fcenes of affight and difrefs. At length.

\section*{\(R \cup M\)}
1..ne. it was fugsened to thom, that what could not he ef tected by the intercellion of the fenate or the adjuration of the friefts, might be brought about by the tears of his wife, or the commands of his mother. This deputation feemed to be relithed by all; and even the fenate itfelf gave it the fanction of their authority. Veturia, the mother of Coriolarus, at firft made fome hefitation t.) undertake f. pions a work : however, fhe at laft undertook the embalfy, and fet forward from the city, acc. mpanica by mary of the principal matrons of Rome, with Volumnia his witc, and his two children. Coriolanus, who at a diftance difonvered this mournful train of females, was refolved to give thom a denial, and called his officers round him to be witnefs of tis refolution; but, when told that his mother and his wife verc anomg the rumber, he infantly came down from dis tribunal to meet and embrace them. At firft, the ven:en's toars and cmbraces took away the power of words ; and the rough foldicr himfelf, hard as he was, colid not refrain from fuating in their diftrefs. Cobibiaus now femed much agitated by contending paffious; while his mother, who faw him moved, feconded her words by the moft perfualive cloquence, her tears : his wife and children loung rourd him, intreating for frotecti. n ard pity; while the fair train, her companions, added their lamentations, and deplored their own and thair country's dittrefs. Coriolanus for a moment was filent, feeling the frong confliet between honour and inclination: at length, as if rouzed from his dream, dellew to take up lis mother, who had fallen at his sect, crying out, "O iny mother, thou hat faved Rome, but loft thy fon." He accordingly gave orders i) draw of the anmy, pretending to the office:s that the city was tooftrong to be taken. Tullus, who liad lon-y ensied his glory, was not remifs in aggravating the lenity of his condust to his conntrymen. Ipon their return, Coriolanus was flain in an infurrection of the people, and afterwards horourably buried, with late an 1 iocffectual repentance.

The year following, the two confuls of the former year, IMmlius and Fabius, were cited by the tribures is appear hefore the people. The Agrarian law, which had been propofed fome time before, for equally Ahtiding the lands of the conmonweath amorg the poppin, was the object invariabiy purfued, and they verc acculed of having made unjultifiable delays in put. ting i: off.
it reems the Agrarian law was a grant the fenate could not think of giving up to the people. The confilc, therefure, made many delays and excufes, till at longoh they were once more obliged to have recourfe in a dietatn-: and they fired upon Quintus Cincimathe, a man who had for fometime given up ali views of ambition, and retired to his little farm, where the deputics of the fenate found him hodding the plough, and drefed in the man attire of a libouring hubandman. He appeared but little cecvated with the addreffes of veremony and the pompons habits they bre ught lim; .tnd, upondecharing to him the fenate's pleature, lac teHincel rather a concern that his aid fhould be wanted. However, hedepuied for the city, where both partics were ftrongly enllamed againft each oilher: but he was selulued to fide with neither ; only, by a Atrict attention :o the interefts of his country, inftead of gating the confuciacs of fraion, to obtain the edeem of all.

Thus, by threats and well-timed, fubmillion, he prerailed upon the tribunes to put off their law for a time, and carried himfelf fo as to be a terror to the multitude whenever ihey refuled to enlift ; and their greateft encourager whenever their fubmifion deferved it. Tlius, having reftored that tranquillity to the people which he fo much loved himiclf, he again gave up the fpiendors of ambition, to enjoy it with a greater relifl in his little farm.

Cinchun itus wats not long retired from his office when a frell exigence of the thaie once more required his af. liftance. The Equi and the Volici, who, though Rill worfted, fill were for renewing the war, madc 1.ew inroads into the territories of Rome. Ninutits, one of the emufuls who fucceeded Cincinnatus, wats fent to oppote them ; but being naturally timid, and rather more atraid of being conquered than defirous of victory, his army was driven intn a defile between two mountaias, from which, except through the enemy, there was no egress. This, however, the Fequi had the precaution to fortify; by which the Roman army was fo hemmed in on every fide, that nothing remained but fubmiffon to the enemy, famine, or immediate duath. Sume knights, who found means of ge:tng axay privately through the eneny's camp, were the finf that brought the account of this difafter to Rome. Nuthing could exceed the confternation of all ranks of people when informed ofit. The fenate at firt thought of the nthe: conful; but not having fufficient experience of his abilities, they unanimoully turned their eycs upon Cincinmatus, and relolved to make him disator. Cincimatus, the only perfon on whonn Rome could now place her whole dependence, was found, as before, by the melfengets of the fenate, lab ouring in lis little field with cheerfin indutty. He was at fitt altonithed at the enfigns of unbounded power with which the deputics came to invef him; but fill more at the approach of the principal of the fenate, who came out to meet him. A dignity fo unlooked for, however, had no effect upon the fimplicity or the integrity of his manners: and being now polfifed of abfohte power, and called upon to nominate his mafter of the horfe, he chofe a poor man named Tarquitius, one who, like himfelf, defpifed riches when they led to difhonour. Upon entering the city, the diotator put on a ferenc lonk, and intreated all thofe who were able to bear arms to repair before fun-let io th: Campus Martits (the place where the levies were made) with neceffary arme, and provifions for tive days. Ee put himfelf at the head of thefe; and, marching all night with great expedition, he arrived before day within fight of the enemy. Upon his approach, he ordered his foldiers to raic a loud fhout, to apprize the conful's army of the relief that was at hand. The Equi were not a litile amazed when they faw themfelves between two cnemies; but Aill more when they perceived Cincinnatus making the Atongeftentrencliments beyond them, to prevent their efcane, and inclofing them as they had inclofed the conful. To prevent this, a furions combat enfued; but the Rqui, being attacked on both fides, and unable to refit or fly, begged a ceffation of arms. They offered the dictator his own terms: lie gave them their lives; hut obliged them, it token of fervitude, to pals under the yoke, which was two fpears fet upright, and ano. ther acrofs, in the form of a gallows, beneath which

Who faves
a confular army from denructinn. the vanquifhed were to march. Their captains and gehis triumph. As for the plunder of the enemy's camp, that he gave entirely up to his own foldiers, without referving any part for himfelf, or permitting thofe of the delivered army to have a fhare. Thus, having refcued a Roman army from inevitable deltruction, having defeated a powerful enemy, having taken and fortified their city, and, fill more, having refufed any part of the fpoil, he religned his dictatorthip, after having cnjoyed it but \(1+\) days. The lenate would have enriched him; but he declited their proffers, chooling to retire once more to his fam and his cottage, content with temperance and fame.

But this repofe from foreign invation did not lefien the tumults of the city within. The chmours for the Agrarian law ftill continued, and ftill more fiercely,
when Sicinius Dentatus, a plebeian, advanced in years, but of an admirable perion and military deportment, came forward, to enumerate his hardhips and his n:crits. This old foddier made no foruple of cxtulling the various merits of his youth; but indeed his atchievements firpported oftentation. He had ferved his country in the wars 40 years; he had been an officer 30 , firlt a centurion, and then a tubune: he had fought 120 battles, in which, by the force of his fingle arm, he had faved a multitude of lives : he had gained 14 ci vic, threc mural, and eight golden crowns, belides 83 chains, 60 bracelets, 18 gilt fpears, and 23 horfe-trappings, whereof nine were for killing the enemy in fingle combat: moreover, he had received +5 wounds, all before, and none behind. Thefe vere his honours: yet, notwithtanding all this, he had never received any thare of thofe lands which were won from the enemy, but continued to drag on a life of poverty and contempt ; while others were poffeffed of thofe very terricories which his valour had won, withou: any merit to deferve them, or ever having contributed to the cour-
ro6 Violent diturbances. quett. A cale of fo much h.irdhip had a ftrong effect upon the multitude ; they unanimoufly demanded thats the law might be palfed, and that fuch merit fhould not go unrewarded. It was in vain that fume of the fenators rofe up to fpeak againt it ; their voices ware drowned by the cries of the people. When reaton, therefore, could no longer be licard, paftion, as ufual, fucceeded; and the young patricians, ruming, furioully into the throng, broke the balloting urns, and dilperfed the multitude that offered to oppote them. For this they were fome time after fined by the tribunes; but their refolution, neverthelefs, for the prelent, put off the Agrarian law.

The commonwealth of Rome had now for near 60 years been flutuating between the contending orders that compofed it, till at lengrh, each lide, as if weary, were willing to refpire a while from the mutual exertions of their claims. The citizens, now, therefore, of every rank, began to complain of the arbitrary decifions of their magintates, and withed to be guiled by a written body of laws, which being known might
prevent wrongs as well as punifh them. In this both the fenate and the people concurred, as looping that fuch laws would put an end tothe commotions that fo long had harafled the llate. It wis thereupon agreed, that ambaflidors niould be fent to the Greek cities in Italy, and to Athens, to buing home fuch laws from
thence as by experience had been found mon cqui. table and ufeful. For this purpus, three fenators, Pofthumius, Sulpicius, and Manlius, were fixed upon, and galleys aligned to convoy them, agrecable to the majefty of the Roman people. While they تiere upoin this commifion abroad, a dreadful plague depopulated the city at home, and fupplied the interval of their ab. fence with other anxiety than that of wifhes for their return. In about a year the plague cealed, and the ambalfadors retuned, bringing lome a body of liws, co!lected from the mof civilized flates of Greece amd Italy, which being afterwards formed into ten tables, and two more being added, made that celcbrated code culled the Lasus of the Truelve Tiblies, many tritgments of which remain to this day.

Siurne. \(\underbrace{\text { Nomer }}\) tibunes required that a body of men thould \(b=\) cho-clected. fen to digett their new laws into proper form, and to give weight to the execuion of them. After lonsr de. bates whether this choice fhould not be partly made from the people as well as the patricians, it was at latt agreed that in of the principal fenators thould be elected, whofe power, continuing for a year, thould \(b\) : equal to that of kings and confuls, and that without any appeal. The perfons chofen were Appius and Genutius, who had been elected confuls for the entfuing year ; Pothumius, Sulpicius, and Manlius, the three ambaffadors; Sextus and Romulus, former confuls ; with Julius Veturius, and Horatius, fenators of the firlt confideration.
The decemviri being now invelted with abfolute power, agreed to take the rems of government by turns, and that each thould difpenfe juftice for a day.

Thefe magiftrates, for the firf year, wrought wih extreme application: and their work benng finifhed, \(i=\) was expected that they would be contented to give up their offices; but having kncwn the charms of 1 cy power, they were now unwilling to relign it: they They we. therefore pretended that fome laws were get wantin: come adive to complete their defign, and intreated the fenate for lute. a continuence of their offices; to which that body affented.

But they foon threw off the mafk of moderasion ; and, regardlels either of the approbation of the lendie or the people, \(e\) efolved to continue themfelves, asy init all order, in the decemvirate. A conduat fo notorions produred difcontents; and thefe were as fure to produce fretla ads of tyranny. The city was become almoft a defert, with relpeet to all who had any thing tu lofe; and the decemvirs' rupacity was then only dificuntinced, when they wamted freth objeet; to exercife it upnn. In this tate of flavery, frofeription, and matual diltuat, not one citizen was found to Arike for lis country's freedom ; thefe tyrants continued to rulwithout controul, beiny contantly guarded, not wit.t their listors alone, but a numerous c:owd of depen dents, clients, and even patricians, whom their vices ha 1 confederatel round them.

In this gloomy fituation of the fate, the Fiqui and \(\begin{aligned} 110 \\ \text { nvafina if }\end{aligned}\) Volfci, thofe conftant enemies of the Romans, under. the \(\sqrt{s}\) ui took their incurfions, refolved to profit by the inteftine em' V゙uiti. divilions of the people, and a fvanced within about 10 miles \(\cdot f\) Rome

liome.
my into three parts; whereof one continued with Ap-known hatred, only rendered them fill more detefable pins in the city, to keep it in awe; the other two were commanded by his colleagues, and were led one againt the Aqqui, and the other againtt the Sabines. The Roman foldiers had now got into a method of punifhing the genetals whom they dill.ked, by fuffering them!elves to be vanquithed in the field. 'They put it in practice upon this occation, and thamefully abandoned their camp upon the approach of the enemy. Never was the news of a victory more joyfully received at Rome than the tidings of this deteat: the generals, as is always the cale, were blamed for the treachery of their men: fome demanded that they thould be depofed; others cried out for a dietater to lead the troops to eonquelt: but annong the reft, old Sicinius Dentatus the tribune fooke las fentiments with his ufual opennefs; and treating the generals with contenapt, thowed all the fauls o. their dilcipline in the camp, and of their conduct in the field. Appius, in the mear time, was not remiss in obferving the difpofition of the people. Dentatus, in particular, was marked out for vengeance, and, under pretence of doing him particular honour, he was appointed legate, and put at the head of the fupplies which were fent from Rome to reinforce the atmy. The office of le. grate was held facred among the Romans, as in it were united the authority of a general, with the reverence due to the priefthosd. Dentatus, no way fufpecting his defign, went to the camp with alacrity, where he was received with all the external marks of refpect. But the generals foon found means of indulging their defire of revenfe. He was appointed at the head of 100 men to go and examine a more commodions place for encampment, as he had very candidly allured the commanders that their prefent fituation was wrong. The foldiers, however, who were given as his attendants, were affafins; wretches who had long been minulters of the vengeance of the decemviri, and who now engaged to murder him, th ugh with all thofe apprehenfions whi h his reputation, as he wats called the Roman \(A\) chilles, might be fupp fed to infpire. With thefe defigns, they led him from the way into the hollow bofom of a retired mosutain, where they began to fet upon him from behind. Dentatus, now too late, perceived the trea h ry of the decmviri, and was relolved to fell his life as dearly as be could; he theretore put his back to a :ock, and defended himfelf againll thofe who preffed mof cl fely. Though now grown old, he lad fill the remains of his former valour, and killed no lefs than 150 of the affilants, and wounded 30 . The affatins now therefore, terrified at his amazing bravery, lhower. ed in their javelins upon him at a datance; all which he received in his fhield with undaunted refolution. "Ihe combit, though fo unequal in numbers, was matnaged for fome time with doubtful fuccefs, till at length his affollants bethought themfeives of afcending the rock againft which he flond, and thons poured down ftoncs up on him from above. This fucceeded; the old foldier fell beneath their united effort, alter having fiown by his death that he owed it to his fortitude, and \(n\) it his furtune, that he lad come off fo many times vietorious. The decemsiri pretended to join in the general forrow for fo brave a man, and decreed lim a funeral, with the firft military honours: but the greatnefs of their apparent diftrefs, compared with their
to the people.

> the people. But a tranfaction atill more atrocisus than the for- Tragicat maer aer ferved to infpire the citizens with a refolution to nory of break all meafiuss of obedicace, and at laft to reftore Virginia. freedom. Appiu: who Atll remained at \(R\) same, fitting one day on hin tribunal to difpenfe juftice, fow a maiden of exquifite beauty, and aged about 15 pan: ing to one of the pubic filionls, a tended by a matron her nurle. Conceiving a violent pallion for her, he refolved to obtain the giatification of his defire, whitever thould be the confequence, and found means to inform himfelt of her name and family. Her nume was Virsinis, the danshter of Virginius a cen:urion, then with the army in the fiold; and the had been contraeted to lethits, lormery a tribune of the people, who had agreed to marry her it the end of the prefent campaign. Appius, at firt, refolved to break this match, and to elpune her himfelf: but the laws of the llwelve Tables had forbidden the patricians to intermarry with the plebeians; and he could not infringe there, as he was the enacter of them. Nothing therefore remained but a criminal enjoyment; which, as he was long ufed to the indulgence of his pafionts, he refolved to obtain. Atter having vainly tried to cor. rupt the fidelity of her nurfe, he had recourfe to another expedient, ftill more guilty. He pitched upon one Claudus, who had long been the minifter of his pleafures, to alfert the beantiful maid was his llave, and to refer the caufe to his tribunal for decilion. Claudius behaved exatiy according to his inttrutions; for entering ituto the fchool, where Virginia was playing among her female companions, he feized upon her as his property, and was going to drag her away by foree, but was prevented by the people drawn together by her cries. At length, after the firlt heat of oppolition was over, he led the weeping virgin to the tribunsl of Appius, and there platibly expofed his pretentions. He afferted, that the was born in his houle, of a female flave, who fold her to the wife of Virginus, who had been baren. That he had feveral credible evidences to prove the truth of what he faid; but that, until they could come together, it was but reafonable the flave fhould be delivered into his cultody, being her proper mafter. Appius feemed to be fruck with the jultice of his claims. He obferved, that if the reputed father himfelf were prefent, he might indeed be willing to delay the delivery of the maiden for fome time ; but that it was not l.wful for him, in the prefent cale, to detain her from her ma. fter. He therefore adjudged her to \(\mathrm{Cl}+u d i u s\), as his flave, to be kept by him till Virginius thould be able to prove his paternity. This fentence was re eived with loud climours and reproaches by the mutitude: the women, in particul it, came round Virginit, as if will. ing to protect her from the judge's dury; while I ilius, her lover, boldly oppoded the decree, and oblized Claudius to take refuge under the utbunal of the decemsir. All things now threatened an open innurretion; when Appius, learing the event, thourht proper to fufeod his judgment till the arrival of Virginius, who was then about 11 miles from Rome, with the arms: 'Ilse day following was fixed for the trial; and, ia the mean time, Appius font letters to the generals to canfine Virginius, as his arrival in town inight only forve to

Pone.
kindie fedition among the penple. There letters, how-
ever, were intercepted by the centurion's friends, who threatering deftruction to whomfoever fhould oppofe him, he ran through the city, wildly calling upon the people to frike for freedom, and from thence went to the camp, in order to fpread a like flame through the army.

He no fooner arrived at the camp, followed by a number of his friends, but he informed the army ot all that was done, tall holding the bloody knife in his hand. He afked their pardon, and the pardon of the gods, for having committed to ralh an attion, but afcribed it s?l to the dreadful necelfity of the times. The army, already predifpofed, immediately with thouts echoed their approbation; and decamping, left their generals behind, to take their fation once more upon mount Aventine, whither they bad ratired about 40 Vol. XVI.

years before. The other army, which had been to op-

Rาпи.
cenfors were Papirius and \(S\) mppronius, both paticians; and from this urder they continued to be clected for r.ear 100 years.

This new creation fer ed to reflore peace for fome time among the orders; and the triumph gained over the Vol:cians hy Geganius the conful, added to the uniieffal fatisfactien that reigned among the people.
This calm, however, was but of fort continuance : for, fome time after, a famine preffing hard upon the pnor, the ulaal complaints againtt the rich werc tencweal; and theff, as before, proving ineffefuul, produced rew feditions. The confinls were accufed of negleat in not hasvity laid in proper quantities of corn: they, however, diffegarded the mu:murs of the populace, content with cxerting all their care in attempts to fup. ply the preciing necelfrics. But though they did all that could be expected from active magilltrates, in providing, ard diltiburing provifions to the poor; yet Spuritis Malius, a rich knight, who had bought up all the corn of Tuficany, by far outthone them in liberality. This demagornue, inflamed with a fecree defire of becoming powerful by the contemions in the fate, dilliobnted corn in great quannities among the poorcr fort cach day, till fis beufe became the alytum of all fuch as wined to excharge a life of labour for one of lazy dependence. When he had thus g, ined a fufficient number of partizans, he procured large quantities of arms to be brought into his houfe by night, and formcd a confiricycy, by which he was to obtain the com. mand, while fome of the tribunes, whom he had found mears to corrupt, were to act under him, in feizing upon the liberti:s of his country. Minucius fion difcovered the plot; and informing the fenate thereof, the \(y\) inmediately formed the refolution of creating a disíator, who fhould have the power of quelling the confiracy, without appealing to the people. Cincinnatus, who was now 80 years old, was chofen once more to refcue his country frem impending danger. He began by fummoning Mxxins to appear ; who refufed to obey. He next fent Alaala, the manter of his horfe, to force lim; who, meeting him in the forum, and preffing Mxlius to fillow him to the diator's trihanal, upon Fis refufal Ahala killed him on the fpot. The difater appl.uded the refolution of his officer, and corm minded the confpirator's guods to be fold, and lis l. ounfe to be demolifhed, diftributing his fores among the people.

The rribuncs of the people were much enraged at the death of Mellius; and, in order to punill the fenate, at the next election, infead of confulls, infilted nfon reforing their military tribunes. With this the fena:c were cbisiged to comply. Thic next year, however, the goveriunent seturned to its ancient channel, and conlifils we re choten.
The Veientes liad ling been the rivals of Rome; Thustionco they had crer taken the oppertunity of its internal \(\checkmark\) in refo.- diftrefics to ravage its territorics, and had cven threatve'. ened its ambalfadors, fent to complain of thefe injuries, with rutrage. In war they had been extremely formidable, and had cut off alront all the Foblan fansily; who, in the number of 306 perfoas, had voluntaily undert.lken to defend the fontiers againft their incurfons. It Reemel now therefure determined, that tle ci.; di Veii, whatever it llould coll, wits to fall; and the Remans accordir gly fat regularly down before
it, prepared for a long and painful refinance. The ftrength of the place, or the unkilfulnefs of the beficgets, may be inlerred from the continuance of the liege, which lated for 10 years; during which time the ammy continued encamped round it, Jying in winter under tents made of the fkins of beafts, and in fummer driving on the operations of the attack. Various was the fuccels, and many were the commanders that diredted the liege: fometimes all the befiegers' works were defrnyed, and many of their men cut off by fallies from the toun; fometimes they were annoyed by an army of Veians, who attempted to bring afflance from without. A fiege fo bloody feemed to threaten depepulation to Rome itfelf, by draining its forces continually away ; fo that a law was obliged to be made for all the bachelors to many the widows of the foldiers who were flain. In order to carry it on with greater vigour, Furius Camillus was created dictator, and to him was intrufted the fole power of managing the long protracted war. Camillus, who, without intrigue or any felicitation had raifed himfeli to the firlt eminence in the flate, had been made one of the cenfors fome time before, and was conlidered as the head of that office; he was afierwards made a military tribune, and had in this poft gained feveral advantages over the enemy. It was his great courage and abilitics in the above oflices that made him thoughe molt worthy to ferve his country on this prelling oecafien, Upon his appointment, numbers of the people flocked to his flandard, confident of linceefs under to experienced a commander. Confcious, however, that he was unable to take the city by florm, he fecretly wronght a mine into it with vaf labour, which opened into the midf of the citadel. Certain thus of fucceds, and finding the city incapable of relief, he fent to the fenate, defiring that all who chofe to thare in the plunder of Veii thould imnediately repais to the arny. Then giving his men directions how to enter at the breach, the city was inflanty filled with his legione, to the amazement and confternation of the befieged, who, but a moment before, had refted in perfeet fecurity. Thus, like a fecond Troy, was the city of Veii is tiken l:y taken, after a 10 years fiege, and with its fpoils en-Camidus. riched the conquerors; while Camillus himfelf, tranfported with the honour of having fubdued the rival of his native city, triumplied alter the manner of the kings of Rome, having his chariot drawn by four milk-nhite herfes; a diftintion which did not fail to difgut the majosity of the fjectators, as they confidered thofe as facred, and more proper for doing honour to their gols than their generals.

122
His ufual good fortune attended Camillus in another Hagenero expedition againt the Falici; he routed their army, fiey whe and befieged their capital city Falerii, which threatened Fulifti.
a long and vigoous relinance. Here a fchoolmafter, who had the care of the children belonging to the principal men of the city, having four means to decoy them into the Roman camp, bffert to put them into the hands of Camillu:, as the furelt means of inducing the citizens to a fpeedy furrender. The general was flruck with the treachey of a wretch whofe duty it was to protett innocence, and not tu betray it; and immediat ly ordered lim to be frinced, his hamas tied belind him, and in that gnomit ius manner to be whipped into the town by his own icholars.

Rome. This generous behaviour in Camillus effected more than his arms could do: the magiltrates of the town immediately fubmitted to the fenate, leaving to Camillins the conditions of their furrender; who only fined therm in a fum of money to fatisfy his army, and received them under the protection and into the alliance of Rome.

Notwithfanding the veneration which the virtues of Camillus had excited abroad, they feemed but little adapted to bring over the refpect of the turbulent tribunes at home, as they raifed fome frefh accufation againt hime every day. To their nther charges they added that of his having conccaled a part of the plunder of Veii, particularly two brazen gatcs, for his nwn ufe; and appointed him a day on which to appear before the people. Camillus, finding the multitude exafperated againft him upon many accounts, detelting their ingratitude, refolved not to wait the ignominy of trial; but, embracing his wife and clildren, prepired to depart from Rome. He had already paffed as \(f \mathrm{dr}\) as one of the getes, unattended \(\mathrm{m} n\) his way, and
I23. unlamented. There he could fupprefi his indignation He goos if:- no longer ; but, turning his face to the Capitol, and to voluntary exilc. lifting up his hands to heaven, intreated all the gods that his country might one day be fenfible of their injuftice and ingratitude; and fo faying, lie paffed forward to take refnge at Ardea, where he afterwards learned that he had been fined isoo ales by the tribunes at Rome.
The Rnmans indeed foon had reafon to repent their ufage of Camillus; for now a more formidable enemy
r24
Italy invaded log the ciauls.
gage them in his quarrel, he acquainted them with the great plenty of Italy, and made them tafle of fome Italian wines. Upon this the Senones refolved to follow him ; and a numerous army was immediately formed, which paffing the Alps, under the conduet of their Hetrurian guide, and leaving the Celtr in Italy unmolefted, fell upon Umbria, and poffeffed themfelves of all the country from Ravenna to Picenum. 'Ihey were about fix years in fettling themfelves in their new acquifitions, while the Romans were carrying on the fiege of Veii. At length Aruns brought the Senones before Clufium, in order to befiege that place, his wife and her lover having flut themfelves up there.

The fenate, being unwilling to engage in an reen war with a nation which had never offended them, fent an embaffy of three young patricians, all brothers, and an emilafts of the Fabian family, to bring about an accommodation to thent. between the two nations. Thefe ambaffadors, beingarrived at the camp of the Gauls, and conducted into the council, offered the mediation of Rome; and demanded of Brennus, the leader of the Gauls, What injury the Clufini had done him; or what pretenfions any penple from a remote country could have upon Hetruria? Brenmus anfwered proudly, that his right lay in his fword, and that all things belonged to the brave; but that, without having recourfe to this primitive law of nature, he kad a juft complaint againtt the Clulians, who, having more lands than they could cultivate, had refufed to yield to him thofe thoy left untilled: And what other motives had you yourfelves, Romans (faid he), to conquer fo many neighbouring nati-ns? You have deprived the Sabines, the Albans, the Fiden ite', the Rqui, and the Volfci, of the belf part of their territories. Not that we accufe you of in;ultice; but it is evident, that you thought this to be the prime and molt ancient of all laws, to make the weak give way to the Arong. Forbear therefore to interefl yourfelves for the Clufini, or to allow us to take the part of the people you have fubdued."

The Fabii were highly provoked at fo haughty an mprudent anfwer ; but, diffembling their refentment, defired leave conduct of to go into the town, under pretence of conferring with the ambatthe magiftrates. But they were no fooner there, than fadors. they began to Air up the inhabitants to a vignrous defence; nay, forgetting their charader, they put themfelves at the head of the befieged in a fally, in which Q. Fabius, the chief of the ambaffaders, new with his own hand one of the principal officers of the Gauls. Hereupon Brennus, calling the gods to witnefs the perfidioufnefs of the Romans, and their violating the law of nations, immediately broke up the fiege of Clufium, and marched leifurely to Rome, having tent an herald before him, to demand that thofe ambaffadors, who had fo manifelfedly violated the law of nations, fhould be delivered up to him. The Roman fenate was greatly perplexed between their regard for the law of nations and their affection for the Fabii. The wifen of the fenate thought the demand of the Gauls to be bat juft and reafonable: however, as it concerned perfons of great confequence and credit, the confcript fathers referred the aflair to the penpic affembled by curix. As the Fabian iamily was very popular, the curix were fo far from condemning the three brothers, that, at the next eletion of military tribuncs, they were chofen the than ever they had met with threatened the republic: an inundation of Gauls, leaving their native woods, under the conmand of one Brennus, wafted every thing witl fire and fword. It is faid tlat one Cceditius, a man of the loweft rank, pretended to hive heard a miraculous voice, which pronounced dikinet!y thefe words: "Go to the magiftrates, and tell ther." hat the Gauls draw neir." The meannefs of the man made his warning defpifed; though, when the event fhowed the truth of his predition, Cumillus erected a temple to the unknown Deity, and the Rnmans inverted for him the name of Aius Locutius. Meffenger after meffenger arrived with the news of the progrefs and devaltations of the Gauls ; but the Romans behaved with as much fecunity as if it had been impoffible for them to have felt the effects of their depredations. At laft envoys arrived at Rome, imploring the affitance of the republic againft an army of Gauls, which had made an irruption into Italy, and now befieged their city. The occafion of the irruption and fiege was this: Arunx, one of the clief men of Clufium in Hetruria, lad been guardian to a young lucumn, or lord of a lucumony, and had educated him in his houfe from his infancy. The lucumrs, as foon as he was of an age to teel the force of paffion, fell in love with his guardian's wife; and, upon the firf difcovery of their intrigue, conveyed her away. Arunx endeavoured to obtain reparation for the injury he had received; but the lucumo, by his interelt and money, gaimed over the magiftrates: fo that the injured guardian, finding no protectors in Hetruria, refolved to make his application to the Gauls. The people among all the Celtic nations, to whom he chofe to addrefs himel.f, were the Senones; and, in order to en-

\section*{l O M}

Rore firt. Erennus, looking upon the promotion of the F a bii is an bigh affront on his nation, hatened his march to Rome.

As his army was very numerous, the inlabitants of the towns and villages through which he paffed left their habitations at his approach; but he fopped nowhere, declaring that his defign was only to be revenged on the Romans. The fix military tribunes, to wit, Q. Tabius, Cato liabius, Caius Fabius, O. Sulpitius, Q. Servilus, and Sextus Cornelius, marched out of Kime at the licad of 40,000 men, without either facridicing to the gods or confulting the aufpices; effential ceremonits amons a people that drew their courage and confidence from the propitions figns which the angurs declared to them. As moft of the military tribures were young, and men of more valour than experience, they advanced boldly agrintt the Ganls, whofe army was ro,000 ftrong. 'Ihe two amies met near the diver Allid, about 60 furlongs tiom Rome. The Romans, that they might not be furrounded by the enemy, extended their wings fo far as to make their centre very thin. Their beft troops, to the number of 24,000 men, they polled between the river and the adjoining hulls; the sef they placed on the hills. The Gaul, firft attacked the latter, who being foon put into confufion, the forces in the plain were ftruck with fuch terror that they fled without drawing their fwo:ds. In this gencral diforder, moft of the foldiers, inftead of returning to Rome fled to Vcii : fome were drowned as they cndeavoured to livim acrofs the Tiber; many fell in the purfuit by the fword of the conquerors; and fome sct to Rome, which they filled with terror and confterbation, it being believed there that all the reft were cut off. 'The day after the battle, Bremus marched his troops into the neighbourhood of Rome, and encamped on the bonks of the Anio. Thither his fcouts brought hin word, that the gates of the city lay open, and that not use loman was to be feen on the ramparts. This made him apprelienfive of fome ambufeade, it being unreafonable to fuppofe that the Romans would abandon their city to be plundered and facked without making any refiftince. On this confideration lie advanced flowlf, which gave the Romans an opportunity to throw

130 They retire imest.e Capitrl. into the Capitol all the men who were fit to bear arms. They carried intu it :ll the provifions they could get; and, that they might laft the longer, admited none into the place but tuch as were capable of defending it.
As for the city, they had not fufficient forces to defend it ; and therefore the old men, women, and children, feeing thenifelves abandoned, fled to the neighbouring towns. The Veftals, before they left Rome, took care to hide every thing nppropriated to the gods which they could not carty off. The two pilladiums, and the facred lire, they took with them. When they came to the J.niculus, one Albinius, a plebeian, who was conveying his wife and children in a carriage to a place of fafety, feeing the facred virgins hending under their load, and their ieet bloody, made his family alight, put the prielteclies and their gods into the carriage, and conducted them to Cxie, a city of Hetruria, where they met with a favourable reception. The Veftals remained at Care, and there continued to per-
of the moft illuftions and venerable ohd men, wation than fly from their native city, chofe to devote them. folves to death by a vow, which Jobius the high pontiff pronounced in their names. The Romans belicved, that, by thefe voluntary devotements to the infermal gods, diforder and confufion was brought among the enemy. Of thefebrave old men fome were pontifices, others had been confuls, and other generals of armies, who had been honoured with triamphs. 'lo complete their facrifice with a folemnity and pomp beconing the inagnanimity and conftancy of the Romans, they dreffed themflves in their pontifical, confular, and triumphal robes; and repairing to the forum, feated themfelves there in their curule chairs, expesting the enemy and death with the greatelt conllancy.

At length Brennus, having fent three days in ufu- Rome prlefs precautions, entered the city the fourth day after 1 lged and the battle. He found the gates open, the walls with- Lurnt. out defence, and the houies without inhabitants. Rame appeared to him like a mere defart ; and this folitude increafed his anxiety. Hc could not believe, either that the Remans were lodged in the Capitol, or that fo numerous a people fhould abandon the place of their nativity. On the other hand, he could nowhere fee any armed men but on the walls of the citadel. However, having firffecured all the avenues to the Citpitol with frong bodies of guards, he gave the reft of his f.lliers leave to difperfe themfelves all over the city and plunder it. Brennus himelf advanced into the forum with the troops under his conmand, in grood order; and there he was fruck with admiration at the unexpentif fight of the venerable old men who had devoted themfelves to death. Their magnificent labits, the majelly of their countenances, the filence they kept, their modeliy and conftancy at the approach of his troops, made him take them for fo many deities: for they continued as motionlefs as fatues, and faw the enemy advance without fhowing the leall concern. The Gauls kept a great while at an awful diftance from them, being afraid to come near them. But at length one foldier bolder than the reft, having out of curiolity toucled the beard of M. Papirius, the venerable old man, not being ufed to fuch familiarity, gave him a blow on the head with his ivory ftaff. The fuldier in revenge immediately killed him; and the reft of the Gauls following his example, faughtered all thofe ve. nerable old men without mercy.
Afrer this the enemy fet no bounds to their rage and fury. They plundered all places, dragging fuch of the Romans as had thut themfelves up in their houfes into the freets, and there putting them to the fword without diftinction of age or fex. Brennus then ine They in vefted the Capitol ; but being repulfed with great lofs, veer the in order to be revenged of the Romans for their refilt- Capituon ance, he refolved to lay the city in afles. Accordly, by his command, the foldiers fet fire to the houres, demolilied the temples and public edifices, and safed the walls to the ground. Thuns was the famous city of K me entirely deftroyed; nothing was to be feen in the place where it thond but a few little hills covered with ruins, and a wide wafte, in which the Gauls who invefled the Capitol were enc.imped. Bronnus, finding he flould never be able to take a place which nature lad fo well fortified other wile than by famine, turned the fiege into a blockade. Dut in the mean time, his army

\section*{R O M}
\(\underbrace{\text { R min }}\) army being diftreffed for want of provifious, he fent out parties to pillage the fields, and raile contributions in the neighbouring cities. One of thefe parties ap. peared before Ardea, where the great Camillus had now fpent two years in a private life. Notwithfanding the affront he had received at Rome, the love he bore his country was not in the leaft diminithed. The fenate of Ardea being met to deliberate on the meafures to be taken with relation to the Gauls, Camillus, more affisted at the calamities of his country than at his own banilhment, defired to be admitted into the council, where, with his eloquence, he prevailed upons the Ardeates to arm their youth in their own defence, and refure the Gauls admittance into their city.

Hercupon the Gauls encamped before the city ; and as they defpifed the Ardeates after they had made then:felves malters of Rome, they preferved neither ordrinking. Hereupon Camillus, having eafily perfuaded the youth of the city to follow him, matched rut of Ardea in a very dark night, furprifed the Gauls drowned in wine, and made a dreadful flaghter of them. Thofe who made their efcape under the flelter of the night fell next daty into the hands of the peafants, by whom they were maffacred without mercy. This defeat of the enemy revived the courage of the Romans feattered about the country, efpecially of thofe who had retired to Veii after the unlortunate battle of A1lia. There was not one of them who did not condemn himfelf for the exile of Camillus, as if he had been the author of it ; and looking upon that great man as their 1.aft refurce, they refolved to choore him for their leader. Accordingly, they fent without delay ambaffadors io him, befeecling him to take into his protection the fugitive Romans, and the wrecks of the defeat at Allia, Dut Camilhus would not accept of the command of the troops till the people alfembled by curix had legally conferred it upon him. He thought the public authority was lodged in the hands of thofe who were fhut up in the citadel, and therefore would undertake nothing at the liead of the Roman troops till a commifion was brought him from thence.
'To do this was very difficult, the place being invefted on :ull fides by the enemy. However, one Pontius Cominius, a man of mean birth, but bold, and very ambitious of glory, undertook it. He put on a light habit, and providing himfelf with cork to keep the longer :bove water, threw himfelf into the Tiber above Rome in the beginning of the night, and fuffered himfelf to lee carried down with the fream. At length he came to the foot of the Capitol, and landed at a feep place where the Gauls had not thought it neceffary to polt any centinels. There he mounted with great difficulty to the rampart of the citadel; and having made himelf known to the guards, he was admitted into the place, and conducted to the magiftrates. The fenate being immediately afiembled, Pontius gave them an account of Camillus's victory; and in the name of all the Romans at Veii demanded thit great captain for their general. There was not much time fpent in debates: the curix being called together, the att of condemnation which had been paffed on Camillus was abrogated, and he named dictator with one voice. Pontius was inmediately difpatched with the decree; and the firme good fortune which had attended him to the Capitol accom-
panied him in his return. Thus was Camillus, from the thate of banithment, raifed at onee to be fovereign inagiftrate of his country. His promotion to the command was no former known, but foldiers flocked from all parts to his camp; infomuch that he foon faw himfelf at the head of above \(40,000 \mathrm{men}\), partly Romans and partly allies, who all thought themfelves inviacible under fo great a general.

While he was taking proper meafures to raife the blockade of the citadel, fome Gauls ranibling round the place, perceived on the fide of the hill the print of Pontius's hands and feet. They obferved likewife, that the mofs on the rocks was in feveral plices torn up. From thefe marks they concluded, that fomebody had lately gone up to and returned from the capitol. The Gauls immediately made their report to Brennus of what they had obferved; and that experienced commander laid a. defign, which he inparted to nobody, of furprifing the place by the fame way that the Roman had afcended. With this view he chofe out of the army fuch fudiers as had dwelt in mountainous countries, and been accuItumed from their youth to climb precipices. Thefe he ordered, after he had well examined the nature of the place, to afcend in the night the fame way that was marked out for thens; climbing two abreaft, that one might fupport the other in getting up the neep parts of the precipice. By this means they advanced with much difficulty from rork to rock, till they arrived at the foot of the wall. They proceeded with fuch filence, that they were not difcovered or heard, either by the centinels who were upon guard in the citadel, or even by the dogs, that are ufually awaked and alarmed at the leat noife. But though they eluded the fagacity of the dors, they could not efcape the vigilance of the geefe. A flock of thefe birds was kept in a court of the Capitol in honour of Juno, and near her temple. Notwithftanding the want of provifions in the garrifon, they had been ipared out of religion; and as thefe creatures are naturally quick of hearing, they were alarmed at the firft approach of the Gauls; fo that running up and down, with their cackling and beating of their wings, they awaked Manlius, a gallant foldier, who fome years before had been conful. He founded an alarm, and was the firt man who mounted the rampart, where he fonnd two Gauls already upon the wall. One of thefe offered to difcharge a blow at him with his battle-ax; but Manlius cut off his right hand at one blow, and ; bue dins cat ax his rind atone difcovered blow, and gave the other fuch a puth with his buckler, and rethat he threw him headlong from the top of the rock pulfed, to the bottom. He, in his fall, drew many others with him ; and, in the mean time, the Romans crowding to the place, preffed upon the Gauls, and tumbled them one over anuther. As the nature of the ground would not fuffer them to make a regular retreat, or even to fly, molt of them, to a yoid the fwords of the enemy, threw themfeives down the precipice, fo that very few got fafe back to their camp.

As it was the cuftom of the Romans at that time not to fuffer any commendable action to go unrewarded, the tribune Sulpitius a!Tembled his troups the next morning, in order to befow the military rewards on thofe thoo, the night before, laid deferved them. Among thefe Manlius was firf named; and, in acknowledgment of the important fer vice he had jult rendered the llate, every foldier gare bim pat of the com which he recci-

\section*{R O M}
ved fparingly from the public ftock, and a little meafure weight. We are told, that the weights of the Gauls of wine out of lis feanty allowance. An inconfiderable frefent indecd in itfelf, but very acceptable at that time to the perfon on whom it was beftowed. The tribune's neat care was to punifh the negligent: accordingly the captain of the guard, who ought to have lad an eye over the centinels, was condemined to die, and, purfuant to his fentence, thrown down from the top of the Capitol. The Romans extended their punifhments and rewards even to the animals. Geefe were ever after had in honour at Rome, and al flock of them always kept at the expence of the public. A golden image of a goofe was erented in memory of them, and a goofe every year carried in triumph upon a foft litter finely adorned; whilf dogs were held in abhorrence by the Romans, who every jcar impaled one of them on a branch of elder.

Ths blockade of the Capitol had already lafted feven months; fo that the famine began to be very fenfibly felt both by the belieged and befiegers. Camillus, fince his nomination to the dictatorfhip, being matter of the country, had pofted ftrong guards on all the roads; fo that the Gauls dared not flir nut for fear of being cut to pieees. Thus Brennus, who befieged the Capitol, was befieged himfelf, and fufiered the fame inconveniences which he made the Romans undergo. Befides, a plague raged in his camp, which was placed in the midft of the ruins of the demolifhed city, his men lying confufedly among the dead carcafes of the Romans, whum they had flain, and not buried. So great a number of them died in one quarter of the city, that it was afterwards ealled Buftia Gallica, or the place where the dead bodies of the Gauls were burnt. But, in the mean time, the Romans in the Capitol were more pinched with want than the Gauls. They were reduced to the laft extremity, and at the fame time ig. norant both of the lamentable condition to which the enemy's army was brought, and of the feps Camillus was taking to relieve them. That great general only waited tor a favourable opportunity to fall upon the enemy; but, in the mean time, fuffered them to pine away in their infected camp, not knowing the extreme want the Romans endured in the Capitol, where they were fo deftitute of all forts of provifions, that they could no longer fubfit. Matters being brought to this fid pafs on both fides, the centinels of the Capitol, and thofe of the enemy's army, began to talk to one ancther of an accommodation. Their difoourfes came at length to the ears of their leaders, who were not averfe to the defigu.

The fenate, not knowing what was become of Camillus, and finding themfelves hard pinched by hunger, refolved to enter upon a negociation, and empowered Sulpitius, one of the military tribunes, to treat with the Gauls; who made no great difficulty in coming to terms, they being no lefs defirnus than the Romans to putan end to the war. In a conference, therefore, between Brennus and Sulpitius, an agreement was made,
\({ }_{3} 38\) and fivorn tn. The Romans were to pay to the Gauls The Ro- 1000 pounds veeignt ot gold, that is, 45,0001. Sterling; mansagree and the latter were to ratife the fiege of the Capitol, tn vay 100 and quit all the Roman teritories. ©n the day ap-
pointed, Sulpitius, brought the fum agreed on, and Brennus the feales and weights; for there were no gold or filver coins at that time, metals paffing only by
were falfe, and their fcales untrue; which Sulpitius complaining of. Brennus, intead of redreffing the injuttice, threw his fword and belt into the feale where the weights were ; and when the tribune anked him the meaning of fo extraordinary a behaviour, the only anfwer he gave was, Va villis! "Wo whe conquered!" Sulpitius was fo ftung with this haughty anfiwer, that he was for carrying the gold back into the Capitol, and fuftaining the fiege to the 1alt extremity; but others thought it advifiable to put up the affront, fince they had fubmitted to a far greater one, which was to pay any thing at all.

Daring thefe difputes of the Roman deputies among themfelves and with the Gauls, Camillus advanced with his army to the very gates of the city; and being there informed of what was doing, he commanded the main body to follow him flowly and in good order, while he, with the choiceft of his men, hatened to the place of the parlcy. 'The Ronuns, overjoyed at his unexpetied arrival, opened to make room for him as the fupreme mingitrate of the republic, gave him an account of the treaty they had made wih the Gauls, and complained of the wrong Brennus did them in the execution of it. They had fearce done fpeaking, when Camillus cried out, "Carry back this gold into the Capitol; and you, Canilus Gauls, retirc with jcur feales and weights. Rome driveraway muft not be redeemed with gold, but with lteel." Bren- the Gauls. nus replied, That he contravened a treaty which was concluded and confirmed with mutual oaths. "De it fo (anfwered Camillus); yet it is of no force, having been made by an inferior magifrate, without the privity or confent of the dietator. I, wham invefted with the fupreme authority over the Romans, declare the contract void." At thefe words Bremnus flew into a rage; and both fides drawing their frords, a confufed feuffle enfued among the ruins of the houfes, and in the narrow lanes. The Gauls, after an inconfiderable lofs, thought fit to retire within their camp; which they abandoned in the night, not caring to engage Camillus's whole army, and, having marched eight miles, encamped on the Gabinian way. Camillus purfued them as foon as it was day, and, coming up with them, gave them a total overthrow. The Gauls, according to Livy, made but a faint refiftance, being difheartened at the lofs they luad fuftained the day before. It was not, fays that author, fo much a battle as a flaughter. Ma- The Gaule ny of the Gauls were flain in the action, more in the entirely cus purfuit; but the greater number were cnt off, as they olf. wandered up and down in the fields, by the inhabitants of the neighbouring villages. In fhort, there was not one fingle Gaul left to earry to his countrymen the news of this fatal cataftrophe. The camp of the barbarians was plundered; and Camillus, loaded with fpoils, returned in triumph to the city, the folders in their fongs Ayling him Romadus, Fatber of his country, and Second founder of Rome.

As the houfes of Rome were all demolifhed, and the walls razed, the tribunes of the penple renewed, with more warmth than cver, an old project which had oceafioned great difputes. They had formerly propofed a law fur dividing the fenate and government between the cities of Veii and Rome. Now this law was revi- 1ifputes ved ; nay, mult of the tribunes were for entirely aban- about redoning their old ruined city, and making Veii the fole moving :o
feat of the empire. The pecple were inclined to favour the project, Veii offering them a place fortified by art and nature, good houfes ready built, a wholefome air, and a fruitful territory. On the other hand, they had no materials for rebuilding a whole city, were quite exhaufted by misfortunes, and even their Arength was greatly diminithed. This gave them a reluatance to f, great an urdertaking, and emboldened the tribunes to utter feditious harangues againt Camillus, as a man too ambitious of being the reftorer of Rome. They even infinuated that the name of Romulus, which had been given him threatened the republic with a new king. But the fenate tonk the part of Camillus, and, being defirous to fee Rome rebult, continued liim, contraty to cuftom, a full year in the office of dictator; during which time he made it his whole bulinefs to fupprefs the frong inclination of the perple to remove to Veii. Having alfembied the curix, he expoftulated with them upon the matter; and, by arguments drawn from prudence, religion, and giory, prevalled upon them to lay afide all thoughts of leaving Rome. As it was necelfan to have the refolution of the peopie confirmed by the fenate, the detator reperted it to the confcript fathers, leaving every one at full liberty to vote as he pleafed. While L. Lucretius, who was to gave his opinion the firf, was beginning to fpeak, it happened that a centurion, who with his company had been upon guard, and was then marching by the fenate-houfe, cried out aloud, "Plant your colours, enfign ; this is the bef place tr, ftay in." There words were confidered as diffated by the geds themfelves; and Luctetius, taking occalion from them to urge the necelfity of Naying at Rome, "An happy omen, (cried he); I adore the gods who gave it." The whole fenate applauded his words; and a decree was puffed without oppolition for rebuilding the city.

Thnugh the tribunes of the people were defeated by Cumillus in this point, they refoised to exercife their autheri:y again't another patrician, who had indee.t defenved fuaithment. This was Q. Fabius, who had violated the law of natione, ard thereby provoked the Gauls, and occafioned the burnisg of Rome. His crime beiner notr ricus, he was fummored by C. Martius Rutius before the aflenbly of the 1 enpie, to anfwer fur his condur in his emb:ly. The criminal had reation to fear the feverell punilhnent : bat his relations gave out that be dicd fuddenly: which generally happened when the accufed ferfon had determinicd to
prevent his condemation, and th.e thame of a public punithment. On the other hand, the repultic gave an hufe fittated on the Capitel to, M. Manlius, as a monument of his viouir, and of the gratitude of his fellow-ctizens. Camillus clofed this year by laying down his difatorthip: whereupon an interregtam enfined, during which be governed the fiate alternately with P. Cornclius Scipio; and it icil to his int to prefide at the eleation of rell magitratec, when L. Valenius Poplicol:a, L. Virginius Tricoitus, P. Cornelus Colfur, A. Manlius Cay itoliauc, L. İn!lius Mamercinue, and I. Poithumius Abinus, were chefen. The firf care ot thefe new magiftrates was to cillea all the ancient monuments of the religion and civil laws of Rome which could be \(f_{1}\) und among the ruins of the denoliffed city. The larts of the twelve tables, and fome of the laws of the kirgs, had been written on brats, and
fixed up in the forum ; and the treaties made with feveral nations had been engraved on pillars erected in the temples. Pains were therefore taken to gather up the ruins of thele precious monuments; and what could not be found was fupplied by mem ry. The pontifices, on their part, took care to re-cilablifh the reli. gious ceremonies, and made alfo a lift of lucky and unlucky days.

And now the governors of the republic applied themfelres wholly to rebuild the city. Plutarch tells us, that as the workmen were digging among the ruins of the temple of Mars, they found Romulus's augural ftaff untouched by the flames; and that this was looked upon as a prodigy, fiom whence the Romans inferred that their city would continue for ever. The expence of building private houfes was partly defrayed out of the public treafure. The \(x\) diles had the direction of the works; but they had fo little tafte fur order or beaty, that the city, when rebuilt, was even lefs regular than in the time of Romulus. And though in Auguftus's time, when Rome became the capital of the known world, the temples, palaces, ard private houfes, were built in: a more magnificent manner than before; yer even then thefe new decorations did not rectify the faults of the plan upon which the city had been built after its firf demolition.

Rome was fearce reftored, when her citizens were A general alarmed by the news that all her neighbours werc com- con:bibining to her deftruction. The Rqui, the Volici, the Hetrurians, and even her old friends the Latins and the Hernici, entered into an alliance againft her, in hopes of opprefling her before the had recovered her frength. The republic, under this terror, nominated Camillus diflator a third time. This great commander, having appointed Servilius to be his general of horfe, fummoned the citizens to take arms, without excepting even the old men. He divided the new levies into three bodies. The Erf, under the command of A. Manlius, he ordered to encamp under the walls of Rome ; the fecond he fent into the neighbourhood of Veii; and maiched himfelf at the heail of the third, to relieve the tribunes, who were clofely belieged in their camp by the united forces of the Volfci and Latins. Finding the enemy encanıped near Lanuvium, on the declivity of the hill Marcius, he pofed himfeit bel:ind \(i t\), and, by lighting fires, gave the diftefifed Romans notice of his arrival. The Volfiand Latins, when they underfond tha: Camillus was at the head of an army newly arrived, were fo tersifiel, that they thut themflves up in the:r camp, which they firtifed with great trees cat down in liafte. The difator, obferving that this barrier was of gieen wond, and that every morning there arofe a great wind, which blew fuil upon the enemy's camp, formed the defign of taking it by fire. With this vicw he ordcred one part of his army to go by break of day with fire-brands to the windward lide of the camp, and the other to make a brik atack on the oppofite lide. By this means the encmy were entirely defeated, and their camp taken. Camillus then comananued his men to extmpuith the thames, in order to five the bnoty, with which be rewarded his army. He then left his fon in the camp. to guard the prifoners; and, entering the country of the Equi, mads himictf mater of thair capit.t city Bola. Brom thence he marched againd the Volfi;

Rome. \(\underbrace{\text { Rome. }}\)
whom be entirely reduced, after they had waged war with the Romans for the fpace of 107 years. Having fubdued this untractable people, he penetrated into Hitruris, in order to relieve Sutrium, a town in that country in alliance with Rome, and befieged by a nu--merous army of Heturi.uns. Dut, notwithfanding all the expedition Camillus could ufe, he did not reach the place before it had capitulated. The Sutrini, being greatly difteffed for want of provifions, and exhautled with labour, had furrendered to the Hetrurians, who had granted them nothing but their lives, and the cloaths on their baeks. In this deflitute condition they had left their own coontry, and were going in fearch of new habitations, when they met Camillus leading an army to their relief.

The unfortunate multitude no fooner fav the Romans, but they threw themfelves at the difator's feet, who, moved at this melancholy fight, defired them to take a little reft, and refrefh themfelves, adding, that he would foon dry up their tears, and transfer their forrows from them to their enenies. He imagined, that the Hetrurians would be wholly taken up in plundering the city, without being upon their guard, or obferving any difcipline. And herein he was not miftaken. The Hetrurians did not dream that the dictator could come fo fpeedily from fuch a ditance to furprife them; and therefore were wholly employed in plundering the houfes and carrying off the booty, or fealling on the provifions they had found in them. Many of them were put to the fiword, and an incredible number made prifoners; and the city was refored to its ancient inhabitants, who had not waited in vain for the performance of the dictator's promife. And now, after thefe glorious exploits, which were finithed in fo fhort a time, the great Camillus entered Rome in triumph a ahird time.

Camillus having refigned his diftatorhip, the republic chofe fix new military tibunes, Q. Quinctius, Q . Servius, L. Juiius, L. Aquilius, L. Lucretius, and Ser. Sulpitius. During their adminiltration the country of the 不qui was laid wafte, in order to put it out of their power to revolt anew; and the twn cities of Cortuofa and Contentbra, in the lucumony of the Tarquinienfes, were taken from the Hetrurians. and entirely demolifhed. At this time it was thought proper to repair the Capitol, and add new works to that part of the hill where the Gauls had endeavoured to feale the citadel. Thefe works were elteemed very beautiful, as Livy informs us, even in the time of Augultus, after the city was embellifhed with molt magnificent decorations.

And now Rome being reinfated in her former f-urifling condition, the tribunes of the people, who had been for fome time quiet, began to renew their fediticus harangues, and revive the old quarrel about the divifion of the conquered lands. The patricians had appropriated to themiclves the Pomptin territory lately taken from the Volfei, and the tribunes iaid hold of this opporturity to raice new duturbances. Bur the citiyens being fo drained of their money that they hat not enough left to cultivate new farms and finck them with catt!e, the dechamations of the tribunes made no impreffion upen their minds; fo that the project vanilhed. As for the militiry tribuines, they owned that their election had been defertive ; and, led the irregulatities of the former comitia fhould be continued in the fite.
cceding cnes, they voluntarily laid down their office. So tlat, after a thort interregnum, during which M. ALanlius, Scr. Sulpitius, and L.. Valerius Potitus, governed the republic, fix new military tribunes \(L\). Dapirius, C. Surgius, L. Amilius, L. Menenius, L. Vale. rius, and C . Comelius, were chofen for the enfuing year, which was fpent in works of peace. A temple, which had been vowed to Murs during the war with the Gauls, was built, and cenfecrated by T. Qainetins, who prefided over the affais of religion. As there had hitherto been but few Roman tribes beyond the Tiber which had a right of fuflrage in the comitia, four new ones were added, under the name of the Stellatina, Tramontina, Sabatina, and Arnienfis; fo that the tribes were now in all 25 , which enjoyed the fame rights and privileges.

The expectation of an approaching war indueed the centuries to choofe Camillus one of the military tribunes for the next year. His colleagues were Ser. Cornelius, Q. Servilius, L. Quinctius, L. Horatius, and P. Valerius. As all thete were men of moderation, they agreed to invelt Canillus with the fole management of affairs in time of war; and accordingly in full fenate transferred all their power into his lands; fo that he became in effect diftator. It had been already determined in the fenate to turn the arms of the republic againt the Hetrurians; but, upon advice that the Antiates had entered the Pomptin territory, and obliged the Romans who had taken poffefion of it to retire, it was thought neceffary to humble them before the republic engaged in any other enterprife. The Antiates had joincel the Latins and Hernici near Satricum; fo that the Romans, being terrified at their prodigious numbers, fhewed themfelves very backward to engage; which Camillus perceiving, he inflantly mounted his horfe, and riding through all the ranks of the army, encouraged them by a proper fpeech; after which he difmounted, took the next ftandard-bearer by the hand, led him towards the enemy, and cried out, Soldiers, advance. The foldiery were athamed not to follow in general who expofed himfelf to the firf attack; and therefore, having made a great thout, they fell upon the enemy with incredible fury. Camillus, in order to increafe their eagernefs fill more, commanded a flandard to be thrown into the middle of the enemy's battalions; which made the foldiers, who were fighting in the firt ranks, exert all the refolution they could to recover it. The Antiates, not being able any longer to naike head againt the Romans, gave way, and were enturely defeated. The Latins and Hernici feparated from the Volfci, and returned home. The Volfici, feeing themfelves thus abandoned by their allies, took refuge in the neighbouring city of Satricum; which Camillus innmediately invefted, and took by affault. The Volici threw down their arms, and furrendeted at difcretion. He then left his army under the command of Valerius ; and returned to Rome to folicit the confent of the fenate, and to make the necelfary preparations for undertaking the fiege of Antium.

But, while he was propofing this affair to the fe- His 149 nate, deputies arrived fiom Nepet and Surrium, two ci-fucceffef, ties in alliance with Rome in the reighbourhood of Hetruria, demanding fuccours againt the Hetrurians, who threatened to boliege thefe I wo cities, which were the kegs of Hetruia. Hereupon the expedition againft

Who gives the Antiates Sec. a greit defeat.

\section*{Rome.}

Artium was laid afide, and Camillus commanded to hatten to the relief of the allied cities, with the troops which Servilius had kept in readinefs at Rome in cafe of an emergency. Camillus immediately fet out for the new war; and, upon his arrival before Sutrium, found that important place not only hetieged, but almoft taken, the Hetrurians having made themfelves mafters of fome of the gates, and gained poffeffion of all the ave. nues leading to the city. However, the inhabitants no fooner heard that Camillus was come to their relief, but they recovered their courage, and, by barricadoes made in the Itreets, prevented the enemy from making themfelves mallers of the whole city. Camillus in the mean time having divided his army into two bodies, ordered Valerius to march round the walls, as if he deligned to fcale them, while he with the other undertook to charge the Hetrurians in the rear, force his way into the city, and thut up the enemy between the belieged and his troops. The Romans no fooner appeared but the Hetrusians betook themfelves to a diforcerly flight through a gate which was not invelted. Camillus's troops made a dreadiul flaughter of them within the city, while Valerms put grcat numbers of them to the fword without the walls. From reconquering Sutrium, Camillus haftened to the relief of Nepet. But that city being better affected to the Hetrurians than to the Rornans, lad volustarily fubmitted to the former. Wherefore Camillus, having invefted it with his whole army, tcok it by allaule, put all the Hetrurian foldiers without diftinction to the fword, and condemned the authors of the revolt to die by the axes of the lictors. Thus ended Camillus's military tribuneflip, in which he acquired nol lefs reputation than he had done in the molt glorious of his dictatorlhips.

In the fullowing magiftracy of fix military tribunes, a dangerous fedition is laid to have taken place through the ambition of Marcus Manlius, who had faved the Capitol from the Gauls in the manser already related. " Mhough this man had pride enough to defpife all the other great men in Rome, set he envied Camillus, and took every opportunity of magnifying his own exploits beyond thufe of the dictator. But not finding fuch a favurable recep:ion from the nobility as he defired, he concerted meafures with the tribunes of the preople, and trove to gain the affections of the multitude. Not conient with renewing the propofal for the difribution of conquered lands, he alfo made himfelf an advocate for infolvent debtors, of whom there was now a great number, as molt of the lower clafs had been obliged to borrow money in order to sebuild their houfes. The lenate, alarmed at this oppofirion, created A. Cornelius Colfus dictator, for which the war with the Volfci afiorded them a fair pretesce. Manlius, however, fill continued to inflame the people againit the patricians. Befides the molt unbounded perfonal generofity, he held allemblies at his own houfe (in the citadel), where he confidently gave out that the fenators, not content with Vol. XVI.
being the polfeffors of thofe lands which ought to have been equally divided among all the citizens, had con. cealed, with an intent to appropriate it to their own ure, all the gold which was to have been paid to the Gauls, and which would alone be fufficient to difcharge the debts of all the poor plebeians; and he moreover promifed to fhow in due time where this treafure was concealed. For this affertion he was brought before the dictator; who commanded him to difcover where the pretended treafure was, or to confels openly before the whole alTembly that he had nandered the fenateManlius replied, that the diftator himfelf, and the principal perfons in the fenate, could only give the proper intelligence of this treafure, as they had been the moft active in fecuring it. Upon this he was committed to prifon ; but the peorle made fuch difurbance, that the fenate were foor afier fain to releafe him. By this he was emboldened to continue his former practices; till at latt the fenate gave an order to the military tribunes to take care that the commonwealth iuffered no detriment from the pernicious projects of Marcus Manlius, and eren gave them authority to affaffinate him, if they found it neceflary fo to do. At laft, however, he was publicly accufed of afpiring to be king; however, the people, it is faid, were fo Itruck with gratitude, on account of his having delivered the Capitol from the Gauls, that they could not refolve to condemn him. But the military tribunes, who, it feems, were bent on his deflruction, laving appointed the allembly to be held without the city, there obtained their wifh. Manlius who is was thro vn headlong from the Capitol itfelf: it was condemme. thenceforth decreed that no patrician fhould dwell in and executhe Capitol or citadel ; and the Manlian family refolved \({ }^{\text {tod. }}\) that no member of it thould ever afterwards bear the prenomen of Marcus. No fooner was Manlius dead, kowever, than the people lamented his fate; and becaufe a plague broke out foon after, they imputed it to the anger of the gods on account of the dellruction of the hero who had faved the flate (A).

The Romans, having now trinmphed over the Sabines, the Etrurians, the Latins, the Hernici, the Equi, and the Volfcians, began to look for greater conquefts. They accordingly turned their arms againt the Samnites, a people about 100 miles ealt from the city, defcended from the Sabines, and inhabiting a large trat of fouthern Italy, which at this day makes a confiderable part of the kingdom of Naples. Valerius Corvus and Cornelius were the two confuls, to whofe care it firt fell to manage this dreadful contention between the rival flates.

Valerius was one of the greateft commanders of his 152 time; he was furnamed Corvus, from a ftrange cir- the Sam. cumftance of being affited by a crow in a fingle com-nite. bat, in which he fought and killed a Gaul of a gigantic flature. To his collearue's care it was conligned to lead an army to Samnium, the enemy's capital; while Corvus was fent to relieve Capua, the capital of the Z z Cam.
(A) The above accounts are exanly conformable to what is to be found in the bef Latin hitorians; neverthelefs they are far from being reckoned univerlilly authentic. Mr Hooke, in his annotations on the death of \(\mathbf{M}\). Maniius, has given very Itrong reafen; againlt believing either that Camillus refcued the gold from the Gaul, or that Manlius was condemned. Ste Hooke's Roman Hifiorg. Vol. II. p. 32G, et jeq.

Rume. Campanians. The Sumnites were the hravelt men the Romans had ever yet encountered, and the contention between the two nations was managed on both lides with the moft deternined refolution. luat the fortune of Rome prevailed; the \({ }^{-}\)Samnites at length fled, averrong, that they were not able to withftand the fierce looks and the fire-darting eyes of the Romans. The other conful, however, was not at firf fo fortunate; for having unwaringly led his army into a defle, he was in danger of being cut off, had not Decius, a tribune of the army, polleifed himielf of an hill which com. manded the enemy : fo that the Samnites, being attacked on either fide, were defeated with great naugh ter, no lefs than \(\hat{3}^{0}, 000\) of them being leit dead upon tine field of bathle.

Some time after this vianoy, tile foldiers who were flat oned at Capua mutinying, forced Quintius, an old and eminent fuldier, who was then etiding in the country, to be their leader; and, conducted by their rage more tian their general, came within eight miles of the city. So terrible an enemy, almoft at the gates, not a little alarmed the fenate ; who immediately created Valerius Corvus diatator, and fent him forth with another army to oppofe them. The two armics were now drawn up aganit each other, while tathers and fons bebeld themielves prepared wengage in oppolite canfes; but Corvus, knowing his influence among the foidiery, inftead of gong forward to meet the nutineers in an fontle manner, went with the molt cordial friendhip to embrace and expoftulate with his old acquaintanees. His conanct hat the defired effect. Quintius, as their jpeaker, only defired to have their detection fiom their duty forgiven; and as for himfelf, as he was imnocent wh the ir a nepracy, he had no reafun to folicit pardor. for his offences.

A war between the Rumans and the Latins followed forn after; but as their habits, arms, and language, were the fame, the moft exact difcipline was neceffary in prevent confufion in the eagagenment. Orders, therefore, were iliued by Manlius the conful, that no inddier Chould leave his ranks upon whatever provocation; and that he fhould be cestainly put to death who thould offer to do otherwife. With thefe injunctions, toth armies were drawn out in array, and ready to begin; when Metius, the general of the enemy's cavalry, pulthed forward from lis lines, and challenged any hinglit in the Roman army to fingle combat. For fome the there was a general paufe, no foldier offering to difobey his orders, till Titus Manlius, the conful's own fon, burning with thame to fee the whole body of the Romans intimidated, boldly fallied out againt his ad. verlary. The foldiers on both fides for a while fufpended the general engagement to be fpectators of this fierce encounter. Manlius killed his adverfary; and then difpoiling him of his armour, seturned in triumph to his father's tent, where he was preparing and giving orders relative to the engagement. Howfoever he mis ht have been applauded iny his fellow-foldiers, being as jet doubtful of the reception he fhauld find frum his father, he came, with helitation, 10 Jay the enemy's fpuils at his teet, and with a modefl air infinuated, that what he did was emitely from a fpisit of hereditary virtue. But he was foun dreadfully made fenible of his croor, when his father, turning away, ordesed him to be led publicly forth before the army, and there to
have his head liruct: of on account of his difobeying orders. 'The whole amny was truck with horror at this unnatural ntandate: fear for a while kept them in fufpenfe; but when they faw their young champion's head ftruck off, and his blood Itreaming upon the ground, they could no longer contain their execrations and their groans. His dead body was carried forth without the camp, and being adoried with the fpoils of the vanquithed encmy, was buried with all the pomp of military diftrefs.

In the mean time, the battle joined with mutual fury; and as the two ammes had ofien fought under the fame Jeaders, they combated with all the animefity of a civil war. The Latins chielly depended on their bodily ftrength; the Romans, on their invincibie courage and conduct. Forces fo nearly matched feemed only to require the protection of the deities to turn the feale of victory ; and, in fact, the augurs had foretold, that whatever part of the Roman army fhould be diftreffed, the commander of that part fhould devote himfelf for his country, and die as a factifice to the immortal gods. Maulius commanded the right wing, and Decius led on the left. Both fides fought for fome time with doubtful fuccefs, as their courage was equal; but, after a time, the left wing of the Roman army began to give ground. It was then that Decius, who commanded there, refolved to devote himfelf for his country, and to cffer his own life as an atonement to fave his army. Thus determined, he called out to Manlius with a loud voice, and demanded his infeructions, as he was the chief pontiff, how to devote himfelf, and the form of the words he fhould ufe. By his directions, therefore, being clothed in a long robe, his head covered, and his an mis flretched forward, fanding upon a javelin, he devoted himflif to the celeftial and infernal gods for the fafety of Rome. Then arming himfelf, and mounting on horfeback, he drove furioully into the midtt of the enemy, carrying terror and cenfternation wherever te came, till he iell covered with wounds. In the mean time, the Roman atmy comidered his devoting himfelf in this manner as an alfurance of fuccefs; nor was the fupertition of the Latins lets powerfully influenced by his refolution; a total rout begran to enfue: the Romans preffed them on cvery fide; and fo great was the camage, that icarce a fouth part of the enemy furvived the deleat. This was the lant banle of a
 Romans: they were forced to beg a peace upon hard feated and conditions; and two years aftur, their frongelt ciy, fublued. Pxdum, being taken, they were brought under an enture fubmilfion to the Roman power.

A fignal difgrace which the Romars fulained about this time in their contef with the Samnites, made a paufe in their ufual good fortune, and tumed the fcale for 2 while in the enemy's favour. The fenate having denied the Samnites peace, Pontins their general was refolved to gain by fratagem what the had fiequently loft by torce. Accordingly, leadng his army into a defile called Cludium, and taking polfeffion of all its ou:lets, he fent 10 of his foldiers, habited like fhepherds, with directions to throw themfelves in the way the Romans werc to march. The Re man conful met them, and taking them for what they appeared, demanded the route the Samnite army had taken; they, with fecrring indiferenee, replied, that they were gone to Lucciia, a

\section*{R O M}

Roire. town in Apulia, and were then actually befieging it. The Roman general, not fufpecting the itratagem that was laid againil him, marched direstly by the thortelt soad, which lay through the defiles, to relieve the city; and was not undeceived till he faw his army furrounded, and blocked up on every fide. Pontius thus having the Romans entirely in his power, firft obliged the army to prafs under the yoke, having been previoully fripped of :ill but their garments; he then flipulated that they should wholly quit the territories of the Samnites, and hat they fhould continue to live upon terans of former confederacy. The Romans were conftrained to fubmit to this ignominious treaty, and marched into Capua difarmed and hali naked. When the army arrived at Rome, the whole city was moft furprifingly aflicted at their thameful return; nothing but grief and refentment was to be feen, and the whole city was put into mourning.

But this was a tranfitory calamity ; the war was carlied on as ufual for many years; the power of the Samaites declining every day, while that of the Romans continually increafed. Under the conduct of Papinius Curfor, who was at different times conful and diftator, repsaté triumphs were gained. Fabius Maximus alto had his fhare in the glory of conquering them; and Decius, the fon of that Decius whom we fatw devoting himfelf for his country about 40 years before, followed the example of his father, and rufhed into the midit of the enemy, imagin.ing that he could 1.ive the lives of his countrymen with the lois of his own.

The iaceefs of the Romans agai...f the Samnites alarmed all Italy. The Tarentiaes in particular, who 1.ad long plotted underhand againtt the republic, now openly declared themfelves; and invited into Italy l'ynhus king of Epirus, in hopes of being able by lis means to fubdue the Romans. The (ffer was readily accepred by that ambitious monareh, who had no. thing leis in view than the conqueft of all Italy.Their anballiders carried magnificent pref nts for the hing, with inllruet ons to acquaint him, that they only wanted a general of fame and experience; and that, as for troops, they could themfelves furnifh a numerous arniy of 20,000 horle and 350,000 font, made up of Lucanian", Melfapians, Samnites, and Turentines. As foon as the news of this deputation were brought to the Rorran camp, Emilius, who had hitherto made war on the Tarentines but gently, in hopes of adjufting matters by way of negociation, took other meatures, and began to commit all forts of holliitics. He took cities, formed cafles, and laid the whole country wafte, burning and defroying all before him. The Tarentines brought their a:my into the field; but 天rmilius \(10 \cdot \mathrm{n}\) obliged them to take refuge wihin their walls. However, to induce them to lay afide the defign of receiving Pyrrhus, he ufed the prifoners he had taken with great moderation, and even fent them back without ranfom. Thefe bighly estolled the generofity of the conful, infomuch that many of the inhabitants were brought over to the Roman party, and they all began to repent of their having rejected a pcace and fent for Pyrrlus.

But, in the mean time, the Tarentine ambuffadors arriving in Epirus, purfuant to the powers they had ace:ven, made an abouluse trealy with the king ; wion
immediately fent before him the famous Cyneas, with 3000 men, to take porfetion of the citadel of 'larentum. This eloquent minifter foon fumbd means to depofe Agis, whom the Tarentines had clofen to be their generd and the goversor of the city, though a fincere friend to the Romans. He likewife prevailed upon the Tarentines to deliver up the citadel into his hands; which he no founer got poffelfion of, than he d.fpatched meffengers to Pyrrhus, foliciting him to halten his departure for Italy. In the mean time, the conful Remillus, finding that he could not attempt any thing with fuccefs againf the Tarentines this campaign, refolved to put his tronps into winter-guarters in A pulid, which was not far from the territory of 'larentum, that was foon to become the feat of the war. As he was obliged to pafs through certain defiles, with the fea on one fide and ligh hills on the other, he was there attacked by the Tarentines and Epirots from great numbers of barks fraught with balifte (that is, engines for throwing fones of a valt weight), and from the hills, on which were pofted a great many archers and ningers. Hereupon Emilius placed the Tarentine prifoners between him and the enemy; which the Tarentines perceiving, foon left of molefting the Romans, out of compaffion to their own countrymen; fo that the Romans arrived fafe in Apulia, and there took up their winter-quarters.

The next year Nemilius was continued in the command of his own troops, with the title of proconful; and was ordered to make war upon the Salentines, who had declared for the Tarentines. The prefent exigence of affairs obliged the Romans to enlilk the proletarii, who were the meanef of the people, and therefore by way of contempt called proletarii, as being thought incapable of doing the tate any other fervice than that of peopling the city, and focking the republic with fubjeas. Hitherto they had never been fuffered to bear arms; but were now, to their great fatisfation, enrolled as well as others. In the mean time Pyrrhus arrived at Tarentum, having narrowly efcaped faipwreck; and being conducted into the city by his faithful Cyneas, was received there wih loud acclamations.

The T'arentines, who were entirely devoted to their Pyrriue pleafures, expected that he fould take all the fatigues olliges the of the war on himfelf, and expofe only his Epirots to danger. And indeed Pyrihus for fome days diffembled his defign, and ruffered the Tarentines to indulge without reftraint in their ufual diverfions. But his lhips, which had been difperfed all over the Ionian fea, arriving one after another, and with them the troops which he had put on board at Epirus, he began to reform the diforders that prevailed in the city. The theatre was t?e place to which the id!e Tarentines reforted daily in great numbers, and where the incendiaries Atirred up the people to fedition with their harangues: he therefure edufed it to be flut up, as he did likewife the public gardens, porticoes, and flaces of exercife, where the inhabitants ufed to entertain thenifelves with news, and fpeak with great freedom of their gover nors, cenfuring their conduct, and fetting the government according to thei different humours, which occafioned great divifions, and rent the city into various fagions. As they were a very voluptuous and inculent people, they ipent whole days and nights in feaft, nal?ue:dies, plays, \&c. Thefe therefure Pyrrhus ab-

\section*{ROM | \(\quad 364\) | K O M}

Rome. fulnely prohibited, as no lefs dangerous than the affemblics of prating politicians. They were utter Ilrangers to militarytexerciles, and the art of handling arms; but Pyrnhus having cauted an exact reginer to be made of all the young men who were fit for war, picked out the Arongen among them, and incorporated them among his own troops, faying, that he would take it apon himelf to give them courage. He exercifed Whem daily for feveral hours, and on that occafion behaved with an inexorable feverity, inflicting exemplary Junifament on fuch as did not attond or failed in their duty. By thefe wife meafures he prevented feditions annen the citizens, and inured their youth to military difcipine; and becaufe many, who had not been accultomed to fuch feverity and rigour, withdrew from their native country, Pyrrhus by a public proclamation, declared all thofe capitally guilty who thould atecmpt to abandon their country, or abfent themielves frim the common mufters.
The Tarentines, being now fenfible that Pyrrhus was determined to be their mafter, bergan loudly to complain of his conduct ; but he, being informed of whatever paffed among them by his fies, who infinuated themfelves into all companies, privately difpatched the molt factious, and fent thofe "hom he fufpected, under various, pretences, to his fon's court in Epirus.

In the mean time, P. Valerius Lxvinus, the Roman conful, entering the countiy of the Lucanians, who were in alliance with the Tarentines, committed great ravages there; and having taken and fortified one of their caltles, waited in that neighbourhood for Pyrrhus. The king, though he had not yet received any fuccours from the Samnites, Mellapians, and other allies of the Tarentines, thought it highly dithonourable to continue thut up in a city, whule the Romans were ravaging the country of his friends. He therefore took the field with the tronps he had brought with him from Epirus, fome recruits of Tarentum, and a fmall number of Italians. But befure he began hotilities, le wrote a letter to Lxvinus, commanding him to difhand his army; and on his refufal, immediately marched towards thofe parts where Lxevinus was waiting for hin. The Romans were encamped on the hither fide of the river Siris; and Pyrrhus appearing on the oppofite bank, made is his firt bulinefs to reconnoitre the enemy's camp in perion, and fee what appearance they made. With this view he crolled the river, attended by Megacles, one of his officers and chief favourites; and having obferved the cor ful's intrencluments, the manwer in which he had potted his advanced guards, and the good order of his camp, he was greatly furprifed; and addreffing Megacles, "Thefe people (faid he) are not fuch barbarians as we take them to be: let us iry them before we condenin them." On his return, he charged his refolution of attacking them; and, hutting himfelf up in his intrencloments, waited for the arrival of the confederate tronps. In the mean time, he pofted ftrong guards along the river, to prevent the enemy from pafling it, and continually fent out fcotts to difover the deligns, and watch the mutions of the conful. Some of thife being taken by the advanced guards of the Romans, the conful himfelf led them through his camp, and having thewed them his ammy, fene them back to the king, telling them, that he had matiy other troups to fow them in due time.

Lxvinus being detcrmincd to draw the enemy to a Rome. battle before l'yrrhus received the rcinfurcements he 157 expected, having harangucd his troops, marched to the His firt banks of the Siris; and there drawing up his infantry battle with in battalia, ordered the cavalry to file off, and march a the Rogreat way about, in order to find a pillage at fome mans. place not defended by the enemy. Accurdingly, they paffed the river without being obferved; and falling upon the guards which l'yrrhus had potted on the banks over-againt the confular army, gave the infantry an opportunity of crolling the river on bridges which Laxinus had prepared tor that purpofe. But before they got over, Pytrhus, haftening from his camp, which was at fome difance from the river, hoped to cut the Rnman army in pieces while they were difordered with the difficulties of paffing the river, and climbing up the Atcep banks; but the cavalry covering the infantry, and ftanding between them and the Epirots, gave them time to form themfelves on the banks of the river. On the other hand, Pyrrhus drew up his men as faft as they came from the camp, and performad fuch deeds of valour, that the Romans thought him worthy of the great reputation he had acquired.

As the cavalty alone had hitherto engaged, Pyrrhus, who confided molt in his intantry, hattened back to the camp, in order to bring them to the charge; but took two precautions before he began the attack: the firf was, to ride through the ranks, and thow himfelf to the whole army; for his horfe having been killed under him in the firlt onfet, a report had bcen fpread that he was flain: the fecond was, to change his habit and helmet with Megacles; for having been known in the engagement of the horfe by the riclinefs of his attire and armour, many of the Romans had aimed at him in particular, fo that he was with the utmon difficulty taken and faved, after his horfe had been killed under him. Thus difguifed, he led his phalanx againtt the Roman legions, and attacked them with incredible fury. Lævinus futtained the thock with great refolution, fo that the victory was formanj hours warmly difputed. The Romans gave feveral times way to the Epirnts, and the Epirots to the Rumans; but both parties rallied again, and were brought back to the charge by their commanders. Megacles, in the attire and helmet of \(\mathrm{P}_{3}\) rhus, was in all places, and well fupported the character he had aflumed. But his difguife at laft proved fatal to him: for a Roman knight, by name Dexter, taking him for the king, fullowed him wherever he went; and having found an opporiunity of difcharging a blow at him, ftruck him dead on the fpot, fripped him of his helmet and armour, and carried them in triumph to the conful, who by fhowing to the Epirots the fpuils of their king, to terrified them, that they began to give ground. But l'yrmus, appearing bare-headed in the firlt files of his phalanx, and riding through all the lines, mendeccived his men, and infpired them with new courage.

The advantage fecmed to be pretty equal on both fidcs, when Lexvinus ordered his cavalry to advance; which Pynlus obferving drew up 20 clephants in the front of his army, with towers on their backs full of bowmen. The very fight of thofe dreadful animals chilled the bravery of the Romans, who had never before feen any. However, they fill advanced, till their lurfes, not being able to bear the fmell of them, and
frightened

158 The Komans defeated.
frightened at the frange noife they made, eitl.er threw their riders, or carried them on full fpeed in fpite of their utmof efforts. In the mean time, the archers, dilcharging fhowers of darts from the towers, wounded feveral of the Romans in that confufion, while others were trod to death by the elephants. Notwithttanding the diforder of the cavalry, the legionaries fill kept their ranks, and could rot be broken, till Pyrrhus attacked them in perfon at the head of the Thelfalian holfe. The onfet was fo furious, that they were forced to yield, and retire in diforder. The king of Epirus reftrained the ardour of his troops, and would not fuffer them to purtue the enemy: an elephant, which had been wounded by a Roman foldier, named Minucius, having cau'ed a great diforder in his army, this accident favoured the retreat of the Romans, and gave them time to repafs the river, and take refuge in Apulia. The Epirot remained mafter of the field and had the pleafure to fee the Romans fly before him : but the victory cof him dear, a great number of his beft officers and foldiers laving been fain in the batule; whence he was heard to fay after the action, that he was both conqueror and conquered, and that if he gained fuch another vilory, he fhould be obliged to return to Episus alone.

His firf care after the action was to bury the dead, with which the plain was covered; and herein he made no difinction between the Romans and his own Epiots. In viewing the bodies of the firmer, he obferved, that none of them had reccived difhononrable wounds; that they had all fallen in the pofts affigned them, fill beld their fwords in their hands, and thowed, esen after death, a certain martial air and fiercenets in their faces; and on this occafion it was that he uttered the fe famous words: "O that Pyrihus had the Romans for lis foldiers, or the Romans Pyrrhus for thzir leader! toge:her, we flould fubdue the whole werll." Tyrsius re. The king of Epirus underfood the art of war too
cuces fove well not to reap what advantage he could from his victaltowns. tory. He broke into the commtries in alliance with the Romans, plundered the lands of the republic, and made incurinons even into the neighbourhood of Rome. Ma. ny cities opened their gates to him, and in a thort time he made himfe'f mafter of the gieaten patt of Cimpanid. While he was in that fruitful province, fubbifing his troops thete at the expeace of the Rnmans, he was juined by the Samites, Lucanians, and Melfapians, whem he had fs long expected. After having teproached them fur their delay, he gave them a good thare of the forits he had taken from the enemy; and having by tinin means gained their affertions, he matched without lulis of time to lay liege to Capua: but Lxrnus, having a!ready received a reinforcement of two legions, threw fome troeps into the city; which obliged - l'yrrhus to drop his delign, and, leaving Capua, to inarch Atraight to Niples. Lexvinus followed him, haraffing his troops on their march; and at length, by kepiag his army in the neiglibourh od, forced him to give over all thoushts of making himfe!f mater of that important city. The king then, all on a fudden, took his roure towards Rome by the Latin way, furprifed Fregellx, and, marching through the country of the Hernici, fat down befure Pronefte. There, from the top of an hill, he had the pleafure of feeng Rome; and
is faid to have advanced fo near the walls, that he drove a cloud of duft into the city. But he was foon forced to retire by the other conful T. Coruncanius, who, having reduced Heturia, was jutt then returned with his victorious army to Rome. The king of Epirus, therefore, having no hopes of bringing the Hetrurians into his intereft, and feeing two confular armies ready to fall upon him, raiied the fiege of Prenefte, and haftened back into Campania; where, to his great furprife, he found Lavinus with a more numerous army than that which he had defeated on the banks of the Siris. The conful went to meet him, with a defirg to try the fate of another battle; which Pyrrhus being unwilling to decline, drew up his army, and, to Arike terror into the Roman legions, ordered his men to beat their bucklers with their lances, and the leaders of the elephants to force them to make a hideous noife. But the nnife was returned with fuch an univer. fal Chout by the Romans, that Pyrhus, thinking fis much alacrity on the pait of the vanquilled too ture a prognofic of viofory, altered his mind ; and, pretend:n:r that the anguries were not favourable, retired to Tarentum, and put an end to the campaign.

While Pyrrhus continued quiet at Tarentum, he He inclines had time to reflect on the valour and conduct of the to peace. Romans; which made him conclude, that the war in which he was engaged muft end in his ruin and diigrace, if not terminated by an advantagecus peace. He was therefore overjoved when he heard that the fenate had determined to fend an honourable embalfy to him, not doubting bur their errand was to propofe terms of peace. The ambaffadors were three men of diftinguifhed merit; to wit, Cornelius Dolabella, who was famous for the fignal victory he had gained over the Senones, Fabricius, and Emilius Pappus, who had been his colleague in the confulate two years before. When they were admitted to an audience, the only thing they demanded was a furrender of the priforiers, either by the way of exchange, or at fuch a ranfom as thould be agreed on; for Pyrrhus, in the late battle, had made 1800 prifoners, molt of them Roman knights and men of diftinction in the republic. They had fought with great bravery, till their horfes, frightened with the roaring of the king's elcphants. liad either thrown them, or obliged them to dimount; by which unforefeen accident they liad fallen into the enemy's hands. The fenate, therefore, pitying the condition of thofe brave men, had determined, contrary to their cuftnm, to redeem them. Pyrrhus was greatly furprifed and difappointed when he found that they had no other propeffals to make; but, conccaling his thoughts, he only anfwered that he would confider of it, and let them know his setolution. Accordingly, he affembled his council: but his chief tavourites were divided in their opinions. Milo, who commanded in the citadel of Tarentum, was for coming to no compofition with the Romans; but \(\mathrm{C}_{y}\) neus, who knew his mafter's inclination, propofed nut only fending back the prifoners without ranfom, but difpatching an embafly to Rome to treat with the fenate of a laiting peace. His advice was approved, and lie himfelf appointed to go on that embally. Af. ter thefe refolutions, the hing acquainsed the ambaffadors, that he intended to releale the prifoners without. ranfom, fince he had already richss enough, and de-

\section*{R O M}
firel noti ing of the republic but her fiiendihip. Af. Thould 1 a continued; that his ambaffador fhould be fent terwards he had feveral conferences with Fabricius, back that very day; that the king of Epiras fhould not whote virtue he had tried with mighty offers of riches be permitted to come to Rome; and that they thould and grandeur ; but finding him pront açanft all temp- acquaint his ambalfodor, that Rome would enter into tations, he refolved to try whether las intrepidity and courage were equal to his virtue. With this view, he canled an elephant to be placed behind a curtain in the hat where he received the Roman ambafiador. As Fin bricius had never teen one of thoe bealls, the king, taking at turn or two in the lall with him, bronght him within the cleplant's reach, and then caufed the curtain to be drawn all on a fudden, and that montrous animal to make his ufual noife, and even \(l_{1} y^{\text {b }}\) his trunk on Fabricius's head. But the intrepid Roman, without betraying the latf fear or concern, "Does the great hing (fail he, with furpriling calmnefs), who could not flagger me with his offers, think to frighten me with the braying of a beaft :" Pyrrhns, aflonithed at his immoveable condtancy, invited him to dine with him; and on this occafion it was, that the converfation turning upon Epicurean philofophy, Fabricius made that celebrated exclamation, "O that Pyirhus, botin for Rome's fake and his own, had placed his happinefs in the boafted indolence of Epicuras."

Every thing l'yrrhus heard or faw of the Romans inctcaled his earneflnels for peace. He fent for the three ambaffadors, releafed 200 of the prifoners without ranfom, and fuffered the reft, on their patole, to return to Rome to celebrate the Saturnalia, or feafts of Saturn, in their own families. Having by this obliging behaviour gained the good will of the Roman ambaffadors, he fent Cyneas to Rome, almoft at the fame time that they left Tarentum. The intructions he gave this faithful minifter, were, to bring the Roanans to grant thefe three articles: I. That the Trarentines thould be included in the treaty made with the king of Epirns. 2. That the Greek cities in Italy thould be fiffered to enjoy their laws and liber. tiec. 3. That the republic fhould rellore to the Sam. nites, Lucanians, and Brustiaus, all the places the had rakea fiom them. Upon thefe conditions, Pyrrhus seclated himfelf ready to forbear all further holtilities, and conclude a lafting peace. With thefe inftructions Cyneas fet out for Rome; where, partly by his eloy'ience, partly hy rich prefents to the fenators and weir wives, he foon gained a good number of voices. When he wras admitted into the fenate, he made an har.ongue worthy of a difciple of the great Demoltsenes; iffer which he read the conditions Pyirlus propoied, and, with a gecat deal of eloquence, endedvourning to thow the reafonabicnefs and moderation of his mafter's demands, afked le.ive for Pyrihus to come to Reme to conclude and lign the treaty. The fenators were generally irclined to agree to Pyrrhus's terms; but \(n\).verthelels, as 位eral fenators were abfent, the determination uf the affair was poftponed to the next diy; whon Appins Clatius, the greateft orator and moft learned civilatin in Rome, old and blind as he was, catufed limils to be callod to the funate, where he had not appared fur numy yeas; and there, partly by his t.) ireat. minds of the lenators againit the king of Epius, and the conditions he affered, that, when he had done fipat: ong, the confuipt fathers manimouny patied a decree, the fubllanc: of which was, That the wat wihh l'yrlitus
no treaty of peace with his malter till he had left Italy.

Cyneas, furprifed at the anfwer given him, left Rome the fame day, and reurned to Tarentum, to acquaint the king with the final relolution of the fenate. l'ylrhus would have willingly concluded a peace with thens upon honourable terms; but, as the conditions they ef. fered were not by any means confltent with the repu. tation of his arms, he began, without lofs of time, to make al due proparations for the next campaign. On the other hand, the Romans having raifed in the confulate P. Sulpicius Saverrio, and P. Decius Mus, dif. patched them both into Apulia, where they found Pyrrhus encamped near a little town called \(i f\) culum. 'There the confuls, joining their armies, fortified themfelves at the fo t of the Appennines, having between them and the eneny a large deep ftream which divided the plait. Both armies continued a great while on the oppofite banks, bafore cither ventured to pals over to attack the other. The Epirots allowed the Rnmans to crofs the fiream, and driw up on the plain. On the other hand, Pyrrhus placed lis men likewife in order of batte in the fame plain; and all the ancients do him the jullice to fay, that no commander ever underfond better the art of drawing up an army and directing its metions. In Anothes the right wing he placed his Epirots and the Samnites; batte. in his left the Lucanians, Eruttians and Salentines; and his phalanx in the centre. The centre of the Roman army confilted of four legions, which were to engage the encmy's phalanx; on their wings were pofted the light-armed auxiliaries and the Roman horfe. The confuls, in order to guard their troops againft the fury of the elephants had prepared chariots, armed with long points of iron in the fhape of forks, and filled with foldiers carrying firebrands, which they were directed to throw at the cleplants, and by that means frighten them, and fet their wooden towers on fire. Thefe chariots were pofted over-againtt the king's eleplants, and ordered not to ftir till they entered upon action. To this precaution the Roman generals added another, which was, to direa a body of Apulians to attack Pyrrhus's camp in the heat of the engagement, in order to force it, or at leaft to draw off part of the enemy's troops to defend it. At length the attack began, both parties being pretty equal in number; for each of them confifted of about 40,000 men. The phalans fuftained, for a long time, the furious onfet of the legions with incredible bravery: but at leagth being forced to give way, Pyrrhus commanded his elephants to advance, but not on the fide where the Romans had pofted their chariots; they marched round, and falling upon the Roman horfe, foon put them into confufion. Then the phalanx, retorning with frefh courage to the charge, made the Rom.on legions in their urn give ground. On this occafion Decius wats killed, fo that one conful only was left to command the two Roman armics. Bus while all things feemed to favour Pyorhus, the body of Apulians which we have mentioned abore, falliag unexpectedly on the camp of the Epirots, obliged the king to difpatch aftrong detachment to difend his interenchments.
[pon

163
l'yrrlius cifeated, and dungerouny wound.d.

Upon the depature of thefe troops, fome of the Epirots, imagining that the camp was taken, began to lofe courage, and retire ; thofe who were next to them followed their example, and in a thort time the whole army gave way. Pyrrhus having atter:pted feveral times in vain to rally his forces, returned to the charge wi \(h\) a fmall number of his friends and the rnnit couragious of his officers. With thele he fuftained the fury of the vitorious legions, and covered the retreat of his own men. But being, after a moll gallant behaviour, dangeroully wounded, he retired at latt with his fmall bind in gond order, leaving the Romans mafers of the tield. As the fun was near fetting, the Romans, being extremely fatigued, and a great number of them wounded, the conlul Sulpicius, not thinking it advifable to purfue the enemy, founded a retie:t, repaffed the itream, and brought his tronps back to the camp. Sulpicius appcared in the field of battle the next day, with a defign to bring the Epirots to a fecond engagement; but finding they had withdrawn in the night to Tarentum, he likewife retired, and put his troops into winter-quar. ters in Apulia.

Both armies continued quiet in their quarters during winter; but early in the fpring took the field anew.The Romans were commanded this year by two men of great fame, whom they had raifed to the confulate the fecond time: thefe were the celebrated C. Fabrici.ts and (). REmilius Pappus; who no fonner arrived in Apulia, then they led their troops into the territnry of Tarentum. Pyrrhus, who had received confiderable reinforcements from Epirus, inet them near the frontiers, and encamped at a fmall diftance from the Ros man arny. Wh le the confuls were waiting here for a favourable opportunity to give battle, a meffenger from Nicias, the king's phyfician, delivered a letter to Fabricius; wherein the t:aitor offered to take off his matter by prifon, provided the ennful would promite him a reward proportionable to the greatnefs of the fervice. The virtuous Roman, being filled with horror at the bare propatal of fuchacrime, immediately communicated the alfair to his colle.gue; whe readily joinced with him in writing a letter t? Pyrrhus, wherein they warned him, withont difenvering the criminal, to take care of himfelf, and be upon his guard açainft the treachero us deligns of thofe about him. Pyrrhus, out of a deep fenfe of gratitude for fo great a benefis, releafed inmediately, with ut ranfom, all the prifoners he had taken. But the Rnmans, diiddiung to accopt either a favour from an enemy, or a recompence for not commoring the blackeft tieachery, deciared, that they would net reccive their prifoners but by way of exchange; and accordingly fent to Pyrrhus an equal number of Samnite and Tarentine prifoners.

As the king of Epirus grew every day more weary of a war which he feared would end in his difyrace, he fent Cyneas a fecond time in Kome , in try whether he could, with his arrful harangues, prevail upn the confefipt tahhers to hearken to an accommodation, upon fich terms as were confiltemt with his hencur. But the ambafidior found the fenators feady in their forsher refolution, and determined not to enter into a treaty with his mafter till he had left Italy, and withdrawn from thence all his forces. This gave the king great mueafinefs; for he had already loft moft of his veteran troofs and beft officers, and was fenfible that he foould
lufe the reft if he ventured another engagement. While he was revolving thefe melanchnly thoughts in his Iós mind, ambantidors arrived at his camp from the Syra. Pyrinus
culians, Agrigentines, and Lentines, imploring the af. goes intu fitance of his arms t") drive nut the Carthaginians, and Sicily. put an end to the troubles which threatened their refpective ftates with ut:er diftruction. Pyrrhus, who wanted only fome honourable pretence to leave Italy, laid hold ot this; and appointing M lo governor of Tarentum, with a frong gar rif in to keap the inhabitants in awe during his absence, he fet fail for Sicily with 30,000 frot and 2500 horfe, on board : fleet of 200 thips. Here he wis a: frit atiended with great fuccelis ; but the Sicilians, difouted at the refulution he had taken of palling over into ifric:, and much more at the enormous exations and extortions of his minifers and courtiers, had fubmitted partly to the Carthaginians and partly to the Mamcrtines. When Carth.ge heard of this change, new troops weee raifed all over Alica, and a numerous army fent into Sicily to recover the cities which Pgrrhus had taken. As the Sicilians d.tily deferted from him in crowds, he was no way in a condition, with his Epirots alone, tw willifand fo powerful an enemy; and therefore, when deputies came to him from the Tarentines, Samnites, Druttians, and Lucanians, teprefenting to him the loffies they bad fultained fince his departure, and remon?trating, that, without his affiltance, they mult fall a facrifice to the Romans, he laid hold of that opportunity to abandon the inand, and return to Italy. His fert tas atacled by that of 166
 Carthage; and his army, after their landing, by the into tallyMamertines. But Pyrrhus havilis, by his heroic bravery, eicaped all danger, marched along the fea fhore, in order to reach Tarentum that way. As he paffed through the country of the Locrians, who had not long before malfacred the troups he had left there, he not only exercifed all forts of cruelty on the inhabitants, but plundered the temple of Proferpine to fupply the wants of his army. The immenfe riches whith he found there, were, by his order, fent to Tarentum by fea; but the flips that carried them being d.:fhed againtt the rocks by a tempett, and the mariners all loft, this proud prince was convinced, fays Livy, that the gods were not imaginary beings, and caufed all the trealiurc, which the fea had thrown upon the fhore, to be carefully gathered up, and replaced in the temple: nay, to appeafe the wrath of the angry godders, he put all thofe to death who had advifed him to plunder her temple. However, fuperftition made the ancients afcribe to this act of impiety all the misfortunes which afterwards befel that anhappy prince.

Pyrrhus at length arrived at Tarentum ; but of the army he had carried into Sicily, he brought back into Italy only 2000 hore and not quite 20,000 foot. IIe therefnere reinforced them wi'h the belt troops be could raile in the countries of the Samnites, Lucanians, and Bruttians; and hearing that the two new confuls, Cu rins Dentarus and Cornelius Lentulus, had divided their forces, the one invading Lucania and the other Samnium, he likewife divided his army into two bodies, marching with the choice of his Epirots againf Denta us, in hopes of furpriling him in his camp ne.ar Bcneventum. But the conful having notice of his approach, went nut of his intrencl:ments with a nrong detachment of legiona:ies to neet him; repulfed his

Rome.
van-guard, put many of the Epirots to the fword, and in Sicily. In order to keep this governor in his duty, took fome of their elcphants. Curius encouraged with he is faid to have made him a very ftrange prefent, aiz. this fuccefs, marched his army into the Taurafian fields, and drew it up in a plain which was wide enough for his troops, but too narrow for the Epirot phalanx, the phalangites being fo crowded that they could not handle their arms without difliculty. But the king's cagernefs to tyy his frengtl and 1 k all with fo renowned a commander, made lum engage at that great diadvantage.

ving the Romans in full poffeffion of his camp; which they fo much admired, that they made it ever after a model to 1 nom theirs by. And now the king of Epirus reftled to leave Italy as foon as poffible; but conccaled his defign, and endeavoured to keep up the drocping fpirits of lis allies, by giving them lopes of feedy fuccours from Greece. Accordingly he difjutched ambatiadors into Etolia, Illyricum, and Macedun, demat ding fupplies of men and \(m\) ney. But the antwers from thole courts not proving favourable, be forged fuch as might pleafe thrie whom he was willing to deceive ; and by this means fupported the conrage of his friends, and kept his enemy in play. When le could conceal his deproture ro longer, he pretended to beon a fudden in a great pallion at the dilaturinels of his friends in fending him fuccours; and acquainted the Tarentines, that he muft go and bring them over himftlf. However, he heft behind him a itrong garrifon in the citadel of Tarentum, under the command of the fame Milo who had kept it for him during his fay

a chair covered with the 1 kin of Nicias, the treacherous phy fician, who had offered Fabricius to poifon his matter. After all thefe difguifes and precautions, l'yrrlus at latk fet fail for Epirus, and arrived fife at Acroceraunium with 8000 foot and 500 horle; after having fpent to no purpofe fix years in Italy and Sicily.

Though, from the manner in which Pyrrhus took both. In this manner they ahilted the Mamertines againf Hiero king of Syracuic, which brought on the wars with the Carthaginians, which terminated in the total deltruction of that ancient republic, als has been related under the article Carthage. The interval between the firt and fecond Punic wars was by the Romans employed in reducing the Boii and Ligutians, who had revolted. Thete were Ganlith nations, and had always been very formidable to the Romuns, who now gave one of their confuls a notable defeat. Howcver, he foon alter fufficiently revenged himfelf, and defeated the enemy with great nanghter; though it was not till tome time after, and with a good deat t difficulty, that they were totally dutdued. During this interval alfo, the Ronims keized on the iflands of Satdinia, Corlica, and Malta ; and in the year 219 13. C. the two former were reluced to the form of a priviace. Papirius, who hid fubdued Corfica, demaniled atrinmph; but not having interelt enough to a btailn it, he took a method entisely new to do himfelf jultice. He put
hime

} and the Romans hecome matters of all ltaly.
\(\qquad\)
\(\qquad\)

himfelf at the head of his victorious army, and marched to the temple of Jupiter Latialis, on the hill of Alba, with all the pomp that attended triumphant victurs at Rome. He made no other alteration in the cercmony, but that of wearing a crown of myrtle inttead of a crown of laurel, and this on account of his having defeated the Corficans in a place where there was a grove of niyules. The example of Papirius was afterwards followed by a great many generals to whom the fenate refufed triumplis.

The next year, when M. Emilius Barbula and M. Junius Pera were confuls, a new war fprung up in a kingdom ont of Italy. Illyricum, properly fo called, which bordered upon Macedon and Epirus, was at this time governed by a woman named Teuta, the wiclow of king Agron, and guardian to her fon Pincus, who was under age. The ficcefs of her late hufband againt the Etolians had fluficd her tu fich a degree, that, inftead of fettling the affairs of her ward in peace, fhe commanded her fubjecis to cruife along the coalt, feize all the fhips they met, take what places they could, and fare no nation. Her pirates had, purfuant to her orders, taken and plundered many fhips belonging to the Roman merclants; and her troops were then befieging the inand of Iffa in the Adriatic, thongh the inliabitants had put themfelves under the protection of the republic. Upon the complaints therefore of the Italian mercl:ants, and to protect the people of Iffa, the fenate fent two ambaffadors to the Illyrian queen, Lucius and Caius Coruncanus, to demand of her that the would reflrain her fuhjects from infefting the fea with pirates. She anfwered them haughtily, that the could only premife that her fubjects fhould not for the future attack the Romans in her name, and by public authority: "but as for any thing more, it is not cuttomary with us (faid fie) to lay reftonints on our fubjects, nor will we forbid them to reap thofe advantages from the fea which it offers them." "Your cuftoms then ( \(r\) <plied the youngof of the ambafiadors) are very different from ours. At Rome \(\mathrm{m}=\) make public examples of thofe fubjects who injure others, whether at home or abroad. Teuta, We can, \(b_{j}\) our arms, force y, u to reform the abules of your bad goveinment." Thefe unfeafonable threatenings provoked Teuta, whowas naturally a proud and im. perious woman, to fuch a degree, that, without regard so the rigbt of nations, the caufed the ambaffadors to be murdered on their return hoine.

When fonotorious an infracion of the law of nations was known at Rome, the people demanded vengeance and the fenate having firf honoured the manes of the ambaffidors, by erecting, as was ufual in luch cafes, flatues three feet high to their memory, ordered a flect to be equipped, and troops raifed, with all polfible expedition. But now Tenta, reflecting on the enermity of her procecdings, fent an embalfy to Rome affuring the fenate that the had no hand in the murder of the ambaffadors, and offering to deliver up to the republic thofe who had committed that barbarous affaflination. The Romans being at that time threatened with a war from the Gauls, were ready to ascept this fatisfation: but in the mean time the Illyriart fleet -having gained fome advantage over that of the Acha. ans, and taken the inand of Corcyra, near Epirus, this fuccefs made Tcuta believe herfelf invincible, and forget the promife fhe had made to the Remans; nay, fhe Voz. XVI.
fent her fleet to feize on the inland of Iffa, which the Romans had taken under their protection.

Hereupon the confuls for the new gear, P. Polthumius Albinius and Cn . Fulvius Centumalus, embarked for Illyricum; Fulvius having the command of the fleet, which conffted of 100 galleys; and Pofthumius of the land forces, which amounted to 20,000 foot, befides a fmall body of hurfe. Fulvius appeared with his flect before Corcyra in the Adriatic, and was put in pof. feffion both of the ifland and city by Demetrius of Pharos, governor of the place for Queen Teuta. Nor was this all; Demetrius found means to make the inhabitants of Apollonia drive out the Illyrian garrifon. and admit into their city the Roman troops. As Apollonia was one of the keys of Illyricum on the fide of Macedon, the confuls, who had hitherto acted jointly, no fooner faw themfelves in poffeffion of it than they feparated, the fleet cruifing along the coaft, and the army penetrating intu the heart of the queen's dominions. The Andyœans, Parthini, and Atin:anes, voluntarily fubmitted to Pofthumius, being induced by the perfuafions of Demetrius to Shake off the Iliyrian yoke. The conful being now in poffeflion of mont of the inland towns, returned to the coaft, where, with the aflitance of the Heet, he took many frong-holds, among which was Nutria, a place of great Arength, and defended by a numerous garrifon; fo that it made a vigorous delence, the Romans having loft before it a great many private men, feveral legionary tribunes, and one quefter. However, this lofs was repaired by the taking of 40 Illyrian veffels, which were returnirg home laden with bootr. At length the Roman fleet appeared before Iffa, which, by Teuta's order, was ftill clofely befieged, notwithftanding the loffes the had fuftained. However, upon the approach of the Roman fleet, the Illysians difperfed; but the Pharians, who ferved among them, followed the example of their countryman Demetrius, and joined the Romans, to whom the Ifani readily fubmitted.

In the mean time Sp. Corvilius and Q. Fabius Maximus being raifed to the confulate a fecend time, Polthumius was recalled from Illyricum, and refufed a triumph for having been too prodigal of the Roman blood at the fiege of Nutria. His colleague Fulvius was appointed to command the land forces in his room, in quality of proconful. Hereupon Teuta, who had founded great hopes on the change of the confuls, retired to one of her ftrong-holds called Rbizon, and from thence early in the fpring fent an embaffy to Rome. The fenate refufed to treat with her ; but granted the young king a peace upon the following conditions: I. That he fhould pay an annual tribute to the republic. 2. That he fhould furrender part of his dominions to the Romans. 3. That he flould never fuffer above three of his fhios of war at a time to fail beyond Lyffus, a town on the confines of Macedon and Illyricurn. The places he yitlded to the Romans in virtue of this treaty, were the iflands of Corcyra, Ilf, and Pharos, the city of Dyrrhachium, and the ccuntry of the Arintancs. Soon after T'euta, either out of thame, or compelled by a fecret article of the treaty, auticated the regency, and Demetrius fucceeded her. ed by new motions of the Gauls, and the great progrefs and Liguwhich the Carthaginians made in Spain. At this time ria fubdm

Rome. alfo the fears of the people were excited by a prophecy faid to be taken out of the Sybilline books, that the Gauls and Grecks thould one day be in polfetlion of Rome. This prophecy, however, the fenate found means to elude, as they pretended, by butying two G.uls and two Greeks alive, and then teliing the multitude that the Guuls and Greeks were now in the polielion of Rome. The difficultics whi hapertition hat rafed being thus furmounted, the Romans made valt preparations againtt the Guls, whom they feem to have dreated above all other nations. Some fay that the number of forces raifet by the Romans on this occation amount--1 to no fewer than 800,000 men. Of this inctedible multitude \(2+8,000\) foot and 26,000 horle were Romans or Campanians; neverthelefs, the Gauls, with oniy 50,000 foot and 20,000 horte, forced a pallige through Hetruria, and took the road towards Rome. Here they had the good fortune at firlt to defeat one of the Roman armies; but being foon after met by two others, they were utterly defeated, with the lols of more than 50,000 of their number. The Romans then entered their country, which they cruelly ravaged; but a plague breaking out in their army, obliged them to retarn home. This wats followed by at new war, in which thofe Gauls who inhabited Infubria, and Lifguria were totally fubdued, and their country reducel to a Roman province. Thefe conquefts were followed by that of Ititi.s; Dimalum, a city of importance in Iliyricum; and Pharc.s, an inland in the Adriatic fea.

The fecond Punic war for fome time retarded the conquelt of the Romans, and even threatened their ftate with entire deftruation ; but Hannibal being at lalt recalled from Italy, and entirely defeated at Zama, they made peace upon fuch advantageous terms as gave them an entire fuperiority over that republic, which they not long after entirely fubverted, as has been re-
lated in the hiftory of Carthage.

The fuccelfful iflue of the fecond Punic war had greatly increafed the extent of the Roman empine. They were now matters of all Sicily, the Mediterranean illands, and great part of \(S_{\text {pain }}\); and, through the diffenfions of the Afiatic Ifa:es with the king of Macedon, a pretence was now found for carrying their arms into thefe parts. The G:tuls in the mean time, however, continued their incurtions, but now ceafed to be fermidable; while the kings of Macedon, through mifconsluat, were firlt obliged to fubmit to a difadvantageous peace, and at lut totally fublued (fee Mace. DON). The reduction of Macedon was foon followed by that of all Greece, cither by the nume of allies or othersvife; wh:le Antiochus the Great, to whom Hannibal fled for protection, by :ial unfucceisful war hirlt give the Romans a footing in An (fee Eyra). The Spaniards and Gauls continued to be the mole obitinate enemies. 'Tha former, pioticularly, were rather exterminated than reduced; and even this required the utmort care and vigitunce of Sipio Fenilsanus, the conqueror of Carkage, to execule. S.e Spany and Numantia.

Thus the Romars attained to a height of power futperior to any other nation in the world; but now a fedition broke out, which we may fay was never temmated but with the overthrow of the republic. This hat its origin from Tibeins Sempronius Gracchus, defeended from a fumily which, theurg pleboian, was as illu-
frious as any in the commenwealth. IHis father had been twice raifel to the confulate, was a great genemal, and had been honoured with two trimmphs. But he was filll more senowned for his domeltic virtues and probity, than for his birth or valour. He married the daughter of the firt Aficamns, find to be the pattern of her fex, and the prodigy of her age ; and had by her feveral chideren, of whom three onily arrived to maturity of age, Tiberios Gracchec, Caius Gracchus, and a daughter named Somproniz, who was married to the fecond Africanus. Tiberius, the eldell, was deemed the moft accomplithed youth in Rome, with relpeet to the qualities both of body and mind. His extraordina. ry talents were heightened by a noble air, an engaging coumtenance, and all thote winning grates of nature which recommend merit. He made his fift campaigns under his brother-in-law, and dillinguihed himfelf en all occations by \({ }^{\text {' is courage, and by the prudence of his }}\) conduct. When he returned to Rome, he applied himfelf to the tludy of eloquence; and at 30 years old was accounted the bett orator of his age. He married the duaghter of Appius Claudius, who had been formenly conful and cenior, and was then prince of the fenate. He continued for fome time in the fentinents both of his own and his wife's family, and fupported the interefts of the patricians; but without openly attacking the popular faction. He was the chief author and negociator of that thameful neceffary peace with the Numantines; which the fenate, with the utmoft injuftice, difmalled, and condenmed the conful, the qua. Itor, and all the officers who had figned it, to be delivered up to the Numantines (fee Numantia). The people indeed, ont of efteem for Gracchus, would not fuffer him to be facrificed: but, however, he had juit reafon to complain, bcth of the fenate and people, for palling fo féandalous a decree againft his general and himfelf, and breaking a treaty whereby the lives of fo many citizens had been faved. But as the fenate had chiefly promoted fisch bafe and iniquitous proceedings, he re:olved in due time to fhow his refentment againt the party which had contributed moit to his difgrace.

In order to this, he food for the tribunethip of the people; which he no fuoncr obtained, than he refolved to attack the nobility in the molt teader part. They had ufurped lands unjuftly; cultivated them by flaver, to the great detriment of the public ; and hat hed for about 250 years in open defiance to the Licinim law, by which it was enated that no citizan fhouhd polfet; more than 500 acres. This haw Tib. Gracchus refol. ved to revive, and by that means revenge himfelf on the patriciars. But it w.is not revenge alone which prompted him to embark in fo d.ngerous :at attempt. It is pretended, that his mother Cornelia animated him to undertake fonething wortley both of his and her family. The repaaches of his mother, the aumority of fome great men, namely of his futher-invlaw \(\Lambda_{\text {ppius }}\) Clandius, of P. Cratus the fontifix maximus, and of Mutius sirevold, the mon learned civilian in Reme, and his mitural thirte afier glory, joined with an eager defire of revenge, confpired to draw him into this moft unfortunate feheme.

The law, as he firt drew it up, was wery mild: for a new lane it only eratted, that thote who polfefied more than 500 propofed acres of land lhould part with the overplus; and that by Grac-
R.me. the full valuc of the faid lands frould be paid them out of the public treafury. The lands thus purchafed by the public were to be divided among the phor citizens; and cultivated either by themfelves or by freemen, who were upon the fpot. Tibcrius allowed every child of a danily to hold 250 acres in his own nanse, over and aborc what was allowed to the father. Nothing could be more mild than this new law; fince by the licinian he might have abfolutely deprived the tich of the lands they unjuitly poffeifed, and made them accountable \(\int\) n: the prolits they had received from them during their ling poffefion. But the rich patricians could no: fo much as bear the name of the Licinian lare, though thus qualifed. Thofe chiefly of the fenatorial and cqueItrian order exclamed ilgaint it, and were continually mounting the roftra one after another, in order to diffuade the people from accepting al law which, they raid, would raife dillurbances, that raight prove more dangcrous than the evils which Tiberius pretended to redrefs by the promulgation of it. Thus the ze:llous tribune was obliged day after day to enter the lifts with frefh adverfaries; but he ever got the better of them both in point of eloquence and argument.

The people were charmed to hear him maintain the caufe of the unfortunate with fo much fincefe, and bethowed on him the higheit commendations. The rich therefore had recourle to violence and ca umny, in ordes to deftroy, or at leatt to difcredit, the tribune. It is faid they hired affiafins to difpatch him; but they could not put their wicked defign in execuion, Gracchus being always attended to and from the roftra by a guard of about 4000 men. His adverfaries therefore endeavoured to ruin his reputation by the blackeft calumnies. They gave out that he aimed at monarchy; and publifhed pretended plots laid for crowni is him king. Dut the people, without giving ear to fuch groundlefs reports, made it their whole bufinet's to encourage their tribune, who was hazarding both his life and reputation for their fales.

When the day came on which this law was to be accepted or rejected by the people alfembled in the conitium, Gracchus began with harangning the mighty croud which an affair of fuch impontance had brought together both from the city and country. In lis fpeech he fhowed the jultice of the law with fo much cloquance, made fo moviug a defeription of tha miferies of the meaner fort of people, and at the fame time fot forth in fuch odious colours the ufurpation of the public lands, and the immenie riches which the avarice and rapacionfuefs of the great had raked together, that the poople, trun!ported with fury, demanded with loud cries the billets, that they might give their fuffratcs. Then Gracchu; finding the minds of the citizens in that warmell and emotion which was neceff.ryy for the fuccefs of his defign, ordered the law to be the patricians, declared againlt the proceedings of his friend and colleagne; and pronounced the word which had been always awful in the mouth of a tribune ol the people, Veto, "I forbid it." As Oetavius was a man of an unblameable character, and had hitherto becn very zealons for the publication of the law, Gracchus
was greatly furprifed at this unexpected oppofition from Rome. his friend. However, he l:ept his temper, and only de. fired the people to affemble zqain the next day to licar thair two thibunes, one in defence of, the other in oppofition to, the law propofed. The people miet at the time appointed; when Gracchus adjreffing himfelf to his colleague, conjured him by the mutual duties of their function, and by the bonds of their ancient fiiend. thip, not to oppofe the good of the people, whom they: were bound in honour to protect againtt the ufurpation of the great : nay, taking his colleaguc afide, he addret. fed hini thus, "Perlaps you are perfonally concerned to nppofe this law ; if fo, I mean, if you have more than the five hundred acres, I myfelf, poor as I am, engage to pay you in money what you will lofe in land." But Oetavius, cither out of Thame, or from a principle of honsur, continued immoveable in the party he had cmbraced.

Gracchus therefore had recourfe to another expedient; which was to fufpend all the magittrates in Rome from the execution of their offices. It was lawful for any tribune to take this fep, when the pafing of the law which he propofed was prevented by mere chicanery. After this, he affembled the people anew; and made a fecond attempt to fucceed in his defign. When all things were got ready for collecting the fuffrages, the rich privately conveged away the urns in which the tablets were kept. This kindled the tribune's indignation, and the rage of the people. The comitium was like to become a field of battle, when two venerable fenators, Manlius and Fulvius, very feafonably interpofed; and throwing themfelves at the tribune's feet, prevailed upon him to fubmit his law to the judgment of the conicript fathers. This was making the fenators judges in their own caufe : but Gracchus thought the law fo undeniably juf, that he could not perfuade himfelf that they would reject it; and if they did, he knew that the incenfed mulitude would no longer keep any meafures with them.

The fenate, who wanted nothing but to gain time, affected delays, and came to no refolution. There were indeed fome among them, who, out of a principle of equity, were for fiying fome regard to the complaints of the tribune, and for facrificing their own interelt to the relief of the diftreffed. But the far greater part would not hear of any compofition whatfoever. Hereupon Gracchus brought the affair anew before the people, and earnefly intreated his colleague Ofavius to drop his oppolition, in compafion to the many unfortunate people for whom he interceded. He put him in mind of their ancient friendihip, tool: him by the hand, and affectionately embraced hin. But ftill Ogavius was infexible. Hereupon Gracchus refolved to deprive Otavius of his tribunefhip, fince he alone obftinately withfood the defires of the whole boly of fo great a peopic. Having therefore affembled the people, he told them, that fince his colleague and he were divided in opinion, and the repablic fiffered by their divifion, it was the prosince of the tribes affembled in comitia to re-eftablifh concord among their tribunes. "If the caufe I maintain (faid he) be, in your opinion, unjuft, I am ready to give up my feat in the college. On the contrary, if jou judge me worthy of being continued in your fer. vice in this A:tion, deprive hinn of the tribunefhip who alone ob?tructs \(m y\) wifhes, As foon as you fhall have
nominated nominated one to fucceed him, the law will pafs without oppofition." Having thus fpoken, he difmilfed the affembly, after laving fummoned them to meet again the next day.

And now Gracchus, being foured with the oppofition he had met with from the rich, and from his obtinate colleague, and being well apprifed that the law would pars in any form in which he thould think fit to propofe it, refolved to revive it as it was at firt palfed, without ab.ating any thing of its leverity. There was ne cxception in tavour of the children in families; or reimburfement promifed to thole who thould part with the lateds they ponefled above 500 acres. 'I'he next day the people being affembled in vatt crowds on this extroordinary occalion, Gracchus made frefh applications to Ontavius, but to no purpofe; he obitinately perfilted in his oppofition. Then Gracchas turning to the people, "Judge you, (faid he), which of us deferves to be deprived of his office." At thefe words the firft tribe voted, and declared for the depolition of Octavius. Upon which Gracchus, fufpending the ardour of the tribes, made another effort to bring over his opponent by genile methods. But all his endeavours proving ineffectual, the other tribes went on to vote in their turns, and followed the example of the firt. Of 35 tribes, 17 had already declared againt Ofavius, and the i Sth was juft going to determine the affair, when Gracchus, being willing to try once more whether he could reclaim his colledgue, fufpended the collecting of the fuffrages; and addrelling Ostavius in the moft prefling terms conjured him not to expofe himfelf, by his obtinacy, to fo great a difgrace, nor to give him the grief of having calt a
of them had appropriated to themfelves lands belonging to the republic. But after all, the tribune, upona Itrict inquiry, found that the lands taken from the rich would not be enough to content all the poor citizens. But the following accident eafed him of this diffeculty, and enabled him to top the murmurs of the malcontents among the people.

Attalus Philometer, king of Pergamus, having bequeathed his dominions and effects to the Romans, Eudemus the Pergamean brought his treafures to Rome at this time; and Gracchus inmediately got a new law paffed, enacting, that this money thould be divided among the poor citizens who could not have hands; and that the difpofal of the revenues of Pergamus thould not be in the fenate, but in the comitia. By thefe fteps Gracchus moft effectually humbled the fenate ; who, in order to difcredit hin among the people, gave out that Eudemus, who had brought the king's will to Rome, had left with Graechus the royal diadem and mantle of Attalus, which the law-making tribune was to ule when he thould be proclaimed king of Rome. Dut thefe seports only ferved to make Gracchus be more upon his guard, and to infpire the people with an implacable hatred againt the rich who were the authors of them. Gracchus being now, by his power over the minds of the inultitude, abolute nafter of their fuffrages, formed a defign of raifing his father-in-law Appius Claudius to the confulate next year, of promoting his brother Caius to the triburethip, and getting himfelf continued in the fame office. The lalt was what moft nearly concerned him; his perfun, as long as he was in office, being facred and inviolable. As the fenate was very active in endeavouring to get fuch only elceted into the collegre of tribunes as were enemies to Gracchus and his faction, the tribune left no ftone unturned to fecure his election. He told the people, that the rich had refolved to affaltinate him as foon as he was out of his office; he appeared in mourning, as was the cultom in the greatef calamities; and bringing his children, yet young, into the forum, recommended them to the people in fuch terms, as thowed that he defared of his own prefervation. At this fight the populace returned no infwer, but by outcries and menaces againt the rich.

When the day appointed for the clection of new tribunes came, the people were ordered to attemble in the C.ipitol in the great court before the temple of Jur piter. The tribes being met, Gracchus produced his petition, intreating the people to continuc him one year longer in the office of tribune, in contideration of the great danger to which he was expefed, the rich having vowed his deflrution as fonn as his pertion thould be no more facred. Tlis was indeed an unufial requef, it having becn long cuftomary not to continue any tribune in his oflice abore a year. However, the tribes bergan to vote, and the two dirft declated for Gratchus. Hereupon the rich made great clamours; which terrified Rubrius Varro, who prefided in the college of tribuncs that diy, to fuch a degree, that he refigned his place to Q. Mummins, who offered to prefide in his room. But this raifed atumult among the tribunes themfelves; fo that Grachus wifely difmilled the affembly, and ordercd them to meet again the next day.

In the mean time the people, being fenlible of what importance it was to them to preferve tlee life of fo
powerful a protechor, not only conducted him home, but watched by turns all night at his door. Next morning by break of day, Gracchus laving affembled hisfriends, led them from his houle, and polted one half of them in the comitium, while he went up himfelf with the other to the Capitol. As foon as he appeared, the people filuted him with loud acclamations of joy. But fcarce was he placed in his tribunal, when Fulvius Flaccus a fenator, and friend to Gracchus, breaking through the crowd, came up to him, and gave him notice, that the fenators, who were affembled in the temple of Faith, which almoft touched that of Jupiter Capitolinus, had confpired againt his racyagainalife, and were refolved to attack him openly on his
very tribunal. Hereupon Gracchus tucked up his robe, as it were, to prepare for a battle; and, after his example, fome of his party, feizing the faves of the apparitors, prepared to defend themfelves, and to repel force by force. Thefe preparations terrificd the other tribunes; who immediately abandoned their places in a cowardly manner, and mixed with the crowd; while the priefts ran to fhut the gates of the temple, for fear of its being profaned. On the other hand, the friends of Gracchus, who were difperfed by parties in different places, cried out, \(W^{P_{e}}\) are ready: What muf we do? Gracclus, whofe voice could not be heard by all his adheremts on account of the turmult, the clamours, and the confufed cries of the different parties, put his hand to his head; which was the fignal agreed on to prepare for battle. But fome of his enemies, putting a malicious confruation upon that gefure, immediately flew to the fenate, and told the fathers, that the feditious tribune had called for the crown to be put upon his head. Hereupon the fenators, fancying they already faw the king of Pergamus's diadem on the tribune's head, and the royal mantle on his fhoulders, refolved to give the conful leave to arm his legions, treat the friends of Gracchus as enemies, aud turn the comitium into a field of battle.

But the conful Multius Scavola, who was a prudent and moderate man, refufed to be the inftrument of their rath revenge, and to difhonour his confulate with the mallacre of a difarmed people. As Calpurnius Pifo, the other conful, was then in Sicily, the mort turbulent among the fenators cried out, "Since one of our confuls is abfent, and the nther betrays the republic, let us do ourfelves juitice ; let us immediately go and demolifh with our own hands this idol of the poople." Scipio Nalica, who had been all along for violent mealures, inveighed bitterly againf the conful for refufing to fuccour the republic in her greatelt diftrefs. Scipio Nafica was the great grandfon of Cneius Scipio, the uncle of the firt Alricanus, and confequently coufin to the Gracchi by their mother Cornclia. But neverthelefs not one of the fenators betrayed a more irreconcileable hatred againt the tribune than he. When the prudent conful refured to arm his legions, and put the adherents of Gracchus to death contrary to the ufual forms of juntice, he fet mo bounds to his fury, but, rifing up from his place, cried out like = madman, "Since nur conful betrays us, let thofe who love the republic follow me." Havirg uttered tisele words, he immediately walked out of the temple, attended by a geat number of fenators.

Nafica threw his robe over his fhoulders, and having covercd his head with ir, advanced with his followers into the crowd, where he was joined by a compariy of the clients and friends of the patricians, armed with Itaves and clubs. Thefe, falling indifferently upon all who food in their way, difperfed the crowd. Many of Gracchus's party took to their hecls; and in that tumult a!] the feats being overturned and broken, Nafica, armed with the leg of a broken bench, knocked down all who oppored him, and at length reached Gracchus. One of his patty feized the tribune by the lappet of his robe : but he, quitting his gown, fled in his tunic; and as he was in that hurry of fpirits, which is infeparable from fear, leaping over the broken benches, he had the misfortune to llip and fall. As he was getting up again, he received a blow on the head, which funned him: then lis adverfaries rufling in upon him, with repeated blows put an end to his life.

Ronie was by his death delivered, according to Ci cero, from a domeltic cnemy, who was more formidable to her than even that Numantia, which had firf kindled his refentments. Perhaps no man was ever born with greater talents, or more capable of aggrandizing himafelf, and doing honnur to his country. But his great mind, his manly courage, his lively, eafy, and powerful eloquence, were, fay's Cicero, like a fword in the hands of a madman. Gracchus abufed them, not i: fupporting an unjuft caufe, but in conducting a good one with too much violence. He went fo far as to make fome believe that he had really fomething ia view befides the intercft of the people whom he pretended to relieve ; and therefore fome hiforians have reprefented him as a tyrant. But the mof judicious writers clear him from this imputation, and afcribe his firt defign of seviving the Licinian law to an eager defire of being revenged on the feriators for the affront they had very unjully put upon him, and the conful Mancinus, as we have hinted above. The law he attempted to revive had an air of juftice, which gave a fanction to his revenge, without cafting any blemill on his reputation.

The death of Gracchus did not put an end to the tumult. Above 300 of the tribune's friends loft their lives in the fray; and their bndies were thrown, with that of Gracchus, into the Tilber. Nay, the fenate carried their revenge beyond the fatal day which had Rained the Capithl with Roman blocd. They fought for all the friends of the late tuibune, and without any form of law affaffuated fome, and forced others into banifment. Caius billins, onc of the molt zealous de fenders of the people, was feized by his enemies, and frut up in a calk with fnakes and vipers, where he miferably perithed. Though the laws prohibited any citizen to take away the life of another before he had been legally condemned, Nafica and his followers were acquitted by the fenate, who enacied a decree, jufifying all the cruclties committed againft Gracchus and his adherents.

Theic difurbances were for a flort time interrupted by a revolt of the flaves in Sicily, occafionied ly the crucley of their mafters but the: bing foin reduce barces in ared the contclls about the Sen:pronizn laze, as it was called, again tnok place. Both partics were determined not to yield; and therefore the mot fatal efferts enfurd. The lirt thing of confequence wis ios dath of Sci-

pio Aficamus the second, who wis pribately frangled m lio lejby lome ulthe partions of the plebein parti, ahout 12: B. C. Caius Graschus, brother to lim , Io l.ad leat fomeriy billed, not only undertock Wie evisal of the Semp:uaina law, but propeted anew ene, Eroned of the rivhte of \(R\) mane citiacns to all the lalian alits, who conld acceive no thase of the lands divided in - andquer ce of the Sempronasulaw. The confequer.ces w thas were much wore that the fo: oner; the Aame
 - as wiln the weuble in its infancy ag:in commenced enemies more formidable than before. lougellæ, a city of the Volfi, revoited: but being fuddenly :atacked, wats obliged to fubmit, and was rafed to the ground; Which guicted matters fir the prefent. Gacchus, howeren, lill continued his attempts to humble the fea.ate and the \(r=1 t\) of the patrician body: the ultimate confequence of which was, that a price was fet on his l.end, and that of Fulvius his contederate, no leis than 182 their weight in gold, to any one who thould bring them Thecure to Opmaius the chiel of the patrician party. Thus the ton of froe cutam of frocription was begun by the patricians, of ieptan with he; themislve, foon had enoush. Gracchus begua.

Sce Numidia. and lulvins werefacrifed, but the diforders of the republic were nut fo eality cured.

The inundation of the Cinbri and Teutones put a firp to the civil difcords for fome time longer; but they being defeated, as telated under the articles Cim3 Ri and Crutones, no:hing prevented the ircubles from being revived wib greater fury than before, except the war with the Sicilian haves, which had again commenced with more dangerous circumftances than ever. lint this war being ectally ended about 99 B. C. no father obftacle senained. Marius, the con-- quero: of Jugurtha * and the Cimbri, undertook the caufe of the pebeians againf the fenate and patricians.

Having allociated limelf with Apuleius and Glancia, two faktous men, they carried their proceedings to fuch a length, that an open rebelion commenced, and Marius himelf was obliged to ald againft his alli:s. Pance, honsever, was for the preent reftored by the maflicie of Apulcius and Gl.usia, with a great number of their followers; upen which Iflarius thuught preper to leave the city.

White factious men thus endearourcd to tear the republic in pieces, the attempts of well-meaning people to heal thofe divilions fersed only to involve the ftate in calamities fill more grievous. "The confuls obferved, that many individuals of the Italian allies lived at Ronte, and dalfely pretended to be Romarn citizens. 13y unean of them, it was likewife perceived, that the plebeian party had acoured a great deal of its power ; as the vores of thete pretended citizens were always at the fervice of the tribunes. The confuls therefore got a law paffed, commanding ail thole pretended citions to return bonic. 'This was fo mucla refented by the Itahim ीates, that ath univen al deleftion took place. A fcherae was then formed by M. Livins Drufus, a wibuns of the people, to reconcile all orders of men ; but this only mode matter, worle, and procured his own af. faflination. His death feemed a ligral for war. The Narla, l'eligri, Samutes, Campanians, and Lucamians, and in fort all the provinces from the tiver Lit is to the Adriatic, tevolted at once, and formed them. fulves into a scpublic, in gpofitisn to that of Rome.
'Ihe banghty Romans were now made thoroughiy fen. lible that they were not invincibie: they were defeated in clmufterery cagagement ; and muffoon have yield. ed, lad they not fallen upon a method of elividing their enemies. A law was paffed, enattring, that all the nations in Italy, whode allinace with lonme was indifputable, thould enjoy the right of Roman citizens. This drew off feveral nations fom the abliance ; and at the fame time, sylla taking upon him the conmand of the lioman amies, fortune foon dechared in farour of the litter.
'Ine fuccefs of Rome arainf the allies ferved only to bring greater miferies uponherfuit. Manius and Syll. hecame rival,; the former adheving to the people, and the laticr to the pathictans. Marius aliciated with on: of the tribunes named Sulpitius; in conjundtion with whom he raife! fuch difurbances, that Silla was forced to retite from the city. Having thas driven of his sival, Matius got himfelf appomed general againt Mithidates + king of Pontus ; but the foldiers relufed to obey any other than Sylla. A civil war immediately cnfued, in which Marius was driven ont in his turn, and a price fet upon his head and that of Sulpitius, with many of their atherents. Su'pitius was toon feized and kilied; but Marius made his elcape. In the mean time, however, the cruelties of Sylla rendered him obnoxious both to the fenate and pcople; and Cinnat, a furious partifan of the Marian fation, being chofen conful, cited him to give an account of his conduet. Upon this Sylla thought proper to fet rut for Afia; Marius was recalled from Africa, whither he had fed; and immediatcly on his landing in Italy, was joined by a great number of thepherds, flaves, and men if defpetate fortunes; fo that he foon f.w hinielf at the houd of a confiderable army.

Cinna, in the mean time, whom the fenntors latd de-Horrid pofed and driven out of Rome, foliciied and obtained crueltics a pow orful army from the allies; and being joined by Sctorins, a moft able and experienced seneral, the two, in conjunction with Maius, adranced, towasds the capital ; and as their forces daily increaled, a foumb army was formed under the command of Papirius Car. bo. The ferate raifed fome forces to deford the city ; but the troops being vaftly irferior in number, and likewife inclined to the contrary fide, they were obli. ged to open their gatcs 1 , the conicderates. Marius entered at the head of a numerous guard compoied of Alwes, whom he called his Dardiana, and whom he defigned to employ in revenging himfell on his enemies. The firtt order le gave thefe affafins wats, to murder all who came to dalute him, and were not anfwered with the like civility. As cuery one was forward to pay his compliments to the new tyrant, this ordur proved the deftuction of valt numbers. At laft thefe Bardixans aboudoned themelve in fuch execfes in every kind of vice, that Cimat and Sentorius ordered their tio ps to fall upon them; which being inltantly put in cxecutiun, they were al] cut off to a man.

By the defrmation of his grards, Marius was reduced to the necclity of taking a methed of gratifying his revenge fomewhat nore tedious, though equitly effectual. A conferrence was beld between the four cheefs, in which Marins feemed quite frantic with rage. Ser:orius endeavourcd to moderate hasfury; but, being

Rome. over-ruled by Cinna and Carbo, a refolntion was taken to murder without mercy all the fenators who had oppofed the popular faction. This was immediately put in execution. A general flaughter commenced, which lafted five days, and during which the greatelt part of the obnoxious fenaturs were cut off, their heads ftuck upon poles over-againft the roftra, and their bodies dragged with hooks into the forum, where they were left to be devoured by dogs. Sylli's houfe was demolihed, his gnods confifated, and he himfelf declared an enemy to his country; however, his wite and children had the good fortunate to make their cefeape.'This muffacre was not contined to the city of Rome. The foldiers, like as many blood-hounds, were difperfed over the country in fearch of thofe who tled. The neighbouting towns, villages, and all the highways, fwarmed with affullins; and on this oceation Plutarch obferves with great concern, that the moff facred ties offriendfhip and hofpitality are not proof againft tre:lchery, in the day of adverlity, for there were but very few who did not diicover their friends who had Hed to them for fhelter.

This flaughter being over, Cinna named himfelf and Sylla threztens re. venge. Marius confuls for the enfuing year ; and thefe tyrants feemed refolved to begin the new year as they had
ended the old one: but, while they were preparing to renew their cruelties, Sylla, having proved vietorious in the eaft, fent a long letter to the fenate, giving an account of his many viĉorie;, and his refolution of returning to Rome, not to reftore petce to his country, but to revenge himfelf of his enemies, i.e. to deltroy thofe whom Marius had fpared. This letter occafioned an univerial terror. Marius, dreading to enter the lifts with fuch at renowned warrior, gave himfelf up to exceffive drinking, and died. His fon was affociated with Cinna in the government, though not in the confulhip and proved a tyrant no lefs cruel than his fath:r. The fenate cleclared one Valerius Flaccus general of the forces in the eaft, and apprinted him a conliderable army ; but the troops all to a man deferted hinr, and joined Sylli. Soon after, Cinna declared himfelf conful a third tine, and took for his colleague Papirius Carbo; hut the citizens, dreading the tyranny of thefe inhuman montters, fled in crowds to Sylla, who was now in Greece. To him the fenate fent deputics, berging that he would have compalfion on his col ntry, and not carry his refentment to fuch a length as to begin a civil war: but he replied, that he was coming to Rome full of rage and revenge; and that all his enemies, it the Reman peofle confented in it, flouid perilh either by the fword or the axes of the executicners. Upon this feveral very numerons armies were formed agtink binn; but, through the mifconduct of the generals who comm:i-ded them, thefe armies were everywhere defe:ted, or wat over to the enemy. Pompey, afterwards Ityled sie Gireat, fignalized bimfelt in this war, and cmbraced the party of Sylla. The Italian uations took fome onc lide and fome another, as their different inclinations led them. Cinn:, in the menn time, was killed in a tumult, and young Marius and Caybo fuccecded him; but the former having ventured an engagement with \(S_{j}\) llit, was by him defeated, and forces to hy to Pixnelte, where he was clofly betieged.

Thus was Remic reduced to the lowent degree of mifery, when one Pontius Telefinus, a Samnite of great experience in war, projected the total ruin of the city. 12 me in He had joined, or pretended to join, the generals of the utmote the Marian fadion with an almy of \(40,000 \mathrm{men}\); and danger therelcre marched towards Prænefte, as if he defigned frum Teleto relieve Marins. Dy this means he drew Sylla and finus a Pompey away from the capital; and then decampins samute. in the night, over-reached thefe two generals, and by break of day was within 10 furlongs of the Collative gate. He then pulled cff the matk; ard decharing himfelf as much an enemy to Marius as to Syll , tolit his tronps, that it was nct his defign to affit one Roman againt another, but to deltroy the whole race. "Let fire and fivord (faid he) de!trey all; let no quarter be given; mankind can nerer be free as lang as ore Rominn is left alive." - Never had this proud metropolis been in greater danger ; nor cves had any city a mo:e narrow efcape. The Reman ycuth marched out to oppofe him, but were driven back with great flaughter. Sylla himfeif was defeated, and forced to fly to his camp. Tclefinus advanced with merefury than ever; but, in the mean time, the ntter wing of his army having been defeated by M. Craflus, the victrious general attacked the body where Telecinus commanded, and by putting them to 1 light, faved his ccuntry from tho moft imminent darger.

Sylla, having now no enemy to fear, mareled firf to Atemrx, and thence to Rome. From the former Monf 187 city be carried \(80 c 0\) prifoners to Ronse, and caufed cruetty of them all to be maffacred at once in the circus. His Sylla. cruelty next fell upon the Praneftines, 12,000 of uhom were maffacred without mercy. Young Marius had killed himfelf, in order to avoid falling into the hards of fuch a cruel enemy. Soon after, the inhabitants of Norba, a city of Campania, finding themfelves unable to refilt the forces of the tyrant, fet fire to their hoafes, and all perifthed in the Hames. The taking of these cities put an end to the civil war, but not to the cruelties of Sylla. Having affembled the people in the comitium, he told them, that he was relolved not to fpare a fingle perion who had borne arms againf hin. This cruel refolution he put in execution with the noof unrelenting vigour; and hiving at laft cut of all thofe whom he thought capable of oppoling him, Syllat canfed himfelf to he declared perpetual dictotor, or, in other words, king and abfolute fovercign of Rome.
This revolution happcened about 30 B. C. and from this time we maly date the \(\ln\) (s of the Roman liberty. Sylla indeed retigned his power in two years ; but the citizens of Rome having ance fibmitted, werz ever after mare inclined to fubmit to a matler. Thourh individuals retaired the fame enthutialic notions of liberty as before, yet the minds of the gencrality feem from this time to hare inclined towards monarch: New miners were indeed already prepired for the republic. Cxtar and Pompey had eminertis diatin: guifhed themfelves by their martial exploits, and were already rivals. They were, however, for fome time prevented from raifing any difutubnces by being kept at at difance frums each other. Screnrius, one of the genctals of the Morian faction, and the only one of thean foffered sither of horour or preb:y, had retired
n,:o :psin, where he erefted a repubiic independent of Kome. Donpey and Metellus, two of the belt reputed generals ia Kone, were lent againft him ; but inflead if cnnupering, they nerc on all uccations conquered by kim, and obliged to abardon their enterprite with diifgrace. At lat Surtorims was treacheroully murdered; and the traturs, who after las death ufurped the command, being totally deftitute of his abilities, were eadily deleated bj Pompey: and thus that general reaped an undeferved honour from concluding the war with ruccers.

The Spanilh war was fearce ended, when a ves; dangerous one w::s excited by Spartacus, a 'ihracian fladiator. For fome time this rebel proved very fucceffinl ; but at latt was totally defeated and killed by Craffus. The fuginives, however, rallied again, to
is, Lhe number of 5000 ; but, being totally defeated by Sompey Pompey, the latter took occafion from thence to claim and crafus the glory which was jufty due to Craflis. "einy thus allume becume extremely popular, and fetting no boinds to preat al:- his ambition, he was choren confin along axith Cralius. thority, Both gener:lls were at the head of powerful armies; and a conten between them immediately began about who thould firf lay down their arms. With dificulty they were in appearance sconciled, and immediately began to oppnfe one anothe: in a new way: I'ompey courted the favour of the people, by reinfating the tribunes in their ancient power, which had been grcatly abridged by Sylla. Cranlus, though naturaliy covatous, entertained the populace with iurprifing profufion at 10,000 tables, and at the fame time diftritated corn fillicient to maintain their families for theee montl, Thefe prodigious expences will fcem leís furprifiag, when we contider that Craffus was the richelt man in Rome, and that his eftate amounted to upwaids of 7000 talents, i. e. 1,356,250 1. Rerling. Notwith丹audiog his utmont efforts, however, Pompey ftill had the luperiority; and was therefore propoled as a prorar perfon to be employed for clearing the feas of pitates. In this new fation a mof extenfive power was to be gran ed to him. He was to have an abfolute authority for three years over all the feas within the ftraits or pillars of Hercules, and over all the countries for the fate of 400 furlongs from the fea. He was empowered to raife as many inldiers and mariners as he ihought proper; to take what fums of money he pleafed out of the public treafury without being aceountable for them; and to choofe out of the fenate fifteen fenators to be his lieutcuants, and to execute his orders when he himfelf could not be prefent. The ferfible part of the people were againft invefting one man with io much power; but the matainking multitude rendered all oppoftion fruitlefs. T'he tribune Rofcius attempted to fpeak agrtinil it, but was prevented by th.c claniours of the people. He then held up two of his fingers, to fhow that he was for dividing that estenfive conmifion between two perfons: but on this the aftembly burlt out into fuch hidents mutcres, that a crow flying accidentally nver the comitium, was funned with the noife, and fell down among the rabble. This law being agreed to, Ponapey executed his commillin fo much to the public fatisfacti n, that on his retun a new law was prop fed in his famor. By this he was to be appointed gencral of all the forces in A fia; and as he was fill to retin the fuvereignty of the feas, he was now in
fact made fovereign of all the Roman empite This law was iupported by Cicero and Cafar, the former afpering it the confulate, and the latter pleafed to fee the Romans fo readily appointing themfclues a malter. Pomper, however, executed his commiffion with the utmoft fidelity and fuccefs, completing the conqueft of Pontus, Albania, Iberia, Sic. which had been fuccefsfully begun by Sylla and Lucullus.

But while Pompey was thus aggrandifirg himfelf, the republic was on the point of being fubverted by Confpracy a confpiracy formed by Lucius Sargius Catiline. He was defcended from an illuftrious family; but having quite ruined his eftate, and rendered himfelf infamous by a feries of the mof dereftable crimes, he affociated. with a number of others in circumfances fimilar to his own, in orcier to repair their broken fortuncs by ruining their country. "Their fcheme was to murder the confuls together with the greatelt part of the fenators, fer fire to the city in diferent piaces, and then feize the government. This wicked defign mifcarried twice; but was not on that account dropped by the confpiratcrs. Their party increated every day ; and Loth Cxfar and Craffus, who fince the departure of Pompey had fuclied to gain the affections of the people as far as poffible, were thought to have been privy to the confpiracy. At laft, however, the matter was difcovered by means of a young knight, who had indifcreetly revezled the fecret to his paramour. Catiline ihen openly took the field, and, fuon raifed a confiderable army: but was utterly defeated and killed about 62 P. C. ; and thus the republic was freed from the prefent danger.

In the mean time, Crefar continucd to advance in popularity and in power. Soon after the defeat of Catiline, he was crcatcd pontifex maximus; and after that was font into Spain, where he fubdued feveral nations that had never before been fubject to Rome. While he was thus employed, his rival Pompey returned from the eaf, and was received with the highelt honours; but though fill as ambitious as evel, he now affected extraordinary modelty, and declined accepting ol the applaufe which was offered him. His ain was to affume a fovercign authority without fceming to defire it ; but he was foon convinced, that, if he defired to reign over his fellow-citizens, it muft be by force of arms. He therefore renewed his intrigues, and fpared no pains, however mean and feandalous, to increate his popularity. Cæar, on his return from spain, found the fovereignty divided between Craflus and Pompey, each of wh \(m\) was ineffectually fruggling to get the better of the other. Cxfar, no lefs ambitious than the other two, propefed that they fhould put an end to their differences, and take him for a partner in their power. In fhort, he projected at trinmvisate, ar :Alfociation of three perfons, (Pompey, Cralfus, and himelf), in which fhould be lodged the whole power of the fenate and rate people; and, in order in make their confederacy more latting, they bound themfelves by mutual oaths and promifes to fand by each odier, and fuffer nothing to bc undertaken or carried int a execution without the una. numous confent of all the three.

Thus was the liberty of the Romans raken away a fecond time, nor did they ever afterwards recover it; though at prefent none perceived that this was the cafe,

\section*{R O M}
except Cat: The affociation of the triumvirs was for a long time kept fecret; and nothing appeared to the people except the reconciliation of Pompey and Craffus, for which the flate reckoned itflf indebted to Cefar. The firt con equence of the triumvirate was the confulthip of Julius Catar. But though this was obeained by the favour of l'ompey and Craflus, he found himfelf difappointed in the colleague he wanted to affociate with him in that office. He lad pitched upon one whom he knew he could manage as he pleafed, and diftributed large fums among the people in order to engage them th vote for hum. The fenate, however, and even Cato himieli, refolved to defeat the triumvir at his own weapons; and having therefore fet up another candidate, diftributed fuch immenfe fums on the oppofite fide, that Cxinr, notwithflanding the valt riches he had acquired, was forced to yield. This defeat proved of fnall confequence. Ceffar fet himfelf to engage the affections of the people; and this he did, by an agrarian law, fo effectually, that he was in a manner idolized. The law was in ittelf very reatomable and juft; neverthelefs, the fenate, perceiving the defign with which it was propoled, thought themelves bound to oppofe it. 'I'heir oppufition, however, proved fruitels: the conful Bibulus, who thewed himfelf molt a ative in his endeavours againit it, was driven out of the afembly with the greatell indignity, and from that day became of no contideration; fo that Cefiar was reckoned the fole conful.

The rext ftep taken by Cxfar was to fecure the knights, as he had already done the people; and for this purpot: he abated a third of the rents which they annually paid into the treafury; after which he governed Rome with an abfulute fivay during the time of his confulate. The reign of this triumvir, however, was cuded by his expedition into Gaul, where his military exploits accquired him the higheft reputation.Ponipey and Craflus in the mean time became confuls, and governed as defpotically as Cafar himelfhad done. On the expiration of their firft confulate, the republic f.ll into a kind of anarchy, entitely owing to the difor. ders occalioricd by the two late confuls. At haft, however, this confution wals ended by raiting Craffus and l'ompey to the confulate a fcoond time. This was no fooner done, than a new partition of the empire was propofed. Craffus was to have Syria and all the eatern provinces, Pompey was to govern Africa and Spain, and Cxlar to be continued in Gaul, atad all this for the fpace of five years. This law was paffed by a great majority: up on which Cralfus undertook an expedition againtt the Parthians, whom i.e imagined he fhould cafily overcome, and then enrich himiclf with their fpoils; Cxfar arplied with great athduity to the completing of the conqueft of Gaul; and Pomper having nothing to d) in his province, itaid at liome to govern the republic alone

The aff.irs of the Romans were now haftening to a crilis. Crathus, having oppreffed all the provinces of the calt, was to:ally defeated and killed by the Parthitns*; alter which the two great rivals Cxfar and Pompey were l:ftalane, without any third perfon who could hold the bainice betwen them, or pervent the deadly quirreis which were abont in emfine. Matters, however, concinued preity quic: till Gaul was reduced to a Roman reovince f. The q'ellion tl.cn was, wheVol. XVI.
ther Cafar or Pompey flould firtt refiga the command of their armies, and return to the rank of private perfons. As both parties faw, chat whoever firt laid down his arms mult of courfe fubmit to the othe1, both refufed to difarm themfelves. As Cæfar, however, had amaffed immenfe riches in Gaul, he was now in a condition not only to maintain an army capable of wing with Pompey, but even to buy over the leading men in Rome to his interef. One of the confuls, named JEmilits, Paulus, coft him no lefs than 1500 talents, or 310,6251 . Iterling; but the other, named Marcellus, could not be gained at any price. Pompey had put at the head of the tribunes one Scribonius Curio, a young patrician of great abilities, but fo exceedingly debauched and extravagant, that he owed upwards of four millions and a half tterling. Cxfar, by enabling him to fatisfy his creditors, and fupplying him with money to purfue his debaucheries, fecured him to his intereft; and Curio, without feeming to be in Crfar's intereit, found means to do him the molt effential fervice. He propofed that both generals fhould be recalled; being well alfured that Pompey would never confent to part with his army, or lay down the government of Spain with which lie had been invefted, io that Cæfar might draw from Pompey's refufal a pretence for continuing himfelf in his province at the head of his troops. This propefal threw the oppofite party into great embarrafiments; and while both profeffed their pacific intentions, both continued in readinefs for the moft obltinate and bloody war. Cicero took upon himfelf the office of mediator; but Pompey would hearken to no terms of accommodation. The orator, furprifed to find him fo obitinate at the fame time that be neglected to ftrengthen his army, afked him with what forces he defigned to make head againlt Cxfar? To which the other anfwered, that he needed but tamp with his foot, and an army would flart up out of the ground. This confidence he atfumed be. caufe he pertuaded himfelf that Cafir's men would abandon him if matiers came to extremities. Cafar, however, though he afferted great moderation, yet kept himfelf in readinefs for the wortt ; and thercfore, when the fenate pafied the fatal decree for a civil was, he was not in the lealt alirmed. This decree was iffued in the year 49 B. C. and w..s expreffed in the following words: "Let the confinls for the ycar, the proconful Pompes, the pixtors, and all thofe ia or near Rome who have heen confuls, provide for the public fafety by the mott proper means." This decree was no fooner palled, than the conful Marcellus went, with his colle rgue I.entulus, to a houfe at a fmall diftance from the town, whete Pompey then was; and prefenting him with a fword, "We require you (faid he) to take upon you with this the defence of the republic, and the command of her trnops." Pompey cbeyed; and Cafar was by the fame decree divelled of his office, and one Lucius Domitius appointed to fucceed him, the new governor being empowered to raife 4050 imen in order to take poffefion of his province.

War being thus refclved on, the fenate and Pompey began to make the necelifiry preparations for oppofirg Cxfar. The attempt of the latter to withand their authority they termed a tumult; from which contemptible epthet it appeared that they cither did ront know, or did not diead, the enemy wlom they were bringing up-a themfelvcs. Huwever, they ordered 30,0 co lio

man forces to be afembled，toecther with as many fo． reign tronps as lompey thould think proper；the ex－ jence of which armament was defrayed from the public trenfury．The governments of provinces，and all pub－ lie honours，were betowed upon fich as were remark－ ahle fur their atachment to Pomper and heir enmity to Catior．The latter，however，was hy means wating in whit concernad his own intereft．Thece of the tri－ bunes who had been his frierds were driven ont of Rome， and arrived in bis camp difguited like flaves．Cafar nowed thent to his army in this ignominious hatit； and，fetting forth the iaiguity of the fenate and p．uri－ cimen，exho：ted his men to ftand by their general under whom they had ferved folong with fuccefs；and finding by their acciamation；that he could depend on them，he

The firft detign of Catior was to make himfelf mafter of Ariminum，a city bordering upon Cifalpine Gaul， and coniequently a part of his province；but as this would be looked upon as a declatation of war，he re－ folved to keep his delign as private as polithle．At that time he himfelf was at Ravenna，from whence he fent a detachment towards the Rubicon，defining the officer who commanded it to wait for himon the banks of that river．The next day le alfifted at a fhow of gladiators， and made a great entertainment．Towards the clofe of the dity he rofe from table，detiring his gualts to fay tiil he came back，which he faid would be very foom； but，infead of returning to the company，he immedi－ ately fet out for the Rubicon，having left orders to fome of his moft intimate friends to follow him through dif ferent roads，to awtid being obferved．Having arrived at the Rubicon，which parted Cifpaline Gaul from Ita－ 15，the fucceeding misfortunes of the empire occurred to his mind，and made him hefitate．Turning then to Ahnius Pollio，＂If 1 do not crofs the river（faid he）， I ann undone：and if I do crufs it，how many calami ties farll 1 hy this means beine upon Rome！＂Having thus fooken，he mufed a few minutes；and then crying out，＂The die is can，＂he threw limfelf into the ri－ vir，and crofling it，marched with all pofible fpeed to Ariminum，which he reached and furprifed before diy－ brenk．From thence，as he had but one legion with him，be difpatched orders to the formidable army he hal left in Gaul to crofs the mountains and join him．

The acivity of Cxar ftruck the oppolite party with the greatelt terror；and indeed not withnut reafon，for they had been extremaly negligent in making prepara－ tons againf fuch a formidable opponent．Pompey himelf，to lefs alarmed than the reft，left Rome with a delign to retire to Capua，where he had two legions whom he had formerly drughted out of Cexiu＇s atmy： Fle communicated his intended flight to the denate；but at the fame time acquainted them，that if any magatrate ir fenator refufed to foll wh him，he thould be treated as a friend to Cetar and an enemy th his country．In the moan time Cafur，having raied new tronps in Cifupine Gand，fent Mare Antony with a detachment of feize Aretium，and fome oher nficers to fecure l＇ianrum and Finum，white he himitif marched at the head of
the Pelign＇，which Domitus Alsenobarbus ciefended with thirty cohorts．Bat Cafar no foner invelled it， than the garrinon betayed ther commander，and deli－ vered him up wi．h many fenators，who had tahen re－ fuge ia the place，to Cewar，who gramed them their lives and liserty．Durnitius，fean ing the refentment of the conqueror，had ordered one of his thaves，whom he wided as a phyfician，to give him a dofe of poiion．When lie came \(t\) ）experience the humanity of the c．nqueror， he lamented his mistortune，and blamed the hastinefs of his com refolution．But his phyfician，who had on－ ly given him a flecping draught，comforted him，and received hi，liberty as a reward for his affection．
l＇ompey，thinking hinielf no longer fafe at Capua after the reduation of Corfinum，retired to Brundu－ flum，with a defign to carry the war inten the eaft， where all the governors were his creatures．Ciefar fol－ lowed him clofe；and arriving with his army betore Drundufium，invelted the place on the land－lide，and undertonk to that up the pirt by a faccido of his own invention．But，before the work was cumpleted，the fleet which had conveyed the two cor：fuls with thirty cohorts to Dyrrhachium being returned，l＇ompes re－ folved to make his cieape，which he condusted with all the experience and dextrity of a great oflicer．He kept his depature very focret；but，at the fame time， made all necenary preparations for the facilitating of it． In the firff place，he walled up the gates，then duy deep and wide ditches cr fo all the ！reets，except only thofe two that led to the port；in the ditches he planted tharp pointed Aakes，covering them with hurdles and earth．After thele precautions，he gave exprels orders that all the citizens dhould keep within doors，left they thould betray his defign to the encrny；and then，in the fpace of three days，cmbarked all his troops，except the light－armed infantry，whom he had placed on the walls；and thefe likewile，on a fignal given，abandon－ ing their pofts，repaired with great expedition to the thips．Cafar，perceiving the wails unguarded，ordered his men to feate them，and make what hafte they conld ater the eama．In the heat of the purfuit，they would have fallen into the ditches which Pompey had prepared for them，had not the Brundufius warned then of the danger，and，by many windings and turninge，led them to the haveo，where they fond all the fleet under fail， except two veffels，whech hatd run aground in going ont of the batbour．Thefe Cafar took，made the foldiers on board prif．ncrs，and brought them ahore．

Calar，feeing himelf，by the flight of his rival，maf－ ter of all ltaly from the Alps to the fea，was delirous to follow and attack him before he was jonned by the fupplies which he expeted from Afial．Dut being det－ titute of thipping，he refolved to go firft to Rome，and fettle fome fort of government there ；and then pafs in－ to span，to dirive from thence l＇tmpey＇s troups，who lad taken polfefion of that great continent，under the command of Aframius and Peacins．Beoore he left Brundulium，he fint Scrib）on Curio with three legions into Sicily，and ordered（）．Valerius，ane of has licute－ numes，to get together what thips he cuald，and crofs over with one legion into Sirdiaia．Cate，whe com－ manded in Sicily，upon the find news of Curio＇s land－ ing there，abandoned the ifland，and retired to the camp of the confuls it l）y：thachium；and Q．Valderius no fooner apleared with his fmall flect oft Sardinia，

\section*{R O M}
than the Caralitini, now the inhabitants of Cagliari, drove out Aurelius Cotta, who commanded there for the fenate, and put Cæfar's licutenant in poffeffion both of their city and ifland.

In the mean time the general himelf advanced toCxfar gocs wards Rome; and on his march wrote to all the fena-
to Rome. Wars tors then in Itzly, deliring them to repair to the cipital, and affift hin with their council. Above all, he was defirous to fee Cicaro; but could not prevail uporn him to return to Rome. As Cxefar dicew near the c.rpital, he quartered his troops in the neighbouring municipia; and then advancing to the city, out of a pretended refpeet to the ancient cufloms, he took up his quarters in the fuburbs, whither the whole city crowded to fee the famous coaqueror of Gaul, who had been abfent near ten years. And now fuch of the tribunes of the people as had fled to him for refuge realfumed their functions, mounted the rollra, and endeavoured by their fpeeches to reconcile the people to the hend of their party. Marc Antony particularly, and Callius Longinus, two of Cæfar's noft zealous partifans, moved that the fenate fhould mes: in the fuburbs, that the general might give them an account of his conduct. Accordingly, fuch of the fenators as were at Rome affembled; when Crefar made a fpecch in juftification of all his proceedings, and concluded his harangue with propofing a deputation to Pompey, with offers of an accommodation in an amicable manner. He even defired the confcript fathers, to whom in appearance he paid great deference, to nominate fome of their venerable body to carry propofals of peace to the confuls, and the general of the confular army; but none of the fenators would take upon him that commiffion. He then began to think of providing himfelf with the necelfary fums for carrying on the war, and bad recourfe to the public treafury. But Metellus, one of the tribunes, oppofed him; allaging a law forbidding any one to open the treafury, but in the prefence and with the confent of the confuls. Cxfar, however, without regarding the tribune, went direaly to the temple of Saturn, whare the public money was kept. But the keys of the ticafury laving been carried away by the conful Lentulus, hic ordered the doars to be broken open. This Metellus oppofed: but Cefar, in a paffion, laying his hand on his lword, threatened to kill him if he gave him any farther dillurbance; which fo te:rified Metellus, thit le withdrew. Colar tonk out of the treafurs, which was ever after at his conmand, an inmmenfe fum; fome fay, 300,000 prunds weight of gold. With this fupply of money he raifed tromps all over I!aly, ard fent covern us iato all the provinces Cabjea to the republic.

Ceflar nour made Afre Antony commander in chief oi the armics in IE, ly, fent his brother C. Antonius th govern llyricum, afigncl Cilalpine Crat to Licinius Crallus, appointed Mi. Amilius Lefidts governor of the eapital; and havines get together fome thips \(t\), cruife in the duwaic ard Meiterranean feas, he gave the command ni one (f his Peets to I'. Cornclius 1 ). labella, and of the oller to wne Hortentius, the fon of the funirus crator. As Pimper had tent goveruors itso the fame province:, by this means a general war was kindled in almof all the part; of the knowa world. However, C far would not thit any of his licutenants "ith the condurt of the war in Spain, which was Pom. pey's favoatite froviace, but tocl: i: upea himelf; and
having fettied his affairs in grcat hafte at Rome, te. turned to Ariminum, affembled his legions thare, and paffing the Alps, entered Tranfalpine Gaul. There he was informed that the inlabitants of Marfeilles had icfolved to refufe him entrance into the:- city; and that L. Domitius Ahenobarbus, whom he had generouny pardoned and fet at liberty after the reduction of Corfinium, had fet fail for Marfeilles with feven golleys, hitwing on board a great number of his clients and naves, with a defign to raife the city ia favour of Pompocy. Cafar, thinking it dangerous to let the encmy take poffefion of fuch an important place, fent for the 15 chicf magiftrates of the ciiy, and advifed tham nut to begin a war with him, but rather follaw the cxample of Italy, and fubmit. The magiftrates returned to the city, and foon after informed him that they were to ftand neuter; but in the meantine Domitius arrising with his fmall fquadron, was received into the city, and declared general of all their forces. Hereupon Cæfar immediately invefted the town with three legions, a:ad ordered tweive galleys to be built at A relas, now Arl.s, in order to block up the port. But as the fiege was like to detain him too long, he left C. Trebonius to carry it on, and D. Butus to command the fleet, while he continued his march into Spain, where he began the war with all the valour, ability, and fuccefs of a grcat: general. Pompes had three generals in this continent, which was divided into two Roman provinces. Varro commanded in Farther Spain; and Petreius and Afranius, with equal power, and two confiderablc armies, in Hither Spain. Cæfar, while he was yet at Marfeilles, fent Q . Fabius, one of his lieutenants, with three legions, to take poffefion of the paffes of the Pyrenees, which Afranius had feized. Fabius executed his commifion with great b:avers, entered Spain, and left the way open for Cæfar, who quickly followed him. As foon as he had croffed the mountains, he fent out fcouts to obferve the fiturtion of the eneny; by whom he was informed, that Afranius and Petreius having joined their forces, confiring offive legions, 20 colonts of the natives, and 5000 horle, were advantageoully pofted on an hill of an e.tfy afcent in the neighlourhocd of Ilerda, now Leride, in Catalonia. Upon this :advice Cæfar adronced within fight of the enemy, and cacamped in a plain between the Siccris and Cinga, now the S oro and Cime. Be 19) tween the cminence on which Afranius had poltad him to great felf, and the city of Iterda, was a fmall plain, and in the diffecfs it middie of it a riling ground, which Cafar attempted to fiize, i: crder to cut off by that means the commanication hetweell the enemy's camp and the city, from Whence tiey had all there provitions. This occafoned a tharp dijpuse betw:en three of Cerar's legions and an equal r umber of the enemy, which hated five hours with erphal fizceis, buth purties claming the victory. Bu: after al, Afrenies's mon, winn lad irnt feized the p \(n\), mintaine 1 thenuelves in puffefinn of it in fite of Ca for's atmoft effurts. Two diy's after this battle, contimasl rains, with :he melting of the finev on the monntains, fo fwelled the two rivers beiween which Cxiar was encampen! , wht they overflowed, b:oke dow:1 his bridges, and aif under vater the neglibouring country to it great dilance. This cut of the commanizatirn between hes camp ant the cities tint had declared for !him ; an 1 recuied him io fuch Itraits, that his army was ready in die for famine, wasat being fold in his

l'jon the new's of Cufar's difrefs, Pompey's farty at kome began to take courage. Several perfons of dilinction went to congratulate \(A\) franius's wite on the diaccefs of har huband's ams in Spain. Many of the inators who had hitherto food neuter, hattened to lompey"s camp, taking it for granted that Cafar was raluced to the hatt extremity, and all hopes of his party lotk. Of this number was Cicero; whe, without any negard to the remonitrance of Atticus, or the letters Cafire himbelf wrote to him, defiring lim to juin neiTher farty, he left Italy, and landed at I yrthachium, where lompey received him with great marks of joy and friendthip. But the joy of Pompey's paty was zen not lons-lived. For Cafar, after having attempted fehis diffu? veral times in vain to rebuild the bridges, caufed boats ties, and to be made with all poffible expedition; and while the rectuces all A) win.
the affections both of the penple, and the patrician: He recalled the exiles, granted the rights and privileges of Roman citizens to all the Gituls beyond the l'o, and, as pontifex naximus, filled up the vacancies of the facerdotal colleges with his own \(f_{1}\) iends. Though it was expected that he would have abfolutely cancelled all debts contracted fince the beginning of the troubles, he only reduced the intereft to one-fourth. But the cheef ufe he made of his dictatornip was to prefide at the cledion of confuls for the next ycar, when he got himfelf, and Servilius Ifaurizus, one of his moft zealous partifans, promoted to that dignity.

And now being refolved to fllow Pompey, and carry Follow; the war into the eaft, he fet out for Brundulium, whi- Pontrey ther he had ordesed 12 lespions to repair with all pof-into the fible expedition. But on his arrival he found only tive \({ }^{\text {caft. }}\) there. The reft, being afraid of the dangers of the fea, and unwilling to engage in a new war, laad marched leifurely, complaining of their general for allowing them no refpite, but hurrying them continually from one country to another. However, Cæfar did not wait for them, but fet fail with only five legions and 600 horfe in the beginning of January. While the reft were waiting at Brundufium for fips to tranfport them over into Epirus, Cæfar arrived fafe with his five legrions in Chaonia, the nurthern part of Epirus, near the Ceraunian mountains. There he landed his troops, and fent the Thips back to Brundufum to bring over the legions that were left behind. The war he was now entering upon was the moft difficult he had yet undertaken. Ponpey had for a whole yeat been allembling troops from all the eattern countries. When he left Italy, he had only five legions; but fince his arriva! at Dyrlachium he had been reinforced with one from Sicily, another from Crete, and two from Syria. Thrce thoufand archers, fix cohorts of flingers, and feven thonfand horfe, had been fent him by princes in alliance with Rome. All the free cities of A fia had reinforced his army with their beft troops; nay, if we give credit to an hiterical poet, fuccours were brought him from the Indus and the Ganges to the calt, and from Arabia and Elhiopi. to the fouth ; at leaft it is certain, that Greecc, \(\Lambda\) fia Minor, Syria, Paleftine, Egypt, and all the nations from the Mediterranean to the Euphrates, took up arms in lus favour. He had almoft all the Roman knights, that is, the flower of the young nobility, in his fquadrons, and his legions confifted montly of vetcrans inured to dangers and the toils of war. Pompey himfell was a gensual of great expericnce and addrefs; and had under him fome of the bett enmmanders of the republic, who had formerly conducted armies thomfelves. As for his navy, he had above 500 flips of war, befides a far greater number of fmall veffels, which were continually cruiling on the coafts, and intercepting fuch fhips as cartied anms or provifions to the encmy. He lad likewife with him above 200 fenators, who formed a more numerous fenate than that at Rome. Cornclius Lentulus and Claudius Marcellus, the laf year's confuls, frefided in it ; but under the direction of Pumpey their protektor, who ordered them to altenhbe at Theffalonica, where he buite a ftately hall for that purpoce. Thete, in one of their affemblies, at the motion of Cato, it was decreed, that no Romall citi,ens Moniul be put to death but in battle, and that no city fubject :o the republic hould be facked. At the fime time the

apt lathers anembled at the falonica they alone reprefented the Roman ienate, and that thofe who refided at Rome were encouragers of tyranny, and friends to the tyrant. And indeed, as the flower of the nobility was with Pompey, and the molt virtuous men in the republic had taken refuge in his camp, he was gencrally looked upon as the only hnpe and fupport of the public liberty. Hence many perfons of eminent probity, who had hitherto flood neuter, flocked to him from all parts. Among thefe were young Brutus, who afterwards confpired againt CæFar, Tidius Sexius, and Labienus. Brutus, whole father had been put to death in Galatia by Pompey's order, had never fpoken to him, or fo much as faluted him fince that time: but as le now looked upon him as the defender of the public liberty, he joined him, facrificing thercin his private refentment to the intereft of the public. Pompey received him with great joy, and was willing to confer upon him fome command; but he declined the offer. 'lidius Sextius, though extremely old and lame, yet left Rome, and went as far as Macedonia to join Pompey there. Labienus likewife forfook his old benefactor, under whom he had ferved during the whole courfe of the Giulifh war, and went over to his rival, though Cwfar had appointed him commander in chief of all the furces on the other fide the Alps. In fhort, Pompey's party grew into fuch reputation, that his caufe was gencrally called the good caufe, while Cæfar's adherents were lonked upon as enemies to their country, and abettors of tyranny.

As foon as Crefar landed, he marched direstly to Oricum, the neareft city in Epirus, which was taken without oppofition. The like fuccefs attended him at Apollonia, which was in no condition to Itand a liege ; and thefe two conquefts opened a way to Dyrrhachium, where Pompey had his magazines of arms and provi- fions. This fuccefs, however, was interrupted by the news that the fleet which he had fent back io Brundulinm to tranfport the reft of his troops had been attacked by Bibulus, one of Pompey'sadmirals, who had taken 30, and inhumanly burnt them with the feamen en board. This gave Cxfar great uneafinefs, efpecially as lic heard that Bibulus, with 110 fhips of war, had taken foffeflion of all the harbours between Salonium and Oricum; fo that the legions at Brundufum could not venture to crols the fea without great danger of f.lling into the enemy's hands. By this Cæiar was fo much embarrafied, that he made propofals of accommodation upon very moderate terms: being no other than that both Pompes and he thmuld diband their armies within three days, renew their former friendlhip with folemn oaths, and return together to Italy. 'Thefe propofils were fent by Vibullins Rufus, an insimate friend of Ponpey, whom Cxfar had twice taken prifoner. Pompey, however, probably elated with his late good fortune, anfwered that he would not hearlen to any terms, left it fhould be faid that he owed his life and return to Italy to Cæfar's favonr. However, the latter again fent one Vatinius to confer with Pompey about a treaty of peace. Labienus was appointed to reccive the propofals; but while they were conferring together, at party of Pompey's men coming up to them, dilcharged their darts at Vatinius and thote who attended him. Some of the guards were wounded, and Vatinius narrowly efcaped with his life.

\section*{381}

In tl - mean cime Cefar advanced towards Dyrrhachium, in hopes of furprifing that important place; but Pompey unexpe?edly appearing, he halted on the other fide of the river A plu-, where he entren:ched himfelf as having but a fnall number of troops in compariton of the formidable army which attended Pompey. The latter, linwever, notwithtt:anding his fuperiority, durf not crofs the river in Cæba's fight; fo that the two armies continued for fome time quiet in that refpective camps. Cæfar wrote letter after letter to Marc Antony, who commanded the legons he had left in Italy, to come to his aflifance; but receiving no anfiver, Cæfar difguifed himiclf in the habit of a flave, and with all imaginable fecrecy went on buard a filherman's bark, with a detign to go over to Brundufium, though the enemy's fleet was cruifing on the coafts both of Greece and Italy. This defign, however, mifcarried, by reafon of the boat being put back by con. trary winds ; and thus Cæfar was refored to his foldiers, who had been very uneafy at his abfence. He was mo fooner landed than he difpatched Polthumius, one of his lieutenants, with moft prefing orders to Marc Antony, Gabinius, and Calenus, to bring the troops to him it all adventures. Gabinius, unwilling to expofe all the hopes of his general to the hazards of the fea, thought it fafer to march a great way ahout by Illyricum, and therefore engaged all the legionaries he could to follow him by land. But the Illyrians, who had, unknown to him, declared for Pompey, fell unexpectedly upon him and killed him and his men, not one efcaping. Mare Antony and Calenus, who went by fea, were in the greatelt danger from one of Pomper's admirals; but had the good luck to bring their tronps fafe to fhore at Nyphxum, in the neighbourhood of Apollonia. As foon as it was known that Antony was landed, Pompey marched to prevent his joining Cofar. On the other hand, Cæfar inftantly decamped, and haftening to the relief of his lieutenant, joined him before Pomper came up. Then Pomper, not caring to engage them when united, retired to an adrantageous polt in the neighbourhood of Dyrrhachium, known by the name of Afparagium, and there encamped. Cælar having thus at length got all his troops together, relolved to finith the war by one general action, and determine the fate of the world, either by his own death or by that of his rival. To this end he offered Pompey batt?e, and kept his army a great while drawn up in fight of the eneny. But Pompey declining an engagement, he decamped, and turned towards Dyrrhachium, as if he defigned to furprife it, hoping by this means to draw Pumpey into the plain. But Pompey, looking upon the king ot 1 yrrhachium as a chimerical project, followed Cæfar at fome diftance, and letting him draw near to the city, encamped on a hill called Petra, which commanded the fea, whence he could he fupplied with provitions irom Greece and Afia, while Cæfar was forced to bring conn by land from Epirus, at a vait experce, and thicugh many dangers.

This inconvenience put Cowir upon a new defig:l, which was to furround an army far more numetous than his own, and, ly thutting them up within a narrow tract of çround, diftrefs them as much for want of forage as his troops were difteffed for want of corn. Purfuant to this delign, he drew a line of circumvalla. tion frem the fea quite round Fomres's caln p , and kept

\(\underbrace{\text { kome. }}\) defieged to force by break of day, he began the at-
tack by fea and land at the fame time. The ninth defigned to force by break of day, he began the at-
tack by fea and land at the fame time. The ninth legion, which defended that part of the lines, made for tome time a vigerons refiftance; but being attacked in
the rear by Pempey's men, who came by iea, and landcome time a vigcrons retiftance; but being attacked in
the rear by Pempey's men, who came by iea, and landed between Cria's two lines, they Hed with fuch pre-
cipitation, that the fuecours Marcellinus fent them from ed between Croass two lines, they Hed with fuch pre-
cipitation, that the fuccours Marcellinus fent them from a neighbouring prit could r.ot ftop them. The enfign who carried the eagle at the head of the routed legion was motally wounded; hut neverthclefs, before tic died, had prefirce of mind enough to conlign the exgle to the cavaliy of the party, deliring them to deliver it to Cxfar. I'ompey's men purfued the fugitives, and made fuch a laughter of them, that all the centurions of the firft cohort were cut ffie except one. And now Pumpey's army broke in like a torrant upon the pofts Cafar had fortifed, and were aduareing to attack Marcellinus, who guarced a ncighbouring fort; but Mare Antrny coming very featomably to his relief with 12
him fo clofely blocled up, that though his men wire flentitully fupplied with provitions by fea, yet the horles of his army began foon to die in gre..t numbers for want of forage. Calas's men, though in the utnuft dittrefs for womt of corn, fet lose a! 1 with incredible checriulnefs; protefting, that they would rather live upon the bark of trees than fufter Pompey w cfupe, now they hat him in their power. Cefar tells us, that in this extromity fuch of the army as had becn in s.rdiria found out the way of inaking bread of a certain root called deres, whith they lleeped in mitk; and that when the enemy inlilted them on account of the ftarving condition which they wete in, they thew firersl of thete louves among them, to put them out of all hopes of fubduing then by famine. "So long as the earth produces lith roots (taid they), we will not let Pompey efcape." At length Ponpey, alarmed at the dittimpers whin began to prevail in his amm, made Several attempts to bieak thr ugh the barriers that inclofit him, but was always repulfed with lofs. At lener being reduced t) the utmof extrensity for want of Forage, lee reflved \(2:\) all events to force the enemy's lines and efape. With the allifance, therefore, and by the advice of two defetiers, he embarked his archers, fingers, and light-armes infantry, and marching him. felf by land at the head of 60 cohorts, went to attack that part of Cofer's lines which was next to the fea,

Suon after Cafir himfelf arrived with a llong reinforcoment, and poitcd himeclf on the fhore, in order to prevent fuih attemets for the future. From this polt he obforved an old camp which he had made within the he decamped, and retired in good order to Apollonia, where he paid the army, and left his fick and wounded. From thence he marched into Macedon, where Scipin Metellus, Pompey's father-in-law, was encamped. He hoped cither to draw his rival into fome plain, or to overpower Scipio if not affited. The met with great difficuties on his march, the countries through which he paffed refufing to fupply his army with provifions; to fuch a degree was his reputation funk fince his latt defeat! On his entering Thelfaly he was met by Domitius, one of his leutenants, whom he had font with three legions to reduce Epirus. Having now got a!! his torees together, he marched direaty to Gomyhi, the firft own of Thellaly, which had bicn formerly is his intereft but now declared againl him. Whacreup)ou he attacked it with fo much vigour, that thous? the garifon was very numernus, and the walls were of an uncomron height, he made hinifulf mafter of it in at lew hours. From hence he marched t I Ietre pulis, ato othor contiderable town of Thelaly, which immediately furrencerel: as did at! the other cities of the come-
 maler.

On the other hand, Pompey being continually insportined by the E:mators and cfticers of his an my, lett his canap at Dyr bowliturg, and Coliowed Cefor, firm!y Flace where l'ompey was inclofed, but afterwards abandoned. ETpon his quituing it, Parsey had taken 1 anfollion of it, and left a legion to guard it. This peft Cexir refoived to reduce, heping to repair the beft he 1.ad difteined on this unfertanate day, by t king the legion which lempey had \(p\) thed there. Accotdingly, l.e adranced fectetly at the l.cad of 33 coler:is in two Ines: and artiving at the obl c.an.p before lompey culthre wotice of his manch, attalied it "i:h great vigrut, forced the fitt intrond ment, motwitht: woting Nie bowsernilance ot 'I' W's Pukio, and penctrated to

one of his guards prevented the blow by cutting of his
arm. Cxiar loft on this occafion 960 of his foot, 400 arm. Cxfar loft on this occafion 960 of his foot, 400 of his horfe, 5 tribunes, and 32 centurions.
'This; lofs and difgrace greatly mortified Cxfar, but
did not difeourage him. After he had by his lenity and eloquent fpeeches recovered the fpitit of his troops,
his fortune changed on a fudden. His right wing, in looking for an entrance into the camp, marched along the outfule of a trench which Cafar had formerly carried on from the left angle of his camp, about 400 paces, to a neighbouring river. Thas trench they mif. tonk for the rampart of the camp; and being led away by that mittate from their left wing, they were foon after prevented from rejoining it by the arrival of Pumpey, who came up at the heat of a legion and a large body of horle. 'Whan the legion which Cafar lad attacked taking counage, made a brilk fally, drove his men back to the firf entrenchment which they had fized, and there put them in great diforder while they were attempting to pars the ditch. Pomper, in the mean time, f.lling upon them with his cavalry in flent:, complatedtheir defeat ; and then Aying to the enemy's right wing, which laad palfed the trench mentioned above, and was thut up between that and the ramparts of the old camp, made a moft dreadful flangliter of them. The trench was filled with dead bodies, many folling inte it in that diforder, and others pafling over them and prefling them to death.

In this diftrefs, Cefar did all he conld to nop the flight of his legionaries, but to no purpofe : the fan-daru-bearers themfelves threw down the Roman eagles when Cxlar endcavoured to ftop them, and left them in the hands of the enemy, who on this occation took 32 fandards; a difgrace which Cafar had never fuffered before. He was himfelf in no fmall danger of falling by the hand of one of his own men, whom he took hold of when flying, bidding him fand and face about; but the man, apprehenfive of the danger he vas in, drew his fword, and would have killed him, had not tricves his

Rome．

208
refolied not to give him bittle，but rather to difrefs him by keeping clofe at his heels，Itraitening his quar－ tere，and cuttirg off his convoys．As he had frequent opportunities of coming to an engagement，but always declined it，his friends and fubalterns began to put ill conftructions on his dilatorinef to his face．
Thefe，together with the complaints of his foldiers， made him at length refolve to venture a general action． With this defiga he marched into a large plain mear the cise，of Pharaliz and Thebes；which latter was alfo called Pbilipp：，from Philip king of Macedon，and the father of Perfes，who，having reduced the＇Thebans， placed a colony of Macedonians in their city．This plain was watered by the Enipeus，and furrounded on all fides by high mountains；and Pomper，who was llill averfe from renturing an engagement，pitched his camp on the declivity of a teep mountain，in a place altogether inacetflible．There he was joined by Scipio his father－in law，at the heas of the legions which he had brought with him from Syria and Cilicia．But notwithitanding this reinforcement，he continned irre－ folute，and anwilling \(t\) ）put all to the ifue of a fingle action；bing fitl convinced of the willom of his ma－ xim，that it was better to deftroy the eneny by fatigues and wint，than to engage an army of brave veterans， who were in a manner reduced to defpair．As he pue off from day to day，under various pretences，defcend－ ing into the plain where Cafdr was encamped，his offi－ cers forced him to call a council of war，when all 20 a man were for veataring a general action the very next day．Thus was P＇mpey obliged to factifice his own judgment to the tlind ardour of the multitude；and the uccenary meafurcs wers taken for a general engage． ment．
The event of this batile was in the highen degtee formate fir Cxiar + ；wha refilved to purfuc his ad－ varitage，and follow lompey to whatever country he flould rctire．Hearing，therefure，or his being at Am－ phipulis，he fent off his tro ps before him，and then en．b．t＇sed on bcald a litte frizate in order to crof the Hellefpen ；but in the midule of the frati，he fell in with ene of Pompey＇s commanderc，at the lead of ten f：ips of war．Cxidr，no way terrified at the fupariority oi his ferce．hore up to him，and commanded him to fubmit．The other inftantly obeyed，awed by the ter－ ri \(r\) of Cafa＇s mame，and furrendered himfelf and ！is fie：at diferetion．

Fi：m thence he onntinued his voyage to Ephefur， then to Rhodes；and being informed that Pompey had ben there bef ie him，he made no doubr but that he wif fied to Egyp：；wherefore，lofing no time，he fet fail for that lingdan，and arrived at Alexandia wi h about 4000 men；a very inconfiderable fo－ce to keep fach a puwefful hingiom under fubjestion．But he was now grown fo iccure in his gond firtune，that he exp：ned in find obedience everywhere．Upon his hand－ in ，the firt accounts he received were of Ponpey＇s miferal le erd，who had been allallinated by orders of the tre iclicrous king as foom as he went on thore；and fon after tre of the murderers came with lus head and rife is a molk grateful prefent to the conqueror．Liut Cainr turned away from it with hror，and hortly af－ ter erciered a magnincent tomb to be built to his me． mory on the fpot where he wat mindered；and a tem． ple near the place，to Nemelis，who was the geducis

It frould feem that the Egrptians by this time had fome hopes of breaking off all allance with the Ro－ mans；which they confidered，as in fact it was，but a fpecious fubjection．They firt began to take offence at Cerat＇s carrying the enfigns of Roman power before him as he entered the city．Photinus，the eunuch，alfo treated him with difrefpect，and even attempted his life． Crefar，however，concealed lis refentment till he had a The Eigsp－ force fufficient to punith his treachery；and fending tians quar－ privately for the legions which had been formerly en－ rolled for Pompey＇s fervice，as being the nearelt to Egypt，he in the mean time pretended to repofe an en－ tire confidence in the king＇s minifter．However，he foen changed his manner when he found himfelf in no danger from his attempts；and declared，that，as being a Roman cónful，it was his duty to fettle the fuccefiton to the Egyptian crown．
There were at that time two pretenders to the crown of Egypt：Polemy，the ackrowledged king；and the celcbatated Cleopatra his filter；who，by the cufom of the courtry，was aifo his wife，and，by their father＇s will，flared juintly in the fucceffion．Hewever，\(n\) t being contented with a hare participation of power，the aimed at governing alune；but Leing rppoted in her views by the Roman fenate，who confirmed hor brother＇s title to the crown，fie was banifhed into Sy ria with Ar － fince her younger fifter．

Cofar，however，gave her new hopes of obtaining the kingdom，aud fint boil for her and her brother in plead their caufe beforc him．Photinus，the youns king＇s guardian，who had long borne the mof invete－ rate hatred as vell to Cxiar as to Cleopatra，difdained this rropofal，and backed his refufal by fending sin ar－ my of 20,000 men to befiere him in Alexandri．．Cxint \({ }^{2122^{-}}\) braveiy repulfed the enemy for fome time ；but finding fiegc him thic city of too great extent to be defended by fo fmall an army as he then had with him，he reured to the pa－ lace，which commanded the harbour，where he purpo－ fed to make a Rand．Achillas，who commanded the Egyptians，attacked lim there with great vigour，and frill aimed at making himfelf inafter of the fleet that hay before the palice．Cxfar，however，too well knew the impontance of thofe theps in the hands of an enemy；and therefore burnt them all in fpite of every effor：to prevent it．He next p．Weted himelf of the iffe of Pharos，which was the key to the Alexan－ drian port，by which he was enabled to recsive the fup－ pias fent him from al fides：and in this fituation he detsmined to willifand the united force of all the Egyptians．

In tile meantime，Cleopatra having hentil of the pre－ fent tura in her favoar，refolved to depead rather nat Cefars＇s fevour for graining the governmat than her own forces．She liad，in fut，aflembled an army in Syria to fupport her claims；hat nots julged it the wifer way to rely entirely on the deciff：：if har felt． clacted jadge．Bint no aric，as fue junly concived， vere fo likely in influence CXfar，is the ch arms of her purfon．The diticulty was low in gat at Cexir，as harerernics were in polfelion of all the avaule hat Ie．I to the palace．For this purp．\｛e，fi＝wontenb ard a fonall veflel，and ia the cuctian fanded near the pa－ lac：；whese，bsing wayed＂？i．a a covercte，fine wis

\section*{R O M}

にn. carried by one Appoodorus into the very chamber of Celar. Her aducels at livet pleafed him; but her caselifs, which were carried beyond the bounds of innocence, entirely brought him over to fecond her claims.

Whle Cleopatra was thus mployed in forwarding her own views, her fiter Arfinoe was alfo Arenuoully engiged in the camp in purluing a feparate interelt. She ford tound means, ty the aniltance of one Ganymede lier contidant, to make a large divifion in the Egyptimanmy in her fivour ; and foon aiter caufed AchilLas to be murdered, and Ganymede to tak: the com:nand in his ftead, and to carry on the fiege with greatcr vigour than before. Ganymede's principal eff rt was by ietting in the fea upon thofe canals which lipplied the palace with freth water ; but this inconvenience Cxfar remedied by digging a great number of wels. His next endeavour was to prevent the junction of Cx far's 2yth legion, which he twice attempted in vain. He foon after made himfelt mafter of a bridge which joined the ille of Pbarns to the continent, from which poft Cafar was refolved to diflodge lim. In the heat of action, fome mariners came and joined the crimbatants; but being feized with a panic, inttantly fled, and fpread a genesal terror through the army. All Cæfir's endeavours to rally his forces were in vain, the conlufion was paft remedy, and numbers were drowned or put to the fivord in attempting to efcape ; on which, jecing the irremedisble dioorder of his tronps, he retired to a haip in order to get to the palace that was jult oppofite. However, he was no fooner on board than great crowds entered at the fame time with him; upon which, apprchenfive of the fhip's finking, he jumped into the fea, and fram 200 paces to the fleet that lay before the palace.

The Alexatdrians, finding their efforts to take the palace ineffectual, endeavoured at lealt to get their king out of Cefar's power, as he had feized upon his perfori in the beginning of their difputec. Fur this purpufe they made ufe of their cuft mary arts of diflimulation, proflliag the utmon detire for peace, and only wanting the prefence of their lawful prince to give a fanction to tise treaty. Cafar, who was fentible of their perfidy, neverthelefs concealed lais fufpicions, and gave them What: bing, as hee was under noo apprehenfions from the abilitics if a boy. l'olemy, bowever, the inftunt he Was fet at liberty, inftead of promoting peace, made
of Clcopatra. Infead of quitting Egypt to go and quell the remains of Pompey's party, he aboudoned himfelf to his pleatures, pathing whole nights in feafts with the young queen. He even relolved to attend her up the Nile into Ethiopia; but the hrave veterans, who hat long followed his fortune, boldy reprehended his conduat, and refuled to be partners in fo infamons an expedition. Thus, at lenoth, roufed frem lis lethargy, he left Cleopatra, by whom he had a for who was afterwards named C.cfirio, in order to oppofe Pharnaces the king of Pontu, who had now made fome inroads upon the dominions of Rome. Here he was attended with the greatefl fuccefs, as we have related under the arlicle Poxrus; and having fettled allairs in this part of the empire, as well as time would pernit, he cmbarked for ftaly, where he arrived fooner than his encmies conuld expect, but not before his affairs there abfolutely lequired his prefence. He had been, during his abfence, created conful for five year, dictat \(r\) for ore year, and tribune of the people for life. But Antony, who in the mean time governed in Rome for him, had filled the city with riot and debauchery, and many commotions enfue?, which rothing but the arrival of Cæfar could appealc. However, by his moderation and human'ty, he foon rettored tranquillity to the city, farce maling any d Ainction between thofe of his own and the eppofite party. Thus having, by gentle means, reftored his authority at home, he prepaned to march into fifrica, where Pompey'sparty had found time to rally under Scipio and Catn, allifted by Juba king of Mauritania. But the vigour of his proceedings had like to have been retarded by a mutiny in his whole arms. Thofe veteran legions, who hall hithertin conquered all that came before them, began to murmur for not having received the rewards which they had expected for their paft fervices, and now infifted upon their difcharge. Ho:sever, Cefar found means to quell the matiny; and tben, accordiag to his ufual diligence, landed with a fmall party in Africa, the relt of the army following foon alter. Afeer many movements and Nisirmihnes, le refolved at lat to come to a decifive battle. Fors this purpofe he invefted the city of 'Trpfus, fuppoling that Scipio would attempt its relicf, which turned out according to his expectation. S:ipi,, joinisg with the young king of Mauritania, advanced with his army, and encamping near Cæfar, they foon came to a general battle. Cafar's fuccef was as ufull; the enemy received a complete and final overthrow, with linte lofs on his fide. Juba, and Petrelus his general, killed each other in defpair; Scipio, atempting to efcape by fea intu Spain, fell in among the encmy, and was inin; to that, of all the cenerals of that undune party, Cato was now alone remaining.

This extraordinary man, having retired into Africa after the battle of Pharfilia, had led the wretched remains of that defeat through burning deferts and traas infeted with ferpents of various malignity, and was now in the ciey of Utica, which lie had been left to defend. Still, however, in love with even the flow of Roman governmenr, he bad furmel the pincipal citions into a fenate, and conccived a reobluina of holding out the town. Ha accordingly affembed his fenaters upors this (chatur, and exiortad then th catu kils fat da fege; but findirgs his amoraions inefe?nal, hantif.

\section*{R O M}
the war in Africa being completed, Cwfar returned in trimmph to Rome; and, as if he had abridged all his former triumphs only to increare the fplendor of this, the citizens were aftonithed at the magnificence of the procelfion, and the number of the countrics he had fubdued. It lanted four days: the firl was for G.unl, the fecond for Egypt, the third for his vizories in Afia, and the fourth for that over Juba in Africa. To crery one of his foldiens he gave a fum equivalent to ab ut 150 l. Serling, double that fum to the centurions, and fint times as much to the iuperior officers. The citizens alfo flared his bountry to every one of whom le difributed 10 bufhels of corn, so pounds of cil, and a fum of money eqmal to about two pounds Stexiing. Ie, after thi, entertained the people at about 20,000 tables, treated them with the combat of glidiators, and fillad Rome with a concourfe of ipectators from every part of Italy.

The people now feenned eager only to find out new modes of homage and unuful methods of adulation for their great enflaver. He was created, ty a new title Mazifter Morum, or Mafter of the Morals of the People; he received the title of Emperor, Father of his couniry ; his perfon was declared facred; and, in fhort, upon him alone were devolved for life all the great dignitics of the flate. It mult be orrned, however, that no fovereign could make a better ule of his power. He inmediately began his empire by refrefling vice and encouraging virtue. He communicated the power of judicature to the fenators and the knights alone, and by many fumptuary laws reftrained the feandalcus fuxuries of the rich. He propoled rewards to all fugh as had many children ; and took the mont prudent methods of repe pling the city, that had been exhaffed in the late commotions; and befides his other works, he greatly reformed the kalendar.

Having thus reltored profperitr once more to Rome, he again fuund himfelf under a neceflity of going into Spain, to oppofe an army which had been raifed there under the two fons of l'ompey, and Labienus his former general. He proceeded in this expedition with his utual celerity, and arrived in Spain hefnre the enemy thought him yet departed from Rome. Cncius and Sextus, P'mpey's fons, prifiting by their unhappy father's example, refolved as much as poffible to protrat the war; io that the firl operations of the two atmies were fent in fieges and trnitlefs atempts to furprife each other. At length Cefer, after taking many cities from the encmy, and purluing young Pompey with unwearied peever.ance, cumpeiled him tocome to a batt'c upnn the plains of Mundd.

After a molt obtinate engagemert, Cxfar grined a complete vistory (fee Muxnis); and laving now fubdued allhis crocmics, le returned to Rome for the laft tim: to reccive new digritics and honours, and in enjoy an accumulation of ail the grat offices of the fate. S:ill, however, he preended t.) a moderation in the erjy yment of his power; he left the con. fuls to be ramed by the poople; bue as he polielfad ali the autherity of the office, it from this time beon? to frak into contenpt. He enhared the namber oifemativs alio; but as he had previoully defroyut their power, their new hon surs were but emply titles. Ife tock carc to pardon all wion had been in arms agrant him, hut tot till he had doprived iutm of tin piower Fol, XII.
of refiftance. He even fet up once more il.c ftatues uf Pompey ; which, however, as Cicero obferved, he onlydid to fecure his orsn. The relt of this extraerdimary man's life was employed for the advantage of the fate. He adnracd the city with magnilicert Luilkings; he rebuilt Carthage, and Corinth fending colonies to both citics; he undertook to level fevcral mountains in Italy, toc'rain the Pontine marfles near Rome, and defimncd to cut thongh the Ithmus of Pelopomeefus. Thins he formed mighty projeats and defigns beFond the limits of the longelt life; but the greateft of all was his intended expedition againt the Parthians, by which he defigned to resenge the death of Craflus; then to pars through Hyrcania, and enter Scythia along the banks of the Cafpian fea; from therce to open hiniielfa way through the immcafurable forefts of Gemany inio Ginul, and fo return to Rome. Thefe were the aims of ambition : but the jealoufy of a few indiriduals put an end to them all.

The fenate, with an adulation which marked the degeneracy of the times, continued to load Cafar with frefh honours, and he continucd with equal vanity to receive them. They called one of the months of the year atter his name; they Ramped money with his image; they ordered his datue to be fet up in all the cities of the empire; they inflituted public facrifices on his birth-day ; and taiked, even in his life-time, of enrolling hins in the number of thair gods. Antoay, at one of their public fentivals, foolifhly ventured to offer him a diadem ; but he put it back again, refufing it feveral times, and receiving at every refufal loud acclamatiuns from the people. One day, when the fenate ordered him fome particnlar honours, he neglected to rife from his feat; and from that moment is faid to have been marked for deftruction. It began to be rumoured that he intended to make himfelf king; for though in få he already was fo, the people, wh. had an utter averfin to the name, could not bear his affuming the title. Whether he really defigned to alfume that empty honour mult now forever remain a fecret; but certain it is, that the unfurpering ; opennefs of his condua marked fomething like a confidence in the innocence of his intentions. When informed hy tho e about hin of the jealouties of many perfons who envied his power, he was heard to fay, That he had ratler die once by treavo, than to live continually in the :?pprehenfion of it: and to convince the world how little he had to apprehend from his ercmies, he difoanded his emmpary of Spanith gurds, which facilitated the enterprife againt his lie.
A deep-lad confpiracy was formodacainft him, crim- A crirpipofed of \(n\) ) lefs than 60 femanors. At the head of racy formthis conpiracy was lirntus, whin fe life Carar had fra- cd againt red after the batele of Pharfalia, and Catius, who hind him. been pardoned foon aftar, both prat:ors for the pretent year. Bru*us made i: his chief glery to have beea devended from that Brutus wh, firat gwe lherty:o Rome; and from a delire of fllewing his exam'e, broke all the ties of privatc fiendmip. and entered into a coappiracy which was to defroy his benefator. Culfins, on the cther hand, was impcotons aid frow, and hated Crrir's perion Hill more tian lis canfe. IJe had ofen tough an ofp tunity of gratifing his revence by affilination, wida sock rife rather from phate than pblic autives.
"The eo fipira'ors, to prive a cchour if jutice to their
fons, dreading more the dangers of porerty thatn of fubjesions.
'l'he triends of the late diulti r inow beem to fond that the was the time fore misg into reater power than helore, and fordety inn theil ambinon unde the wil of plonuteré jualice. Of this number was Antor?, whan Melowe al:e. dy Cen ating as a lieutentnt under Ceedr. LIE \(v\) as a nian of nowerate abilitics and excellive vies; ambitions of power, but killed in war, to walen he had beca thained fient his youth. ILe was comful fir this gear ; and refulved, with Le1. das, whu wats fund of ammations like bimte.ff to hise this epportunity of alluming the fovereign power. Lepdus, tucrefore, touk potistion of the forsm with a band of foldiers at his devotion; and Antuny being contul, was fermitted to command them. Their firlt Hep was to pollets themfelves of all Cefar's papers and muner; and the next to convene the fo. ate, in order to determine whether (æbrhad been a legal magiltrate or atyrami al ufurper, and whether th. fo who killed him merited rewards or punithments. There were many of thate who had recsived their promotions from Cefar, and had required lurge fortunes in confequence of his appoinenents; to vote lim an ufurper, therefore, would be to endanget their property; and jet to woe him innocent, might endanger the tlate. In this dilemma th. \(y\) feemed willing to reconcile extremes; wherefore they approved all the aets of Cxfor, and yet granted a general pardo: to all the conflirat. is.
'I'his deeree was very far from giving Antony fatisfiation, as it granted feeurity to a number of men who were the awowed enemies of tyranny, and who would be foremoft in oppofing his fchemes of refloring abfolute power. As therefore the fenate had ratified all Cafar's aets without diftingtion, he formed a fcheme upon this of making him rule when dead as imperiourly as he had done when living. Being, as was faid, poftefled of Catir's books of accounts, he fo far gained upon his fecretary as to make him infert whaterer he thouglit proper. By thele means, great fums of money, which Cxfar never wonld have bellowed, were here dill ributed among the people; and every man who was averfe to republican principles was here fure of fiading a gratui'y. He then demanded that Cofar's funeral obfequies thould be pertormed; which the fenate now could not decently forbid, at they had never declared him a tyrant. Accordingly, the body was brought forth into the torum with the utmolt foiems nity ; and Antons begran his operations upon the pafdions of the penple, by the prevatiling motives of private interct. He dirft read Creirrs's will, in which he Antony h.w left Octwius, his fifer's gromilfon, his heir, per- infames mitting him to tate the name of (oufar; and three parts the peoof his private forsune Lrutus was to inherit in cale ple. of his death. The Roman people were lelt the gardens which he had on the other fide the Tiber; and every citizen, in particular, was to recsive 300 fellerees. This laft beqreft not a little contributed to increse the penple's allection for iheir late dictator; they now began to e nlider Cretar as a father, whe, not fatisfer with doing thom the greatell good while living, th "ollt of bonefiting them even alter his death. As Anteny continued reading, the multitude began to te maved, and firths and lantentations were heard frum every quator. Anteny, feeing the audience fa-

\section*{223} The confpirators pardoned by the fenate.

rourable to his defigns, now began to addrefs the af. fembly in a more pathetic frrain: he prefented before then Cxefar's bloody robe, and as he unfolded it, took care they fhould obferve the number of Atabs in it: he then difplayed an imaze, which to them appeared the body of Cxefar, all covered with wounds. The people could now no longer contain their indignation; tli.ey unanimouny cried out for revenge; all the nld foldiers who had \(f\) ught under him, burnt, with his body, their coronets, and other marks of conqueft with which he had honoured them. A great number of the firt matrons in the city threw in their ornam=nts alfo; till at length, rage fucceeding to forrow, the multitude r.in with flaming brands from the pile to fet fire to the confpirators \({ }^{\text {c }}\) houfes. In this rage of refentment, neeting with one Cinna, whom they mittook for another of the fame name who was in the conlipiracy, they tore him in piecies. The confpirators themfelves, inowever, being well guarded, repulfed the multitude with no great trouble; but perceiving the rage of the penple, they thought it fafelt to retire from the city. Divine honours were then granted him; and an altar was erected on the place where lis body was burnt, where afterwards was eretted a column inficribed, To the Father of his country.

In the mean time, Antony, who had excited this te endesoursto en. rofs the power ent tirely into his own hand. flame, refolved tu make the beff of the nccation. Having gained the people by his zeal in Crara's caufe, he next endeavoured to bring over the fenate, by a reeming concern for the freedom of the flate. He therefore propofed to recal Sextus, Pompery's only re- maining fon, who had concealed himfelf in Spain tince the death of his father ; and to grant him the command of all the fleets of the empile. His next ftep to their confidence, was the quelling a fedition of the people, who rofe to revenge the death of Cafir, and plating their leader Amathus to death, who pre-ended to be the fon of Marius. He after this pretended to dread the refentment of the multitude, and demanded a suard for the fecurity of his perfon. The fenate granted his requeft; and, under this pretext, he drew round him a body of 6000 refolute men, attached to his intereft, and ready to execute his commands. Thus he continued every day making rapid Arides to abfolute pnwer ; all the authonity of government was lodged in his hands and thofe of his two brothers alore, who frared amongs them the confular, tribunitian, and pre. torian power. His vaws to revenge Cexar's death feemed either poftponed, or totalily fergoten; and his conly aim feemed to be to confirns himielf in that ponver which he had thus artiully acquired. But an ol fiacle to his anbbitien feemed to arife from a quarter in whish about 18 yeals nld, and had been fent to that city to improve himfelf in the fudy of Grecian litera:ure. Upon the news of Cafir's death, notwithitanding the earnef dilluafions of all his friends, he refflved to te-tu-n to Rome. to clain the inheritarce, and revenge the death of his uncie. From the former profeflim in if Antony, he expeated to find him a warn affittant to his aims; and lie doubted not, hy his concurrence, to take figna! vengeance cn all whe had a har.o. in the con-
fairacy. Howcrer, he was greatly difípiointed. An. tony, whoofe projects were all to aggrandize himifelf, gave him but a very cold reception, and, infeand of granting him the fortune leff him by the will, delayed the payment of it upon various pretences, hoping to check his a mbition by his limiting his circumftances. But Oq vianns, inflead of abating liis claims, even fold his own patrimonial eftatc, to pay fuch legacies as Cafir ha ! left, and particularly that to the people. By thefe means he gained a degree of popularity, whicls his enemies rainly laboured to diminith, and whill in faet he had many other methnds to procure. His converfition was elegant and infinuating, his face coniely and graceful, and lis affeaior، to the late difato: fo fincere, that every perfon was charmed either with his piety or his addrefs. But what added fill more to his interell was the name of Cxfar, which be had affumied, and, in confequence of which, the former followers of his uncle now flucked in great numbers to him. All thefe he managed with fuch art, that Antony now began to conceive a violent jealoufy for the talents of his young opponent, and fecrecty laboured to counteract all his defigns. In fact, he did not want reafon; for the army near Rome, that had long wiflied to fee the confpirators punifhed, began to turn frona him to his rival, whom they faw more fincerely bent no gratifying their defires. Antony having procured alfo the government of Hither Gaul from the penple, two of his legions that he lad brought home from his former government of Macedonia, went over to Octavianus, notwithitanding all his remonfrances to detain them. This produced, as ufual, interviews, complaints, recriminations, and preeended reconciliations, which only tended to widen the difference; fo that, at length, both fides prepared for war. Thus the fate was divided into three dilitine facions; that of Ofavianus, who aimed at procuring Cerfar's inheritance, and revenging his death; that of Antony, whofe folle view was to obtain abfolute power; and that of the confpirators, who endeavoured to reflore the fenate to its former authority.
Antony being raifed bs the people to his new government of Cialpine Gaul, contrary to the incli raitions of the fenate, refolved to enter upon his province immediately, and oppofe Brucus, who commanded a fmall body of troops there, while his army was yet entirs. He accordingly left Rome, and marching thither, cummanded Brintus to depart. Brutus, being unable to oppofe him, retired with lis forces ; hut being purfued by Antony, he was at lait befieged in the city of Mutina, of which he fent word to the fenate.
In the mean while, Oatavinus, who by this time had ratied a bedy of 10,000 men, returnced to Renme; and being refolved, hefore he attempted to take vingcance on the crulfinators, if \(p\) fible to diminith the pawer of Artony, begatin by briuging over the fenate to fecond his deligns. In this hie fiusceeded by the credtr of Ciecrn, who had lorng hated Artumy berauie le thrught him the eneny :f the flate. Accordinslj: A war by means of lis cioquence, it decice was pated, or- breaksou:

It was arrad th at all the ir cmemics thould be datroyed; of which cach prefentel al la.. In ane? were con priaid not and) the onamic, but the dionds of the tritaniraie, tince the jutaties of the che were (feen found
 up his brother I'mbus to the venitance of his colleague; Antony pemaized the promifrion of his urcle 1.ncius: and Odiaianns deliveicd up the great Cicero. The moft lacred rights of nature vere violated; 360 frators, and above 2000 knighes, were iocluced in this tarible profeription; their fortunes were encrit:c.tted, and their mu dere:s enrich wh with the ipoil. Rome forns fele the effeets of this infernal union, and 1.c borrid cru lities of Marius and Sylla wescrenewed. As many as co uld clape the cruelsy of the triumvirs, Hed thither in:o M..cedonia to Brutus, or found refuge wh yorng Pompey, who was now in Sicily, and co. vercal the illatitmanean woth his nemisous navy. 'Theit' cruelties were not aimed at the men alone; but the fofter fex were in danger of being marked as ob jects either of avarico or refentment. They made out a litt ef \(1+00\) women of the belt quality, and the riclicelt in the city, who were ordered to give in anaccount of their fortunes, to be taxed in proportion. But this feemed fo unpopular a meafure, and was fo firmly oppred by Hortonlia, who fpoke againet it, that, inAtad of iq00 women, hioy were content to tax only foo. However, they made up the deficiency by extending the tax upon men; fiear 100,000 , as well citizens as Itrangers, were compelled to furnith fupplies to the fubverfion of their country's freedom. At laft, both the avatice and vengeance of the tritumviri feemad fully fati fied, and they went into the fenate to de. chare that the pro!cription was at an end ; and thus hatving dinsed the city with blond, Otavianus and Artony, leaving Lepidas to defend Rome in their abfence, marched with their army to of pofe the confpirat. tors, who were now at the head of a formidable amy in Afia.
B. utus and Calius, the primespal of thefe, upon the Thes are \({ }^{23 \mathrm{~T}}\) death of Cxfir, being compelled 10 quit \(R\).me, went oppofed by into Grecee where they perfuaded the Roman ftudenis Lrutusaud at Athens to declare in the caufe of ficedons; then Caflius. parting, the former raifed a poweaful army is Macedonit and the adjacent countries, while the latter went into Syrin, where he focn became mafter of 12 legions, and reduce! his epponent Dolabella to fuc! itraits as to kill him'elf. Both armiss fion alter \(j\)-ining at Smband, the fight of tuch a formidable torec began io revive the declining fpirits of the party, and to ve-umic the two esencrals till more clocly, between whem there had been fome time befuse a flight mifunderAhuding. In Rort, lowing guited Italy like diftefsed exiles, witheut lawing one fingle fuldier or one trun that owned ther comnanand, bicy now found t! emfelves att the lead of at wilhing army, furnifhed withall the receflimics for carrymg on the war, and in at condtion to fupport a contelt where the empire al the werld depended on the event. Tl is finceus in faifing levies was cntircly owit if to the jufice, moduration,

Rome. deration, ar.j great lumanity of Brutus, who in every inltance feemed Itudious of the happinefs of his cuantry.

It was in this fnurining fate of their affairs that the confpirators lad formed as refolution of going again?t Cleopatra, who, on her fide, had made great preparations to atift their upponents. However, they were diverted from this purpofe \(b_{y}\) an information that Octaviar.us and Antony were now upon their march, with 40 legions to oppole them. Drutus now, iherefore, moved to have their army pafs over into Grecce and Macedonia, and there meet the enemy; but Callus fo far prevailed as to have the Rhodians and Lycians firtt redt:ced, who had refufed their ufual contribution. This expedition was immediately put in execution, and extraordinary contributions were raifed by that means, the Rholians having fearee any thing left but the \(r\) lives*. The Lycians fuffered ftill more feverely ; for lhaving fhut themfelves up in the city of Xanthus, they defended the place ag zint Brutus with fuch fury, that neither his art nor intreaties could prevail upon them to furrender. At length, the town being fet on fire, by their attempting to burn the works of the Romans, Brutus, initead of laying hold on this opportunity to florm the place, made every effirt to preferve it, in. treating his foldiers to try all means of extinguifhing the fire: but the defperate phrenzy of the citizens was not to be mollified. Far fr ma thinking themfelves obliged to their generous enemy for the efferts which were made to fave them, they refolved to perifh in the flames. Wherefore, inftead of extirguifhing, they did all in their power to angment the fire, by throwing in wood, dry reeds, and all kinds of fuel. Nothing conld exseed the diffretis of Bru us upron feeing the townfmen thus refolutely bent on deftro ing themifives: he rode about the forlifications, fretching out his hands to the Xanthians, and cunjuring them to bave pity on themfelics and their city ; but, imenfibie to his expoffulati.ns, they ruthed into the flames with deiperate obfiinacy, and the whole foon became an heap of undif:inguilhab'e ruin. At this horrid feedacle, Brutus \(^{\text {and }}\) ortered a reward th every foldier who would bring him a Lycian alive. The number of thofe whom it was polible to fave from their own fury amounted to no more than 150 .

Bru us and Caffins met once more at S.rdis, where, after the ufual ceremonies were palied between them, they refolved to have a private ef neterenc: together, when, after much altercation, they were at lail perfectly reconciled. After whicl, night coming on, Catfius invited B:utus and lisi friends to an entertainment. Brutus fece Uron retiring hicme, it was that Drutus, as Plutarch a feeclif. tells the fory, fave a feectre in his tent. It was ia the dead of the . ightit, when the whole camp was perfealy quict, tiat Bruths was emplojed in read ng by a lamp that was jurt expiring. On a fudden he thought he hearda a noife as if tonebody entered; and loo ing towauds the dror, has perceived it open. A giganti: 6. gure, with a frightial afpcet, flood before him, and continued to gaze upon lim with filent feverity. At h.tat lrutus hide curage to fpeak to it : "Art thoo: a Lamen or a mortal man? : end why comeft thru to me:" "Brutus," replied the thantom, "I anm thy cril genius, thou fealt fee me asain at Philippi." "Well then," a:fiveed Brutus, without being difcompoted,
"we thall meer agair." Upon which the phantum rauilied; and Brutus caiinng to his ferrants, alked if they had feen any thing; to which replying in the negative, he again relumed his fudies. Dut as he was Hruck with io ftrange an occurrence, he mentioned it the next day to Camus, who, being an Epicnrean, alcribed it to the cticet of imagination too nuth exercied ty vigilance and anxiety. Brutus apperred fasisfied with this folution of his late terors; and, as Antony and Octavianus were now advanced ints Mincedonia, they feon after palfed over into ' narace, and adranced to the city of Philippi, near which the forces of the triumvirs were poftes.

A battle foon enfued; in which the republicans were defeated, and Cafius killed, as is related in the arricle Philirel.

The firft care of Brutus, when he became the fole The regeneral, was to affemble the difperied troop; of Caf. publicans lius, and animate them with frelh hopes of viotory. is seffated. they had loit all they polferfed by the plundering of their camp, he promifed them 2coo denarii each man to make up their lolies. This once more i.fpired them with new ardour; they admired the liberality of thecir general, and with loud thou:s proclaimed his \(f\) rmer intrepidity. Scill, however, l.e hadd no: confizence futhicient to face the adverfary, who offered him bittic tie enfuing day. His aim was to farve li, enemies, who were in extreme want of provifiuns, their fleet having been latuly defeated. But his fingle opinion vals over-suled by the relt of his army, who now grew every day more confident of heir itrengul, and more arregant to their new general. He was, theref re, at laft, after a relipite of 20 days, oblized to comply with their Solicit tions to try the fate of the battie. Buth armies being drawn out, they remained a long while oppofite to each other without offering to engdge. It is taid that he himfelf had lof much of his natural ardoar by having again fein the fipeatre the night prece. ding : however, he encouraged his men as much as poffible, and gave the fignal for battle within three hours of fun-let. Fortune ag.in declared againf hime ; and the They ar two triumviri exprefisi) ord.red by noo means to fuffer defeated a the gen:ral to etcape, for fear he fhould renew the fecond war. Thus the whole body of the enemy feemed chiefy time. in'ent on Brutus :alune, and his cupture feemed ine. vit:alle. I. this cepliorabiee esi iferce, Lucilius his friend re:olved, by his own death, ia effeet the general's delivery. Upon perceiving a body ot Thracian horie clofely puruing Bruas, and jult up. n the point of t.akng him, he bell'y tircev kimelelt in their way, telling thum that he was Deutus. The Thra -ians, overjonged wih fo gese: a pirize, ima codiately diipathed fimie of their compa tions, with the news of their fuccef, to the : m . " Up n which, the ardour of the purfuit now abxin, An owy marched ont to mect his prifr ner ; \(f\) me hilently deflining the fate if fo virtuons a mur: : ofieners repm: achi.i.g that mean defire of life for whialt he corlitited to undergo c.ptiviey. Antony now sertrs 1 Th weirs approach, began to prepare himelelf for 1. interview ; hat the failltill Lucilius, advan ing with a chectul sii, on acd the deceit tbat he had put upon him : on which the triumvir, Atuck with fo much fadelity, p.r.rdon dhinm upon the fpot; and from the: time foward lod cd hinz with benefits, ard honcured him vith his friendhip.

Rome. \(\rightarrow\)

Korse.

1.: the mean time Brutus, with a fmall ramber of friends, paffed over a rivule, and, night coming on, fat down under a rock which enee.led him from the purfuit of the enemy. After taking breath fura little time, he f-nt out one Statilius to give hime fome information of thofe that remained; but he never returied, being kitled by a party of the enemy's ha fe. Brotus judzine very rightly of his fate, ne wetulud to die likewife, and \(f_{\rho} k e\) ts thi fe who flood romad hine, to lend lim the r late fad alitta:ce. None of them, however, would render him fo \(m\) lancholy a pisce of Rervice. At laf one Strab, werti:g his hedd, prefinted the fiwerd's point on Buans ; who thred himtelf upon it, and immediatcly expired.

From the moment of Brutus's death the triumviti beg.tn to ate as forereigns, and to divide the Roman duminions between thent, as theirs by right of comquelt. However though there were apparently three who thus part cipated all the power, yet, in fict, only two were aftaily priteiced of it ; fince Lepidus was at firf adcnited merely to curb the mutuil jealouly of Ant ny and Oitavinns, and was polfelled neither of interef in the army nor authority among the poople. Their firtt care was to punifh thofe whom they had former.'y maiked for vengeance. The head of Brutus was fent to Rome to be thrown at the foot of Ceffar's fatue. Hi, afhes, however, were fent to lis wife Purcia, Cato's daughter, who afterwards killed herfelf by fiwallowing banning coals. It is obferved, that of all thofe who had a hand in the death of Crefar, not one died a natural death.
The power of the triumviri being thus eftablifhed upan the ruins of the comm nwealth, Antony went into Greece, and fpent fome time at Athens, converfing amony the phillfophers, and affiling at their difputes in perfon. From thence he paffed over i:iso Aña, where all the monarchs of the eilf, who acknowledged the Roman power, came to pay him the:r obedience. In this manncr he procecded from kingdo:n to kingdom, attended by a crowd of fovercigns, exacting contributions, difributing fivours, and giving away crowns with capricious inf.lence. He prefented the kingdom of Cappadocia to Syfenes, in prejadice of Ariarathes, ori.' \({ }^{\text {b }}\) bec.unie he found pieafure in the beauty of Claphyra, the mother of the lormer. He fetted Hetodin the kingtom of Julea, and fupported hi in againf every oppofer. Iut among all the fove eigns of the eaft who finted his fuy ure, mine had folurge a part as Cleo. patro, the eciebrated queen of Eryit.
It happreied that Serapion, her governor in the iflad rf Cypus, hat iormaty turnillisd forme fuccours to he conlpirators; and it was thon.ght proper that the fonuld arfuer firtic con?uct en latiecation.  purple, lote; and II ati: \(g\) is the wind. 'the wars of
filver kept tune to the found of flutes and epmuais. She herfelf lay reclined on a couch dpangled with Ifars of gold, and with fuch ormaments as peets and painters had ufially afcribed to Vcnus. On each fide were boys like Cupids, who fannod her by turns; while the molt benuti.ul nymps, dreffed l.ke Nercids and Graces, were placed at proper dillances around her. Upon the banks of the river were \(k\) ept burning the mol exquific perfumes, while an infinite number of people gazed upon the fight. Ant ny was captivated with her beatey; and, leaving: all his bulinefs to fatisfy his paffion, fhotily after folloned her into Egypt.

Whic he thus remained idle, Onavianus, who took upen lim to lead back the veteran troops and futte them in Italy, was al?indoully employed i: providing for their fubfilence. He had promifed thein lands at home, as a recompenfe tor their gail fervices; but they could not receive now grants, with ut turning out the former inhabitants. In coniequence of this, multitudes of women, with children in their arms, whote tender years and innocunce excited univerfal compaffior, daily filled the temples and the freets with their dillreffes. Numbers of humandman and fhepherds came to deprecate the conqueror's intention, or to obtain an habitation in fome other part of the world. Amongh this num'er was Virgil the poet, who in an humble manner begyed permitfion to retain his patrimonial farm: Virgil obtainad his requell; but the reft of his countrymen, of Mantua and Cremona, were turned out without merey.

Italy and Rome now felt the mof extreme miferies; Miferics the infolent foldiers plundered at will; while Sextus funtained Pompey, being mafter of the fea, cut off all foreign by the Rocommmication, and prevented the people's receiting mans. their uftal fuppiies of corm. Tou thefe intichiefs were atded the commenecnent of another civil war. Fulvia, the wife of Antnay, who had bzen 1-ft behind him at Rome, had fllt for fome time all the rage of jealoufs, and refolved to thy every method of bringing back her haßand from the arms of Cleopatra. She confidered a breneh with Ogavianus as the only probable means of routing him from lais lethatey; and accordingly, with the allitance of Lucius ber brother-in-law, who was then conful, and entirely devoted to her intereft, he beyan to fow the feeds of diffention. The pretext was, that Antony thould have : Mare in the diltribution of lands as well as Oatavianus. This produced lome negociations between them; Ofavianus offered to make the vetcrans themfelves ump.res in the difpute. Lucius refufed to arquilíce; and being at the head of more than fie legiums, mefly compofed of fuch as hat heen difpoffelled of thacir lands, he refolved to compel Ogas ianus to accept of vihatever terms lie flowld offer. Thus a new war was excited between OGavianus and \({ }^{3} \mathrm{n}\) tony; or, at leaft, the generals of the hatter affimet the fanction fris name. Oftwimes, however provid vizorions: Lacins was lemmed in betwee:a iwn aro mic, and conftrained to retre:t to \(\Gamma\) routia, a ci.y of Formiaz, where he was coneis befiaged by the eppofite perte. JHe made many deforate lahiee, ant Fulvia did a!l in her power tur reli,ve him, but withat fuc-
 mity by famine that be came out in perton and deli. verad lim'elf up to the mercy of the conqueror. Oitivanus recei.ed tim very it mourally, and genserony pad daned him and all hi: followers. "Itho havirg con-

Ronse.
clusicd the war in a few months, he returned in triumph to Rome.

Antony, who during this interval, was revclling in all the ftudied luxuries proeured him by his in dious miltrels, having heard of his brother's overthrow, and his wite's being compelled to leave Italy, was reiolved to oppofe Octavianus without delay. He accurdinsly failed at the hed of a confiderable fleet trom Alexandria to Tyie, from thence to Cyprus and Rhodes, and had an interview with Fulvia lis wife at Athens. He much blamed her for occationing the late diforders, telified the utmof contempt for her perfon, and, leaving her upon her death.bed at Sycion, hatened into Italy to fight Oftavianus. They both met at Brandufium; and it was now thought that the fimes of a civil war were going to blaze out once more. The forces of Antony were numerous, but moltly newly railed; however, he was alfited by Sextus Pompeius, who in theie oppolition; of interelts was daily coming into power. Octavianus was at the head of thofe veterans who had always been irreliftible, but who feeme3 no way difpofed to fight againtt Antony their former general. A negociation was therefore propofed; and a reconciliation was effeeted. All offences and affronts were mutually forgiven; and to cement the union, a marriage was concluded between Antony and OAtavia, the filter of Octavianus. A new divifion of the Roman empire was made between them; Ostaviaanus was to have the command of the wen, Antony of the ealt, while Lepidus was obliged to content himfelf with the provinces in Africa. As for Sextus Pom. peius, he was permitted to retain all the indands he had already pofeffed, together with Peloponnefus; he was alfo granted the privilege of demanding the confulfhip in his abfence, and of dilcharging that office by any of his friends. It was likewife itipulated to leave the fea open, and riy the people what corn was due out of Sicily. Thus a general peace was conclujed, to the great fatistation of the people, who now expected a celfation from ail their calamities.

This calm feemed to continue for fome time: Antony led lis forces againtt the Parthians, over whom his lientenant, Ventidius, had gained great advantages. Oetavianus drew the greateft part of his army into Gaul, where there ware fome dillurbances ; and Pompey went to fecure liis newly ceded province to his intereff. It was on this quarter that frell motives were given for renewing the war. Antony, who was obliged by treaty to quit Peloponnefis, refufed to evacu tie it till P. mpey had fitistied him for fuch debts as were due to him frum the inhabitants. This Prmpey would by no means comply with ; but immodiately fitted out a new ileet, and renewed his former enterprifes, by cutting off fuch corn and provilions as were ersfegned to Italy. ' 1 hus the grieval ces of the poor were ag.in renewed; and the people beran to complain, that inftead of thrce tyrantsthey were aow opprefied by four.

In this exigence, Oftavianus, who lad long meditated the beit means of diminfhing the number, :efolved to bigin by getting rid ef Pompey, who kept the flate in contitued alarms. He was mater of two fleet = ; one of which he had caufed to be buitt at Ravenna; and anothe whicls Menodorus, who revolted from Pompey, brought to his ad. His frit attempt was to inyuse Sicil: ; but being orerpowered in las phefige by

Pompey, and afterwards fhattered in a Norm, he was cbliged to defer his defigns to the enfuirgy year. Dis. ring this interval he was reinfaced by is lleet of 120 thips, given hins by Antong, with which he refulved once more to invade Sicily on three feveral quariers. Bat fortune feemed till determined to oppofe him. He was a fecond time difabled and fhattered by a form: which fo railed the vanity of Pompey, that he began to llyie hinifelf the for: of Nept:me. Howerer, Octavianus was not to be intimidated by any difgraces; for having fhon tly relitted his navy, and rectuited his firces, he gave the command of buth to Arrippa, his faith. Sex \({ }^{240}\) ful triend and affuciate in war. Agrippa proved him. Pumpeius felf worthy of the truft repofed in him: he began his cperations by a victory over Pompey; and, though he was foortly after worlted himfelf, he foon after gave his adverfary a complete and final overthrow. 'Thus undone, Pompey refolved to fly to Antony, from whom he expected reluge, as he had formerly obliged that triumvir by giving protection to his mother. However, he tried once more, at the head of a fmall body of men, to make limfelf independent, and even furprifed Antony's officers who had been fent to accept of lis fubmillions. Nererthelefs, he was at laft abindoned by his foldiers, and delivered up to Titus, An'ony's lieutenant, who thortly afeer caulel him to be fain.

The death of this general removed one very porerful obfacle to the ambition of Oftavianus, and he refolved to take the earlieft opportunity to get rid of the reft of his affociates. An offence was foon furnifhel hy Lepidus, that lerved as a fufficient pretext for depriving him of his thare in the triumvirate. Being now at the head of 22 legions, with a llrong body of cavalry, he idly fuppofed that his prefent power was more than an equivalent to the popularity of Oqavianus. He therefore refolved upon adding Sicily, where he then was, to his r rovince ; pretending a right, as having firlt i:.vaded it. His colleague fent to expofulate upon thefe proceedings; but Lepidus fiercely replied, "that he was deternined to have his flare in the adminiftration, and would no longer fubmit to let one alone poffeis all the authority:" Oetavianus was previounty informed of the difpofition of Lepidus's roldiers; for he had, by his feceet intrigues and largelies, entirely attached them to himfeif. Wherefore, without further delay, he with grat boldnefs went alune to the camp of Leridus, and with no other affllance than his private bounties, and the althority he had gained by his former vitories, he refolved to dep fe his sival. The foldiers thronged round him with the muit dutiful alacrity, while Lepidus haftened to prevent their defection. But Octavianus, though he received a wound from one of the centurions, went with great prefeuce of mind to the place whore the military enfigns were planted, and, Aourihing one of thom in the air, all the le gion ary foldicrs rati in cruwds and laluicd him as thir general. Lepidus being thus :tban loned by his mon, divefted Lepidus himfelt of all the maris of his authority, which he defcated could no longer liecp, and fubmilively threw limfelf and baat the fect if ORavianu. 'This general fard his nifhed. life, nutwithtandag the remonftrances of his army; but deprived him ot all his formor authority, and banilladhim to Circemm.

Ofta. .lus i: 1 received upon his return to Reme with Luiverfal joy; die fenators met him at the gates,

Rome. to put himfelf in a condition for carrying on the war, and Thortly after declared it againt him in form. All Antony's followers were invited over to \(j\) ain him, with great promifes of rewards : but they were not declared enemies, partly to prevent their growing defperate, and partly to give a fhow of moderation to his own party. At length both found themfelves in readineis to begin the war, and their armies were anfwerable to the empire they contended for. The one was followed by all the forces of the eaft ; the other drew all the frength of the weft to fupport his pretentions. Antony's force compofed a body of 100,000 foot and 12,000 horfe ; while his fleet amounted to 500 hlips of war. The army of Oftavianus muftered but 80,000 foot, but equalled his adverfary's in his number of cavalry: his fleet was but half as numerous as Antony's; however, his fhips were better built, and manned with better fol-

The great decifive engagement, which was a naval one, was fought near Actium, a city of Epirns, at the entrance of the gulph of Ambracia. Antony ranged his thips before the mouth of the gulph; and Oetavianus drew up his fleet in oppolition. Neither general aflumed any fixed ftation to command in ; but went about from thip to thip wherever his prefence was neceffary. In the mean time, the two land armies, on oppofite fides of the gulph, were drawn up, only as fpectators of the engagement; and encouraged the fleets by their thouts to engage. The battle began on both fides with great ardour, and aft \(r\) a manner rot practifed upon former occafions. The prows of their veffels were armed with brazen points; and with thefe they drove furioufly againtt each other. In this con. flid the fhips of Antony came with greater force, but thofe of Otavianus avoided the thock with greater dexterity. On Antony's fide, the derms of the finips were railed in form of a tower; from whence they threw ar. rows from machines for that purpofe. Thofe of Octavianus made ufe of long poles hooked with iron, and fire-pots. They fought in this manner for fome time with equal animofity; nor was there any advantage on either fide, except a fradl appearance of diforder in the centre of Antony's fleet. But all of a fudden Cleopatra determined the fortune of the day. She was feen flying from the engagement sttended by 60 fail ; ftruck, perhaps, with the terrors natural to her fex: but what increated the general amazement was, to behold Antony himfelf following foon after, and leaving his fleet at the mercy of the conquerors. The engagement, notwithltanding, continued with great obltinacy till five in the evening; when Antony's forces, partly conftrained by the conduct of Agrippa, and partly perfuaded by the promifes of Octavimus, fubmitted to the conqueror. The land-forces foon after followed the cample of the navy; and all yielded to the conqueror without ftiking a how the fourth day alter the battle.

When Cleoparra fled, Antony purfued her in a fiveoared galley ; and coming along-tide of her hip entered, without leeing or being feen by her. She was in the fein, and he went to the prose, wher: he remained for fome time filent, holding has head between his hands. Inthis manner he contimued three whole days ; daring which, ei:har through indignation or flame, he neither faw nor poke to Cleopatra. At latt, when they wese arrived at the promontory of '「enans, the Vol. XVI.
queen's female attendants reconciled them, and every thing went on as before. Still, however, he had the confolation to fuppofe his army continued faithful to him ; and accordingly difpatched orders to his lieutenant Canidius to conduct it into Alia. However, he was foon undeceived when he arrived in Africa, wher: he was informed of their fubmiflion to his rival. This account fo tranfported him with rage, that he was hard. ly prevented from killing limfelf; but at length, at th: entreaty of his fiends, he retmed to Alexandria, in it very different fituation from that in which he had lefe it fome time before. Cleopatra, however, feemed to retain that fortitude in her misfortunes which had utterly abandoned her admirer. Having amatfed confiderable riches by means of confifcation and other acts of viclence, the furmed a very fingular and unheard of project ; this was to convey her whele fleet over the ifthmms of Suez into the Red Sea, and thereby fave herfelf in another region beyond the reach of Rome, with al! her treafures. Some of her veffels were actually tranfported thither, purfuant to her orders; but the Arabiars having busnt them, and Antony difluading her from the defign, the abandoned it for the more improbable fcheme of defending Engpt againit the conqueror. She omitted nothing in her power to put his advice in practice, and made all kinds of freparations for war ; at lealt hoping thereby to obtain better terms from Octavianus. In fact, the had always loved Antony's fortunes rather than his perfon; and if the cou!d have fillen upon any method of faving herfclf, though even at lis expence, there is no doubt but the would have embraced it with gladnefs. She even fill had fome lopes from the power of her charms, though fie was amived almolt at the age of 40 ; and was delirous of trying upon Oc . tavianus thofe arts which had been fo fuccefful with the greatelt men of Rome. Thus in three embaties, which were fent one after annther from Antony to his rival in Afia, the queen had always her fecret agents, charged with particular propofils in her name. Antony defired no more than that his life might be fared, and to have the liberty of paffing the remainder of his days in obfeurity. To thefe propofals Oetavianus made no reply. Cleopatra fent him aifo public propofals in favour of her children; but at the fame time privately refigned him her crown, with all the enfigns of royalty. To the queen's public propofal no anfwer was given; to her private offer he replied, by giving her affurances of his tavour in cale the fent away Antony or put him to death. Thefe negociations were not fo private but they came to the knowledge uf Antony, whofe jealoufy and rage were now lieightened by every concurrence. Hebult a fmall f.litary houfe upon a mole in tl:e fea; and there he paffed his time, thwning all commerce with mankind, and profefing to imitate Timon the man-hater. However, his furious \(j\) alounly drove him even from this retreat into fociety; to learing that Clenpatra had many fecret conderences with ni.e Thyrfus, an emiffary from Octavianms, le feized upon him, and having ordered him to be cruelly foourged, he fent him back to his patron. At the fame time he fent letters by him, importing, that he had chaltiled Thyrfas for infulting a man in his misforunes; but withal he gave his ifal permillion to aven;, himple, by icourging Hiparchus, Antony's free lman, in the fame manner. The revenge, in this cafe, would hare

to preferve her perfon as an ornament to grace his sri- made ute of every method the could think of to propiumph. Cleopatra, however, was upon her guard, and would not confer with Proculus, except through the gate, which was well fecured. In the mean time, while he defignedly drew out the conference to forme length, and had given Callus, one of his fellow-foldiers, directions to carry on the converfation in his abfence, be entered with two more by the window at which Antony bad been drawn up. As tron as he was entered, he ran down
tate the conqueror, and to gain his affection; hutin vain. However, at his departure, Oftavidnus imagined that he bad reconciled her to life, and to the indignity of being flown in the intended triumph, which he was preparing for on his return to Rome : but in this he was deceived. Cleopatra, all this time, had kept a correfpondence with Dolabella, a young Roman of high birth, in the camp of Octavianus; who, perhaps, from

Julius Cedar: both betrayed into his hands by their refictive tutors, who them!elves fuffered for their perfidy thirty after. As for the reft of Cleopatra's children, he treated then with great gentleness, leaving them to the care of thole who were entrufted with their educatimon, who had orders to provide them with every thing fuitable to their birth. When the was rec veered from her late indifpofition, he came to vifit her in perfon.Cleopatra had been preparing for this interview, and

Phrahates, and likewife ambaffaders from Phrahztes, who were all come on the fame errand; to wit, to folicit the aflitance of the Romans a amain each other. Otaviarus gave a friendly answer both to Tiridates and the amballadors of Phrahates, without intending to help either: but rather with a defign to animate the one againft the other, and by that means to weaken both, fo) far as to render the Parthian name no longer formedoable to Rome. After this, haviner appointed Meffala

 In nate toy th ie very men whom he thourlat the mult deverad th his perfro，nade him fen there might aife ano！！cr Brasus，who，to tef re hberty tu his country， misht all Tirate him or lis very throne．＇Thisheknew Had happened th Julius Cafor；whereas Syllit，atter lasiag lind down the athority he had ufurped，ded te erably in his ied in the nidit of hers enemies．The follon of fear cutweiphed in his foul the charms of a wheren，whed inclede！him esthow the example of Syl－ 1a．Ile wa，infeed very mathing to part with his ：nthor tw ：but far hegan to get the better of his am－ hivan．However，bato：he cante to any refolution， le thoughi it advisable to comult his two moll intimate and erufty friends，Agrippa and Mixcenas；the former no lefs frmous for his probity than his valuor ；and the la：ter a man of great penetratior，and generally efteem－ ad the moll refined politician of his age．Agrippa en－ lurged on the many and almoft inevitable dangers which attend monarehy，infuporiable to a free people，and to mon cducated in a commonwealth．He did not forget the examples of Sylla and Cxhar ；and clofed his fueech wi：h exhorting OEtavianus to convince the wold，by rettoting liberty to his conntry，that the only \(m\) live for his taking up arms was to revenge his father＇s death．

That if，in tahiog upon him the foverengn power，he dreaded the name of hing，at nane fo odinns in a com－ monwealth，lie might content himfelf with the title of Coffar or Imperolter，and under that name，which was well known to the Romans，enjoy all the authority of a king．

This advice Octavianus followed，and from that time laid alide ali thoughts of abdicating the fovereign puwer； but，to deceive the people into a belief that they Atill enjoyed their ancient government，he continued the old magillrates，with the lame name，pomp，and ornaments， but with jult as much power as he thought fit to leave them．They were co have no military yower，but on－ 1）their uld jurifliction of deciding finally all caufes， except fuch as were capital；and though fome of thele lat were left to the governor of R．me，yet the clief he referved tor himelf．He paid great court to the people：the very name that covered his ufurpation was a compliment to them；for he affened to call it the power of the tribuncthip，though he acted as abfelutels by it as if he had called it the dictatorial power．He likewile won the heats of the populace by cheapnefs of provifions and plentiful markets；he trequently enter－ tained them with thows and forts；and by thefe means kept them in good－humour，and made them forget ufurpation，fuvery，and every public evil；people in eafc and plenty being under no temptation of inquiring into the title of the p piace，or resenting aets of power which they do not immediately feel．

As for the fenate，he filled it whh his own creatures， raifing the number of the comfeript fathers to 1000 ． He fupplied feveral poor fenators with money out of the treatury to difharge the pubic offices，and on all occafions alfected an high regard for that venerable body；but at the fame time divelled them of all power， and reduced them to mere cyphers．To prevent them from raifing new diflurbances in the diftant provinces，he illued an edict，forbidding any fenator to travel out of Italy without leave，except fuch as had lands in Sicily， or Narbonne Gaul，which at that tionc comprehended Langnedoc，l＇rovence，and Dauphiny．＇ Co theje pro－ vinces，which were ear Italy，and in a perfect flate of tranquillity，they had full liberty to retire when they pleafed，and live there upon their eftates．Before he ended his lixth confulthip，he took a cenfus of the peo－ ple，whish was＋r years after the laft；and in this the number of the men fit to beararms amounted to 463,000 ， the greateft that had ever been found botore．He like－ wife celebrated the games which had been decreed by the fenate for his victory at A气tium ；and it was ordered， that they fhould be celebrated every fith year，four cul－ leges if prietts being appuinted to take care of them； to wit，the pontifices，the augurs，the feptemvirs，and quindecimvirs．The motet＂gai）the allintons of the poople，he anmulled，by we edift，the many fevcre and umjut laws，whach had been encted during t＇se tri－ umvirate．He raited many pub＂ic buildi ge，repaircd the old ones，and added many fiately orname，ts to the city，which at this time was，if we thay give credit，to fome ane ent writers，ibout 50 miles in compafs，and contained near four mulla mo of iouls，ecknang men， women，children，and flaves．He attended bulinefs，re． foamed abufes，llowed great regard for the Ronan name，procured public abundance，pleafure，and jollity，
ofien
tn all the relt, as it expreffed more diguity and reverence than authoricy, the molt facred ihings, fuch as temples, and places confecrated hy augurs, being ter med by the R mans \(\mathcal{A}\) igufia. Oravianus himflf was inby the R mans \(\mathcal{A}\) igiffa. O Yavianus himflif was in-
clined to atfune the name of Romulus; but fearing he fhould he furpered of affechng the kingdom, he de.
clined it and to \(k\) that of Alugiffus, by which we flazil flould he furperted of affechng the kingdrm, he de.
clined it and to \(k\) that of Augifus, by which we flaill henceforth diftinguilh him.
Though the whole p.wer of the fcnate and penple was now velted in Anemitus, yet, that he might feem to flare it with the confeript father., he refufed th go-
vern all the provinces; afignine to the fenate fuch as to flare it with the confeript father., he refured to mo-
vern all the provinces; alignine to the fenate fuch as were \(q\) uiet and peaceable : ind kee ing to himelf those which, burdering upun barbarots nati ns, were \(m\) f ex. pofed to troubles atid wars, laying, He defired the fir-
thers might enjoy their power with tafe and fafety, pofed to troubles atid wars, laying, He delired the fit-
thers might enjoy their power with tafe and fifety, while he underwent all the dingers and lab urs: but, by this pulitic conduct. he fecured all the military power to himfif; the troops lying in the provinces he had chofen; and the othere, which were governed by the fenate, being quite diftitute of \(f\), rces. The latter were called fenaioria!, and the former imperial, provinces.

Over the provinces of both forts were fet men of difinction, to wit, fuch as had heen confuls or prætors, with the titles of proconful and profector; but the governinent of Egypt was committed to a private knight, Auguitus tearing left a perfon of rank, depending upon the wealth and fituation of that country, might raife new dillurbancesiu the empire. All thefe governors held their employment only for a year, and were upon the artival of their fuccelliors to depart their provinces immediately, and not fail to be at Rorne within three months at the farthef. This divifion of the provinces was mate, according to Ovid, on the ides of January; whereas tie was vefted by the fenate and penple with the fovereign power on the feventh of the ides of the fame month, as is manifen from the Narbonne marbles: and from that time many uriters date the years of his empire. Thus ended the greateft commonwealth, and at the fame time began the greateft monarchy, that h.d ever been known ; a monarchy which intinitely ex. celled in power, ri-hes, extent and continuance, all the empires which had preceded it.

It comprehended tlic greateit and by far the beit part fixtent \& \({ }^{25}\). of Europe, A fia, and Africa, being near 4000 miles in of the Rolength, and about half as much in breadth. As to the manemyeatly revenues of the empire, they have by a moderate pire. cumputation been reckoned to amnunt to forty millions ferling. But the Romans themfelves now ran headlong ints all manner of luxury and effeminacy: The people were become a mere mob; thate who were wont to direct mighty wars, to raife and depofe great kings, to beftow or talke away potent empires, were fo funk and debauched, that, if they had but bread and flows, their ambition went no higher. The nobility were indeed more po'ite than in former ages: but at the fame time idle, venal, vicious, infenfible of private virtuc, utter Atrangers to public glory or difgrace, void of zeal for the wellare of their country, and folely intent on gaining the favour of the emperor, as knowing that certain wealth and preferment were the rewards of ready fabmilion, acquiefcence, and flattery. No wonder, therefore, that they luft their liberty, without being ever again able to retrieve it.

Anguftus, now abfolute mafter of the Roman em- Mifitary pire, took all methods to ingratiate hinstelf with his eftablifhfoldiers, by whofe means he had attained fuch a height ments of of power. With this view, he difperfed them through sugutus. different parts of Italy in 32 colonies, that he might the more eafily realiemble them on propor occations. He kept 25 leg ons conitantly on fout: 17 or which were in Europe; viz. eight on the Rhine, four on the Danube, three in Spain, and two in Dalmatia. The other eight were fent into Afia and Africa; four of them being quartered in the neighbiunhood of the Euphrate., two in Esypt, and two in Afria Propria, that is, the ancient dommions of Ca:thage. All theie furces, amounting to 170,650 men, were conltantly kept on fout by the Roman eiuperors for feveral ages. In the neighbourhood of Rome were always quartered 12 co horrs, that is, about 10,000 men; nine of which were calle I pratorian coloorts; the other three city coliorts. Thale w.re eitablithed as a ginard to the enperor, and to manntain peace and tranquillity in the ciiy, but had often a great thare in the dillurbances which took place throughout the empire. Befides there, Auguftus confantly kept at fea two powcrful navies; the one riding \(\underbrace{\text { Rome. }}\) - And now OCtavianus, entering upon his feventh confullhip with M. Ayripp:l, the third time conful, and finding all things ripe for his defign, the people being highly pleafed with his mild government, and the fenate filied with his creatures, whofe fortunes depended ujon his holding the power he had u urped, w int by the advice of Agrippa and Macenas to the fenatehoufe; and there, in a ftudied fpeech, offered to relign his authority, and putall again into the hands of the penple upno the old foundation of the commonwealth; being well apprifed, that the greater part of the comfcript fathers, whofe interefts were inte:wnven with his, would unanimoufly prefs him to the contrary: Which happened accordingly; for they not only interrupted him while he was fpeaking, but, after he had done, unanimoully besinghe him to take upon himfelf alone the whole gove:nmert of the Roman empirc. He, with a feeming reluctance, yielded at l ff to their requelt, as if he had been compelled tw accept of the fovereignty. By this artifice he comparfed his delign, which was, to get the power and authurity, which he had ufurped, confirmed tw him by the fenate and people fur the pace of 10 years: for he would not accept of it for a longer tern, pretending he fhould in that time be able to fettle all things in fuch peace and order that there would be no further need of his authority, but that he might then eafe himfelf of the burden, and put the government again into the hands of the fenate and perple. This method he tonk to sender the yoke lefs heavy; but with a defign to renew his leafe, if we may be allowed the exprefinn, as foon as the ten years were expired; which he did accordingly from ten years to ten years as long as he lived, all the while governing the whole Roman empire with an abfulute and uncontrouled power. With this new authority the fenate refolved to ditkinguifh him with a new nime. Some of the confeript fithers propofed the name of Romulus, thereby to impurt that he was another founder of Rome; vthers offered other titles; but the venerable name of Auguffus, propofed by Mantutiu; Plancus, feemed preferable

Rome. a: anchor \(n=\) ar Ravenn. in the Adratic Cex, :o conmand Dalm, th.1, Crecese, Cyprus, ind the rell ( f the ealtern provinces; ble other at Difouns in th De Jiterr.anear, to keep in awe the weitern parts of the empire. They were likewile to teep the leas elarer of pirates, to corvey the vilfes which b.onthe ro Rom: the annual tribues it. m the provinces beyond fea, and on tranfort c mat onder frovilions tucentary \(f\) the retiol and fathanace of the city. As in the civil government, Ausultus eno Aed feveral riew lars, and reformed f me of the oid ones: lowever, he affeged in do ne thing Withun: the atwee of the fenate; who were fo woll gieded with the enmplailince thowed them on all ece coli an. that to the reft of his titles they added that of l'ais l'ariee or "Inher of his Comery."

And row Augnilus howing fettled all things with regard tu the cisil and military eltablifhments of the en pire, turned his arms againit the Spanith nations call 4 the Cartubrians and Alluria:s, who had never Leen fui.y fubducd. The war, however, terminated as ufual, in favour of the Romans; and thefe brave nations were forced to receive the yoke, though not without the moft violent refiltance on their part, and the utmolt difichly on that of the Romans (See Asturia).
Ly: this and his other conquetts the tame of Auguftus became fo celebrated, that his friendhip was courted by the moil diftant monarchs: Phrahates king of Parthia confented to a treaty with him upon his own terms, and gave him four of his own fons with their wives and children as hoftages for the performance of
the art cles; and as at further inftance of his refped, he delivered up the Roman eagles and other culigns which had been taken from Craflius at the battle of Carrler. IIe received alfo an embally from the king of Indid, wioh a letter witten in the Greek tongue, in which the Indian monarch informed him, that "though he reigned over 600 Kings, he had to great a value for lie iriencllyp of Augulus, that he had fent this embaliy on fo long a journey on purpete to defire it of \(h \cdot n\); that he was ready to meet him at whatfoever flace he pleated to appoint; and that, upon the firft notice, he was ready to afifit him in whatever was right." This tetter he fubferibed by the Jame of Porus ling of Indiz. Of the ambaliadors who fet out frn..s india, three only reached the prefence of Augultus, whowas at that time in the Inland of Samos, the nthers dying by the way, Of the three furvivors one was namid Zarmar, a gymnofophif, who followed the emperor to Athens, ind there burnt himfelf in his prefence; it being cult mary for the gymnofophits to put ant end to their lives in this manner, when they thonght they I ad lived long ent ugh, or apprehended fome misfortunce Sior \(n\) after this the Romats diminions were extended licuthward eser the Garamantes, a penple whefe country reached as far as the river Niger. All this time the emperor continued to make new reyulttions for the gond of the ftate ; and among other things cauled the Bybyilie crocles to be reviewed. Many of chefe hic rejested; but fuch as were rechoned atuthentic, he caufed to be copied by the pontifices them. filee, and ladg. d them in golden eabinets, which he pla ced in the temple of anolli, built by him in hi, pilare. The Roman empire had now extended irfelf in far, that it leeme' th hate arrived at the limits proforised to it by nature; and as Suun as this was the cale, it
bagan to ine attacked by thefe nations which in procels of time were to overthrow it. The Geimans, by which name the Romans confounded a great number of nations dwelling in the northern parts of Eurcpe, began to make incurlions into Gaul. Their fint attompthappenct in the year 17 B. C. When they at fin gianed an incentiderable advantage, but were foun driven back with great lofs. Soon atter this the Rhxti, who feem to have inhabited the country bordering on the lake of Contunce, invaded Italy, where they commited dreadful devaltations, putting all the males to the fword without ditintion of rank or age; nay, we are thld, that, when women with child happened to fall into their hands, they confulted their augurs whether the child was male or female ; and if they pronommed it a male, the mother was immediately maffacred. Againtt theie barbarians Augulus dent Drulus the fecond fon of the empref; Livit: wla, though very young, found means to gain a complete vietory with very little lofs on his part. 'Thole who efcaped took the road to Gatl, being joined by the Vindelici, another nation in the neighbourhood; but 'liberius, the elder brother of Drulus, marched againt them, and overthrew them fo completel), that the Rlix. ti, Vindelici, and Norici, three of the mott bubarnus nations in thofe parts, were fain to fubmit to the plea. fure of the emperor. 'lo keep their country in awe. Thiberius planted two colonies in Vindelicia, opening a road from thence into Noricum and Rhætid. One of the cities which he built for the defence of his colonics wiss called Dryfonagus; the other, Augufa Vindelico. r mm ; both of which are now known by the names of Nimizghen and Augburg.

Augulus, who had long firce obtained all the temperal honours which could well be conferred upon him, now began to affume thofe of the fpiritual kind alfo; being in the year \({ }^{1} 3\) B. C. created Pontifex Maximus: an office which he continued to hold till his death ; as did alfo his fucceffors till the time of Theodofins. By virtue of this office he corrected a very grofs miftake in the Roman kalendar; for the pontifices having, for the fpace of 36 years, that is, ever. fince the reformation of Julius Cæ@ar, made every third year a leap year, inftead of every fourth, twelve days had been inferted inttead of nine, fo that the Roman year confifled of three days more than it ought to have done. Thefe three fuperfluous days having been thrown out, the form of the year has ever fince been regularly obferved, and is nill known by the name of the old fyle in ufe amng us. On this occafion he gave his own name to the month of Augunt, as Julins Cxfar had formerly done to the month ot July.

In the year if B. C. Agrippa died, and was fuc- Tiberius ceeded in his high employment of governor of Rome finweds by 'liberius; but, betore invefting him with this ample Agrippa. power, the empernr caufed lim to divorce his wife Agrippina (who lrad already brought him a fon, and was then big with child), in order to marry Julin the widow of Agrippa and danghter of the emperor. Julia was a princel's of an infamens charafter, as was known to alnoft every budy excepting Auguttus himielf; however, Tiberius made no helitation, through fear of difobliging the emperor.

The empern now fent his two fons Tiberius and Drufus againll the northern nations. Tiberius redu- hern bas-

Agrippa.

\section*{Rome.}
ced the Pannonians, who had attempted to Thake of the yoke after the death of Agrippa. Drufus performed great exploiss in Germany ; but while he was confidering whether he thould penetrate further into theie northern countries, he was feized with a violent fever, which carnied him off in a few days. He was fucceeded in his command by Tiberius, who is reparted to have done great thengs, but certainly made no permanent conquells in Germany. However, he was honoured with a triumph, and had the tribunitial power for five years conferred upon him; which was no fooner done, than, to the great furprife of Augultus and the whole city, he defired leave to quit Rnme and retire to Rhodes. Various reatons have been alfigned for this exuaorsinaly refolution; fome are of opinion that it was in order to avoid being an eye-witnels of the debaucheries of his wife Julid, who fet no bounds to her lewdne!'s though others imgine that he was offended at the honours which Auguftus had conferied on his grandchildren, efpecially at his Atyling them princes of the Roman yout?; which left him no hopes of enjoying the oovereign power. However, Augulus politively refuled to comply with his requelt, and his mother Livia ufed her utmult endeavuurs to dilfuade him from his refulution : but 'Tiberius continued obltinate; and finding all other means imeffectual, at laft fhut himfelf up in his houfe, where he ajstained four whole days from nourilhment. Angultus, perceiving that he could not get the better of his obltinate and inflexible temper, at laft complied with his requeft. Tiberius foon grew weary of his retircment, and, giving out that he had leit Rome only to a a oid giving umbrage to the emperor's two grandchildren, defired leave
to return ; but Auguikus was fo much difpleafed with his having obftinately infinted on leaving Rome, that he oblifed him to remain at Rhodes lur feven years lorger. His mother, with much ado got him declared the emperor's lieutenant in thofe parts; but Tiberius, dreading the refentment of his father-in-law, continued to act as a private perfon during the whole time of his flay there.

A profound peace now reigned throughout the whole empire; and iu confenuence of this the temple of Janus was fhut, which had never before liappened
fince the t.me of Numa Pompilius. During this pacific interval, the Saviour of mankind was born in Judxa, as is recorded in the facred bitury, 748 years af. ter the foundation of Pome by Romulus. Three years after, Tiberius returned te the city, by permilion of Aus, ultes, who yet w whe not allow hun to bear any public office; but in a thort time, Lucius Cafir, one of the emperor's grandchildren, ded, not without fufpicions ot his being poitoned by Lild. Liberius thowed luch great concern for his death, that the aff eftion of Augutus for him eeturned; and it is faid that he would at that time have adopted Tiberiu, had it not been for giving uabrage to his ther grandion Caius Cæbar. This uottacle, however, was foon alter temoved; Caius being taken off altn, not without great fulpiciuns of Livit, as wel as in the former cale. Augutus was exceedingly \(c\) ancerned at his death, and immediately adoped l'iorius as his I n ; bu: adopted alin Agripa Puthumius, tue thind fon of the famous Agrippe; and ubligen Tiberius to adopt Cermanicus ti.e dun of his benticr Drufus, though he had a ion of bis owa named Drujus; which was a great mortafica-
tion to Lim. As to Agrippa, however, who might have been an occafion of jealouty, Tiberins was foon freed

Rome. from him, by his difgrace and barithment, which very foon took place, brit on what accuunt is not known.

The northern nations now began to turn formidable : and though it is pretended that Tiberius was always fuccelsful againlt them, yet about this time they gave the Romans a moft terrible overthrow; three legions and fix cohorts, under Cuintilius Varus, being almoft eatirely cut in pieces. Augufus fet no bounds to his gricf on this tatal occafion. For fome months he let his hair and beard grow, Irequently tearing his garments, knocking his head againtt the wall, and crying ont like a diftrafted perfon, "Refore the legions, Varus!" Tiberius, however, was foon after fent into Germany ; and for his exploits those he was honoured with a triumph. Augutus now took him for his colleague in the fovereignty ; after which he fent Germanicus againtt the norihern barbarians, and Tiberius into Illyricum. This was the laft if his public aets; for having accompanied Tiberius for part of his journey, he died at Nola in Campania, in the 76 th year of Death of his age, and \(56 \mathrm{th}^{\text {of }}\) of his reign. Livia was fufpected Augulum of having hallened his death by giving him poifoned figs. Her reafon for this was, that fhe feared a reconciliation between him and his grandfon Agrippa whom he had banifhed, as we have already related. Some months before, the emperor had paid a vifit to Agrippa, unknown to Livia, Tiberius, or any other perfnn, excepting one Fabius Maximus. This man, on his return home, difcuvered the fecret to his wife, and the to the emprefs. Auguftus then perceiving that Fabius had betraved him, was fo proviked, that he banifhed him from his prefence for ever; upon which the unfortunate Fabius, unable to furvive his difgrace, laid violent hands on himfelf.

Tiberius who fucceeded to the empire, refolved to fecure himfelf on the thr ne by the murder of Aerippa ; whom accordingly he caufed to be put to death by a military tribune. Though this might have been a fufficient evidence of what the Romans had to expect, the death of Anguftus was no fnoner kn wn, than the confuls, fenaturs, and knights, in ufe the expretfion of Tacitus, ran headling into navery. The two confuls firit took an oa:h of fidelity to the emperor, and then adminiftered it to the fenate, the people, and the foldiery. Tiberius behaved in a dark mytterious manner, taking care to rule with an ablolute fivay, but at the farne time feeming to hefitaie whether he fh uld accept the fovereign power or not; infomuch that nne of the fenit rs to ik the liberty to tell bim, that other men were flow in performing what they had promifed, Lut he was flow in prom:ling what he had alrcady performed. At laft, h,wever, his modefly was nvercome, and be declared his acceptance of the fovereignty in the following words: " 1 accept tle empire, and will hold it, till fuch time as you, confeript fathers, in your great prudence, thall think proper to give repoie to my ol 1 age."

Tiber us had fearce taken prffeffinn of the throne, when news were hr \(u \cdot h r\) lim that the armies in Pan noni.، an.l Ge mayy had mutinied In Pannonia, three leginn: having been all weal fome days it relisation frim their ufual duties, either to moun for the deatb of Augullur, \(r\) to arj ire for the accefinn of \(T\) berius, grew turbulent and feditious. The Punnonian muti-

Rome. neers were headed by one Percennius, a common foldier ; who, before he ferved in the arme, had made it \(h\) is home outinets o wita pirtirs in the theates and playdowe, to hils or appad diwh ators as he liked or cithed. Intimed by the fpeeches of this man, they epenly revifed; :aw th ugh Thasius himicte wrote to then, and fent his fon Drulus to chde.tvour to quell the tunuat, they matacred fonse of their oflicers, and infulted where, ithat lat, bems trighened by an eclipie of the moon, they began to thiw 1 me figus of tepentance. Oi tha favmiable dipotition Drmiss touk advantage; and cven \(g t\) the rilgle.ders of the revolt condemied and executed. Immedately after this they were ag.in terrized by fuch violent forms and dreadtul rains, th:tt they quietly fubmitted, and every thing in that quarter was rettored to tranquility.

The revoit of the German legions threatened much more danger, as they were more numerous than thofe of Pannuli.. They proceeded nearly in the fime way as the Pannorian legions, falling upon their officers, cipecially the centurion, and beating them till they nimolt expired, drove them out of the camp, and fome of them were even thrown into the Rhine. Gernanicus, who was at that time in Gaul, haftened to the camp on the firf news of the ditturbance; but boing mable to prevaii on them to return to their duty, he was obliged to feign leteers from Tiberius, granting all their demands. Thefe were, That all thofe who had ferved \(=0\) ycars thould be difcharged; that fuch as had ferved 16 thouid be deemed veterans: and that fome leg.cies which had been left them by Augutus mould nor ouly be paid imnediately, but dubiced. This baft article he was obliged to difcharge with ut delay out of the meney which be and his friends had brought to detray the eapences of their journey: and on recenving it, the trwops quietly retired to their winter-quarters. 1312 in the inean time, foms deputies fent either by Tiberius or the fenate, probably to quell t!e fediti,, , nce:tiored frefh difturbances; for the legionaries, tahing it into their heads that theie deputies were come (.) Suoke ti.econcefiims which Germanicus had made, were with dificuity prevented from tearing them in pieces: and, notwithanaing the utmoflendeavcurs of Germanicus, behased in fuch an outrage us manner, that the gencral thoughe proper to lerad off his wife Agr ppind, with her infant fon Claudius, fhe herfelf at ti. if m:time bei.ig big with ch Id. As the was attended by many women of dillaction, wives of the chief officers in the camp, their tears and lamentations on partions wih th ir hafbands occafioned a great uproar, and diew \(t\) gether the foldiers from all quarturs. A new fecne enlucd, which nade an impreflis a even upon the moft obuinite. They could not behol, without fhane andi cnapali n , f., many women of rank traveling thus forlon, whethe at entusion to attend them, or a folduct th ginad them1: and their generai's wife among the tolf, carryine her iat int child in her arms, and preparing to fly tor fl- leer againt the ereachery of the Roman logi m:. This made fuch a deep impretion on the minds of many ot then, that frome ran to llop lier, while the relt recurred to Germanicus, earnelly intreatilyg him to recal. his wife, and to prevent her from being bliged to feek a finctuary among forighers. The general improved this fisou able difpeftitur, and in a thort time they of cheir own accord feized and
maffacred the ringleaders of the revolt. Still, how- Rome. ever, two of the legions continued in their difobedience. Againft them therefore Germanicus determined to lead thofe who had returned to their duty. With this viers he prepared veffels; but before he embarked his troops, he wrote a letter to Cxcina who commanded them, acquainting him that he approached with a powerful army, tciolved to put them all to the fword without diftintion, it they did net prevent him by taking vengance on the guiliy themfetves. This letter Cacina communicated only to the chief officers and fuch of the foldiers as had all alorg difapproved of the revolt, exhorting them at the fanse time to enter into an affociation againft the feditions, and put to the fword fuch as had involved them in the prelent ignomi- The revole ny and guit. This propofal was approved of, and a quelled hy cruel maifacre immediately took place; inomuch that a dreadful when Germanicus came to the camp, he found the maflacte. greatelt part of the legiens deftroyed. This greatly afletted the humatie Germanicus, who cauled the hodies of the flan to be burnt, and celebrated their obfequies with the ufual flemniti-s; however the fedition was thus effequatly quelled, after which he led his army into Germany. There he performied many great exploits \(\dagger\); but kill all that be could perform was far from freeing the empire from fo dangeronts and troubic. \(t\) See Gerfome an eacmy. In the year 19 , he died, of poifon, as was fuppofed, given by Pifo, his partner in the government of Syria, to which Germanicus had been promoted after his return frum the north.

In the mean time, Tiberius, though he affected to court the favour of the people ty various methods, yet fhoved himfelf in general fuch a cruel and bhodthirity tyram, that he became the nbject (f univerfal abhorrence. 'Though he had hated Germanicus in his heart, lie punilhed Pifo with death : but in abont a Tiver year after the death of Germanicus, havine now no tiberius a on the deah of cruel tyobjer of jealoufy to keep him in ave, he began to rant. pull off the mak, and appear more in his natural character than before. He took upon himfelf the interpretation of all political meafures, and began daily to diminith the authority of the fenate; which defign was rauch facilitated, by their own aptitude to flavery; fo that he defpifed their meannefs, while he enjoyed its effects. A law at that time fulfilled, which made it treafon to form any injurious attempt againf the najelly of the people. Tiberius affumed to himfelf the interpretion and enforcement ot this law; and cxtended it not only to the cafes which really affected the fafely of the llate, but to every conjuncture th.t could polibly be favourable to his hatred or fufpicions. All freedom was now therefore banithed from convivial meetings, and diffidence reigned amongit the deareft relations. The law of offended majelly being revived, many perfons of dillinction fell a facrifice ti) it.

In the beginning of thefe cruelties, Tiberius took Rifc of into his confidence Sejanus, a Roman knight, but by Scjanus 3 birll a Volician, who fond out the method of gain- wicked miing his a nfidence, by the moll refiued degree of dif. \({ }^{\text {nifer. }}\) fimulation, being an over-match for his mafter in his own atts. He was made by the emperor captain of the \(P_{\text {ixtorimg guards, one of the mont cor fidential trufte }}\) in the fatc, and extolled in the fenate as a worthy alfociate in his labours. The fervile fenators, with

Rome.
ready adulation, fet up the fatues of the favourite be-
fide thofe of Tiberius, and feemed eager to pay him fide thofe of Tiberius, and feemed eager to pay him
fimilar honours. It is not well known whether he was the advifer of all the cruelties that eafued foon after; but ceitain it is, that, from the beginning of his minifry, Tiberius feemed to become more fatally fufिicious.

It was from fuch humble beginnings that this minifter even ventured to afpire at the throne, and was

273 His infamous conduct. refolved to make the emperor's foolith contidence one of the firft Iteps to his ruin. However, he confidered that cutting off Tiberius alone would rather retard than promute his defigas while his fon Drufus and the cbildren of Germanicus were yet remaining. He therefore began by corrupting Livia, the wife of Drufus; whom, after having debauched her, he prevailed upon to poilon her hußand. This was effected by means of a tlow poifon (as we ate told), which gave his death tbe appearance of a calual dittemper. Tiberius, in the mean time, either naturally phlegmatic, or at leaft not much regarding his fon, bure his death with great tranquillity. He was even heard to jeft upon the occafion; for when the ambatfadors from Troy came fome what late with their compliments of condolence, he anfwered their pretended diltrcffes, by condoling with them alfo upon the lofs of Hector.

Sejanus having fucceeded in this, was refolved to make his next attempt upon the children of Germanicus, who were undoubted fucceffors to the empire. However he was frultrated in his defigns, both with regard to the fidelity of their governurs, and the chattity of Agrippina their mother. Whereupon he refolved upon changing his aims, and removing Tiberius out of the city; by which means he expected more frequent opportunities of putting his defigns into execution. He therefore ufed all his addrefs to perfuade Tiberius to retire to fome agrceable retreat, remote from Rome. By this he expected many advantages, fince there could be no accefs to the emperor but by him. Thus all letters being conveyed to the prince by foldiers at his oun devotion, they would pafs through his hands; by which means he mult in time become the fole governor of the empire, and at laft be in a capacity of removing all obftacles to his ambition. He now therefore began to infinuate to Tiberins the great and numerous inconveniences of the city, the fatigues of

274
Tibcrius recires front Romc.
attending the fenate, and the feditious temper of the inferior citizens of Rome. Tiberius, either prevailed upon by his perfuafions, or purfuing the natural turn of his temper, which led to indolence and debauchery, in the twelfth year of his reign Icft Rome, and went into Campania, under pretence of dedicating temples to Jupiter and Auguftus. After this, lhough he removed to feveral places, he nevel rcturned to Rome; but Spent the greateft part of his time in the inland of Caprea, a place which was rendered as infimous by his plcafures as detefable by his cruelties, which were thocking to human nature. Buried in this retreat, he gave himfelf up to his pleafures, quite regardlefs of the miferies of his fubjects. Thus an infurrection of the Jows, upen placing lis Qatue in Jerufalem, under the government of Pontius Pilate, gave him no fort of unealinefs. The falling of an amphitheatre at Fidenre, in which 50,000 perfons were either killed or wounded, no way affetcd his repofe. He was only employed in ीudying l:ow

Voz. XVI.
to \(\mathbf{v a t y}\) his odious pleafures, and forcing his feeble frame, fhattcred by age and former debaucheries, into the enjoyment of them. Nothing can prefent a more horrid picture than the retreat of this impure old man, attended by all the miniters of his perverted appetites. He was at this time 67 years old; his perfun was moft difpleafing ; and fome fay the difagreeablenefs of \(i t\), in a great meafure, drove him into retirencne. He was quite bald before; his face was all broke out into ulcers, and covered over with platers; his body was bowed forward, while its extreme height and leanncis' increafed its deformity. With fuch a perfon, and a mind fill more hideous, being gloomy, fulpicious, and cruel, he fat down with a view rather of forcing his appetites than fatisfying them. He fipent whole nights in debaucheries at the table; and he appointed Pumponius Flaccus and Lucius Pifo to the firft polts of the empire, for no other merit than that of having fat up witl him two days and two nights without interruption. Thefe he called his friends of all hours. He made one Novelius Torgnatus a pretor for being able to drink off five bottles of wine at a draught. His luxuries of another kind were fill more deteftable, and feemed to increare with his drunkennefs and glu:tony. He made the mort eminent women of Rome fubfervient to his lutts; and all his inventions only feemed calculated how to make his vices more extravagant and abominable. The numberlefs obfcene medals dug up in that inland at this day bear witnefs at once to his hame, and the veracity of the hiltorians who have defcribed his debaucheries. In fhort, in this retreat, which was furrounded with rocks on every fide, he quite gave up the bufinefs of the empire; or, if he was ever active, it was unly to do mifchief. But, from the time of his retreat, he became more cruel, and Sejauns always endeavoured to increafe his diftrults. Secret fpies and informers were placed in all parts of the city, who converted the moft harmlefs actions into fubjects of offence. If any perfon of merit teflified any concern for the glory of the empire, it was immodiately conArved into a defign to obtain it. If another fooke with regret of former liberty he was fuppofed to aim at re-eftablifhing the commonwealth. Every andion became liable to forced interpretations; joy exprefed an hops of the prince's deith ; melancholy, an envying of his profperity. Sejams found his aim ewery day fucceeding; the wretched emperor's terrurs were an intrument that he wrought upon at his pleafure, and by which he levelled every obftacle to his defigns. But the chief objects of his je:louly were the children of Germanicus, whom he refolved to put ont of the way. He thercfore continued to rerder thens obnoxious to the emperor, to alarm him with falfe reports of their ambition, and to terrify them with alarms of his intended crucley. By thefe mcans, he fo contrived to widen the breach, that he aetrally produced on both fides thofe difpolitions which he pretended to obviate; ill 276 til at length, the tinn princes Nero and Drufus were The childeclared enemies to the fare, and afterwards flarved iren of to death in prifon; while \(\Lambda\) grippina their mothct was Gerimanifent into banifhment.

In this manner Sejanus proceeded, removing all who food between him and the empire, and every day increafing in confidence with Tiberius, and power with the fenate. The number of his flatu:s excecded cyen

Rome.
thofe of the emperce ; people fwore by his fortune, in ti.e fame mannce as they would have dunc had he been actu ally upon the throne, and he was more dreaded than even the tyrant who actually enjoyed the enirite. But the ripidity of his rite leaned only laparatory to the greatneds of his downfall. All we know ci bis firk difgrave with the emperer is, that Sutrius Soctrodns wats the min whe had the boldnels tuaccufe him. Antorit, the methar of Germanicus, ficonded the acculstio. W"hat were the particulars of his crimes, visconnot learn : but certain it is, that he attemp'ed ts wirp the eropite, by aming at the life of Tiorius. He was sey netr diffatching him when, lis prakticos ware difoovered, and his iwn life was fubli-utci! for that artimn which he amed. Tiberius, f:n'tble of the trator's power, proceculed with his nfual dilhmulation in haring him apprehended. He oranted him new \(h_{2}\) nours at the vet time he refolved his deut, trd took him as dis colle:gge in the confralfhis. The caperor's liter to the fenate began only whit lliglte con plants againtt his fricnd, but ended with an order for puttin; him in prifin. Fe intreated lhe fenators to protect a poor hld man, as he was, abind ancd b: all; and in the mean time, prepared lhips for his Hight, and ordered foldiers for his fecurits. The fenate, who had long been jealous of the favourite's power, and dreaded his cruclty, immediately tonk this oppormnity of going beyond their orders. Infead of fentencing him to imprifonment, they direeted his execuion A ffrange revolution now appeared in the city; ol thofe mmbers that but a moment before were prefling into the prefence of Sejanus, with offers of fervice and adulation, not ore was found that would feem to be of his acquaintance; he was deferted by all; and thofe who had formorly received the greatef bencfits from lim, lecmed now converted into lis numl inveterate encmies. As he was conducting to txecution, il e people loaded him with infult and execratıon. He attempted to hide lis face with his hands; but even this was denied him and lis hands were fecured. Nor did the rage of his enemies fubfide with his death ; his body was ignominiounly dragged about the Areets, and his whole family executed with 1 m .

His death only lighted up the emperor's rage for further executions. The prifins were crowded with pre-
berius began to grow weary of particular executions; le thercfore give reders that all the accured Mould be Fu' 10 death together without lurther examination. Of 20 fenators, whons he chofe for his coun-il, he put 16 th) death. 6. Let them hate me (cricd he) fo long as ticy obey me." Ele then averred, that Priam was an l.app rn.n, who outlived all his preterity. In this na.nner there was n \(t\) a day without fome borbarous exccution, in whith the fufferers vere obliged to underg' the mant tham ful indignitis and exquifite tormonte. When unc \(C\) imillus itd killedhimbelf to ave id the torture: " Ah (cricd Tiberius), fow that ni:n bus been atl. to efcape me!" When a prifoner earbiefog inte: :eel that be wald not ditir his death: " No (criad the l , idt.t), 1 im net finliciestly your fiacnal, to tho:ten your tormen*." He rlien litinhed lis cyes with the teriures of the wietches that were I ut to Jeath before him ; and in the cuajs ef Suctonius
the rock whas to be feen, from which he ordered fuch as had difpleafed him to be thrown headlong. As hic was one day examining fome perfons upon the rack, he was told that an old friend of his was come from Rhodes t) tee him. Tiberius luppoling him brought for the pupole of information, immediately ordered him to the turture; and when he was convmed of his miftake, he ordered him to be pui to death, to prevent further dibovery.

I: this manner did the tyrant continue to torment others, although he was himfelf ftill more tortured by his own fufpicions; fo that in one of his letters to the fenate, he confefled that the grods and goddefles had fo aflleted and confoundud him, that he knew not what or how to wrise. In the mean time the frontier provinces were invaded with impunity by the barbarians. Mrlia was feized on by the Dacians and Sarmatians; Gaul was wafed by the Cernars, and Are menia conquered by the king of Parthia. Tiberius, however, was fo much it flave to his brutal appecites, that he left his provinces wholly to the care of his lieu. tenants, and they were intent rather on the accumula. tion of private fortune than the fafety of the fate. Such a total diforder in the enpire produced fuch a degree of anxiety in him who governed it, that he was heard to wilh, that heaven and earth night perrifn when he died. At length, however, in the 22 d year of his reign, he began to feel the approaches of his diffolution, and all his appetites totally to forfake him. He now, thactiore, found it was time to think of a fuccefor, and hefitated for a long while, whether he foould choofe Caligula, whofe vices were too appa. rent to efcape his obfervation. He had been often heard to fay, that this youth had all the faules of Sylla, without his virtues; that he was a ferpent that would lling the empire, and a Plaeton that would fet the world in a flame. However, notwithfanding all his well-grounded apyrchenfions, he named him for his firecetior; willing, perhaps, by the enormity of Caligula's conduet to cover the meniory of his own. craligula

But though he thought fit to choofe a fucceffor, he concealed his approaching decline with the utmeft care, as if lee was willing at once to hide it from the world and himfelf. He long liad a contempt for phyfic, and refufed the advice of fuch as attended him: he even feemed to take a pleafure in being prefent at the fiports of the foldiers, and ventured himfelf to throw a javelin at a boar that was let loofe before him. The effort which he made upon this occation caufed a pain in his fide, which haftened the approaches of death: Aill, however, le lecmed willing to awnid his end; and llrove, by change of flace, to put off the inquietude of his own refleqtons. He left his lavourite iftand, and went upor the continent, where he at lat fixed at the promontory of Mifenum. It was here that Chiricles, his phydician, pretending to kiis his hand, lelt the failure of his pulle, and apprifed Nicre, the emperre's prifent finvourite, that he had met above two days to live. Tiberius, on the evntrary, who hat perccived the art of Clar icles, did all in his power to impreds his altendants wi:h an opimon of lis heath: he ecntinucd de table till the evernisig; he foluted itl his grefos as they lent the row and read the ate of the fomate, in which they had ablolved tome perions In had written agante, with gicat indignatio: I Ile

\section*{R O M}

Rence. refolved to take fignal vengeance of their difotedience, and ineditated new fchemes of cruelty, when he fell into fuch faintings, as all believed were fatal. It was in this fituation, that, by Macro's advice, Caligula prepared to fezure the fuccefion. He received the congratulations of the whole court, caufed himfelf to be acknowledged by the Pretorian foldiers, and went forth irom the emperor's apartment amidt the applaufes of the multitude; when all of a linden he was informed that the emperor was recovered, that he had begun to fpeak, and defired to eat. 'This unexpected account filled the whole court with terror and alarm: every one who had before been earneft in teftifying their joy, now re affumed their pretended foriow, and left the new emperor, thr. ugh a feigned folicitude for the fate of the old. Caligula himfelt feemed thunderftruck; he preferved a gloomy filence, expefing nothing but death, inflead of the empire at which he had afpired. Macro, however, who was hardened in crimes, ordered that the dying emperor fhould be ditpatched, by fmothering him with pillows, or, as others will have it, by poifon. In this manner Tiberius died, in the 7 Sth year of his age, after reigning 22.

The Romans were, at this time, arrived at their time, circulated through the city, brought with it the luxuries peculiar to each conuntry ; fo that Rome prefented a deteltable picture of various pollution. In this reign lived Apicius, f.) well known for having reduced gluttony into 2 fyfem ; fome of the moft notorious in this way, thougls: it no fhame to give near 100 pounds for a fingle fifh, and exhauft a fortune of 50,000 pounds in cne entertainment. Debaucheries of every other kind kept pace with this; while the deteftable folly of the times thought it was refininir upon pleafure to make it unnatural. There were at Rome men called /pintrix, wh fe fole trade it was to Itudy new modes of pleafure; and thefe were un verfally fav urites of the great. The fenators were long falien from the rauthority, and were no lefs eftranged from their integricy and honour. Their whole Atudy feemed to be, huw to invent new ways of flattering the empercr, and various method of tormenting his fuppofed enemies. The people were ftill more corrupt: they had, for fome years, been accultomed to live in idlenefs, upon the donat:ons of the emperor ; and, being fatisfied with fubfiltence, entirely gave up their freedum. Too effeminate and cowardly to go to war, they a nly railed agemft their governors; fo that
281 they were bad fuldiers and feditious citizens. In the Chritt cru- 1 Sth year of this monarch's reign, Clirift was crucitied. sificd. Shortly after his dea:h, Pilate is faid to have written to Tiberius an acceunt of his paffion, refurrection, and moracles; upon which the emperor made a report of the whole to the fenate, deliring that Chrift might be accounted a god by the Romans. But the fenat being difleafed that the propofal had not come fint from themtelves, refured to allow of his aputhofis; alleging an ancient law, which gave them the fuperintendal:ce in all matters of religion. They even went fo \(f, r\), as by an edict to command that all Chriftians hould leave the city: but Tiberiuc, by an ther edia, threatened death to all fuch as thould accure thent; by which means they continued unmolefted during the relt of his reign.

No monarch ever came to the throne with more ad. vantages than Caligul.i. He was the fon of Ge:manicus, who lad been the darling of the army and the people. He was bred among the foldiers, from whom he received the name of Caligali, from the flocrt bufo kin, called caliga, that was worn by the common centinels, and which was alfo ufually worn by him. As he approached Rome, the principal men of the fate went out in crowids to meet him. He reccived the congratulations of the people on every tide, all equally pleafed in being free lrom the cruelties of Thberius, and in hoping new advantages from the virtues of his fuccelfor.

Caligula feemed to take every precaution to imprefs them with the ovinion of an happy change. Amid! the rejoicings of the multitude, he advanced mourning, with the dead body of Tiberius, which the foldiers brought to be burnt at Rome, according to the cultom of that time. Upon his entrance into the city, he was received with new titles of honour by the fenate, whole chief employment feemed now to be, the art of increafing their emper r's ranity. He was left co-heir with Gemellus, grandfon to T:berius; but they fet afide the nomination, and declared Caligulat fole fuccefior to the empire. The joy for this election was not confined to the narrow bounds of Italy ; it fpread through the whole empire, and victims without number were facrificed upon the uccafion. Sime of the people, upon his going into the ifland of Campania, made vows for his retum ; and thertly after, when he fell fick, the maltitudes crowded while nights round his palace, ard fome even devoted themfelves to death in cafe he recuvered, fetting up bills of their refontions in the freets. In this affection of the citizens, flrangers themelves feemed ambitious of tharing. Artabanus, king of Parthia, fought the emperor's alliance with aliduity. He came to a perfonal conierence with one of his legates; paffed the Euphrates, adored the Rr man eagles, and kiffed the emperor's images; fo that the whole world leemed enmbined to praile him for virtues which they fuppofed him to pofiels.

The new emperor at finft feemed extremaly careful Caligula of the public favour; and having performed the func- heginsto ral folemnities of Tiberius, he hattencd to the inlands of reign well. Pandataria and Pontia, to remove the athes of his mother and brothers, expofing himfelf to the dangers of tempeftuous we:ther, to give a luftre to his piety. Having breught them to Rume, he inflituted annual folemnities in their honour, and ordered the month of September to be called Germanicus, in memory of his father. Thefe ceremonies bsing over, he conterred the fame honcurs upon his grandmothes Anionia, which had before been given to Livia; and ordered all intirmations to be burnt, that suy ways expuled the enemics of his family. He even refufed a paper that wasoffered him, tending to the difcovery of a contpiracy against him ; allcging, That he was confcions if nothing to deferve any man's lidtred, and theretore had no lears from their machinations. He caufed the intitutions of Augultus, which had been dilufed in the reign of Tiberius, to be revived; undertcok to tefurm many abufes in the ftate, and ieverely punifhed enrupt govern rs. Among others, he banithed Pontus Pilate into Gaul, whe'e this unjult nuar ittrate afterwards put an end to his life by duicide. He bamthed the fointrix, 3 E 2

\section*{R O M}

0-iremior cfabeminlble recreaions, finm Rnme ; atkemytud t) sefture the arcient manner of elecing una:ridrates by the lulfrases of the people and gavi thena \(\therefore\) :rse jutifliction, wicimus any :ppeal to binnlelf. t!ouera the will of loberius wias annul'ed by the lenare, and ihai of Iovia lipppiclled by "lonesius, yet lie caufed sil theirl-sacie to be punstually paid; and in crser to make Corishius ansends for nilhay the crown, lie catefed him to be elceled l'ranceps luver tutis, or pincipal of th: yourls. He rellored lume kines to their domigions wholad been unjully cilpoffellid by Tiberius, and savis them ! e nrrears of their revonucs. sind, that he misht appear an enconrsger of crory virsue, he ordered atemaie llove a large fum of money for enduring the m thexquitise forments witlout dicovering the fecrets (1 her naller. So mans) concellions, amal lisel ipparent virtue, could not fail of recciving jutt applaws. A thield of gold, bearing his image, was decreed to be carried annually to the Capitol, attendeci by the finate and the fons (f the nobility linging in praite of the emperor's virtues. It was likewife ordsised, that the day on which he was appointed to the empire fhould be called Pulsia; implying, ilat when lre came to govern, the
them was their enmily to his family ; and in proof of his accufations he preduced thofe very memorials which but a while before he pretended to have burnt. Among the number of thole who were facrificed to his jealoury, was Macto, the late firourite of 'riberius, and the perton to whom Calhgula owed his empire. He was accufed of nany crimes, lome of which were common to the emperor as well as to him, and his death biought on the ruin of his whole family.

Thefe crucltics, however, only feamed the firf fruits of a nuind naturally timid and Jufpicious: his vanity and profution doon gave rife to others which were more atro. cious, as they lprung from lefs powerful motives. His pride firt began by aftumnes to himele the tite of ruler, which wats ufually granted only to kings. He would alfo lave taken the crown and diadem, had he not been adviled that he was already luperior to all the monarchs of the world. Not long after, he aflimed divine honours, and gave himfelf the names of fuch divinities as he thought mof agrecanle to his nature. For this purpore he caufed the heads of the ftatues of Jupiter and fome othergods to be Atruck off, and his own to be put in their places. He frequently feated himfelf between Caftor'and Pollux, and ordered all who came to their temple to worthip, flould pay their adorations only to him; nay, at laft he altered their temple to the form of a portico, which he joined to his palace, that the very gods, as he faid, might ferve him in the quality of porters.

He was not lefs notorinus for the depravation of his appetices than for his ridiculous prefumptions. Neither perfon, place, nor fex, were obfacles to the indulgence of his unnatural luits. There was fearce a lady of any quality in Rome that efcaped his lewdnefs; and, indeed, fuch was the degeneracy of the times, that there were few ladies who did not think this difgrace an honour. He committed inceft with his three filters, and at public feafts they lay with their heads upon his bofom by turns. Of thefe he proftituted Livia and Agrippina to his vile companions, and then banifhed them as adultreffes and confpirators againft his perfon. As for Drufilla, he took her from her huiband Longinus, and kept her as his wife. Her he loved fo affegionately, that, being fick, he appointed her as heirefs of his empire and fortune; and fhe happening to die before him, he made her a goddefs. Nor did her example when living, appear more dangerous to the poople than her divinity when dead. To mourn for her death was a crime, as the was become a goedefs; and to rejoice for her divinity was capital, becaufe the was dead. Nay, even filence itfelf was an unpardonable infenfibility, tither of the emperor's lof's or his filter's advancement. Thms he made his fifter fubfervient to his profit, as before he had done to his pleafure; railing vaft fums of money by granting pirdons to fome, and by confifating the goods of others. As to his marriages, whether he contracted them with greater levity, or diffolved them with greater injuftice, is not eady to determine. Being prefent at the nuptals of Livia Orefilla with Pifo; as foon as the folemnity was over, he commanded her to be brought to him as his own wife, and then difmifed her in a few days. He fnon after baniflied her upon fufpicion of cohabiting with her hurband after fhe was parted from him. He was enamourcd of Lollio Paulina, upon a bate relation of her grand-
was Milonia Cæfonid, whofe chicf merit lay in her perfect acquaintance with all the alluring arts of her fex, for the was otherwife polfefied neither of youth nor beauty. She continued with hin during his reinn; and he loved her fo ridiculoufl; that he fometimes flowed her to his foldiers deffed in armour, and fometimes to lis companions fark maked.

But of all his vices, his prodigality was the molt remarkable, and that which in fome meafure gave rife to the relt. The luxuries of former emperors were fimplicity iteif, when compared to thofe which he practiled. He contrived new ways of bathing, where the richelt oils and molt precious perfumes were exhaufted with the utnelt profufion. He found out diflies of immenfe value; and had even jewels, as we are told, diffolved amons his fauces. He fometimes had fervices of pure gold prefented before his guefts intead of meat ; obierving, that a man fhould be an aconomift or an emperor.

For feveral days together he flung conliderable fums of money among the people. He ordered thips of a - prodigions bulk to be built of cedar, the ftems of ivory inlaid with gold and jewels, the fails and tackling of various filks, while the decks were planted with the choiceß fruit trees, under the fhade of which he often dined. Here, attended by all the minitters of his pleafures, the molt exquilite fingers, and the moft beautiful youths, he coafted along the fhore of Campania with great fplendor. All his buildings feemed rather calculated to raife afonifhment, than to anfwer the purpofes of utility. But the moft notorious inftance of his fiuitlefs profufion was the valt-bridge at Puteoli, which he undertook in the third year of his reign. To fatisfy his defire of being malter as well of the ocean as the land, he caufed an infinite number of fhips to be faftened to each other, fo as to make a floating bridge from Baiz to Puteoli, acrofs an arm of the fea three miles and an half broad. The mips being placed in two rows, in form of a crefeent, were fecured to each other with anchors, chains, and cables. Over thefe were laid valt quantities of timber, and upon that earth, fo as to make the whole refemble one of the freets of Rome. He next canted feverai houfes to \(b\) : built upon his new bridge, for the reception of himelf and his attendants, into which frefh water was conveyed by pipes from land. He then repaired thither with all his court, attended by prodigious throngs of people, who came from all parts to be fpectators of fuch an expenfive pageant. It was there that Caligula, adomed with - all the magnificence of eattern royalty, fitting on horfeback, with a civic crown and Alexander's breaft-plate, attended by the great ollicers of the army, and all the nobility of Rome, entered at one end of the bridge, and with ridiculous importance rode to the other. it niglt, the number of torches and oherr illuminations with which this expenfive flucture was adorned, calt - fuch a gleam as illuminated the whole bay, and all the neighbouring mountains. This feemed to give the weak: emperor new caufe for exultation; boafting that he had tumed night into day, as well as fea into land.
charior, followed by a numernus train of charinteers, and all his foldiers in glittering armour. Ite then afcended a roftrum erefed for the occation, where liz made a folemn oration in praife of the greatncis of his cisterprife, and the affiduity of his wortimen and lis: army. He then diftributed rewards among his mes, and a fplendid feult fucceeded. In the midft of the entertaimment many of his attendants were thrown into the rea; feveral fhips filled with fpectators were attacked and funk in an hoftile manner; and although the majority efcaped through the calmnefs of the wea. ther, yet many were drowned; and rome who endeavoured to fave themfelves by climbing to the bridge, were llruck diwn again by the emperor's command. The calmners of the rea during this pageant, which continued for two days, furnifhed Caligula with frefh opportunities for boalting; being heard to fay, "that Neptune took care to keep the fea fmooth and ferene, merely out of reverence to him."

Expences like thefe, it may be naturally fuppofed, mutt have exhaufted the moft unbounded wealtla: in fact, after reigning about a year, Caligula found his revenues totally exhaufted; and a fortune of about \(18,000,000\) of cur money, whicl Tiberius had amaf. fed together, entirely fpent in extravagance and foll 5 . Now, therefore, his prodigality put him upon new methods of fupplying the exchequer; and as before his profufion, fo now his rapacity became boundlefs. He put in practice all kinds of rapine and extortion; while his principal ftudy feemed to be the inventing new impofts and illicit confifcations. Every thing was taxec,' to the very wages of the meaneft tradefman. He caufed freemen to purchafe their freedom a fecond time; and poifoned many who had named him for their heir, to have the immediate poffeffion of their fortunes. He fet up a brothel in his own palace, by which he gained confiderable fums by all the methods of proftituion. He alfo kept a gaming-houfe, in which he himfelf prefided, fcrupling none of the meaneft tricks in order to advance his gains. On a certain occafion having had a run of ill luck, he faw two rich knights pafling through his court; upon which he fuddenly rofe up, and caufing both to be apprehended, confifcated their eftates, and then joining his former companions, boafted that he never had a better throw in his life. Annther time, wanting money for a Itake, he went down and caufed feveral noblemen to be put to death; and then returning, told the company that they fat playing for trifles while he had won 60,000 fefterces at a caft.

Such infupportable and capricious cruelties produced many fecret confpiracies againft him; but thefe were for a while deferred, upon account of his intended expedition againlt the Germans and Britons, which he undertook in the third year of his reign. For this purpofe, he caufed numerous levies to be made in all parts of the empire; and talked with fo much refolution, that it was univerfally believed be would conquer all before him. His murch perfectly indicated the in. equality of his temper: fometimes it was fo rapid, that the cohorts were obliged to leave their ftandards behind them; at other times it was fo flow, that it more refembled a pompous proceffion than a military cxpe--dition. In this difpolition he would caufe himfelf to be carried on eight mer.'s Moulders, and order all the

Aft：r rumberlefs inftances of folly and cruelty in this expedition，among which he had intentions of de－ firoying the whole army that had formerly mutinied
under his father Gemmanicus，he began to think of a titumph．The fenate，who hatd long been the timid minillers of his pride and cruelty，immediately fet about confultiug how to fatisfy his expectations．They con－ lidered that a triumph would，even to himfelf，appear as a burlefque upon his expedition：they therefore de－ creed him only an ovation．Having come to this refo－ lution，they fent him a deputation，informing him of the honours granted him，and the decree，which was drawn up in terms of the moft extravagant adulation． However，their flattery was far from fatisfying his pride．He confidered their conduct rather as a dimi－ nution of his power，than atn addition to his glory． He therefore ordered them，on pain of death，not to concern themfelves with his honours；and being met by their melfengers on the way，who invited him to come and parake of the preparations which the fenate had decreed，he informed them that he would come； and then laying his hand upon his fiword，added，that lee would bring that alfo with him．In this manner， either quite omitting his triumph，or deferring it to another time，he entered the city with only an ovation； while the fenate paifed the whole day in acclamations in lis praife，and fpeeches filled with the molt excer－ live flattery．This conduet in fome meature ferved to reconcile him，and foon after their excefive zeal in his caufe entirely gained his favour．For it happened that l＇rotagenes，who reas one of the moot in：imate and the mont cruel of his favourites，coming intu the houle， was fawned upon by the whole body of the fenate，and particularly by Proculus．Whereupon Protogenes with a fierce lnok，afked low one who was fuch an enemy to the emperor could be fuch a fiond thim？There meeded no more to excite the fenate againf Proculus． They infantly feized upon him，and violently tore him
n pieces：phinly fowing by their conduet，that ty－
amm in a prince paduces crusty in thole whom he ramy in a prince pooduces crusty in thole whom he
\(\ddot{8}\) vem，－lt was ator returning trom thas exravagat expedition，that he was wated upon by a deputation of the Jews cf Alurandria，who came to depiecate his anger for not worthipping his divi．ity ats other nations had done．The emperos gave them a very ungracious reception，and would probably have delloyed their co mutrymen it he had noi fion after ben cut off．

This affire of t．e Jows iemane．undecided during his reign ；but it was at hatt fertied by his fuccetior tu their tatistaction．It was upouths aceafion that I＇hilo made the following temark：ble antwer to his atfociates， who were teratied wita apprehentions of the enperor＇s indignation；＂ledr norhang（cred he to then），Ca－ ligul．，by declaring againit us，puts God on our tide．＂

The cont mation of this horrd zeign feemed to threaten univerald cilanity：however，it was but thort． There had already been feveral confpracies furmed to dettony the tyrant，but without tucceis．＇I hat which at latt fucceeded in deliverng the wurld of this mon－ ller，was converted under the mfinence ol Callius Che－ rea，tribune of the pixturim bands．This was a man of experienced courage，an ardent admirer of freedom， and consenuencly an enemy to tyrauts．Bofides the motives which be bad in common with other men，he had received repeated infults from Calrgula，who touk all necalions of turning him into ridicule，and impeach－ ing him of cowardice，merely becaufe he had an effe－ minate voice．Whenever Cherea cance to demand the watch－word from the emperur，according to cuftom， he always gave him eithr Venus，Adonis，or lome fuch，implying effeminacy and foftnefs．He therefore fecretly imparted his defigns to leveral fenators and knights，whom he knew to have received perfonal in－ juries from Caligula，or to be apprehentive of thofe to come．Among thefe was Valerius Afiaticus，whofe wife the emperor had debatuched．Aimus Vinciarius，who was fufpected of having been in a former confpiracy， was now defirous of really engaging in the firt defign that offered．Befides thefe，were Clemens the prefeet ； and Califus，whote riches made him obnoxious to the tyrant＇s refentment．

While thefe were deliberating upon the mof certain and feedy method of deltroying the tyraut，an mex－ pected incident gave new Itrength th the confpiracy． Pompedius，a fenatur of diftimation，having been accu－ fed before the emperor，of having fouken of him with difelpent，the informer cited one Qumtilia，an actrefs， to confim his accuation．Quintilia，howcver，was polfelied of a degree of fortitude not eafily found．She denied the fact with obltinacy；and being put to the torture at the informer＇s requett，the bore the fevereft torments of the rack with unilaken conitancy．But what is mof remarkable of her refolution is，that the was açusainted with all the partieulars of the conipi－ racy；and although Cherea wio appuinted to pretide at her torture，the revealed nothing：on the contrary， when the was led to the rack，the trod upon the toe of one of the confpirators，intimating at once her know－ ledge of the confederacy，and lier own refolution not to divulge it．In this manner the fulfered until all her limbs were diflocated ；and in that deplurable llate was prefented to the emperor，who ordered her a gratuity for what fic had fuftered．Cherea could now no lon－

\section*{R O M}
7.ons. ger contain his indignation at being thus made the infrument of a tyrant's cruelty. He therefore propofed to the compirators to attack him as he went to of fer facrifices in the Capitol, or while he was employed in the fecret pleafures of the palace. The reft, however, were of opinion, that it was beft to fall upon him when he hould be unattended; by which means they would be more cortain of fuccefs. Atiter feveral deliberations, it was at laft refolved to attack him during the continuance of the Palatine games, which lated four days; and to Atrike the blow when his guards flould have the leaf opporturity to defend lim. In coniequence of this, the three firt days of the games palfed without affording that opportunity which was in ardently defired. Cherea now, therefore, began to apprehend, that defersing the time of the confpiracy might be a mean to divulge it: he even began to dread, that the honour of killing the trrant might fall to the lot of fome other perfon more bold than himielf. Wherefore, he at laft refolved to defer the execution of bis plot only to the day following, when Caligula fhould pafs through a private gallery, to fome baths not far diftant from the palace.

The laft day of the games was more fplendid than Who is the reft; and Calligula feensed more fprightly and con. defcending than mfital. He took great amufement in feeing the people feramble for the fruits and other rarities thrown by his order among them; and feemed no way apprehenfive of the ploi formed for his deftruction. In the mean time, the conffiracy began to tranfpire; and had he pofleffed any friends, it could not have failed of being difcovered. The confpirators waited a great part of the day with the moft extreme anxiety; and at one time Caligula feemed refolved to fpend the whole day without any refrefhment. This uncxpected delay entirely exafperated Cherea; and had he not been reftrained, he would have gone and perpetrated his delign in the midt of all the people. Juft at this infant, while he was yet hefitating what he fhould do, Afprenas, one of the confpirators, parfuaded Caligula to go to the bath and take fome flight refrefhment, in order to enjoy the reft of the entertairment with greater relifh. The emperor therefore r:fing up , the confirators ufed evcry precaution to keep off the throng, and to furround him, moder pretence of greater afiduity. Ufon entering into the little vaulted gathery that led to the bath, he was met by a band of Grecian children who had been inftriter in finging, and were come to perform in his prefence. He was once more therefore going in return into the theatre with them, had not the leader of the hand excured himiolf, as having a cold. This was the moment that Cherea feized to frike him to the ground; crying out, "Tyrant, think upos this." Immediately after, the other confpirators rufhed in; and whele the emperor continued to refift, cring ont, tha he was not yet dead, they difpatched him with 30 wounds, in the 2 oth jeir of his age, after a hirt reign of three years ten months and eight dayc. Whith him, his wife and inant daugh. ter alfo perithed; tie one being Atabbed by a centurian, the oher having its brains dathed out againdl the wall, His coin was alfo nelted di wn by a dectee of the finate ; and fuch precau.ions were taken, that all femed willing, that neit:er his fertures nor his mime n.ingot be tranfantoe' to palerity.

As foon as the death of Caligula sits made pubic, i: produced the grateft confufion in all parts cl the city. The confpirators, who only ilined at deflroying a ty-Great ratnt without attending to a fucceffor, had all Gought fufion onfafety by retiring to private places. Some thouybt fies on his the report of the empcror"s death was only an artifice de:th. of his own, to fee how his enemies would behave. Others averred that he was fill alive, and actually in a fair way to recover. In this interval of tiffenfe, the Gurman guards finding it a convenient time to pillage, gave a loofe to their licentionfneis, under a pretcuee of revenging the emperor's death. All the confpirato:s and fenators that fell in their way received mo mercy: Alp:enas, Norbarus, and Anteius, were cut in pieces. However, they grew calm by degrces, and the fenate was permitted to affemble, in order to deliberate upon what was necellary to be done in the prefent emergency.

In this deliberation, Saturninus, who was then conful, infilted much upon the benefits of liberty; and talked in raptures of Cherea's fortitude, alleging that it deferved the higheft reward. This was a language highly pleafing to the fenate. Liberiy now became the favourite topic; ard they even ventured to talk of extinguifhing the very name of Cafar. Imprelfed with this refolution, they brouglit over fome coborts of the city to their fide, and boldly feized upon the Capitol. But it was now too late for Rome to regain her priftine freedom; the populace and the army oppofing their cndeavours. The former were fill mindiul of their ancient hatred to the fenate, and remembered the donations and public fpectacles of the emperors with regret. The latter were fenfible they con'd have no power but in a monarihy ; and h.id fome hopes that the election of the emperor would fail to their determination. In this oppolition of interefts, and variety of opinions, chance feemed at laft to decide the fate of the empire. Some coldicrs happening to run about the pulace, difovered Claudius, Caligula's uncle, lurking in a fecret place, where he had hid himfelf through fear. Of this perfonige, who had hitherto been despifed for his imbecillity, they refolved to make an cmperor : and accordingly carried him upon their thoulders to the camp, where they prodnimed him at a time he expected nothis.g but death.

The fenate now, thercfore, perceiving that force alone was likely to feitle the fucceffion, were refolved to fubmit, fince they had no power to oppofe. Claudius was the perfor mot nearly allied to the late emperor, then living; being the nephew of 'liherius, and the macle of Calignl.. The fonate therefure parted is decree, confirming him in the empire; and went fion after in a bidy, to render him their ecmplilive knmage. Ch.rea was the firlt who fell a lacrifce to the jealunfy of lhis rew monath. Ile met death witl all the furtitude of an ancient Roman; detiring to die by the fance livord with which tee lad killed Ciligula. Lufus, his friend, was put to ditath with him; and Salinue, one of the contpiratass, laid vivlent hands on Limelf.

Ciaudias was 50 years old when he begran tio reis-. The conplicated difeates of his infancy had ia fom: meanime alfected all the facuti s both of his body an 1 mind. He was entinued in a llate of pupillage mach lugger than was uftul at that time; and feemed, is

\section*{-}

Not that lie was entirely dentute of badertandins, firce he had made a tolerable proficioncy in the Grech ard I. itith hannerec, and even wrote an hithey ot hes own time; which, however deftitute ot chier ment, was not conemp:ibl. in pciat of Ityle. Neverthelels, with t! is thare of eradition, le was unable to advanec 1 inmelf in the fiase, and feemad utterly naglected until he 1 .as placed all at onse at the head of affaits. line conmencemens (f his rivn gave the moth promit ling hopos of an happy contmance. He bugan by patling an aet of oblwon fors all former worn's and actona, and diannuiled all the crucl edians of Caligula. Ife forbace all perfins, up infevere penaties, to acri- Ai.e to him as they had dore to Caligula; was allduous in heasing and exanaming complaints; and fre quantiy adminititered juttice in pelfun; tompering by his mildrefs the feverioy of the law. Wre are told of his bringing a woman to acknowledge her fun, by adjudging lier to matry him. The tribunes of the peuple coming one day to attend him when he was on his tiibunal, he courteoully excured hinfelf for not having room for them to fit down. By this deportment he to much glined the affections of the people, that upon : vaguc report of his being flain by furprife, they san abut the firees in the utmolt rage and confternation, with horrid imprecations againft all fuch as werc accetirary to his death; nor could they be appeafed, until liey were affured, with certainty, of his fiffety. He took a more than ordinary care that Rome foould be consinually fupplied with com and provifions, fecuring the merchants againd pirates. He was not lel's afliduous in his buildings, in which he excelled almoft ill that went before hins. He conftrutted a wonderful aquaxduct, called after his own name, much furpaling any other in Rome, either for workmanfhip or plentiful fupply. It brought water from 40 miles diftance, through great mountains, and over deep valleys; being built on Hate!? arches, and furnihing the highelt parts of the city. He made alfo an haven at Oltia; a work cif fuch immenfe expence, that his fucceffors were unable to maintain it. luat his greateft work of all was the iraining of the lake Fucinus, which was the largelt in Italy, and bringing its water into the " Ciber, in order to Atengthen the current of that river. For effecting this, among other vaft difficulties, he mined through a mountain if fone thrce miles broad, and kept 30,000 men cinployed sor 11 years together.

To this foliciade for the internal advantages of the ftate, he adjed that of a watchful guasdianfhip over the provinces. He rellored Judea to Herod Agrippa, which Culligula hasl takes from Herod Antipas, his uncle, the man whon had put John the Baptite to death, and who was banithed by erder of the prelent emperor. Clandius alfor ofored lizeh princes to their kingdoms :is drad been unj atly dupolfetled by his fredeeetiors; but depaived 11 . L,yeians and Rhodians of their liberty, lor havin - promuted in!urcestions, and cracifical fome 201 ciiisens of Rume
one liericus, who, by many arçuments, petfadedthe enuperor to make a defcent upon the ifland, magnilying the advantages that would attend the conqueit of it. In purfuance of his advice, therefore, Plautius the pretor was ordered to pals over into Gaul, and make preparations for his great expedition. At firft, indeed, his foldiers feemed backward to cmbark; declaring, Usat they were mowilling to make war beyond the limits of the world, for 10 they judged Britain to be. Huwcver, they were at laft perfuaded to go ; and the liritons, under the conduet of their king Cynobelinus, were feveral times overthrown. And the lefuccefles foon after induced Clatidus to go into Britain in perfon, upon pretence that the matives were lthl feditions, and hid not delivered up dome Roman fugitives who had then flelter anong them; but for a particular account of the expluits of the Romans in that illind, fee the arhcle England.

But hough Claudius gave in the beginning of his reign the highett hopes of an happy continuance, he foon begran to leflen his care for the public, and to commit to his fivvourites all the concerns of the empire. 'Lhi wan acto相 weak pince was unable to act but under the di- of eruelty. rection of others. 'The chief of his direstors was his wife Menlilina: whore name is almolt become a common appellation to women of abandoned characters. However, the was nut lefs remarkable for her cruelties than her lults; as by her intrigues fhe deftroyed many of the molt illuttrious families of Rome. Subordinaic to her wete the emperor's freedmen; Pallas, the treadurer; Narcillus, the fecretary of ttate; and Calliftus, the mafter of the reqุuefts. Thefe entirely governed Claudius; fo that he was only left the fatigues of ceremony, while they were pollefled of all the power of the itate.

It would be tedious to enumerate the varions cruelties which thefe infidions advifers obliged the feeble emperor to commit: thofe againlt his own family will fuffice. Appius Silanns, a perfon of great merit, who had been married to the cmperor's mother-in-liw, was put to death upon the fuggettions of Meffalina. After him dee new both his \(1018 \cdot 11\)-hw, Silamus and Pompey, and his two nieces the Livias, ane the daughter of Drufur, the other of (iermanicus ; and all without permitting th.m to plead in their defence, or cven without allign \(1 . g\) any caufe for his difpleafure. Great numbers of others fell a facrifice to the jeal ufy of Mefhalina and her nimions; who bore fo great a fway in the ftate, that all (fices, dynities, and grovernments, were entirely at ther dipodal. Every thmg wats put to fale: dhey look money for pardons and penaltics; and accumulated, by thele means, fuclivalt fums, that the wealth of Crofus was contidered as nothing in cumparifon. Une day; the emperor complaining that his exchequer was exhiulled, lie was ludicrounly tuld, that it might be fufficie:tly replenillied if his two treedmen would take him intc parmet thip. Still, however, during fuch corruption, he regarded his favourites with the lighef efteem, and cien folicited the fenate to grant them peculith marks of their approhation. 'Thefe diforders in the minifers of guvernment did not fail to produce confpiracies sgaint the emperor. Statius Corvinus and Gillus Alfinius formed a complitacy arainft him. Two knigh's, whole names are not told us, privately combincd to allaMinate him. Lut the revolt

Rome.
rity: but in order to increafe the neceflity of their affiftance, they laboured to angment the greatnefs of his terrors. He now became a prey to jealoufy and difquietude. Being one day in the temple, and finding a fword that was left there by accident, he convened the fenate in a fright, and informed them of his danger. After this he never ventured to go to any feaft without being furrounded by his guards, nor would he fuffer any man to approach him without a previous fearch. Thus wholly enplipyed by his anxiety for felfprefervation, he entirely left the care of the flate to his favourites, who by degrees gave him a relifh for flaughter. Trom this time he feemed delighted with inficting tortures ; and on a certain occafion continued a whole day at the city of Tibur, waiting for an hang. man from Rome, that he might feaft his eyes with an execution in the manner of the ancients. Nor was he lefs regardlefs of the perfons he condemned, than cruel in the inflittion of their puniffment. Such was his extreme fupiditi;, that he would frequently invite thofe to fupper whom he had put to deatl) but the day before; and often denied the having given orders for an execution, but a few hours after pronouncing fentence. Suetonius aflures 13 , that thene were no lefs than 35 fenators, and above 300 knights, executed in his reign ; and that fuch was his unconcern in the midit of תaughrer, that one of the tribunes bringing him an account of a certain fenator who was executed, he quite forget his offe:ce, but calmly acquiefced in his punifu. me:r.
In this manner was Claudius urged on by Meffalina
which gave him the greatelt nneafmefs, and which was punifhed with the moft unrelenting feverity, was that of Camillus, his lieutenant general in Dumatia. This general, incited by many of the principal men of Rome, openly rebelled againft him, and alfumed the title of emperor. Nothing could exceed the terrors of Claudius, upon being informed of this revolt: his nature and his crimes had difpofed him to be more cowardly than the reft of mankind ; fo that when Camillus commanded him by letters to relinquifh the empire, and retire to a private fation, he feemed inclined to obey. However, his fears upon this occafion were foon removed: for the legions which had declared for Camillus being terrified by fome prodigies, fhortly after abandoned him; fo that the man whom but five days before they had acknowledged as emperor, they now thonght it no infamy to dellroy. The cruelty of Meffilina and her minions upon this occafion feemed to have no bounds. Thes fo wrought upon the emperor's fears and furpicions, that numbers were executed without trial or proof; and fcarce any, even of thofe who were but furpected, efcaped, unlefs by ranfoming their lives with their fortunes.

By fuch cruelties as thefe, the favourites of the emperor cndeavoured to eftablifh his and their own autho-

\section*{th} , one alens, a buffont, is faid to have climbed a tree; and being demanded what be faw, anfwered that he perceived a dreadfal form coming from Ofta. What this fellow fpoke at random was aetually at that time in preparation. It feems that fome time, before there had been a quarrel between Meffalina and Narciffus, the emperor's firf freedman. This fubtle minifter therefore defired nothing more than an opportunity of ruining the emprefs, and he judged this to be a mof favourable occalion. He firlt made the difcorery by means of two concubines whe attended the em. peror, who were infructed to inform him of Mefla. lina's marriage as the news of the day, while Narciffus himfelf ftepped in to confirm their information. Find. ing it operated upon the emperor's fears as he could wifh, he refolved to alarm him flill more by a difcovery of all Meffalina's projefts and attempts. He aggravated the danger, and urged the expediency of lpeedily punifhing the delinquents. Claudius, quite tervified at fo unexpected a relation, fuppofed the enemy were already at his gates; and frequently interrupted his freedman, by alking if he was till matter of the empire. Being affured that he yet had it in his power to continue fo, he refolved to go and punith the affront offered to his dignity without delay. Nothing could exceed the confternation of Meffalina and her thoughtlefs companions, upon being ioformed that the empcror was coming to difturb their feftivity. Every one retired in the utmof confulion. Silins was tation. Meflislina took fhelter in fome grardens which fhe had lately feized upon, having expelled Afraticus the true owner, and put him to death. From thence fhe fent Brittanicus, her only fon by the emperor, with Octavia her daughter, to interccde for leer, ard implore his mercy. She foon atter followad them herfelf; but Narciffus had fo fortificd the emperor againft her atts, and contrived fuch mothods of diverting his attention from her defence, that the was obliged 10 return i.. defpair. Narcilitis being thus for fuccofsful, led Clandias 3 F

th ... lwa it the adnitce:r, there flowing him the aparenu cies ald red with the spoils of his own palace; ant th on co whang him: the pratorian eamp, reviwhin .. arage by givag ham aforames of the readirat, of th: doldiers to detent hins. Having thus artfullw wrought epenh his fors and refentment, the wretchod Situs was commaded tuappeat; who, making no defence, was inkesly \(p \cdot 8\) to death in the emperor's prediace. Siaral whers thated the fame fate; but Mefalinal fial phatued ho lell with the hopes of pardon. Sicerefilved to Lave neither prayers nor tears unat. teniped to appeafe the emperor. She fometimes even d,ave a loofe to her refentment, and threatened her acinfers "ith vengeance. Nor did the want ground for cntertaining the moll favourable expexations. Chaudias having returned from the exccution of her para11.our, and having allayed his refentment in a banquet, hegan to relent. He now therelore commanded his atrerdarts to apprife that miferable creature, meaning Meflatina, of his efolution to hear her accufation the defenee. The permilion to defend herfelf world have been fatal to Narcillus; wherefore he rufhed out, and ordered the tribunes and centurions who were in readinels to exccute her immediately by the emperor's command. Claudins was informed of her death in the midft of his banquet ; but this infenfible idiot fhowed rot the leaft appearance of emotion. He continued at table with his ufual tranquillity; and the day following, while he was fitting at dinner, he afked why Meffalina was abfent, as if he had totally forgotten her crimes and her punithment.

Claudius being now a widower, declared publicly, that as he had litherto been unfortunate in his marriages, he would remain fingle for the future, and that the would be contented to forfeit his life in cafe he broke his relolution. However, the refolutions of Chadius were but of fort continnance. Hlaving been accutlomed to live under the controul of women, his prefent frecedom was become irkfome to him, and he was ontirely unable to live without a director. His freedmen therefore perceiving his inclinati, ns, refolved to procure bim annther wife; and, after fome deliberation they fixed upon Agrippina, the daughter of his broThe enpe- ther Germanicus. This woman was more pradifed in ror marries vice than even the former emprets. Her cruclties were Agrippina, more dangerous, as they were directed with greater caution: the had poifoned her former hufband, to be at liberty to attend the calls of ambition ; and, perfertly asquainted with all the infirmities of Chandius, only made ufe of his power to advance her own. However, as the late declaration of Cladudius feemed to be an obttacle to his marrying again, perfons were fuborned to move in the fenate, that he thouhd be compelled to take a wife, as a matter of great importance to the commonwealth; and fome more determined flatterers than the reft left the honfe, as with a horongh refolution, that intant, to confram him. When this dectee palfed in the fenate, Cl , udius had fearee patience to contain himfelf a day before the celeltration of his muptials. However, fuch was the detelation in which the peuple in general held thefe incelluous matches, that though the) were rade lawful, yet only one of his tribunes, and one ot his freedmen, followed his example.

Claudius having now received a new ditector, fub-
mitted with more implicit obedience than in any foraner part of his reign. Agrippina's chiel aims were to gain the fuccellion in lavour of her own lon Nero, and to fet afide the clams of joung Lritamicus, fon to the emperor and Medlalina. For this puspule the married Nero to the umperor's daughter Oitasia, a few dajs afier her own marriage. Not long after this the urged the emperor to frengthen the fucceffion, in imitation of his predeceffors, by making a new adoption; and cauted him to take in her fon Neru, in fome meature to divide the fatigues of government. Her neat care was to incrate her fon's pupularity, by giving him Seneca for at tutor. This excellent man, by birth a Spaniard, had been banithed by Clatudius, upon the dalfe tettimony of Methlua, who had aceuted him of adulte:y with Julia the emperor's niece. The people love 1 and admired him for his genias, but ftill more for his Itrick morality; and a part of his reputation neceltarily devolved to his pripil. This fubtle woman was not lels afliduous in pretending the utmoft affection for Britannicus; whom, however, the refolved in a proper time to deflroy: but her jealouly was not confoned to this child only; the, thortly atter her acceflion, procured the deaths of feveral lacies who had been her rivals in the emperor's affections. She difplaced the captains of the guard, and appointed Burrhus to that command; a perfon of great military knowledge, and frongly attached to her interefts. From that time the took lefs pains to difgnife her power, and irequently entered the Capitol in a chariot; a privilege which none before wete allowed, except of the facerdotal order.

In the 12 th year of this monarch's reign, fhe per. fuaded hin to reftore liberty to the Rhodians, of which he had deprived them lome years before; and to remit the taxes of the city Hum, as having been the progenitors of Rome. Her defign in this was to increafe the popularity of Nero, who pleaded the caufe of both cities with great approbation. Thus did this ambitious woman take every fep to aggrandize her fon, and was even contented to become hateful herfelf to the public, merely to increafe has popularity.

Such a very immoderate abufe of her power ferved at laft to awaken the emperor's dupicions. Agrippina's imperious temper began to grow unfupportable to him; and he was heard to declare, when heated with wine, that it was his fate to fuffer the diforders of his wives, and to be therr executioner. This expreflion funk deep on her mind, and engaged all her faculties to prevent the blow. Her firlt care was to remove Natcilfus, whom the hated upun many accounts, but partucularly for his attaehment to Claudus. This miniler, for fome time, oppoied her detigns; but at length thought fit to retire, by a voluntary caile, into Campania. 'Ihe unhappy emperor, thus expefed to all the machinations of his infidious confort, feemed entirely regardlels of the dangers that theatened his defruction. His affection for Britannicus was perceived every day to increafe, whels ferved alto to increate the vigilance and jealoufy of Agrippina. She now, theretore, refolved not to deter at erime which the had meditated a long while before; namely, that of poifoning her hutband. she for fome time, however, debated with herfelt in what manuer the fhould adminifter the poifon; as the fared too ltoong a dole would difcover her treachery, and one too weal: mightit fail of its effeet.

\section*{R O M}

Rnnie. 297 By whom he is poi foned.

At length the determined upon a poifon of fingular ef. ficacy to deftroy his intellents, and yet not fuddenly to terminate his life. As fhe had been long converfant in this horrid practice, fhe applied to a woman called Locufla, notorious for affifting on fuch occafions. The poilon was given to the emperor among mulhrooms, a difh he was particularly fond of. Shortly after having eaten, he dropped down infenfible; but this caufed no alarm, as it was ufual with him to fit eating till he had Rupified all his faculties, and was obliged to be carried off to his bed from the table. However, his conllitution feemed to overcome the effects of the potion, when Agrippina refolved to make fure of him: wherefore fhe directed a wretched phyfician, who was her creature, to thruft a poifoned feather down his throat, under pretence of making him vomit; and this difpatched him.

The reign of the emperor, feeble and impotert as he was, produced no great calamities in the ftate, fince his cruelties were chiefly levelled at thofe about his perfon. The lift of the inhabitants of Rume at this time amounted to fix millions eight hundred and fortsfour thoufand fonis; a number little inferior to all the people of England at this day. The general charatter of the times was that of corruption and luxury : but the military firit of Rome, though much relaxed from its former feverity, fill continued to awe mankind; and though during this reign, the empire might be juflly faid to be without a head, yet the terror of the Roman name alone kept the nations in obedience.
Claudius being deftroyed, Agrippina took every precaution to conceal his death from the public, until the had fettled her meafures for fecuring the fuccelfion. A frong guard was placed at all the avenues of the palace, while fhe amufed the people with various reports; at one time giving out that he was ftill alive; at another, that he was recovering. In the meanwhile, the made fure of the perfon of young Britannicus, under a pretence of affection for him. Like one overcome with the extremity of her grief, the held the child in her arms, calling him the dear image of his father, and thus preventing his efcape. She ufed the fame precautions with regard to his fifters, Octa-

\section*{398}

\section*{Nero fuc.} eceds to the empire. via and Antonia; and even ordered an entertainment in the palace, as if to amufe the emperor. At \(l_{\text {alt }}\), when all things were adjufted, the palace-gates werc thrown open, and Nero, accompanied by Burrhus, prefect of the Pratorian guards, iffued to receive the congratulations of the people and the army. The co. horts then attending, proclaimed him with the loudeft acclamations, though not without inaking fome inquiries after Britannicus. He was carried in a clatiot to the reft of the army; wherein having made a fpeech proper to the occafion, and promiling them a donation, in the manner of his predeceffors, he was declared emperor by the army, the fenate, and the people.

Nero's firlt care was, to thow all pofible refpect to the deceafed emperar, in order to cover the guilt of his death. His obfequies were performed with a pomp equal to that of Auguttus: the young emperor pronounced his funcral oration, and he was canonized among the gods. The funeral oration, though fyoken by Nero, was drawn up by Seneca; and it was remarked, that this was the firft time a Roman emperor needed the afiftance of another's elog̨uence.

Nero, lhough but 17 years of age, began his reign with the general approbation of mankind. As he owed the empire to Agrippiria, fo in the beginning he fubmitted to her directions with the moft implicit obedience. On her part, fhe fcemed refolved on governing with her natural ferocity, and confidered her private animofities as the only rule to guide her in public juftice. Immediately after the death of Claudius, The caufed Silanus, the pro-conful of Afia, to be af. fallinated upon very flight fufpicions, and without ever acquainting the emperor with her defign. The next object of her tefentment was Narciffus, the late emperor's favourite; a man equally notorions for the greatness of his wealth and the number of his crimes. He was obliged to put an end to his life by Agrippina's order, though Nero refured his confent.
This bloody onlet would have been foliowred by many feverities of the fame nature, had not Seneca and Burrhus, the emperor's tut r and general, oppno fed. Thefe worthy men, although they owed their rife to the emprefs, were atove being the imfruments of her cruelty. They, therefore, combined togeth-r in an oppofition; and gaining the young emperor on their fide, furmed a plan of power, at once the mofe merciful and wife. The beginning of this monarch's reign, while he continued to act by their counfel, has always been corfidered as a model for fucceeding princes to govern by. The famous emperor Trajan ufed to fay, "That for the firt five years of this prince all other governments came fhort of his." In fact, the young monarch knew fo well how to conceal his innate depravity, that his neareft friends could fcarce perceive his virtues to be but affumed. He appeared juft, liberal, and humane. When a warrant for the execution of a criminal was brought to him to be figned, he was heard to cry out, with feeming concern, ": Would to Heaven that I had never learned to write!" The fenate, upon a certain occafion, giving him their applaufe for the regularity and juftice of his adminiftration; he replied with fingular modefty, "That they fhould defer their thanks till he had deferved them." His condefcention and affability were not lefs than his other virtues ; fo that the Romans began to think, that the clemency of this prince would compentate for the tyramy of his prodeceffirs.

In the mean time, Agrippin., who was excluded from any fhare in government, attempted, by every pofible method, to maintain her declining power. Perceiving that her for had fallen in love with a freedwoman, named \(A . ? \%\), and drcading the infuence of a concubine, fhe tried every art to prevent his growing paflion. However, in fo corrupt a court, it was no difficult matter for the emperor to find other confi-. dents ready to alfift him in his wifhes. The gratifi- He icn
cation of his pafim, therefore, in this infance, only cation of his pafion, therefore, in this inlance, only rokes his ferved to increafe his hatred for the emprefs. Nor was mother. it long before he gave evident maks of his difobedience, by difplacing Pallas her chiscf favouritc. It was upon this occafinn that fle firft perceived the intal declenfion of her authority; wlich threw her into :he molt urgovernable fury. In order to give terror to her rage, flae proclamed that Britannicus, the real heir to the throne, was fill living, ard in a condition to reccive his father's cmpire, which was now poffeffed by an ufurper. She threatened to ge to the camp, and t. c haris en her ahitl 1 .e. Theie nenaces ferved to alam the futi icions ui Nero; who, though apparently grided by has governose, get had begun to give way \(\therefore\) lan athat depra"i+y. He, thercfore, determined upo:t the death of Britamicus, and contrived to have limp lines at a public bancuet. Agrippina, how. ever, till setaned 1 ct natural ferocity: the took every c, prextusisy of chol:ging and fittering the tribunes and c:ntarions; fle heafed up treafures with a rapacity bejend her matural atrarice; all her adionsfeemed calculated to ratie a faction, and make hertily formidable to the emareror. Whereupon Nicro commanded her German geard to lie taken from her, and obliged her to lodge cu: of the palace. He alro forbade particular perfons to silit her, and went limfelt but ruely and caremo. 1:it why to fay her his refpe?s. She now, therefore, began in nind, that, with the emperor's favour, the had lott tice allisuiry of her friems. She was even accufed by Silna of confpiring againft her fon, and of defign. inge to marry Plautius, a perfon deficnded from Aucuilus, and of making him emperor. A fhort time after, Pillis, her favourite, together with Burrhus, were arraigned for a fimilar offence, and intending to fet up Cornclius Sylla. Thefe informations being proved reid of any foundation, the informers were banilhed; a pumilhment which was confidered as very inadequate to the greatnefs of the offence.

As Nero incrated in years, his crimes feeme to increafe in equal proportion. He now began to find a pleafure in tunning about the city by night, difguifed like a ीare. In this vile habit he entered taverns and brothels, attended by the lewd minifters of his pleafures, attempting the lives of fuch as oppofed him, and frequently endangering his own. In imitation of the emperor's example, numbers of profligate young men infelted the Areets likewife; fo that every night the city was filled with tumult and diforder. How. crer, the people bore all thefe levities, which they afcribed to the emperor's youth, with patience, having occafion every day to experience his liberality, and having alfo been gratified by the abolition of many of their taxes. The provinces alio were no way affeeted by there riots; for except difturbances on the fide of the l'arthians, which were foon fuppretled, they enjoyed the mon perfect tranquillity.

But thole fenfualities, which, for the firf four years of his reign, produced but few diforders, in the fifth became alarming. He firlt began to tranfgrefs the bouads of decency, by publicly abandoning Octavia, lis prefent wife, and then by taking Poppea, the wife of his fatourite Otho, a woman more celebrated for her beauty than her virtues. 'Ihis was another grating circumfance to Agrippina, who vainly ufed all her interelt to difgrace Poppea, and reinfate herfelf in her fon's \(\operatorname{lo}\) h favour. Hiftorians affert, that the even offered to fatisfy his paffion herfelf, by an inceftuous compliance; and that, lad not Sencea interpofed the fon would have joined in the mother's crime. 'This howcver, does not feem probable, fince we find Poppea victotious, fora after, in the contention of interelfs; and at laft impelling Nero to parricide, to fatisfy ber revenge. She began her arts by urging him to divorce his prefeat wfe, and marry herielf: Hie reproached lim as a pupil, who wanted not only, power over others, but
liberty to direnhimfeif. She infinuted the cianeserous deligns of Agrippina; and, by degrees accultomed his mind to rellest on parricide widhout horror. Fiis cruelties againft his mother began racher by various circumfances of petty malice than by any downright injurs. He encouraged feveral perfons to teafeher with litigious fuits ; and employed fome of the meanneft of the people to ling fatirical fongs againft her, under her windows : but, at laf, finding thefe ineffectual in breaking her fpirit, he refolved on putting her to death. Elis firt attempt was by poifon; but this, though twice repeated, proved ineffectual, as the had fortified her conftutuon againf it by antidetes. This failng, a thip was contrived in fo artificial a manner as to fall to pieces in the water ; on board of which the was invited to fail to the coalts of Calabria. However, this plot was as ineffectual as the former : the mariners, not being ap. prifed of the fecret, difurbed each othe 's operations; fo that the fhip not finking as readily as was expeeted, Agrippina found means to continue fwimming, till the was taken up by fome trading veffels paffing that way. Nero finding all his machinations were difcovered, refolved to throw off the matk, and put her openls to death, withont further delay. He therefore caufed a report to be ipread, that the had confpired againft him, and that a poniard was dropped at his feet by one who pretended a command from Agrippina to affallinate him. In confequence of this, he appled to his governors Seneca and Burrhus, for their advice how to aet, and their ahiftance in ridding him of his fears. Things were now come to fuch a crifis, that no middle way could be taken; and either Nerc or Agrippina was to fall. Sencca, therefore, kept a profound dilence ; while Burrhus, with more refolution, refufed to be perpetrator of fo great :l crine; alleging, that the army was entirely devoted to all the defeendants of Cafar, and would never be brought to imbrue their hands in the blood of any of his family. In this embarrallinent, Anicctus, the contriver of the thip abovementioned, offered his fervices; which Nero accepted with the greatelt joy, crying out, "That then was the firt moment he ever found himfelf an emperor." Thisfreed. man, therefore, taking with him a body of foldiers, furrounded the houfe of Agrippina, and then forced open the doors. The executioners having difpatched her with feveral wounds, left her dead on the couch, and went to inform Nero of what they had done. Some hiftorians fay, that Nero came immediately to view the body; that he continued to gaze upon it with pleafure, and ended his horrid furvey, by cooly obferving, that he never thought his mother had been fo handfome. However this be, he vindicated his conduet next day to the fenate; who not only excufed, but applauded his impicty.

All the bounds of virtue being thus broken down, Fully and Nero now gave a loofe to his appetites, that were not meamefs only fordid but inhuman. There feemed an odd con- of Nero. tralt in his difpofition ; for while he practifed crueltics which were fufficient to make the mind fludder with horror, he was fond of thofe amufing arts that foften and refine the heart. He was particularly addicted, even from childhood, to mufie, and not totally ignorant of poctry. But chariot-driving was his fotvourite purfuit. Henever nilled thic circus when charint-races were to be exhibited there; appearing at firf privately, and

\section*{K O M}
y
carrisd out. Nay, it is faid, that feveral wonsen were delivered in the theatre. Soldiers were placed in feveral parts to obforve the looks and geftures of the fectators, either to direft then where to point harir applaufe, or reftrain their difpleafure. An old fenator, named \(l_{e} f_{-}\) pafian, afterwards emperor, happening to fall alleep upon ore of thefe occafions, very narrowly efc.iped with his life.

After being fatigued with the praifes of his countrymen, Nero refolved upon going over into Grecce, to receive new theatrical honours. The occafion was this. The cities of Grecec had made a law to fend him the crowns from all the gamcs; and deputies were accordingly difpatched with this (to him) important embalfy. As he one day entertaiied them at his table in the moft fumptu ous manner, and converied with them with the utmoll familiarity, they intreated to hear him fing. Upon his complying, the artful Greeks teftified all the marks of echafy and rapture. Applaufes io warm were peculiarly pleafing to Nero: he could not refrain from crying out, That the Greeks alone were worthy to hear him; and accordingly prepared without delay to go into Greece, where he fipent the whole year cnfuing. In this journey, his retinue refembled an army in number; but it was onls compofed of fingers, dancers, taylors, and other attendants upon the theatre. He paffed over all Greece, and exhibited at all their games, which he urdered to be celcbrated in one year. At the Olympic games he refolved to fhow the people fomething extraordinary; wherefore, he drove a chariot with to horfes; but being unable to fultain the violence of the motion, he was driven from his feat. The fpectators, however, gave their unanimous applaufe, and he was crowned as conqueror. In this manner he obtained the prize at the Ithmian, Pythian, and Nemean games. The Greeks were not fparing of their crowns; he obtained 1800 of them. An unfortunate finger happened to oppofe him on one of theie occafions, and exerted all the powers of his art, which, it appears, were prodigious. But he feems to have been a better finger than a politician ; for Nero ordered him to be killed on the fpot. Upon his return from Greece, he eatered Naples, through a breach in the walls of the city, as was cuftomary with thofe who were conquerors in the Olympic games. But all the fplendor of his return was referved for his entry into Rome. There he appeared feated in the chariot of Auguflus, dreffed in robes of purple, and crowned with wild olive, which was the Olympic garland. He bore in his hand the Pythian crown, and had \(1: 00\) more carried before him. Befide him fat one Diodorus, a mufician; and behind him followed a band of fingers, as numerous as a legion, who fung in honour of his victories. The fenate, the knights, and the people, attended this puerilc pageant, filling the air with their acclamations. The whole city was illuminated, every Arcet fimoked with incenfe; wherever he palfed, victims were flain; the pavement was flrewed with iaffion, while garlands of flowers, ribbons, fowls, and patties, (for fo we are told), were fhowered down upon him from the windows as he paffed along. So many honours only inflamed his defires of acquiring new; he at laft began to take leffons in weftling; willing to imitate Hercules in ftrength, as he bad rivalled \(A_{\text {pollo }}\) in aetivity. He alfo caufed a lion

\section*{R O M}
ral conflagration, he mounted his domeftic ftage, and

Rume. lion of paffeboard to be made with great art, againf which le undauntedly appeared in the theatre, and Aruck it down with a blow of his club.

But his crmelties even outdid all his other extrava. gancies, a complete litt of which would exceed the limits of the prefent aticle. He was olten heard to obferve, that he had rather be hated than loved. When one happenced to fay in his prefence, That the world

305
Borming of Rome. miglat be burned when he was dead: "Nay," replied Nero, "let it be burnt while I am alive." In \(f\) et, a great part of the city of Rome was confumed by fire fhortly after. This remarkable conflagration took place in the uth year of Nero's reign. The fire began among certain thops, in which were kept fuch goods as were proper to feed it; and fpread every way with fuch amazing rapidity, that its havock was felt in diftant ffreet, before any meafures to flop it could be tried. Befides an infinite number of common houfes, all the noble monuments of antiquity, all the Itately palaces, temples, porticoes, with goods, riches, furniture, and merchandize, to an immenfe value, were devoured by the flames, which raged firf in the low regions of the city, and then mounted to the higher with fuch terrible violence and impetuofity, as to fruftrate all relief. The Shrieks of the women, the various efforts of fome endeavuuring to fave the young and tender, of others attempting to affift the aged and infirm, and the hurry of fucli as frove only to provide for themfelves, occafioned a mutual interruption and univerfal confution. Many; while they chiefly regarded the danger that purfued them from behind, found themfelves fuddenly involved in the flames before and on every fide. If they efcaped into the quarters adjoining, or into the parts quite remote, there too they met with the devouring flames. At laf, not knowing whither to fly, nor where to feek anctuary, they abandoned the city, and repaired to the open fields. Some, out of defpair for the lofs of their whole fubfance, others, through tendernefs for their children and relations, whom they had not been able to inatch from the flames, fuffered themfelves to perith in them, though they might eafily liave found means to efcape. No man dared to ftop the progrefs of the fire, there being many who lad no other bufinefs but to prevent with repeated menaces all attempts of that nature; nay, fome were, in the face of the public, feen to throw lighted fire brands into the houfes, loudly declaring that they were authorifed fo to do; but whether this was only a device to plunder more freely, or in reality they had fuch orders, was never certainly known.

Nero, who was then at Antium, did not offer to return to the city, till he heard that the flames were advancing to his palace, which, after his arrival, was, in fpite of all nppofition, burnt down to the ground, with all the houfes adjoining to it. However, Nero, affecting compafion for the multitude, thus vagabond and bereft of their dwellings, laid open the field of ivars, and thl the grat edifices erected there by Agrippa, and even his own gardens. IHe likewite caufed taternacles to be reared in hafte for the reception of the forlorn populace ; from Oftia, too, and the neighbour. ing citics, were brought, by his or ders, all forts of fursiture and neceflarics, and the price of corn was confiderably leffened. But thele bountics, however generous and popular, were befowed in vain, becaufe a report it as fread abroad, that, during the time of this gene-
tiong the deftuction of Troy, comparing the prefent delolation to the celebrated calamities of antiquity. At length, on the listh day, the fury of the flames was Atopped at the foot of mount Elquiline, by levelling with the ground an infinite number of buildings ; fu that the fire found nothing to encounter but the open fields and empty air.

But fearce had the late alarm ceafed, when the fire broke out ancw with freth rage, but in places more wide and fpacious; whence fewer perfons were deftroyed, but more temples and public porticoes were overthrown. As this fecond conflagration broke out in certain buildings belonging to 'tigellinus, they were both generally afcribed to Nero; and it was conjectured, that, by deftroying the old city, he aimed at the glory. of building a new one, and calling it by his name. Ot the fourteen quarters into which Rnme was divided, four remained entio, three were laid in afhes, and, in the feven others, there remained here and there a few houfes, miferably thattered, and half confumed. Among the many ancient and ftately edifices, which the rage of the flames utterly confumed, Tacitus reckons the temple dedicated by Servius Tullius to the Moon; the temple and great altar confecrated by Evander to Hercules; the chapel vowed by Romulus to Jupiter Stator: the court of Numa, with the temple of Vefta, and in it the tutelar gods peculiar to the Romans. In the fame fate were involved the ineftimable treafures acquired by fo many victorics, the wonderful works of the belt painters and fculptors of Greece, and, what is fill more to be lamented, the ancient writings of celebrated aththors, till then preferved perfectly entire. It was obferved, that the fire began the fame day on which the Gauls, having formerly taken the city, burnt it to the ground.

Upon 306放 ed a palace, which he called his golden boufe; though den palace. it was not fo much admired on account of an immenfe profufion of gold, precious ftones, and other ineftimable ornaments, as for its vat extent, containing fpacious fields, large wilderneffes, artificial lakes, thick woods, orchards, vincyards, hills, groves, \&c. The entrance of this fately edifice was wide enough to receive a colottus, reprefenting \(\mathrm{Neio}_{\mathrm{o}}\) iz 20 feet high: the galleries, which confited of three rows of tall pillars, were each a full mile in length; the lakes were encompalfed with magnificent buildings, in the manner of cities, and the woods ftocked with all manner of wild beafts. The houfe itfelf was tiled with gold: the walls were covered with the fame metal, and richly adorned with precious ftones and mother-of-pearl, which in thafe days was valued above gold: the timber-work and ceilings of the rooms were inlaid with geld and ivory: the roof of one of the banqueting rooms refembled the firmament both in its figure and motion, turning inceffantIy about night and day, and thowering all torts of fweet waters. When this magnificent flucture was finifhed, Nero approved of it only fo far as to fay, that at length be began to lodge like a man. lliny tells us that this palace extended quite round the city. Nero, it feems, did not finifh it ; for the firft order Otho figned was, as we read in Suctonius, for fifty millions of fellerces to be employed in perlecting the grolden palace which Nero had begun.

\section*{ROM [ 415 ] ROM}

Rome. 307 Under. takes to cut taking, namely, that of cutting a canal through hard a canal from Aver nesto Tiber.

The projetors of the plan were Severus and Celer, two bold and enterprifing men, who foon after put the emperor upon a fill more expenfive and arduous underrocks and tteep mountains, from the lake Avernus to the mouth of the Tiber, 160 miles in length, and of fuch breadth that two galleys of tive ranks of oars might eafily pais abrealt. His view in this was to open a communication between Rome and Campania, free from the troubles and dangers of the fea; for, this very year, a great number of veffels laden with corn were thipwrecked at Mifenum, the pilots chooling rather to venture out in a violent form, than not to arrive at the time they were expected by Nero. For the executing of this great undertaking, the emperor ordered the prifoners from all parts to be tranfported into Italy; and fuch as were convicted, whatever their crimes were, to be condemned only to his works. Nero, who undertook nothing with more ardour and readinefs than what was deemed inpoflible, expended incredible fums in this rath undertaking, and excrted all his might to cut through the mountains adjoining to the lake Avernus; but, not being able to remove by art the obflacles of na-
308 Romic rebuilt.
be more dreadful than the perfecution raifed againf them upon this falfe accutation, of which an azcount is given under the andial Historr. Hitherto, The connowever, the citizens of Ronie feemed comparatively fuiracy of exempted from his cruclties, which chicfly fell upor Pifo ftrangers, and his nearelt connections; but a cor.fpiracy formed againft him by Pilo, a man of great power and integrity, which was prenaturcly difcovered, opened a new taain of fufficions that deftroyed many of the principal families in Ronie. This confpiracy, in which feyeral of the chief men of the city were concerned, was firt difcovered by the indifcreet zeal of a woman named Epicharis, who, by fome means now unknown, had been let into the plot, which the revealed to Volufius, a tribune, in order to prevail upon lim to be an accomplice. Volulius, inttead of coming into her defign, went and difcuvered what he lad learned to Nero, who immediately put Epicharis in prifon. Soon alter, a freedman belonging to Scraius, one of the accomplices, made 2 farther difcovery. The confpirators were examined apart; and as their teftimonies differed, they were put to the torture. Natalis was the firlt who made a confeffion of his own guilt and that of many others. Scxnius gave a lift of the confpirators atill more ample. Lucan, the poer, was amonglt the number; and he, like the relt, in order to fave limfelf, fill farther enlarged the catalogue, naming, among others, Attilia, his own mother. Epicharis was now, therefore, again called upon and put to the torture; but her fortitude was proof againf all the tyrant's cruelty ; neither fcourging nor burning, nor all the malicious methods ufed by the executioners, could extort the fmallef confeffion. She was therefore remanded to prifon, with orders to have her tortures renewed the day following. In the meantime, the found an opportunity of Atrangling herfelf with her handkerchief, by hanging it againft the back of her chair. On the difcoveries already made, Pifo, Lateranus, Fennius Rufus, Subrius Flavius, Sulpitius Afper, Veltinus the conful, and numberlefs others, were all executed without mercy. But the two molt remarkable perfonages who fell on this occafion were Seneca the philotopher, and Lucan the poet, who was his nephew. It is not certainly known whether Seneca was really concerned in this confpiracy or not.This great man lad for fome time perceived the outrageous conduct of his pupil; and, finding himfelf incapable of controuling his favage difpolition, liad retired from court into dolitude and privacy. However, his retreat did not now protect him; lor Nero, either having real teftimony againt him, or elfe hating him for his virtues, fent a tribune to inform him that he was fufpected as an accomplice, and foon atter fent him an order to put himfelf to deaih, with which lie complied.

In this manner was the whole city filled with naugh. ter, and frightful inftances of trachery. No maller was fecure from the vengeance of his llaves, nor cven parents from the bafer attempts of their chilenen. Not only throughout Rome, but the whole country ronad, bodies of tuldiers were feen in purfuit of the furpected and the guilty. Whole crowds of wretches loaded with chains were led every day to the gates of the palace, to wait their fentence from the tyrant's own lips. He always prefided at the tor:ure in perfon, attended by 'l'i-
gellinus,

\section*{R O M}

Rome. dens, with a refolution of nying into Egypt. He accordingly difpatched the freedmen, in which he had the molt confidence, to prepare a ficet at Oftia; and in the meamwhile founded, in perfon, the tribunes and conturions of the guard, to know if they were willing to flare his fortunes. But they all exeufed themfeives, under divers protexts. One of them had the bnlinn ifs to anfwer him ly a part of a line from Virgil: Ufque ateone mifrunn eff mori? " Is death then fuch a mi-fortune ?" Thus deltitute of every reforrce, all the expedients that cowardice, revenge, or terror could produce, took place in his mind by tarns. He at one time refolved to talke reluge among the Parthians; at ano:her, to deliver himfelf up to the mercy of the infurgents: one whitc, he determined to mount the roftum, to afl parden for what was paft, and to conciude with promifes of amendment for the future. With thefe gloomy deliberations he went to bed; but waking about midnight, he was furprifed to find his geuards had lett him. The protorian foldiers, in fat, having been corrupted by their commander, had retired to their camp, and prochaimed Galba cmper or. Nero immedi tely fent for his friends to delberate upor his prefert exigence ; but his triends alfo forfonk him. He went in perfon from houfe to houle; b :t all the donss were fhut againft him, and nore were found to antwer his inquirie-. While he was puriung this inquiry, his very domentics followed the general defection; and having plundered his apartment, efcaped different wiys. Being how reduced to defperation, he defired that ore of his favourite gladiaters might come and dijpatch him ; but even in this requelt there was none found to obey. "Alas! (cried he) have I ncither friend nor enemy :" And then running defperately forti, he feemed refilvod to plunge headlong into the 'Ciber. But juft then his conrage beainning to iail him, he made a fudden fop, as if willing to recolica his reafen; and aiked for fome fecret place, where bee night re-aflume his courage, and meet death with becrming fortitude. In this difirefs, Phaon, one of his freedmen, offered him his country-loufe, at about four miles diftant, where he might for fome time remain concealed. Nero accepted his offer; and, halfIrelied as he was, with his head covered, and hiding lis face with an laanderchief, he mounted on !orfeback, attended by four of his domenies, of whom the wretched Sporus was one. His journey, though quite fhort, was crowleal with adventures. Round him he heard nothing but confufed noifes from the camp, and the cries of the foldiars, imprecating a thouland evils upon his head. A paifenger, meeting lim on the way, cried, "There go men in purfuit of Nero." Another anked him, if there was any news of Nero in the city? His horfe taling friglt at a dead body that lay near the rad, he dropped his handkerchief; and a foldier that was rear, addreffed him by name. He now therefore quitied his horfe, and forfoking the highway, cnicerd a thicket that led towards the back part of Phaon's houre, through which he crert, making the bent of his way among the reeds and brambles, with which the place was overgrowen. When he was arrived at the back part of the houfe, while lee was wating till there fhould be a breach made in the wail, he tosk np fome water in the hollow of hi- hands from a fool to úrink: faying, "To this liquer is Nero reduced." When the hole was made large enough to almit lim, he crept in \(u_{i}\) on

Vol. XVI.
all-fours, and took 2 Short repofe upon a wretched pal-
R nne. let, that had been prepared for his reception. Being preffed by humger, he dernanded fumewhat to eat: they brought him a piece of brown bread, which he reficsd; but he drank a litile water. During his interval, the fenate finding the pratorian guards had taken part with G.ila, declared himi mperor, and condemned Nero to die more ma, orum ; that is, "according to the rigour of the ancient laws." Thefe dreadfult tidings were quiek. ly brought by one of Phaon's fines foom the city, whilz Nern yet continued lingering between his hopes and his fears. When he was told of tie refolution of the fenate aguint him, he afked the melienger what lie meant by being punifhed "according to the rigour c\& the ancient lans?" To this he was anfwered, that the criminal was to be firipped naked, his head was to be fixed in a pillory, and in that polture he was to be frourged to death. Nero was fo terrified at this, that he feized two poniards which he had brought with him, and exanining their points, returned them to their Sheaths, faying, that the fatal moment was not yet ar--rived. However, he had little time to fare; for the foldiers who had been font in purfuit of him were jult then approaching the houfe: wherefore hearing the found of the horfe's feet, he fet a dagger to his throat, with which, by the affifance of Epaphroditus, his freedmat and fecretary, he gave himfelf a mortal wound. He was not quite dead when one if the cen. His death turions entering the room, and pretending he came to his relief, attempted to fop the blood with his cloak But Nero, regarding him with a fern countenance, faid, "It is now ton late. Is this your fidelity?"Upon which, with his eves fixed, and frightefully flaring, ine expired, in the 32 d year of his age, and the 14 th of his reign.

Galba was \(\%=\) ycar: old when he was declared er- Uncainers peror, and was then in Spain with his legions. How- of Gal'n in ever, he foon found that his being raifd to the throne the hexinwas but an inlet to netr difquictudes. His firfembar ming of 1 i. \(r a f m e n t\) arofe fom a diforder in his own army, for reignt upon his approaching the camp, one of the wings of horfe repenting of their choice, prepared to revolt, and he found it no cafy mater to reconcile them to their duis. He alfo narrowly efiaped affafination from fome flaves, who were prefented to him by one of Nero's freedmen with that intent. The death of Vindex alfo ferved to add not a little to his difquiendes; fo that, upon lis very entrance into the cmpire, he had fome thoughts of putting an end to his own life. But hearing from Rome that liero was dead, and the empire transferred to him, he immediately alfumed the title and enfigns of command. In his journey towarls Rime he was met by Rufu; Virginius, who, finding the fenate had deciced him the government, came to yield him obedience. Tinis general had more than once refufed the empire himelt, which was offered him by his folditrs; alleging, that the fenate alone had the difpfal of it, and from them only he would accept the homont.

Gallon having been brought to the empire by means Fuu:s in of his army, \(w\) is at the fame time wriling to fupprefs his adnutheir power to commit any future diftubance. His firf nifration. approach io Rome was attended with one of thofe rigorous frokes of \(j\) ullice which ought rather to be denominated cruelty than any thing elfe. A body of ma-
riners, whom Noro bad taken from the oar and enlitled anong the legius, went to meet Gadn.t, three males from the city, and with loud imporstunities demanded a confirmation of what his puedeceftor had done in their tov our. Galba, who was ngidly attuched to the ancient dicipline, diferred thenr requeti to another time. But dey, contidering this delay as equivalent to an abWhate denis, intited on a ve:y diarefocotul manner; and fome of them cien hat recourie to arms: whercupon Qubad ordered a bedy of hone attonding him to ride in amons them, and thus hilled; ;000 of them; but not content with this punthment, he afferwards ordered them to be decimated. Their intulence demanded correction ; but fuch ementive punilhments deviated into cruelty. His neat thep to curb the insolence of the foldiers, was l.is ulfichargnt g the German cohort, which had been eftathhes by the lormer emperors as a guard to their per1 n . . Thole lef fent home to their own country unrewisded, pretending they were difalfeted to his perfon. 11: secmed to have two other objects alto in view; :inhaly, to patith th o.e vices which had cume to an enormuns linglie in the Lait reign, with the ftiEtelt icve. sty; ; and to replenth the exckequer, which had been yinte diainced by the prodyality of his predeceffors. Dut thefe attempts only brought on him the imputation of feverity and dvarice; for the flate was too mach corrupted to admit of fuch an immediate tranfition from vice to virtue. The people had long teen maintained in lloth and luxury by the prodigaty of the former emperors, and could not think of being obliged to feek fur new means of fubliftence, and to retrench their fuycrluities. They began, thereforc, to fatirize the old man, and turn the firmplicity of his manners into ridicule. Among the marks of avarice recorded of him, he is faid to have groaned uron laving an expenfive foup ferved up to his table; he is taid to have prefented to his Itewated, for his fidelity, a plate of beans; a famous flayer upon the flute, named Canus, having greatiy delighted him, it is reported, that he drew , ut his purfe, and gave him five-pence, telling him, that it was private atad not public moncy. By fuch ill-judged frugalitis, at duch a t.me, Gaba began to lofe his popularisy; and he, who betore his aceeflion was etteemed ly all, being become emperor, was condered with ridicule and contempt. Bue there ate ome circumilances alleged againt him, lefs equ vocal than thete tifling ones aready linentioned. Shustly after his conings to Rome, the 1 eofic wore prefemed with a moft eratetul ficefacle, which was that of Lecult, Elius, Poritetus, Pettowius, and Petinus, all the bleody minitters of Nero's crucley, drawn in fetters through the cliy, and publicly executed. But 'IThellirus, who bad becn more aetive than all the reft, wis not here. The crafty villain had taken care for hio cund dafuy, by the langenclis of his Lrithes; and the us the people crics onf for vengeance :ghonft him at the theare ind at the circus, fet the emperas granted lim bis hife and pardon. ifeintus the cun"ch, als, who had been the inllrument of poifoning Cl ueb we, eicspen, and owed has hafety to the profer appacation of lis walth. Tlame, by the incquatity whis or nduct, he became defpicable to his fuhjeits. At one time flewing hafelf severe and frugal, fi ana ther romis and fredigal; condenning fome ilIt hiou; pusions withent any hearing, and pardung nhers though guilty: in thert, nothing was done hat
by the mediation of his favourites; all offices were venal, and all punithments redeemable by money.

Rome.
Affairs were in this unfetted pofture at Rome, when the provinces were yet in a worle condition. The fuccefs of the army in Spain in choofing an emperor in. duced the legions in the other parts to wifh for a fimilar opportunity. Accordingly, many feditions were hindled, and feveral factions prumoted in different parts of the empire, bat particularly in Germany. There were then in that provi. ce two Roman armies; the one which had lately attempted to make Rulus Virginius emperor, as has been aheady mentiuncd, and which was comonanded by his lieuten:met; the other commanded by Vitellius, who long had an ambition to obtain the empire for himelf. The former of thefe armies defpiling their prefent general, and confidering themielves as furpected by the emperor for having been the laft to acknowledge his citle, refolved now to be foremoll in denying it. Accordingly, when they were fummoned to take the oaths of homage and fidelity, they refuted to acknowledge any other commands but thofe of the fenate. This refufal they backed by a meflage of the pretorian bands, importing, that they were retolved not to acquiefe in the cleation of an em. peror created in Spain, and defiring that the fenate thould proceed to a new choice.

Galba being informed of this commotion, was fenfible, that, betides his age, he was lets refpected for watnt of ath heir. He refolved therefore to put what he had formerly deligned in executi \(n\), and to adopt fome perfon whofe virtues might deferve fuch advancement, and protea his declining age from danger. His favourites underfanding his determination, inftantly refolved to give him an heir of their own choofing; fo that there arofe a great contention among them upon this occation. Otho made warm application for hmfelf; alleging the great fervices he had done the emperor, as being the firf man of note who came to his affiftance when he had declared againt Nern. However, Galba, being fully refolved to confult the public good alone, rejected his fuit ; and on a day app -inted ordered Pifo Lucinianus to attend him. The chardeter given by hiftorians of Pifo is, that he was every way worthy of the honour defigned him. He was noway related to Galba ; and had no otuer intereft but inerit to recommend him to his favour. Tahingr this ycuth therefore by the land, in the prefence of !lis friends, he adopted him to ficceed in the empire, giving him the mott wholefome leffons for guiding his future conduct. Pifu's conduat thowed that he was highly deferving this diftinction: in all his dopormert. there appearcd fuch modelly, lirmnefs, and equahty of nind, as betpoke him rather capable of difharging, than ambitious of obtaining, his prefint dignity. Buc the arrny and the fenate did not feem equally ditintcrelled uynn this occation; they had been fo long ufed to bribety and corruption, that they could now bear no anperor who was not in a capacity of litislying their avarice. The adoption thoref. re of Pifo was bit coldly received; fir his vintues were no recommendation in a nution of univerfal depravity.

Otho now finding his hopes of aldoption wholly fru- ond \({ }^{318}\) Arated, and Aill further fimulated by the immenfe load chated an of debt which he hat enntracted by his rintons way of perom-
living, reflelved upon obtaining the empire by force,

\section*{R O M}
\(\underbrace{\text { Rome. }}\)
fince he could not by peaceable fuccefion. In fact, his circumflances were fo very defperate, that he was heard to fay, that it was equal to him whether he fell by his enemies in the field or by his creditors in the city. He therefore raifed a moderate fum of money, by felling his intereft to a perion who wanted a place; and with this bribed two fab:altern officers in the protorian bands, fupplying the deficiency of largeffes by promifes and plautible pretences. Having in this manner, in lefs than eight days, corrupted the fidelity of the foldiers, he fole fecretly from the emperor while he was facrincing; and affembling the foldiers, is a fhert ipeech urged the cruelties and avarice of Galba. Finding there his invectives received with univerful fhouts by the whole army, he entirely threw off the mafk, and avowed his intentions of dethroning him. The foldiers being ripe for felition, immediately feconded his views: taking Otho upon their fhoulders, they infantly proclaimed him emperor: and, to frike the citizens with terror, carried him with their fwords drawn into the camp.

Galba, in the mean time, being informed of the revolt of the army, feemed utterly confounded, and in want of fufficient refolution to facc an event which he
fhould have long forefeen. In this manner the poor old man continued wavering aud doubtfin; till at laft, being deluded by a falle report of Otho's being flain, he rode into the forum in complete armour, attended by many of his followers. Juft at the fame inftant a body of horfe fent from the camp to deftroy him entered on the oppofite lide, and each party prepared for the encounter. For fome time hoftilities were fufpended on cach fide; Galba, confufed and irrefolute, and his antagonifts ftruck with horror at the bafenefs of their enterprife. At length, however, finding the emperor in fome meffure deferted by his adherents, they ruthed in upon him, trampling under foot the crowds of people that then filled the forum. Galba feeing them apprnach, feemed to recollett all his former foititude ; and bending his head forward, bid the affaffins frike it off if it were for the gond of the poople. This was quickly parformed; and his head being fet upon the peint of a lance, was prefented to Otho, who ordered it to be contemptuoufly carried round the camp; his hody remairing expofed in the ftreets till it was buried by one of his ीlaves. He died in the 73d year of his age, after a fhort reign of feven months.

No fooner was Galba thus murdered, than the fenate and people ran in crowis to the camp, contending who floonld be foremoft in extolling the virtues of the new emperor, and depreffing the charater of him they had fo unjuftiy deftroyed. Each laboured to excel the \(r \in f\) in his inflances of homage ; and the lefs his affections were for him, the more did he indulge a'l the vehemence of exaggerated praife. Otho finding himfelf furrounded by congratulating multitudes, immediately repaired to the fenate, where he received the titles ufually given to the emperors; and f:om thence roturned to the palace, leemingly refolved to reform his life, and atume manners becoming the greatnefs of his fation.

He began lis reign by a firnal inflance of clemency, in pardoring Marius Ceive, who had becu highly fivourcd by Gallat ; and not comtented with barely forgiviag, he adranced him to the highed honours; af-
ferting, that "fidelity deferved every reward." This ad of clemency was followed by another of jutice, cqu illy agreeable to the people. Tigellinus, Ncro's \(\mathrm{f}_{\mathrm{d}}\) vourite, he who had becn the promoter of all his cruelties, was now put to death; and all fuch as had been unjufly banifled, or flripped, at bis inftigation, during Nero's reign, were reftored to their country and fortunes.
In the mean time, the legions in L. רwer Germany vitellius having been purchafed by the large gifts and fpecious revolit. promifes of Viccllius their general, were at lengh induced to proclaim him emperor; and regardlefs of the fenate, declared that they had an equal right to appoint to that high flation with the cohorts at Rome. The iews of this condua in the army foon fpread confermation througheut Rome; bui Otho was particula1) Aruck with the account, as being apprehenfive that nothing but the blood of his countrymen could decide a canteft of which his own ambition only was the caufe. He now therefore fought to come to an agreement with Vitellius; but this not fucceeding, both. fides began their preparations for war. News being received that Vitellius was upon his march to Italy, Otho departed from Rome with a vaft army to oppofe him. But though he was very poweiful with regard to numbers, his men, being little ufed to war, conld not be relied on. He feemed by his behaviour fenfible of the difproportion of his forces; and he is faid to have been tortured with frightful dreams and the moft uneafy apprehenfions. It is alfo reparted by fome, that one night fetching many profound fighs in his fleep, his fervants tan lathly to his bed fide, and found him flretched on the ground. He alleged he had fcen the ghof of Galba, which bad, in a threatening manner, beat and puthed him from the bed; and he afterwards uied many expiaticns to appeafe it. However this be, he proceeded with a great thow of courage till he arrived at the city of Brixcllum, on the river Po, where he remained, fending his, forces befor: him under the conduct of his generals Suctonius and Celfus, who made what halie ther could to give the eneny battle. The army of Viellius, which confifted of 70,000 men, was commanded by his general, Pi.lens and Cecina, he himfelf remaining in Gaul in order to bring up the reft or his forces. Thus both fides haftened to meet each other with fo much animofity and precipitation, that three confiderable battles were fought in the fpace of three days. One near Placentia, another ncar Cremona, and a third at a place called Cafor; in all which Otho had the advantage. But thefc fucceffes were of but fhort-Jired continutree ; for Valens and Cecina, who had hitherto afted feparatcly, joining their forces, and rcinforcing their armies with frefh liupplies, refulved to come to a gencral engagement. Otho, who by this time had joired his army othinde. at a little village c.lled Pedriucum, finding the enemy, faacdat notwithtanding their late lofes, iaciined to come to a bedriacurt battle, refolved to call a conncii of war to determine upon the proper meafures to be taken. His generals were of opinion to protrax the war: but nthers, whofe inexperience lad given them confidence, declared, that nothing but a battic could relieve the miferies of the fate ; protefting, that Fortune, ard all the gols, with the divinity of the emperor himelf, favoured the defign, and would madoubtedly profyer the chierprife.
\(\therefore 10\) - ~

In this advice Otho acquiefeed: he had bec:a for fome thane io unealy under the war, that he feemed willing to exchange lifpenfe for danger. However, he was to turrounded with flatterers, that he was prohibited from: teing perfonally prefent in the engagement, but prevailed upon to referve himfelf for the fortune of the empire, and wait the event at Brixellum. The affairs of both arnies being thus adjufted, they came to an enfragement at Bedriacum; where, in the beginning, thole on the fide of Otho feemed to have the advanlage. At length, the fuperior difcipline of the legions of Vitellius tumed the fiale of viexory. Otho's army tled in great confufion towards Bedriacum, being purfued with a miferable flaughter all the way.
In the mean time, Otho waited for the news of the batde with great imparience, and feemed to tax his meffengers with delay. The firf account of his defeat was brought him by a common fuldier, who had efcaped from the field of battle. However, Othu, who was atill firrounded by flatterers, was delired to give no credit to a bafe fugitive, who was guilty of falfehood only to cover his own cowardice. The foldier, however, ftill perifted in the veracity of his report; and, finding none inclined to believe him, immediately fell upon his foond, and expired at the emperor's feet. Otho wats fo much flruck with the death of this man, that he cricd out, that he would caufe the ruin of no more fich valiant and worthy foldiers, but would end the comelt the flortelt way; and therefore having exhorted his followers to fubmit to Viellius, he put an end to his comn life.

It was no fooner known that Otho had killed himfilf, than all the foldiers repaired to Virginius, the commander of the German legions, earnefly intreating him to take upnn him the reins of goverument; or at lealt, intrenting his meditation with the generals of Virellius in their tavour. Upon his declining their requelt, Rubrius Gallus, a perfon of confiderable note, undertook their embally to the generals of the conquering army ; and feon after obtained a pardon for all the adherer.ts of Otho.

Vitellius was immediately after declared emperor by the finate; and received the marks of diftinction which were nuw accull med to follow the appontment of the terongeft fide. At the fime time, ftaly wis fevercly intreited by the foldiers, who committed fuch outra,jes as ex-eeded a!! the oppreffions of the moft calamitous war. Vitelline, who was yer in Gatul, refolved, belive he fet out fir Rome, tur puifh the pratorian cotorts, who had been the inftre rents of all the late difturbances in the flace. He therefore caufed them to b. diarmen, and deprived of the name and hotour of f. Liers. lie allo ordered 150 of thoie who were moth grilty to be put to deatli.

As he approached towards Rome, he paffed through the :owns with all imaginable fplendor ; his paffige by water was in painted galleys, adomed with garlands of flowers, and profutely furnilhed with the greatelt delicacies. In his jom ney there wa- nuither order nor difciphine amoner his friduers; they plunjered wherever they cane with impurity; and he feemed no way difpleafed with the licemu ufnels of their belaviour.

Uponhis arrival at Rome, he entered the city, not as a place be came to govern with juilice, bue ats a town that becance his own by the buws of conquett. He
marched through the freets mounted on horfeback, all in armour; the fenate and people going before him, as if the captives of his late vidory. He the next day made the fenate a fpeeclt, in which he magnified his own actions, and promifed them extraordinary advantages from his adminiftration. He then harangued the people, who heing now long accuftomed to flatter all in authority, highly applauded and bleffed their new emperor.

In the mean time, his foldiers being permitted to fatiate themfelves in the debaucheries of the city, grew totally unfit for war. The principal affairs of the fate were managed by the loweft wretches. Vitellius, more abandoned than they, gave himfelf up to all kinds of luxury and profuenerefs: but gluttony was his favourite vice, ia that he brought himfelf to a habit ot vomit. ting, in order to renew his meals at pleafure. His entertaimments, though feldom at his own coft, were prodigioully expenfive; he frequently invited himfelf to the tables of his fubjects, breakfafling with one, dining with another, and fupping with a third, all in the fame day. The mof memorable of thefe entertainments was that made for him by his brother on his anival at Rome. In this were ferved up 2000 feveral dithes of fifh, and 7000 of fowl, of the mont valuable kinds. But in one particular difh he feemed to have outdone all the former profufion of the moft luxurious Romans. This difh, which was of fuch magnitude as to be called the fisield of Minerva, was filled with an olio made from the founds of the fifh called foarri, the brains of pheafants and woodcocks, the tongues of the moft coftly birds, and the fpawn of lampreys brought from the Carpathian fea. In order to cook this dilh properly, a furnace was built in the fields, as it was too large for any kitchen to contain it.

In this manner did Vitellius proceed; fo that Jofephus tells us, if he had reigned long, the whole empine would not have been fufficient to have maintained his gluttony. All the attendants of his court foughe to raife themfelves, not by their virtues and abilities, but the fumptuoufnefs of their entertainments. This prodigality produced its attendant, want ; and that, in turn, gave rife to cruelty.

Thofe who had formerly been his affociates were row deftreyed without mercy. Going to vifit one of them in a viclent fever, he minglect poifon with his water, and delivered it to him with his own hands. He never fardoned thofe money-lenders wha came to demand payment of his former delts. One of the number coming to falute him, he immediate!y ordered him to be carried off to exceution; but fhottly af'er, commanding him to be brought back, when all nis attendants thought it was to pardon the unhappy creditor, Vitellius gave them foon to underfond that it was merely to have the pleafure of feeding his cyes with his torments. Having condemned another to death, he executed bis two fons with him, only for their prefuming to intercede for their Iather. A Roman knight being dragged away to excention, and crying nut that he had made the emperor his heir, Vitellius demanded to fee the will, where finding himfelf joint heir w th another, he ordered both to be executed, that he might cujny the legacy without a partner.

By the continuance of fuch vices and cructies as thele be became odious to all mankird, and the anto-

\section*{R O M}

Rome.
logers began to prognofticate his ruin. A writing was fet up in the forum to this effect: "We, in the name of the ancient Chaldeans, give Vitellius warning to dcpart this life by the kalends of October." Vitellius, on his part, reccived this information with terror, and ordered all the aftrologers to be banifhed from Rome. An old woman having furetold, that if he furvived his mother, he fhould reign many years in happinefs and fecurity, this gave him a defire of putting her to death; which he did, by refufing her fuftenance, un. der the pretence of its being prejudicial to her health. But he foon faw the futility of relying upon fuch vain prognoftications; for his foldiets, by their cruelty and rapine, baving become infupportable to the inhabitants of Rome, the legions of the Ealt, who had at firt acquiefced in his dominion, began to revolt, and fhortly after unanimoufly refolved to make Vefpafian emperor.

Vefpalian, who was appointed commander againt the rebeliious Jews, had reduced mott of their country, except Jerufalem, to fubjection. The death of Nero, however, had at firf interrupted the progrefs of his arms, and the fucceffion of Galbd gave a temporary checis to his cor.quelts, as he was obliged to fend his fon 'Citus to Rome, to receive that emperor's commands. Titus, however, was fo long dctained by contrary winds, that he received news of Galba's death before he fet fail. He then refolved to continue neuter during the civil wars between Otho and Vitellins; and when the latter prevailed, he gave him his homage with reluctance. But being defirous of acquiring refutation, though he difiked the government, he determined to lay fiege to Jerufalem, and actually made preparations for that great undertaking, when he was given to undertand that Vitellius was detefted by all ranks in the empire. Thefe murmutings increafed every day, while Vefpafian fecretly endeavoured to advince the difcontents of the arny. By thefe means they Legan at length to fix their eyes upon him as the perfon the moft capable and willing to terminate the miferies of his countty, and put a period to the injuries it fuffered. Not only the legions under his command, but thofe in Mxfia and Pannonia, care to the lame refolution, fo that they declared themfelves for Vefpafian. He was alfo without his own confent proclaimed emperor at Alexandria, the army there confirming it with extrandinary applaure, and paying their accuftomed homage. Stil, however, Vetpafian feerned to decline the honour done bim; till at length his foldicrs compelled hum, with their threats of immediate death, to accept a litle which, in all probability, he wifhed to enjuy. He now, therefore, called a council of war: where it was refolved, that his fon Tilus thould carry on the war againit the Jews; ard that Mutianus, one of his generals, thould, with the greatel part of his legion:, enier Italy; while Verpalian himfelf ihould levy forces in all parts of the eant, in order to reinforce them in c.fe of neceffity.

Durirg thefe preparations, Vitellius, tbough buried in floth and luxury, was refolved to make an effort to defend the empire; wherefore his chief commanders, Valens and Cecind, were ordered to make all pofible preparations to relift the invaders. The firt amy that entered I:aly with an honile intention was under the command of Autonius Pimus, who was met by Ce-
of Vitellius attacked him with great fury, and, prevailing by their numbers, foon laid that beautiful building in athes. During this dicadful croblagration, VItellius was fealting in the palace of Tiberius, and beholding all the hurrors of the alfault with great fatis. faction. S.abinus was taken prifoner, and fhortly atter executed by the emperor's coinmand. Young Domitiar, his nephew, who was afterwards emperor, efcaped by fligbr, in the habit of a prieft; ard all the reft who furvived the fire were put to the fisord.

But this fuccefs ferved little to improve the affaits of Vitelius. He vainly fent melfenger after melfenger to being Vefpafian's general, Aitonius, to a compofition.
cina near Cremona. A battle was cxpeacd to enfue ; but a negociation takiog place, Cccina was prevailed upon to change fides, and declare for Vefpafian. His army, however, quickly repented of what they had done; and imprifoning their general, attacked Antonius, though without a leader. The engagement con- vith \({ }^{323}\) tinued during the whole night: in the morning, after a defelles thort repart, both armies engaged a fecond time; whe defeated the foldiers of Antonius faluting the rifing fune ; when ing to cuftom, the Vitellians fuppofing that they liad received new reinforcements, betook themfelves to fight, with the lofs of 30,000 men. Shortly after, freeing their general Cecina from prifon, they prevailed upon him to intercede with the conquerors for pardon; which they obtained, thoagh not without the moll horrid barbarities committed upon Cremona, the cliy to which they had retired for finiter.

When Vitellius was infurmed of the defeat of his army, his former infolence was converted into an extreme of timidity and irrefolution. At length he commanded Julius Prifcus and Alphenus Varus, with fome forces that were in readinefs, to guard the paffes of the Apennines, to prevent the enemy's march to Rome; referving the principal body of lis army to fecure the city, under the command of his brother Lucius. But being perfuaded to repair to his army in perfon, his prefence only fersed to increafe the contempt of his foldiers. He there appeared irrefolute, and ftill lusurious, without counfel or conduct, ignorant of war, and demanding from others thofe infructions which it was his duty to give. After a fhort continuance in the camp, and underfanding the revolt of his fleet, he returned once more to Kome: but every day only ferved to render his affairs fill more defperate ; till at laft he made offers to Vefpafian of refigning the empire, provided his life was granted, and a fufficient revenue for his fupport. In order to enforce his requeft, he iffued from lis palace in deep mourning, with all his domeftics weeping round him. He then went to offer the fword of juftice to Cecilius, the conful; which he refufing, the abject emperor prepared to lay down the enfigns of the empirc in the temple of Concord. But being interrupted by fome, who cried out, That he himfelf was Concord, he refolved, upon fo wak an encouragement, fill to maintain his fower, and immediately prepared for his defence.

During this fluctuation of counfels, one Sabinus, who had advifed Vitcllius to refign, perceiving his defperate fituation, refolved, by a bold fep, to oblige Vefpafian, and accordingly feized upon the Capitol. But he was premature in his attempt; for the foldiers tal burnt

firuar ont of Kemac.

This commander gave no anfwer to his requefts, but Hiil enntinued his march towards Rome. Being arrives before the walls of the city, the fores of Vitellius were telilved upor cicfending it to the utmolt extreminy. It "1as atiacked on three fides with the utmont tury; while the army within, fallying umon the befice get-, defended if with equal obitimac:. The battle lathed a whote day, tiil at latk the belieged were driven into the city, and a dreadful flugher made of them in all the Erevis, which they wainly atempted to defend. In the mean time, the citizens fond by, lonking on as ho:l fides fought ; and, as if they had bean in a the itre, clapped their lands; .to o.e time encouraging a ne party, and again the niher. As cither tur ned their backs, the citizens would then fali upon them in their places of refuge, and fo kill and phunder them without mercs. But what was fill more remarkable, during theie dreadful flaugherers both within and without the city, the people would not be prevented from cele'rating one of their riotous feafs, called the Sutarmalia; io that at une time might have been feen a itrange misture of mirth and mifery, of cruelty and lewdnels; in cne place, bu:yings and flaughters; in another, drunkenne's and fealting; in a word, all the horrors of a civil war, and all the licentioufnefs of the mof abandoned fecurity !

During this complicated feene of mifery, Vitellius retired privately to his wife's houfe, upon mount Aventine, defigning that night to Aly to the army commanded by his brother at Tarracina. But, quite incapable, through fear, of furming any refolution, he changed his mind, and returned again to his palace, now void and defolate; a!l his flaves forfaking him in his diftefs, and purpofely avoiding his prefence. There, after wandering for fome time quite difconfohate, and fearing the face of every creature he met, he hid himfilf in an obfcure corner, from whence he was foon taken by : party of the conquering foldiers. Still, however, willing to add a few hnurs more to his miferable iife, lie begged to be kept in prition till the artival of Vofpulian at Rome, pretending that he had fecress of importance to difcover. But his intreaties were vain: the foldiers binding his hands behind him, and throwing an hater cound his neek, led him along, half naked, into the pmblic forum, laporading him. as they proceeded, with all thofe bitter reproaches their mali:e could fuggef, or his owa cruelties deferve. They aifo tied his \(h\) ir backwards, as was uftall with the mof infamous malefators, and held the point of a fivord under his chin, to prevent his hiding his face from the public. Some cal dirt and filth upon hin as he paricd, others flruck him with their hands; fome ridiculed the de"cots of his perfon, his red fiery face, and the .n. rmous greatnefs of his belly. At leagth, being come w the place of puniflment, they killed him with many bows; and then dragging the dead body through the Rrcets with an hook, they threw it, with all profible is. nonys into the river Tiber. Such was the miferable end of this emperner, in the 57 th year of his age, atiter
overtaken by his unmerciful purfuers. Fut not on'y the enemy fufiesed in this manner, but many of the citirens, who were obroxious to the foldiens, were dragged from their houfes, and killed withont any form of trial. The heat of their refentment being fomewhat abated, they mext began to feck for pluder ; and under pretence of feareling for the enemy, leit no place witl.out malks of their rage or rapacity. Befides the folders, the lower rabble joined in thefe detellable outages; fiome flaves came and difoopered the siches of their maflers; fome were deteded by their neareft frion's: the whole city was filled with outcry and lamentation; infomuch, that the formor ravarges of Otho and Yitelitus were now confidered as flight evils in com. parifon.

At length, however, upon the arrival of Matianne, gencral in Yofpafiam, thele fluwhters ceafed, and the flate began in wear the appearance of former tranquillity. Velpafian was declared emperor by the unanimous confent hoth of the fenate and the arny; and dignifice with all chofe titles, which now followed ra. ther the power than the merit of thofe who were ap. pointed to govern. Micffengers were difpatched to him into Egypt, defiring his return, and teltifying the utmoft defire for his government. Howeser, the winter being dargerous for failing, he deferred his vogage to a more convenient featum. Pe:hps, alfo, the diflenfions in other parts of the empire retarded his return to Rome: for one Claudius Civilis, in Lower Ger-Revole of many, excited his countrymen to revolt, and deftroyed Clavdus the Roman garrilons, which were placed in diferent Civilis. the Roman garrilons, whith were placed in different parts of that province. but, to give his rebelion an Yefpatian, until he found himfelf in a condition to throw ofl the mafl. When he thought himfelf funticiently powerful, he difclaimed all fubmifion to the Romati goverment ; and laving everonme one or two of the lientenauts of the empire, and being joined by fuels of the Romans as refured nbedience to the new emperce, he bollly advanced to gi:e Cerealis, Vefpafian's gene:al, hattle. In the beginning of this engrage. ment, he feemed fuccefsul, breaking the Roman legions, and patting their cavalry to flight. But at length Cerealis by his coneluat turned the fate of the day, and not only routed the encmy; but took and deAtroyed their camp. This engagement, however, was not decifive; feveral nthers enfied with doubtful fuccefs. An accommodation at length took place. Civilis obtained peace for his courtrymen, and pardon for himfelf; for the Roman empire was, at this time, fo turn by its own divifions, that the harbarons mations around made incurfons with impunity, and were fore of obtaining peace whenever they thought proper to demand it.

During the time of thefe commotions in Germany, Irruption the Sarnatians, aborburnus tation in the north-eatt of of the Saro the empire, fudicnly p.ffed the tiver 1 fer, and marched matans. into the Roman domirions wish fuch cclerity and fury, as to deftery feveral garrifons, and an anmy under the conmand of Fonteius Agrippa. Ilnwever, they wete diven back by Rubrius G:llhes, Vefpatan's leutenant, inte their native furefs; where feveral attempts were made to contine them br garifons and forts, placed along the confures of their country: Dut thefe hardy nations, having once found the way into the empie,
fincereft teftimnnies of their joy, in having an emperor of fuch great and experienced virtues. Nor did he in the leaft difappoint their expectations; being equally affiduons in rewarding merit, and pardoning his alverfaries; in reforming the manners of the citizens, and fitting them the beft example in his power.
In the incan time, Titus carried on the war againtt the Jews with vigour, which ended in the terrible defruction of the city, mentioned under the article Jews. Aruction of the city, mentioned under the article Jews.
After which his foldiers would bave crowned 'l'itus as conquetor; but he refufed the honour, alleging that he was only an inftrumert in the hand of Heaven, that manifettly declared its wrath againft the Jews. At Rome, however, all mouths were filled wids the praifes of the conqueror, who had not only fowed himelelf an excellent gencral, but a courageous combatant : his return, therefore, in triumph, which he did widh his father, was marked with all the magnificence and joy that was in the power of men to exprefs. All things that were efteemed valuable or beautiful among men were brought to adorn this great occalion. Among the rich fpoils wecre expofed valt quantities of gold taken out of the temple; but the book of their law was not the lc.if remarkable among the magnificent profufion. A triumphal arch was erected upon this occalion, on which were defrribed all the vitories of 'Titus over the Jews, which remains almoft entire to this very day. Velpafran likewife built a temple to Peace, wherein were depolited moft of the Jewilh foils; and having now calned all the commotions in every part of the empire, he thut up the temple of J.nnus, which had been open about five or fix years.

Vefalian having thus given fecurity and peace to the empire, :efolved to correct numbilerleis abufes which hid grown up under the tyranny of his predecefors. To efreft this with greater eafe, he joined Titus with him in the confullhip and tribuni:ial power, and in fome mealute admitted him a partner in all the lighelt offices of the itate. He began with reflraining the licenti, alnefs f the army, and forcing them back to their prittine dicopline. He abridged the proceffes that had been carricd to an unreatonabie length in the courts of juntice. He too: care to rebuld fuch parts of the city as had liffured in the late cummotions; parlicularly tite Capiol, whach lad been latcly bumt ; and which he now reitored to more than former magnificence. He likewitc built af fam us amphitleatre, the ruins of which are to this day an eviduce of its an ion grandemr. The orher ruinous cites of the empire allo liared his paternal care; he in. prowed fuch as were deciining, adomed others, and buile many anew. In fuch ato ato thefe he palfed a lonse reign of clemency and moderation ; fo that it is find, no wan fuffered by an unjuft or a fevere decree during his adminitration.

Julius S:abiius fiems to be the only perion who was
treated with greater rigour than was ufual with this emperor. Sabinus was comniander of a fmall army in G.anl, and had declared himfelf emperor upon the death of Vitellius. However, lis army was fhortly after overcome by Vefpafian's general, and he himfelf compelled to liek lafety by flight. He for fome time wandered through the Roman provinces, without being difcovered : but finding the purfuit every day become clofer, he was obliged to hide himfelf in a cave; in which he remained concealed for no lefs than nine ycars, astended all the time by his faithful wife Empona, who provided provifions for him by day, and repaired to him by night. However, the was at laft difoovcred in the performance of this pious ofice, and Sabinus was taken prifoner and carricd to Rompe: Great interceffion was made to the emperor in his behall: Empona herelelf ap. pearing with her two ch:ldren, and imploring her husband's pardon. However, neither her tears nor intreaties could prevail ; S.lbmus had been too dangerous a rival for mercy; fo that, though the and her children were fared, her hultand fuffered by the crecutioner.

But this feems to be the only infance in which he refented paft offerices. He cauled the daughter of X'i- and guod tellius, his avowed enemy, to be married into a noble qualitics uf family, and he himfelf provided ber a fuitable fortune. One of Nero's fervants coming to beg for pardon for having once rudely thruit him out of the palace, and infulted him when in office, Vefpafian only took his revenge by ferving him jutt in the fame manner. When any plots or confpiracies were formed againlt him, he difdained to punith the guilty, faying, That they delerved rather his contempt for the:r ignorance, than his refentment; as they feemed to envy him a dignity of which he daily experienced the uneafinefs. His liberality towards the encouragement of arts and learning, was not lets than his clemency. He fettled a confant falary of 100,000 fefterces upon the teachers of thetoric. He was particularly favourable to Jofephus, the Jewith hiforian. Quintilian the orator, and Pliny the naturalif, flourihed in his reign, and were highly eftem:ed by hum. He was no lefs an encourager of all other excellencies in art ; and invited the grcateft mathers and artificers from all parts of the roorld, making them confiderable preients, as he found occalion.

Yet all his nunictous acts of generofity and magniticerce could not preferve his charater frem the impucerce conld not preferve his character frem the impu-
tation of rapacity and avanice. He revived many oblo. lete methods of taxation; and even bought and fohl commodities himelf, in order to incre:the his fortune. 11c is charged with advancing the molt avaricious go11c is charged with advancing the molt avaricious goon their return to Rome. He defcended to tome very on their return to Rome. He defeended to tome very a tax upon urinc. When his fon litus remonltrated a tax upon urinc. When his fon Titus remonltrated picee of money, demandad if the fmell offerded him, and then added, that this "cry money was produced by urine. But in excule for ths, we mat t cberve, that the exehequer, when Vefpe:fian cane to the throne, the exchequer, when , phenann cane to the throne,
was to much exhauted, that he inforn:ed the finare that it would require a lupply of three huded millions (fterling) to rectiablith the con.m nwealth. Whis lims (fterling) to rectitblat the conin nwe.lth. .his heavy taxations than the cm ire had bitherto experienced: but while the provinces were thus otliged of

contribute to the fuppoit of his power, he took every precartion to provide for their fatety; fo that we find but two infarrettions it this reirn.-In the fourth year th his reign, Antiochus kitg of Connagena, holding a private correfpondenie woth the I'arthianc, the deciared enersies of Rome, was taren priforer in Ci licis, by Pyrrhus the governus, and ient bound \(t 1\) Rome. But Vepalian gener ully prevented all ill treatment, ly giving him a relidance at Lacejamon, and allosing lim a reranue fuitable to his dignity. shout the lame time alfo, the Alani, a batarous perple irhabiting along the river Tanais, abonconed their birsen wilds, and mased tie kingdom of Nedia. leom thence palfing into drmenis, after great ravage, they oreth cu " Pirdates, the king of that country, witi prodivious daughter. 'Titus was at length fent to chaitic their infolence: but the barbarians retircd at the approach of the Roman at:uy, loaded with plunder; beins compelled to wait a more tavourable oppotunity of renewing their inmptions. Thefc incurtions, however, were but atranfent lorm, the ef feets of whicil were foon repaised by the emperor's moderation and atliduity. We are told, that he now formed and eftablithed a thoufand nations, which had scarcely before amounted to 200 . No prorinces in the rappite lay out of his view and prutection. He had, during his whole reign, a particular regard to britain ; his gencrels, Petilius Cercalis, and Julius Frentinus, brought the greated patt of the illand into fubjection; and Agricold, whon fucseeded foon after, compieted what they had begur. Sec Evgland.

In this manner, having reisned ro years, laved by his fubjects, and deferving their aflection, he was furprifed by an indifpolition at Campania, which he at once declared would be fatal, crying cut, in the fpitit of l'uganilm, "Methinis 1 am going to be a god." Remuving from thence to the city, and afterwards to a country-feat near Reatc, he was there taken witl a fux, which brought him to the laf extromity. However, perceiving his end approach, and juft goinz to expire, he cried out, that an emperor ought to die Aanding; wherefore, railing himfilf upon his feet, he expired in the hands of thole that fuftained him.
'I'ita, being je yfully received as empernt, notwith-
 who mainta acd that he himelf was appoinied, and that 'litur had fallified the will, began his reign with every vitue \(h_{10}\) became anempererand a man. During the life cí his futher there bud been many imputations againll him; bit upon his cxaltation to the thone he feemed ensirely to take deave of his forneer viees, and became an catmple on the grenteft mociestion and huJuity. Jehadl neloved Bereniec, lilicr to Agrip. in hias of Juden, at woman if the geatell beauty and alarements. But linowing that the connction with hod was curirely ditiosecable on the peonle oif Rome, he font lice a way, nowiththanding their mutual pafion anct t.e many ar:s the ufed to induc him on cla:nge his re:ulrians. He next difarded alli thofe who had been has lirmer minillers of his pleatures, and fotbore to counten mece tise componions of \(!\) is \(l o\) fer rectations, though he hat formeriy tation gereat pains in the tolection. 'Yhis mrderation, added to his jalkice and gencrolity, pricuredhm the love of all good men, and the appellation of the difighe of mas/ind, whith all his ac-
tin:as leemed calculated to enfure. Ashe came to the thronc with all the advantages uf his father's pe pularity, he was refolved to ufe every method to increafe it. He therefo:c tooir particular care to pusilla all informers, falle witnefics, and promoters of difenlion, condemning thens to be feourged in the moft public ftreets, next tu be dragged through the theatre, and then to be banil'rcd to the uninhabited parts of tlie empire, and fold ats flayes. Ifis comrely and readinces to do good have been celebratedeven by Chrithion writers; his principal rule being, never to fend any petitioner dilfatisfied away. One night, recollecling that he had done nothing beneficial to mankind the day proceding, he cried ontamong his friends, "I have loft a day." A fentence tou remarkable not to be univerfally knuwn.

In this reign, an cruption of nount Vefuvius did confidetable damige, overwhelming many towne, and fending its athes into countries more than 100 nites dillamt. Upon this memorable occalion, I'. iny the na turalift lof his life; for, being impelled by too eager a curiolity to obterve the cruption, he was fuffocated in the flames \(\dagger\). There liappened alfo about this time a fire at Rume, which continued three days and nights fucceffively, which was followed by a plague, in which 10,000 men ware buried in a dys. The emperor, however, did all that lay in lis. power to repair the damage fuftained by the public; and, with refeet to the city, declared that lie wonld take the whole lofs of it upon himfelt. Thefe difaftes were in fome meafure counterbal inced by the fucceffes in Britain under Agricola. This excellent general having heen fent into that counir) towatds the lat or end of Vefpafian's reign, fhowed himfelf equally expert ia quelling the sefrachory, and civiluing thofe who had furmerly fubmitted to the lin man power. The Ordowices, or inlabitants of North Wales, were the firt that were fubclued. He then mide a defcent upon Mona, or the ifland of Auglefea; which furrendered at difcretion. Having thus rendered himfelf matter of the whole country, he took cyery method to relture difcipline to his own army, ard to inirn. duce fome thare of politenefs among thofe whom lae had conquered, He extorted them, both by advice and cxample, to build temples, theatres, and fately houfes. He caufed the fons of their nobility to be infructed in the liberal arts; he hat them tanglit the Iatin language, and induced them to imitate the lioman modes of drefling and living. 'I'hus, by degrees, this barbarous people began to abume the luxurions manners of their conquerors, and in time even ou:did then in all the relincments of denfual pleature. Fur the fuccels in Britain, Titus was faluted emperor the 15 th time; but he did not long furvive his lionours, being reized with a violent fever at a lithe dillance from Rome. Perceiving his death to approach, Titus uses he declarct, that during the whole courfe of his life he knew but of one attion which lic iepented of: but that action he did not thinl: preper to exprets. Shontly atter, he dica (not without lifpicion of treachery from lis brother 10 mitian, who had long wilhad to govern) in the fill !ear of his age, having pigned two years two months and twenty day.

\section*{Rome.}
knornn, ard his pride foon appeared upon his coming to the throne; having been heard to dcclare, that he had given the empire to his father and brother, and now received it again as his due.

The beginning of his reign was univerfally acceptable to the people, as he appeared equally remarkable for his clemency, liberality, and juftice. He carried his abhorrence of cruclty fo far, as at one time to forbid the facrificing of oxen. His liberality was fuch, that he would not accept of the legacics that were left him by fuch as had children of their own. His jutice was fuch, that he would fit whole days and reverfe the partial fentences of the ordinary judges. He appeared very careful and liberal in repairing the libraries which had been buint, and recovering copies of fuch books as had been loft, fending on purpofe to Alexandria to tranfribe them. But he foon began to fhow the natural deformity of his miad. Infead of cultivating literature, as his father and brother had done, he negle\&ed all kinds of fudy, addicting himfelf wholly to the meaner purfuits, particularly archery and gaming. No emperor before him entertained the people with fuch various and expenfive fhows. During thefe diverfions he diftributed great rewards; fitting as prefident himfelf, adorned with a purple robe and crown, with the priefts of Jupiter and the college of Flavian priefts abont him. The meannefs of his oecupations in folitude were a juft contraft to his exhibitions in public offentation. He ufually fpent his hours of retirement in catching flies, and flicking them through with a bodkin; fo that one of his fervants being afked if the emperor was alone, he anfwered, that he had not fo much as a fly to bear him company. His vices feemed every day in increafe with the duration of his reign; and as he thus became morc odious to his people, all their murnurs only ferved to add frength to his fufpicions, and malice to his crnelty. His ungrateful treatment of Agricola feemed the firt fymptom of his natural malevolence. Domitian was always particularly fond of obtaining a military reputation, and therefore jealons of it in others. He had marched fome time before into Gaul, upon a pretended expedition againf the Catti, a pcople of Germany; and, without ever feeing the enemy, refolved to have the honnur of a triumph upon his return to Rome. For that purpofe he purchafed a number of flaves, whom he dreffed in German habits; and at the head of this miferable procellion entered the city, amidt the apparent acclamations and concealed contempt of all his fubje?s. The fucceffes, therefore, of Agricola in Britain affected him with an extreme degree of envy. This adm:rable general, who is farce menticnad by any variter except Tacitus, purfucd the advantares which the had already obtained. He routcd the Calchorians; overcame Galgacus, the Britifin chief, at the head of \(30,000 \mathrm{men}\); and afterwards fending out a fect to foonr land.
took care that triumphant ornaments, natues, and other Rome. honours, fhould be decreed him ; but at the fame time he removed him from his command, under a pretence of appointing him to the government of Syria. By thefe means, Agricola furrendered up his government to Saluftius Lucullus, but foon found that Syria was atherwife difpoled of. Upon his return to Rome, which was privately and by night, he was coolly received by the emperor; and dying fome time after in retirement, it was fuppofed by fome that his end was latened by Domitian's direftion.

Domitian foon after found the want of fo experienced Many bara commander in the many irruptions of the birbarous nations that furrounded the empire. 'Ihe Sarmatians in Eurnpe, joined with thofe in Alia, made a formidable invafion; at once deftroying a whole legion, and a general of the Romans. The Dacians, under the conduet of Decebalus their king, made an irruption, and overthrew the Romans in feveral engagements. Lolfes were followed by loffes, fo that every feafon became memorable for fome remarkable overthrow. At laf, however, the flate making a vigorous exertion of its internal power, the barbarians were repelled, partly by force and partly by the affiftance of money, which only ferved to enable them to make future invalions to greater advantage. But in whatever manner the enemy might have been repclled, Domitian was refolved not to lofe the honour of a triumph. He returned in great fplendor to Rome; and not contented with thus triumphing twice without a victory, he refolved to take the furname of Germanicus, for his conqueft over a people with whom he never contended.

In proportion as the ridicule increafed againf him, his pride leemed every day to domand greater homage. He would permit his ftatues to be made only of gold and filver; affumed to himfelf divine honours; and ordered that all men fhould treat him with the fame appellations which they gave to the divinity. His cruelty was not behind his arrogance; he caufed numbers of the molt illuftrious fenators and others to be put to death upon the moft trifing pretences. Saluftus Lu. cullus, his lieutenont in Britain, was deftroyed oniy for having givea his uwn n. me to a new fort of lances of his own insention. Junius Rulticus died for publithing a book, in which he commended Thrafea and Prifcus, two philofophers who oppored Vefpafian's coming to the throne.

Such cruclties as thefe, that feem almnf withont a metire, may naturally be fuppofed to have produced rebellion. Lucius Ant nins, gevernor in Upper Germany, knowing how much the emperor was detelted at home, affumed the enfgns of imperial dignity. As has was at the licad of a formiduble army, his fuccefs :cmained lone doubeful ; but a fudden orertowing of ti. \(=\) linite dividing lis army, he was fetupan at that jumeturc by d"ornumuils, the enperor's geretal, and (irtiii) ronted. He iikewife diconvered and fublued the Orkneys, and thus reduced the whole into a civilied province of the Roman empire. When the account of theef fucceflis was hrought to Domitian, he received it with a feemirg pleafure, but real uncalinefs. He though: A cricola's rifing reputation a reproach ugen his own irastivity : and, inftead of attempting to cnirlate, he rcfolved to fupprefs the marit of his fervices. Fe ordered him, therefore, the external marks of bis approbation, and Vol. XVI.
 2....... rec.antefu! ifonlenefs mal mercy. 110 W. Iote durly tist..ie to the fenate and subility, the t-ira de. At a - time, he fur rumden the fircly a de w.t. his ::ot 1 , to the great conternation on the :-as: :I. A: ravi.cr, le siohed to amme himfil ith thair terters in a duferent mamer. Having in-- u! !! em to a puile cotertamment, he received them \(\therefore\) Qer, furmulty at the enteance of lis putace, and con-
 and illmmate 1 by a few manchaly haps, that dif.ufed light orly fullece.t to thow the horrors of the flace. Sll arvund were to be f.en nothing but coffins, with tisu armes of each of the fer.tors written upon them, icgether with celur objects of terior, and inftrunients of execution. While the compmy beheld all the Fecparations with fileat agony, feveral men, having their bodies blackened, each with a drawn fword in one hanit and a fiaming torch in the other, entered the hall, and danced round them. After fome tinue, when the guclls expeted nothing lefis than inftant death, well Knowing Demitim's capricious cruelty, the doors were fotopen, and one of the fervants came to inform them, that the emperor gave all the companyleave to withstraw.

Thefe cruelties were rendered fill more odious by his 1 it and avarice. Frequently after prefiding at an execution, he would retire with the lewdef proftitutes, and tie the fame baths which they did. His avarice, which was the confequence of his profufion, knew no bounds. He fcized upon the eftates of all againft whom he could find the fmallet pretenfions; the moll trifing ation or word againt the najefty of the prince was fuficien: to rain the poffefor. He particularly exacted large fums from the sich Jews; who eveu then began to practie the ant of pectlation, for which they are at prefei.t faid to be remarkable. He was excited againat them, not only by avarice, but by jealoufy. A prophecy had been long current in the eaft, that a perfon from the line of David thould rule the world. Whereupon, this iupicious cyrant, willing to evade the prediction, commanded all the Jews of the lineage of David to be diligently fought out, and put to death. Two Chriftians, grandfons of St Jude the apofte, of that line, were brought before him; but finding them pror, and no way ambitious of temporal power, he difmiffed them, confidering them as objefts too mean for his jealouly. However, his perfecution of the Chriltians was more fevere than that of any of his predecefors. By his letters and edifts they were banifhed in fevcral parts of the empire, and put to death with all the tortures of ingenius, cruelty. The predictions of Chaldaans and atereligers aifo, crncerning his death, gave him moll wolent apprehenlions, and kept him in the mote turmenting diaquietude. As he approached towards the ent of lis te gn, he would pernit no criminal, or prifuace, to be brought into his prefence, until they were tound in fucts at manncr as to be incapable of injuring him; d.d:c gencrally fecu:ed their chans in his uwn la ado. Ilis jealoufies increafed to that degree, that he orderad the gillery in which lice walked to be fet romend with .4 , clincid thne, which fered as a mirror turneq the petfins of all fich as apprached him fom behind. Every omen and prodizy g.ve hina frelh anxiety.

Bell a perrod was foun to be put to this monltet's
crnily. Among the number of thofe whom he at once caretféd a:ad fulpeeted, was his wife Domitia, whem hel ind taken fiom Nelius lama, her former huband. le l.ud taken fiom Nilius launa, her former huband. A coil fiv-
Thlis woman, however, was become obnoxious to hint, facy furnifir hasing placed her affertions upon one Pari, a ed agaidi player; and he refolved to difpach her, with fieveral him. others that he cither hated or fulpected. It was the tyrane's method to put down the names of all fuch as he intended to dellroy in his tablets, which he licpt about him wilh gieat circumpection. Domitia, fortunately happening tenget a fight of them, was llruck at findin: her own name in the catalogue of thofe fated to deftruction. She thowed the fatal lift to Norbanus and Petronius, prefeets of the pratorian binds, who found thenifelves fet down; as likewife to Stephanns, the comptroller of the houfehold, who came into the confpiracy with alacrity. l'orthenias alfo, the chiof chamberlain, was of the number. Thefe, alter many confultations, determined on the frill opportunity to put their defign in exccution; and at lengh fixed on the 18 th day of September for the completion of their attempt. Domitian, whofe death was every day foretold by the aftrologers, who, of coniequence, mult at laft be right in their predictions, was in fome meafure apprehenfive of that day; and at he had been ever timorous, fo he was now more particularly upon his guard. He had fome cime before fectuded himfelf in the moft fecret recelfes of his palace ; and at midnight was fo alfrighted as to leap out of bis bed, inquiring of his attendants what hour of the night it was. Upon their falfcly aftiring him that it was an hour later than that which he was taught to apprehend, quite tranfported, as if all danger was paft, he prepared to go to the bath. Juft then, Parthenius his chamberlain came to inform him that Stephanus the comptioller of his houfehold defired to fpeak to him uponan affiair of the utmoft importance. The emferor having given orders that his attendants fhould retire, Stephanus entercd with his hand in a fcarf, which he had worn thus for fome d.lys, the better to conceal a dagger, as none were permitted to approach the emperor except unarmed.He began by giving information of a pretended confpiracy, and exhibited a paper in which the particulars were fpecified. While Domitian was reading the contents with an eager curofity, Stephanus drew his dag- dercu. ger, and lituck him in the groin. 'The wound not being mortal, Domitian caught hold of the affalin, and threw him upon the ground, calling out for affifance. He demanded alfo his fword, that was ufually placed under his pillow; and a boy who attended in the apartment, running to feth it, found orly the fcabbard, for Parthenins had previoully removed the blade. Tha Itruggle with Steplaanus ftill continued: Domitian ftill kept him under, and at one time attempted to wetl the dagger from his hand, at another to tear out his eyes wila his fingers. But Pathenius, with his freedman, a ghdiator, and two subaltern officers, now coming in, ran all lanoufly upen the emperor, and difpatched him with many wourds. In the mean time, fome of the oinicers of the guard beirg alarmed, came to his affiftance, but too late to fave him; howerer, they flew Stepliatus cn the fot.
When it was publicly known that Domitian was nlain, the joy of the fenate was fo great, that being affombled with the: umolt hate, they began to load his

Rome.
memory with every reproach. His flatues were commanled to be taken down; and a decree was made, that all his inicriptions thould be erafed, his name ftruck out of the regitlers of fame, and his funeral omitted. The people, who now took iitle part in the athirs of gevernment, looked on his death with indif. ference; the foldiers alone, whom he had loaded with favours, and entiched by largeffes, tincerely regretted their benefactor. The fenste, theref.re, refolved to pr vide a fucceffor before the army could have an opportunty of taking the appuintment upon themfelves: and Cocceius Neiva was cholen to the empire the very day on which the tyrant was flain.

Nerva was of an illutrious family, as molt fay, by birth a Spaniard, and abore \(\sigma_{5}\) years old when he was called to the thronc. He was, at that time, the moft remarkable man in Rome, for his virtues, moderation and refpef to the laws; and he owed his exaltation to the blamelefs conduct of his former life. When the fenate went to pay him their fubmillions, he received them with his accuftomed humility; while Arius Antonius, his moit intimate friend, having embraced him with great familiarity, congratulated him on his acceflion to the empire : and indeed no emperor had ever fhewn himfelf more worthy of the throne chan Nerva; his only fault being that he was too indulgent,

352
His great clemency and moderation. and often made a prey by his inflidious courtiers.

However, an excels of indulgence and humanity were faults that Rome could eatily pardon, after the cruelties of fuch an emperor as Domitian. Being long accultomed to tyranny, they regarded Nerva's gentle reign with rapture, and even gave his imbecility the name of benevolence. Upon coming to the throne, he folemnly fwore than no fenator of Rome fhould be put to death by his command, during his reign, though they gave ever fo juft a caufe. He conferred great favours, and beftowed large gifts, upon his particular friends. His liberality was fo extenfive, that, upon his firlt promotion to the empire, he was conitrained to fell his gold and filver plate, with his other rich moveables, to enable him to continue his liberalities. He releafed the cities of the empire from many fevere impofitions, which had been laid upon them by Vcfpafian ; took off a rigorons tribute, which had been laid upon carriages; and reftered thofe to their property who had been unjufly difpoffelfed by Domitian.

During his fhort reign he made feveral good laws. He particularly p:ohibited the raftration of male children; which had been likewife condemned by his predecefor, but not wholly removed. He put all thofe faves to death who had, during the latt reign, informed againt their mathers. He permitted no fatues to be erefed to honour him, and convented into moncy fach of Domitian's as had been fpared by the fenate. He fold many rich robes, and much of the fplendid furniture of the palace, and retrenched feveral unreafonable expences at court. At the fame time, he had to little regard for money, that when Herodes Atticus, one of his fubjecte, had found a large treafure, and wrote to the eniperor haw to difpofe of it, he received for arfiver, that he might ufe it; but the finder ftill informing the emperor that it was a fortuae too large for 2 private perfon, Nerva, admiring his honefty, wrote him word, that then he might abufe it.

A life of fuch generofity and mildnefs was not,
however, without its enemies. Calpurnius Craffus, with fome others, formed a dangerous confpiracy to deIt oy him ; but Nerva would ufe no feverity: he refted fatisfied with banifning thofe who were culpable, though the fenate were for inflicting more rigorous punithments. But the moft dangerous infurrection againft his interelts was from the pretorian bands; who, headed by Cafparius Olianus, infifted upon revenging the late cmperor': death, whofe memory was lill dear to them from hi; frequent liberalities. Nerva, whofe kindnefs to grood men rendered him fill more obnoxisus to the vicious, did all in his power to ftop the progrefs of this infurrection; he prcfented himfelf to the mutinous fildiers, and, opening his bofom, defired them to frike there, rather than be guilty of fo much injuftice. The fildiz:s, howeser, paid no regard to his remonftrances; but, feizing upon Petronius and Parthenius, few them in the moft ignominious manner. Not content with this, they even compelled the emperor to approve of their fedition, and to make a feeech to the people, in which he thanked the cohorts for their fidelity. So difagree able a conftraint upon the emperor's inclinations was, in the end, attended with the moft happy effects, as it caufed the adoption of Trajan to fucceed him in the empire, Norva perceirad that in the prefent turbulent A354 Acopts difpofition of the times, he food in need of an affiltant in the empire, who might fhare the fatigues of government, and contribute to keep the licentious in awe. For this purpofe, fetting afide all his own relations, he fixed upon Ulpius Trajan, an utter Atranger to his family, who was then governor in Upper Germany, to fucceed him. Having put his determination in exccution, and performed the accultomed folemnities, he inflantly fent off ambaffadors to Cologne, where Trajan then retided, intreating his affiftance in punifhing thofe from whom he had received fuch an infult. The adoption of this admirable man, proved fo great a curb to the licentioufnefs of the foldiery, that they continued in penfert obedience during the rell of chis reign; and Cafparius being fent to liim, was, by his command, either banifmed or put to death.

The adopting Trajan was the laf public at of Nerva. In about three months after, having put himfelf in a violent pattion with one Regulus a fenator, he was feieed with a fever, of which he fhortly after died, after a fhort reign of one jear four months and nine d.tys. He was the firlt freign emperor who reigned in Rome, and juttly reputed a prince of great gencrofity and moderation. He is alfo celebrated for his witdom, though with lefs reafun, the greateft inflance he gave ofit, during his reign, being in the chnice of his fincelfir.

Trajan's Camily was originally from Italy, lut he him- Great quafelf was bon in Seville in Spain. He very carly ac. litics of compunied lis father, who was a general of the Ro. Trijatu. mans, in his conpeditions =long the Euplrates and the Rhine ; and while yet very young, acquired a contiderable reputation for military accomplilhments. The caured his body to fatigue; he made long march:s o: foot; and laboured to acquire all the hlall in war which was necetfary for a commander. When he was made general of the arny in Lower Germany, which was unc of the moft coniderable employments in the crapire, it made no alteration in his maners or way of living; and the commander was feen noway differing from the private triburie, cxeept in his fupericr wildom and vir-
illes.
:us. The ment quatines of 1 is \(n\) :ind were accompar.ed with al:he atvantages cf perfon. His body was 11 aji- and vicrous; he wis at that mide time of life \(n\) s ich is harpiiy tenipered with the warmeh of youth an 1 t.e caution of age, being \(f_{2}\) years w. To thefe quadites were addect, a modelty har fecmed peculiar to limfuit aloae; is that mashind fund a pleafare in grati.g the feacerm, lifhenatets of whith the porieflir fermad no way confo us. Vpon the whole, Trajin is datiin guithed as the greateft and the beit cmperes of Romce. Ohbers on ight lave equiled him in war, ard fune right lawe been his rivals in cimency and gnodnefs; but he fecms the only priace who united thete talents ia the great: It perfedtion, and who appears equalby to ergage our admiration and our regard. Upon being intumed of the death of Norva, he prepared to return to Rome, whither he was invited by the united intreates of the 赂te. He therefore began his math w the the difipline that wisfor a long time unkrown in ile armies of the empire. The countries through whith he pafed were neither ravaged nor taxed, and he entercd the ci \(y\), not in a triumphant manner, though he hatd delerved it chien, but on foot, attended by the cisil offi ers of the fate, and followed by his foldiers, who marched litently forward with modefy and refpect. It wnuld be tedious and unneceffary to enter into a detail of this grow monarch's labours for the fate. His applicat. 13 to batinefs, his moderation to his enemies, his modety in exaltation, his liberality to the defersing, and his frugality in hi own expences; thefe have all been the fubj :Et of panegyric among his cotemperarics, and they con. tinuc to be the admiration of poncity. Lpungiving the prefect of the pretnrian band the fword, according to cuitom, he made we of this remarkable exprelion, ". Take this fword, and ufe it, if I have merit, for me; ii otherwife, againft me." After which he added, That he who ghave laws was the firf who was bound to obferve them. His failings were his love of women, which, however, never hurnied him beyend the bounds of decency; and his immoderate palion for war, to which he had been bred up from his childhood. The firt war he was engaged in after his coming to the throne was with the Dacians, who during the reign of Domitian, had committed numberlefs ravages upen the provinces of the empire. He therefore ratifed a power(tul army, and with great expedition marchad into the fe barbarous countries, where he was vigoroufly oppofed by Decebalus, the Dacian king, who for a long time witt:It od his boiden efforts; but was at latt entirely redured, and his kingdom made a Roman plovince, See Dacia. At his return to Rume, he entered the city in thiumph; and the rejoicings fur his victories lafted for the fpace of 120 days.

Having thus given peace and profperity to the empire, 'Trajan continued his reign, loved, honoured, and almoft adored, by his fubject. He adorned the city with public buildings; he freed it from fuch men as lived by their vices; he entert.ined pertions of merit with the utmoft familiarity; and fo litule icared his enemies, that he could fearcely be induced to furpoie that he had any.

It had been happy for this great prince's memory, Lfrifiams. about the ninth year of his reigu, les was pertuaded to
look upon the Cluiatians with a fufpicicus eyc. The cxtreme reastation which he proteffed for the religion of the cmpire, fer him deduonlly to oppofe every innovotion, and the progrcts of Chriltianity leemed to alarns him. A liw had ior fome time before been palfad, in whin all Hexcrix, or ficietics diflienting Irom the eflaLithed religion, were conlidered as illegal, heing teputed nurlerics 10 imponture an 1 fedition. Under the fanction of this lus, the Chriltions were perfecuted in a.l parts (fthe empire. Great numbers of them were put to death, as wall by popular tumults as by ediרs and jusicial proceedings. However, the perlecution ceafed after fome time; for the cmperor having a lvice from l'liny, the pro-conful is Biahynid, of the innocence and timplicity of the Cinillians, and of their inoffonlive and moral waty of living, he fudpended their puniflments. But a total nop was put to them upon 'liberianus the governor of Palceline's lending him word, That he ras "earied out with executing the laws againt the Gollileans, who crouded to execution in fuch multitudes, that lee was at a lofs how to procced. Upon this information, the cm; eror give orders, that the Chriftians fhoth not be fought atter: Lut if any offered themfelves, that they thould luffer. In this manner the rage of perfecution ceafed, and the emperor found leifure to turn the force of his arms aglinil the Armelvians and Pa"hians, who now began to throw off all futmifion to Rome.

Whic the was employed in thefe wars, there was a If furrecdreadful infurreftion of the Jews in all parts of the cm - tion of the pire. This wretched people, Boll infatuated, and ever Jews. expeaing fome fignal deliverer, touk the advantage of 'Trajan's a'fence in the caft to maflacre all the Greeks and Romans whom they got into their power, without relunance or mercy. This rebellion firlt began in Cyrene, a Roman province in Africa; from thence the flame extended to Egypt, and next to the ifland of Cyprus. Thefe places they in a manner difpeopled with ungovernable furs. Their barbarities were fuch, that they eat the fleth of their cnemic:, wore their fkins, fawed them afunder, call them to wild beafts, made them kill each other, and fudied nen torments by which to deltroy them. However, thefe cruellies were of no long duration: the gover nors of the refiective provinces making head againtt their tumulturus fury, foon treated them with a retaliation of cruelty, and put them to death, not as human bcings, but as outragious pelfs to focicty. As the Jews had practifed their cruelties in Cypus particuatrly, a law was publicly enaded, by which it was made capital for any Jew to fot foot on the inand.

During thefe blondy tranfactionc, Taman was pro- Succefles of fecuting his fuccefles in the call. His frilt march was Trjan an istes Armenia, the hing of which country had diflaimed the calt. all alliance with Rome, and receivel the enligns of royalty and d minion from the wonarch of Parthia. It wever, upon the news of 'Traj in's expedition, his fcars were fo grest, that he aboudoned his commery to the invaders; while the greatef part of lis governors and mobility came fubmilively to the cmperor, acknowledying thermielves his fubjects, and making him the moft coltly prefents. Hasing in this manner taken peffeftion of the whole country, and gotten the king into lis power, he marched into the dominions of the

\section*{R O M}

Rome. king of Parthia. There entering the opulent kingdom of Nefopotamia, he reduced it intu the form of a Roman frovince. From theace he went againit the Parthians, marching on foot at the head of his army; in this manner crofing the rivers, and conforming to all the fevenities of dific pline which were imp)fed on the muanel ioldier. His fucceffes againt the Parchans were grat and numerous. He conquered Syria and Chaldea, and tiok the famous city of Babylon. Here, attempting to crofs the Euphrates, he was oppofed by the enemy, who werc refolved to Atop his pallage : but he fecretly cauled boats to be made upon the adjoining nountains; and bringing them to the water fide, palled his army with great expedition, nor, however, without great flaughter on both fides. From thence he traverled tracts of country which had never before been invaded by a Roman army, and feemed to take a pleafure in purfuing the fame march which Alexander the Great had formerly marked out for him. Having pafled the rapid Areams of the Tigris, he advanced to the city Cteliphon, which he took, and opened himfelf a paffage into Perfia, where he made many conquefts, that were rather fulendid than ferviceable. After fubduing all the country bordering on the Tigris, he marched fouthward to the Perfian gulph, where he fubdued a monarch who portifed a conliderable illand made by the divided freams of that river. Here, winter coming on, he was in danger of lofing the greatelt part of his armey by the inclemency of the climate and the inundstions of the river. He thereiore with indefatigable pains fitted out a fleet, and failing down the Perlian gulph, entered the Indian ocean, conquering, even to the Indies, and fubduing a part of them to the Roman empire. He was prevented from purfuing further conquefts in this diftant country, both by the revolt of many of the provinces he hid already fubdued, and by the fcarcity of provilions, which feemed to contradict the reports of the fertility of the countries he was induced to invade. The inconveniences of increafing age alfo contributed to damp the ardout of this euterprife, which at one time he intended to purfue to the cunfines of the earth. Returning, therefore, along the Perfian gulph, and fending the fenate a particular account of all the nations he had conquered, the names of which alone compoted a long catalogue, he prepared to punith thofe countrics which had revolted from him. He began by laying the famous city of Edeffa, in Mefopotamia, in athes; and in a fhort fpace of time, not only retock all thofe phaces which had before acknowledgred fubjection, but conquered many other pruvinces, fo as to make himifelf maiter of the monf fertile kingdoms of all Alia. In this train of fuccelfies he farce met with a repulfe, execpt before the city Atra, in the deferts of Arabia. Wherefore judging that this was a proper time for bounding his conquelts, he refolved to give a mafter to the countries he had fubdued. With this refolution he repaired to the city Cteliphon, in Perlia; and theee, with great ceremony, crow:ed Parthamafpates king of Parthia, to the great joy of all his fubjefts. He eitablithed another king alfo over the kingdom of Albania, ricar the Cafpiun fea. Then placing governurs and lieutenants in other provinces, he relolved to return to his capital in a more magnificent manner than any of his predeceifors had dorie be-

\section*{R O M \\ [ \(43^{\circ}\) ] \\ R O M}

Rome. For this reafon he abandneed all the comquits whiel jur made, judging them to be raher an incondensall the the river Euphrates the b unduy of the enipire, plas cs.?crn
conquels of ilcian cing the legions along its banks to pieverot the incurfions of the enemis.

Having thes fetted the aftairs of the eaf, and lea-
ving Severus govern rof Syria, he took his journcs by land to \(R\) 'me, fending the athes of Trajan thother by fea. Epon his appreach to the city, he was informed of a maguificent triumpla that was puepaing for him ; but this he modenly declined, defiring that thote honours might be paid to Trajan's inemory which they lase deligned for him. In confequence of this command, a mof fuperb triumph was decreed, in which Trajan's flatue was carried as a principal figure in the proceffion, it being remarked that he wats the only man that ever triumphed after he was dead. Not content with paying him thefe extraordinary honours, his athes were placed in a golden urn, upon the top of a column ifo fect high. On this were engraven the particulars of all his exploits in baffo relievo; a work of great labour, and which is fill remaining. Thefe teftimonics of refpect to the memory of his jredecelfor did great honour to the heart of Adrian. His virtues, however, were contrafted by aftrange mixture of vices; or to fay the truth, he warted ftrength of mind to preferse his general rectitude of character without deviation. As an emperor, however, his conduet was moft admirable, as all his public tranfactions appear dietated by the foundeft policy and the mon difin. terelled wifdom. But thete heing already enumerated under the article Adrasn, it would be fuperfluons to repeat tlem in this place. He was fucceeded by Narcus Antoniaus, afterwards fumamed the Pions, whom he adopted fome time before his death. See

\section*{36: Antoninus Pius.}

Cuufes of From the beginning of the reign of Antoninus Pius, the decline we may date the decline of the Roman empire. From of the Ro. the time of Cæfar to that of Trajan, farce any of the mirc. emperors had either abilities or inclination to extend
the limits of the empire, or even to defend it argaint Rome. the barbarous nations who furrounded it During all this fpace, only tome inconfiderable provinces 10 the northward of Italy, and part of the iffand of Britain, had been rubjugated. However, as yet, nrthing was loft ; but the digeneracy and corruption of the people had fown thofe iecd of dififution which the empire puichly beg.in to feel. The diforders were grown to fuchan height that even '1 rajan himfilf could no: cure them. Indeed his ealt-rn conquelts could farce have been preferved hough the Icpublic, had been exilting in all its glny ; and theretere they were quietly refigned by his fucceffor Adrian, as too diftant, difaffected, and ready to be over-run by the barbarous nations. The province of Dacia, being nearer to the centre of government, was more eafily preferved ; and of coniequence remained for a long time fubjuct to Kome. During the 23 years of the reign of Antoninus, few temarkable events happened. The hiftorians of thofe times are exceflive in their praifes of his juftice, generofity, and other virtues, both public and private. He put a ftop to the perfecution of the Chrifians, which raged in the time of Trajan and Adrian, and reduced the Brigantes, a tribe of Britons, who had revolted. However, during his reign, feveral calamities befel the empire. The Tiber, overflowing its banks, laid the lower part of Rome under water. The inundation was followed by a fire, and this by a famine, which fwept off great numbers, though the emperor took the utmoft care to fupply the city from the mon diftant provinces. At the fame time the cities of Narbonne in Gaul, and Antioch in Syria, together with the great fquare in Carthage, were deftroyed by fire; however, the emperor foon re!? mer condition. He dicd in the year 160 , univerfally lamented by his fubjects, and was fucceeded by Marcus Aurelius, furnamed the Pbilofopher, whom he had adopted towards the latter end of his reign.

The tranfactions of this emperor the reader will find related under the article ANTovines Pbilofophus,
(A) As, after the death of Marcus Aurelius, the Roman, empire declined very faft, it may not be amifs here to give fome account of the military and other eftablifhments of the Roman emperors. Mr Gibbon obferves that, in the times of the commonwealth, the ufe of arms was confined to thofe who had fime property to defend, and an intereft in maintaining the laws which were propofed to be enacted. But, as the public freedom declined and war became degraded into a trade, thofe who had the property of the country chofe rather to hire whers than to expofe their own perfons, as is the cafe with our modern armies. Yet, even after all confideration of preperts had been laid afide among the common foldiers, the officers continued to be chofen from among thofe who had a liberal education, together with a good Alare of property. However as the common foldicts, in which the ltength of an army confilts, had now no more of that virtue called patriotifin, the legions which were formerly almoft invincible, no lovger fought with the fame ardour as before. In former tinies, the profeffon of a doldier was more honuurable than any other; but, when the folliers eame to be looked upon as hinelings, the honour of the profeflion funk of cousfe, and, by this means, one of the frongell motives which the foldiers had to fubmit to their fevere difeipline, and exert themfulves againtt their enemice, was removed. On the very fird entrince of a toldier into the Ronatn furvice, a folemn oath was adminiftered to lam, by which hee onggaged never to defert has fandard; to fubmit lis own will to that of his leaders, and to facrifice his life for the fafety of the comperor ard the empire. The attachment which the Romans had to their llandard: \& \(\alpha\) indeed attorithing. The rulden eagle, which appented in the front of the legion, was almolt in object of adoration with them; and it was efteemed impious, as well as ignominiuus, to abandon that facrea enfign in the time of danger. The centurions had a right to punith with blows, the generals with death; and it was an inflesible maxim of the Roman difcipline, that a good foldier thould dread his officers muchmore than the eneny.

No: withtanding a.l :h, fo fenfible were the Romens of the infuffecmey of mere valour without fkil, that

After the death of Marcus Aurelins, his fon Commodus fucceeded to the imperial throne without oppo. fition. He was in every refpect unworthy of his fit
ther; and fo prone to vice, that he wals generally believed to have been the fon, not of Marcus Aurelius, but of a celebrated gladiator, with whom the emprefs
military exercifes were the unremitted objef of their difcipline. The recruits and young foldiers were conAtantly trained both in the moruing and evening; and even the veterans were not excufed from the daily repetition of their exercife. Large theds were erected in the winter-quarters of the troops, that thele uleful habours might not be interrupted by tempeftuous weather, and the weapons ufed in thefe imitations of war were always twice as heayy as thofe made ufe of in real ation. The foldiers werc diligently imfructed to march, to run, leap, fixim, carry heavy burdens, and handle every fpecies of weapon either for offence or defence; to form a variety of evolutions; and to move to the found of flutes in the pyrrhic or martial dance. It was the policy of the ablelt generals, and even of the emperors themfelves, to encourage thefe military ftudies by their prelence and example; and we are informed that Adrian, as well as Trajan, frequently condefcended to inftruct the unexperienced foldiers, to reward the diligent, and fometimes to difpute with them the prize of fuperior flrength and dexterity. Undcr the reigns of thofe princes, the fcience of tactics was cultivated with fuccefs; and, as long as the empire retained any vigour, their military inftructions were refpected as the moft perfect model of Ruman difcipline.

From the foundation of the city, as the Romans had in a manner been continually engaged in war, many alterations badtaken place in the conftitution of the legions. In the time of the emperors, the heavy-armed infantry, which compofed its principal Atrength, was divided into 10 colorts and 55 companies, under the orders of a correfpondent number of tribunes and centurions. The firft coltort, which always claimed the poft of honour and the cuftody of the eagle, was formed of \(11=5\) foldiers, the moft approved for valour and fidelity. The remaining nine cohorts confitted each of 555 ; and the whole body of legionary infantry confifted of 6100 men. Their arms were uniform, and excellently adapted to the nature of their fervice; an open helmet with a lofty creft; a brealt-plate or coat of mail; greaves on their legs, and a large buckler of their lett arm. Their buckler was of an oblong and concave figure, fonr feet in length, and two and an half in beadtin ; framed of a light wood, covered with a bull's hide, and ftrongly guarded with brafs plates. Befides a lighter fpear, the legionary carried the pilum, a ponderous javelin about lix feet long, and terminated by a malfy triangular point of lteel i\& inches in length. This weapon could do execution at the diflance of 10 or 12 paces; but its froke was fo powerful, that no cavalry durft venture within its reach, and farce any armour could be formed proof againtt it. As foon as the Roman had darted his pilum, he drew his fivord, and rufhed forward to clofe with the enemy. It was a thort well-tempered Spanifh blade with a double edge, and equally calculated fur the purpofes of pulhing and friking ; but the foldier was always inftructed to prefer the former ufe of his own weapon, as his body acmained thereby the lefs expofed, while at the fame time he inflifted a more dangerous wound on his adverlary. The legion was ufually drawn up eight deep; and the regular diftance of three feet was left between the files and ranks. Thus the foldier poffeffed a free fpace for his arms and motions; and fufficient intervals were allow: ed, through which feafonable reinforcements might be introduced to the relief of the combatants. The cavalry, without which the force of the legion remained imperfect, was divided into ten troops or fquadrons: the firt, as the companion of the firt cohort, contifted of 132 men ; whilt each of the other nine amounted only to 66 . The entire eftablifhment formed a body of 726 horle, naturally connected with its refpective legion; but occalionally acting in the line, and compofing a part of the wings of the army. The cavalry of the ancient republic was compofed of the nobleft youths of Rome and Italy, who, by performing their military fervice on horfeback, prepared themfelves for the offices of fenator and conful; but after the alteration of manners and government which took place at the end of the commonwealth, the mof wealthy of the equeftrian order were engaged in the adminiftration of juftice and of the revenue; and, whenever they embraced the profefion of arms, they were immediately entrufted with a tronp of horfe or a cohort of foot, and the cavalry, as well as the infantry, were recruited from the provinces. The horfes were bred for the moft part in Spain, or in Cappadocia. The Roman troopers defpifed the complete armour which encumbered the cavalry of the ealt. Infle.dd of this, theiv arms confifted only of an helmet, an oblong thicld, light boots, and a coat of mail. A javelin and a long broad fisord were their principal offenfive weapons. They feem to have borrowed the ufe of lances and iroa maces from the barbariaris.

Befides the legionaries, the Romans, efpecially in the times of the emperors, began to take auxiliaries into their pay. Confiderable levies were regularly made among thofe provincials who had not yet attained to the rank of Roman citizens. Many dependent princes and communities, difperfed round the frontiers, were permitted, for a while, to hold their freedom and fecurity by the tenure of military fervice. Even felect troops of barbarians were compelled to enter into the fervice; which was afterwards lound to be a mof deftructive \(x\) edient, not only as it carried the Roman military fkill among barbarians who were otherwife unacquainted vi li it, but it gave thefc auxiliaries themfelves frequent opportunities of revolting, and at latt of derhroning the emperors at pleafure, and even of overturning the empire iffelf. The number of auxiliaries was feldom interior to that of the legronaries themfelves. The bravef and moff faithful bands among them were placed under the command of prefects and centurions, and ferverely trained in the arts of Roman difcipline ; but the tar greater part retained thofe arms which they had ufed in their native country. By this inftitution, each legion, to whom a certain number of auziliaries was allotted, connined within itfelf crery feccies of lighter troops, and of mifile weapons:

K ne Tanfuna vas fuppofed to be intimate. According to Mir Gibbor, however, Commodus was not, as hus been seprefented, a tizer born withan infatiate thisth of hu-
man blood, and capable from his infancy of the mof inhuman action:. Nature had formed him it a weak, rather than a wicked difpofition. His limp.uity and timidity
and was capable of encountering every mation with the advantages of its rcfpective arms and dicipline. Nor Was the legion deftitute of what, in midern language, would be ftyled a train of artillery. This confitted of 10 military cngines of the largett fize, and 56 fmaller ones; but all of them, either in an oblique or horizuntal man. \(n \mathrm{r}\), dicharged fones and darts with irrcfittible violence.

The camp of a Roman legion preferted the appearance of a fortified city. As foon as the fpace was marked nut, ule pionecrs carcfully levelled the ground, and removed every impediment that might interrupt its peafeat rogulaiig. lis form was an exad quadrangle ; and it may be computed that a fquare of 700 yards was fufficient for the encampment of 20,000 Romans, though a fimilar number of modern troops would expofe to the encmy a frent of more than treble that extent. In the midft of the camp, the protorium, crigeneral's tent, arofe above the others; and the cavalry, infantry, and auxiliaries, had each their refpective fations appointed them. The lliects were broad, and perfetty llranght; and a vacant face of 200 feet was left on all fides between the tertsand rampart. Thes rampart isfelf was 12 feet high, armed with a line of frong and intricate palifades, and deended by a ditch 12 feet deep and as much biead. This labour was performed by the legions themfelves, to 1.hum the ufe of the fipade and the pick-as was no lefs familiar than that of the fword or pilum. Whenever the trumpet gave the fignal of deparcure, the camp was almon inftantly broke up, and the troo ps fell into their amks will unt delay or confufion. Befides uheir arms, which the foldiersfcarcely confidered as an incumbrance, thicy were laden with their kitchen-furniture, the inltruments of fortifiction, and provifions for nany days. Under this weight, which would opprefs a modern foldier, they were taught to advance by a regular Acp, near 20 miles in fix lours. On the appearance of an enemy, they thew atide their baggage, and, by eafy and rapid evolutions, converted the column of march into an order of battle. The flingers and archers fkirmifh d in the front ; the ausilianies formed the firt line, and were feconded or fuftained by the legions. The cavalry covered the flanks, and the military engines were placed in the rear.

The numbers of the Roman armies are not eafily calculated with any tolerable accuracy. We may compute, howcrer, that the legion, which conffed of 683 Romans, might, with its attendant auxiliaries, amount to \(12,500 \mathrm{mon}\). The peace ellablithment of Adrian and his fuccellors was compofed of no fewer than 30 of thefe furmidable brigades; and mon probably formed an army of 370,000 men. Inftad of being confined within the walls of fortified cities, which the Romans confidered as the refuge of weaknefs or pufillanimity, the legions were encamped on the banks of the great rivers, and along the frontiers of the barbarians. Three legions were fufticieat for lritain. The principal ftrength lay upon the Rhine and Danube, and confifted of 16 legions, difpofed in the following propostiors: wo in the Lowcr, and three in the Upocr Germany; one in Khatia; one in Noricum; four in Pannonia; three in Mefia ; and two in Dacia. The defunce of the Euphrates was intrufted to eiglat legions, fix of whom were placed in Syria, and the other two in Cappadncia. With regard to Egypt, Africa, and Spain, as they were far removed from any important feene of war, a fingle legion maintained the dumoflic tranquillity of cach of thofe great provinces. Italy was defended by the city cohorts and pratorian guards formerly mentioned. Thefe differed nothing from the legiens in their arms and inftitutions, except in a more fplendid appearance, and a lefo rigid difipline.

Tl.c Roman navy, though fuflicient for every ufeful purpofe of government, never feemed adequate to the ;reatnefs of the empire. "The policy of the emperors was directed only to preferve the paceful dominion of the A.Iediterrancan fea, which was included within their dominious, and to proteo the conmerce of their finbjects. Two permarent fleets were fationed by Auguftus, one at Ravenna on the Adriatic, and the other at Mifenum in the bay of Naples. A very conliderable force was alfo ftationed at Frejus in Provence; and the Euxine was ghiarded by 40 thips and 3000 foldiers. To atl thefe we may add the fleet which preferved the communication between Catil and Britim, ard a great number of veffels confantly maintained on the Rhine and Damule to hore raf's the enemy, or intercept the pafiage of the barbatians. The whole military eftablifhment by fea and lard amour:ted to about 450,000 men.

It was rot, however, to this formidable power alone that the empire owed its greatnefs. The p licy of the law onnibeted as muh to its fupport as the martial eftablifhment ittelf. Aecording to Nir Gibloor, though the puri.ces mi hat uccafiunally tuffer from the partial abufe of delegated authority, the general principle of "rve:nm-nt was iofs, fimple, and beneficen: Among thefe beneficient principles he reckins that of uriverfal fincration; but to this thene were feveral exceptions: fur the brith Dhill were perfecuted and dentryed by
 wel : fieguently i, and hat even uader the very belt emperons, Thay and Mancus Autcins. Huweser, as a

timidily rendered him the flave of his attendants, who gradually corrupted his mind. His cruelty, which at firt obesed the dictates of others, degenerated into Vol. XVI.
habit, and at length becatne the ruling pafiun of his
may difover, that notwithfanding the inceitant demands of wars and colonies, the citizens, whe, in the time of Scrvitas Tulhus, amounted to no more than \(8, y, c c\), were muliplied, tefore the end of the focial war, to the rum. ber oi \(4 \sigma_{3}, 000\) men able to bear arms in the fervice of their countiy. When the allics of Rome claire ed an cqual fhare of honours and privileges, the fenate pecfercel the chance of war to a conceflion ; however, at laft, ali the Italian Rates, except the Samnites and Lucaniains, were admitted into the bofom of the republic, and fien ec:tributed to the ruin of public frecdom. When the popular alfemblies had been fuppreffed by the adminillat:nrs of the emperore, the conquerors were dillinguilhed from the varquifhed nations only as the fist and moit honourable order of fubjects; and their increafe, however yapid, was no longer capotid to the fame dant. gers. Yet the princes who adoptet the maxims of Auguftuc, guarded with the frictert eare the dic.aty al the Roman name, and diffuted the freesom of the city with a prudent liberality.
"'Till the privileges of the Romans had been pregreflively extended to all the inhabitants of the empire, ant important diltiaction was preferved between laty, and the provinces. The eftates of the latians were caenpted from taxes, and their perfons from the arbitrary jurifdition of governors. From the foot of the Alp; to the extremity r. \(t\) Calabria, all the natives of Italy were born citizens of Ronse. The provirices of the erejpire were deftitute of any public torce or contitutional freedom. The frec flates and citics, which had embraced the cante of Rome, were infenfibly tink into real fervitude. The public authority was cvery where engrofed by the minifers of the fenate and of the emperer; and that authority was abfolute. But ile farme falutary maxims of govermment which had fecured the peace and obedience of Italy, were extended to the molt difant conquelts. A nation of Romans was gradually formed in the provinces, by the double expedient of intreducing colonics, and of admitting the molt fathtul and deferving provincials to the fredom of Rome.
"So fenfible were the Romans of the influence of language over national manners, that it was their monf fe. rious care to extend with the progrefs of their atms, the ule of the Latin tongue. The eattern provinces, however, were lefs docile in this refpect than the wefter, ones; and this obvious difference made a dittinetion between the two pottins of the empire, "hich became very remarkable when it began to decline. No was the infusnee of the Greek language and fentiments contined to the narrow limit; of that once cel brated ecuntry. Their empire, by the progref of colonics and co..queft, had been diffued from the Adriatic to the Euphrates and Nil:. Ahit was covered with Greek cities, and the long reign of the Macedonian kings had introduced a tilen: revolution into Syria and Egyp. In their pompous courts, thofe princes nnited the ejegance of Atlens with the lusurg of the catt ; and the example of the coutt wes imiate, at an lumble diftance, by the hi, he: ranks of their fubjects. Such was the gencral divifien of the Reman empiac into the Latin and Greflan. guages; to which we may add a third dillinction for the body of the natives in Syria, and efpecially in Egypt. The ufe of their ancient dialects, by fecluding them from the commerie of mankind, clecked the improvements of thefe babarims. The fluthful efeninacy of the former expered them to the contompt, the fullen fercionfie's of the latter excited the aremoon, of the Roman conduerors. They foldom deti:co! or delerved the free.iom of the city; and it is rematied, that moie than 2.30 years clapled after the ruia of the Ptolemies, before a native Egyptian was admitted into the tenate of Rone.
"The number of fihjects who acknowledged the laws of Rome, of citizens, of provincials, and of flaves, cannot now be fixed with fuch accuracy as tle importance of the object would deferve. We are informed, that when the emperor Clandius cxercifed the rifice of cenfor, be inod an azcount of \(0,354,000\) Roman citizens; who, with the proportion of women and chidren, mutt have amounted to abcut \(20,0 c 0,00 c\) of frouls. "llh: multitude of fub, cets of an inferior rant wis uncertain and fuctuating: but after weighing with a:teriin every circumfance which could infuence the balance, it feems probable that the:e cxiled, in the time ni Clumlius, about twice as many provincials as there were Roman citizons, of cithor lex, and of every are: and that the flives were at leatt equal in number th the free iahabitants of the Roman won: The intat amourt of this imperfef calculation would tife to about 120 m lions it perfons; a degree fi pepalasiea which pofibly exccels that of modea Lurnpe, and firms dicemen numbrous fuciviy that has ever becia united under ihe fime fylem of gerimment.
 embraced by the Romans. T'ae vancuithel nations, blonded in!n cna great jouple, refored tie i.cpe, ray even the sibh, of refuming their independence, and farcely confoderel thair oan erithease as dithet from the exifence of kome . The eftabifhed autherity of the emperors pervided, wi:h ut an efori, the wile

 magilrate feldom required the aid of a miltury force.

\(r\) - , woil l. Nibyy very Rrange indatices of his cruelty as reluted by the ancients. He is haid to have cut aubu.r a conpulat man whons be fow walking along the Ureet ; party, to try lis own ftength, in which he fuculy excelled; and purtly, as he himfelf owned, out if curiolity, to tice his entrails drop out at once. He wock pleabue in cutting off the feer, and putting out th.c ejes, offuch as he met in his rambies thr ught the city; telling tl:e former, after he had thus maimed atocm, that now they belonged to the nation of Monofelif; and the latter, that ther were now become Lufcuni, diluding to the word lufius, "one.cyed." Some f.e m.urdered becanfe they vere negligently dreffed; - : iners, becaure they fecmed to be trimmed with too sumh nicety. He pretended to great fkill in furgery, efpecially it le:ting blond: but fometimes, inflead of cating Ly that mams thofe whon he vificed, or who were frewailed upon to recur to him, he cut off, by way 1s civerfion, their ears and nofes. His lewdneis and debauckeries were equally romarkable, and equally infimous. However, die is faid to have been exceedingly wall cailed in athery, and to have ferformed incred.ble feats in that woty. He excelled all men in firengeth ; and is faid to have run an elephant through wiol his fipear, and to have hilled in the amphitheatre soo lions, one after another, and each of them at one !1] w. Porge:ful of his dignity, lee entered the lifls , i h the common gladiators, and came off conqueror 335 times; wlence be often fubferibed himfelf in lis lettere, the congeror of 1000 gla.itazors.

Tise plablic trandations of this reign were but very Nos
the following conditions. 1. 'That they' hould not
Ronse. fettle within fise miles of the Damube. 2. That they \(\underbrace{-}\) floould deliver up their arms, and fupply the Romans with a cettain number of troops when required. 3 . That they fhould affemble but once a month, in one place only, and that in prefence of a Roman centurion. 4. That they thould not make war upon the Jazyges, Buri, or Vandals, withont the confent of the penple of Rome. On the other hand, Commodus promifed to abandon, which he accordingly did, all the caftles and fortrefles held by the Romans in their country, excepting fuch as were within five miles of the Danube. With the other German nations, whom dis father had almoft entirely reduced, he concluded a very difhonourable peace; nay, of fome he purchafed it with large fums of money:

Soon after the return of the emperor to Rume, his fifter Lucilla, perceiving that he was univerfally abhorred on account of his cruelty, formed a confpiracy arginft his life. Among the confpirators were many fenators of diftintion. It was agred among them that they fhould fall upon the emperor while le was going to the amphitheatre through a narrow and dark patiage; at:d that Clatidius Pompeianus, to whom Lucilla had betrothed her daughter, thould give the firt blow. But he, inflead of flrking at once, thowed him the naked dagger, and cried out, "This prefent the fenate fend; you :" fo that the guards had time to refose the emperor, and to feize the confpirators, who were foon after put to death. The emperar banifhed his filter to the illand of Caprex, where he foon after caufed her to be privately murdered.

The fivounite minifer of Commodus was one Pe-
rennis ;
roal firencth of the monarchy. Their perfonal valour remained; but they no longer poffeffed that public conrage which is nourilhed by the love of independence, the fenfe of national honour, the prefence of danger, and the habit of command. They received laws and guvernors from the will of their fovereign, and tratted for their defenceto a nereeniry army. The polterity of their boldelt leaders were contented with the rank of citizts, and ful ient. The moft afping firits reforted to the comt or tlandard of the emperors; and the dyitel provinces, deprived of political itrength or union, infenfibly funk into the languid indifference of piма:
-. The luve of letters, almoft infeparable from peace and refinement, was fafhionable ameng the fubjeas of Adrian and the Antonines; who were themfelves men of learning and curiofity. It wats diffufed over the whole extent of their cmpire; the moft nothern tribes of Dititons had acquired a talte for rlietoric ; Homer as well as Virgll were trinfcribed and fludied on the banks of the Rhine and Danube; and the moft liberal rewards fonght (ne the faintit glimmerings of literary merit. The fciences of ptytic and aftronomy were coltivated with fome der rec of apputation; but, if we excep: Lucian, an age of indolence palfed away without producing a fingle writer of geniss who deferved the attentim of pollerity. The authority of Phato, of Arillotle, of Zeno, and Epicurus, ilill reioned in the fchools; and their fytems, tranmmated with blind deference from one gencration of difdiples to another, precluded every generous atempt to cornect the errors or enlarge the bounds of the homan mind. Tlise beauties of the poets and orators, inllead of hindling a fire like their own, prodnced only fervile imiintions; cr, if any ventured to deviate from thete modes, they deviated at the fame time from grod fenfe and propricty. The provincials of Reme, traned by an uniform antificial education, were engaged in a very megual competi, inu with thofe bold ancionts, who, hy exprefing their genuine feelings in their native tongue, had ahe ady occupied every piace of homonr. The nawe of port was almolt forgoten; that of orator was ufuried by the fophins. A clond of ertics, of compilers, of commentators, darkened the face oflearnitg, and the decline of 'genins was foon followed by the corruption of talte.
"Longinus obfervis and laments the degeneracy of his contemporaries, which debafed their fentiments, enervared their e uraze, and deprefied ileir talems; conparing them to pigmies, whofe fature ha, been diminifhed by erinfan prefurc on their limbs. This dimmutive fature of mankind was conlantly finking below the old fandard, anci the Ro nan world was incleed peopled by a ace of piomies; when the fieree giants of the north broke milad mendel the puny bree.t. They relfored a maly freedom; and, after the revolution of ten centuries, frecdum. becume the happy fatent of tafie and ficience.."

Kome. rennis; who in oppreffion and crucley fuems to have been nothing inferior to thofe of the moft tyramical emperors. During the firft part of the reign of Commodu:, he ruled with an abfolute fway; but at laft was torn in fieces by the enraged ioldiery, whom he had offended by his ton great feverity. He was fucceeded in his place by a ifreedman named Cleander; for the empero: himfelf was fo much taken up with his pieafures, that he could not beftow even it moment on the affairs of thare. The new miriter abufed his power in a more flagrant manner than even his predecefor had done. By him all things were openly fet to fale ; offices, provinces, public revenues, juftice, and the lives of men both innocert and guilty. The minifter, who ruled the emperor without controul, infured fuch ter\(r\) rrs into his timoreus mind, that he changed the captains of his guards almoft continully. One Niger enjoyed the dignity only fix hours: annther only five ditys : and feveral nthers a fill hor:er fpace. Moft of thofe officers lof their lives alone with their emplnyments; being acculed of treafon by Cleander, who continually fulicited, and at laft obtained, that important pof for himielf.

In the year 187 happened a remarkable revol:. One Maternus, a common foldier, having fied from lis coInurs, and being joired by many others guilty of the fame crime, grew in a fhort time fo powertinl, the banditri flocking to him from all parts, that he over-ran and plundered great part of Ganl and Spain; formed the frongef cities; and fruck the emperer and people of Rome with fuch terror, that troops were raifed, and armies difpatched againt him. Pefcennius Niger was font to make head againf him in Gaul, where he became very intimate with Severus, who was then gnverroo cf Lyons, atd who wrote a letter to the empernr, commeading the prudent and gallant behaviour of Niger in purfuing the rebels. Maternus, finding himfelf reduced to great Araits, divided his men into feveral ima!l bands, and marehed pisately with them by different ways into Italy; having mothing lefs in view than to murdar the emperno during the folemnity which was kept annually in honour of the mother of the gods, ard on his death to fe:ze upon the cmpire for himfelf. Thes all artived at Rume undicovered; and feveral of li:s men had aiready mixed themfelves with the emperon's guards, when others of his own party betrayed him. He was immediately feized and executed; and his death put an end to the difturbances which fume of his followers had begun to raife in other provinces. In the fame year broke out the mont dreadful plague, fays Dio Catins, that had been known. It lafted two or three years; and raged with the greateft vinlence at Rome, where it ficquently cifried off 2000 perfons : 1 day. The following year a dreadful fire, which confumed a great part of the city, was kindled by lightring; and at the fame time the people were aflicted with a dreadful famine, nccafioned, according to fome anthors, by Cleander, who, having now in view nothing lefs than the fovereignty itfelf, bought up underhind all the enrn, in order to raifc the price of it, ard gain the affelions of the coldiery and people by diftriburing it among them. Others tell uc, however, that Papirius Dionyfius, whofe province it was to furply the city with provifions, contributed towards the fanime, in order to make the reople rife againft Clein-
der. Be this as it will, the populace arerioed a!l their calamitics to this hated minifter; and one day, while the people were celcbrating the Circaffian games, a troop of children, having at their had a young woman of an extraordinary flature and fierce afpect, entering the circus, began co utter aloud many bitter invectives and dreadful curfes againf Cleander; which being for fome time anfwered by the pecple with other invectives and curies, the whole muititude rofe all of a fruden, and flew to the place where Cleander at tbat time refided with the enrperor. There, renewing their invectives, thes denandel the head ot the minitter who had been the occafion if fo many calmmities. Hereupon Cleander ordered the pratorian cavalry to charge the multitude; which they did accordingly, dsiving them with great flaughter into the city. But the populace difcharging thowers of Rones, bricls, and tiles, from the tops of the houfes and from the windows, and the city-guards at the fame time taking part wit! the people, the prxtorian horfe were foon obliged to fave themfelves by Hight : nor was the flaugher ended till the emperor, apprifed of the tumult, caufed the head of Cleander to be ftruck off and thrown out to the enraged populace. The emperor himfetf did not long furvive Cleander ; being cut bin Conomos his fender beis his favourite concubine, Lretns captain of the guards, and Eriectus his chamberlain.

No foner was the dea'h of Commoxus krown, than the fenate affembled, and declared him a public enem!, loading him with curfen, ordering his Ataues to se bro:" ken to pieces, and his name to be rafed out of all public infcriptions; and denanded his body, that it might be dragged thrnugh the Areets, and throwu in:n the Tiher. But Heivius Pertinhx, whom the conspirators pertinas had previoufly deligned in the empire, and who had raifed to already affumed it, prevented fuch an outrage, by let. the cmpire. ting the fenators know that Commodus was alreacy bunied. This extraordinary perfonage had paffed through many changes of fortunc. He was arizinally the fon of an entranchifed flave, called Elius, who only gave him fi, much learang as to qualify lim for kecping a little thop in the city. He then bccam: a fchoolmafter, afterwards fudied the law, and aftor that became a foldier; in which ithtion his betaviour was fuch as caufed him to be fonn made capeain of a cohnrt againft the Parthians. Being thus merrduced to arms he went through the ureal gradition of military preferment in Britain and Moffia, until te became the commander of a legion under Aurelius. In this fation he performed fuch excellen: fervices againft the batharians, that he was made confut, and fucceffively governor of Dacia, Syria, and Afra Minor. In the reign of Commodus he was banifhed; but foon after recalled, and fent into Briain to reform the abufes in the army. In this empinyment his ufual exerandinary fortune attended lim: he was oppofed by a fedition among the legions, and left for dead among many others that were thin. However, he got over rhis danger, Pererels punithed the mutineers, and eflablified regularity ant difcipline among the troops he was fent to cemmand. Fiom thence he was removed into Afriea, where the fedition of the foldiers had like to bave been as fatal th him as in his former government. Removir.g from Africa, ard fatigned with an athe life, he betook limfilf to retirement : but Commodus, 312 willing

He attenpted \(t\), retrain the licentinufin is of \(\because\) C. pratr nom bands, and puta fop to the injuries and for aenees hey ecommitted agai:.ft the people. He fuld are t a the bufonns and jefturs of Commodus ats flaves; patecularly luch as had oblene rames. He continu. LIt fequetited the fenate as orien as it lat, and never ruiu.d an audiesse even to the meanelt of the peop'c. II. sfuecets in foregia affairs was equal to his internal police. When the barbarcus nations abruad had certain intelifease that he was emperow, they immediate1y laid down their arms, well knowing the uppefition they were to expeet from fo experienced a commander. Hi, great error was avarice; and that, in tome measure, ferved to haften his suin.

The pratorian foldicrs, whofe manners he had attempted to reform, having been long corrupted by the indulgence and profution of their formes monarchs, be gan to hate him for the partimony and difeipline he had introcuced among them. 'Ihey therefore ictolved to dethroae him; and for that purpore dect ired Miteruns, an ancieat fena or, emperor, and endeavoned to cate him th the carmp on melaim him. Ma'enus, lowever, was tom juth to the neruts of Prerinas, amb :o faithful a fubj. \&t, to c near in thecir feditions de figns; whed re efaping rut olt their hans, he fod, firte the the empern, and then out if the chty. 'Tliey then noninat eal na: Fileo, mother fenatur; w. om the finate "ould hare ordered for ex emtion, had are Pur tuntex interp ted, who dechared that durireg his reign no fena or thonld fuffer dan'h.

The pisturiant diers then refoived manimonfy ment to ufe any feret confir. ciss, or frivile conamances, but belty to feize upon the en petor and omire as once. 'l'ney' acenelingly, ia a tunn hou, manner, marched through the theets of Rane, and enterat the paitece withoat oppofition. Such was the terers at their :apluach, thit the greatelk bar' of the empera's neten-

 their adwice; declx:ine, th it was un oo.thy his imp it lignity, and all his pat actions, to live hme't by thight. IIming thos ref lyed to fice the rebels, he lad fume hopes that his prefence a'one wou!d territy and confound ih:m. But what eculd his former virthe, or thedignivi of command, avail againit a tumu? thous rablule, hurfed up ia vice and minilers of forner tyrann ? One Tly whive a 'lumgian, Itruck him "ith his latace on the beatt, trying out, "O The fol. dicrs fend yon this." Pertmox finding all was over, encered his head with his robe, and lunk duwn, manglid with I mathitule of wounds, which he received Ir m var ons alli..fins. Ficlectus, and fome more of la's attendants, whe attimpted to detusd him, were allo flam: his fon and daghter soly efaped, who ha: pened in be lodged out, if the palacc. 'l'hu, aterer a reign of ti.ree monti's, Purtma: fell a facritice to the licentinus lury of the praterian army. From the umber this adventures, he was called the tancis-lall of Fortan: and certanly no man ever cxperienced luch a varicty oftituations with to blamelefs a charater.

The foldiers hang committed thi ou!rage, retired Theompire with great precipitation; and getting ont if the city expofed to to the reft of thir c mpanions, exped tionny forvined lute, and their can:p, expecting to he attackid by the extizens. Two days hasing paffed wi hout any attempt of this kind, they became more infolent; and willing t, make ule of the power of whech they found themfelves polfelled, made proclamatinn, that they would fell the empire \({ }^{2} 1\) whrever would purchae it at the highteft price. In confequence of this proclamation, foodious and innjult, only two bidders were foun 1 ; namely, Sulpicianus and Didius Julianus: '1he fo:mergat cunfular perfon, profet of the city, and fon-in-law to the la e emperor Pertinax; the latter, a e nfular perfun likewife, a great lawyer, and the wealthieft man in the city. He was fitting with \(f\) me friends at dirner when tine proclamation was puiblithed; and being chammed with the profpeet of unbeunded power, immed ately rofe from table and hafened to the camp. Sulpicianus was er there before lam; but as he had rather pro. miles than area ure to befow, the uthers of Didius, who produced inmmenfe funs of ready money, prevailed. He was roceived inio the camp by a ladder, and they ir itanilly fwore to oley him ats emperor. Frim the cany he was attended by his new elacters into the city; tie whrle body of his gruads, which confited uf 10,000 men, manged around him in fith order as if they lan. 1 prepored for buttle, and not for a peacetul coremwny. 'Ilec (itizens, hawewer, refued tu c. nfirm his elcation; but rather cuafed lim as loe palicd. ITpon beias comducted to the fenate-h ule, he adreffed t'e few din:turs that were profont in at very laconic fpectis " lathese, you want an emperar; and I am the litteli perfon! on can choofe." B .t iven this, thert as it lems, was unnecelfary, tince the fenate had it i: t in their pown to acfule lheir appobation. His fpech Icing biached by the army, to whom lae had given about a million of flenling, liteceded. the choic of the foldiers was confirmed lyy the fenate, and Didins wiss acknowleded emmer. r, now in the 57 th year o! his age.

It thould feem by this weąk morarch's conduf whers

of an empirc ra'her a platiue t san a toal. Intcad of autenpt:ng to ghin the hearis of his ubject;, he gave himedf up to edie and inaftert, utterly reg.rdeleis of the dutiss of his facion. He was mild and gen le in. de:d; reither injuriug any nor expecting to be injut red. Bu: that avarice, by which he bic.ume ( pulent, laill foll wed him in his cxalation; fo that the very foldiers who elceted lum, foon began to detert him or th. re qual ties, fo very "ppolite to a military characier, The people alfo, againft whofe confent he was chc fen, were no lefs inimical. Whenever he iffued from his p.llace, they openly poured torth their imprecations azuint him; crying out, that he was a thief, and had follen the empire. Didius, however, in the true liprit of a trader, patiently, bore it all; fometimes beck ning them with fmiles to approach him, and tellify ing his reg ird by every kind of fubmilion.

\end{tabular}} \(\mathrm{Ni}_{\mathrm{i}}^{2} \mathrm{t}\) rand Septinius scycrus as funle the chipire. home, two valiant generals, in different parts of the empire, difclaimed his authority, and boldly refolved to atter,.)pt the throne for themfelves. There werc, Peicennius Niecr, governer of Syria; ;nd Septimius Severus, commander of the German legions. Niger was beloved by the peapie for his clemency and v.luur ; and the report of his propofing Pertinax for his model, and reciuving to revenge his death, gained him univerfal eflecm among the people. Being thus apprifed of their inclinatior.s, he eafily induced lis army in Syria to prochaim lim emperor ; and his tule was, fherily after, acknowledged by all the kings and poteriates in Alia, who fent their ambafladors to him as their lawful prince. The pleafire of being thus treated as a monarch, in fome meature retarded his endeavnurs to fecure his :itle. Entirely fatisfied with the homave of thoie ahout lim, he neglecied the opprounities of supprefing his tivals; and yave himeff up to luxury and feallung at Anticch. 'The condut on' Severus, an Af ican by birch, was very different. Being procl imed by his army, he began by promifing to revenge the de:th of Pertinas, and took upon him his name. He next fecuicd the fidelity of ath the ttrong places in his province; and then refflued, with the utmont expedition, to maich with his whole force dircetly to Rome.
In the miran time, Did us, wino ditr garied the attempts of Niger, was greatly allurmed at thote of Sevelus. HI: firt, with many folicitations, procured the sen-te to proci:im him a traitor. He then applied himafll tu mate the neceffary provifions to oppote tim, in which lie fond no thing but dfappointment. Thic colorits it.t elefted him were enervated by vice and luxury; the penple de'efted his caufe; and the citics of tazly had long been difufudt the arto of w.ir. Sume aldvifed him to niarch forward, and micer Sevcrus as he was or fing the Alps: others weve for fending the wenera's upon that expedition. The unf runate Didtus, enequal to the talk of empire, and qui:e conformaded with the mul'iplicity of cr minfel, could tahe mo oth.er reioluti \(n\) but that of awaiting lis tival's coming at R :ne. Accordingl', foon afict being informed of his appranch, he obitind d the conicnt of the fenate to fend
 emsire. But Severus rejected this offier, confciot:s of lhis own frength, and of the we.tin: is of the propoier. the fenate foon appeared of the fame fentinents; and
percciving the tiandity and weaknefs of theit pacheat
Kairs. in tfer, began to abandon lim, alleging, that he who could not cefend the empire was not worthy to govern it. D.dius vainly cnicavoured to reduce them to their du:y, firlt by intreaties, and then by threats; but thefe only lerved to hatten his deftruction. The fenate being called together, as was formerly practifed in the tines of the commonwealth by the confule, the; unanimonily decreed, 'I'hat Didius fhould be deprived of the empire, and that Severus thould be prochamed in his thad. Flacy then commanded Didius to be Nain; and fent mentengers for this purpofe to the palace, where they found hom difarmed, and weeping amrong a lew friends that itill athered to his interelt. When tha executioners began t:s prep.ire for their fatal errand, he expoltulated with them, demanding what crime he had committed? He could no: be perfuaded th think, that paying his money, and receiving an empire in exchange, delerved jo fevere a punilhinent. 'I'he executioners, lowever, were neither able nor wiiling to en. ter iato the merits of the cause; they prefently led him into the lecret baths of the palace, and obliging him to ftretch his neck furward, after the manner of condemned criminals, truck off his head, and placed it up in thofe courts wher he hadilimerly pleaded with graat fuccefs.

The fenate having thus difpatched Didius, fent am. Severus deballidar, in Sicucru., yeldirg him obscience, granting carret emhim the e figns and the ufual tith.s o. cmpiac, and in-piror. forming him of the death of Didius. Sifurus, who was now about 47 years of age, recenved them with dll pr. per refpect ; and entertaining them ionocirably continued his march towaras Rome. As lic came near the city, his firl excrion of power was, to have all the pratorian foldiers who had lately fold the empire come fort unarmed to mest him. Thefe, though fenuble of theit danger, h.id \(n\), uther ref,urc: laft but compliance; and accordegiy came forward with branches of laurel, a it to welcume his approach. Suerus, how. ever, \(f\) on thowed how little ctapable thair pretent fubnifli n wis to atoace fr their palt riffences: atter up. braidi.g them, in a ih it fpecth, witu all heir crimes, he commanded th.m ts \(\mathrm{b}=\) in tantly thipped of their military habits, deproed of the name and honwar of filliers, al d bitilithed 100 mmes from Rune. Ife then entered the city in a malitar: nammer, touk p all ain. n of the pilce, and promited the icnae to conduct himleit with clemiacy and jallice. Hawever, th ough he. unted gratt vigutar with the molt teined pelicy, yet his Atrican cunang wis contideacd as a particular defeet in him. He is cel. brated for his wit, learning: and prudence; but cqually blamed lir infitclity and cruely. In thort, he diened a ike diposed to the periormance of tae greacte acts of vi ius and the nuit blondy :cverites. ILe began his eemmand, ly f.izing all the chiltten if fuch as al emplayments or authority in the eatt, and detancal then als pledges for their fathers lnyalty. He next fupplied the city wish corn; and then with all pontible cxpeti ion motached againt Niger, who uias Ithl contidereat and honoured as empetor of the eat.

Onc of the chicf oisnacles to his march was, the Nigir delewvig bchind him Clodius Albinus, commander if the fested and legins in Britain, whore he hy all means withed to fe-kiled. cure in has intertlt. Lior this cad, he endeavoned to

Rone. fyecail upon him, by givirg him hopes of fucceeding t) the empire ; infinuating, that he himelf was dectining, and his clildsen were as yet but infants. 'lo deceive him Athltather, he wrome in the fame Ilyle to the Renae, gave him the title of Corsur, and ordered money In) be coined with his inazge. Thete attifies lerving to lull Albinus into falic fectuity, Severu: marched againt Niger with all his iorecs. Alter fiome undecifive conAR Rts, the lafk great batte that was fought between thefe extraordinary men was upon the planis of Illus, on the very foot where Atexander had fomerly conquered i)arius. Befides the cho great armies drawn up on the plain, the neighbouring mountains were covered with intinite tambers of people, who were merely led by curiolity to becume feectators of an engagement that was to determine the enipire of the world. Severus wa conquerer; and Niger's head being frack ofl by fome foldiers of the conquering army, was infultingly carricd through the camp on the peint of a lance.

This vitiory fecured Severus in the poffeflion of the throne. However, the Parthiars, Pertians, and fome nther neighbouring nations, tonk up arms, under a preence of vindicating Niger's caufe. The emperor marclsed againft them in perion, had many engagements with them, and obtained fuch fignal vietnfies over them, as enlurged the empirc, and ellablifhed peace in the
rewards and honours; giving them fuch privileges as firengthened his own powers while they deftroyed that of the llate. For the foldiers, who had hitherto thowed the fronged inclination to an abufe of power, were now made abiecrs of the fate of emperors; and we thall henceforward behold them fotting them ur, and deLaroning them, at pleafure.

Deing thas feture ot his army, he refolval to give way to his ratural turn for conqueft, and to oppofe his armas againa the l'arthians, who were then invading the frontiers of the empire. Having therefore previoufly given the government of domeftic policy to one Plantianus, a particular favoarite of \(\mathrm{h}: \mathrm{s}\), to whofe daugher he married his ion Caracalla, he fet out for the eaft, and profecuted the war with his uiual expedition and fiecefs. He forced fubmifion foom the king of Armenia, deltroyed feveral citics in Arabia Felix, landed on the larthian coafts, took and plundered the famous city Cetiphon, marchad back through Paleftine and Egypr, and at length returned to Rome in tiumph.

During this interval, Plauriunns, who was left to diredt the affairs of Reme, i egan to tirink of afpiring to the empire himfelf. Upon the emperot's return, he employed a tribune of the pratorian cohorts, of which he was the commander, to affatinate him, as likewife his fon Caracalla. The tribune feemed cheerfully to undertake this dangerous office; but in?ead of gring through with it, informed Severus of his favourite's treachery. He at fift received it as an improbable fory, and as the artifice of fome one who envied his favourite's fortune. However, he was at laft perfuaded to permit the tribune to conduct Plautianus to the cm peror's apartments. Wich this intent, the tribune went and amufed him with a pretended account of his killing the emperor and his fon, defiring him, if he thoughit it fit to fee thens dead, to come with laim to the palace. As Plantianus ardently defired their deaths, he readily gave credit to this relation; and following the tribune, he was conduked at midnight into the innermof recelles of the pahace. But what mall have teenhis difappointment, when, infead of finding the emperor lying dead, as he expeited, he beheld the 101 m 1 ghted up with onrches, and Severus, furrounded by hos friends, prepared in array to receive him. leeing aiked by the emperor, with a ftern conntenance, what had brought him there at that unleafonable time? he was at firt utterly confounded; wherefore, nut hnow: ing what excufe to make, he ingentooully confeffed the whole, intreating forgivenefs for what he had intended. The omperor feemed in the beginning inclined to pardon; but Caracalla his fon, who from the earlieft age thowed a difpolition to cruety, fpumed him away in the midtt of his fipp;ications, and with his firord ran him through the bady.

Severus having efcaped this danger, fpent a confuderable time in viliting fome cities in It.sly, permitting none of his offiecrs to feil places of trult or dignity, and dillributing jullice with the fricteft impartiality. He took fuch an exad reder in mamaging his exchequer, that, notwithtandine 1 is geat expences, he left more muncy tehind lim than any of his predecetkors. His armies alio were kept apon the mont refpetable footin! ; fo that he feared monvafion. leeny equally attencre to the precervation of all parts of the empire, he tefilved to make his latt cxpecition into Britain,

Rome. where the Romans were in danger of being deflroyed, or compelled to tly the province. Wherefore, ifter.ap- of Severus into Eritair. pointing his two fons Caracalla and Geta joint fuccetfors in the empire, and taking them with him, he landed in Dritain, to the great terror of fuch as had drawn down his refentment. Upon his progrefs into the cuuntry, he left his fon Geta in the fouthern part of the province, which had continued in obedience, and marched with his fon Caracalla againt the Caledonians. In this expedition, bis army fuffered prodisious hardfhips in purfuing the enemy; they were obliged to bew their way through intricate furefls, to drain extenfive marlhes, and furm bridges over rapid rivers; fo that he loft 50,000 men by fatigue and fickrets. However, he fupported all thefe inconveniences with the greatelt bravery; and is faid to have profechted his luccefles with fuch vigour, that he compelled the enemy to fue for peace; which they obtained, not without the furrender of a confiderable part of their country. We mult here obferve, however, that the Piets and Caledonians are fo often confounded together by hitorians, that many miftakes have thence arden concerning the progrefs and conquelts of the Romans in the north of Britain. But from the boundary formed by the famous wall of Severus (fee Skyfrus's IVall), we mult conclude, that no part of Caledonia, properly fo called, had beca either on this or any other occation ceded to him ; and there is reafon to belicve, that he rather received checks from the perple of that territory, than was ever able to make any contiderable impreflion upon them. Be this, however, as it may, after having made peace, and built his wall, he retured to York; where, partly through age and latigue, and patty through grief at the irrcclumable lite of Cariwalla, he found himfelf dally delining, having already lolt the ufe of his fect. 'io add to the diltrets of his lituation, be was informed that the foldiers had revolted, and declared his fon emperor. In this exigence, he feemed nnce mole to recal his natural vigour ; he got lim.felf inmediately put iato his fitter, and commanded the rew cmperor, with che tribuncs and centurions, to be benught before him. Though all were willing to court the favour of the young emperor, fuch was the authority of Severus, that i:nne dared to difobey. They appeared before him confounded and trembling, and implored pardon upon their knces. Upon which, puting his hand to his head, he cried out, "Know, that it is the bead that goveras, and not the leet." However, foon perceiving his ditorder to incrale, and knowine that be could not outlive it , he called for foifon; which being refufed him, he loaded his ?!mach with food; which not heing able to diseft, it foon brought him to his end, in the 5 Gth year of his age, after an adive though cruel rsian of about 18 years.

Caracaila and Getabciag acknowledged as emperors by the army, begnil to flow a mutual hatred to cach other cven before their arrival at Romc. Their only agreement was, in refolving to deily Severus their falther: lout foon alter, each ionght io attach the funate and army to his own particular inerell. They were of very oppofite difp fitions: Caracallia was fierce and criel to an extreme degree ; Geta was mild a:ad merciful; fo thit the city foin found the dianger us effects of being governed by two princes of equal power and contrary inclinations.

But this oppofition was of no long continuauce ; for Caracalla being refolved to govern alone, furioully entered Gata's apartment, and, followed by rufians, flew him in his mottucr's arms. Having committed this de teftable murder, he iffued with great hafe from the pahim; and that he was obliged, in felf-defence, to retaliate the intended injury. He then took refuge among the pratorian cohcrts, and in a pathetic tone began to implore their affitance, fill making the fame ex. cufe for his conduet. To this be added a much more prevailing argument, promifing to beftow upon thum the largeffes ufually given upon the elestion of now emperors, and diftributing among them a'moll all the trealiures which had been a mafled by his father. By fuch perfuafives the foldiers did not hefitate to proclaim him fole emperor, and to figmatize the memory of his brother Geta as a traitor and an enemy to the common. wealth. The fenators were foon atter induced, eithe: through favour or fear, to approve what had been done by the army: Caracalla wept for the death of his brother whom he had flain; and, to carry his hypocrify to the utmoll extreme, ordered him to be adored as a god.

Being now emperor, he went on to mark his courfe who with blood. Whatever was done by Domitian or Ne- proves a so fell fhort of this monfer's barbaritics. Lactus, who mof firf advifed him to murder his brother, was the firt who fell a facrifice to his jealoufy. His own wife Plautinal followcd. Papinian, the renowned civilian, was behended for refufing to write in vindication of his cruelty; anfwering the emperor's requen, by obferving, That it was much eafier to commit a parricide than to dcfend it. He commanded all governors to be flain that his brother had appointed; and defroyed not lefs than \(20 c 0\) pelfons who had adhered to his party. Whole nights were fpent in the execution of his bloody decrees; and the dead bodies of people of all ranks were carried out of the city in carts, where they were burnt in heaps, without any of the ceremonies of a funeral. Upon a certain occafion, he ordered his foldiers to fet upon a crowded audience in the theatie, only for difcountenaacing a chariotecr whom he happened to favour. Pcrceiving himfolf hated by the people, he publicly faid, that he could infure his own fafety though not their love; fo that he neither valued their reproaches. nor feared their hatred.

This fafety which he fo much buizt upnn was placed His extrain the proterion of his foldiers. He lad exhaufted vigant folthe treafury, drained the provinces, and committed a ly, cruelly, thoufand aets of rapacity, merely to keep them Gedfalt and treain his interefts; ard being difpocd to trull himfelf chery. with them particu!aly, he refolved to lead them upon a vilit through all the provinces of the empire. He tirft went into Germany ; where, to oblige the natives, he drefied himfelf in the hatii of thers country. From thence he travelled ir.to Macedonia, where he pretended to be a great admirer of Alexander the Great; and amony other extravagancies cauled a fatue of that monarch to be made with two faces; one of which refembled Alesander and the other himfelf. He was fo corrupted by flatcry, that he callcd himielf ficxars ier: wallicd as he was told that monarch had walked; and, like hitn, bent his head to one thoulder. Shorly atter, arriving at Leffer Alia and the ruins of Troy, as he

to be flain. Him therefore Macrinus exherted to re venge his b:otler's death, by killing the tyrant, which he nigitht ealily elfect, as being always fo near has perfin. Martialis readilj undertook the dangerons tatk; \(b=1, g\) willirg to me:i c'ea:h himfelf, fo lee might ob\(t\) in his delire of feeing the tyrant expire betore him. Accordingly, as the empetor was ridir:s ont one dyy drave limfelf privately, upon a batural cocalion, with onsy one i a re to hod his hole. This was the opportumity Matialis had for leng and ardently delired; whesefore running to him as if he had been calleu, be nabbed the cmperor in the back, ir that lie died immedtately. Mrrtialis uncancemedly returned to his troon ; but retiring by ir fenfible degrees, he endeavou:ed in fecure hirsialf by tlight. But his companior.s teon milling him, and the prage giving infum rion of whit had been done, he was puifies by the Geiman hareand cut in pieces.

During the rign of this execrable tyrant, which contioued fix yeare, the enpire was every d.by decliaing ; the fildiers were entirely matters ot every elcotion; and as there were satious almies in cifferent parts, fo tl:cre were as many interelts all oppolite to cach other. Citracall., by fitisfjeng their molt unrealonable appetites, dettroyed all dicinline among them, and all fubordina. tion in the ftate.

The foldiers, now without an empern", after a fuf- Macrima penfe of two days, fixed apon Macrinus, who took all fucceede. pollinle methods in conceal his being privy to Caracalla's murder. The fenate confirmed their choice thortly after: and likewife that of his fon Disdunamus, whom he took as a partner in the empire. Macrinus was 53 year, old when he entered upon the govenment of the empire. He was of obrure farentage; fome fay by birth a Moer, who by the mere retation of offise, being firlt mide prefect of the pre:orian bands, Was now, by treafon and accident, calied to fill the throne. We are told but little of this emperor, except his engaging in a bloody though undericled battle with Artabaus king of Parthia, who cane 10 take vengeance for the injury he had dutained in the late reign: how. ever, this monata findug las rad eatery duad, was content to make feace, and returned into Parthia. Somethirg is allo fital of the feverity of this emperer's difcipline ; for to fuch a pitch of licentioufines was the Rom.tn army now atrived, that the moft fwere punith. ments were unable to rellrain the foldiers; and yet the molt gertle m月 \&tions were locked npen as fuerity. It wis this rigotens difcipine, togerher with the artilices at Malis, grandmother to Ifeliogababs the natural inn of Caracallu, that casted the empros's ruin. Hein gab ilis wisicil el:lgabalus was prieit el at temple didicated to the Sun, in latur reEmefa, a city of Phonci.l; and thongh but \(1 ;\) ye.rs valis old was greaty loved by the amy for the beatity of a aind his perfon, and the memoly of his fardr, whom they Aiil conladered ::s their greate it benefagor. to their camp, he was immediately proclaimed; and fuch were the hopes of his viriues, that all men began to affect his interelts.

Macrinus, who at this time was purfuing his pleafures at Antioch, gave but little attention to the firft report; only fending his lieutenant Julian, with fome legions, to quell the infurrection. However, thefe, like the reft, foon declared for Heliogabalus, and new their general. It was then that Macrinus found he had
 with his fon, to march directly againft the feditious legions, and force them to their duty. Both parties met on the confines of Syria : the battle was for fome time

385 Marinus delicated, and put to death, furious and obitinate ; but at laft Marceinus was overthrown, and obliged to feek fafety by fight. His principal aim was to get to Rome, where he knew his pre. fence was defired; wherefore he travelled through the provinces of Afia Minor with the utmort expedition and privacy, but unfortuately fell lick at the city of Chalcedon. There thofe who were fent in purfuit, overtook and put him to death, together with his fon Diadumenus, after a flort reign of one year and two months.

The fenate and citizens of Rome being obliged to fubmit to the appointment of the aniny as ufual, Heliogabalus afeended the throne at the age of 14. One at to early an age, invefted with unlinnited power, and furrounded with datterers, could be expected to act only as they thought proper to direct. This young emperor was entirely led by them; and being fenfible that it was in his power to indulge all his appetities, he fudied only their gratification. As he is defcribed by hiftorians, he appears a monfter of ferfuality. His fhort life therefore is but a tiffue of effiminacy, luft, and extravagance. He married, in the fmall fpacc of four years, fix wives, and divorced themall. He built a temple to the fun ; and willing that his god fhould have a wife as well as himfelf, he married him to Pallas, and fhortly after to the moon. His palace was a place of rendezvous for all the proflitutes of Rome, whom he frequently met naked, calling them bis follow Joldiers, and companions in the felld. He was fo fond of the fex, that he carried his mother with him to the fenatehoufe, and demanded that the foould always be prefent when matters of importance were debated. He even went fo far as to build a fenate-houfe for women, with fuitable orders, habits, and diftinctions, of which his mother was made prefident. They met feveral times; all their debates turning upon the fahions of the day, and the different formalities to be ufad in giving and rectiving vifits. To thefe follies, he added great cruelty and brundefs prodigality; fo that he was heard to fay, that fuch difhes as were cheaply obtained were fcarce worth eating. His fuppers therefore gencrally coft 6000 crowns, and often 60,000 . He was always drefied in cloth of gold and purple, enriched with precious fones, and yet never wore the fame habir twice. His palace, his chambers, and his beds, were all furnifhed of the richefi fuffs, covered with gold and jewels. Whenever he took horfe, all the way between his appartment and the place of mounting was covered with gold and gitver duft frewn at his approach.

Thefe excelfes were toon perceived by his grandmother Mafa, whofe intrigues had firlt raifed him to the throne: fo that fhe thought to leffen his power by di-

Vol. XVI.
viding it. For this purpofe, under a pretence of free. ing him from the cares of public bufinefs, fhe ferfuaded him to adnpt his coufin-german, Alexander, as his fuccelfor; and likewife to make him his partner in the confulthip. Heliogabalus, having thus raifed his coufin, had fearce given him his power, when he rufned again to take it away; but the virtues of this young prince had fo greatly endeared the people and the army to him, that the attempt had like to have been fatal to the tyrant himfelf. The prxtorian foldiers mutinving, attenpted to kill him as he was walking in his gardens; but he efcaped, by hiding himfe'f from their fury. However, upon retuming to their camp, they continued the fedition; requiring that the emperor fhould remove fuch perfons from about him as oppreffed the fubject, and contributed to contaminate him. They required alfo the being permitted to guard the young prince themfelves, and that none of the emperar's fa. vourites or familiars thould ever be pernitted to converfe with him. Heliogabalns was reluctantly obliged to comply; and confcions of the danger he was in, made preparations for death, when it fhould arrive, in a manner troly whimfical and peculiar. He built a lofty tower with fleps of gold and pearl, from whence to throw himfelf headlong in cafe ot necellity. He alfo prepared cords of purple tilk and gold to frangle himtelf with; he provided golden fwords and daggers to ttab hirtifelf with; and poiions to be kept in boxes of emerald, in order to obtain what death he chofe beff. Thus fearing all things but particularly fufpicious of the defigns of the fenate, he banifhed them all oui of the city: he next attempted to poifon Alexander, and fpread a report of his death; but perceiving the foldiers begin to mutiny, he immediately took him in his chariot to the camp, where he experienced a freth mortification, by finding all the acclamations of the army directed only to his fucceffor. This not a little raifed his iadignation, and excited his delire of revenge. He returned towards the city, threatening the moft fevere punifhments againft thofe who had difpleafed lim, and meditating freth cruelties. However, the fuldiers were I 388 un*illing to give him time to put his defigns in execu. cd by the tion: they followed him direstly to his palace, purfued foldicr:. him from apartment, to apartment, and at laf found him concealed in a privy; a fituation very different from that in which he expceted to dic. Ilaving dragged him from thence through the ftreets, with the molt bitter invective:, and having difpatched him, they attempred once more to fineere his pampered body into a privy; but not eafily elfecting this, they threw it into the Tiber, with heavy weight, that nune might afterwards find or give it burial. This was the miferable and ignominious death of Helingabatus, in the 18 th year of his age, afier a deteftable reigra of four years. His mother alto was flain at the fame time by the foldiers; as were alfo many of the opprobrious affociates of his criminal pleafures.

Alexander being, without oppofition, declared entperor, the fenate, in their wfual method of adulation, were for conferring new titles upon him; but he modeftly declined then all, alleging, that titles were only honourable when given to virtue, not to ftation. This outfet was an happy omen of his future virtues; and few princes in hittory lave been more commended by his contemporaries, or indeed more deferved commenda-

Rome. tion. To the mon rigit jutice he added the greateft humanity. He loved the good, and was a fevere reprover of the lewd and infamous. His accomplithments were equal to his virtues. Ie was an cxceilent mathematician, geometrician, and mulician; he was equally thilled in painting and foulpture; and in poctry few of his time could equal him. In thort, fuch were liis talents, and fuch the folidity of his judgment, that though but 16 years of age, he was contidered as at wite old man.
T.e firf part of his reign w:as fpent in a reformation of the abutes of his predecelfor. He reltored the fenators to their rank; nothing being undertaten without the moll lige advifers, and moit mature deliberation. Among the number of his adviers was his mother Mummea; a woman eminent for her virtues and accomplifhmerts, and who made ule of her power as well to fecure her fon the affections of his fubjects, as to procure them the moft jult adminiftration. He was a rigid punifher of fuch magiltrates as took bribes, faying, That it was not enough to deprive fuch of their places; for their trufts being great, their lives, in moft cafes, ought to pay for a breach of them. On the contrary, he thought he could never fufficiently reward luch as had been remarkable for their juftice and integrity, keeping a regifter of their names, and fometimes akking fuch of them as appeared modet and unwilling to approach him, why they were fo backward in demonding their reward, and why they fuffered him to be in their debt? His clemency extended cven to the Cluriftians, who had been punifled in the former reigns with unrelenting barbarity. Upon a conteft between them and a company of cooks and vintners, about a piece of public ground, which the one claimed as a place for public worfhip, and the others for exercifing their refpective trades, he decided the point by his refcript, in thefe words: "It is better that God be worShipped there in any manner, than that the place fhould be put to ufes of drunkennefs and devanchery."

His abilities in war were not inferior to his affiduity

Arength, and was now becoming little more than a folendid suis.

About the \(13^{\text {th }}\) year of his reign, the Upper Germans, and other northern nations, began to pour down inmenfe fwarms of people upon the more fouthern parts of the empire. They pafted the Rhine and the Danube with fuch fury, that all Italy was thrown into the moft extreme conflernation. The emperor, ever ready to expofe himfelf for the fafety of his pople, made what levies he could, and went in perfon to ftem the torrent; which he fpeedily effected. It was in the courfe of his fuccelfes againft the enemy, that he was cut off by a mutiny among his foldicrs. The legions cncamped about Moguntia, having been abominably corrupted during the reign of Heliogabalus, and trained up in all kinds of rapinc and difobedience, required the moft frict command. Alexander could neither endure their tumul:wary obedience, nor they his regular difcipline. His own faults, and thofe of his mother Mammea, were objected againf him. They openly exclaimed, That they were governed by an avaricious woman, and a mean-fpirited boy ; and refolved upon electing an emperor capable of riting alone. In murthis general revolt Maximinus, an old and experienced commander, held frequent conferences with the foldiers, and enflamed the fedition. At length, being determined to difpatch their prefent emperor, they font an executioner into his tent; who immediately ftruck off his head, and, fhortly after, that of his mother. He died in the 29 th year of his age, after a profperous reign of thirteen years and nine days.

The tumults occafioned by the death of Alexander being appeafed, Maximinus, who had been the chief succeeded prom of bas promoter of the fecition, was chofen emperor. This minus, a extraordinary man, whofe character deferves particular man of giattention, was born of very obfcure parentage, being the fon of a poor lierdfman of Thrace. In the beginning he followed his father's profefion, and only exercifed his perfonal courage againlt the robbers who in- frength. fefted the part of the country in which he lived. Soon after his ambition increaling, he left his poor employment, and enlifted in the Roman army; where he foon became remarkable for his great frength, difcipline, and coutage. This gigantic man was no lef's than eight feet and a half high; he had a body and Arength correfponding to his lize, being not lefs remarkable lor the magnitude than the fymmetry of his perfon. His wife's bracclet ufually ferved lim for a thumb-ring; and his flrength was fo great, that he was able to draw a carringe which two oxen could not move. He could llikic out an horfe's tecth with a blow of his fit, and break its thigh with a kick. Hlis diet was as extmordinary as the reft of his endowments; lie geneally eat 40 pounds weight of flefo every day, and drank fix gallons of wine, without committing any debanch in cither. With a frame fo athletic, he was polfeffed of a mind undaunted indanger, and neither fearing nor regarding any man. The firft time he was made known to the emperer Severus, was upon his celcbrating games on the birth-dily of his fon Get.r. Maximinus was then a rude countryman, and requefted the emperor to be permitted to contend for the prizes which were diltributed to the beft runners, wrellers, and boxers, of the army. Severus, unwilling to infiinge the miltary difcipline, wou!d

\section*{R O M}

Rme. would not permit him at firft to combat, except with flaves, againt whom his ftreng:h appcared aftonifhing. He overcame 16 in tumning, one after the other: he then kept up with the emperor on horefack; and hatving fatigued him in the courfe, he was oppofed to feven of the moft active foldiers, and overcame them with the greateffe:afe. From that time he was particularly noticed, and taken into the emperor's body-guards, in which his affiduity and prompt obedience were purricularly remarkible. In the reign of Cirracalla, he was made a centurion, and diltinguilhed himielf in thi; Aation by his frict attention to the morals and difcipline of thofe he commanded. When made a tribune, he flill retained the hard fimplicity of his life; ate as the meanett centinel; fipent whole days in exercifing his trcops, and would now and then himelf wrefle with eight or ten of the flrongeft mien in the army, whom he threw with fcarce any clfort. Being thus become one of the moft remarkable men in the empire, both for courage, difcipline, and perfonal astivity, hic gave fhortly after, a very high inflance of his unlhaken fidelity: for when Macrinus was made eniperor, he refured to ferve under a prioce that had betrayed his fovereign ; and retired to Thrace, his native country, where he followed commerce, and purchafed fome lands, content with privacy rather than a guilty dependence. Upon the acceffion of Heliogabalus to the throne, this bold veteran once more returned to the army; but was, in the very beginning, difgufted at the bafe effeminacy of the emperor ; who, hearing amazing intances of his frength, afked him, if he were equally capable in cumbats of another nature? This lewd demand was fo little fuitable to the temper of Maximinus, that he inflantly left the court. Upon the death of Heliogabalus, he again returned to Rome, and was received with great kindnefs by Alexander, who particularly reconmended him to the fenate, and made hin commander of the fourth legion, which confifted of new-raifed foldiers. Maximinus gladly accepted of this charge, and performed his duty with great exactnefs and fuccefs, fetting an example of virtue and difcipline to all the commanders of the army. Nor was his valour lefs apparent againt the Germans, whither he was fert with his legion; fo that he was unanimoufly confidered as the boldeft, bravef, moft valiant, and moft virtuous foldier in the whole empire. He foon, howcrer, forfeited :ll thefe jufly merited titles, when he was raifed to the throne; and, from being the mof loved commander in the army, he became the mof cruel tyrant upon earth. Yet in fatt, his former virtues were all of a fevere and rigid kind, which, without any educiation, might very eafily degenerate iuto tyranny ; fo that he might have milaken his fucceeding cruelty for difcipline, and his teverity for juftice. However this be, Maximinus is conlidered as one of the greateft monfters of cruely that ever difyraced power ; and, fearful of nothing himfelf, he feemed to fiport with the terrors of all mankind.
393 Becomes a cruel :ysant.
ed regardlefs of theeir oppofition, procceding io f.eure
l: "e. his election by putting aill finch to death as had hean -r ae raifed by his predeceffir. The Chrillians alfo, having found lavour in the former reign, felt we weight of his r-fentment; and were perfecuted in fevera! paris os the empire, particularly in thote where he himicli refided. His crucley likewice extended to the tich, whote lives and efatcs became a freguent factifice to avalice and furpicion. But what appears fill a more cxtraordinary infance of his cruely, being aflamed of the meanneds of his extraction, he commanded all fuch at were beft accquainted with him and his parentage to be fain, althongt there were fome:among the number that had relieved him in his low condition.
However, his cruelties did not retard his military his fucefs operations, which were carried on with a firit bc-in war. coming a better monatch. He overthrew the Germans in feveral battles, wafted all their country with fire and fivord for +00 miles together, and fet a refolution of fubduing all the northern nations as far as the ocean. In thefe expeditior.s, in order to attach the foldiers more firmly to him, he increafed thacir pay; and in every duty of the camp, he himfelf took as much pains as the meanef centinel in his army, thowing incredible courage and alliduity. In every engagement, where the conflict was hotreft, Maximinus was always feen fighting there in perfon, and deftroying all before him: for, being bred a barbarian, he confidered it as his duty to combat as a conmmon foldier, while he commanded ns a general.

In the mean lime, his cruelties had fo alienated the comppiraminds of his fubjects, that feveral confpiracies were ciesfornied fecretly aimed againft him. Magnns, a confular per- ayainft fon, and fome others, had plotred to break down a him. wooden bridge, as foon as the emperor had paffed it, and thus to abandon him to the enemy. But this being difcovered, gave Maximinus an opportunity of indulging his natural feverity, upon this pretext alone cauling above 4000 to be flain. Shortly after, fome of Alc:ander's old foldiers withdrawing themelves fronz the camp, proclaimed one Q uatcianus as emperor, who had been lately difgutted at Maximinus for heing difmiffed from employment. The foldiers, in fatt, conItrained him to accept of the dangerous fuperiority to which he was expofed: and fhortly after, in the fpirit of the times, the perfon who had been the promoter of his advancement, murdered him in his bed, and carried his head to Maximinus; who received him kindly at firft, but foon put him to 2 cruel death, for his complicated guilt of treaton and treachery:
Thefe partial infurreations were foon after followed cordian by is feirit of general difentent throughout all the proilaimes? empire. The provinces of Africa were the firt that cangeror. fhowed their deteftation of the tyrant, whofe extortions and cruelties among them were become infupportable. They firt flew his procurator; and afterwards confidering how dangerous a crime they had conmitted, they refolved to throw off all expectations of pardon, and create a new emperor. Gordian was then proconful of Africa, a perion of gre.t fame for his virtues, and highly reverenced for a blamelefs life of near 80. Him, therefore, they determined to elea; :m」 accordingly the foldicis and natives aflembling together, tumultuoufly entered his houfe, refolved to put their defign in execution. Gordian, who at firf fuppoted
K. me. they were come to kill him, leeing made renfible of estrinfentions, uterly tedifed their offer, alleging his estreme age, and Maximinus's power. But all his oppofition was vain: they confrained him to accept of the protlered dignity; and he, with his fon Gordian, whe was 46 years of age, were declared emperors. Being thus railed conerary to his inclination, the old man imandiately wrote to the fenate, declaringr that he had unwillingly accepted of the empire, and would only keep his authority till he had freed it from the tyramy of its prefent uppreflor. The fenate very joydully confirmed his clection, adjudging Moximinus as an enemy and trator to the ftate. The citizens alfo thowed an equal zeal in the caufe: they Acw upon fuch as were the reputed friends of Manminus, and tore then in pieces; even fome who were innocent fillling afacrilice to the multitude's blind rage. So great an alcerati in beiag made in the city againf the interefts of Maniminus, the fenate were refolved to drive the oppolition to the extreme; and accordingly made all necelfary preparations for their fecurity, ordering Maximinus's govemors to be difplaced, and commanding all the provinces to acknowledge Gordian for emperor. 'Ihyis order was differently received in different parts, as people were affefted to one or the other party; in fome provinces the governors were flain; in others, the meriengers of the fenate ; fo that all parts of the empire felt the confequence of the civil war.

In the mean time, when Maximinus was informed of thefe charges againft him, his rage appeared ungovernable. He roared like a fivage beatt, and violentIy fruck his head againt the wall, thowing every inAtance of ungovernable diftraction. At length his fury being fomewhat fubfided, he called his whole army together ; and, in a fet fpeech, exhorted them to revenge his caufe, giving them the frongeft affurances that they fhould pollefs the eftates of all lich as had offended. The foldiers unanimoully promifed to be faithful; they received his harangue with their ufual acelamations; and, thus encouraged, he led them towards Rrme, breathing nothing but flaughter and revenge. However, he found many obftacles to his impetuonty; and, though he defined nothing fo much as difpatch, his marches were incommodious and flow. 'ree tumultuous and difobedient anmies of the empire were at prefent very different from the legions that were led on by Sylla or Cxfar; they were loaded with baggare, and followed by llaves and women, rather retimbling an callerncardvan, than a military battalion. To thefe inconveniences alfo was added the hatred of the cities through which he paffed, the inhabitants all abandoning their houles upon his approach, and fecuring their provifons in proper hidingplaces. Howerer, in the complication of inconveniences and mistortunes, his aflairs began to wear a fat vourable appearance in Afica: for Capelianus, the sowernor of Namidia, raied a body of roops in his lavour, and morched againit Gordian, towards Car. thage ; where le fonglit the younger Gordian, flew him, aral dellony his army. The father, hearing of the death of his for, together with the lofs c.f the battle, Arangled himfelf in his own girdle. Capclianus purfuing his victory, entered Carthage; where he yrave a lonfe to pilloge and floughter, under a pretence of revarging the caufe of maximinus. The news of
thefe fuccetfes was foon brought to the emperar, who now increafed his diligence, and fattered himfelf with a fpeedy opportunity of revenge. He led on his large army by hafty journeys into Italy, theatening deftruction to all his oppofers, and ardently wifhing for frefh opportunities of llaughter.

Nothing could exceed the conflernation of the fenate upon the news of this defeat. They now faw themfelves not only deprived of the affiftance of Gordian and his fon, on whom they greaty relied; but alfo oppofed by two formidable tyrants, each commanding a victorious army, directly marching towards Rrme, and meditating nothing but vengeance. In this affliting exigence, they, with great folemnity, met at the temple of Jupiter, and after the molt mature deliberations, chofe J'upienus and Balbinus emperors conjointly. 'Ilhefe were men who had acquired the effeem of the public both in war and peace, having commanded arshles, and goveraed provinces, with great reputation; and being now appointed to oppofe Maximinus, they made what levies they could, both in Rome and the country. With thefe, Pupienus marched to fopp the progrel's of the invaders, leaving the city to a frelh and unlooked for calamity. This was occafioned by two of Maximinus's foldiers, who, entering the fenatehonfe, were flain by two lenators. Thisquickly gave offence to the body of the pretorian foldiers, who inftantly refolved to take revenge, but were oppofed by the citizens; fo that nothing was feen throughout Rome, but tumult, flanghter, ind cruelty. In this univerfal confufin, the calamity was increafed by the foldiers fetting the city on fire, while the wretched inhabitants were combating cach other in the midt of the flamas.

Neverthelefs, Maximinus himfelf, in whore favour thefe feditions were promoted, did not feem to be nore fortunate. Upon being informed of the new election of emperors, his fury was again renewed, and he pulfed the Alps, expectin: upon entering Italy, to refrelh his fatigued and fanmilhed army in that fertile part of the country. But in this he was entirely difo appointed; the fenate had taken fuch care to remove all kinds of fuftenance to fortified places, that he ftill found himfelf reduced to his former receffities, while his army bergan to murmur for want. 'lo this another difappointment was idded fhortly after : for, approach. ing the city of Aquilein, which he expected to enter whithout any difficulty, he was aftonithed to find it prepared for the moft obftinate refifance, and refolved mus. to hold out a regular fiege. This city was well fortified and populous, and the inhabitarts greatly averfe to Maximinus's government but what added ftill more to its ftrength, it was commanded by two excellent generak, Crifpinus and Menophilis, who had fo well furnilhed it with men and ammunition, that Maxminus found no fmall reliftance, even in invelling the pace. His firf attompt was, to take the city by florm; but the befieged thew down fuch quantities of fcalding pitch and fulphur upon his felciers, that they were unable to continue the alfath. He then determined upoar a blockade ; but the inhabitants were forefolute, that even the old men and chithren were feen combating upon the walls, while the women cut off their hair to furnith the foldiers with bow-ftrings Maximinus's rage at this unexpected oppofition was now

R O M
Rome. now ungovernable: having no enemy to wreak his refentment upon, he turned it againt his own comman. ders. He put many of his generals to death, as if the city had held out through their neglect or incapacity, while famine made gieat depredations upon the reft of his army. Nothing now appeared on either fide to terminate the contelt, except the total deftruction of either. But a mutiny in Maximinus's own army a while refcued the declining empire from deftruction, and faved the lives of thoulands. The foldiers being long haraffed by fumine and fatigue, and hearing of revolts on every fide, refolved to terminate their cala. mities by the tyrant's death. His great frength, and his being always armed, were, at firft, the principal motives to deter any from affaffinating him ; but at length having made his guards accomplices in their defign, they fet upon him, while he flept at noon in his tent, and flew both him and his fon, whom he had made his partner in the empire, without any oppofition, after an ufurpation of about three years, and in the 65 th year of his age.

The tyrant being dead, and his body thrown to the dogs and birds of prey, Pupienus and Balbinus continued for fome time emperors without oppofition. But the pratorian foldiers, who had long been notorious for mutiny and treafon, foon refolved on further change. Nor did the diffenfions between the new made emperors themfelves a little contribute to their downfall: for though both were remarkable for wirdom and age, yet they could not reftrain the mutual jealouly of each other's power. Pupienus claimed the fuperiority from his great experience; while Balbinus was equally alpiring upon account of his family and fortune.

In this ill.judged conteft, the pretorian foldiers, who were enemies to both, fet upon them in their palace, at a time their guards were amuled with fecing the Capitoline games. Pupienus perceiving their tumultuous approach, fent with the uimfift fpeed for affiftance from his colleague : but he, out of a culpable furpicion that fomeching was defigned only againt himfelf, refufed to fend fuch of the German guards as were

402 And like wife Pupie nus and Balbinus. next his perfon. Thus the feditious foldiers found an eafy accefs to both the emperors' apartments ; and dragging them from the palace towards theamp, flew them both, leaving their dead bodies in the ftreets, as a dreadful inftance of their fedition.

In the midit of this fedition, as the mutincers were proceeding along, they by accident met Gordian, the grandfon of him who was ilain in Africa, and deckio red him emperor on the fpot. The fenate and peop.e had been long reduced to the necefinty of fusfering their emperors to be nominated by the army; fo that all they could do in the prefent inftance was to confirm their choice. Th's prince was but 16 years old when he began his reign, but his virtues feemed to compenfate for his want of experience. His princip.ll aims were, to unite the oppofing members of the go. vernment, and to reconcile the follers and citizens to euch other. His learning is faid to hive been equal to his virtues; and we are affured that he had 62,000 books in his library. His refpect for Mifithrus, his governor and inftructor, was fuch, that he married his daughter, and profited by his counfels in all the critical circumflances of his rcign.

The firft four years of this emperor's reign were attended with the utmof profperity; but in the fifth \(\underbrace{\text { Rome. }}\) he was alarmed with accounts from the eaft, that Scl- His fuccers por, king of Perfia, had furioufly invaded the confines againt the of the Roman empire, and having taken Antioch, had barbsrians. pillaged Syria and all the adjacent provinces. Belides the Perfians, the Goths alfo invaded the empire on their fide, pouring down like an inundation from the north, and attempting to fix their refidence in the kingdom of Thrace. To oppofe both thefe invafions, Gordian prepared an army; and having gained fome victories over the Goths, whom he obliged to retire, he turned his arms againt the Perfians, whom he defeated upon feveral occafions, and forced to return home with difgrace. In gaining thefe advantages, Mifithrus, whom he had made protorian prefect, had the principal thare; but he dying foon after (as it is fuppofed being poifoned by Philip an Arabian, who was appointed his fucceflor), the fortunes of Gordian feemed to die with him. The amm began to be no longer fupplied with provifions as ufual; murmurs were heard to prevail, and thefe were artfully fomented by Philip. Things thus proceeding from bad to worfe, Philip was at firt made his equal in bed 405 empire ; fhortly after, invefted with the fole power; cab b thiand, at length, finding himfelf capable of perpetrating fucceeds his long meditated cruelty, Gordian was, by his order, hicceds Rain, in the 22d year of his age, after a fucceffful reign of near fix years.
Philip liaving thus murdered his benefactor, was fo fortunate as to be immediately acknowledged emperor by the army. The fenate alfo, though they feemed at firft to oppofe his power, confirmed his election, and gave him, as ufual, the title of Augufus. Philip was about 40 years old when he came to the throne; being the fon of an obfcure A rabian, who had been captain of \(a\) band of robbers. Üpon his exaltation, he alfo. ciated his fon, a boy of fix years of dge, as his partuer in the empire; and, in order to fecure his power at home, made peace with the Perfians, and marehed his army towards Rome. On his way, having conceived a delire to vifir his native country of Arabia, he built there a city called Philippopoos; and from thence ueturning to Rome, he was received as emperor, and treated with all the masks of fubmifion, thongh not of joy. To put the peaple in good humour, he caufed the fecular games to be celebrated, with a maguificence flperior to any of his predecelfors, it bsing jult 1000 jears alter the building of the city. Upon occafion of thefe gamee, we are told that boths Piilip and his fon were converted to Chriftianity. However this be, a murderer and an ungratetul ufurper does no great honour to whatever opinion he may happen to embrace. We have little account of the latter part of his reign in the wretched and mutilated hiftories of the times; we only learn, that the Goths having invised the empire, Marinus, Philip's licuterant, who was fent ag.tintt them, revolted, and caufed himfelf to be declared cin. peror. This revolt, however, was but of flori duration; for the army which had raiied hims repented of thei- rafmefs, depofed him with equal levity, and pat hirn to death. Decius was the perfon whom Philip arpointel to command in the rcom of the revolting gencral. The chief merit of Desius with the emperor

 ithol lis min：＂hich，when it ！appencd ac－ Whan，if，lop appoiriad hion th fincceed in the waman！of the fublii us amy．Decius，who was a 1：a＂ul weat tibtetey，being thus entruted wi．h fo ＂ach finer，upon antiving at the army found that the tulders＂ore reflued on invelting him with the luprenie authority．He therefore seemed to fuffer in ir importuaties，as if through contraint；and，in the mean time，fent lialip word，that he had unwill－ ind ly alfuned the title of emperor，the better to fe－ ctac it for the rizhtinl poflellor；adding，that he only fooled for a convenient opporturity of giving up his pre：cufions and tide togecther．Philip knew mankind too will，to rely upon fuch profelliens；he therefore ghe tigether what forces he could from the feveral Prise ho her （fl It．idy．However，the army had farce arrived at Ve－ ren ？，when it revolted in farour of Decius，and fet－ ting vicle：tiy upon Philip，a centincl，with one blow， cut off his head，or rather cleaved it afunder，feparating the under jaw from the upper．Such was the deferved Barnh：of libili？，in the 45 th year of his age，after a reign of about tive years；Decius being unive：dally acknow－ lesised as his faceefor，A．D． 248.

The activity and wifdom of Decius in fome mea－ fure Ilopped the hattening decline of the Roman em－ pire．The fenate leemed to think fo highly of his me－ fits，that they voted him not inferior to＇Irajan；and indeed he fermed in every intance to confulh their dig－ 1ity in particular，and the welfate of all inferior ranks －f people．He permitted them to choofe a cenfor，as was the cufom in the flomifhing times of Rome ；and V．．letian，his gencral，a man of fuch ftrift morals，that his lite was faid to be a conti：ual cenforfhip，was cho－ Ita to that dignity．－But no virtucs could now prevent the approaching downfall ot the flate；the obfinate dif－ putes between the Pagans and the Chrifians witbin the cropire，and the unceafing irruptions of barbatous mations trom without，enfeclled it beyond the power of a remedy．To llop thefe，a perfecntion of the Chrif－ tians，who were now grown the molt numerous bndy of the people，was impolitically，not to fay unjufly， hegua；in which thoufands were put to death，and all the arts of cruelty tried in vain to leffen their growing rumber．This perfecution was fucceeded by dreadful devaftations from the Goths，particularly in Thrace and Meffis，where they had been mint fuccefsful． Thcere irruptions Decius went to oppofe in perfon；and the barbarians in one batde．However，being refolved to purfuc his victory，he was，by the treachery of Gal－ Jus his nwn general，led into a defile，where the king of the Gohlis had fecret information to attack him．In this difiduartagecus fituation，Decius firft faw his fon filled with an arrow，and foon atter his whole army pht in the rout．Wherefore，refolving not to furvive his lofs，he put fpurs to his horfe，and inftantly plem－ ging into it quagmire，was fiwallowed up，and his B dy conid never be found after．He diad in the 50：1 year of his age，after an hort reign of two yeats and fix months；leaving the charaner of an excellent prince，atd one caprabic of averting the dc－
efleact it．

Gallus，who had thes betraval the Ruman amm，succeeted had addrefs enough to get himelf dechared emperor by by Gatlus． that part of it which furvived the deleat ；he tras 45 years old when he began to reign，and was defeencad from an honourable family in Rome．Itc bought a dif． honourable peace from thic enemics of the flate，agrec－ ing to pay a confiderable anmal tribute to the Geths， whom it was his duty to reprefs．Having thus pur－ chafed a thort remifion from war，by the diggrace of his comntry，he returned to Rome，to give a loofe to his pleafures，regardleis of the wretched fituation of the empire．

410
Nothing can be more deplorable than the fate of flate of the the Roman provinces at this time．The Goths and cmpire． other barbarous nations，not fatisfied with their late bribes to continue in peace，broke in upon the eafte：n parts of Europe．On the other fide，the Perlians and Scythians comnnitted unleard of ravages in Mefopu－ tania and Syria．The empcror，regardlefs of every national calamity，was lof in debauch and fenfinality at home；and the Pagans were allowed a power of perfecuting the Chriftians through all parts of the llate；thefe calamitics were fuccected by a peftilence， that feemed to have in general fpread over every part of the carth，and which continued raging for feveral years in an unheard of manncr；and all thefe by a civil war，which followed fhortly after，between Gal－ lus and his general Amilianus，who having gained a victory over the Goths，was proclaimed emperor by his conqucring army．Gallus hearing this，was foon rou－ fed from the intoxications of pleafure，and prepared to oppore his dangerous rival．Both armics met in Moc． fia，and a battle enfued，in which Emilianus was victorious，and G．lllus，with his fon，were thain．His death was merined，and his vices were fuch as to de： ferve the deteftation of poftefity．He died in the 47 th yeat of his age，after an unhappy reign of two years and four months，in which the empire fuffered inex－ preffible calamities．Aimilianus，after his victory over Gallus，expected to be acknowledged emperor；but the foon found himfelf miferably difappointed．The fenate refinfed to acknowledge his claims；and an army that was flationed near the Alps chofe Valerian，their own commander，to fucceed to the throne．In confe－ quence of this，Remilianus＇s foldiers began to confi－ der their general as an obfacle to the univerfal tranquil－ lity，and flew hm in order to avoid the mifchicfs of a civil war．

Valerian being thus univerfally acknowledged as emperor，althongh arrived at the age of \(; Q\) ，fet about reforming the fatc with a fipirit tlat feemed to mark a good mind and unabated vigour．But reformation was then grown almolt impracticable．The difputes between the Pagans and Chriftians divided the empire as befure；and a dreadful perfecution of the latter en－ fred．The northern nations over－ran the Roman do－ minions in a more formidable manner than ever；and the empire began to be ufurped by a multitude of petty leaders，each of whom，nerleaing the gencral fate，fet up for himfelf．＇loadd to thefe calamities，the Perfians， under their king Sapor，invaded Syria；and coming into Mefopotania，took the unfortunate Valerian Pri－

\section*{R OM}
foner, as he was making preparations to oppofe themNothing can exceed the indignities, as well as the cruer ties, which were practifed upon this unhappy monarch, thus fallen into the hands of his enemies. Sapor, we are told, always ufed him as a tootfool for mounting his horle ; he added the bitternefs of ridicule to his infults, and ufually offerved, That an attitude like that to which Valerian was reduced, was the beft fatue that could be erected in honour of his victory. This horrid life of infult and fufference continued for feven years, and was at length terminated by the cruel Perlian's commanding lais prifoner's eyes to be plucked out, and afterwards caufing him to be flead alive.

The news of the defeat of the Roman army by the Perfians, and the captivity of Valerian, no fooner reached the barbarous nations at war with Rome, than they poured on all fides into the Roman territories in incredible multitudes, threatening the empire, and Rome itfelf, with utter deftruation. The Goths and Scythians ravaged Pontus and Afia, committing every where dreadful devaftations; the Alemanni and Franks having over-run Rhxtia advanced as far as Ravenna; putting all to fire and fword ; the Quadi and Sarmatians feized on great part of Dacia and Pannonia; while other barbarous nations, invading Spain, made themfelves mafters of Tarraco and other important places in that provincc. In the mean time Gallienus, the fon of Valerian, having promifed to revenge lis father's captivity, and reprefs the barbarians, was chofen emperor without any oppofition. He was at that time in Gaul ; but haftened into Italy, from whence he drove out the barbarians, either by the terror of his approach, or by overcoming them in battle.In Dacia and Pannonia, alfo, the barbarians were driven back by Regillianus, who commanded there, and who is faid to have gained feveral vietories in one day.

But in the mean time, one Ingenuus, a man of great reputation in war, and univerfally beloved bota by the pcople and foldiery, caufed himfelf to be proclaimed cm. feror in Pannonia, where he was generaly acknowledged as well as in Moffia. Gallienus no fooner heard of his revolt, than he marched from the neighbourheod of Ravena, where he then was, into Illyricum, engagal lngenuus, and put him to fight. Some authors tell us, that Ingenuus was killed aiter the battle ly his own foldiers; while others aifirm, that he put an end to his own life to avoid falling into the hatds of Gallienus, who ufed his vitory with a cruelty hardly to be parallelled. The following letter to Verianus Celer, one of his officers, will thow the difpofition of this emperor: " I thall not he fatisfied (fiys he) with your putting to death only fuch as lave borne arms ayrinft nee, and might have fallen in the field: you mult in cvery city deftroy all the males, old and ycung; ipare nore who have withed ill to mc ; none who have fpoken ill of me the fon of Valerian, the father and brother of princes. Ingenuus emperor! Tcar, kill, cut in pieces without mercy : you manderfand me; do then as you krow I would do, who have written to gou with nay own hand." In confequence of thefe cruel orders, a molt dreadful havock was made among that unhappy people; and, in feveral cities, not one male child was lelt alive. The troops who had formenly ferved under Ingenuus, and the inhabitants of Mofia who had efraped the general
flaughter, provoked by thefe cruelties, proclaimed Regillianus emperor. He was a Dacian by birth, defcended, as was faid, from the celebrated king Decebalus whom Trajan had conquered; and had, by fcveral gallant actions, gained reputation in the Roman armies. Afier he was proclaimed emperor, he gained great advantages over the Sarmatians; but was foon after, murdered by his own foldiers. Thefe revolts were quickly followed by many others. Indeed it is not furpriling, at a time when the reins of government were held with fo loofe an hand, that a crowd of ufurpers fhould ftart up in every province of the empire. The great number of ufurpers who pretended to the empire about this time have been diftinguithed by the name of the thirly tyrants. However, there were only 19 ; viz. The tlict Cyriades, Macrianus, Balifta, Udematus, and Zemobia tyramte. in the eaft : in Gaul, and the weftern provinces, Pofthumus, Loliianus, Vieqorinus and his mother Víloria, Marius, and Tetricus; in llyricum, and on the confines of the Danubc, Iagenuus, Regillianus, and Aureolus; in Pontus, Saturninus; in iñaria, Trebellianus; in Theffaly, Pifo; in Achaia, Valens; in Egypt, Emilianus; and in Africa, Celfus. Several of thefe pretenders to the empirc, however, though branded with the opprobrious appellation of tyrants, were eminent examples of virtue, and almoft all of them were poffeffed of a confiderable thare of rigour and ability: The principal reafon aftigned for their revolt was, the infamous charater of Gallienus, whom ncither officers nor tuldiers could bear to ferve. Many of them, however, were forced by the foldiers to alfume the iniperial dignity much againft their will. "You have loft," faid Saturninus to his foldiers when they invefted hind with the purple, "a very ufeful commander, and have made a very wretched emperor." The apprehenfions of Saturninus were junified by the event. Of the t9 ulurpers already mentioned, not one died a natural death; and in Italy and Rome Gallienus alone continued to be acknowledged empern. That prince indeed honoured Odenatus prince of Palnıyra with the title of Augufus, who continued to polfe's an independent fovereignty in the eatl all his lifetime, and at his death tramfinited it to his wile Zenobia. See Palmpra.
The confequences of theie numerons ufinpations Fatalionfor were the moll fatal that can be conceived. Whe clec- quences of tions of thefe precarious emperors, their life and dath, thefenfurwere equally deltruative to the ir fibbear, and :allie. - ations. rents. The price of detere elcvation wis infantly paid to the trops hy an immente donative dawn fion the exhaunel propig. Howcer virtuus their chapacior,
and however pure thair intentionsmight be, they foun i exhantel people. However virtuous their chazatior. therrelves reduced to the necefity of fupporting their unfurpation by frequent adt of rapine :ubl cruchy. When they fel!, they involved armies and provinces in their fall, as appears from the letter of Gallients already q-oted. Whilit the forces of the flate scre difperfed in private quarcle, the defencel fs frovinces lay
expofed on every invader. The beaveli wiurpers were perfed in private quarcle, the defencel fs frovinces lay
expofed in every invader. The beaveli ufurpers were complied, by the perplexity of their lituricicn, to an. clute difonourable tre tics with the burbirians, end e\%en to fubmit to flameful ributes, and ianto duce fuch numbers of barbarians inte ti.e Rominn fervice as focmed fufficint di onee to uvertheuw the empire.

But whe：tie emy ire feomed thus ready to fink at once，it fidatmy faivel on the death of Gallimus， wha was murdered by dartian，one of his own gene－ rat wate！：befoged Aureolus，one of the tyrants， is Mila： 1 lis doalh gave general latisfaction to all， cucep：hather，who hoped to reap the reward of their treallery Ly the phunder of Milan．But being fruthated in thele expatations，and in fome meature kept within bounds by the largelles of Martian，Ila－ vius Clau dius wis neminated to fucceed，and joyfully accepted lyy all orders of the thate，and his tithe con－ firmed loy the fenate and the people．
Whe are not futficienty allured of this emperor＇s li－ ne．ge and country．Some affirm that he was born in 1）imatia，and defcended from an ancient family there； others aliert that he was a Projan；and others，that he wa，fon to the emperor Gordim．But，whatever might have leen his defeent，his merits were by no me．uns doubrful．He was a man of great valour and conduet， having performed the nolt eminent fervices againft the Goths，who had long continued to make irruptions in－ to the empire．He was now about 55 years old，equal－ 1y remarkable for the ftrength of his body and the vi－ sour of his mind ；he was chafte and remperate，a re－ warder of the grod，and a fevere punifher of fuch as tranigrefled the laws．Thus endowed，therefore，he in ronce meafure put a flop to the precipitate decline of the empire，and once more feemed to reltore the glory of Rome．
His firlt fuccefs，upon being made emperor，was agan＇t Aureolus，whom he defeated near Mitan．His uest expedition was to oppofe the Goths，againft whom he led a very numerous army：Thefe barbarians had made their principal and molt fuccenful irruptions into Thrace and Macelonia，fwarmed over all Greece，and had pillaged the famous city of Athens，which had long been the ithool of all the polite arts to the Romans． Thie Goths，however，had no vencration for thofe em－ bellithment，that tend to fofien and humanize the mind， but detroyed all nomumerts of talte and learning with the molt lavage alacrity．It was upon one of thefe oc－ c．aions，that，having heaped together a large pile of boks in order to burn then，one of the commanders diffuaded them from the defign，alleging，that the time which the Grecians thould wafte on books would only renjer then more unqualified for war．But the empire feened to tremble，not only on that fide，but almoft on every ipuatter．At the fame time，above 300,000 of Chele barbarianc（the Heruli，the Trutangi，the Virtur－ ：i，and many nanelefts and uncivilized nations）came down the river 1）abube，with 2000 thips，fraught with neen and ammunition，fipreding terfor and devaftation on every fide．

In this flate of univerfal difmay，Clandius alone feem－ ed to continue unthaken．He marched his difpropor． thondarmey ag tint the favage invaders；and，though but ill prepared for fich an engagenent，as the forces cf the empire were then employed in different parts of the wold，he came off victorions，and made an incredi－ he liaurher of the enemy．The whole of their great amy wis cither cut to pieces or taken prifoners：houfes wele filled with their arms；and farce a province of the empire，that was nut furnifhed with flaves from those that furvived the defeat．Thefe fuccelfes were followed by manv others in different parts of the empi：e ；fo that
the Coths，for a confiderable time after，made but a feeble oppofition．He fome tinie after marclied againit the revolted Germatis，and overthrew them with conti－ derable flaughter．His lath expedition was to oppole Te－ trecus and Zenoba，his two puillant rivals in the empire． Bat on his march，as he approached near Sirmium，in Pamonia，he was feized with a peftilential fever，of which he died in a few days，to the geeat regret of his tubljects，and the irreparable lofs of the Roman em－ pire．His reign，which was not quite of two years continuance，was atsive and fuccefstul；and fuch is the chatater given of him by hiforians，that he is faid to have united in himfelf the moderation of Au－ gutus，the valour of Trajan，and the piety of Anto－ ninus．

Immediately after the death of Claudius，the army made unammous choice of Aurelian，who was at that time mafler of the horfe，and efteemed the molt valiant conmander of his time．However，his promntion was not without arpolition on thie part of the funate，as Quintillus，the brother of the deceafed emperor，put in hiis claim，and was for a whle acknowledged at Rome． But his authority was of very thort duration；for find－ ing himfell ab：indoned by thofe who at firft inftigated him to declare fur the throne，he chure to prevent the fevcrity of his rival by a voluntary death，and caufing his veins to be opened，expired，after having reigned but 17 days．

Aurelian being thus univerfally acknowledged by all the flates of the empire，aflumed the command， with a greater fhow of power than his predeceflors had enjoyed for fome time before．This aative mo－ narch was born of mean and obicure parentage in Da－ cia，and was about 55 years old at the time rf his co－ ming to the throne．He had fpent the early part of his life in the anmy，and had rifen through all the gra－ dations of military duty．He was of unihaken courage and amazing ftrength ；he in one engagement hilled 40 of the enemy with his own hand，and above 900 at feveral different times．In fhort，his valour and expe－ dition were fuch，that he was compared to Julius Сæ－ far；and，in fant，only wanted mildnefs and clemency to be every way his equal．
The whole of this monarch＇s reirg was fpent in re preffing the irruptions of the northern mations，in fus great humbling every other pretender to the cmpire，and pu－againf the nithing the monfrous irregularities of his own fubjects． He defeated the Murcomanni，that had invaded Italy， in three fiveral engagements，and at length totally de－ froyed their amy．He was not lefs fuccersful againft Zenobia，the queen of the Eaft，a woman of the molt heroic qualifications，who had long difchamed the Ro－ man power，and ellablithed an empire of her own，as is related under the article Palmyra．

Aurelian having thus brouglit beck peace to the empire，endeavoured，by the rigours of juftice，to bring back virtue alfo．He was very ftria in phuiff－ ing the crimes of the foldiery：in his orders to his lien－ tenants，he inifted that the peafants fhoukd not be plun－ dered upon amy pretences；that not even a grape，a grain of falt，or a drop of oil，hould be exacted un－ juftly．He caufed a foldier who had committed adul－ tery with his hollefs，to have his feet tied to the tops of two trecs，forcibly bent at top to meet each other ； which being let loofe，and fuddenly recoiling，tore the criminal criminal in two. This was a feverity that might take the name of crueliy; but the vices of the age, in fome meafure, required it. In thelic puniflumeits inflicted on the guil!y, the Chrillims, who had all along been growing more numeruus, were tharers. Againt thefe he drew up feveral letters and edifts, which thowed that he intended a very fevere perfecution; but if we may believe the credulous hifhorinns of the times, he was diverted juftas he was going to fign them by a thunderbolt, which fell fo ne:ir his perfon, that all the prople judeded him to be defrroyed.
Dut however Heaven reight lave interpofed on this occalion, it is certain that his feverities at laft were the cante of his deltrustin:. Menenhus, his principal fecretary, having been threatened by him for fome fault which he had committed, began to confider how he might prevent the meditated blow. For this purpofe, he forgcd a roll of the names of fever:ul perfons, whom he pretended the emperor lad marked out for deach, adding his own to Arengthen him in the confudence of the party. The feroll thus contrived was fhown with an air of the utmorf fecrecy to fome of the perfons concerned; and they, to procure their fafety, immediately agreed with him to delltoy the emperor. This refolution was foon put in execution ; for, as the emperor fa Fed with a fmall guard from Uraclea, in Thrace, to-

500 Pees mult- once, and flew him with very fmall refiftance. He was dercd. flain in the Goth, or, as fome fay, in the 63 d year of his agye, after at very active reign of almott five years.
The number of pretenders to the throne, which had for menly infefted the empire, were, by the lita monarch's atavity, fo entirely removed, that there now feemed to be none that would venture to declare himfe:fa candidate. The army referred the choice to the fenaze; and, chorft em- lensth, however, the fenate made cho:ce of Taciuns, a perror.
country. Ife particulnly eftemed the woth of his Hamelihe Tacioms the hitorian ; commanding that thay thouli be placed in every puhlic library throng hout the empire, and that many crpies of then thould be traceicribed at the pushic charge. A reign legun with fach moderation and jufticc, only wanted cintinuance to have made the emafite happy ; but ater el joying the empire about fix menths, lie öed of a fever i.s his match to oppofe the Notfans and Scy thians, who had invaded the eatern phts of the empirc.

Upon the death of \(T\), citus the army fecraed divided in the choiee of:at emperor; ine part of it chofe Fioriamus, broh her to the deccaitd; but the majority were for fome time undetermined. They alleged auongit each orher the necemity of choofirg one eminent for valour, honour, pitty, clemency, and probity: but the laft virtue being that chiefly infifed upon, the whole army, as if by commen conient, cried out that I'robus fhould be emperor. He was accordirigly confirmed in this dignity with the ufual folemnities: and Florianus findinghimfelf deferted, even by thote legions who had promifed to fland up in his fuppert, opened his atterics and bled himfelf to cleath,

Probus was 44 years old when he afeended the Probura \(\mathrm{SO}_{3}\) throne, being boria of noble parentage at Sirmiurn in fed to the Pannoriia, and bred up a foldier from his youth. He en:pres. began early to diftinguifa himfelf for his diftipline and valour; being frequently the firlt man who in belieging towns fcaled the wills, or that burft into the enemy's camp. He was no le.'s remarkable for fingle combat', and faving the lives of many eminent citizens. Fír was his activity and courage, when eleated to the empirc, lefs app:irent, than in his private fiation. He firt repreffed the Germans in Gaul, of whom he flew 400,000. He then marched into Dalmatis, to oppof: and fubdue the Surmatians. From thence he led his furces into Thrace, and furced the Goths to fue for peace. He after that turned his armistowarls ACia; His 307 fubdued the province of Ifausia; and marching on- quefto ward, conquered a people called the Bl:myes ; who, leaving their native forells of Ethiopia, had polf ficd themielves of Arabia and Judea, and had coninued in a flate of rebcllion fince the reign of Gallienus. Narfis alfo, the king of Perfia, fubmitted at his approach: and upen his return into Europe, lie divided the depopulated part; of Thrace among its barbarnus invaders : a circumitance that afterwards produced groat calamities to the empire.

His diligence was not iefs confop cuous in fuppreffing inteltine commotions. S.aturninus being conipelled by the Egyptians to declare himfelf cmperor, was defeated and flain. Proculusalfo (a perfon remaskatie only fur his great attachmeat to women, and who boatted in a letter, that, having taken 100 Sarmatian virgins prifuners, he deprived ten of that manie in one night, and all the reft within a fortuight) fet up againt the cmperce ; but was compelled to hy, and at length delivered up by the Germans. At the fime time Conofus (who was a remarkable votary to bacchus, bcinor able to drink as n:uch wine as ten could do, without being difordered) rebelled, and being overcome hanged himelf in defpair. Probus, when he dim him immediateiy ater his dcath, could not av, id poirting to himb, and faying, "Thers hangs nct a man but a calk." Still, however, lart. wiohithandirg every circrs to give quiet to the empire,

Rume. elly periccuted.
places, which only themfelves coull endure. In this manner the Goths, Sarmatians, Alani. Quadi, \&cc. pourcd down in incredible numbers; while every defeat feemed but to increafe their Itrength and perfeverance. Of thefe, multitudes were taken prifoners, and fent to people the more fouthern parts of the empire; ftill gre iter numbers were deftrojed; and though the reft were driven back to their native foreft, yet they contirued cver mindful of their inveterate enmity, and, like a favazc beaf, orly continued inastive, till they had licked their wounds for a new encounter.

During this interval, as if the external miferies of the empire were not fufficient, the tenth and laft great perfecution was renewed againf the Chritians. This is fail to h:lve exceeded all the former in feverity: and fuch was the zeal with which it was purfued, that, in an ancient infeription, we are infurmed that they had effaced the name and fuperfition of the Chriftians, and had reftored and propagated the worfhip of the gods. Their attempts, however, were but the malicious efforts of an expiring party ; for Chri:lianicy fhortly after was eftablifhed by law, and tiiumphed over the malice of all its enemies. In the midft of the troubles raifed by this perfecution, and of the contefts that fruck at the in ternal parts of the ftate, Dinclefian and Maxinian fur prifed the world by refigning their dignities on the fame day, and both tetiring into private ftations. Hiftorians are much divided concerning the motives that thus induced them to give up thofe honcurs which they had purchafed with io much danger. Sonie afcribe it to the philofophical turn of Disclefian; and cthers, to his being difgufted with the obfinacy of his Chriftian dibjects: but Latantius afferts, that he was compelled to it, together with his partner, by Galerius, who soming to Nicomedia, upon the emperor's recovery from a great ficknefs, threatened him with a civil war in cafe he refufed to refign. However, of this we are well affured, that he fill preferved a dignity of fentiment in his retiremer.t, that might induce us to believe he had no other motive for refignation than the love of quiet, and the contcioufrefs of his inability to difcharge on a fick.bed the duties of a fovereign. Having retired to his bitti-place, he fpent his time in cultivating his garden, alluring his vifiters that then only he began to enjoy the world, when he was thought by the relt of mankind to forfake it. When alfo fome attempted to perfuade him to refume the empire, he replied, That if they knew his prefent happinefs, they would rather endeavour to innitate than difurbit. In this contented manner he lived fome time, and at laft died either by poifon or madnefs, it is uncertain which. His reign, which continued 20 years, was astive and ufeful; and his authority, tinstured with feverity, was well adapted to the depraved ftate of morals at that timo.

Maximian, his partner in the empire and in refignation, was by no means fo contented with his fituation. He longed once more for power, and difturbed the two fucceeding reigns with varicus efforts to refume it; attempting to engage Doclefian in the fame defign. Being obliged to leave Roms, where he had bred great confufinn, he went nver into Gaul, where he was kindly received by Conftantine, the then acknowledged emperor of the weft. But here alfo continuing his intrigues, and endeavouring to force his own daughter and deitroy her hufband, he was detectel, and comdemn.
ed to die by whatevcr death he firuld thin'z proper ; and Lact.mitius tells us that he chofe hanging.
Upon the refignation of the two emperors, the tivo si3 Cafars whom they lad formerly chofen were univer- tius thlofally acknowledged as their fucceffors. Confantias rus, and Chlorus, who was fo called from the plainnefs of his Galerius, complexion, was virtunus, valiant, and merciful. Ga- enperore. lerius, on the other hand, was brave, but brusal, incentinent, and cruel. As there was fuch a difperity in the: tempers, they readily agreed, upen coming ii:to full power, to divide che empirc: Confantius being appointed to govern the weftern parts; namely, Italy, Sicily, the greatelt part of Afica, tegether with Spain, Gaul, Britain, and Germany : Galerius had the eaftern parts allotted to his fhare; to wit, Illyricum, Pannonia, Thrace, Macedonis, all the provinces of Greece, and the Leffer A fia, together with Egypt, Syria, Judea, and all the countries eaftward. The greainels of the divifion, however foon induced the emperors to take in two partners more, Severus and Maximin, who were made Cxfars, and affifted in the conducting of affairs; fo that the empire now was under the guidance of four perfons, all invefted with fupreme authority.

We ate informed but of few particulars of the reign of Conftantius, except a detail of his charafter, which appears in every light moft amiable. He was frugal, chafte, and temperate. His mercy and juftice were equally confpicuoas in his treatment of the Chriftians, whom he would not fufer to be injured; and when at Jength perfuaded to difplace all the Chriatian officers of his houtehold that would not change their religion, when fome of them complied he fent them away in difgrace; alleging, that thofe who were not true to the ir God, would never be faithful to their prince.

In the fecond year of his reign he went over into Britain; and leaving his fon Conftantine as a kind of hoftage in the court of his partner in the emp.re, tomk up his refidence at York. He there continued in the practice of his ufual virtues; till falling fick, he began to think of appointing his fon for his ficcelfor. He accordingly fent for him with all fpeed; but he was paft recovery before his arrival : notwithfanding, he received him with marks of the utmolt afection, and raifing himfelf in his bed, gave him feveral uieful inAruations, particularly recommending the Chriftians is his protection. He then bequeathed the empire to his carc; and crying cut, that nove but the pious Conflantine thould fucceed him, he expired in his alms.

In the mean time, Galerius, his partner in the cm . pire, being intormed of Conft antine's advancement, teftified the moft ungovernable rage, and was even going to condemn the meffenger who brought him the account : but being diffuaded, he fecmed to acquiefee in what he could not prevent, and fent him the marks oi royalty : but at the fame time declared Sevcrus emperor, in cppofition to his interefts. Juft about this time a'fo, another pretender to the empire farted up. This was \(933^{1 / 2}\). Maxentius, a perfon of mean extraction ; but very much ularps the favoured by the foldiers, whom he paraited to pillage at diticretion. In orde: to oppoie Mixentins, Severas hro \({ }^{\text {ne- }}\) led a numerous army towards the gates of Rome; !net his foldiers confidering again?t whom t'icy were to fight, inmediatcly ubandoned him; and Mertiy atter the put an end to his own life, by openirg his veio:To revenge his death, G.llerius muchad in:) Italy, re-

\section*{K U N}
 lena: .. His foldiers, however, upon approaching the c.apital began to waver in their refolutions: wherefore li: was obliged to have reccuric to intreaties, imploring them not to abanton him; and, retiring by the fame route by which he had advanced, made Lieinius, who Was originaliy tief fin of a poor labourer in Dacia, C fite, in the room if Severus who was dlain. 'his feemed to be the latt at wh hewer; for thortly atfer he Was beized with a very extraordinary diforder in his rr vates, which laffed all the thill of his phyficians, fir near the fpace of at er he had fanguithed ia torments ftizns was one of the natily crimes alleged againf him; and the hirtorians have not tailed to aggravate the circumitinces of his death as a judgmens from Heaven fior his former impiety. However this be, la abated muth of his feverizics agannt them on his deathbed ; and revoked thofe ediuts which he had furmerly pubhelhed, tending to their perfecution, a little before his deat.
Confantine being thus delivered from his greatef "rpone:n, inight nuw be conlidered as poffefing nore pmer than any of his rivals who were yet remaining. The compire was at that time divided between him and the: nihers: Mincutius, who governed in Rome, a icrion of a cruel dipnofition, and a fedfaft fipporter of paganiin: ; Licinius, who was adopted by Galerius, and commanded in the eaft; and likewse Maximin, who had formenly been declared Cxfar with Severus, and who alfo govenned fome of the eaftern provinces.

For fome time all things feemed to wear a peaceful appearance; till at Jength, either ambitian, or the ty--amical conduet of Maxentiuc, induced Confantine to engage in ar expedition to expel that commander from Rome, and to make the preper preparations for marel. ing into Italy. It was upon this occafion that he formed a refolution which produced a mighy change in the politics as well as the morals of mankind, and gave a nicw turn to the comncils of the wife, and the purfuits of ambition. One evening, as we are told by Eufebius, the amy being upon its march toward Rome, Conftantine "as tiken up with satious confiderations upon the late of fublunary things, and the dangers of his approacling expedition : fentible of his own incapacity to fucceed without divine affifance, he empliyed his meditatons upon the opinions that then were chielly agitited among nankind, and fent up his ejaculations (1) IUdven to in!pire him with widom to choofe the
proteation. Aftcr this, he confulted with feveral of the principal teachers of Chrittianity, and made a public avowal of that facred perfuation.

Conflamine having thus attached his foldiers to his interell, who were mofly of the Chriltian pertuation, luft no time in entering Italy with 90,000 foot and Sooo horfe; and foon advanced to the very gates of Rome. The unfortunate Maxentius, who had long given himfelf up to eale and debauchery, now began to make preparations when it wat too late. He hril put in practice all the fuperititivus rites which paganum taught to be necelfary; and then confulted the sibylline books ; from whence he was inforned, that on that great day the enemy or Rume thould perith. This prediction, which was equivocal, he appted to Conitantine; wheretore, teaving all things in the bet pothere, he advauccal from the city with an army of 100,000 fout and 18,000 horfe. The engagement was lur lome time fierce and bloody, till his cavalry being roused, victory declared upon the fide of his opponent, and he himelt was drowned in lis Hight by the oreaking down of a bridge as be attempted to crols the river 'Tiber.

Conltantine, in confequence of this victory, entering the city, dificlamed all praifes which the tenate and people were ready to offer; afcribing his fucceis to a luperior powcr. He even caufed the crols, which he was laid to have feen in the heavens, to be placed at the right of all his itatues, with this micription: "That tunder the influence of that vidorious crofs, Conftantine had delivered the city from the yoke of tyramical power, and had refored the fenate and people of Rome to their ancient atthonity." He afterwards ordained, that no criminal thould for the future fuffer death by the crofs; which hald formerly been the mult ufual way of punfhing llaves convited of capital offences. Euits were foon atter iflued, declaring that the Chriftians thould be eafed from all their grievances, and received into places of truft and authority. Thus the rew religion was feen at once to prevail over the whole Roman empire; and as that enormous fabric had been builtand guised upon pargan principles, it lofl a great deal of its Hrength and coherence when thofe principles were thus at once fubverted.
'Ihngs continued in this fate for fome time, Conflantine all the while contributing what was in his power to the iutereft of religion, and the revival of learning, which had been long upon the decline, and was almoit wholly extinat in the empre. But in the midla of theie athisuities, the pace of the empire was again ditturbed by the preparations of Maximin, who geverned in the e:llt, and who, defirous of a lull participation of power, marehed againf Licinius with a very numerous army. In conlequance of this flep, atier many confilits, a general engagement enfued, in which Maximin fuffered a deffat and tutal deteat; many of his troops were cut to pieces, death. and thoie that furvived fubmitted to the conqueror. M ximin, however, having efcaped the general canage, once mere put himelf an the head of another army, sefolving to thy the tortune of the fied; but death prerented hi, detign. As he died by a very exuacrdinay Find of madnef, the Cinrittians, of whom he was the declated enemy, did not fail to alcribe his end to : judgnent from Heaven; but chis was the age in whith talie judements and falte miracles made up the bulk of their uninitruct.ve lififory.

Ronse. 518 War between Comfantise and Licinius.

519
Licinius overcome and put to death.

520 Conltas:tinc puis his w and .on to diash.

Corfantine and Licinius thus remaining undifputed polfelfors and partners in the empire, all things promifed a peacealie continuance of friendihip and power. However, it was foon found, that the fame ambition that aimed after a pat, would be content with nothing leds than the whole. Pagan writers afcribe the rupture between there two potentates to Conftantine ; while the Chritians, on the cther hand, impute it wholly to Licinius. Both, perhaps, might lave cencurred : for Licinins is convicted of having perfecuted Chrittianity, which was fo highly favoured by his rival; and Conttanine is known to have been the firft to begin the preparations for al. open itpture. Both fides exerted all their power to make oppotition ; and at the heatd of very fornidable armies, came to an engagement near Cybalis, in Pannonia. Conttutine, previous to the battle, in the riddt of his Chritian bithops, begged the alllance of Heaven; while Liconins, with equal zeal, ealled upen the pagan prielts io intercede with the gods in his lawour. Conlantine, after an obftinate reliftance from the enemy, became victorious; tonk their camp; and, after fome time, compelled Licinius to fue for a truce, which was agreed upon. But this was of nolong continuance; for, foon alter, the war breaking out afrefh, and the rivals coming ouce more to a general engagement, it proved decifive. Licinius was cutirely deteated, and purlued by Conftantine into Nicomedia, where he furrendered himfelf up to the vietor; having firt oltained an oath that his life fould be fpared, and that he fould be permitted to paf. the remainder of his days in retirement. This, however, Conftantine 1ho:tly after broke; for either learing his defigis, or finding him actualiy engaged in freh confiracies, he commanded him to be put to death, toGether with Martian his general, who fome time tefore had been croated Cælar.

Conltantine being now fole morarch of the empire, without a rival to divide his power, or any perfon from whefe claims he could have the leaft apprehentions, refolved 10 etfablifh Chriftianity on fo fure a bafis, that no new regulations thould thake it. He commanded that in ail the provinces of the empire the orders of the bithops thould be exactly obejed; a privilege of which, in fucceeding times, thefe fathers made hut a very indifferent ufe. He called alio a gereral council of thers to meet at Nicea, in order to repreis the herelies that had alrealy crept into the church, particulasly that of Arius. To this place repaired about \(3 \mathbf{1 S}\) bilhops, belides a multitude of preßoters and deacons, togrother with the emperer himfelf; who a!l, to about 17 , concurred in condemning the tenets of Arius; whe, with his alfeciates, was banithed into at remete part of the empire.

Having thus actlored univerfal tranquillity to the empire, he vas not able to ward eff the calamities of a more demet?ic rature. As the hiftories of that peaiod are entirely at variance with cach other, it is not eafy to tell the motives which induced him to pet his wide Fauna and lis fon Ciipus to death. "The mont plitifible acermut is this: Faulta the emprefs, who was a woman of great beansy, but of extravigart defires, lad long, though fecretly, loved Crifpue, Confantine's fon by a former witc. She had tried every art in infpire this youth with a mutual prilion; but, finding her more diftant efforts ineffeciual, had even the cunfidence to make him an open confeltion of her defires. 'Ihis pro.

duced an cxplanation, which wrs fatal to both. Csifpus reccived her addrefies with deteftation ; and the, 10 be revenged, acculed lim to the emperor. Conflantine, fired at unce wi.h jealouly and rage, ordered him to die without a hearing; nor did his innocence appenr till it was too late icr tedrel's. The only reparition therefore that remaincd, wats the puting Fautt, the wicked inftrument of his formice cruclty, to dealh; which was accordingly executed upon lier, together with fonse others who had been accomplices in her falfehood and treachery.

But the private misfortunes of a few were not to be werghed arg.intt evils of a mere rencral nature, which the Roman empire fhortly after experienced. Thefe arofe from a moafure which this emperor conceived and executed, of eransfering the tent of the empire from Jnome to Byzantium, or Conflautinople, as it was afterwards called. Whatever might have been the reafons which induced him to this undertaking; whether it was becaufe he was offended at fome aftonts he received at Rome, or that he fuppofed Conlantinople more in the centre of the empire, or that he thought the eallern parts more required his prefence, experience has thourn that they were weak and groundlefs The empire had long betore been in the moll deciining flate ; but this in a great meafure gave precipitation to its downfall. After this it never refuned its former fplendor, but languilhed.

His firlt defign was to build a city which he might mate the capital of the world; and for this purpole, he made choice of a fituation at Chalcedon in Afia Minor; but we are told, that in laying out the ground. plan, an eagle caught up the line, and flew with it over to Byzantium, a city which lay upon the oppofite fide of the Bofphorus. Here, therefore, it wais thought ex. pedient to fix the feat of the empire ; and indeed nature feems to have formed it with all the conreniences and all the beanties which night induce power to make it the feat of refidence. It was fituated on a plain that rofe gently from the water ; it commanded that frait which unites the Mediterranean with the Euxine fea, and was furnined with all the advantages which the moft indn'gent climate could befow. This city, therefore, he beansified wi:h the molt magnificent edifices; le divided it into 14 regions; built a capitol, an amphithentre, many churches, and other public works; and having thus rendered it equal to the magnifieence of his idea, he dedicated it in a very folemn manrer to the God of martyrs ; in about tro jecars afo ter, repairing thithat with his whole court.

This removal produced no immediate alterdtion in the govermment of the empre; the inthabitants of Rome, tho' with relufance, lubinitted to the change: nor was there for two or three years any difturbance in the flace, until at length the Goths, nindiag that the Rom:ms had withdrawn all their gar:if res along the Danube, reacked their inmads, and ravaged the country with unheard-f chu:'sy. Corillatiric, however, fonn reprefied their incurfons, and to feraitened them, that acir 1cceoco of their namber perifled by cold and hanger. Thefe and fome che- infarse dicns being happly fupprelled, the government of the empire was divided as follows. C rittanit e, the empron's ddeft fon, commanded in \(G: n l\) ind the wellen pro. vinces; Conftatius ;overned isfica and 11 yisum ; and Con:tans

Conttans ruled in Italy. Dalnatius, the emperor's brother, was ient 10 defend thofe parts that bordered upon the Goths; and Annibalionus, his nephew, had the charge of Cappadocia and Armenia Minor. This divion of the empire llill farther contsibuted to its down1.111: for the united frength of the flate being no loager brought to repreis invafons, the barbarims fought with fipcrior numl ers; and conquered at hat, thoush nfien defiased. Cenfantine, however, did not live to feel thefe calamities. The latter patt of his reign was peaceful and plendid; ambathacors from the remotelt Indies came 10 acknowledge his authority; the Perfians, who were ready for fieth inroads, upon finding lim prepared io oppefe, fent humbly to defire his liiendhip and forgivenefs. He was above 60 years old, and had reigned above 30 years, when he found his health began to decline. To obviate the effects of his diforder, which was an intermitting fever, he made ufe of the warm baths of the city; but receiving no benefit from thence, he removed for change of air to Helenopolis, a city which he had built to the memory of his mother. His diforder increafing, he changed again to Nicomedia; where finding himfelf without hopes of recovery, he caufed himfelf to be baptifed: and having fion after received the facrament, he expired, after a memorable and adive reign of 32 years. '1his monareh's character is reprefented to us in very different lights: the Chritian writers of that time adoreing it with every ftrain of panegyric ; the heathens, on the contrary, loading it with all the virulence of invective. He eftablithed a religion that continues the bleding of mavkind; but purfued a fcheme of polities that dellroyed the empire.

Firm the time of Confantine to the divifion of the empire between Valentinian and his brother Valens, the hiftory of Rome is related under the article ConstanTINOPLE, where alfo that of the caftern part is carried down to the final deftruction of that city by the Turks. In the beginning of the reign of Valentinian, the province of Libya Tripolitana was roievoully oppreffed by the barbarians of the defert, and almoft equally fo by Romanus is own governnr. Hisconduct was fo exceedingly orpreflive, that the inlabitants fent a deputation to Valentinian, complaining of their unhappy fituation, and detiting redrefs. Palladius was accordingly fent to inquire into the flate of the province; but bcing gained over by liomanus, he made a falle report to the emperor; and thus the unhmppy province was left a pres to the mercilefs invaders and rapacious governor. Duling the relt of this reign the basbarians continued their inroads into the empire; and among others, we find the Saxcns now putting in for a flare of the fpoils of the zuined empire : however, their atmy was at this lime entirely cut off. At latt Valentinian himfelf took the field againf thefe northern birbarians; and entering the country of the Quadi, defroged all with fire and fword. The barbanans on this were tain to lite for pace in a vely humble manner; but Valentinian, folling into a great paffion while pieaking to them, thicatesed in extirpate the whole nation at once. His fury on this occalion prodused an apmplexy, or fome other mortal diforder: fur he fuddenly fell down, and being eonvered by his attendants into his chamber, he was feized with violent convallive fits and contortions of all his limbs, in the agonies of which he expired,
in the year 375 , the \(55^{\text {th }}\) of his age, and 12 th of his reign.

After the death of Valentinian, his fon Gratian took upon litm the imperial dignity; foon after becoming matter of the whole empire by the death of Valens. The tranfations of his reisn, and thofe of his partner Thendolies, are related under the article Constantinople, \(n^{\circ}\) 7フ-8y. The death ot The dofius gave the liniting throke tos the Reman alfairs; his fon Honurius, whan he left the weltern empire, being por. lifed of no abilisies whatever, and indeed feening to have been but very little removed from an idiot. The barbations appear to have been abumtantly fentible of the adrantages offered them by the diath of 'Thzodofius. He cxpired in the month of January ; and before the accellion of firing, the Goths were in arms. The barbarian auxiliaries alfo now declared their independency; and along with their countrymen, turi ufy :thailed the deelining empire. The Goths were now headed by an experienced commander, their celebrated king Alaric; who would have proved formidable even in better times of the empire. He firf over-ran Greece, which he accomplithed without oppofition, through the treachery of the governor, who commanded the troops that defended the pafs at Thermopyle to retire at the approach of the enems. Athens, Corinth, Argos, Sparta, yielded without refiftance; and the whole country was ravaged and dellroyed by the blood thirfty barbarians. At laft, in the year 397 , he was oppofed by Stilicho, the general of Honorius, a man of great valour and experience in war. The Goths were defeated with great lofs, and afterwards befieged in their camp; but through miftake or negligence in the Roman commander, they were fuffered to efcape, and make themfelves mafters of the province of Epirus. Alatic then, having found means to conclude a rreaty with the minifters of Conftantinople, Stilicho was obliged to retire.

Not long after this, Alaric invaded Italy itfelf. The emperor, llruck with terror, would have abondoned the conntry and fled into Gaul: but this difgraceful and pernicious meafure was oppofed by Stilicho; who propofed to the court of Honorius, at that time at Milan, that if they would maintain their ground during bis abfence, he would foon return with an army capable of oppofing the barbarians. This being agreed to, Stiiicho immediately fet out for Rhxtia, where the mof confiderable body of the Roman forces at that time was, and collected his troops with the utmont diligence. But in the mean time Honorins was in the greatef danger; having been obliged to take refuge in the town of Afta in Piedmont. To this place the Guths infantly laid fiege, and a capitulation had been propofed, when the drooping fpitits of Honorius were at once revived by the arrival of Stilicho, whom le had fu lons expected. The Gothe werc now belieged in tlieir turn, and obliged to come to a decifive battle feated at at Pollentia. 'The engagement lafted the whole day; bolleatua. but at latt the Goths were compelled to retreat. Iheir canp was inftantly invefted ; their entrencliments forced with great 月aughter; the wife of Alaric was taken, with all the wealth which had heen amatled in plundesing Grecee ; while many thoufands of Roman prifoners were relealed from the moft deplorable naverv. The vistery, however, wat not fo decilive but that

Rome. Alaric continued fill extremely formidable; and Stilicho chofe rather to conclude a treaty with him, and allow him an annual penfion, than to continue the war with vigour. Alaric, who was not very fcrupulous in his oblervance of this treaty, in his retreat attempted to make himfelf mater of the city of Verona: but Stilicho coming up with him near that place, gave him a terrible defeat, in which the lofs was little lefs than it had been at Pollentia; after which he effected a retreat out of Italy, but not without the greateß difficulty and danger.

Italy being thus happily delivered, Honorius entered Rome in triumph, having Stilicho along with him in the triumphal chariot. On his entry into the city, he abolithed the flows of gladiators; which, though forbidden by Conflantine, had been tolerated by his fuccelfors, and even by Theodofius himfelf, out of complaifance to the people, who were beyond meafure fond of that inhuman diverfion. However, foon after, the emperor was obliged to leave the metropolis and retire to Ravenna, in order to fecure himfelf from the birbarians, who now broke in npon the empire on all fides. Such multitudes now made their appearance, that it is not a little difficult to account for their fudden emigration. Mr Gibbon accounts for it from a fuppofed revolution in the northeaftern parts of China. "The Chinefe annals (fays he), as they have heen interpreted by the learned induftry of the prefent ag, may be ufefully applied to reveal the fecret and remote caules of the fall of the Roman empire. The extenfive territory to the north of the great wall was poffeffed, atter the fight of the Huns, by the viftorious Sienpi; who were fometimes broken into independent tribes, and fometimes re-united under a fupreme chief; till at length feyling themfelves Topa, or " mafers of the earth," they acquired a mare folid cunfiftence, and a more formidable power. The Topa foon compelled the paftoral nations of the ealern defert to acknowledge the fuperiority of their arms: they invaded China in a period of weaknefs and inteftine difcord; and thefe furtunate Tartars, adopting the laws and manners of the vaniquithed people, founded an imperial dy. nuty, whelh reigred near 160 years over the northern privinces of the monarchy. Snme generations before they afcended the throne of China, nue of the Tapa prines had enlifted in his cavalry a flave of the name of hioko, renowned for his valour ; but who was tempted, by the fear of punilliment, to defert his thandard, and th range the defert at the head of 100 followers. 'This wang or rohbers and nutlaws fivelled into a camp, a tribe, a nunier us people, dillinguithed by the appellation of Gaousen; and their hereditary chieftains, the poferity of Moko the flave, affumed their rank among the Scythian monarchs. The youth Toulun, the gieatert of his defeendan:ts, was exercifed by thofe misfurtunes which are the fehnol of heroes. He bravely fungesed with adverfity, broke the imperious yoke of the Topa, and became the leginator of his natini, and the conqueror of Tattary. His tronps were diftributed inten regular bands of 100 and of 1000 men ; cowards were floned to de.th ; the mote fplendid lonours were perpofed ac the reward of valour; and Toulun, who had knorledge enough to defife the learning of Chin.t, atiopted only fu.h arts and inftutions as were f.svourable to the military firit of his guvernment. His
tents, which he removed in the winter feafon to a more
Ronic. fouthern latitude, were pitched during the fummer on the fiuitful banks of the Selinga. His conquers Aretched from the Corea far beyond the river Irtilh. He vanquifhed, in the country to the north of the Cafpian fea, the nation of the Huns; and the new title of Khan, or Cagan, expreffed the fame and power whicl: he derived from this memorable victory.
"The chain of events is interrupted, or rather is concealed, as it paffes from the Volga to the Viftula, through the dark interval which feparates the extreme limits if the Chinefe and of the Roman geography: Yet the temper of the barbarians, and the experience of fuccefive emigrations, fufficiently declare, that the Huns, who were oppreffed by the arms of the Gevugen, foon withdrew fr m the prefence of an infulting victor. The countries towards the Eoxine were already occupied by their kindred tribes, and their hafty flight, which they foon converted into a bold attack, would more naturally be directed towards the rich and level plains through which the Vifula gently flows into the Balt:c fea. The north muft aga \(n\) have been alarmed and agitated by ti:e invafion of the Huns; and the nations who retreated before them mult have preffed with incun:bent weight on the confines of Germany. The inhabitants of thofe regions which the ancients have affigned to the Suevi, the Vandals, and the Burgundians, might embrace the refolution of abandoning to the fugitives of Sarmatia their woods and moraffes; or at lea \(\AA\) of difcharging their fuperfluous numbers on the provinces of the Roman empire. About four years after the victorious Toulun had aflumed the title of \(k\) khan of the Geougen, another barbarian, the haughty Rhodogatt, or Radagaifus, marched fiom the northern extremities of Germany almoft to the gates of Rome, and left the remains of his army to atchieve the deftruction of the weit. The Vandals, the Sueri, and the Burgundians, formed the ftength of this mighty hof: but the Alani, who had found an hofpitable reception in their new feats, added their active cavalry to the heavy infantry of the Germans; and the Guihic adventurers crowded fin eagerly to the fandard of Radagaifus, that by fome hiftorians he has been \(\cap\) yled the ling of the Goths. Twelve thoufand warriors, ditt nguifhed above Radagaithe vulgar by their noble birth or their valiant deeds, fus invadcs glittered in the van; and the whole multitude, which traly with was not lefs than 200,000 fighting men, might be in- a prodigicreafed by the acceffion of women, of children, and of eus army. flaves, to the amount of 400,000 perfons. This formid.ble emgiration iffued trom the fame coaf of the B:altic which had poured forth the myriads of the Cimbri and Tentones to afault Rome and Italy in the vigour of the republic. After the departure of thofe barbarians, their native country, which w:as marked by the veftiges of their greatnef, long rampuris, and gigantic moles, remained diaring fome ages a yaft and dreary folitude; till the human fpecies was re:eveedt by the powers of generation, and the vacancy wa; filled up by the infuy of new inhabitants. The nations who now ufurp an extent ef land which they are unatle to cultivate, would foon be afifed by the induAtious poverty of their neighbours, if the governmert of Europe did not protect the claims of dominion and property.
"The correfpondence of nations was in that age fo

\section*{\(\mathrm{R} O \mathrm{M}\)}
imperieat and frecurious, that the revhlutions of the nuth might efare the knowled pe of the court of Ra. wennal thll the dark cluad shic!1 was colletted alons the coat of the Balit: bart in thander upon the benks. iff th: Upper Dinule. The emperor of the well, if his minith ts dialubes his amutements by the news of tre impending dinger, was fer ithed withbeisy the ocIt ion and the ipectatar of the war. The fatciy of Rume was intanted to the comrie's and the fwod of stinchn: but fich was the fesble and exhaufed late of the empire, that it was imporible to refore the fortinicu:ins of th: Danube, nt to prevent, by a vigurous alic:, the ination of the Cermare. The hopes of the vifilant miniter of Henorius were conmed to the defince of Italy. He once mere abandoned the provinces; rec alled the troops; peelled the new levies, which were bigorount exated, and paillanimsuny eluded; employed the moit efticacious menas to arrell or allu:e ine deferters: and offered the gitt of freedom, and of two pieces of gold, to all the dlaves who would enlitt. By thefe eifots he painfully colleaded from the fubjects of a great ermpire an army of 30,000 ir 40,000 mer: which, in the days of Scipio or Camillus, would have teen inflantiy furnifhed by the free citizens of the territory of Rome. The 30 legions of Stilicho were reinionced by a large body of harbarian auxiliarics; the faithful Alani were perfimally attached to his fervice; and the tronps of Huns and of Goths, who nearched under the banners of their native princes Hulden and Sarus, were animated by interelt and refentanent to oppofe the ambition of Radagaifus. The king of the confederate Germans paffed, whout refitunce, the Alps, the Po, and the Appenine ; leaving oa o:a hand the inacceffible palace of Honorius, te. curely buried among the marthes of Ravenna ; and on the other, the camp of Stilicho, who had fixed his Inead-quarters at Ticinum, or P.ıvia, but who feems to have ainded a decitive battle till he had atembled his ditant forces. Many cilies of Italy were pillaged, or detroged; and the fiege oi Fhorence by Radagaifus is nat of the earlieft events in the hillory of that ceiebratal repuhlic, whofe firmners checked and delayed the u:tkifinl fury of the bublerians. The fenate and f-pie trembled at their appraach withia 180 miles of Pome; and anxioully comparal the danger which they haderaped with the netw peals to which they were capoed. Alaric was a Chriltian and a foldier, the i-..ser of a difciplined army; who undertond the hws on war, when ratpeeted the fanctity of treaties, and who 1.allaurif 1! or nverled with the fulyjets of the cmfios in the fare camrs and the fame churches. 'Ilie fivace Radagaifus was aftranger to the manucrs, the ratigion, and seen the langugg, of the civilized nato:'s of tle louth. The tirrathe's of his temper was exapperated by cruel faperflition; and it was univerfatly baleved, the the had bound hinifelf by a folemm rio to raluen ti.e city into a heap of fomes and athes, a:ad to facrifice the moft illultrous of the Roman fe-nati-rs oa the atiouts of thole gods who were appeafed b; haman lif out. The public denere, which thauld have esen ie ed all danett:c anmotites, difpleyed the
 wetries ni Jupier and Nercury refacted, in the im-

fus ; and fecretly rejuiced in the calamities of their country, which cundenned the finth of their Chainian adverliaries.
". Florence was reduced to the lat? extremity ; and the Defeited fainting couage of the citizens was fupported only by and dethe amilherity of St - Ambrofe, who led conmmicated fraycal hy in a dream the froniife of a fivedy deciverance. Oa a stlichuo finden they behed from their walls tha banners of Stilicho, who advarced with his united torce to the relief? of the faithful city; ard whon foon narked that latal fipot for the grave of the barbarian hotl. The apparent contradiaions of thofe witers who vationlly relate the defeat of Raddigaifos, may be reconciled without offering much tiolence to their refpect ve tettimones. Orofius and Auguliin, who were iatimately connented by fiendth:p and religinn, afrobe thas minaculous vifory to the providence of G d rather than to the valour of man. They Atrialy exclude every ides of chance, or even of bloodthed ; and politively ahirm, th , the Roma:s, whefe canp was the feene of plenty and idlerels, enjoycd the diflefs of the barbatians, flowly expiring on the llatp and barren ridge of the hiils of Feftia, which rite above the city of Florence. Their extravagant affertion, that not a fingle foldier of the Chrifian army was killed, or even wounded, may be difmiffed with filcnt contempt ; but the reit of the narrative of Auguftia: and Orofims ic confiftent with the fate of the war and the charader of Stilich. Confcious that ha commanded the lat army of the republic, his prudence wculd no: expofe it in the open field to the headfireng fury of the Germans. The neethod of furrounding the eremy with flreng lines of circumallation, which he had twice employed dyairft the Gothic king, was repeated on a larger fcale, ard with more confiderable effect. The examples of Cafar mutt have been familiar to the moft illierate of the Roman wartiors ; and the fortilicutions of Dyrrhachium, which connected \(2+\) caltles by :a perpetual ditch and 1 ampart of 15 miles, aff.reded the model of an entrenchment which might confise and fatve the mott numerous holt of batbarians. The Roman troops had lefs degenerated from the indultry than from the valour of their anceftors; and if the fervile and laborions work offended the pride of the foldiers, Tufcany could fupply many thouland peafar:ts, who would labour, though perhaps they would not fight, for the lalvation of their native country:The imprifoned multitude of horfes and men was gridually deftroyed by famine, rather than by the fiword; but the Romans were expofed, during the progrefs of fuch an extenfive work, to the frequent attacks of an impaticnt enemy. The defpair of the hungry barbanians would precipitate them againft the fortifications of Stilicho; the gener.ll might fometmes indulge the atdour of his brave auxiliaties, who eagerly prefled to affault the camp of the Germans; and thelc various incidents might produce the lharp and bloody confiats which dignify the narative of Zolimus, and the Chronicles of Prafocr and Narcellinus. A fationable fupply of men and provilions had been introduced into the wails of Fiorence; and the fanithed hoth of Redacains was in its tun betieged. The proud manarh of firmany varlite ntaina, alter the lofs (f his bravelt warrior, wis radecad to on thide either in the fath of a cappitula\(t\) oa, or in thacemer.cy of silich? Bat the death of the a ma' rap we, whe was isnumininatly behe ded, difo

Rome. the flort delay of his execution was fufticient to brand the conqueror with the guilt of cool and doliberate cruelty. The lam thed Germans who eleaped the fury of the auxiliaries were fold as flaves, at the contemptible price of as many fingle peces of gold: but the difference of food and climate fwep: away great numbers of thote unhappy firangers; an.t it was obferved, that the inhuman purchafe:s, inttead of reaping the fruit of their labrur, were foon obliged to add to it the expenec of interring theni. Stilicio informed the emperor and the fenate of his fuccefs; and deferved a fecond time the glarious title of Deliverer of Italy.
"The fame of the victory, and more efpecially of the miracle, has cacouraged a vain perfuafion, that the whole army, or rather nation, of \(G\) ermans, who migrated from the thores of the Baltic, mifcrably periihed under the walls of Florence. Such indeed was the tate of Radagaifus himelf, of his brave and taithful companions, and of more than one-third of the various multitude of Suevi and Vandals, of Alani and Burgundians, who adhered to the llandard of their general. The union of fuch an army might excite cur furprife, but the caufes of feparation are obvious and forcible; they were the pride of birth, the infolence of valour, the jealoufy of command, the impatience of fubordination, and the obftinate confict of opiniors, of interelts, and of parfions, among fo many kings and warriors, who were Accuint of untaught to yield or to obes. After the defent of Ra-theremain- dagaifus, two parts of the German hofl, which moft der of the have exceeded the number of 100,000 men, fill rearmy of Radagaifus.
mained in arms between the Apennine and the Alpe, or between the Alps and the Danube. It is uncertain whether they attempted to revenge the death of their general: but their irregular fury was foon diverted by the prudence and firmuels of Stilicho, who oppofed their march, and facilitated their retreat; who confidered the fafety of Rome and Italy as the great object of his care, and who facrificed with too much indifference the wealch and tranquillity of the diftant provinces. The barbarians acquired, from the junctiun of fome Pannonian decerters, the hnowledge of the country and of the roads; and the invalion of Gaul, which Alaric had de. figned, was executed by the remains of the great army of Radagaifus.
"Yet if they expected to derive any affiftance from the tribes of Germany who inhabited the banks of the Rhine, their hopes were difappointed. The Alemanni preferved a fate of inactive neutrality; and the Franks difinguifhed therr zeal and courage in the defence of the empire. In the rapid progrets dnwn the Rhine, which was the firft ast of the adminifration of Stilicho, he had applied himfelf with peculiar attention to iccure the alliance of the warlike Franks, and to remove the irreeuncileable enemies of peace and of the republic. Marcomir, one of their kings, wats pullicly convisted before the tribunal of the Roman magiftrate of vinlating the faith of treaties. Hy was fentenced to a mild, but diftant exilc, in the province of Tufcany; and this ciegradation of the regal digniiy was fo far from exciting the refentment of his fubjeets, that they punifhed with death the turbuient Sunno, whatempted to revenge his brother, and maintained a dutiful allegiance to the princes who were eflatlithed on the throne by the choice of Stilicho. When the limits of Ganl and Germany were fhaken by the nothern cmigration, the Franks
bravely encountered the fingle force of the Vandals; who, regardlef, of the leltons of adveritts, had againa feparated their troops from the flandard of hair barb:riall allic. They pais the peraler of th eir buncto ina van-
 and 20,050 Vandals, with thar l:ing Godigifclus, were ad hy the hain in the ficid of lattle. The whice peopie muft have trarks. been extirpated, if the fquadrons of the Alani, adrancing to the it relief, liad not trampled down the ia: anary of the Franks; who, after an ho:numable rolifance, were compelied to relingu th the unequal contcf. The vitorious confederates purfued their marcin; and on the laf day of the year, in a feafen when the waters of the Rhine were moft probably fruzen, they entered without oppofition the cefencelefs provinces of Gaul. This memorable paliage of the suevi, the V'andal, the Alani, and the Burgurdians, who never afterwards retreated, may be conifidered as the fall of the Rnman empice in the countries beyond the Alps; and the barriers, which had follong feparated the favage and the civilized nations of the earth, were from that fatal mo. ment levelled with the ground.
" While the peace of Germany was fecured by the attachment of the Fraviks and the neu:rality of the Alemanni, the fubjeats of Rnme, unconfcious of their approaching calamities, crijoyed a fate of quict and piofperiiy, which hat feldom bleffed the frontiers of Gaul. Their flocks and herds were permitted to graze in the paflures of the barbanians ; their huntfmen penetrated, without fear or danger, into the darich recefies of the Hercynian wood. The banks of the khine were crowned, like thofe of the Tiber, with elegant houfes and well cultivated farms; and ifa poct defcended the river, he might exprefs his doubt on which fide was fituated the territory of the Romans. This fcene of peace and plenty was fuddenly changed into a defert, Ged by the and the profpect of the fmoaking ruins could alone di- barbariazs. tlinguif the folitude of nature from the defolation of man. The flourihing city of Mentz was furprifed and deftroged ; and many thoufand Chriftians were inhumanly maffacred in the church. Worms perithed after a long and obftinate fiege: Strafburg, Spires, Rheims, Tournay, Aras, Amiens, experienced the crucl oppreffoon of the German yone; and the confuming flames of war fpread from: the baiks of the Rhine over the greatef part of the 17 provinces of Gaul. That rich and extenfive country, as far as the Octan, the Alps, and the Pyrenecs, was delivered to the barbatians, who drove before them, in a promifcuous crowd, the bimp, the fenator, and the virgin, laden with the foolls of their houfes and aliars."

In the midfa ef thefe calamities a revoit happened in revolt er 533 Britain, where one Corflantinc, a common foldicr, was Confan. raifed to the imperisl throne, merely for the fake of his tule, whom namc. However, he feenis to have been a man of con- Fons riws fiderable abilitics, and by no mocans unfit for the high ledgoses as dignity to which he was raifed. He governed Brtailin his partuce with great profperity ; paffed over into Gaul and Spain, in the cn.the inhabitants of which fubmitted without opp fition, pirc. being glad of any proccior whatever from the barbarians. Honosius, incapable of cefending the empire, or reprefling the revoit, was rbliged to acknowledge him fur his partner in the cmpire. Ia the mean time, Alaric, with his Goths, threatened a now invefon unlefs he was paid a certain fum of mracy. Stilichn is faid to have occaficned this demand, and to liaw infint 3 i1

Rome.
cd upon fending him the money he demanded ; and this was the caufe of his difgrace and death, which happened foon after, with the extirpation of his family and friends. Nay, fuch was the general hatred of this unfortunate minitter, that the foldiers quartered in the cities of Italy no fooner heard of his death, than they murdered the wives and children of the barbaians whem Stilicho had taken into the fervice of lionorins. The enraged hubands went over to Alaric, who made a new demand of money; which not being readily fent, he laid fiege to Rome, and would have takea it, had not the emperor complied with his demand. The ranfom of the city was 5000 pounds of gold, \(3^{0,000}\) of filver, 4000 filt garments, 3000 ikins dyed purple, and zovo pounds of pepper. On wis occalion the heathen temples werc ftripped of their remaining ornaments, and among others of the Atatue of Valour; which the pagans did not fail to interpret as a prefage of the fpeedy ruin of the thate.

Alaric having received this treafure, departed for a fhort time: but foon after he dgain blocked up the city with a numerous army; and again an accommodation with Honolius was fet on foot. However, for fome rea. fons which do not clearly appear, the treaty was broken off, Rome was a third time befieged, and at laft taken and plundered. Alaric, when upon the point of breaking into the city, addrefling his foldiers, told them, that all the wealch in it was theirs, and therefore le gave them full liberty to feize it ; but at the fame time he ftrietly enjoined them to thed the blood of none but finch as they thould find in arms; and above all, to fpare thofe who thould take fanetuary in the holy places, efpecially in the churches of the apottles St Peter and St Paul ; which he named, becaufe they were molt fpacious, and confequently capable of affording in afylum to great numbers of people. Having given thefe orders, he abandoned the city to his Goths, who treated it no better, according to St Jerome, than the Greeks are faid to have treated ancient Troy; for after having plundered it for the face of three, or, as others will have it, of fix days, they fet fire to it in feveral places; fo that the ftately palace of Salluft, and many other magnificent buldings, were reduced to alhes; nay, Procopius urites, that these was not in the whole city one houfe left entire ; and both St Jerome and Philoflorgius affert, that the great metropolis of the empire was re. duced to an heap of afhes and ruins. Though many of the Goths, purfuant to the orders of their general, refrained from fhedding the blood of fuch as made no zeffltance; fet others, more crucl and blood-thirfly, matfacred all they met: fo that the flreets in fome quariers of the city were feen covered with dead bodies, and fivimming in blood. However, not the leaft jnjury was offered to thofe who fled to the churches; nay, the Gotlis themfelves conveyed thither, as to places of fafer5, fuch as they were defirons thould be fpared. Many oif the flatues of the gods that had been left entire by tie einperors as excellent pieces of art, were an this occa. dion detirnyed, cither by the Couns, who, thongh moflly Arians, were \%ealous Chritians, or by a dreadlul form of thunder aud lightning which fell at the fame time upon the city, as if it lad been fent on purpofe to complete with them the deftruction of idolatry, and abrilh the fmall remains of patan fuperRition. Howbet, wetwithfanding thefe accounis, fome afirn that
the city fufiered very little at this time, not fo much as when it was taken by Charles V.

Alaric did not long furvive the tating of Rome be- 536 ing cut off by a violent fit of ficknefs in the neighbour- that con hood of Rhegium. After his death the affairs of Ho. qucror. norius teemed a little to revive by the defeat and death of Confantize and fome other ufurpers; but the pro. vinces of Gaul, Britain, and Spain, were now almoft entirely occupied by barbarians; in which fate they continued till the death of Honorius, which happened in the ycar 423, after an unfortunate reign of 28 years.

After fome ufurpations which took place on the death of Honorius, his nephew Valentinian III. was declared emperor of the welt, and his mother Placidia regent during his minority. He was farce feated on the throne, when the empire was attacked by the Huns under the celebrated Attila. The Romans, however, wretched and degenerate as they were, had they been unanimous, would even yet have been fuperior to their enemies. The emprefs then had two celebrated generals, Bonifacius and Actius; who by theit union might have faved the empire : but unhappily, through the treachery of Aetius, Bonifacius was obliged to tevolt ; and at civil war enfued, in which he loft his life. Aetius, however, nowithttanding his treachery, was pardoned, and put at the head of the furces of the empire. He detended it againt Attila with great fpirit and fuccefs, notwithfanding the deplorable fituation of affars, till he was murdered by Valentinian with his own hand, on the fufpicion that he afpired to the empire. But in the mean time the provinces, except ltaly itfelf, were totally over-run by the barbarians. Genteric king of the Vandals ravaged Africa and Sicily; the Goths, Suevi, Burgundians, \&c. had taken pofleffion of Gaul and Spain; aud the Britons were oppreffed by the Scots and Picts, fo that they were obliged to call in the Saxons to their afliliance, as is related under the article Englanu. In the year 455, Valentinian was murdered by one Maximus, whole wife he had ravifh. ed. Maximus immediatcly affumed the empire ; but telt fuch violent anxieties, that he defigned to relign it and Hy out of Italy, in order to enjoy the quiet cf a private life. However, being difuaded from this by his friends, and his own wife dying foon atter, he forced the Empres's Eudoxia to marry him. Endoxia, who had tenderly loved Valentinian, provoked beyond meafure at being married to his murderer, invited Genferic king of the Vandals into Italy. This proved a molk fatal theme: for Genferic immediately appeared before Rome; a violent tumult entued, in which Maximus lolt his life; and the city was taken and plundered by ken and Genteric, who carrical off what had been left by the plundered Goths. A veffel was loaded with coftly itatues; hall liy Genthe covering of the Capitol, which was of Grafs plated over with gold; facred vellels emriched with precions ftones; and thofe which had been taken by Titus out of the temple of Jerufalem; all of which were lot with the vellel in its paflage to Alrica.

Nothing could now be more deplorable than the ftate of the Roman affairs : neverthelefs, the empire continued to exilt for fome years longer; and even feemed to revive for a little under Marjorianus, who was declared cmperor in 458. He was a man of great courage, and polleffed of many other excellent quadities. He defeated

\section*{R O M}

Nomes
deicated the Vandals, and drove them out of Italy. himfelf to be proclaimed king of Italy, bnt would not With great labour he fitted out a feet, of which the Romans had been long deftitute. With this he defigned to pafs over into Africa; but, it being furprifed and burnt by the enemy, he himfelf was foon after murdered by one Ricimer a Goth, who had long governed every thing with an abfolute fway. After the death of Marjorianus, one Anthemius was raifed to the empire : but beginning to counteract Ricimer, the latter openly revolted, befieged and took Rome; where he committed innumerable cruelties, among the reft putting to death the unhappy emperor Anthemius, and raifing one Olybius to the empire. The tranfactions of his reign were very few, as he died foon after his acceffion. On his death one Glyccrius ufurped the empire. He was depofed in 474, and one Julius Nepos had the name of emperor. He was driven out the next year by his general Oreftes, who caufed his fon Auguftus or Auguftulus to be proclaimed emperor. But the following year, 476 , the barbarians who ferved in the Roman armies, and were diftinguifhed with the title of allies, demanded, as a reward for their fervices, the third part of the lands in Italy; pretending, that the whole country, which they had fo often defended, belonged of right to them. As Oreftes refufed to comply with this infolent demand, they refolved to do themfelves jultice, as they called it ; and, openly revolting, chole one Odoacer for their leader. Odoacer was, according to Ennodius, meanly born, and only a private man in the guards of the emperor Augntulus, when the barbarians revolting, chofe him for their leader. However, he is faid to have been a man of uncommon parts, equally capable of commanding an army and governing a tate. Having left his own country when he was yet very young, to ferve in Italy, as he was of a ftature remarkably tall, he was admitted among the emperor's guards, and continued in that ftation till the prefent year ; when, putting himfelf at the head of the barbarians in the Roman pay, who, though of different nations, had, with one confent chofen him for their leader, he marclied againt Oreftes and his fon Auguftulus, who Rill refufed to give them any fhare of the lands in Italy.

As the Roman troops were inferior, both in num.
in Pavias at that time one of the belt fortified cities in Italy : but Odoacer, invefting the place without lofs of time, took it foon after by affault, gave it up to be plundered by the foldiers, and then fet fire to it ; which reduced moit of the houfes, and two churches, to athes. Orelies was taken prifoner, and brought to Odoacer, who carried him to Placentia, and there caufed him to be put to death, on the 28 th of Auguft, the day on which he had driven Nepos out of Ravenna, and obliged him to abandon the empire. From Placentia, Odcacer marched Atraight to Ravenna, where he found Yaul, the brother of Oreftes, and the young emperor Auguftulus. The former be immediately put to death; but faring Auguftulus, in confideration of his youth, he fripped him of the enfigns of the imperial dignity, and confined him to Lucullanum, a cafte in Campania; where he was, by Odoacer's orders, treated with great hamanity, and allowed an handfome maintenance to fupport himfelf and his relations. Rome readily fubmitted to the conqueror, who immediately cauled
affume the purple, or any other mark of the imperial dignitg. Thus failed the , very name of an empire in the Weft. Bitain liad been long fince abandoned by the Romans; Spain was held by the Goths and Suevi; Africa, by the Vandals; the Burgundians, Goths, Franks, and Alani, had erected feveral tetrarchies in Gaul ; at length Italy itfelf, with its prond metropolis, which for fo many ages had given law to the reft of the world, was enflaved by a contemptible barbarian, whofe family, country, and nation, are not well known to this daj:

From this time, Rome has ceafed to be the capital of an empire; the territories of the pope, to whom the city is now fubjea, bcing inconfiderable. The origin of the pope's temporal power, and the revolutions of Italy, are related under the article Italy; and a fketch of the fpiritual ufurpations of the popes may be feen under the articles History, fect. ii. and Rerormation; and likewife under the various hiftorical atticles as they occur in the courle of this work.
It is thought that the walls of modern Rome take in nearly the fame extent of ground as the ancient ; but the difference between the number of buildings on this fpot is very great, one half of modern Rome lying wafte, or occupied with gardens, fields, meadows, and vineyards. One may walk quite round the city in three or four hours at moft, the circumference being reckoned about is Italian miles. With regard to the number of the inhabitants, modern Rome is alfo greatly inferior to the ancient: for, in 1709, the whole of there amounted only to 138,568 ; among which were 40 bifhops, 2686 priefts, 3559 monks, \(181+\) nuns, 393 courtefans, about 8000 or 9000 Jews, and it Moors, In 1714 , the number was increated to 143,000 . In external fplendor, and the beauty of its temples and palaces, modern Rome is thought by the moft judicious travellers to excel the ancienc. There was nothing in ancient Rome to be compared with St Peter's churcin in the modern. That Rome was able to recover itfelf after fo many calamities and devaltations, will not be matter of furprife, if we confider the prodigious fums that it has fo long annually drawn from all countries of the Popith perfuation. Thefe fums, though fill confiderable, have heen continually decreafing fince the Reformation. The furface of the ground on which Rome was originally founded is furpriiingly altered. At prefent it is difficult to diRtinguith the feven hills on which it was firft built, the low grounds being almoft filled up with the ruins of the ancient Itreets and houfes, and the great quantities of earth wafhed down from the hills by the violence of the rains. Anciently the fuburbs extended a valt way on all fides, and made the city appear almon boundlefs; but it is quite ocherwife now, the country about Rome being almoft a defert. To this and other caufes it is owing, that the air is nonc of the moft wholefome, efpecially during the fummer heats, when few go abroad in the day-time. No city at prefent in the world furpaffes, or indeed equals, Rome, for the multiplicity of fine fountains, noble edifices, antiquities, curiofities, paintings, flatues, and fculptures. The city flands on the Tiber, 10 miles from the Tufcan fea, 380 from Vienna, 560 from Paris, 740 from Amferdam, 810 from London, and 000 from Madrid. Tbe Tiber is fubject to fre-
quest
\(\qquad\)

\(\qquad\)

Ren.e. gueat isundations, by which it eften does great damage. A imall part of the city is feparated from the other by the river, and is therefore called Traveftere, or beyond the 'Tiber. 'lhere are fercral bridges over the river, a great number of towers on the walls, and 20 gates. The remains of Rome's ancient grandeur corisit of tharees, colofufes, temples, palices, thenteres, mamachias, triumphal arches, circufes, columns, obelites, foun:ains, aqued:nets, maufoleums, therme or hot.baths, and other ftructures. Of modem taildings, the fplendid churches and palaces are the mout remarkable. Mr Addifun fays, it is almolt impolfible for a man to form in his imagination fuch beautiful and glorious feenes as are to be met with in feveral of the Roman churches and chapels. This gentienian tells us alfo, that no pat of the antiquities of Recme pleafed him fo much as the ar.cient ftatues, of which there is fill an incredible variety. Next to the fatues, he fays, there is nothing more furprifing than the amazing variety of arcient pillars of fo many linds of marble. Rome is faid to be well paved; but not well lighted, nor kept very clean. Two-thirds of the houfes are the property of the churches, convents and aims houfes. Pretefants are not obliged to kneel at th:e elevation of the hoft, or at meeting the eucharif in the freets; and they may have flefh-meat always at the inas, evea during Lent. Here are many acadenies for promoting arts and fciences, befides the univerfity. The carnival here is only during the eight days before Lent, and there are no fuch feenes of riotis at Verice: proft tutes, however, are publicly tolerated. T'o maintain good order, there is a body of soo Stirri, or Halberdeers, under their barigelha, or co.onel. There is little or no trade carried on in Rome, Lu:: a raft deal of moncy is fpent by travclets and -.har firangers. The princi,al modern frutwures are the churea of S: Peter, and the ther churches; the aqueducis and fountains; the Vatican, and the other palaces; the Campidolio, where the Roman fenate reficles, isc. The principal remains of antiquity are the pila miliaria of fine marble; the equeftrian brais thatue of Marcus Aurelius Antoninus; the marble monnmert of the emperor Alexander Severus; marble bufts of the emperors and their conforts; three brick arches of the temple of Pcace, built by the emperor Vefpafian; the triumphal arch of Scptimus Severus and of Gallienus; the circus of Antoninus Caracalla; fome parts of the cloaca-maxima; the columna Anto. nina, repreferting the principal actions of Marcus Aurelius; the columna Trajani, or 'Trajan's pillar; fome frapments of the curia, or palace of Antoninus Pius, and of Nerva's forum ; the maufoleum of Augufus, in the Strada Pent fici; the remains of the cmperor Severus's tomb without Sit John's gate; the pyramid -f 6 ains Ceflus near St Paul's gnte; the porphyry cofin of S: Helen, and the riginal fatue of Confan ine rhe Great, in the chusch of St John of Luteran : a font of urie tal Erarnte, ian the chapel of St Giovanni in forte, foid to have been crefed by Conftamine the Great; an Egyptiat coljitk nar the church of St Maria ivaygirre : the fately remains of Dinclecian's Laths; the celearaced Pouthern; the welifk; of Sei.) frit, and Auguitus by the Clementine collige ; the (iamel: of St Paul funti deil Mara, fail to hive becn auil: l y Couftutius the Grent the Farace Hercu-
les, in white marble, of a Coloflian fize and exquifite work:manfhip, in a court of the Farnete palace, and an admirable group cut out of one block of marble, in another court of the fame prace. Betides theic there are is great many more, which our bounds will not allow is to take any further notice of. Hera is a great number of rich and well-regulated hofpitals. Near the church of St Scbaniuno alle Catacombe, are the moft facions of the catacombe, where the Chriftians, who neser burned their dead, and fuch of the Pagan Romans as could not afford the expence of burning, were bnricd. Along the Via \(\Lambda\) ppia, with. out St Sebalkian's gate, were the tombs of the principal families of Rome, which at prefent are ufed for cellars and ftore-howes by the gardeners and vinedreffers.

ROMNEY, a town of Kent in England. It is one of the cinque-port towns, and is fcated on a marlh of the fame name, famons for feeding cattle; but the air is very mhealthy. It was once a large and populous place, but the retiring of the fea has reduced it vers much; however, it fends two members to paviliament.

ROMORENTIN, is a fmall town fituated on the river Saudre, in the teritoly of Blifois in France, famons for its wonllen mannfature. It is faid to be a very ancient place; and the inlabitants pretend that Cxiar built a tower here, of which there are ftill fome confiderable remains. They have a manufature of ferge and cloth, which is ufed for the clothing of the troops.

ROMPEE, or Rompu, is heraldry, is applied to ordinaries that are reprefented as broken; and in chevrons, bends, or the like, whofe apper points are cut off.

ROMUPUS, the founder and firf ling of Rome. Sec Rome, \(n^{\circ} 14\).

RONCIGLIONE, is a town of Italy, in the Ecclefialic State, and Patrimony of St Peter, in E. Longo 13. N. Lat. 42.12. It is a fmall place, but had a pretty good trade, and was one of the richell in the province, while it belonged to the dukes of Parma, which was i:ll \(16+9\), when pope Innocent X. became mafter of it, and it has ever fince continued in the porfcfion of his fucceffors.

RONDELETIA, in botany: A genus of the monogymia order, belenging to the pentandria clafs of plarits; and in the natural method ranking with thofe of which the order :s doubtful. The C rolla is funnelfloped; the capfule bilocular, inienior, and polyfermons, roundifi and coorrea.

RONA, me of the Hebrides iflands, is rectened about 20 leagues diflant frim the northeart point of Nefs ia Levis-about a mile long, and half a milc broad. It has a hill in the weft part, and is only vifible from Lew is in a far furnen's day. There is a chapel in the illand dedicated to St Renor, fenced with a fone woll round fit. This chath the natives take care su keep vely neat and clean, ard fueep it cerery dar. There is a:s altor in i , on which there lies at big plank of wood about ten iect lorg. Every foot has a hale in it, and ia cuery hole :s allone, which the natives aferibe feveral virtues; one of them is firgular (as dry lay) for pormerin: (pecty deciivery to a woman in travel. Tlie inhabitants are cxtremely ignorant, and very fuperRitious. See Marsiz's Defiriphion.

Henfart. RONSARD (Peter de) was born at the cafle of Poilfoniere in Vend mois in 1524. He was defcended
of a noble family, and was educated at Paris in the college of Navarre. Academical puruits out lintiog his grenius, he left college, and became page to the duke of Orleans, who refigned him to James Stuart, king of Scots, married to Magdalene of lirance. Ronfard continued in Scotland with King James upwards of two years, and afterwards went to France, where he was employed by the duke of Orleans in feveral negociations. He accompanied Lazarus de Baif to the diet of Spires. Having from the converfation of this learned man imbibed a paftion for the belles.lettres, he fludied the Greek language with Baif's fon under Dorat. It is reported of Ronfard, that his prastice was to ftudy till two o'clock in the morning ; and when he went to bed, to awaken Baif, who refumed his place. The mufes poffeffed in his eyes an infinity of charms; and he cultivated them with fuch fuccefs, that he acquired the appellation of the Primee of the Poels of his time. Henry II. Francis II. Charles IX. and Henry III. loaded him with favours. Having gained the frlt prize of the Feus: Fioraux, they thought the reward promifed below the merit of the work, and the repuration of the poet. The city of Touloufe canfed a Minerva of maify filver of confliderable value to be made and fent to him. This prefent was accompanied with a decree declaring him The French Pect, by way of diftination. Ronfard afterwards made a prefent of his Minerva to Henry II. and this monarch appeared as much e'ated with this mark of the poct's elteem for him, as the poer himfelf could have been had he received the prefent from his fievereign. Mary, the beautiful and unfortunate qucen of Scots, who was equally fentible of his merit with the Toulunefe, gave him a very rich fet of table-plate, among wisch was a veffel in the form of a rofe-bufh, reprefenting Mount Parnaflus, on the tup of which was a Pegafus with this infcription:

> A Renfard, l' Apollon de la fource des mufes.

From the above two anecdetes of him may cafily be inferred the reputation in which he was held, and which he continued to keep till Mallerbe appeared. His works poffefs both invention and genius; but his affectation of everywhere thrufting in his learning, and of forming words from the Greek, the Latin, and the different provincialifms of France, has rendered his verfification difagreeable and often unintelligible.
Ronfarl, dil Defpréaux, par une autre mithode,
Re3!ant tout, brouilla tout, fit un art à fa mode;
Et' cout fois lang temps cut uia beurcux cieffin;
ATuis fa mimete, on François purland Grce at Latin,
Tit dians l'dge fuivant, par un retour grotefque,
Tomber del fes grands mots le falle pedantefque.

He wrote hymns, odes, a poem called the Francisd, eclogues, ep'grams, founets, Sc. In his odes he takcs bonbalt for feetical raptures. He wifhes to imitate lindar ; and labouring too much for lofty expecffions, he lofes himfeif in a clond of words. He is obfome and harth to the laft degree: faults which he might eafily have avoided by fladying the wroks of Mlarot, who had before he wrote brought Frencli pretry very near to perfection. "Marot's turn and thyic
of compofition aye fuch (fays Bruycre), that he feems
tohave writean afier Roniand: therc is hardiy ans dit. ference, excelt in a few wr rds, betwecr. Ma:ct and us. Ronfard, and the authors his contemporaries, did nore differvice than grod to fyle : they chected its crante in the advances it was making towneds perfection, ari had like to have prevented irs ever attaining it. It is furprifing that Marot, whofe works are fo natural and eafy, did not make Ronfard, who was fired vith the Arong emhufiafm of poetry, a greaier pos: tha: either Ronfard or Alarot." Bat what could be expected from a man who had fo little tane, that he called Marot's works 's a dunghill, from which rich grains es gold by induftrious working might be drawn :' As a fpecimen of our author's intolerable and ridiculous offectation of learning, which we have already cenfured, Boileau cites the following verfe of Ronfard to his miftrefs: Effes-vsus pas ma feute entele:bic? 'are not ynu my only entelechia!" Now cutelechia is a word peculiar to the peripatetic philofophy, the fenfe of which does not appear to hasc ever leen fixed. Hermalaus Barbarus is faid to have had recnurfe to the devil, in order to know the meaning of this new term ufded by Arifotle; but he did not gain the information he wanted, the devil, probably to conceal his ignorance, feaking in al faint and whifpering fort of voice. What could Ronfard's miftrefs thercfore, or even Ronfard himfelf, know of it ; and, what can excnie in a man of real gerius, the low affectation of ufing a learned team, becaufe in truth nobody conld underiand it. IHe has, however, fome pieces not defitute of real nicrit; ard there are perhaps few effuliens of tire 「reach muf: more truely poetical than his tiour Sorins of the jen, where a molt fertile imagination difplays ail its riches.

Ronfard, though it is doubtful whather he erer was in orders, held feveral bencfices in commendam; and lie died at Saint-Cofme-les-Tcurs, one of thefe, December 27. 1585 , being then 01 years of age. He appearcd more ridiculous as a man than as a poct: he was particularly vain. He talked of nothing but his family and his alliances with crowned heads. In his panegyrics, which he addreffes to himfelf without any cetcmony, lic has the vanity to pretend, that from Rovfard is derived the word Refignol, to denote both a mulician and a poct together. He was born the year after the defeat of Francis I. before Pavia: "Juft as heaven (faid he) wifhed to indemnify France for the lofles it had fulfained at that place." He blufhed not to tell of his in. trigues. All the ladies fought after bim; tut he never faid that any of them gave him a denial of their fevours. His immoderate indulgence in pleafure, joined to his literary labours, ferved to hafter his uld age. In his 50 th year he was weak and valetudmary, ind fubject to attacks of the gout. He retaired his wit, his vivacity, and his readinefs at poetic enmpofition, to his laft moments. Like all thofe who afpire ater public cticom, he had a gre thember of admirers and fo:nc encmics. Thnugh Melin de Saint Gelai- ratled at him continually, Rabelais wats the peifon whom he mont dreaded. He took alusays care to inform himfelf whacre that jovial refor of Meudon went, that he might roe he found in the fame place witb him. It is reported, that Vo'taire anted a fimilar part viih regaid to Peron*". See I'cof whofe cxtcmpoary fallics and \(l_{\text {se }}\) nio's he was ins it cun.
afruis.

nitud. Roufusd's pocens appeared in 1567 at Paris in 6 vols tin, and in \(160+\) in 10 vols 12 mon .

ROOD, i quansty of land equ.l to 40 fquare ferches, or the tourts part of an acre.

RUOF, exprefies the covering of a houfe or building, by wlich its inhabitants or contents are protected frum the injuries of the weather. It is perhaps the elf.atial part of a houle, and is frequently ufed to exp :ets the whole. To come under a perfon's roof, is to enjoy his protcation and fociety, to dwell with him. Teit:am was ufed in the fame fenfe by the Romans. To be within our walls rather expreffes the being in our polletion: a roof therefure is not only an effential furt of a houfe, but it even leems to be its charasterifall nations The Greeks, who have perhaps excelled Senctures 1 all nations in tafte, and who have given the molt perkinds of fi尺 model of architectonic ordonnance within a certain rouf. limit, never crected a building which did not exhibit this pare in the dittinctelt manner; and though they borrowed much of their model from the oricntals, as will be evident to any who compares their architecture with the ruins of Perlepolis, and of the tombs in the mountains of Sciras, they added that form of roof which their own climate taught them was neceflary for theltering them from the rains. The roofs in Pertia dod Arabia ale Hat, but thofe of Greece are without exception lloping. It feems therefure a grofs violation of the true principles of tafte in architedture (at leaft in the regions of Europe), to take away or to hide the roof of al houle; and it mult be afcribed to that rage for novelty which is to powerful in the minds of the rich. Our ancefters feemed to be of a very different opinion, and turned their attention to the ornamenting of their soots as much as any other part of a building. They fhowed them in the moft confpicuous manner, sunning them up to a great height, broke them into a thoufand fanciful thapes, and luck them full of lighly dreffed vindows. We laugh at this, and call it Gothic and clumiy ; and our great architeets, not to offend any more in this way, conceal the roof altogether by parapets, balultrades, and other contrivances. Our forefathers certainly did offend againft the maxims of true tafte, when they enriched a part of a houfe with marks of elegant habitation, which every fpectator mult know to be a cimberfome garret: but their fucceffors no lefs offend, wao lake off the cover of the houfe altogether, and inake it impoftible to know whether it is not a mere Rerecn or colonnade we are looking at.

We cannothelp thinking that Sir Chrifopher Wren erred when he fo induftrionly concealed the roof of St Pul's church in London. The whole of the upper

Irror of sir chrif Ta) her bliren in the romf of st 'raul' Lundus.
order is a merefereen. Such a quantity of wall would have been intolerably offenlive, had he not given it fome appearance of hatitation by the mock windows or nitches. Even in this tate it is glomy, and it is odd, nod is a puzze to every fpectator-Ihtre thould be no purgle in the defign of a building any more than in a difcourfe. It has been faid that the double roof of the great churches which have aines is an incongruity, looking like a houfe flanding on the top of another Loufe. But there is not the leaf occafion for fuch a thou,ht. We know that the aille is a fhed, a cloilter. Suppofe only that the lower roof or thed is hidden by a b.lutrade, it then beenmes a purtico, againlt which the connniffeur has no ubjection: yet there is no differ-
ence; for the portico maft have a cover, otnerwife it
is neither a fhed, cloifter, nor portico, any more than a building without a roof is a houfe. A houfe without a vilible roof is like a man abroad without his hat; and we may add, that the whim of concealing the chimneys, now fo fafhionable, clanges a houfe to a barn or llore-lioufe. A houfe fhould not be a copy of any thing. It has a title to be an original; and a fcreen-like houfe and a pillar-like candleatick are fimilat folecifms in taftc.

The archited is anxious to prefent a fine object, and Little ata very fimple outline difcuffes all his concerns with the tention

\section*{roof. He leaves it to the carpenter, whom he frequent-} Iy puzzles (by his arrangements) with coverings almoft impolible to crecute. Indeed it is feldom that the idea of a build of a roof is admitred by him into his great compofi-ing. tions; or if he does introduce it, it is from mere affec. tation, and we may fay pedantry. A pediment is frequently ftuck up in the middle of a grand front, in a fituation where a roof cannot perform its oflice; for the rain that is fuppofed to flow down its fides, mult be received on the top of the level buildings which flank it. This is a manifeft incongruity. The tops of dreffed windows, trifling porches, and fometimes a projecling portico, are the only fituations in which we fice the figure of a roof correfpond with its office. Having thus loft fight of the principle, it is not furprifing that the draughtfman (for he thould not be called architeet) runs isto every whim: and we fee pediment within pediment, a round pediment, a hollow pediment, and the greateft of all abfurdities, a broken pediment. Nothing could ever reconcile us to the fight of a man with a hat without its crown, becaufe we caunot overlook the ufe of a hat.

But when one builds a houfe, ornament alone will Advannot do. We mult have a cover; and the enormous ex- lages of a pence and other great inconvenicuces which attend the high pitcho concealment of this cover by parapets, baluftrades, and fcreens, have obliged architects to conlider the pent roof as admillible, and to regulate its form. Any man of fenfe, not under the influence of prejudice, would be determined in this by its fitncis for anfwering its purpofe. A high pitched rouf will undoubtedly thoot off the rains and fnows better than one of a lower pitch. The wind will not fo ealily blow the dropping rain in between the flates, nor will it have fo much power to Atrip them off. A high pitched roof will exert a fmall. er thrult on the walls, both becaufe its tlrain is lefs horizontal, and becaufe it will admit of lighter covering. But it is more expenfive, becaufe these is more of it. It requires a greater fize of timbers to make it equally flrong, and it expofes a greater furface to the wind.

There have been great changes in the pitch of roofs: our forefathers matle them very high, and we make them very low. It does not, however, appear, that this change has been altogether the effect of principle. In imple unadomed habitations of private perions, of roofso cvery thing comes to be adjufted by an experience of inconveriences which have tefulted from too low pitched roofs; and their pitch will always be nearly fuch as fuits the climate and covering. Our archite As, however, go to work on different principles. Their profeffed aim is to make a beautiful object. The fources of the pleafures arifing from what we call tafle are fo various, fo complicated, and even fo whimfical, that it

\section*{ROO}

Koof. is aimof in vain to look for principle in the rules adopted by our profeffed architects. We cannot help thinking, that much of their practice refults from a pedantic veneration for the beautiful productions of Grecian architecture. Such architects as have written on the principles of the arc in refpect of proportions, or what they call the ordonnance, are very much puzzled to Aud of the make a chain of reafoning; and the moft that they Greek ar- have made of the Greek architecture is, that it exhibits chitecture of them. a nice adjuftment of Atrength and ftrain. But when we confider the cxtent of this adjuftment, we find that it is wonderfully limited. The whole of it confifts of a bafement, a column, and an entablature; and the entablature, it is true, exhibits fomething of a connedion with the framework and roof of a wooden building; and we helieve that it really uriginated from this in the hands of the orientals, from whom the Greeks certainly borrowed their forms and their combinations. We could eaflity fow in the ruins of Perfepolis, and among the tombs in the mountains (which were long prior to the Greek architecture), the fluted column, the bafe, the Ionic and Corinthian capital, and the Doric arrangement of lintels, bearns, and rafters, all derived from unqueltionable principle. The only addition made by the Greeks was the pent roof; and the changes made by them in the fubordinate forms of things are fuch as we fhould expect from their exquifite judgment of beauty.

But the whole of this is very limited; and the Greeks, after making the root a chief feature of a houfe, went no farther, and contented themfelves with giving it a flope fuited to their climate. This we have followed, becaufe in the milder climates we have no cogent reafun for deviating from it; and if any architect fhould deviate greatly in a building where the outline is exhibited as beautiful, we fhould be difgufted; but the difguf, though felt by almoft every fpectator, has its origin in nothing but habit. In the profeffed architect or man of education, the difguft arifes from pedantry : for there is not fuch a clofe connection between the form and ufes of a roof as fhall give precite determinations; 8 and the mere form is a matter of indifference.

We fhould not therefore reprobate the high.pitched roofs of our anceftors, particularly on the continent of Europe. It is there where we fee them in all the extremity of the fathion, and the tafte is by no means exploded as it is in England. A baronial cafte in Germany and France is feldon rebult in the pure Greek Ityle, or even like the modern houfes in Britain; the high pitched roofs are retained. We fhould not call them Gothic, and ugly becauic Gothic, till we how their principle to be falfe or taftelefs. Now we apprehended that it will be found quite the reverfe; and that though we cannot bring ourfelves to think them beautiful, we ought to think them fu. The conftruction of the Greek architecture is a transference of the practices that are necerfary in a wooden building to a building of tone. To this the Grecks have adhered, in fpite of innumerahle difficultics. Their marble quarries, however, put it in rendered agreeable. But it is next to impofible to adhere to thefe proportions with freeftone or brick, when the order is of magnificent dimenfions. Sir Chriftupher Wren faw this ; for his mechanical koowledge wis equal to his tafte. He compofed the front of St Pulul's cherch

\section*{ROO}
in London of two orders, and he coupled his columns; and fill the lintels whicl form the architrave are of fuch length that they could carry no additional weight, and he was obliged to trufs them behind. Had he made but one order, the architrave could not have carried its own weight. It is impoffible to execute a Doric entablature of this fize in brick. It is attempted in a very noble front, the Academy of Arts in St Peter fourgh. But the architect was obliged to make the multules and other projecting members of the corniche of granite, and many of them broke down by their own weight.

Here is furels an error in principle. Since fone is and the the chief material of our buildings, ought not the mem- effe? of bers of crnamented architecture to be refinements on our ufing the effential and unaffected parts of a limple ftone- nonc. building. Tleere is almoft as much propriety in the architecture of India, where a dime is made in imitation of a lilly or other flower inverted, as in the Greek imitation of a wooden building. The principles of mafonry, and not of carpentry, thould befeen in our architecture, if we would have it according to the rules. of jult tafte. Now we affirm that this is the characeriflic feature of what is called the Gothic architecure. In this no dependence is had on the tranfverfe ferength of tone. No lintels are to be feen; no extravagant projections. Every fone is preffed to its neighbrure, and none is expofed to a tranfierfe ftrain. The Grceks were enabled to execute their colofial buildings only by ufing immenfe blocks of the hardelt matcrials. Tic Norman mafon could raile a building to the flkics without uling a fone which a labourer could not catry to. the top on his back. Their architects fludied the principles of equilibrium; and having attained a wonder ful knowledge of it, they indulged themfelves in exhibiting remarkable inftances. We call this falfe tate, ind tay that the appearance of infecurity is the greateft fault. But this is owing to our habits: our thoughts may be faid to run into a wooden train, and certain fimple maxims of carpentry are familiar to our imagination; and in the careful adherence to thefe conlifts the beauty and fymmetry of the Greek architeCure. Had we been as much habituated to the equilibrium of proffure, this apparent infecurity would not have met our eye: we would have perceived the frength, and we fiould have relifhed the ingenuity.

The Gothic architcoure is perlaps intitled to the R name of rational architecture, and is bcauty is founded on the characteriftic diftinction of nur fpecies. It dcferves cultivation: not the pitiful, fcrvile, and unReilled copying of the monuments; this will produce incongruitics and abrierdities equal to any that hasve crept into the Greek architecture: but let us examine with attcution the nicc difpofition of the groins and Spaundre's; let us fudy the traccry and kinots, net as ornaments, but as ufeful mombers; let us obferve how they have made their walls like honey-combs, and admire their ingenuity as we pretend to admire the innince infured by the great archited into the bee. All this cannot be underfocd withont mechanicalknowledge ; a thing which few of our profeffional arehiteds have any Thare of. Thus would arch tectoric talfe be a mark of fkill; and the perfon who prefents the detign of a building would know how to exccute it, without commiting it entirely to the mafin and cappenter.

Thefe obfertratiors are not a digrefion from our fub-

Roo?. jec. The farme prineiples of mutual prefture and equiIt rium lave a place in sowfs and many wooden edifiees; as. d if they latd been as much ftudied as the Normans and Sotateens feem \(t\) Irave tludisd fueh of them as were arplizable to slex purpoles, we might bave produced wooden buildings at the liperin r to what we are familiuly aequantid watl:, as the bold and wonderful chorches ltill remaining in Eurape are luperior to the time si productivns of cur flune architequre. 'I'lse eein. ires uled in buiding the bridge of Orleans and the corn-swarket of Paris, are late inllances of what may he do:ne in lhis wisy. The lat mentioned is a dome of z 20 fect diameter, bnilt of fir planhs; and there is not a fiece of timber in it more than nine feet long, a foot b:uad, and three irches thick.

Tl:e तorman arditeets frequently roofed with ftone. Th-sir weoden rool's were in general very fimple, and fluer pafelied aim was to difpenfe with them altogether. Fond of their own fience, they copied nothing from a wooden building, and ran into a limilar fault with the ancient Greeks. The parts of their buildings Whicin were necefforily of timber were made to imitate Ronc-baildings; and Gothie ornament confilts in cramming every thing full of arches ard paundrels. Nothisw elie is to be feen i.s their timber-works, nay even ia) thetr foulpoure. Look at any of the maces or Lecreres ©th to be found about the old cathedrals; wey are filvar fteppiss.

But there appears in bave heen a rivalhip in old times between the mafons and the carpenters. Many of the baronial halis are of prodigious width, and are roold with timber: and the capenters appeared to haye borrowed much knowledge from the maions of thofe times, and their wide roofs are fiequently conItrutted with great ingenuity. Their aim, like the mafons, was to throw a roof over a very wide building without entploying great logs of timber. We have feen roofis 60 leet wide, withont laving a fiece of timber in it :bove 10 feet !ong and 4 inches fquare. The Parlisment Houfs and Pron Chureh of Edinhurgh, the great hall of "Tarniway cafte near Elgin, are fecimens of th.ofe roots. 'They are very numerous on the continent. Indeed Britain retains few monuments of private magnificence. Ariftocratic Atate never was fo great there; and the ancour of the civil wars gave molt (f) the performances of the earpenter to the flames. Weftminterhall exhibits a fpecimen of the falfe talte of tle N rman rools. It contains the effential parts indeed, vers properly difpofed; but they are hidden, or intentionally covered, with what is conceived to be ornamental ; and this is an imitation of fone arches, erammes in between fender pillars which hang dowa from the pricipal frames tulles, or rufters. In a pure Norm :n sonf, ich as 'l'arnaway hall, the eflential parts are cabbited as thirigs undor it od, and therefore relithed. "They are remed and ormamented; and it is here that the infors sind of tafte or the want of it may appear. Sud here we do not mean to defend all the whims of ort ancefoss ; but we atfert that it is no more neetfary so coatide: the nem'ers of a roof as things to be consealell hise a garret or privg, than the members of a ceiling, which form the moft benutiful patt of the Giectionchitecturs. Should it be faid that a ronf is raly a thing to licep off the rair, it may le anfwered,
that a ceiling is only to keep off the du?, or the floor to be trodden under toot, and that we theuld have neiwher cupartmenis in the one nor inlaid work or earpets on the other. The frueture of a rorfinay theretore be exhibited wita pr prosy, and mode an ormannatal teature. This has been done even in 1saly. The chutch of St Marta Maggiore in Kone and feveral others are ipecimens: but it mu!t be acknowiedged, that the lorms of the principal frames of thefe rouls, which refemble thofe of our modern buldings, are very unfic for agreeable omament. As we have already obferved, our imaginations lave not been mate fufficiently familiar with the principles, and we are rather alarmes than pleated with the appearance of the immenfe logs of timber which form the couples of thele roofs, and hang over our heads with every appearance of weight and danger. It is quite otherwife with the ingenious roofs of the Gcrman and Norman architects. Slender timbers, inter. laced wihh great fymmetry, and thrown bs necelity into figures which are naturally pretty, form aitogether an object which no carpenter can view without pleafure. And why flould the genteman refule himfelf the fame pleafure of behoiding feientific ingenuity ?

The roof is in fatt the part of the baildi.g which requines the greatell degree of flill, and where fcience wid be of more fervice than in any other part. The architect feldom knows much of the mater, and leaves the tafk to the earpenter. The carpenier confiders the framing of a great roof as the touchfone of his ant ; and nothing indeed tends fo much to fhow his judgement and his fertility of refiource.

It muft thercfore be very acceptable to the artif to have a elear view of the principles by which this difficult problem mily be folved in the beft manner, fo that the rool may have all the ftrength and feeurity that can be withed for, without an extravayant expenee of timber and iron. We have faid that mechanical fience can give great affifance in this matter. We may add that the framing of earpentry, whether for roofs, Hoors, or any other purpofe, alfords one of the molt elegant and moft fatislactory applications which can be made of mechanical fcience to the arts of common life. Unformately the pratical artilt is feldom pofiefled even of the fmall portion of fcience which would almolt infure his practice from all riks of tailure ; and even our moft experienced earpenters have feldom any more knowledge than what ariles fiom their experience and natural lagacity. The moft arprovec author in our language is Price in his Brisif Carpenter. Mathurin Joulde is in like manucr the author mont in repute in France; and the publications of both thefe amthors are void of every apparance of principle. It is not \(:\) :ncommon to fec the works of carpenters of the greateft reputation tumble down, in coniequenee of miltakes foom which the moll elementary linowledge would have faved them.

We flatl attempt, in this article, to give an account Purpuse of the leading principles of this att in al mamer fo f.miliar and palpible, that any perfon who knows the common propertics or the lever, and the compofition of notion, thall fo far underftand them as to be ahite, on cvery occafion, fo to difjofer his matcria?'s, with recpect to the Rrains to which they ane to be exp. fid, that he fhath always linow the ethedive ftrain on every picee, and thall,
thall, in monc calc:, be abe to make the difpolition fuch as to derive the greatell poffible advantage from the materi,l, which he cmploys.

It is evident that the whole munt depend on the prin. cipl's which regulate the flrongth of the matrials, relative to the manner in which this firenyth is exerted, and the manner in which the flrain is laid on the piece of matter. With refper to the firft, his is not the proper place for confiduing it, and we muit icfer the reacer to the ar icle STRENGTa of Muto inds in Miccharics. We thall jutt brorrow from that article two or thice propolitions fuised to our purpofe.

IJoc force with which the materials of oar cdifices, roots, flonrs, machines, and framings ne every kind, refitt being broken or eruthed, or puiled afunder, is, immediately or mimately, the cohefion of their particles. When a wight hangs by a rope, it tends either immediately to brak atl the fibere, overoming the colletion among the particles of each, \(r 1\) it tends to pull one parcel of then firm among the reft, with which they are joined. This union of the fibres is brought about b) fome hind if gluten, or by wifing, which caufes them to hiod cach other fo hard that any onc will break rather than come out, fo much is it withheld by friction. The ultimate retiltance is therefore the cohefion of the fibre; the force or flength of all fibrous materials, fuch as timber, is exerted in much the fanne manner The fibres are either broken or pulled out from among the relt. Metal;, fone, glafs, and the like, rcfift being pulled afunder by the fimple cohelion of their parts.

The force which is neceflary for breaking a rope or wire is a pooper meafure of its Arength. In like manner, the force nccefliry for tearing directly afunder any rod of wood or metal, breaking all its fibres, or tearing them from among each other, is a proper meafure of the united ftrength of ail thefe fibes. And it is the fimpleft ftrain to which they caa be expofed, being juft equal to the fum of the forces neceffiry for breaking or difengagiag each fibre. And, if the body is not of a fibrous limuture, which is the cafe with metals, fones, glafs, and many other fubnarices, this force is ftill equal to the limple fum of the colefive forces of each particle which is feparated by the fracturc. Let us diftingnith this mode of excrtion of the cohetion of the body by the name of its \(\mathrm{Ab}_{\mathrm{b}}\) solute Strength.

When fulid bodics are, on the ecritrary, expofed to great comproffion, they can refift only to a ccrtain degrec. A piece of chay nr lead will be fqueered out; a piece of freettone will he cruthat to powder; a beim of wood will be crippled, fiveling out in the middic, and its fibres lofe their mutual cohefion, after which it is eafily crufhed hy the load. A notion may be formcd of the manner in which thefe ftrains atc refifted by conceiving at cylindrical pipe filled with fmall hont, well fhaken together, fo that eich fphericle is iying in the chofef manner poofible, that iv, in enntan with lix cthers in the fume vertical phare (this being the pofition in which the thot will take the leaftroom). 'Thus c...ch truches the reft in fix points: Now fuppofe them \(21]\) uni ed, in thefe fix points only, by fome cement. This aftembluse will fick together and form a cylindrical pillar, which may be taken out of is mould. Sup. Vol. XVI.
pofe this pillar faroding upigint, and Jondea above. The fupports arifing fom the cement :lft , bliquely, and the load tends eibher in force them aivader laterally, or 10 make them fide on each cther: either of thefe things happening, the wh le is crufhed to pieces. The refift mee of fibrous mateials to fuch a flamin is little more intricate, but may be exp!ained i:1 a wis very fimilar.

A piece of mattor of any kind may alfo be deftoye. hy wrencl ing or twifting it. We can calily form a notion of its reffinance to this kind of Catain by coalt. dering what would hepeen to the cyliad rof fmall fort if treated in this way.

And lally, a beam, or a bur of m:tal, or a piece of fonce of cher matter, may he broleon tranlvertely. This will happesi to a rafter or joit fupported at the ends when oveshaded, or to a beam laving cne end fuck faft in a wall and a load laid on its projesting part. 'Ihie is the frain to whith miterials ate molt commonly expofed in ronfs; and, unfortunately, it is the Arain which they are the leall able to bear; or tather it is the manner of application which causes an external force to cxcite the greateft \(p\) nfible immediate ftrain on the particles. It is againtt this that the carpenter mult chiefly guard, avoiding it whe: in his power, and, in every cafe, diminithing it as much as pofible. It is neceffary to give the reader a clear notion of the great weakncis of materials in relation to this tranfverfe ftrain. But we flall do nothing more, referring him to the articies Sirati, Stress,
Strengtil.
L.et \(A C B D\) (fig. 1.) reprefent the fide of a beam projesing horizontally from a wall in which is is firmly fixed, and let it be loaded with a weight W appended to its extremity. This tends to breal: it; and the leaft reflection will convince any perfon that if the beam is equally frong throughout, it will brcak in the line \(C D\), e:en with the furtace of the wall. It will npen at \(D\), while \(C\) will ferve as a fort of joint, round which it will turn. The crofs festion througln the line CD, is, for this reafon, called the forion of fracure, and the ho:izontal linc, drawa through C on its under furface; is called the axis of frafure. The frature is madc by tearing afunder the fibres, fuch as DE or FG. Let us fuppote a real jniat at C, and that the beam is really fiwed through along \(C D\), and that in place of its natural fibres threads are fiblfituted all over the fection of fracture. The waight now tends to break thefe thread; and it is our bufinefs to find the furce necefiny for this purpef:

It is evident that DCA may be confidered as a bendc. lever, of which C is the fulcrum. If \(f\) be the force which will jut bulume the cerlefion of a thread when lung on it in that the fmalleft addition will brak it, we may find he weight which will he fificient for this purpotc wicen heng on it \(A\), by fayine, \(\dot{A} C: C D\) \(=f\) : a, and \& will be the weigit whach will junt break the tirest. by l.mnjeg \& by the poine A. This gives us \(\varepsilon=j \times \frac{\mathrm{CD}}{\mathrm{CA}}\). If the weighit be hung on at \(a\), tim furce jutt fufficient for hreaking the famac thread will be \(=f \frac{\mathrm{CD}}{\mathrm{C} a}\). In like manncr the force e, which mut he lung on at \(\Lambda\) in orscr to break an cqualiy frong or an 3 N equally

 Their weaknefs in ration to trat. verfs frais. srains. Plate
\(\operatorname{ccc}^{2}\) (ixl.

If we fuppofe all the fibres to exert equal refitances \(\therefore\) : the irlant of frasure, we know, from the fimplelt elements of mechanics, that the refillance of all, the firtic!-s in the line CD, each asping equally in its own lace, is the fime as if all ti.c induidual refiltances were inited in the midille point \(g\). Now this total refiftance is the refiRance or threngh fof each purticle, multiplied by the number of patticles. This number may be exMreited by the line CD, becaufe we have no reafon to lurpore that they are at unequal difances. Therefore, in comparing different fections together, the number of particles in each are as the fections themfelves. Therefore DC may reprefent the number of particles in the live \(\mathrm{DC}^{\prime}\). Let us cail this line the depth of the beam, and exprefs it by the fymbol \(d\). And lince we are at prefent treating of roofs whofe rafters and other parts are cenmonly of uniform breadih, let us call \(A \mathrm{H}\) or 13t the breacth of the beam, and exprefs it by \(l\), and let C 1 be called its length, 1 . We may now exprefs the Arength of the whole line \(C D\) by \(f \times d\), and we may fuppofe it all concentrated in the middle point \(g\). Its mechanical energy, therefore, by which it refifts the energy of the weight ru, applied at the diftance \(l\), is \(f . \mathrm{CD} . \mathrm{C} g\), while the momentum of \(\tau v\) is \(s u . \mathrm{CA}\). We muft thercfore have \(f . \mathrm{CD}, \mathrm{C}_{\delta}=\pi \cdot \mathrm{CA}\), or \(f d . \frac{1}{2} d\) \(=v \cdot l\), and \(f l:{ }^{2}=l: \frac{1}{2} d\), or \(f l: w=2 l: d\). That is twice the length of the beam is to its depth as the :. bfolute ftrength of one of its vettical planes to its relative frength, or its power of refifting this tranfuelfe foustane.

It is evident, that what has been now demonttrated of the refiftance exerted in the line CD, is eqzally true - f every line parallel to C1), in the thicknefs or breadth of the beam. The abfolute ftrength of the whole fection of fracture is properly reprefented by f. cl. l, and ve fill have \(2 \%: d=\) fill : w ; or twice the length of the beam is to its depthas the abfolute frength to the relative tlrength. Suppofe the beam it feet long and une foot deep; then whatever is its abfolute frength, the 2fth part of this will beak it if hung at its extremi: \(\%\).
but even this is too favourable a fatement; all the fibtes are fuppofed to act alike in the infant of fractusc. lat this is not true. At the intant that the filbere at 1) breaks, it is liretched to the utmolt, and is exenting its whole force. Fut at this inflam the fibre 2t \(g\) is not fo mucin fretched, ard it is not then exerting \(1: 5\) ntranth foree. If we fuppofe the extenfion of the fibres to be as their diltance from C , and the afoul exertimo of each to be as their cxicnions, it may cafly bshown (ice Strpaghat Strain), that the whoie sefitance is thic fanc as if the fuil force of all the fibtes *verc utited at a point \(r\) dillant from C by one wird of (D. In this cafe we mant fay, that the abfolute flenght is to the relative llrength as three times the hugih to tle depils; fo that lie Lerm is weaker than ly t.e former flatement in the propurtion of two to three.

Esen this is more firength than experiment jufifies; and we can fee an crident reaton for it. When tice bean is Araired, not only are the upper fibes itretcled, but the lower fibes atc comprefled. This is

\section*{466 ] \\ ROO}
very diftin?ly feen, if we attempt to break a piece of Roof. cork cut into the thape of a beam: this being the cafe, C is not the centue of iradure. Thace is fome point \(c\) which lies between the fibres which are fletched and thofe that are comprefled. This fibre is neither thetelicd nor fequeezed; and this point is the real centre of fratture; and the lever by which a fibre 1) retifts, is not DC, but a hoiter one \(\mathrm{D} c\); and the energy of the whole refitances mult be lefs than by the fecond fatement. Till we know the proportion between the dilatability and compreflibility of the parts, and the relation between the dilatations of the fibres and the refiftances which they exert in this Rate of dilatation, we cannot politively fay where the point \(c\) is fituated, nor what is the fum of the alual refifances, or the point where their adion may be fuppofed concentrated. The former woods, fuch as oak and chefnut, may be fuppofed to be but nimhtly compreflible ; we know that willow and other foft woods ate compreflible. Thefe laft mult therefore be weaker: for it is evident, that the fibres which are in a flate of compreffion do not refift the fracture. It it well known, that a beam of willow may be cut through from C to \(g\) without weak. ening it in the leaft, if the cut be filled up by a wedge of hard wood fluck in.
We can only fay, that very found oak and red fir have the centre of effort fo fituated, that the abfolute Alrength is to the relative flrength in a proportion not lefs than that of three and a half times the length of the beam to its depth. A fquare inch of found oak will carry about 8000 pounds. If this bar be firmly fixed in a wall, and project 12 inches, and be loaded at the extremity with 200 pounds, it will be broken. It will juf bear 190, its relative firength being a \(^{\frac{2}{2}}\) of its abfolute flrength; and this is the cafe only with the finell pieces, fo placed that their annual plates or layers are in a vertical pofition. A larger \(\log\) is not fo Atrong tranfverfely, becaufe its plates lic in various directions round the heart.

Thefe obfervations are enough to give us a diftinct \(p\) partical notion of the vall diminution of the frength of timber infercnce. when the frain is acrofs it; and we fee the jullice of the maxim which we inculeated, that the carpenter, in framing roofs, fhould avoid as much as poffible the expofing his timbers to tranfverfe ftra ns. But this cannot be awoided in all cales. Nay the ultimate flrain, arifing from the very nature of a roof, is tranfverfe. Tbe auter mull carry theis own weight, and this tends to break them acrofs: an o li, berm a foot decp will not eary its own weight if it project more han 60 lect. Bufades this, the raters mutt cariy the lead, tyling, or flates. We mult thereme comfider this tranfverfe Itrain a liete more pasticularly, fo as is know what ftrain will be laid on any parc by an unavoid:ble load, laid on either at that part or at any other.

We have hitherto fuppofed, that the beam had one Ffied \({ }^{19}\) of its ends fixed in a wail, and that it was loaded at the when other end. 'This is 11 an hilual arrangement, and was taken meely as affroding a finuple application of the mecthanical princopics. It is much more ufial to have the beam lipponted at the ends, and looded in the midalle. Let the bear FEGH (fige 2.) ieft in the props Eind \(G\), and he loaded at its niddle poilet \(C\) with a weight W. It is required w detomine the fleain at the fectim CD: It is plain that de beam will

Efe, Ghg, going over the pulleys \(f\) and \(g\), and loaded with priper weightse and \(g\) The weight \(e\) is equal to the fupport given by the bleck E ; and g is equal to the lupport given by (G. The fum of \(e\) and \(g\) is equal to W ; and, on whatever point W is hung, the weights \(e\) and \(g\) are to W in the propertion of DG and DE to GE. Now, ia this ft:tre of things, it appears that the flain on the fection CD ariles immediately from the upward action of the ropes F \(f\) and \(H b\), or the upward prefions of the blocks E and G ; and that the office of the weight W is to oblige the be:lm to oppole this ftrain. Things are in the fame flate in refpect of ftrain as if a block were fublituted at \(D\) for the weight W, and the weights \(e\) and \(g\) were hung on at \(E\) and \(G\); only the directions will be oppofite. The beam tends to break in the fection C 1 ), becaure the ropes pull it upwards at \(E\) and \(G\), while a weight \(W\) holds it down at C . It tends to npen at D , and C becomes the centre of fraçure. The ftrain therefore is the fame as if the half ED were fixed in the watl, and a weight equal to \(g\), that is, to the half of W, were hung on at \(G\).

Hence we conclude, that a beam fupported at both ends, but not fixed there, and loaded in the middle, will carry twice as much weight as it can carry at its extremity, when the other extremity is faft in a wall.

The flrain occafioned at any point \(L\) by a weight W , hung on at any other point D , is \(=\mathrm{W} \times\)
\(\frac{D E}{E G} \times L G\). For EG is to ED as W to the preffure occafioned at G . This would be balanced by fome weight \(g\) acting over the pulley \(b\); and this tends to break the beam at \(L\), by atting on the lever GL. The preffure at \(G\) is \(W \cdot \frac{D E}{E G}\), and therefore the ftrain at \(L\) is \(\mathrm{W} . \frac{\mathrm{DE}}{\mathrm{EG}}\). LG.

In like manner, the flrain occafioned at the point \(D\) by the weight Whung on there, is \(W \frac{D E}{E G} \times D G\); which is therefore equal to \(\frac{1}{2} \mathrm{~W}\), when D is the midalle point.

Hence we fee, that the general flrain on the beam arifing from one weight, is proportionab'e to the rectangle of the parts of the beam, (fur \(\frac{\text { W.DE.DG }}{E G}\) is as DE.DG), and is greateft when the load is laid on the middle of the beani.

We alfo fee, that the Arain at \(L\), by a load at \(D\), is equal to the ftrain at \(D\) by the fime load at L.. And the ftrain at \(L\), from a load at \(D\), is to the ftrain by the fame load at L as DE to LE. There are all very obvions corollaries; and the fufficiently inform us concerning the Atrains which are produced on any part of the timber by a load laid on any other part.
If we now fuppofe the beam to be fixed at the two ends, that is, firmly framed, or held down by blocks at \(I\) and \(K\), placed beyond \(E\) and \(G\), or framed into pofts, it will carry twice as much as when its ends were free. For fuppofe it fawn through at CD; the weight Whung on there will be juft fufficient to break it at \(E\) and \(C\). Now reftore the connection of the fec-
tion CD , it will require another weight W to break it there at the fame time.

Therefore, when a rafter, or any piece of timber, is firmly conneated with three fixed points \(G, E, I\), it will bear a greater load between any two of then than if its connection with the remote point were removed; and if it be faftened in four points, G, E, I, K, it will be twice as frong in the middle part as without the two remote connections.

One is apt to expcet from this that the joif of a floor will be much thengthened; by being firmly built in the wall. It is a little ttrengthened; but the hold which can thus be given it is much too thort to be of any fealible fervice; and it tends greatly to fhatter the wall, becaule, when it is bunt down by a lond, it forces up the wall with the momentum of a long lever. Judicious builders therefore take care not to bind the jnitts tight in the wall. But when the joilts of adjoining rooms lie in the fame direction, it is a great advantage to make them of one piece. They are then twice as ftrong as when made in two lengths.

It is eafs to deduce from thele premiffes the frain on infernces. any point which arifes from the weight of the beam itfelf, or from any load which is uniformly diffufed over the whole or any part. We may always confider the whole of the weight which is thus uniformly diffufed over any part as united in the middle point of that part ; and if the load is not uniformly diffufed, we may flill fuppofe it united at its centre of gravity. Thus, to know the frain at L arifing from the weight of the whole beam, we may fuppofe the whole weight accumulated in its middle point \(D\). Alfo the frrain at L, arifing from the weight of the part ED, is the lame as if this weight were accumulated in the middle point \(d\) of ED; and it is the fame as if half the weight of ED were hung on at D . For the real Atrain at L is the upsard preffure at G, acting by the lever GL. Now call the weight of the part \(\mathrm{DE}_{6}\); this upward prcfifure will be \(\frac{e x d E}{E G}\), or \(\frac{\frac{7}{2} e x}{\mathrm{EG}} \mathrm{DE}\).
Therefore the frain on the midule of a beam, arifing from its own weight, or from any uniform load, is the weight of the beam or its load \(\times \frac{E D}{E G} \times D G\); that is, half the weight of the beam or load multiplied or atting by the lever \(D G\); for \(\frac{E D}{E G}\) is \(\frac{r}{2}\).

Alfo the frain at L , arifing from the weight of the beam, or the uniform load, is \(\frac{1}{5}\) the weight of the beam or load acting by the lever LG. It is therefore proportional to LG, :und is greatef of all at D. Thercfore a beam of uniform ftrength throughout, uni.orml \(\boldsymbol{y}\) loaded, will break in the midtle.

It is of importance to know the relation between the flrains ariling from the weights of the beame, or from any uniformly diffufed load, and the relative ftrength. We have already feen, that the relative Atrength is \(f \frac{d l . d}{m l}\), where \(m\) is a number to be difcovered by experiment for every different fpecies of matcrials. Leaving out every circumfance but what depends on the dimenfions of the beam, viz. \(d, b\), and \(l\), we \(r_{\text {ee }}\) that the relative ferength is in the proportion of \(\frac{d^{2} b}{l}\),
ti at is, as the bresith and the fquare of the depth d) sectiy and the length inverisls.

Now, to contster frit the itrain arilm? from the weight of the beam isfelf, it is evident that this weight increafes in the fame froportion with the depth, the tradith, and the length of the beam. Therelore its pover che reliling this thain munt be as its depth ditede 1y, and the fane of its length inverfely. To confider this in a more popular maner, it is plan that the increaie of breadth mates no ciange in the power of relating the atual ttrain, becande the load and the ablolute frangh increale in the lame proportion with the breadt. But by increafing the depth, we increafe the reliting fection in the fame proportion, and therefore the rumbar of refiting fibres and the abolute Atength: but we aloo increafe the weight in the fame proportion. This mates a compenfation, and the relative Itreng:? is yet the fame. But by increafing the depth, we have not only increafed the ablulute ftrength, but allo its mechanical energy: For the refifance to fracture is the fame as if the full ftenegth of each fibre was exerted at the point which we called the centre of eftort; and we thowed that the diltance of this from the inderfide of the beam was a certain portion (a halt, at fhirt, a fourth, \&c.) of the whole depth of the beam. "his dutance is the arm of the lever by which the colieion of the wood may be fuppofed to ast. 'Therefure this am of the lever, and confcquently the energy of the refilance, increafes in the proportion of the depth fi the beam, and this remains uncompenfated by any icreafe of the frain. On the whole, thetefore, the poser of the beam to futhain its own weight increafes in the proportion of its depth. But, on the other Mand, the power of withftanding a given frain applied -t its extremity, or to any aliquot part of its length, is diminithed as the length increafes, or is inverfely as the length; and the frain arifing from the weight of the beam alfo increafes as the length. 'Theretore the power of relifting the frain actually caerted on it by the ueight of the beam is inverfely as the fquare of the length. On the whole, therefore, the power of a beam to carry its own weight, valies in the proportion of its depth directly and the fquase of its length inverfely.
is this ftrain is frequently a confiderable part of the whole, it is proper to confider it apart, and then to rechon only on what remains for the fupport of any extraneous had.

In the next place the power of a beam to carry amy rorme of la load which is uniformily diffufed over its lingth, mulat carryaload be inserl:ly as the fquare of the length: fir the past of the lengt' (which is the eafe he:e, beeaufe the load may be cunceived as accumulated at its centre of gravit:, the middle point of the heam) is inverfly as tha \(\operatorname{len}_{8}(\) th ; and the afinal ftrein is as the length, athd thereface its momentum is as the fquare of the length. Therefore the power \(\mathfrak{c} l^{\circ}\) a beant to carry a weight unifomme diffuled over \(i\), is inver.ely as the fquare of the lemgth. N. \(B\). It is lecre underfood, that the uniform luad is ef fime determiced quantity for cvery foot of the length, fo that a bean of double length carries a frictwhen double load.
the ation IVe have hitherto fuppofed that the forees which of he load ind to beak a beam tranfierfely, are afting in a direci, obi i fu:.
tion perpanticular :o the beam. 'This is alvajos the cafe in level lfoors laded in any maner; but in roof. the ation of the lo.t 1 tending to beak the raters is chb. lique, beerufe gravity always ats in vertical lines. It may alio ficaueatly hap, en, that a beann is Arained by a force ading obl quely. This modifeation of tl.e Araia is eafily dilenfled. Suppofe that the external force, which is meafured by the weight \(W\) in fig. 1. acts in the dirceition A su' inttead of AW. Draw C \& perpendicular to \(A\) su. 'Then the momentum of this external force is not to be meafured by W \(\times \mathrm{AC}\), but by If \(x: C\). The ftrain therefore by which the fibres in the fection of frature DC are torn afunder, is diminillied in the propertion of CA to C á, that is, in the propartion of radius to the fine of the angle CAa, which the beam makes with the direction of the external force.

To apply this to our purpofe in the mof familiar manner, let AB (fig. 3.) be an oblique rafter of a building, loaded with a weight IV fufpended to any point \(C\), and thereby occafoning a frain in fome part \(D\). We have alrealy feen, that the immediate caufe of the Itrain on D ) is the reation of the fupport which is given to the point 13 . The rafter may at prefent be confidered as a levet, fupported at \(A\), and pulled down by the line CW. This cecafions : preflure on \(B\), and the fupport ats in the oppofite direction to the attion of the lever, that is, in the direvion \(\mathrm{B} b\), perpendicular to BA. This tends to break the beam in every part. The preffure exerted at \(D\) is \(\frac{W \times A E}{A!}\), \(A E\) being a horizontal line. Therefore the frain at 1\()\) will be W \(\times\) AE
\(A B^{-} \times B D\). Had the beam been lying horizontally, the frain at I), from the weight W fufpended at
C, would have been \(\frac{W \cdot A C}{A B} \times B D\). It is therefore diminilhed in the proportion of \(A C\) to \(A E\), that is, int the proportion of radius to the cofine of the elevation, or in the proportion of the lecant of clevation to the radius.

It is evident, that this law of dimiantion of the frain is the fame whether the lhain arifes from a load on any purt of the ratiter, or from the weight of the rafter itfelf, or f:om any loal uniformiy diffufed over its length, provited only that thete loads att in vertical lines.

We can now compare the flrength of roofs which serength of have differest devations. Suppoling the width of the roufs habohding to be given, and that the weight of a fquare ving difeyard of covering is alfo riven. 'lomen, becaufe the load on the rafter will iacreate in the lame proporiona with its length, the load on the flant-fide 13 a fo the roof will be to the had of a fimiter covering oathe half AF of the flat roof, of the fime vidth, as \(\Lambda\) l to \(\Lambda F^{\circ}\). But the tranfverte action of any 10.1 on \(A \mathrm{~B}\), by which it tends to break it, is to that of the farnc losd on Al as AE to AB. The tranferfe frain thatofoe is the frme on roth, the increafe of real load on AB being compenfated hy the obhquity of it. astion. But the frengths of beans to retill equal flains, applied to fimilar poin's, or uniformily dillifed oter them, are in. verfely as their lengths, becaufe the monentum or energy of the fratin is proportional to the lengti. There.
rent clevations compared.

\section*{R O O}
fore the power of \(A B\) to withland the ftrain to which it is really expofed, is to the power of AF to refilt its Itrain as AF to AB. If, therefore, a rafter AG of a certain fcantling is juft able to carry the roofing laid on it, a rafter AB of the fame feantling, but more eievated, will be too weak in the proportion of AG to AB. Therefore feeper roofs require Router rafters, in order that they may be equally able to carry a roofing of equal weight per fquare yard. To be equally ftrong, they mult be made broader, or placed nearer to each other, in the proportion of their greater length, or they mult be made deeper in the fubduplicate proportion of their length. The following eafy confruation will enable the artift not familiar with computation to proportion the depth of the rafter to the flope of the roof.

Let the horizontal line af (fig. 4.) be the proper depth of a beam whofe length is half the width of the building; that is, fuch as would make it fit for carrying the intended tiling laid on a flat roof. Draw the vertical line \(f b\), and the line \(a b\) having the elevation of the rafter; make ag equal to af, and defcribe the femicircle \(l d g\); draw ad perpendicular to \(a l\), ad is the required depth. The demonfration is evident.

We have now treated in fufficient detail what relates to the clief frain on the component parts of a roof, namely, what tends to break them tranfverfely; and we have emlarged more on the fubject than what the prefent occation indipenfably required, becaufe the propofitions which we have demonltrated are equally applicable to all framings of carpentry, and are even of greater noment in many cafes, particularly in. the conftruction of machires. Thefe confif of levers in various forms, which are frained tranfverfely; and fimilar ftrains frequently cocur in many of the fupporting and connecting parts. We fhall give in the article Timber an account of the experiments which have been made by cifferent nituralitits, in order to afcertain the abfolute ftrength of fome of the materials which are molt generaliy framed together in buildings and engines. The houfe-carpenter will draw from them abfolute numbers, which he cai apply to his particular punpofes by means of the propofitions which we have now eftablihed.

We proceed, in the next place, to confider the other Arains to which the parts of roofs are expofed, in confequence of the fupport which they mutually give each other, and the preffures (or thrufls as they are called in the language of the loufecarpenter), which they exert on each other, and on the walls or piers of the building.

Let a beam or piece of timber AB (fig. 5.) be fur. ponded by two lines \(A C, B D\); or let it be fupported by two props \(A \mathrm{E}, \mathrm{BF}\), which are perfectly moveable round their remote extremities E , F , or let it relt on the twn plifhed plains KAH, LBM. Morcover, let G be the cenire of gravity of the bcam, and let GN be a line through the centre of gravity perpendicular to the horizon. The heam will not be in equilibrio unlefs the restical line GN cither paffes through \(P\), the point in which the diestions of the two lines \(\mathrm{AC}, \mathrm{BD}\), or the dirctions of the two props \(A E, F D\), or the perpendiculats to the two planes KAH, LBM interiect each uther, or is parallel to thefe directions. For the finpports given by the lines or props are unqueftionably c.xerted in the diteation of their lengths; and it is as well
known in machanics that the fipposts given by planes are exerted in a disction perpendicular to thofe planes in the points of contaft and we know that the weight of the beam acts in the fame manner as if it were all accumulated in its centre of gravity \(G\), and that it ast; in the direction GN perpendicular to the honizon. Moreover, when a body is in equilibrio between three forces, they are ating in ane plane, and their direc. tions are either farallel or they pafs through one point.

The fupport given to the bean is theretole the frune as if it were fufpended by two lines whichare attachad to the fingle point \(I\). We may allo infer, that the
 the points of contact \(A, B\), and the centre of f-avity \(G\), are all in one vertical plane.

When this pofition of the beam is difturbed by any external force, there mult either be a motion of the points \(A\) and \(B\) round the centres of fufpenfion \(C\) and D, or of the props round thefe points of fupport \(E\) and F , or a fliding of the ends of the beam along the polifhed planes GH and IK; and in confequence of thefe motions the centre of gravity G will goout of its place, and the vertical line GN will no longer pafs through the point where the directions of the fupports inter fext each other. If the centre of gravity rifes by this motion, the body will have a tendency to recover its ferm. er poffition, and it will require force to kecy it away from it. In this cafe the equilibrium may be faid to be flable, or the body to have fabili:y. Dut if the centre of gravity defcends when the body is moved from the polition of equilibrium, it will tend to move fill farther ; and fo far will it be from recovering its former pofition, that it will now fall. This equiliorium may be callced a lottering equilibrium. Thefe accidents depend os the fituations of the points \(A, B, C, D, E, L ;\) and they may be determined by confidering the fubjzet germetrically. It does not much interof us at preterit ; it is rately that the equilibrium of furpenfion is toticring, or that of props is llable. It is evident, that if the beam were fulpended by lines from the peint \(P\), is woul? have ftability, for it would fwing like a pendelum round \(P\), and therefore would alway's tond towats the po!ition of equilibrium. The interfection of the lines al fupport would fill be at \(P\), and the vertical line drawn through the centre of gravity, when in any othcr fituation, would be on that fide of \(P\) towards which lhis centre has been moved. Thercfore, by the :ulus of pendulous bodies, it tends to come back. This would be more remarkably the cafe if the points of fufpenficn \(C\) and \(D\) be on the fame fide of the point \(P\) with the poir.ts of attachment \(A\) and \(B\); for in this cafc the sew point of intcrfection of the lines of fupport would fnift to the oppofite fide, and \(b=\) fiill farther lrom the vertical line through the new pofition of the centre ot gravity. liat if the points of fufpenfion and of atrachment are on n? pofice fides of 1 , the new point of interfecticn mivy flint to the fime fide with the centre of gravity, and lie beyond the vertical line; in this cafe the cquilibrium is intiering. It is caly to perceive, too, that if the equilibrium of fufpenfios from the points \(C\) and 1\()\) ve flabies the equilibrium on the props \(A E\) and \(13 F\) muit be onttering. It is not neceliary for our prefent purpofe to cngaye more particularly in this difcunion.

It is plain that, with refpeet to the mere momenta y equilibriun, there is no difference in the fuppo:i by

1:nd. -

Noor. -
threats, or preps, or planes, and we miny fubditute the onc for the other. IV: shall find this fubttitution extremely uefol, becaute we ently conccive diftinat notions of the tupport of a body hy ftrings.

Ojerve farher, thit if t! e whoie figure be inverted, and Itrings be fubtitutat fir prope, and props for fitil ys, the equilibrime wild thll obtain: for by comwait \({ }^{\prime}\) fig. \(j\). with fig. 6. w. fee that the vertical line :.:smu la the centre of gravit; will pais through the intufection of the two thiogs or props; and this is a.t that is necultey for th. ephil orium: only it mult be b beved in the fubl?quti)n of props for threads, and of thrends for prope, that if it be donc without inverting the whole lizuie, a At.ble equilibrium becomes a t. liering on", ath vate serfor.
-̌zamics.
This is a mial ufeful propurition, efpecialiy to the unleteret artilan, and enables him to make a practical ule of problems which the greatelt mechanical geniutes have fouad no eafy tak to folve. An intance will thow the extent and utility of it. Suppofe it were regivired to make a manfard of kirb roof whofe width is \(A B\) (fis. - .), and confifting of the four equal rafters \(A C, C D, D E, E B\). There can be no doubt but that its he? form is that which will put all the parts in equilibrio, fo that no ties or Rays may be necelfuy for oppoling the unbalanced thrut of any part of it. Make a chain acdeb (fig. 8.) of four equal pieces, loofely conncited by pin-joints, round which the parts are perFestly moveable. Suipend this from two pins a, \(b\), fixed in a horizontal line. This chain or feftoon will ar. runge itfelf in fuch a form that its parts are in equilibriu. Then we know that if the figure be inverted, it will compofe the frame or trufs of a kirl-roof a \(\gamma \delta \varepsilon b\), Which is alfo in equilibrio, the thrufts of the pieces balancing each other in the fame mane that the mutual pulls of the hanging fettoon acdeldid. If the proprrtion of the height \(d f\) to the width \(a b\) is not fuchas pleafes, let the pins \(a, b\) be placed neater or more dithant, till a proportion between the width and height is obtained which pleafes, and then make the figure ACDEB fig. 7. limilar to it. It is evident that this propolition will apply in the fame manner to the determination of the form of an arch of a bridge; but this is not a proper place for a fatther difcuffion.

We are now able to compute all the thrufts and other preflures which are exerted by the parts of a roof on each cther and on the walls. Let AB (fig. 9.) be a beam Aanding anyhow obliquely, and \(G\) its centre of gravity. Let us fuppofe that the ends of it are fupported in any directions \(\mathrm{AC}, \mathrm{BD}\), by frings, props, or planes. Let thefe directions meet in the point \(\mathrm{l}^{\prime}\) of the vertical live PG pafing through its centre of gravity. Though G draw lines \(\mathrm{G} a, \mathrm{G} b\) parallel to PP, PA. Then
The weight of the bcam \(\left.\begin{array}{l}\text { The proflite or thruft at } A \\ \text { The preflurc at } \mathrm{B}\end{array}\right\}\) are proportional to \(\left\{\begin{array}{l}\mathrm{PG} \\ \mathrm{P} a \\ \mathrm{P} h .\end{array}\right.\)

For when a body is in equilibria batween threc forces, thefe forces are proportional to the lides of a triangle which have their direations.

In like manuer, if \(A_{g}\) b: drawn parallel to \(P b_{2}\) we fiall ! ave
\[
\left.\begin{array}{l}
\text { Weight of the beam } \\
\text { Thrun on A } \\
\text { Thruf on } \mathrm{B}
\end{array}\right\} \text { propotion.al to }\left\{\begin{array}{l}
\mathrm{Pg} \\
\mathrm{PA} \\
\mathrm{Bg}
\end{array}\right.
\]
\(\left.\begin{array}{l}\text { Or, drawing } B_{2} \text { parallei to } \mathrm{P} a \\ \text { Weight of beant } \\ \text { Thult at } A \\ \text { Thrutt at } \mathrm{B}\end{array}\right\}\) are proportional ti) \(\left\{\begin{array}{l}P_{\gamma} \\ \mathrm{B}_{\gamma} \\ P_{B}\end{array}\right.\)
It cannot be diaguted that, if flrength al me be confi- Thic proper dered, the froper form of a 1001 is chat which puts the turm of a whole in equilibrio, fo that it would remain in that rotis that thape although all the juiuts were perfectly loofe or which puts flexible. If it has any other fluape, addational ties or in equilibraces are neceflary for preferving it, and the parts are brio. umeceilinily ftrained. When this equilibrium is obtained, the ratters which compole the roof are all ataing on e.sth other in the dincetion of their lengths; and by this action, combined with their weights, they fuftain no Atrain but that of comprefion, the itrain of all others that they are the nonf athle to retif. We may confider them as for many inflexible lines having their weights accumulated in their centres of gravity. But it willallow an eafier inveftigation of the dubject, if we fuppore the weights to be at the joints, equal to the real versical prellures which are exerted on thefe puints. Thefe are very catily computed : for it is plain, that the weight of the beam AB (fig. 9.) is to the part of this weight that is fupported it \(B\) as \(A B\) to \(A G\). Therefore, if W reprefint the weight of the beam, the vertical preffure at \(B\) will be \(W \times \frac{A G}{A B}\), and the vertical preffure at \(A\) will be \(W \times \frac{B G}{A B}\). In like manner, the prop \(B F\) being confidered as another beam, and \(f\) as its centre of gravity and \(w\) as its weight, a part of this weight, cqual to \(w \times \frac{f \mathrm{~F}}{\mathrm{BF}}\), is fupported at B , and the whole vertical preffure at B is \(\mathrm{V} \times \frac{\Lambda \mathrm{G}}{\mathrm{AB}}+\varepsilon u \times \frac{f \mathrm{~F}}{\overline{\mathrm{BF}}}\). And thus we greatly limplify the confideration of the mutual thrufts of roof frames. We need hardly obferve, that although thefe prefluecs by which the parts of a frame fupport each other in oppofition to the vertical antion of gravity, are always exerted ian the direction of the pieees, they may be refolved into preffures alting in any other direction which may engage our attention.

All that we propofe to deliver on this fubject at prefent may be included in the following propofition.

Let ABCDE (fig. 10.) be an alfemblage of rafiers in a vertical plane, refting on two fixed points A and \(E\) in a horizontal line, and perfectly moveable round all the joints \(\mathrm{A}, \mathrm{B}, \mathrm{C}, \mathrm{D}, \mathrm{E}\); and let it be fuppofed to be in equilibrio, and let us inveftigate what adjuftment of the different circumftances of weight and inclination of its different parts is neceffary for producing this equilibrium.

Let \(\mathrm{F}, \mathrm{G}, \mathrm{H}, \mathrm{I}\), be the centres of gravity of the different rafters, and let thefe letters exprefs the weights of each. Then (by what has been laid above) the weight which preffes \(B\) directly downwards is \(F \times \frac{A F}{A B}+G \times\) \(\frac{C G}{B C}\). The weight on \(C\) is in like manner \(G \times \frac{B G}{B C}+\) \(H \times \frac{D H}{C D}\), and that CnD is \(\mathrm{H} \times \frac{\mathrm{CH}}{\mathrm{CD}}+\mathrm{I} \times \frac{\mathrm{EI}}{\mathrm{DE}}\).

Lat Abcd E be the figure ABCDE inverter, in the manter thready deferibed. It mity be coneceived as a thread faltened at \(A\) and \(E\), and loaded at \(b, c\), and

\section*{ROO}

Rnof. Rnor. \(d\) with the weights which are really prefling on \(\mathrm{B}, \mathrm{C}\), will be in equilibrio. We may difcover this form by mean; of this fingle confideration, that any parc \(b c\) of the thread is equally fltetched throughout in the direftion of its length. Let us therefore inveftigate the proportion between the weight \(\beta\), which we fuppofe to be puiling the point \(b\) in the vertical direction \(b \beta\) to the weight \(\delta\), which is pulling down the point \(d\) in a fimilar minner. It is evident, that fince AE is a horizontal line, and the figures \(\mathrm{A} b c d \mathrm{E}\) and ADCDE equal and limilar, the lines \(\mathrm{B} b, \mathrm{C} c, D d\), are verrical. Take \(b f\) to reprefent the weight hanging at \(b\). By ftretching the threads \(b \mathrm{~A}\) and \(b c\), it is let in oppofition to the contractile powers of the threads, acting in the directions \(b \mathrm{~A}\) and \(b c\), and it is in immediate equilibrio with the equivalent of thele two contractile forces. Therefore make \(b g\) equal to \(b f\), and make it the diagonal of a parallelogram \(b b i g\). It is evident that \(b b, b i\), are the forces exerted by the threads \(b \mathrm{~A}, b c\). Then, feeing that the thread \(b c\) is equally ftretched in both directions, make \(c k\) equal to \(b i ; c k\) is the contractile force which is excited at \(c\) by the weight which is hanging there. Draw \(k /\) parallel to \(c d\), and \(/ m\) parallel to \(b c\). The force \(l c\) is the equivalent of the contractile forces \(\mathrm{ck}, \mathrm{cm}\), and is therefore equal and oppolite to the force of gravity acing at \(C\). In like manner, make \(d n=c m\), and complete the parallelogram \(n d p o\), having the vertical lize od for its diagonal. Then \(d x\) and \(d p\) are the contrastile forces excitcd at \(d\), and the weight hanging there muft be equal to 0 d .
Therefore, the load at \(b\) is to the load at \(d\) as \(b g\) to do. But we have feen that the conpreffing forces at \(B, C, D\) may be fublituted for the extending forces at \(b, c, d\). Therefore the weights at \(\mathrm{B}, \mathrm{C}, \mathrm{D}\) which produce the compreffions, are equal to the weights at \(b, c, d\), which produce the extenficns. Therefore \(b g: d o=\) \(\mathrm{F} \times \frac{\mathrm{AF}}{A B}+\mathrm{G} \times \frac{\mathrm{CG}}{\mathrm{BC}}: \mathrm{H} \times \frac{\mathrm{CH}}{\mathrm{CD}}+\mathrm{I} \times \frac{\mathrm{EI}}{\mathrm{DE}}\).

Let us enquire what relation there is between this proportion of the loads upon the joints at D and D , and the angles which the rafters naake at thefe joints with each other, and with the horizon or the plumb lines. Produce \(A B\) till it cut the vertical \(C_{c}\) in Q ; draw BR parallel to \(C D\), and \(B S\) parallel to \(D E\). The fimilarity of the figures ABCLE and \(\mathrm{A} b c d \mathrm{E}\), and the fimilarity of their pofition with refpeet to the horizontal and plumb lines, fhe w, without any further demonftration, that the triangles QCi and \(g b i\) are fintilar, :nd that \(Q B: B C={ }_{z} i: i b=b b: i b\). Therefore \(Q B\) is to BC as the contrantiie force exerted by the thread A \(b\) to that exerted by \(b c\); and therefore \(Q B\) is to \(13 C\) as the comprefion of \(B A\) to the comprellion on \(B C\) (A). Then, becaute \(l i\) is equal to \(c k\), and the triangles \(C B R\) and \(c k l\) re fimilar, \(C B: B R=c k: k l,=\) \(c k: c m\), and Cl 3 is to BR as the compreflion on CB to the comprelfion on CD . Aud, in like manner, be-
caure \(\mathrm{c} m=d n\), we have BR to BS as the compreflion on DC to the comprellion on DE. Alfo BR:RS = \(n d\) : \(d o\), that is, as the comprefion on DC to the load on D. Finally combining all thefe ratios
\(\mathrm{QC}: \mathrm{CB}=g b: b i,=g b: k_{c}\)
\(\mathrm{CB}: \mathrm{BR}=k \cdot: \cdot k l,=k \cdot c: d n\)
\(\mathrm{BR}: \mathrm{BS}=n d: n o=d n: n_{0}\)
\(\mathrm{BS}: \mathrm{RS}=n 0: d_{0}=n o: d o\), we have finally
\(\mathrm{QC}: \mathrm{RS}=\mathrm{g} 6:\) od \(=\) Load at \(\mathrm{B}:\) Load at 1 ). Now
\(\mathrm{CC}: \mathrm{BC}=f, \mathrm{QBC}: \rho, \mathrm{BQC},=f, \mathrm{ABC}: \rho, \mathrm{ABS}\)
\(\mathrm{BC}: \mathrm{BR}=f, \mathrm{BRC}: f, \mathrm{BCK},=f, \mathrm{CD} d: f, i \mathrm{BC}\)
\(B R: R S=f, B S R: ~ \int, R B S=f, d D E: f, C D I:\)
Therefore
\(\mathrm{QC}: \mathrm{RS}=\delta, \mathrm{ABC} . \int, \mathrm{CD} d . \delta, d \mathrm{DE}: \delta, \mathrm{CDE} . \delta, \mathrm{AB} b\). f, 6 BC .
\(\mathrm{QC}: R S=-\frac{\int, \mathrm{ABC}}{\int, \mathrm{AB} \cdot \int \mathrm{CB} b}: \frac{\int, \mathrm{CDE}}{\int, d \mathrm{DC} \cdot \int, d \mathrm{DE}}\).
That is, the loads on the different joints are as the fines of the angles at thefe joints directly, and as the products of the fines of the angles which the rafters make with the plumb lines inverfely:

Or, the loads are as the fines of the angles of the joints directly, and as the products of the cofines of the elevations of the ralters jointly.

Or, the loads at the joints are as the fincs of the angles at the joints, and as the produets of the fecants of elevation of the rafters joint?!: for the fecants of angles are inverfely as the cofines.

Draw the horizontal line BT. It is evident, that if this be confidered as the radius of a circle, the lines \(\mathrm{BO}, \mathrm{BC}, \mathrm{BR}, \mathrm{BS}\) are the fecants of the angles which theie lines make with the horizon. And they are alfo as the thrufts of thofe rafters to which they are parallel. Therefore, the thruft which any ralter makes in its own direction is as the fecant of its elcvation.

The horizontal thruft is the fame at all the angles. For is \(=k x,=m \mu,=n v,=p \pi\). Thereföc both walls are equally prefled ont by the weight of the root. We can find its quandity by comparing it with the load on one of the joints:
Thus, \(\mathrm{CC}: C D=f, A B C: f, A B 6\)
\(\mathrm{BC}: \mathrm{BT}=\) Rad. \(: f, \mathrm{BCT},=\) Rad. \(: f, C B b\) Therefore, \(\mathrm{QC}: \mathrm{B}^{\prime}=\) Rad. \(\times f, \mathrm{ABC}: \sqrt{3}, 2 \mathrm{BA} \times \int, b B C\). It deferves remark, that the lengths of the beams do not affect cither the propostion of the load at the differcnt joints, nor tire pofition of the rafters. This depends merely on the weights at the angles. If If a change of length afieats the weight, this indeed theweights alfects the form alio; and this is generally the cafe. \({ }^{2}\) : the For it feldom happens, indecd is neser fhould happen, angi, that the weight on rafters of longer bearing are int greater. The covering alone increaies nearly it. the proportion of the leneth of the rafter.

If the proportion of the weights at \(B, C\), and \(D\)
(A) This proportion might have heen thown disectly without any ufe of the inverted figure or corffideration of contractile forces; but this fubfutution gives diftuet notions of the mode of aching cuen to perfors not much cenverlint in finch difguiftions; and we wifh to make it familiar to the mind, Lecaufe it gives an eariv folution of the moit complicated problems, and furnifhes the prastical capener, rihu hat little fcience, with folutions of the molt difficult cafes by cxperiment. A feftoon, as we called it, may eifily be mads; amb. we are certiin, that the forms into which it will arange itfelf are models of peifit frames.

Red. -r.
are cưb, as alio the p lition of :my two of the lines, the poliue:n of all the reti is dsterminest.
it the larizonth diblanees between the argles a:c abld equal, the fores on the diticrent angles are profore nal tw the vercicals drawn on the linesthromeh thels an_los form the adj iming angle, and the thruts fien 12 the alje:tiang angles are as the lines which connce them.

If \(t\) it initers themflees arc of equal lengtls, thaz we:! ts at the dideent atges are ats thele yert c.iss in 1 ats the fecants of the clevation of the 1 afiers j \(\because\) :ns.
lis: : :ctabition is very frutful in its practical contegrenct: It is calf to perceive that it contains the whole thouty of the combruction of alches; for each It the of at: arch may be covidued as no of the ratiens on this piece of carpcotry, fince all is kept up by its mere cquilibrium. We may have an opportunity in 1 tne futhe article of enhbiting fome very elegant and forple flations of the noof dhlicult cafes of this imfor ant froblen ; and we muw proceed to make ufe "t the frowledge ne lave acquired for the conftruction of recf.

We mentioned by the bye a problem which is not usfequent in practice, to determine the bell form of a kirb-iorf. Mr Cuuplet of the Royal Acatimy cf L'ari; has fiven a folution of it in an claborate memoir in 1,26, occupying feveral lemmas and theorems.

L:t AL (fig. It.) be the width, and CF the height; it is required to conftruet a roof ABCDE whofe rafters \(A 1 ;, B C, C D, 1 D E\), are all equal, and which lhall be an equi bric.
1) raw CE, and bifect it perpendicularly in \(\bar{H}\) by the line UHG , cutting the horizental line \(A E\) in \(G\). About tle centre \(G\), with the diftance \(G E\), defuribe the cizcle EDC. It mult pals throngh C , bec fe CH is equal to HE and the angles at H are equal. Draw HK parallel to FE , cutting the circumference in \(K\). Draw CK, cutting GH in D. Juin CD, ED ; thefe lines ate the ratters of half of the roof requircd.

ITc prove this by thowing, that the loads in the angles \((\vec{C}\) and 1\()\) are equal. For this is the proportion whichaefults from the cquality of the rafters, and the extent of furface of the unifurm roofing which they are luppofed to fupport. Therefore produce ED till it meet the vertical FC in N ; and having made the fide CLA fimilar to CDE, complete the parallelogram BCDP, and draw DB, which will hifect \(\mathrm{CP}^{\text {in }} \mathrm{R}\), as the hori\%ontal line KH , bifeets CF in Q. Draw I5F, which is cvideatly parallel to DP. Moke CS perpendiculir to \(C F\), and equal to \(\mathrm{F} G\); and about \(S\), with the radiu SF, defrribe the citcle FKIV. It mutt pats though K , becaufe SF is equal to CG , and \(\mathrm{CQ}=\) OF Draw \(W \mathrm{WK}, \mathrm{WS}\), and produce BC , cutting N) in ().
'T!es:mele TVKF at the circumference is one lalf of ti.e angle lisF at the centre, and is thetefore equal to W:C, or CGl". It is :hewefore double of the argle CEF or lECS. Tut ECS is equal to ECD and DCS, and F.('1) is one half of NDC, and DCS is nne-half of DCO, or CDP. litesefore the angle WKF is cq a to N1)P, and WK is parallel to N1), and CF is to CVV as \(\mathrm{CP}^{\prime}\) to CN ; and CN is equal to CP . But it las been thown above, thai CN and \(\mathrm{Cl}^{\prime}\) are as the
loads upen D ard C. Thefe are therefore equal, ased the ram. ABCDE \(s\) in equisibrin.

A comparitun ot thas fuluti \(n\) with that of Nr Cos:p. let will thow its gicat advantage in telpeet of fimplicity and perfpicuits. And the iutethgent reader can cafity adapt the contruction to any proporion between th: rafters All and DC, which other circumftance, fuch as garret-roum, Sc. may rendes consenient. Whe conftruction maft be fuch that NC may be to C'P as CD tu \(\mathrm{CD}+\mathrm{I} \mathrm{E}\)
\(\frac{+15}{2}\). Whatever proportion of \(A\) il to ISC is affumed, the point D will be found in the circumbernce of a femicincle \(\mathrm{H}^{\prime} \mathrm{D}^{\prime} b\), whofe cenere is in the line \(\mathrm{C} \dot{B}^{\circ}\), and having \(A B: B C=C H: H E,=c b^{\prime}: H^{\prime} \mathrm{E}\) - The reft of the comptration is limple.

In buildings whith are ruedcd with flate, ijle, or fhingles, the circumfance which is mont likely to limit the conttruction is the fope of the upper rafer Cll, CD. Thrs muft ie fifficsint to prevent the penctration of rain, and the ltripping by the winds. The only circumatance left in nur choice in this cafe is the pro. pertion of the rafters \(A B\) and \(B C\). Nothing is eafier than making NC to CP in any delired proportion when the angle BCD is given.

We need not repeat that it is always a defrable thing The trufs? to form a crufs fur a roof in fuch a manner that it that be in equilibrin. When thas is done, the whole force of the fruts and braces which are added to it is employed in preferving this form, and no part is expended in unneceflary trains. For we mult now obderve, that thee equitibrium of which we have been treating is always of that hind which we called the tottening, and the root requires fays, braces, or langing timbers, to give it ftiffnefs, or keep it in thape. We have alfo faid ennugh to enable any reader, acquanted wi h the moftementary geometry and mechanics, to compute the tranfverie Arains and the theitls to which the component patts of all roofs are expoted.

It only renains now to fhow the general maxims by General which all oonfs mutt be conftrucled, and the circumftances which determine their excellence. In doing this we thall be exceedingly bief, and almof content ourfelves with exhibiting the principal forms, of which the endiets variety of roofs ate only flight roodifications.We thall not trouble th.e reader with any account of fuch roofs as receive part of their fupport from the intc. rior walls, but confine ourfelves to the more difficult problem of throwing a roof over a wide building, without any intermediate fupfort; becanfe when fuch roofs are conflrueted in the beft manner, that i , teriving :he greatelt poflible ftrength from the materials conpl yed, the belt conftumfinn of the others is necelfarily included. For all fucl roofs as relt on the middle walls are roofs of fmallar baring. 'The only exception deferving nosice is the roofs of churches which have aifles fepalated from the nave by columus. The roof mult tif: enthefe. llot if it is of an arched form internally, the horizontul thrufts mult be nicely balanced, that they may not puila the columns afide.
'Ilie fimplett motion of a roofframe is, that \(i^{*}\) con- Simplet fitts of two rafters \(A B\) and \(B C\) (fig. 12.), mecting in not o: of the ridge 1 l .

Lenn this limple form is fufceptible of better amd worlc

\section*{ROO}

Ronf.

worfe. We have already feen, that when the wcight of a fquare yard of covering, is given, a Atecper roof requires ftronger rafters, and that when the femtling of the timbers is allo given, the relative frength of a ralter is inverfuly as it. length. But there is now another circumflance to be taken into the account, viz. the fupport which oric rafter leg gives to the other. The befl form of a ralffer will therefore be that in which the relative Arength of the legs, and their mutual fupport, give the greatelt product. Mr Muller in his Military Engineer, gives a determination of the beft pitch of a roof, which has confiderable ingenuity, and has been copied ints many bonks of military education both in Britain and on the continent. Defrribe on the width A C, fig. 33. the femicircle AFC, and bifect it by the radius FD. Produce the rafter A B to the circumference in E, join EC, and draw the perpendicular E G.Now \(A B: A D=A C: A E\), and \(A E=\frac{A D \times A C}{A}\), and \(A E\) is inverfely as \(A B\), and may therefore reprefent its Arength in relation to the weight actually lying on it. Alfo the fupport which CB gives to AB is as CE, becaule CE is perpendicular to AB. Therefore the form which renders \(\mathrm{A} E \times \mathrm{EC}\) a maximum feems to be that which has the greateft Atrength. But AC: \(A E=E C: E G\), and \(E G=\frac{A E \cdot E C}{A C}\), and is therefore proportional to A E.EC. Now EG is a maximum when \(B\) is in \(F\), and a quare pitch is in this refper the ftongelt. But it is very doubtful whether this conAruation is deduced from jur principles. There is an. other Atrain to which the leg A B is expofed, which is not taken into the account. 'This arifes from the curvature which it unavoidably acquires by the tranfverfe preffure of its load. In this ftate it is preffed in its now direation by the abument and load of the other leg. The relation between this ftrain and the refiftance of the piece is not very difinaly krown. Euler has given a dillertation on this fubject (which is of great importance, becaufe it affects pofts and pillars of all linds; and it is very well kuown that a polt of ten feet 1. ng and fix incles fquare will bear with great fafety a weight winch would cruith a poit of the fame fantling and 20 feet long in a minute) ; but his determination las not becn acquiefced in by the firf mathematicians. Now it is in relation to thefe two frains that the Arength of the rafter thould be adjuted. The firmnefs of the fupport given by the other leg is of no coniequerce, if its own Arength is interior to the frain. The force which tends to crufh the \(\operatorname{leg} \mathrm{AB}\), by comprefling it in its curved llate, is to its weight as \(A \mathrm{~B}\) to \(\mathbf{B D} \mathrm{D}\), as is cafily feen by the compofition of forces; and its incurvation by this force has a relation to it, which is of intricate determination. In is contained in the properties demonfrated by Bernoulli of the elaftic curve. This determination alfo includes the relation between the curvature ard the length of the piece. But the whole of this feemingly finiple problem is of much more difficult invefigation than Mr Muller was aware of; and his rules for the pitch of a roof, and for the fally of a dock gate, which depends on the f.me principles, are of no value. He is, however, the firft author who attempted to folve eitleer of thefe problems en mechanical principles fufceptible of precife reafoning. Belidor's folutions, in his Arcbitcilure Hydrasilizue, are below noticc. Vol. XVI.

Reafons of economy liave made carpenters prefer Koof. a low pitch; and although this does diminith the fupport given by the oppolite leg fafter than it irccreafes the relative Arength of the other, this is not cf material confequence, becaufe the ttrength remaining in the oppofite leg is aill very great; for the fupporting leg is atoting againf comprelion, in which cafc it is vafly fronger than the fuppurted leg acting againtt a tranfverfe ftrain.

But a roof of this fimplicity will not do in monf cafes. Thrult on There is no notice taken in its conftuation of the thrun the walls, which it exerts on the walls. Now this is the firain which is the mon hazardous of all. Our ordinary walls, inflead of being able to refift any confiderable frain prefling them outwards, require, in general, fome tics to keep them on foot. When a perfon thinks of the thinnefs and height of the walls of even a firong houfe, he will be furprifed that they are not blown down by any frong puff of wind. A wall of three feet thick, and 60 feet high, could not withitand a wind blowing at the rate of 30 feet per fecond (in which cafe it acts with a force confiderably exceeding two pounds on every fquare foot ), if it were not tiffened by crofs-walls, joifts, and roof, which all help to tie the different parts of the building :ogether.
A carpenter is therefore exceedingly careful to avoid How \({ }^{36}\) every horizontal thruft, or in oppofe them by other avuidct. forces. And this introduces another effential part into the condruction of a roof, namely the tie or beam AC, (fig. \({ }^{1}+\) ), laid from wall to wall, binding the feet \(A\) and C of the rafters together. This is the fole oflice of the beani; and it fhould be confidered in no other liglot than as a fring to prevent the roof from pufhing out the walls. It is indeed ufed for carrying the ceiling of the apartments under it; and it is even made to fupport a flooring. But, confidered as making part of a roof, it is merely a fring; and the frain which it withtands tends to tear its parts afunder. It therefore acts with its whole abfolute force, and a very fmall fcantling would fuffice if we could contrive to faften it firmly enough to the foot of the rafter. If it is of oak, we may fafely fubject it tn a Atrain of three tons for every fquare inch of its feation. And fir will fafely bear a llrain of two tons for every fyuare inch. Eut we are obliged to give the tie-beam much larger dimenfions, that we may be albe to connect it with the foot of the rafter by a mortife and tenon. Iron Ar:aps are alfo fiequently added. By attending to this office of the tie-beam, the judicions carpenter is directed to the proper form of the mortife and tenon and of the frap. We fhall confider both of thefe in a proper place, after we become acquainted with the various ttrains at the joints of a roof.

Thefe large dimenfions of the tie-beam allow us to load it with the ceilings without any rifk, and eren to lay floors on it with moderation and caution. But when it has a great bearing or \(\int p a n\), it is very apt to bend downwards in the middle, or, as the workmen term it, in fway or fwag ; and it requires a fupport. The queltion is, where to find this fupport? What fixed points can we find with which to connect the middle of the tie-bcam? Some ingenious carpenter thought of fuipending it from the ridge by a piece of timber BD (fig. 15.), called by fome carpenters the ling-fog. It mult be achnowledged that there was great ingenuity in this thought. It was alfo perfectly juf. For the weight of the rafiers BA, BC tends to make them fly

30

\section*{にOO}
s., f. oat.at the fow: 'Ihis is preventid b y the tie-bc:m, and this exciess a prellune, Ly which they tend to comprefs each oflace. Suppole them without weight, and that a grent weight is luid on the ridge B . This can be fup. poriced only by the butting of the rafters in their own direations A B and C B , and the weight tends to comprefs then in the oppolite directions, and, hrough their intervention, to fretels the tie-be.m. If neither the 1.ffers can be coaptetfed, nor the tie-beam Atretched it io plum that the triangle A BC mut retain its thape, and that 1 b becontes a fixed point, wery proper to be ufed as a point of fulpention. To this point, therefore, is the tie-bearn fulpended by means of the kingpelf. A common fipetator, maccuainted with carpentry, views it scry differcutly, and the tie-beam appears to him to carly the roof. The hing-poft appears a pil. Lar refling on the beam, whereas it is really a tring; and an iron-rod of one fixteenth of the fize would have done jult as well. The king-polt is fometimes mortifed into the tie-beam, and pins pat through the joint, which gives it more the look of a pillar with the roof acfing ion it. This does well enough in many cafes. But the beft method is to connett them by an iron Arap, like a Rarrup, which is bolted at its upper ends into the ling-pof, and palfes round the tie-beam. In this way a fpace is commonly left between the end of the kingpot and the upper fide of the tie beam. Here the beam phanly appears hanging in the Rtirrup; and this method allows us to rellore the bean to an exact level, when it has liunk by the unavoidable compreffion or nther sielding of the parts. The holes in the fides of the iron hrap are made oblong intead of round; and the bolt which is drawn through all is made to taper on the under fide; fo that driving it farther draws the tie beam upwards. A notion of this may be formed loy looking at fig. 16. which is a fection of the poft and bcan.

It requires confiderable attention, however, to make thes furpenfion of the tie-bearn fufficiently firm. The tep of the king polt is cut into the form of the archftone of a bridge, and the heads of the rafters are firmIy mortifed into this projeding purt. Thefe projections are called joggles, and are formed by working the king poft out of a much larger pice of timber, and rutsing off the unneceffary wood from the two fides; atad, ler all this thonld not be fufficient, it is ufual in great works to add an iron-plate or frap of threc branches, which are bolted into the lieads of the king\(\mathrm{p} \% \mathrm{f}\) and raticre.

The rafters, though not fo long as the be:m, feem to ftand as muh in need of fometting to prevent that bending, for they carry the weight of the covering.'This cannot be done by fufpenfion, for we have no fixed pints above them: But we have now got a very firm point of fupport at the foot of the king-poft.liraces or firuls, FD, FD, (fig. 17.), are put under the middle of the rafters, where they are flightly mortifed, and thei: lower encis are firmly montifed into joggles formed on the foot of the king-polt. As theic Lraces are very powerful in their refiltance co compreffions, and the king port equally fo to refrt extention, the points Eand Finty le confulered as fixed; and the rafiers being this ieduced to lalf their forner lergth,
37 have now four times their former relative freneth.
Contu uc- R of, do not always confint of two floping fides meetion of Gat ing in a ridge. 'They have fometirnes a flat on the top, ruofs.
47. 〕 K O O
withtwo lloping fides. They are fometines fomed with a double flope, and are called kirb or manfarde roofs. 'llasy fometimes have a valley in the middle, and are then called M roofs. Such roofs require another piece which may be called the trufs leam becaule all fuch fiames ate called truffes, probably from the French word trouffe, becaule fuch roofs are like purtions of plain roots troulfes or thortened.
A flat-topped roof is thes confructed. Suppore the three ratiers \(A B, B C, C D\) (fig. 38.) of which \(A B\) and CD are equal, and BC horizontal. It is plain that they will be in equilibrio, and the roof have no tendency to go to either fide. The tie-beam AD) withfands the horizontal thrulis of the whole frame, and the two rafters \(A B\) and \(C D\) are each preffed in their own directions in confequence of their butting with the middle rafter or trufs beam BC. It lies between then like the keyfone of an arch. They lean towards it, and it refts on them. The preffure which the trufs-beam and its load excites on the two rafters is the very fame as if the rafters were produced till they mect in G , and a weight were laid on thefe equal to that of BC and its load. If therefore the trufs bcam is of a fcantling fufficient for carrying its own load, and withftanding the compreffion from the two ratters, the roof will be equally ftrong (while it keeps its flape) as the plain roof AGD furnifued with king-port and braces. We may conceive this another way. Suppofe a plain roof AGD, without braces to fupport the middle B and C of the rafters. Then Ict a beam \(B C\) be put in between the ratiers, butting upon little notches cut in the rafters. It is evident that this mut prevent the rafters from berding downwards, becanfe the points \(B\) and \(C\) cannot defiend, movilag round the centres A and D , without thortening the difance BC between them. This cannot be without comprefling the beam BC. It is plain that BC may be wedged in, or wedges driven in between its ends \(B\) and \(C\) and the notches in which it is lodged. Thefe wedges may be driven in till they cven force out the rafters GA and GD. Whenever this happens, all the mutual preflure of the heads of thefe radters at G is taken away, and the parts GB and GC may be cut away, and the roof ABCD will be as frong as the roof AGD farnithed with the king-pof and braces, becaufe the trufs-beam gives a fupport of the fame kind at B and C as the brace would have donc.

But this roof \(A B C D\) would have no firmonds of flare. Any addition of weight on one fide would deAtroy the equilibrium at the angle, would deprefs that angle, and caufe the oppofite one to rife. To give it lliftnefs, it mult cither have ties or braces, or fomething partaking of the nature of both. The ufual method of framing is to make the heads of the rafters butt on the joggles of two fide-pofts \(13 E\) and CF, while the trufs-heam, or ftrut as it is generally termed by the carpenters, is mostifed fquare into the infide of the heads. The lower ends E and F of the fide-pofs are comneted with the tie-bean cither by mortifes or ftaps.

This confruction gives firmefs to the frame; for the angle B camot defcend in confequence of any inequality of preffure, without foreing the other angle \(C\) to sife. This it camnot do, being held down by the poft CF. And the fime conftuation fortifies the tiebeam, which is now fufpended at the points E and F

\section*{R O O}

Roof.
38
They are
nut fo Arong as the prain ruofs.
from the points \(I\) and \(C\), whofe firmnefs we bave juft now flown.

But alchough this roof may be made abundantly Arong, it is not quite fo frong as the plain root \(A(C D\) of the fame fcantling. The compretlion which BC muft futzain in order to give the fame fupport to the refters at B and C that was given by braces properly placed, is conliderably greater than the compretfion of the Lrace. And this ftain is an addition to the tranfverle ftrain which BC gets from its nown load. Alfo this form necelfarily expofes the tie beam to crofs ftrains. If BL is mortiled into the tic-bcam, then the Itrain which tends to deprefs the angle ABC prefles on the tie-beam at E ranfverfely, while a contrary Arain acts on \(F\), pulling it upwards. Thefe ftrains however are fmall; and this conftuction is frequently ufed, being fufceptible of fufficient Itrength, without much increafe of the dimenfions of the timbers; and it bas the great advantage of giving free room in the garrets. Were it not for this, there is a much more per. feat form reprefented in fig. 19. Here the two pofts \(\mathrm{BE}, \mathrm{CF}\) are united below. All tranfiverie aetion on the tie-beam is now entirely removed. We are almont difpofed to fay that this is the ftrongelt roof of the fame width and llope: for if the iron Ptrap which connects the pieces \(B E, C F\) with the tie-beam have a large bolt \(G\) through it, confining it to one point of the beam, there are five points \(A, B, C, D, G\), which cannot change their places, and there is no tranfverfe flain in any of the connedions.

When the dimenfinns of the building are very great, fo that the pieces \(A B, B C, C D\), would be thought too weak for withfanding the crofs frains, braces may be added as is exprelfed in fig. 18. by the dotted lines. The reader will objerve that it is not meant to leave the top fat externally : it munt be raifed a little in the midjle to fhoot off the rain. But this mut not be done by incurvating the beam BC. This would foon be crulhed, and fpring upwards. The flopes mult be given by pices of timber added above the Aruting beam.

And thus we have completed a frame of a roof. It confits of thefe principal members : The rafters, which are immediately loaded with the covering; the tie-beam which withtands the horizontal thruft by which the ronf tends to fly out below and puth out the walls; the king. polts, which hang from fixed points and ferve to uphold the tie-beam, and allo to afford other fixed points on which we may relt the braces which fupport the middle of the rafters ; and laftly the trufs or Itrut-ting-beam, which ferves to give mutual abutment to the different parts which are at a diftance from each other. The rafters, braces, and truffes are expofed in comprefion, and mult therefore have not only cohetion but fiffnefs. For if they bend, the prodicis. compreffions to whicn they are fubjected would quickly cruth them in this bended fate. The tie-beams and king-pofts, if performing no nther office but fupporting the roof, do not require Atifners, and their places might be furplied by ropes, or by rods of iron of one-tenth part of the fection that cv en the fmallelt oak Atetcher requires. Thefe members require no greater dimenfions thatn what is nocelfary for giving fuficient joints, and any more is a needlefs expence and Ioad. All roofs, however complicated, confitt of thefe effential parts, and if pieces of timber are to be fean
which pirfurm none of the fe olfices, ticy mun be pronounced ufelefs, and they are frecpunty hurtful, by producing crofs frains in forme other piece. In a root properly corftrunted thete ftould be no fuch Arains. All the timbers: except thofe which immediately carry the covering, thould be either puthed or drawn in the direction of their length. And this is the rule by which a roof thould alwass be examined.

Thefe effential parts are fufceptible of numberlefs combinations and varieties. But it is a prudent maxim to make the conll ruttion as fimple, and confiting of as few parts, as poffible. We ate lefs expofed to the imperfec. tinns of workmal!fhip, fuch as looie jnints, \&x. Another eflential harm a ifes from many pieces, by the compref. fion and the fhrinking of the timber in the crofs direction of the fibres. The effeet of this is equivalent to the fhortening of the piece which butts on the joint. This alters the proportions of the fides of the triangle on which the fhatpe of the whole depends. Now in a roof fuch as fig. 18. there is twice as much of this as in the plain pent roof, becaufe there are two pot:And when the direction of the butting pieces is vory oblique to the action of the load, a fmall flrinking permits a great change of thape. Thus in a roof of what is called pediment pitch, where the rafters make an angle of 30 degrees with the horizon, half an inch compration of the king-polt will produce a fagging of an inch, and occafion a great Itrain on the tic-bean if the pofts are mortifed inco it. In fig. 2 , of the rools in the article Architecture, half an inch florinking of each of the two polts will allow the middle to fagg above five inches. lig. I. of the fame plate is fallity in this relpest, by cutting the ftrutting.heam in the middle. The frutting-heam is thus thoriened by thre Alrinkings, while there is but one to florten the rafiers. The coniequence is, that the tru's which is include: within the rafters will fager away from them, and then they mult bend in the middle till they again reft on this included trufs. This ronf is, however conftußed o:t the whole on good principles, and we adauce it nuly to thow the advantages of fimplicity. This catting of the trufling-beam is unavoidable, it we nould preferve the king-poft. But we are in doubt whether the Gervice performed by it in this cafe will bulance the inconvenience. It is employed only to fupport the middle of the upper half of each rafter, which it does but imperfeetly, becaufe the braces and Itrut men be cut half through at their crofling: if thefe \(j\) ints are made tight. as a workman would with to do, the fertling of the ronf will caufe them to work on each other croflwife with infuperable force, and will undoubtedly ftrain them cxceedingly.
'This method of including a truls within the rafters of a pent roof is a very conliderable ajuition to the art of carpentry. But to iafure its tull efiect, it fhould al. ways be cxecuted in the mannor reprefented in fis. 1. Plate XLVIII. with butting rafters under the principal oncs, butting on joggles in the heads of the pofts. Without this the itrut-bearm is hardly of any icrvice. We would therefore recommend fire 20 . ss a prope: conitrustion of a trulfed root, and the king-p:of which is placed in it may be employed to fupport the upper part of the bafiers, and alfo for preventing the frutbeam from bending in either diseftion in confequence of its great compreltion. It will a'fo give a fufpenfion for the great bardens which are fumetimes neceflary in

\section*{KO O}
a theatre. TVe machurery l.etino of cy firm points to which it can be attachal: and the portion ol the lingle rafters which carry this king-pult are but thort, and thercione may be confidambly lased with fafety.

We olvense in the drawings which we fometimes fave of Chinefe builuings, that the truffing of roofs is haderfloud by them. Indee they mult lic very expe. sienced carpenters. We dee wooden buildings run up to a gieat height, which can be fupported only by fuch thating. One of thefe is tketched in tig. 21. There are fome very excellent ipecimens to be feen in the buildings at Depoferd, helonging to the victualling(ifice, ufially called the Rad llowe, which were eneted about the vear \(1-85\), and we believe are the periormance of Mr James Arrow of the Board of Works, one of the nott intelligent artifts in Britain.

Thus have we given an clementary, but a rational or fcientific, account of this important part of the art of carpentry. It is fuch, that any practitioner, with the trouble of a little reflection, may always procced with con- fisence, and without refting any part of his practice on the vatgue notions which habit may have given him of the Arength and fupports of timbers, and of their manner of atting. That thefe frequently miflead, is proved by the mutnit criticims which are frequently publifhed by the rivals in the profeflion. They have frequently fagacity enough (for it can feldom be called icience) to point ont glaring blunders; and any perfon who will look at fome of the performances of Mr Price, Mr Wyatt, Mr Arrow, and others of acknowledged reputation, will readily fee the:n diftinguifhable from the works of inferior artifs by fimplicity alone. A man without principles is apt to confider an intricate conftruction as ingenious and effectual ; and fuch roofs fometimes fail merely by being ingeniounly baded with timber, but more fregiently titl by the wrong action of fome ufelefs piece, which produces ftrains that are traniverie to other pieces, or which, by rendering fome points too firm, caufe them to be deferted by the rell in the general fitbfiding of the whole. Inftances of this kind are pointcd cut by l'rice in his Dritifl Carpenter. Nothing thows the fkill of a carpenter more than the diflinetnet's with which he can foretce the changes of thape which muft take place in a fhort time in every roof. A knowledge of this will often correct a confluction which the mere mathematician thinks mexceptionable, becaure he does tot reckon on the actual comprettion which muft obtain, and imagines that his triangles, whill fulfain no crofs ftrins, invariably retain their thape :ill the picces break. The fagneity of the experienced carpenter is not, however, enongh without ficcisce lur perfesing the art. But when he knows how nuch a paticular piece will yield to compration in one cate, fcience will teil him, and nothing but ficnce can do it, what will be the compretion ot the fame picce in an ther very dilerent cale. Thus he learns how far it will now yicld, and then he proportions the parts fo to each other, that when all have yielded aceording to their flrinas, the whols is of the thape he withed to prodice, and every joint is in a tiate of hirmnefs. It is tere thit we obfetve the seat it number of impropric. tes. 'The iron fraps are frequently in politions not frited to the adual llain on them, and they are in a feate of violent twitt, which bcilh tends ftrongly to

Wreak the Rrap, and to chipple the pieces which they lurround.

In like manner, we frequently fee joints or mortifes ins a fate of violent frain or the tenons, or on the heels and fhoulders. The joints were perlaps properly thaped to the primitive form of the truls; but by its ferting, the bearing or the pulh is changed: the brace, for example, in a very low pitched roof, comes to prefs with the upper part of the floulder, and, acting as a powerful lever on the tenon, breaks it. In like manner, the lower end of the brace, which at firf butted firmly and fquarely on the joggle of the king-pon, now prelles with one corner with prodigious force, and feldom fails to fplinter off on that fide. We cannot help recommending a maxim of Mr Perronet the celebrated hydraulic architect of France, as a golden rule, viz. to make all the fhoulders of butting pieces in the form of an arch of a circle, having the oppofite end of the piece for its centre. Thus, in tig. 18 . if the joggle-joint \(B\) be of this form, having \(A\) for its centre, the fagging of the roof will make no partial bearing at the joint ; for in the fagging of the roof, the piece ABturns or bends round the centre \(A\), and the counter-preflure of the joggle is ftill direeted to \(A\), as it ought to be. We have jult now faid bends round \(A\). This is too frequently the cafe, and it is always very difficult to give the tenon and mortife in this place a true and invariable bearing. The rafter puthes in the direction \(B A\), and the beam refilts in the direction AD. The abutment fhould be perpendicular to neither of thefe but in an intermediate direction, and it ought alfo to be of a curved thape. But the carpenters perhaps think that this would weaken the beam too much to give it this fhape in the fhoulder ; they do not even aim at it in the beel of the tenon. The fhoulder is commonly ever with the furface of the beam. When the bearing therefore is on this houlder, it caufes the foot of the rafter to flide along the beam till the heel of the tenon bears againft the outer end of the mortife (See Price's Briti/b Carpenter, Plate C. fig. I K). This abutment is perpendicular to the beam in Price's book, but it is more generally pointed a little outwards below, to make it more fecure againft flarting. The confequence of this confruction is, that when the rocf fettics, the thoulder comes to bear at the inner end of the mortile, and it rifes at the outer, and the tenon taking hold of the wood beyond it, either tcars it out or is itfelf bro. ken. This joint therefore is feldon trulted to the ftrength of the mortife and tenon, and is ufually feenred by an ion ftrap, which lies obliquely to the beam, to which it is bolted by a large bolt quite through, and then embraces the outlide of the rafter loot. Very frequently this frap is not made futficientiy obl"que, ind we have feen frme made almoff fquare with the beam. When this is the cafe, it not only keeps the foot of the rafter from flying out, but it binds it down. In this cafe, the raftur acts as a power.al lever, whode fulcram is the inner angle of the foulder, and then the flap never fails to cripple the ralter at the point. All this can be prevented onls by making the Arap very long and very ohlique, and by maling its outer end (the nirrup part) fquare with its length, and making a notch in the rafter foot to receive it. It cannot now cripple the rafter, for it will rife along with it, turning round

\section*{R O O}
the bolt at its inner end. We have been thus particular on this joint, hecaufe it is here that the ultimate frain of the whole roof is exerted, and its fituation will not allow the excavation neceflary for making it a good mortife and tenon.

Similar attention mun be paid to fome other Araps, fuch as thofe which embrace the middle of the rafter, and connect it with the poft or trufs below it. We mult attend to the change of Mape produced by the fagging of the roof, and place the ltrap in fuch a manner as to yield to it by turning round its holt, but fo as not to become loofe, and far lefs to make a fulcrum for any thing acting as a lever. The ftrains arifing from fuch actions, in framings of carpentry which change their thape by fagging, are enormous, and nothing can refilt them.

TWe fhall clofe this part of the fubject with a fimple method, by which any carpenter, with ut mathematical fcience, may calculate with fufficient precifion the ftrains or thrults which are produced on any point of his work, whatever be the obliquity of the pieces.

Let it be required to find the horizontal thruft acting on the tie-beam AD of fig. 18. This will be the fame as if the weight of the whole roof were laid at \(G\) on the two rafters GA and GD. Draw the vertical line GH. Then, having calculated the weight of the whole roof that is fupported by this fingle frame \(A B C D\), including the weight of the pieces \(A B, B C\), \(\mathrm{CD}, \mathrm{BE}, \mathrm{CF}\) themfelves, take the numher of pounds, tons, \&c. which expreffes it from any fcale of equal parts, and fect it from G to H . Draw HK, HL pa. rallel to \(\mathrm{GD}, \mathrm{GA}\), and draw the line KL , which will be horizontal when the two fides of the roof have the fame nope. Then ML meatured on the fame fale will give the horizontal thrul, by which the Arength of the tic-herm is to be regulated. GL will give the thruft which tends to crull the rafters, and L.M will allo give the force which tends to crulh the frut-beam BC.

In like manner, to find the ftrain on the king.polt ED of fig. 17. confider that each brace is preffed by half the weight of the rroufing laid on BA or BC , and this preffure, or at lealf its hurtful effect, is diminifhed in the proportion of BA to DA , becaufe the astion of gravity is vertical, and the effea which we want to counterat by the braces is in a direation Ee perpendicular to BA or BC. But as this is to be refilted by the brace \(f E\) acting in the direstion \(f E\), we mult draw \(f e\) perpendicular to le, and fuppofe the ftrain augmented in the proportion of Ee to Ef.

Having thus oltained in tons, pounds, or nther ineafues, the Atrains whicls muft be balanced at \(f\) by the cohetion of the king-poft, take this mealure from the feale of equall parts, and fet it off in the direstions of the bra-es to G and H , and complete the parallelogram \(\mathrm{G} f \mathrm{HK}\); and \(f \mathrm{~K}\) meafured on the fame fala will be the ftain on the king-polt.

The artift may then examine the frength of his of trufs upon this principle, that cvery fouare inch of oak will bear at an average 7000 pounds compreffion or Aretching it, and may be fafely luaded with 3500 fur any length of tine ; and that a fquare inch of tir will in like manner fecureig bear 2500 . And, becaufe fraps are lifed to refift fome of theie Rrains, a fquare inch of well wrought tough iron may be fafely frained
by 50,000 pounds. But the artit will alrays recol. left, that we camot have the fame confidence in iron as in timber. The faults of this laft are much more eafily perceived; and when timber is too weak, it gives us warning of its failurc, by yielding fenfibiy before it breaks. This is not the cafe with iron; and much of its fervice depends on the honely of the blackfinith.
In this way may any defign of a roof be examined. We thall here give the reader a fietch of two or tirree truffed roois, which have been executed in the chief varieties of circumfances which occur in common prac. tice.
Fig. 22 is the roof of St Paul's Church, Covent Garden, London, the work of Inigo Jones. Its conftruction is fingular. The roof extends to a confiderable diftance beyond the building, and the ends of the tie-beams liupport the Tufcan corniche, appearing like the mutules of the Doric order. Such a roof could no: reit on the tie-beam. Inigo Jones has thercfore fupported it by a trufs below it; and the height has allowed him to make this extremely ftrong with very little timber. It is accounted the higheft roof of its width in Lon. don. But this was not difficult, by reafon of the great height which its extreme width allowed him to employ without hurting the beauty of it by ton high a pitich. The fupports, however, are difpofed with judgment.
Fig. 23. is a kirb or manfaid roof by Price, and fuppofed to be of large dimenfions, having braces to carry the middle of the rafters.

It will ferve exceedingly well for a church having pillars. The middle part of the tie-beam being taken away, the frains are very well balanced, fo that there is no rifk of its punhing afide the pillars on which it refts.
Fig. \({ }^{2}+\). is the celebrated roof of the theatre of the univerfity of Oxford, by Sir Chriftopher Wren. The fpan between the walls is 75 feet. This is accounted a very ingenious, andis a fingular performance. The middle part of it is almont unchangeable in its form ; but from this circumfance it does not diffribute the horizontal thruft with the fame regularity as the ufual confruction. The horizontal thruf on the tie beam is about twice the weight of the roof, and is withfood by an iron ftrap below the beam, which ftretches the whole width of the building in the form of a rope, making past of the ornament of the ceiling.

In all the roofs which we have confidered liitherto Cafes in the thruft is difcharged entirely from the walls by the which the tie beam. But this cannct always be done. We fre- thruft cart quently want great clevation within, and arched ceil- clasged bed ings. In fuch cafes, it is a much more difficalt matter charged from the to keep the walls frec of all preflure outwards, and walis by there are few beildings where it is comp.etely done. the nicYct this is the greateft fault of a roof. We thall jurt beaolpoint out the methods which may be mof fucceffoflly adopted.
We lave faid that a ticheam jult performs the cffice of a Atring. We have iaid the fame of the kingpoit. Nuw fuppote two rafters \(\mathrm{AB}, \mathrm{BC}\) (fig. 25.) moveable ahout the joint \(B\), and refting on the top of the walls. If the line ED be furpended fiom B, at. 1 the two lines DA, IDC be filtened to the feet of the rafters, and if there lines be incapable of extention, it is plain that all thruf is removed fom the wall, as es-
fertuilly

Ronf. fequally as by a common tic-beam. And by fortening 131) te Bd , we gain a greater infide height, and ma te romm for as arched coling. Now if we fubltithte a sing-polt BD (fig. 2G.) and two Itretchers or hamaver-beams D.1, 1)C for the other ltrings, and conneet \(t\) em firmly by mein, of sron traps, we obtain our purpote.

Let us compare this roof with a tie.beam roof ins foint of Itain and itrength. Recur to fig. 25. and complete the purallelogram . 11 CF , and draw the diagonals \(1 C, \quad 1 F\) croling in E. Draw BG perpendicuiar to CD . We have feen that the weight of the ronf (which we may call \(\mathrm{W}^{\top}\) ) is to the horizontal thrult at C as BF to EC ; and if we exprefs this thruf by \(T\), we have \(T=\frac{W \times E C}{B 1^{i}}\). We may at prefent confider \(B C\) as a lever moveable round the joint \(D\), and pulled. at \(C\) in the direction EC by the horizontal thrut, and hold back by the ftring puling in the direction CD. Suppofe that the forces in the directions 1 CC and CD are in equilibrio, and let us find the force S by which the lling CD is frained. Thele forces mult (by the property of the lever) be inverfely as the perpendiculurs drawnirom the centre of motion on the lines of their dircetion. 'Iherefore \(B G: B E=T: S\), and \(S=T \times \frac{B E}{B G}, W \times \frac{B E \cdot E C}{B F \cdot B G}\).

Therefore the fitrain upon each of the ties DA and DC is always greater than the horizontal thrult or the larain on a fimple tie-beam. This would be no great inconvenience, becaufe the fmalleft dimenfions that we could give to thafe ties, fo as to procure fufficient fixtures to the adjoining pieces, are always fufficient to w.thtand this ftrain. But although the fame may be faid of the iron traps which make the ultimate connections, there is always fome hazard of imperfect work, cracks or flaws, which are not perceived. We can judge with tolerable certainty of the foundnefs of a piece of timber, but cannot fay fo much of a piece of iron. Mureover, there is a prodigious ftrain excited - In the king-poit, when BG is very thort in comparifon of liE, namely, the force compounded of the two Itrains \(S\) and \(S\) on the ties DA and DC.

But there is another defect from which the ftraight tis-heam is entirely free. All roofs letule a litele. When this roof fettles, and the points \(B\) and \(D\) defeend, the legs BA, \(B C\) muft lpread further out, and thus a preffure outwards is excited on the walls. It is feldom therefore that this kind of roof can be executed in thes limple lorm, and other contrivances are neceflary for courterating this fupervening action on the walls. Fig. 27 , is one of the belt which we have feen, and is cxecuted with great fuccef, in the circus or equeltrian theatre in Edinburgh, the width being 60 feet. The pieces EF and ED help to take off fome of the weight, and by their greater uprightnels they exert a fmaller thruit on the walls. The beam \(\mathrm{D} d\) is alfo a fort of truls beam, having fomething of the fame effen. Mr Price has given anobler very judicious one of this kiod, Britilı Carpenter, Plite IK, fig. C. from which the tie-bedm may be taken away, and there will remain very lutle thrult on the walls. Thofe which he has gio ven in the following \({ }^{3}\) late \(\mathbb{K}\) are, in our opinion, very finuly. The whole frain in thele luft root's tends to b:eak the rafeers and ties thanferlely, and the fixtutes of
the ties are alfo not well calculated to refift the frain to which the pieces are expofed. We hardly think that luefe ronfs could be executed.

It is fiarcely necelfary to remind the reader, that in Genera' oball that we have delivered on this fubject, we have at-fervations:
tended only to the conlluftion of the principal safters or trulles. In finall buildings all the rafters are of one kind: but in great buidlings the whole weight of the covering is made to relt on a few principal rafter: which are connested by beams placed horinontally, and cither mortifed into then or farfed on them. 'Thele are called purions. Sinall rafters are laid frum purlin to purlin; and on theefe the latho for tiles, or the kirting. boards for flates, are nailed. Thas the covering does not imnediately reft on the principal frames. '!his allows tome more liberty in their conltruetion, becatule the garrets can be to divided that the principal rafters fhall be in the partitions and the relt lelt unincumbered. This conltruction is fo fur analogous to that of floors which are conltructed with girders, "binding, and bridgeing joifts.

It may appear prefuming in us to queftion the propriety of this practice. There are fituations in which it is unavoidable, as in the roofs of churches, which can be allowed to reft on fome pillars. In other lituations, where partition-walls intervene at a diltance not too great for a fout purlin, no principal rafters are neceiliary, and the whole may be roofed with fhort rafters of very flender fcantling. But in a great uniform roof, which has no intermediate lisports, it requires at leaft fome reafons for prefersing this methed of carcafe-roofing to the limpler method of making all the 1 afters alike. The method of carcale-roofing requires the felection of the greatelt logs of timber, which are leldom of equal ftength and foundnefs with thinner rafters. In theie the outlide planks can be taken off, and the beft part alone worked up. It alfo expofes to all the detects of workinanhip in the mortifing of purlins, and the weakening of the rafters by this very motifing ; and it brings an additional load of purlins and thort raters. A roof thus conftructed may furcly be compared with a foor of fimilar conttrution. Here there is not a thadow of doubt, that if the girders were fawed into planks, and thefe planks laid as joifts fulficiently near for carrying the fooring boards, they will have the fime ftrength as before, except fo much as is taken out of the timber by the faw. This will not amount to one-tenth part of the timber in the binding, bridging, and ceiling joitts which are an addition.il load; and all the mortifes and other joinings are fo many dininutions of the Atrength of the girders ; and as no part of a carpenter's woik requires more fkill and accuracy of execution, we are expofed to many chances of imperfettion. But, not to relt on thefe confiderittions, however reafonable they may appear, we thall relate an experiment made by one on whole judgment and exactnefs we can depend.

Two models of floors were made 18 inches fquare of comfinmed the finelt uniform deal, which had been long feafoned. by experiThe one confulted of limple joifts, and the other was ment. framed with girduss, binding, bridging, and ceiling joifts. The plain joilts of the one contained the fame quantity of timber with the girders alone of the other, and hoth were made by a molt accura:c workman. They were placed in wooden trunks 18 inches fquare
within, and refted on a ftrong projection on the infide. Small fhot was gradually poured in upon the floors, fo as to fpread uniformly uver them. The plain joitted floor broke down with 487 pounds, and the carcafe floor with 327 . The firlt broke without giving any warning ; the other gave a violent crack when 294 pounds had been poured in.

A trial had been made before, and the loads were 341 and 482 . But the models having been made by a lefs accur:ute hand, it was not thought a fair fecimen of the ftrength which might be given to a carcafe Hoor.

The only argument of weight which we can recollea in favour of the compound confruction of roofs is, that the plain method would prodigioully increafe the quantity of work; would admit nothing but long timber, which would greatly add to the expence; and would make the garrets a mere thicket of planks. We admit this in its full force; but we continue to be of the opinion that plain roofs are greatly fuperior in point of Arength, and therefore fhould be adopted in cafes where the great difficulty is to infure this neceffary circumflance.

It would appear very negleaful to omit an account of the roofs put 01 round buildings, fuch as domes, cupolas and the like. They appear to he the molt difficult tafks in the carpenter art. But the dificulty lies entirely in the mode of framing, or what the French call the trait de charpenterie. The view which we are taking of the fubject, as a part of mechanical fcienee, has little conneation with this. It is plain, that whatever form of a trufs is excellent in a fquare building mult be equally fo as one of the frames of a roundone; and the ouly difficuly is how to manage their mutual interiections at the top. Some of them mult be dilcontinued befure they reach that length, and common fenfe will teach us to cut them fhort alternately, and al. ways leave as many, that they may fland equally thick at at their firft fpringing from the bafe of the dome. Thus the length of the purlins which re ich from trufs to trufs will never be too great.

The truth is, that a ound building which gathers in at top, like a glafs-houfe, a potter's kiln, or a fpire fleeple, inttead of being the mnlt difficult to eren with llability, is of all others the eafieft, Nothing can thow this more forcibly than daily practice, where they are run up without centres and without icatoldings; and it requires grofs blunders indeed in the rtoice of their outline to put them in much danger ol falling from a want of equilibrium. In like manner, a dome of carpentry can hardly fall, give it what thape or what confruction you will. It cannot fall unlefs fome part of it flies out at the bottom : an iron hoop round it, or Itraps at the joinings of the trulles and purlins, which make an equivalent to a hoop, will effequally fecure it. And as beauty requires that a dome thall fpring almof perpendicularly from the wall, it is evident that there is hardly any thruf to force out the walls. The enly part where this is to be guarded againt is, where the tangent is inclined about fo or 50 dearees to the horizon. Here it will be proper to make a cuurfe of firm horizontal joinings.

We doubt not but that domes of carpentry will now be raifed of great extent. The Halle du Bled at Padis of 200 feet in diameter, was the invention of an in-
telligent carpenter, the Sieur Moulineau. He was not by any means a man of fcience, buthad much more mechanical knowledge than artifans ufually have, and was convinced that a very thin thell of timber night not only be fo thaped as to be nearly in equilibrio, but that if hooped or firmily connefted horizontally, it would have all the ftiffnefs that was neceffary; and he prefented his project to the magiltracy of Paris. The grandeur of is plealed them, but they doubted of its pallibility. Be. ing a great public worl, they prevailed on the Academy of Sciences to confider it. The members, who were competent judges, were inflantly Aruck with the juftnefs of Mr Moulineau's principles, and aitonifhed that a thing fo plain had not been long familiar to eve. ry houfe-carpenter. It quickly became an univerfal topic of converfation, difpute, and cabal, in the polite circles of Paris. But the Academy having given a very favourable report of their opinion, the projea was immediately carried into execution, and foon completed, and now fands as one of the great exhibitions of Paris.

The confruction of this dome is the fimpleft thing that can be imagined. The circular ribs which compofe it confift of planks nine feet long, i 3 inches broad, and three inches thick ; and each rib conlills of three of thefe planks bolted together in fuch a manner that two joints meet. A rib is begun, for inftance, with a plank of three feet long flanding between one of fix feet and another of nine, and this is contimed to the head of it. No machinery was neceflauy for carrying up fuch fmall pieces, and the whole went up like a piece of bricklayer's work. At various diftances thefe ribs were connected horizontally by purlins and iron flraps, which made fo many hoops to the whole. When the wort had reached fuch a height, that the diftance of the ribs was two-thirds of the original diftance, every third rib was difcontinued, and the fpace was left open and glazed. When carried fo much higher that the diftance of the ribs is one-third of the original diflance, every fecond rib (now confifting of two ribs very near each other) is in like manner difcontinued, and the void is glazed. A litile above this the heads of the ribs are framed into a circular ring of timber, which forms a wide opening in the middle; orer which is a glazed canopy or umbrella, with an opening between it and the dome for allowing the heated air to get out. All who bave feen this dome fay, that it is the moft beausiful and magnificent object they have ever beheld.

The only diticulty which occurs in the conftution of wooden dumes is, when they are unequally loonled, by carrying a heayy lanthern or cupola in the midd'e. In fuch a cafe, if the dome were a mere flell, it would be cruthed in at the trop, or the action of the wind on the lanthern might tear it out of its place. Such a done mult therefore confif of trufled frames. M: Price has given a very good one in his pla:e OP, thoz much Atonger in the truties than there was amy occafion tor. This caufes a great lnis of room, and throw'sthe lights of the lanthern too far up. It is evidently copied from Sir Chriftopher Wren's dome of St Paul's chusch in London ; a model of propristy in its particular fituation, but by mo means a general mo del of a wooden dime. It refts on the brick cone within it ; and \(\operatorname{Sir}\) Chriftopher has very ingenioully made ufe of it for diffening this cone, as any intelligen:

\section*{R 00}

Rov. perfon wiol percieve by attending to its conftrustion the roof is furported and fiffened by four braces, one (Sice Prie, l'ate \(\mathrm{O}^{\text {² }}\) ).
lig. as. reprefonts a dome cxecuted in the Regifter Onfice in Edirburgh by James and Kobert Adams, and is vety agree.ble to mecharical principles. The 1 an is go feet clear, and the thicknes is only \(\psi^{?}\).
4)

Farther remaris oll Norman rouls.

W'e cannot tuhe 'eave of the fubject without taking fome notice of what we have already fpe ken of with comenendation by the rame of Norman iofs. Whe c.lled them Niryman, becaufe they were frequently excouted by thate perple foon after thei: entablifimen: in Ita'y and other parts of the fouth of Europe, and became the prevaling t.the in all the gaeat baronid caf. tles. Their architects were rivals tu the Suracens and Mones, who about that time buit many Chrifian churches; and the architesture which we now call Gothic feems to have arifen frem their joint habours.

The principle of a Norman torf is extremely fimple. The rafters all butted on juggled king. poif. AF,BG, CH, \&ic. (lig. 29.), and braces or ties were then difpofed in the intervals. In the middle of the roof HB and HD are exidently ties in a ttate of extenfion, while the pof CH is comprefled by them. Towards the walls on each fide, as between B and F, and between F and L, they are braces, and are compreffed. The ends of the polts were generally ornamented with knots of Howers, cmbolifed globes, and the like, and the whole texture of the trufs was exhibited and drelled out.

This conftrustion admits of employing very fhort timbers; and this very circumfance gives greater flrength to the trufs, becaufe the angle which the brace or tie makes with the rafter is more open. We may alio perceive that all thrul may be taken off the walls. If the pieces AF, BF, LF, be removed, all the remaining diagonal pieces act as ties, and the pieces directed to the centre aet as flruts; and it may alio be obferved, that the principle will apply equally to a flraight or that roof or to a floor. A floor fuch as abc, having the joint in two pieces \(a b, b c\), with a drut \(b d\), and two ties, will require a much greater weight to break it than if it had a continued joilt \(a c\) of the fame fantling. Ard, laflr, a piece of timber alaing as a tie is much fronger than the fame piece acting as a ftut; for in the later fituation it is exped to bending, and when bert it is much lefs :able to withitand a very great Atrdin. It muft be acknowledged, however, that this advantage is balanced by the great inferiority of the joints in point of Atrength. The joint of a tic depends wholly on the pins; for this reafon ties are never uted in heavy works without ftrapping the joints with iron. In the toofs we are now deferibing the diagonal pieces of the middle part only act purely as ties, white thofe towards the fides at as fruts or braces. Indeed they are feldom of fo very fimple conftruction as we have deferibed, and are more generally confrufted like the fketch in fig. 30. having two fets of rafters \(A B, a b\), and the angles are filled up with thin planks, which give great Aliffers and Atrength. They have alfo a double fet of pulins, which eomect the differene truffes. The ronf being thus divided into fquales, other purlins run between the middle peints \(E\) of the rafters. The rafter is fupported at E by a check put between it and the under rafter. The nitdle point of each fquare of
of which fipungs from e, and its oppofite from the fimalar patt of the adjnining trofs. The other two braees fipring from the midatie points of the lower pullins, which go horizontally from a and \(b\) to the next trut, and are fupported by phanks in the fame manner as the baters. By this contrivance the whule becomes vety tliff and frong.

We hope that the reader will not be difpleafed with conclu nur lasing taken fome notice of what was the pride of fion. our anceltors, and conftituted a great part of the finery of the grand hall, where the fidual lord affembled bis valfals and difplayed his magnificence. The intelligent mechanic will fee much to cummend ; and all who look at thele roofs admire their apparent fiimfy lightnefs, and wonder at their duration. We have feen at hall of 57 feet wide, the roof of which was in four divifi, ns, like a kirb roof, and the trulles were about 16 feet ationder. They were fingle rafters, as in fig. 30. and their dimenfions were only eight inches by lix. The roof appeared perfectly found, and had been flanding ever lince the year 1425 .

Much of what has been faid on this fubject may be applied to the conftruston of wooden bridiges and the centers for turning the arches of ttone-bridges. But the farther difculfion of this mult be the employment of another article.

ROCFING, the materials of which the roof of a houle is compofed. See the foregoing article.

ROOK, in omithology. See Corvers.
Rooks are very deftuctive of com, efpecially of wheat. They fearch out the lands where it is fown, and watching them more carefully than the owners, they perceive when the feed firtt begins to fhoot up its blade; this is the time of their feeding on it. They will not \(b=\) at the pains of fearching for it at randrm in the fown land, for that is more trouble than fo fmall a grain will requite them for: but as foon as thefe blades appear, they are by them directed, without lofs of time or pains, to the places where the grains lie ; and in three or four days time they will root up fich valt quantities, that a good crop is often thus deftroyed in embryo. Alter a few days the wheat continuing to grow, its blades appear green above ground ; and then the time of danger from thefe birds is over; for then the feeds are fo far robbed of their mealy matter, that they are of no value to that bird, and it will no longer give itfelf the trouble to deftroy them.

Wheat that is fown fo early as to thont up its green blades before the harvelt is all carried in, is in no danger from thefe birds; becaure while it is in a thate worth their fearcling for, the feattered corn in the harvell fields is eafier come at, and they feed wholly on this, negleating the fown grain. But as this cannot always be done, the farmers, to drive away thefe ravenous and mifehievous birds, dig holes in the ground and ftick up the feathers of rooks in them, and hang up dead rooks on flicks in feveral parts of the fields; but all this is of very little ufe; for the living rooks will tear up the ground about the feathers, and under the dead ones, to tleal the feeds. A much better way than cither is to tear feveral rooks to pieces, and to fcatter the piecesover the fields; but this lafts but a little while, f , r the kites and other birds of prey foon carry off the pieces and feed upon them. A gun is a good remedy

Roukt. \(\underbrace{\text { Rouk: }}\) while the perfon who has it is prefent ; but as foon as he is gone, they will return with redoubled vigour to the field and tear up every thing before them.

The beft remedy the farmer has is to watch well the time of the corn's being in the condition in which they feed upon it; and as this lafts only a few days, he fhould keep a boy in conftant pay to watch the field from day-break till the dulk of the evening. Every time they lettle upon the ground to fly over it, the boy is to holloa, and throw up a dead rook into the air: this will always make them rife; and by degrees they will be fo tired of this conftant difturbance, that they will leek out other places of preying, and will leave the ground even before the time of the corn's being unfit for them. The reafon of their rifing at the tolling up of their dead fellow-creature is, that they are a bird extromely apprenentive of danger, and they are always alarmed when one of their comrades rifes. 'They take this for the rifing of an out bird, and all fly off at the fignal.
RUOKE (Sir George), a gallant naval commander, born of an ancient and honourable family in Kent, in England, in 1650 . His merit raifed him by regular fteps to be vice-admiral of the blue: in which ttation he ferved in the battle of I: Hogue, on the 22d of May I 692 ; when it was owing to his vigorous behaviour, that the laft flroke was given on that important day, which threw the French entirely into confulion. But the next day be obiained Aill more glory; for he had orders to go into La Hogue, and burn the enemy's thips as they lay there. There were 13 large men of war, which had crowded as far up as polible; and the tranfports, tenders, and ammunition thips, were difpofed in fuch a manner that it was thought impoffible to burn them. Belides, the French camp was in fight, with all the Erench and Irifh troops that were to liave been employed in the invafion of England; and feveral batteries were raifed on the coaft, well provided with heavy artilery. The vice-admiral made the neceftary preparations for obcying his orders, but found it impollible to carry in the thips of his fquadron: he therefore ordered his light frigates to ply in clofe to the thore; and having manned out all his boats, went himfelf to give directions for the attack, burnt that very night fix threcdeck-lhips, and the next day fix more, from 76 to 60 guns, together with molt of the tranfports and ammenition veffels; and this under the fire of all the batteries juf mentioned, and in fight of all the French and Irifn troops: yet this bold astion colt Lhe lives of no more than ten nen. 'lhe vice-admiral's belaviou: on this ccealion appeared fo great to King. Wralliam, that having no opportunity at that time of promoting lins, he fettled a penfion if 10021 . per annum on lim fir life; and afterwards going to Portfmouth to view the fleet, went on brard Mr. Rooke's thip, dined with him, and then conferred on him the honour of knighthood, he having a little before made him vice-admiral of the ted.

In confequence of other fervices he whs in \(1 \mathrm{GI}_{4}\) raifed to the rank of admiral of the blue: lowards the clofe of the next year, he was admiral of the white : and was alfo appointed admiral and commander in chisf in the Viediterratacan.

Iuling King William's reign, Sir Geo-ge wastwice elefed member for Portimouth; and mpon the accef. Voz. XVI.
fion of Queen Anne in 1702, he was colflitused viceadmiral and lieutenant of the admirally of England, as alfo licutcnant of the feets and feas of the kingdom. Upnn the declaration of war againft Fiance lie was ordered to command a fleet fent againtt Cadi\%, the duke of Ormond having the commend of the land forces. On his palfage home, receiving an acccumt that the galleons, under the efcort of a ftrong lirench fquadron, were got into the habbur of Vigo, he refolved to attack thein; and on the ith of Oetober came before the harbour of Randondello, where the Fiench commander had neglected nothing necelfary for putting the place into the beft pofture of defence. But notwithltanding this, a detachment of 15 Englifh and 10 Dutch men of war, of the line of battle, with all the fire fhips, were ordered in ; the frigates and bomb-velfels followed; the great fhips moved after them, and the army landed near Rondondello. 'line whole fervice was performed under Sir George's dircEtions, with admirable conduet and beavery; for, in thort, all the flips were deftroyed or taken, prodigious damage do:se to the enemy, and valt wealh acquired by the allies. For this action Sir George received the thanks of the Houre of Commons, a day of thankfiging was appointed both by the queen and the ftates-general, and Sir George was promuted to a feat in the privy-coun. cil; yet, notwithftanding this, the Houfe of Lords refolved to inquire into his conduet at Cadiz. But he fo fully juttified himfelf, that a vote was paffed, approving his behaviour.

In the fpring of the year 1704, Sir George commanded the hips of war which conveyed King Cla, III. of Spain to Libon. In July, he attacked Gibralter; when, by the bravery of the Englifh famen, the place was taken on the 24 ih, though the town was extremely ftrong, well furnifhed with ammunition, and had 100 guns inounted, all facing the fea and the narrow paffes to the land: An action which was conceived and executed in lifs than a week; though it las fince endured fieges of many months continuance, and more than once baffled the united forces of France and Spain. This brave officer being at laft obliged, hy the prevalence of party-fpirit, to quit the fersice of his country, retired to his feat in Kent; where lic fpent the remainder of his days as a private gentleman.

He was thrice married; and by his fecond lady Mrs Luttrcll left one fon. He died January 24. 1708.9, in his 5 th year, and was buiced in Canterbury cathedral, where a monument is encofed to his memory. In his private life he was a good hulband and a kind marter, lived hofpitably towards his neighbours, and left behind him a moderate fortune; fo moderate, that when he came to make his will, it furptifed thofe who wese prefent: but Sir George afigned the reafon in a tew words," I do not leave much (iaid he), but what I leave was honeftly gotuen; it never cull a faitor a tear, or the nation a farthing."

ROOM, a chamber, farlour, or oller apartment in a houlc. See Architectese and Ventilation.

ROOT, among botanilts, denotes that part of a plant which imbibes the nerritious juies of the cathe, and tranfmits them to the other parts. See Plani atad Radix.

Colours extratied frum Roots. See Colocredilaivis, \(n^{\circ} 41\).

Root,

Rooke
Rout.

Roct,

Root, in algebra and arithmetic, denotes any number which, multiplied by itfelf once or oftener, produecs any other number; and is called the fquare, sule, ligualrate, \&c. root, according to number of multiplications. Thus, 2 is the fquare root of 4 ; the cuberoot of \(s\); the bequadrate-rvot of 16 , \&c.

ROPE, is a word too familiar to need a definition; and we needfiy no more than that it is only apphed to a confiderable collertion of twifted fibres. Smaller batids are called lines, Arings, cords; and it is not applied with great propriety even to thofe, unlefs they ate compored of fmaller things of the fame kind twitled together. Two hay bands twilted together would be called a rope. All the different kinds of this manufature, from a fifhing line or whip-cord to the cable of a firt rate thip of war, go by the general name of Cordage.

Kupes are made of every fubfance that is fufficiently fibrous, flexible, and tenacious, but chiefly of the barks of plants. The Chinefe and other orientals even make them of the ligneous parts of feveral plants, fuch as certain bamboos and reeds, the flems of the aloes, the fibrous covering of the cocod nut, the filaments of the cotton pod, and the leaves of lome grafes, fuch as the fparte (Lygeum, Lins). The aloe (Agave, Linn.) and the fiparte exceed all others in ftrength. But the barks of plants are the mont productive of ibbrous mater fit for this manufacture. Thofe of the Linden tree (Tilia), of the willow, the bramble, the nette, are frequently ufed: but hemp and flax are of all others the bell ; and of thefe the hemp is preferred, and emplojed in all cordage exceeding the lize of a line, and even in many of this denomination.

Hemp is very various in its ufeful qualities. Thefe are great Arength, and the length and finenefs of the fibre. Being a plant of very greedy growth, it fucks up much of the unaltered juices of the foil, and therefore differs greatly according to its foil, climate, and cul:ure. The befl in Earnpe comes to us through Riga, to which port it is brought from very dittant places to the fouthrward. It is known by the name of Riga rim (that is, clean) hemp. Its fitre is not the longct (at leaft in the dreifed liate in which we get it) If all others, but it is the fineft, mont flexible, and ftrongell. The next to this is fuppofed to be the Peterlburgh braak hemp. Other heinps are efleemed ne.sly in the following order:-Riga cuthot, Peterft,urgh out thrit, hemp liom Koningłourgh, Archangel, Sweden, Merrel. Chucking is a namie given to a hemp that comes from varicus places, long in the fibre, but coarte and harfh, and its frength is inferior to hemps which one would thirk weaker. Its texture is fuch, that it dees not admit fplitting with the hatchel fo as to be more completely dreffed. It is the:efore kept in its coarfe form, and ufed for inferior cordage. It is however a g. od and frong hemp, tut will not make fine work. There are doubtlefs many good hemps in the fouthern parts of Europe, but littic of them is brenght to our marker. Codilla, half clean, \&c. are porticns of the aborementioned hemps, feparnted by t!e dreffing, and may be contidered as broken libres of thofe hemps.

Only the firft qualities are manufutured for the rigging of the Britilh navy and for the thips of their Eialt India compary.

Ropemaking is an art of very great importance; and there are few that better deferve the attention of the intelligent oblerver. Hardly any art can be carried on without the affitance of the ropermaker. Cordage makes the very finews and mulcles of a thip; and every improvement which can be made in its preparation, either in refpect to Atrength or pliablenefs, mult be of inmenfe fervice to the mariner, and to the commerce and the defence of matiors.

We thall give a very floort account of the manufacture, which will not indeed fuliy inftruet the artificers, but will give fuch a vicw of the procefs as fhall enable the reader to judge, from principle, of the propriety of the different parts of the manipulation, and perceive its defcets, and the means fur removing them.

The aim of the rope-maker is to unite the flrength of a great number of fibres. This would be done in the completeft manner by laying the fibres parallel to eacla other, and fallening the bundle at the two ends: but this would be of very limited ufe, becaufe the fi. fibres. bres are fhort, not exceeding three feet and an half at an average. They muft theretore be entangled together, in fuch a manner that the ftrength of a fibre fhall not be able to draw it out from among the refl of the bundle. This is done by twifting or twining them together, which caules them motually to comprefs each other. When the fibres are fo dilpofed in a long fkain, that their ends fucceed each other along its length, withour many of them meeting in one place, and this fkain is twifted round and round, we may caufe then to comprel's each other to any degree we pleafe, and the frigion on a fibre which we aitempt to pull out may be more than its cohefion can overcome. It will therefore break. Confequently, if we pull at this twfled fktin, we will not Cep.rate it by drawing one parcel unt from among the reft, but the whole fibres will break; and if the diltribution of the fibres has been very equable, the fkain will be nearly of the fame ftrength in every part. If there is any part where many ends of fibres meet, the thain will break in that part.

We know very well that we can twitt a fkain of fibres fo very hard, that it will break with any attempt to twilt it harder. In this fate all the fibres arealready Arained to the utmof of their Atrengib. Such a fk , in of fibres can have no ltrength. It cannot carry a weight, becaufe each fibre is already ftrained in the fame manner as if loaded with as much weight as it is able to bear. What we have faid of this extreme cafe is true in a certain extent of every degree of twift that we give the fibres. Whatever force is actually exerted by a twifled fibre, in orcier that it may fulliciently comprels the rell to hinder them from being drawil out, muft be confidered as a weight hanging on that libre, and mult be deduced from its abfolute firength of cohefion, before we can eflimate the flengeth of the fkain. The thength of the ikain is the remainder of the abfoluce trength of the fibres, after we have deduced the force employed in twitting them tog-ther.

From this obfervation may be deduced a fundamental principle in rope-making, that all twilling, beyond what is neceffary for preventing the fibres from being drawn out without breaking, diminithes the ftrength of the cordage, and thould be avoided when in our power. It is of importance to keep this in mind.

5
Alcthad to beobferved in twitting the fibres.

6
Spinning of ropejarns.

It is neceffary then to twit the fibres of hemp together, in order to make a rope; but we fhould make a very bad rope if we contented ourfelves with twiting o together a buich of hemp fufficiently large to withfand the ftrains to which the rope is to be expofed. As ionn as we let it go out of our hands, it would untwilt itfelf, and be again a loofe bundle of hemp; fur the fibres are Atrained, and they are in a confiderable degree elaftic; they contrant again, and thus untwitt the rope or flain. It is neceflary to contrise the twift in fuch a manner, that the tendency to untwift in one part may af againft tle fame tendency in another and balance it. The procefs, therefore, of rope-making is more complicated.

The firt pirt of this procefs is spinning of ropeyaris. This is done in variolls ways, and with different machicery, according to the nature of the intended cordage. We thall confine our defcription to the manufacture of the larger kinds, fuch as atc uifed for the ftanding and running rigging of hips.
Defeription An alley or walk is inclofed for the purpofe, about of the ap- 200 fathoms long, and of a breadth fuited to the extent paratus and manner of uning it.
l'late

\section*{ccccall} of the manufacture. It is femetimes covered above. At the upper end of this ropewalk is fet up the fpin-ning-wheel, of a form refembling that in fig. 1 . The band of this wheel goes over feveral rollers called whirls, turning on pivots in brafs holes. The pivots at one end come through the fraine, and termi. nate in little hooks. The wheel being turned by a winch, gives motion in one diregtion to all thofe whirls. The fyinner has a bundle of dreffed hemp round his waif, with the two ends meeting before him. The hemp is laid in this bundle in the fame way that women fpread the flax on the diftaff. There is great variety in this; but the general aim is to lay the fibres in fuch a manner, that as long as the bundle latts there may be an equal number of the ends at the extremity, and that a fibre may never offer itfelf double or in a bight. The fpinner draws out a froper number of fibres, twifts them with his fingers, and having got a lufficient length detached, he fixes it to the hook of a whirl. The wheel is now turned, and the fkain is twitted, becoming what is called arope-yarn, and the fipinner walks backwards Down the rope-walk. The part already twifted draws along with it more fibres out of the bundle. The fpinner aids this with his fingers, fupplying hemp in due proportion as he walks away from the wheel, and taking care that the fibres come in equally from both fides of his bundle, and that they enter always with their ends, and net by the middls, which would double them. He thould alfo endeavour to cnter cvery fibre at the heart of the yarn. This will caufe all the fibres to mix equally in making it \(u_{p}\), and will make the work fmooth, becaufe one end of each fibre is by this means buried ameng the reft, and the other end only lies ontward; and this, in pafling through the grafp of the Spinner, whn pretles it tight with his thumb and palm, is alfo made to lie fmooth. The greateft fault that can be committed in fpinning is to allow a fmall thread to be twifted off from one fide of the hemp, and then to cover this with hemp fupplied from the ober fide: for it is evident that the fibres of the contral thread make very long fpirals, and the fkin of fibres which covers them muft be much more oblique. This covering has but litile connection with what is
below it, and will eafily be detached. But even while it remains, the yarn cannot be Atrong ; for on pulling it, the middle part, which lies the flraightef, mull bear all the ftrain, while the outer fibres, that are lying obliquely, are only drawn a little more parallel to the axis. This defect will always happen if the hemp be fupplied in a confiderable body to a yarn that is then fpinning fmall. Into whatever part of the yarn it is made to enter, it becomes a fort of loofely connceted wrapper. Such a yarn, when untwitted a little, will have the appearance of fig. 2. While a good yarn looks like fis. 3. A good fpinner therefore endeavours al. ways to linpply the hemp in the form of a thin flat okain with his lefi hand, while his right is employed in grajping firmly the yarn that is twining off, and in loolding it tight from the whirl, that it may not run into loop: or f 1 x xs .

It is evident, that both the arrangement of the fibres and the degree of twifting depend on the fill and dexterity of the fpinner, and that he mut be inftructed, not by a book, but by a malter. The degrec of twift depends on the rate of the wheel's motion, combined with the retrngrade walk of the fpinner.

We may fuppofe him arrived at the lower end of the walk, or as far as is necellary for the iutended length of his yarn. He calls out, and another spinner immediately detaches the yarn from the hook of the whirl, gives it to another, who carries it afide to the reel, and this fecond fpinner attaches his own hemp to the whirk hook. In the mean time, the firlt fpinner keeps faft hold of the end of his yarn; for the hemp, being dry, is very elaltic, and if he were to let it go out of hishand it would iaftantly untwit, and become little better than loofe hemp. He waits, therefore, till he fees the recler begin to turn the reel, and he goes flowly up the walk, keeping the yarn of an equal tightnefs all the way, till he arrives at the wheel, where he waits with his yarn in hand till another fpinner lias n̄nifhed his yarn. The frlt fpinner takes it off the whirl look, joins it to his own, that it may follow it on the reel, and begins a new yarn.

Rope-yarns, for the greateft part of the large rig. Different \({ }^{8}\) ging, are from a quarter of an inch to fomewhat more kinds of than a third of an inch in circumference, or of fuch it rope-yaras. lize that 160 fathoms weigh from \(3^{\frac{1}{2}}\) to 4 pounds when white. The different fizes of yarns are named from the number of them contained in a ftrand of a rope of three inches in circumference. Few are fo coarfe that 16 will make a ftrand of Britith cordage; 18 is not unfrequent for cable jarns, or yarns fpun from harth and coarfe hemp; 25 is, we believc, the finett fize which is worked up for the rigging of a flip. Much fiser are indeed fpun for founding lines, filhing lines, and many other matine ufes and for the other demands of foecety: Ten gond fpinners will work up above 600 weimht of hemp in a day; but this depends on the weather. In very dry weather the hemp is very elanlic, and requires great attention to make fmooth work. In the warnier climates, the fpinner is permitted to moiten the rag with which he gralps the yarn in his right hand for each yarn. Nu work can be done in an open fpinning walk in rainy weather, becaufe the yarns would not take en the tar, if immediately tarred, and would rut if l:ept on the red for a long time.

The fecond part of the procefs is the converfion of

Rupe= making.
the yans into what may with proprity be alled a rope, cord, or line. That we may have a clear conception of the principle which regulates this part of the procels, reethent of we thall begin with the limphete potlible cafe, the union conereing uf two jams into note line. This is not a very ufual the ropeyarnsinto rofes, rord, or Ahecs. fabric for rigging, but we felect it for its fimplicity.

When hensp las been fplie into very tine libres by the hatchel, it becones exceedingly tife ind pliant, and atter it has lain for fome time ia the form of fine yarn, it
may be unreeled and thrown loofe, without loling much of its twit. 'liwo luch yans may be put on the whisl of : fipinning wheel, and thrown, like fasen yarn, fos as to make lewing thread. It is in this way, indeed, that the failmaker's fewing thread is manufacored; and when it has been kept on the reel, or on balls or bobbins, for fome tince, it retairs its tuif as well as it, ufes require. But this is by no means the cale with jarns pund for great cordage. The hemp is to clafic, the number of fibecs twitted together is fo great, and the diameter of the yarn (which is a fort of lever on which the elaflicity of the fibre exerts itfelf) is fo confider. able, that no keeping will make the fibres tetain this conArained pofition. The end of a ropeyarn being thrown loofe, it will immediately unewift, and this with conliderable force and fpeed. It would, therefore, be : fruitlets attempt to twitt two fuch yans together; yet the ingenuity of man has contrived to make ufe of this rery tendency to untwit not only to counterad itfelf, but even to produce another and a permanent twift, whin requires force to undo it, and which will recoser itfelf when this force is removed. Every perfon mut recollect that, when he was twilted a packthread very hard with his fingers between his two hands, if he flachens the thread by bringing his hands nearer together, the packthread will immediately curl up, running into loops or kinks, and will even twift it felf into a neat and firm cord. l'amiliar as this fact is, it would puzale any perfou not accuftomed to the fe fubjeets to explain it with diftinonefs. We thall confider it with fome care, not as piece of mechanical curiofity, but as a fundamental prisciple in this manufacture, which will give us clear inftuctions to dired us in the mof delicate part of the whole procels. And we beg the attention of the artifts themfelves to a thing which they feem to liave -verlooked.

Let \(m, d, n d\) (ig. 4) be two yarns fixed to one point \(d\), and let both of them be iwifted, each round its own axis, in the direction \(a b c\), which will canfe the sibres to lie in a ferew ferm, as reprefented in the figure. If the end \(d\) of the yarn \(m\) were a: liberty to turn round the point \(d\), it would turn accoreingly, as often as the end \(m\) is turned round, and the yarn would ac-- puire no twill ; lut being attached to fome filid body i: cannot turn without un ing this budy. It has, however, this tendency, and the b. dy mutt be forcibly pe. vented from turning. If it be hell saft for a time, and then let go, it will be turned round, and it will not sop till it has turned :1s offon as the end \(m\) has been twiled, and row all the twit will be medone. Thus th is the tendency of the yarn \(m d\) to untwift at the end \(d\) (becaufe it is kept falt at \(m\) ), which prodices this motion of the body attached to is at \(d\). What we hove faid of the yarn \(m\) dis equally tite of the yarn \(n d\). Doth tend to turn, and will tum, the body attueded at diound the common axis, in the fame direc.
tion in which they are twifted. Let fig. 5 . be fuppoled a crols fection of the two yarns touching each other at d, and thene glued to a board. The fibres of each pull obliquely, that is, they both pull away from the board, and pull laterally. The dicetion of this lateral pull of the fibres in the circumference of each yarn is reprefented by the litile darts driwn round the circumferences. Thefe ations directly oppofe and ballance cach ather at \(d\); but in the femitircies oet, if o, they evidently confpire to turn the board round in the fame direction. Thae fame may be faid of the outer halves of any circles delcribed within thele. In the inner halves of thefe inner circles the aftions of fome fibres oppofe each other; but in every circle there are many more confpiring attions than oppoling ones, and the confpiring actions exert themelves by longer levers, fo that their joint momentum greatly exceeds that of the op\(p\) fing forces. It may be demonflated, that if all the fibres exert equal forces, the force which tends to turn the board round the common axis is \(\frac{2}{5}\) of the force employed to twift bnth the yarns.

Suppofe then that the folid body to which the yarns are attached is at liberty to turn round the common axis; it cannot do this rithont carrying the yarns round with it. They mutt, therefore, turn round each other, and thus compofe a rope or cord \(k l\), having its component yarns (now called frands) lying in a direction oppolite to that of the fibres in each ftrand. The rope will take this twift, while each of the ftrands is really untwifting, and the motion will not ftop till all is again in equilibrio. If the yarn had no diameter and no rigidity, their elatic contatation would not be batlanced till the cord had made half the number of turns which had been griven to that part of the yarn which is thus duabled up. But, as the yarns have a fenfible dianeter, the fame ultimate contraction of the fibres will be expended by the twilting of the cord in fewer turne, even if the yarns had no nigidity. The turns neceffary for this purpofe will be fo \(n \mathbf{u} h\) fewer, in proportion to the twif of the yarns, as the fibres of the yarn lie more obliquely, that is, as the yarns are more iwilted. But further, this contractile force has to overcome the rigidity or llifnefs of the varns. This requires force merely to bond it into the forew form ; and therefore, when all is again at efl , the fibres are in a flate of frain, and the rope is not fo much clofed by doubling as it would have been had the yarns been fotter. If any thing can be done to it in this ftate which will foten the yarns, it will twift iffelf more up. It has thercfore a tendency to twit more up; and it this be aided by an external force which will hend the ftrands, this will happen. Beating it with a foft mallet will have this effeef ; or, if it be forcibly twilted till the libres are allowed to contract as much as they would have done had the yarn been perfectly foft, the co:d will keep this twit withont any effort ; and this mant be confidered as its mon perfee fate, in relation to the degree of twift originally given to the yarns. It will bave motendency to tun into kinks, which is both tonublef me and dangerous, and the fibres will not be excring any ufelefs effort.
'To attain this flate flomld therefure be the aim of every part of this fecond procefs; and this principle fhrould be kept in view through the whole of it.

The compencnt parts of a ropes are called ntrands, as

Ropemaking.

Ropemaking. n

10
Difcription of che nalachinery, and monde of ufing it.
has been already obferved; and the operation of uniting them with a permanent twif is called laying or clofing, the latter term being chiefly appropriated to cables and other very large cordage.
Lines and cordage lefs than \(1 \frac{x}{2}\) inches circumference are laid at the fpinning-wheel. The workman fattens the ends of each of two orthree yarns to feparate whirl-hooks. The remote ends are united in a: knct. This is pat on one of the hooks of a fivivel called the loper, reprefented in fig. 6. and care is taken that the yarns are of equal lengths and twift. A piece of foft cord is put on the other hook of the loper ; and, being put over a pulley feveral feet from the grourd, a weight is hung on it, which ftretches the garn. When the workman fees that they are equally ftretched, he orders the whecl to beturned in the fame dircetion as when twining the yarns. This would twine them harder ; but the fwivel of the loper gives way to the Itrain, and the yarns immediately twift around each other, and form a line or cord. In doing this the yarns lofe their twift. This is reftored hy the wheel. But this fimple operation would make a very bad line, which would be flack, and would not hold its twift for, by the turning of the loper, the ftrands twilt immediately together, to a great diftance from the loper. By this turning of the loper the yarns are untwitted. The wheel retteres their twilt only to that part of the yarns that remains feparate from the others, but cannot do it in that part where they are already twined round each other, because their mutual preffure prevents the twit from id. vancing. It is, therefore, neceffary to retard this tendence to twine, by keeping the yarns apart. This is done by a little tnol called the top, reprefented in fig. 7 .

It is a truncated cone, having three or more notches along its fides, and a handle called the flaff. This is put between the Atrands, the fmall end next the loper, and it is preffed gently into the angle formed by the yarns which lie in the notches. The wheel being now turned, the yarns are more twifted, or bardened up, and their preffure on the top gives it a ftrong tendency to come out of the angle, and allo to turn round. The worknan does not allow this till he thinks the jarns fafficiently hardened. Then he yields to the prefure, and the top comes atway from the fwivel, which immediately turns round, and the line begins to lay.Gradually yielding to this prelliure, the workman flowly comes up towards the wheel, and the laying goes or, till the top is at laft clole to the whecl, and the work is done. In the mean time, the yarns are Rortened, both by the twining of each and the laying of the cord. The weight, therefore, gradually ifes. The uie of this weight is cridenty to oblige the yarn to take a proper degree of twit, and not run into kinks.

A cord or line made in this way bas always fome tendency to twift a little more. However little frition there may be in the loper, there is fome, fo that the turns which the cord has made in the laying are not enough to balance completely the elafticity of the yarns ; and the weight being appended caures the frands to be more nearly in the direstion of the axis, in the fatne manner as it would feretch and untwift a little any rope to which it is hung. On the whole, however, the twitt - f a laid line is permanent, and not like that upon thread doubled or thrown in at mill, which remains only
in confequeree of the great fofinefs and Hexibility ef the yarn.

The procefs for laying or clofing large cordage is confiderably different from this. The ftrands of which Large or the rope is compofed confint of many jarns, and re. ha:wferquire a conliderable degree of lardening. 'Ihis cannot laid corbe done by a whirl driven by a wheel-band; it requires the power of a crank turned by the hard. The frands, dage is
diffe diffterm-
ly formed. when properly hardened, become very fiff, and whern bent round the top are not able to tranfmit force enough for laying the heavy and unpliant rope which forms begond it. The elaftic twift of the hardened frards muit, therefore, be alfited by an external force. All this requires a different machinery and a different pro. cef.

At the upper end of the walk is fixed up the tackic. board, fig. 8. This confitts of it frong oaken plank called a breafl bard, having three or more holes in it, fuch as \(A, \mathrm{~B}, \mathrm{C}\), fitted with brafs or iron plater. Into thefe are put iron cranks, called heavers, which have hooks, or forclocks, and keys, on the ends of their foindles. They are placed at fuch a diffance from cach other, that the workmen do not interfere with each other while turning them rouad. 'This breaft-bnatd is fixed to the tup of ftrong pofto well fecured by flruts or braces facing the lower end of the walk. At the lower end is arother breaft-board fixed to the upright pofts of a lledge, which may be loaded with fones or other weights. Similar cranks are placed in the holes of this breat-board. The whele goes by the name of the fadge ; (fee fig. 9.) The top neceliary for clofing large cordage is too heavy to be held in the han3. It therefore has a long faff, which has a truck on the end. This refls on the ground; hut even this is not enough in laying great cables. The top mult be fupported on a carviage, as fhown in fig. 10. Where it muft lie very Ready, and need no attendance, becaufe the mafer workman has fufficient employment in attending to the manner in which the firands clofe behind the top, and in helping them by various methods. The top is, therefore, fixed to the carriage by lathing its falf to the two upright poits. A piece of foft rope, or Arap, is attached to the handle of the tep by the middle, and its two ends are brought back and wrapped feveral times tight round the rope, in the direation of its twilt, and bound down. This is fhown at W, and it greatly afo fitts the laying of the rope ty its fiiction. "lizis bats keeps the rap from flying too far from the point of uninn of the lirands, and brings the firands more regul latly into their places.

The firft nperation is ewarfig the jarns. At each end of the waik are frames called warping fr.mes, which carry a great number of reels or winches filled with rope-yann. The forman of the waik takes off a yarn ond from each, till he has made up the number necelfary for his rofe or Arand, and hrit ging the cnds together, he palfes the whole throngh an ir"n ing fixed: the top of a Rake driven i:ien the ground, and daws them through : thea a knot is tiad on the cond of the bundie, and at warkman pulls it throith this ring tial the intended leng:12 is drawn off the reels. The end is made falt at th:e botton of the walk, or at the fledoce, arid the foreman comes back along the fiain of yaris, to fre thai none are harging faske: than the ref. He

 ti．ght，he－f．ar thialo till ：c reaches the upper end， ＂hase lectur the ymas to I Icist！！，again adjutts their
 vicinl．e tis．sthe hook os a tackle，the other block of wis ch is axcit to a Limp put，callcd the sumping－pofl．The 2l：：in is wall tiwnt．．cd by tiois tack＇c，and thes feparated ine its dialienst frands．Each ol thefe is knot：ed apat it both ends．＇Tle knets at their upper ends are made tht 1 ）the l：ax．．s of the crands in the tack？e－2omd，and a．ufe at their ！ewer ends are ratened to the cranks in i．E Hedge．The a＇edge iticdf is kept in its place by a 8．teile＇，hy which the ftrands are again ftretched in heir places，and every thing adjufted，fo that the fedge diands finure on the walk，and then a proper weight is laid on it．The tackie is nor cat off，and the cranks are unmed at both ends，in the contrary direction to the twith of the yarns．（It fome kinds of cordage the cranks are turned the fame way with the finning twit）．Dy this the frands are twilted and hardened up ；and as ther contract by this operation，the fledge is dragged up the walk．When the foreman thinks the lirands fulii iently bardened，which he eftimates by the motion of the fledge，he orders the heavers at the cranks to tiop．The middie frand at the fledge is ta－ ken cff from the crank．This crank is taken out，and atronger one put in its place at D ，fig． 9 ．The other ftrands are taken off from their cranks，and all are join－ ed on the hook which is now in the middle hole．The rop is then placed between the ftrands，and，being preff－ ed home to the point of their union，the carriage is placed under it，and it is firmly fixed down．Some weight is taken of the fledge．The heavers now begin to turn at both ends．Thofe at the tackle－board con－ tinne to turn as they did before；but the heavers at the nedge turn in the eppofite direftion to their former mo－ iinn，to that the cranks at both ends are now turning une way．By the motion of the fledge crank the top is forced away from the knot，and the rope begins to clole．The heaving at the upper end reftores to the tirand the twif which they are confantly lofing by the jaying of the rope．The workmen judge of this by making a chalk matk on intermediate points of the flrands，where they lie on the fakes which are fet up along the walk for their fupport．If the twill of the firands is diminillied by the motion of clofing，they will lengthen，and the chalk mark will move away from she tackle－board：but if the twift increafes by turning the cranks at the tackle－board，the frands will fhorten， and the matk will come nearer to it．

As the clofing of the rope adrances，the whole theriens，and the il dge i，dragged up the walk．The top moves falter，and at lat realies the upper end of the walk，the rope being now laid．In the mean time， the fledge has me ved feveral fathoms from the place where it was when the luing began．

Thefe m．tions of the fledge and top muft be exactly adjufied to cach oiter．The rope mult be of a certain langth．Therefore the Redge muft ifop at a certain place．At at mornent the rope th uld be latd；that is，the top thoull be at the＇ackle－board．In this con filts the addrefs of the foreman．He has his attention directed both diys．He looks it the frunds，and when hefees any of them langing flacker between the fakes than the ethers，he calls to the heavers at the tackle－
board to heave more nipon that frand．He finds it more diftienlt to regulate the motion of the top．It re－ quires a conliderable force ro keep it in the angle of the fromds，and it is always difpofed to fart forward．To prevent or check this，lonie Araps of liff rope are brought roond the fatif of the top，and then wrapped feveral times round the rope behind the top，and kept firmly down by a lanyard or bandage，as is thown in the figure．This boih holds back the top and greatly affilts the laying of the rope，caufing the ftrands to fall into their phaces，and keep clole to cach other．This is fometimes very difficult，cfpecialiy in ropes compofed of more than three flrands．It will greatly improve the laying the rope，if the top have a tharp，fmooth， tapering pin of hard wood，pointed at the end，project－ ing fo far from the middle of its fmaller end，that it gets in between the ftrands which are clofing．This fupports them，and makes their clofing mure gracual and regular．The top，its notches，the pin，and the warp or Arap，which is lipped round the rope，are all fmeared with greafe or foap，to alfin the clofing．The foreman judges of the progrefs of clofing chiehy by his acquantance with the wolk，knowing that when the fledge is abreaft of a certain take the top fhould be abreat of a certain other fake．When be finds the top too far down the walk，he flackens the motion at the tackle－board，and malles the men turn brikly at the fledge．By this the top is forced up the walk，and the laying of the rope accelerates，while the Redge remains in the fame place，becaufe the ftrands are lofing their rwit，and are lengthening，while the clofed rope is fhortening．When，on the other hand，he thinks the top ton far advanced，and fears that it will be at the head of the walk before the fledge has got to its proper place，he makes the men heave brifkly on the ftrands， and the heavers at the fledge crank to work foftly．－ This quickens the motion of the fledge by fhortening the firands；and by thus compenfating what has been overdone，the fledge and top come to their places at once，and the work appears to anfwer the intention．

But this is a bad manner of proceeding．It is evi－ dent，that if the ftrands be kept to one degree of hard． nefs thronghout，and the heaving at the fledge be uni－ formly continued，the rope will be uniform．It may be a little longer or thorter than was intended，and the laying may be too hard in proportion to the twift of the ftrands，in which cafe it will not keep it ；or it may be too flack，and the rope will tend to twift more．Ei－ ther of thefe fitults are difcoverable by flackening the rope before it come off the hooks，and it may then be corrected．But if the error in one place be compenfated by that in another，this wall not be eafily feen before taking off the hooks；and if it is a large and niff rope， it wih hardly ever come to an equable fate in its differ－ eut parts，but will be apt to run into loops during fervice．

It is，therefore，of importance to preferve the uni－ formity throughout the whole．Mr Dut Hamel，in his great work on rope－making，propofes a method which is very exad，but requires an apparatus which is cum－ berfome，and which would be much in the way of the workmen．We think that the following method would be extremely eafy，embartafs no one，and is perlectly exact．Huvine determined the proportion berthod relocity of the top and fedge，lat the diameter of the \＆e．
truck

Rope- truck of the top carriage be to that of another truck making.
fixed to the fledge, in the proportion of the velocity of
the top to that of the fledge. Let a mark be made on the rim of each; let the man at the fledge make a fig. nal every time that the mark on the fledge truck is uppermoft. The mark on the carriage truck fhould be uppermoft at the fame infant; and in this way the foreman knows the ftate of the rope at all times with. out quitting his fation. Thus, in making a cable of 120 fathoms, it is ufual to warp the yarns 180 fathoms, and to harden them up to 140 before cloling. Thercfore, in the cloling, the top mut move to fathoms, and the fledge only 20 . The diameter of the carriagc truck fhould therefore be feven times the diameter of the fledge truck.

We have hitherto proceeded on the fuppofition, that the twift produced by the cranks is propagated frecly along the ftrands and along the clofing rope. But this is not the cafe. It is almoft unavoidable that the twift is greater in the neighbourhood of the crank which producesit. The ftrands are frequently of very conliderable weight, and lie heavy on the ftakes. Force is therefore necelfary to overcome their friction, and it is only the overplus that is propagated berond the fake. It is proper to lift them up from time to time, and let them fall down again, as the fawer does with his marking line. This helps the twit to run along the ftrand. But this is not enough for the clofed rope, which is of much greater weight, and much fiffer.When the top approaches the tackle-board, the heaving at the fledge could not caufc the ftrands immediately behind the top to clofe well, without having previoully produced an extravagant degree of twift in the intermediate rope. The effor of the crank muft therefore be affifted by men fta:ioned along the rope, each furnifhed with a tool called a woolder. This is a ftont oak flick about three feet long, havirg a ftrap of foft ropeyarn or cordage faftened on its middle or end. The flrap is wrapped round the laid rope, and the workman works with the ltick as a lever, twiting the rope round in the direction of the crank's mintion. The wonlders fhould keep their eye on the men at the crank, and make their motion correfpond with his. Thus they fend forward the wift produced by the crank, withont either increaling or diminifhing it, in that part of the rope which lies between them and the fledge.

It is ufual betore taking the rope from the hooks to heave a while at the fledge end, in order to harden the rope a little. They do thisfo as to take it up abont \(\frac{8}{60}\). The nropriety or impropriety of this pratice depends entirely on the proportion which has been previounly oblerved between the hardening of the ftrands and the twifting of the clofing rope. It is, in all cafes, better to adjuft thefe precifcly, and then nothing remains to be done when the top has arrived at the upper end of the walk. The making of two ftrand and three flrand line printed out the principle which thould be attended to in this cafe ; namely, that the twitt given :o the rope in laying flould be precifely what a perfectly foft rope iwnuld give to itfelf. We do not fee any reafon for thinking that the proportion between the number of turns given to the frands and the number of turns given to the laid line by its own elafticity, will vary by any difference of diameter. We would therefore recommend to the artifts to feitle this proportion

ROP
by experiment. The line fhould be made oi the finelt, fmalleft, and fofteft threads or yarn. Thefe thould be made into ftrands, and the frands fhould be hardened up in the direction contrary to the fpinning ewiff. The rope foould then be laid, hanging perpendicularly, with a fmall weight on the top to keep it down, and : very fmall weight at the end of the rope. The number of turns given to the ftrands Thriuld be carefully noticed, and the number of turns which the rope takes of itfelf in clofing. The weight fhould then be taken off, and the rope will make a few turns moe. 'I'his Whole number will never exceed what is neceffary for the equilibrium ; and we imagine it will not fall much fhort of it . We are clearly of rpinion an exact adjultment of this particular will tend greatly to improve the art of rope-making, and that experiments on good principles for afcertaining this proportion would be highly valuable, becaufe there is no point abnut which the artifts themfelres differ more in their opinions and prafice.

The cordage, of which we have been deferibing the ivole \({ }^{15}\) manufacture, is faid to be HawsER-iAID. It is not making uncommon to make ropes of four firands. Thefe are faroud-laid ufed for throuds, and this cordage is therefore called cordage SHROUD-LAID cordage. A rope of the fame fize and weight mu? be fmoother when it has four flrands, becaule the ftrands are fmaller: but it is more difficult to lay clofe. When three cylindrical firands are fimply laid together, they leave a vacuity at the axis amounting to \(\frac{1}{2}\) of the fection of a fland. I'his is to be filleal up by comprefling the ftrands by twifting them. Each muft fill up \(\frac{3}{3}\) of it by changing its thape; and \(\frac{1}{2}\) of this change is made on each fide of the ftrand. The greateft change of thape therefore made on any nne part of a ftrand amounts only to \(\frac{1}{6} 8\) of the fection ef the ftrand. The vacuity between four cylinders is \({ }^{\frac{1}{T}}\) of one of them. This being divided into eight parts, is \(\frac{\pi}{2} \frac{2}{2}\) of a ftrand, and is the greateft comprellion which any part of it has to undergn This is nearly five times greater than the former, and mult be more diflicult to produce. Indeed it may be feen by lo king at the figures 11. and 12, that it will be ealier to comprefs a flrand into the obtule angle of 120 degrees than intu the right angle of 90 ; and without realoning more about the matter, it appeas that the dificulty will increafe with the number of frands. Six flrands muft touch each other, ard form an arch leaving a hollow in the middle, into which one of the 知 ands will חip, and then the reit wil] mot completcly furround it. Such a rope would be meven on the furface. It would be weak; becanice the central !trand womd be flack in comparifon of the rett, and would not be escrting its whole force when they are juft ready to breat. We fee then that a four frand rope muft be nuore difficult to lay well than a hawfer-haid repe. With care, bow. ever, they nayy be laid well and clofe, and ate nuch ufed in the Brithlh navy.

Ropes are made of four Atrands, with a heart or And with Arand in the middle. 'lhis gives no addition I frengeth, a he. st int for the reafon juft now given. Itsonly ufe is to make the: midule the wosl: better and more eafy, and to fuproit all the firands at the fame diftance from the axis of the rope. This is of great confequence; bccaufe when they are at unequal diflances from the axis, fome mutt be more Anging than others, and they will nut -chit alike. This

 61 s＇a＇n \(\quad\) lo \(n\) bewil ！ong uled and baccme unfervicenble， and in \(\because: 211\) ol cu：，tlee heart is always found cut and
 as 1.0 onds：Whic：the repe is violently Itrainca，it thetales grea：；becabic ：lye Aramds furround de axis
 muic pabiltel io the suis．But the heart has not the －blithiry of parts，and cannot lletels fo much ；at the 1 1n：c time，its y．110：s are firmly grafped by the hard fionds wisich furround them；they nuft therefore be twra i．alo thort pieces．

The frocefs fiom laying a rope with a heart is not very diterent from that already defcribed．The top Ito a hele pierces through it，in the direation of the ax＇s．＇The fain or flamd in ended for the heart paffes through this laole，and is faretched along the walk．A bey atocnd it，holding it tight as it is taken into the clcting rope．But a little attention to what has been hiid will thow this method to be defective．The wac＇：will have no more turns than the laid rope；and als it lies in the very axis，its yarns will be much tiraighter than the frands．Therefore when the rope is I：ained and Itretched，the wick camnot ftretch as much as the laid ftrands；and being himly grafped by them，it muft break into fhort pieces，and the frands， having left their fupport in thofe places，will fink in， and the cordage grow love．We thould endeavour to in nble all to fretch alike．The wick therefore thould be twifted in the fame manner as the llrands，perhaps ceen a litele more．It will thus communicate part of its terength to the rope．Indeed it will not be fo uni－ wormly folid，and may chance to have three firal va－ uite：．But that this does no harm，is quite evident from the fuperior ftrength of cable－laid cordage，to be defuribeiprefently，which have the fame vacuities．In thes wiy are the main and fore ftays made for thips of the line．They are thought Etunger than hatwer－ 1．id ropes，but unfit for running rigging ；becanfe their Atrands are apt to get out of then phaces when the rope is drawn into loops．It is alio thought that the derit retans water，rets，and communicates its putre－ f．iction to the furrounding frands．

Such is the general and cffential procels of rope－ma－ bing．The fibres of hemp are twifted into yarns，that they anay mane a line of any length，and ttick among aach other with a force equal to their own cohefion． ＂lin：yartis are made into cords of permanent twit by layins them；and，that we may have a rope of any de－ ：rec of trength，many yans are united in onc Itrand， for the func reaton that many fibres were united in one yorn ；and in the courf：or this procefs it is in our jower to give the rope a folidity and hardnafs which makes it lels penetrable by water，which would rot it in athort u！nice Some nt thefe purperes are incondifent －with others：and the fkill of a rope－mater lies in ma－ dills tit：belt compowtition ；fo lhat the rupe may on the whele be the beft in peint of ilrength，pliancy，and duation，that the quantity of hemp in it can pro－ ducc．
＇Lliere is anoll er frecies of cordige in very generai wie．A rope of two or more ftrands maty be ufed as it tland，in order to compole a ftill larger rope；and in this manner are cables and other ground tackle cem．
monly made：for this reafon fuch cordage is callod Catile－Lald cordage．

The proceds of cable－laying hardly differs from that of hawfer－laying．＇Three ropes，in their ftate of per－ manent twif，may be twitted toge：her ；but they will not hold it，like fine thread，becaule they are Itit and elatic．They matt therefore be treated like ftrands for a hawfer．We mult give them an addioional ewift， which：will difpofe them to lay or clofe thenfelves；and this difpofition mutt be aided by the workmen at the fledge．We bay the twift thould be an addition to their twift as a rope．A twit in the oppofite direction will indeed give them a difpofition to chebebeind the top ； but this will be very linall，and the ropes（now ftrands） will be exceedingly open，and will become more open in laying．The twift is therefore given in the direc－ tion of their twitt as a rope，or oppolite to that of the primary drands，of which the ropes are compofed． Thefe primary atrands are therefore partly untwitted in cable laying a rope，in the fame manner as the yarns are untwited in the ufual procefs of rope－making．

We need not infit farther on this part of the manu． facture．The reader mult be fentible that the hawfers intended for llrands of a cable mutt rot be fo much twifted as thofe intended to remain hawfers；for the twitt given to a finifhed hawfer is prefumed to be that which renders it molt perfect，and it mult be injured by any addition．The precife proportion，and the diftri－ bution of the working up between the hardening of the ftrands and clofing the cable，is a fubject about which the artilts are no better agreed than in the cafe of haw－ fer－laid cordage．We did not enter on this fubjert while defcribing the procels，becaufe the introduction of reafonings and principles would have hurt the lim－ plicity of the deicription．The reader being now ac－ quainted with the different paris of the manipulation， and knowing what can be done on any occalion，will now be able to judge of the propriety of the whole， when he learns the principle on which the ftrength of a rope depends．

We have already faid，that a rope－yarn thould be Mode of twifted till a fibre will break rather than be pulled out entimating from anong the reft，and that all twifting beyond this is the injurious to the ftrength of the yarn：And we advanced this maxim upon this plain confideration，that it is need－ lefs to bind them clofer together，for they will already break rather than come out；and becaufe this clofer binding is produced only by forcibly wrapping the out－ er fibres round the inner，and drawing the onter ones tight．＇Ihus thefe fibres are on the ltreich，and are ftratied as if a weight were hung on cach of them． ＇Ilre proces of laying lines，of a permanent twit，fhows that we mult do a little more．We mut give the yarn a degree of elattic contractility，which will make it lay itfelf and form a line or cord which will retain its twit． ＇llas mutt leave the libres of the yarns in a tlate of greater compreffon than is neceffary for jult leeping them together．But more than this feems to be need－ lefs and hurtul．The fame maxim mult diret us in forming a rope conliltinf of frands，containing more than ene yarn．A needlefs exeefs of twitt leaves them， ftrained，and lefs able to perform their office in the rops．

It not unfrequently happens，that the workman，in order to make his ropa folid and firm，hardens up

Repre making．

Rote makine.
the frands till they really break : and we belicve that in the general practice of making large hawiers, many of the outer yann in the frands, cipecially thofe which chance to be outermoll in the laid rope, and ate therefore moit thained, are broken during the operation.

But there is another confideration which fhould alfo make us give no greater twill in arif part of the oferatiun than is abfolutely neccifay for the firm conefion of the parts, and this independent of the firain to which the fibres or yarns are finbjected. Twifting caules all the fibres so lie obliquel; with refpeit to the axis or seneral direction of the rope. It may jult happen that ore Elore or a ye yarn thall heep in the axis, and remain ftraight; all the reit mult be oblique, and the more oblique as they are farther from the axis, and as they are more twifted. Now it is to be demmollrated, that when any ferain is given to the rope in the direction of its length, a ltrain greater than this is actually excited on the oblique fibres, and fo much the greater as they are more cbiique; and thus the fibres which are already the weakeft are expofed to the greatef ftrains.

Let CF (fig. 13.) reprefent a fibre hanging from a hook, and loaded with a weight \(F\), which it is jult able to bcar, but not more. This weinht may reprefent the abfolute force of the fibre. Let fuch another fibre be laid over the two pulleys A, B (fig. 14.), which are in a horizontal line \(A B\), and let weights \(F\) and \(f\), equal to the former, be hung on the ends of this filure, while another weight \(R\), lels than the fum of \(F\) and \(f\), is hung on the middle point \(C\) by a hank or thread. This weight will draw down the filure into fuch a pofition \(A C B\), that the three weights \(F, R\), and \(f\), are in equilibrio by the intervention of the fibre. We affirm that this weight \(R\) is the medure of the relative flrength of the fibre in relation to the form \(A C B\); for the fibre is equally ftretched in all its parts, and therefore in eve:y part it is frained by the force \(F\). If therefore the weights \(F\) and \(f\) are held falt, and any addition is made to the weight \(R\), the fibre muft break, being already flrained to its full Arength; therefore \(R\) meafures its ftrength in relation to its fituation. Complete the parallelogram ACBD , and draw the diagonal CD ; becaufe AB is horizontal, and \(\mathrm{AC}=\mathrm{BC}, \mathrm{DC}\) is vertical, and coincides with the directirn CR , by which the weight R acts. The point \(C\) is drawn by three forces, which are in equilibrio. They are thesefore proportional to the fides of a triangle, which have the fame directions; or, the force asting in the direction CA is to that acting in the direstion CR as CA to CD . The point R is fupported by the two forces \(\mathrm{CA}, \mathrm{CB}\), which are equivalent in CD ; and therefore the weight \(F\) is to the weight \(R\) as \(C A\) is to \(C D\). Therefore the ablolute ftrengths of the two fibres \(A C, B C\), taken feparately, are greater than their united ftrengths in relation to their pufiti in with refped to CR: and fince this proportion romains the fime, whatever equal weights are hung on at \(F\) and \(f\), it follows, that when any flrain \(D C\) is made to at on this fibre in the direction \(D C\), it excites a greater flrain on the fibre, becanfe \(C A\) and \(C B\) taken together are greater than CD. Each fibre futains a Itrain greater than the half of CD.

Now let the weight \(R\) be turned round the axis CR. This will caufe the two purts of the fibre ACD to lap round each other, and compofe a twilled line or cord Yo: XV1.
\(C R\), as in \(\mathfrak{h}_{1}=1\), and the parall=logram \(A C B D\) :ill remain of the fime fo: \(m\), by the y eld ng of the we ghts Fand \(f\) as it is evident from the enuil brium nef ice:
The fibre will always athme that finm whith mokes the fides and diagonal in the propertion of the weights. While the fiberes lap round each other, they are lisaiacd to the fume degres, that is, th the full extent of their frength, and they remain in this degrec of Arais in every purt of the li:e or cord CR. If therefore each of the fibies has the deength AD, the cord lias the Arength DC; and if F and \(f\) be held fatt, the fmallett addition to \(R\) will break the cord. The fum of the abfolute firength of the two fibres of which this thread is enmpofed is to the fum of their relative ftrengths, or to the frength of the tinead, as \(A C+C B\) is to CD , or \(25 A C\) is to EC.

If the weights \(F\) and \(f\) are not held faft, but allowed to yicld, a heilwier weight \(r\) may be bung on at \(C\) without breaking the fibre; for it will draw it into another poftion A c B. fuch that \(r\) Mall be in equilibrio with \(F\) and \(f\). Since \(F\) and \(f\) remain the fame, the fibre is as much Arained as before. Therefore make \(c a, c b\) equal to \(C A\) and \(C B\), and complete the parallelogram acbd. \(c d\) will now be a meafure of the weight \(r\), becaute it is the equivalent of \(c a\) and \(c b\). It is cvident that \(c d\) is gicater than CD, and therefore the thread formed by the lapping of the fibre in the pofition \(a c b\) is fronger than the former, in the proportion of \(c d\) to CD , or ce to CE. The cord is therefore fo much ftronger as the fibres are more parallel to the axis, and it mull be ftrorgeft of all when they are quite parallel. Bring the pulleys \(\mathrm{A}, \mathrm{B}\) clofe to each other. It is plain that if we hang on a weight \(R\) lefs than the fum of \(F\) and \(f\), it cannot take down the bight of the fibre; but if eq̧ual to them, althourh it cannot pull it down, it will keep it down. In this cafe, when the fibres are parallel to each other, the Arength of the cord (improperly fo called) is equal to the united abfolute ferengths of the fibres.

It is cafy to fee that the length of each of the fibres which compore any part CR of this cord is to the length of the part of the cord as AC to EC; and this is the cafe even althoutgh they fhould lap round a cylinder of any diamcter. This will appear very clearly to any perfon who confiders the thing with attention. Let ac (fig. I 6.) be an indefinitely fmall portion of the fibre which is lapped obliquely round the cylinder, and let HKKG be a festion perpendicular to the axis. Draw a e parallel to the axis, and draw e \(c\) to the centre of the circle HKG, and \(a c^{\prime}\) parallel te ecc. It is plain that \(e^{\prime} c\) is the length of the axis corvesponding to the fmall portion a \(c\), and that \(e^{\prime} c\) is equal to a e.

Herce we derive another manner of expreffing the ratlo of the abfolure and relative frength ; and we inay fay that the abfolute Atength of a fibre, which has the fame oblquity throughout, is to its relative frength as the leng:h of the fibre to the length of the cord of which it makes a part. And we muy fay, that the frength of a rope is to the united abfolute Atrength of its yarns as the length of the cord to the lencth of the garns; for althongh the yarns are in various fates o! obliquity, they contribute to the ftrength of the corc in as mush as they contribute immediatcly th the flrength of the ftrands. The lirength of the yarns is to that of the Arands as the length of the yarms to that of the \(3 Q\)

Atrands,

Effed of twitting on the Atrength of rupes, \&c.
firmels, and the firength of the frands is to that of the rope as the length of the firll to that of the laft.
And thus we fee that twifting the fibres diminiflacs the Arength of the aftemblage ; becaufe their obliquity, which is its neceflary confequence, enables any exter nal force to excite a greate: ftrain on the fibres than it could have excited had they remained paraltel; and tince a greater degree of twifting necelfarily produces a greater cbliquity of the fibres, it muft more renarkahly diminith the frength of the cord. Marenver, fince the greater obliquity cannot be produced without a greater ftrain in the operation of twifting, it follows, that immoderate twifting is doubly peejudicial to the ftrength of cordage.
Thefe theoretical deductions are abundantly confirmed by experiment; and as many perfons give their afo fent more readily to a general propofition when prefented as an induction from unesceptionable particulars, than when offered as the confcquence of ancontroverted principles, we fhall mention fome of the experiments which have been made on this fubject. Mr Reaumur, - one of the moft zealous, and at the fame time judicious, obfervers of nature made the following experiments. (Mem. Acad. Paris, 171 I.)
1. A thread, confifting of 832 fibres of filk, each of which carried at a medium i dram and 18 grains, would hardly fupport \(5^{\frac{1}{2}}\) pounds, and fometimes broke with 5 pounds. The fum of the abfolute ftrengths of the fibres is 10.40 drams, or upwards of 8 pounds 2 cun. ces.
2. A fkain of white thread was cxamined in many places. Every part of it hore \(9 \frac{1}{2}\) pounds, but none of it would bear 30 . When twifted flack into a cord of 2 yarns it broke with 16 pounds.
3. Three threads were twilted together. Their mean Arength was very nearly 8 pounds. It broke with \(17 \frac{1}{2}\), whereas it thould have carricd 24.
4. Four threads were twilted. Their mean flrength was \(7 \frac{1}{2}\). lo broke with \(21 \frac{1}{2}\) inftead of 30 . Four threads, whofe itrength was nearly 9 pounds, broke with 22 inflead of 3 .
5. A fmall and very well made hempen cord broke in different places with \(58,63,67,7^{2}\) pounds. Anwher part of it was untwifted into its three frands. One of them bore \(29 \frac{1}{2}\), another \(33 \frac{1}{2}\), and the third 35 ; therefore the fum of their abfolute ferengths was 98. In another part which broke with \(7^{2}\), the frands which had already borne this flrain were feparated. tions. Each of thefe had a fathom cut off, and it was carefully opened out. It was white, or untarred, and contained 72 yarns. They were each tried feparately, and their mean Atrength was \(n 0\) pounds. Each correfponding piece of rope was tried apart, and the mean ftrength of the nine pieces was 4552 pounds. But 90 times 72 is 6480 .

Nothing is more fumiliarly kunwn to a feaman than the fuperior Atrenght of rope-yarns made up into a fkain without twitting. They call fuch a piece of supe a Salvage. It is ufed on hard the king's fhips for rolling tackles, flinging the great guns, butt-flings, nippers for holding the viol on the cable, and in every
fervice whore the ntmon Arength and great pliancy are wanted.

It is therefore fufficiently eftabliftied, both by theory and obfervation, that the twifting of cordage diminifhes its Atrength. Experiments cannot be made with fufficient precifion for determining whether this diminution is in the very proportion, relative to the obliquity of the fibres, which theory points out. In a hawfer the yarns lie in a great variety of angles with the axis. The very outermoft yarn of a fland is not much inclined to the axis of the rope: for the inclination of this yarn to the axis of its own frand nearly compenfates for the inclination of the frand. But then the oppofite yarn of the fame Itrand, the yarn that is next the axis of the rope lies with an obliquity, which is the fum of the obliquities of the frand and of the yarn. So that all the yarns which are really in the axis of the rope are exceedingly oblique, and, in general, the infide of the rope has its yarns more oblique than the outfide. But in a laid rope we fhould not confider the firength as made up of the ftrengths of the yarns; it is made up of the ftrengths of the flrands: For when the rope is violently ftretched, it untwifts as a rope, and the flrands are a little more twilled; fo that they are refifting as Itrands, and not as yarns. Indeed, when we confider the procefs of laying the rope, we fee that it mult be fo. We know, from what has been already faid, that the three ftrands would carry more when parallel than when twifted into a rope, although the yarns would then be much more oblique to the axis. The chief attention therefore fhould be turned to the making the molt perfect ftrands.

We are fully authorifed to fay that the twif given to cordage thould be as moderate as poffible. We are certain that it diminifhes the flength, and that the appearance of Atrength which its fuperior fimonthnets and hardnefs gives is fallacions. But a certain degree of this is neceffary for its duration. If the rope is laid ton flack, its parts are apt to open when it happens to be catched in thort loops at its going into a pulley, \&c. in which cutie fome of the ftrands or yarns are apt to kink and break. It alfo becomes ton pervious to water, which foaks and rots it. To prevent thefe and nther fuch inconveniences, a confiderable degree of firmnefs or hardnefs is neceflary; and in order to give the cordage this appearance of fuperior flrength, the manufactures is difpofed to exceed.

Mr Du Hamel made many experiments in the royal Experi-dnck-yards in France, with a view to afcertain what is ments of the beft degree of twif. It is ufual to work up the Du Hamel yarns to \(\frac{2}{5}\) of their length. Mr Du Hamel thought to afrerthis tno much, and procured fome to be worked up then degree only to \(\frac{3}{3}\) of their length of the yarns. The ftrength of twitt, of the firft, by a mean of thiee experiments, was 4321 , ※s. and that of the latt was 5187.

He caufed three ropes to be made from the fame hemp, fpun with all polible equability, and in fuch proportion of yarn that a fathom of each was of the fume weight. The rope which was worked up to \(\frac{2}{3}\) bore \(400^{8}\) pounds; that which was worked up to \(0 \frac{3}{4}\) bore 4850 ; and the one worked up to \(\frac{4}{5}\) bore 6205 . In another trial the frengths were 4250,6753 , and 7397. Thcfe ropes were of diferent fizes.

He had influence enough, in confequence of thefe experiments, to get a confiderable quantity of rigging

Rope-
making.

Anpe- made of yarns workce up only to \(\frac{3}{4}\) of their length, making. and had them ufed during a whole campaign. The officers of the fhips reported that this curdage was about \(\frac{7}{7}\) lighter than the ordinary kind; usarly \(\frac{1}{8}\) Ilendet er, fo as to give lefs hold to the wind, was hicrefore more fupple and pliant, and run eafier through the blocks, and did not run into kinks; that it required fewer hands to work it, in the proportion of two to three ; and that it was at leaf \(\frac{\frac{2}{4}}{4}\) tronger. And they faid that it did not appear to have fuffered more by ufing than the ordinary curdage, and was fit for another campaign.

Mr Du Hamel alfu made experiments on other fa. brics of cordage, which made all twifting unnecelfary fuch as fimply laying the yarn in Rains, and then cover. ing it with a worming of fmall line. This he found greatly fuperior in ftıength, but it had no duration, becaufe the covering opened in every fhort bending, and was foon fretted off. He allo covered them with a woven coat in the manner pratifed for houfe-furniture. But this could not be put on with fufficient tightnels, without an enormous expence, after the mann-t of a horfe-whip. Small ropes were woven folid, and were prodigioufly flrong. But all thefe fabrics were found ton foft and \(f^{e}\) vious to water, and were foon rendered nnterviceable. The ordinary procefs of ropemaking therefore mult be adhered to; and we mult endeavour to improve it by diminifhing the twift as far as is compatible with the neceffary folidity.

In purfuance of this principle, it is furely advifable to lay flack all fuch cordage as is ufed for fianding rigging, and is never expofed to fhort berdings. Shrouds, flays, backftays, pendants, are in this fituation, and can eafily be detended from the water by tarring, ferving, sec.

The fame principle alfo directs us to make fuch cordage of four ftrands. When the ftrands are equally hardened, and when the degree of twilt given in the laying is precifely that which is correfpondent to the twift of the ftrands, it is demonitrable that the ftrands are lying lefs obliquely to the axis in the four-ftrand cordage, and fhould therefore exert greater force. And experience fully confirms this. Mr Du Hamel caufed two very fmall hawfers to be made, in which the ftrands were equally hardened. One of them had three ftrands, and the other fix with a heart. They were worked up to the fame degree. The firt broke with 865 pounds, and the other with 1325. Several comparifons were made, with the fame precautions, between cordage of three and of four ftrands, and in them all the fourfland cordage was found greatly fuperior; and it appeared that a heart judicioully put in not only made the work eafier and more perfect to the eye, but alfo increated the llrength of the cordage.

It is furely inreatonable to refufe credit to fuch a uniform courfe of experiment, in which there is no motive for impolition, and which is agreeable to every clear notion that we can form on this complicated fubject ; and it argues a confiderable prefumption in the profclional artifts to oppofe the vague notions which they have of the matter to the calm reflections, and minute examination of every particular, by a man of good underftanding, who had no intereft in milleading them.

The fame principles will explain the fuperiority of
cable-laid cordage. The general aim in rope-naking is to rake every yarn bear an equal thare of the gerocral firatin, and to put every yarn in a cundition to bear it. But if this cannot be done, the nest thing atined at is, to put the yarns in fuch fituaions that the flrains to which they arce expoled in the ofe of the rope may be proportioned to their ability to bear it. Eisuthis poimt cannot be attained, and we muf conteat ourtelves with an appioach towards it.

The gicatell difficulty is to place the yarns of alarge Arand agreeably to thofe maxins. Suppoling thern placed wih perfect segularity round the y..rn which is in the midulle : they will lie in the circumferences of concenuric circles. When this whole nuf, is turned equally round this yarn as an axi-, it is plain chat they will all keep their places, and that the middle yarn is fimply twifed round its axis, rhile thofe of the fur: rounding circles are lapped round it in fpirals, and that thefe firals are fo much more oblique as the yarns are farther fiom the axis. Suppofe the fledge kept faft, fo that the flrand is not allowed to thorten. The yarns mult all be ftretched, and therefore flrained; ard thofe nult be the molt extended which are tlie farthelt from the middle yarn. Now allow the nledge to approach. The frand contracts in its general lengeh, and thofe yarns contraf molt which were moft extended. The remaining extenfion is therefore diminithed int all; but ftill thofe which are moft remote from the midule are moft extended, and therefore moft ftrained, and have the fmallelt remainder of their abfolute force. Unfortunately they are put into the molt unfavourable fituations, and thofe which are already moft flained are left the molt oblique, and have the greateft ftain laid on them by any external force. But this is una. voidable: Their greateft hurt is the ftrains they fuftain in the manufacture. When the Atrand is very large, as in a nine-inch hawfer, it is almont impoffible to bring the whole to a proper firmnets for laying with. out flraining the outer yarns to the utmon, and many of them are broken in the operation.

The reader will remember that a two-ftrand line was in laying laid or clofed merely by allowing it to twift itfelf up at large rope, the fwivel of the loper; and that it was the elalticity the frands arifing from the twilt of the yarn which produced this effect: and he would probably be furprifed when we faid, that, in laying 3 larger rope, the ftrands are twifted in a direclion oppofite to that of the fpinning. Since the tendency to clufe into a rope is nothing but the tendency of the Aransis to untwill, it would feem natural to twitt the ftrands as the yarns were twitted betore. This would be true, if the elafticity of the fibres in a yarn produced the fame tendency to untwif in the Itrand that it does in the yarn. But this is not the cafe. The contration of one of the outer yarns of a frand tends to pull the ftrand backward round the axis of the ftrand: but the contraction of a fibre of this yarn tends to turn the yarn round its own axis, and not round the axis of the ftrand. It tends to untwift the yarn, but not to antwift the Itrand. It tends to untwift the ftrand only fo far as it tends to contraét the yarn. Let us fuppofe the garn to be fpun up to onc-half the length of the fibres. The contracting power of this yarn will be only one.half of the force exerted by the fibres: therefore, whatever is the force neceflity for clofing the rope properly, the fibres of
\(3 Q^{2}\)
the
aretwilled in a dircttioll oppoGite to that of fpinning, and are confequentíy tlronger.
th. \(\because\)... \(n=\ldots\), it : cxerting twice this Jorce. Now let the fime yat:1, putn up to cne-halt, be made up in a Arand, and lat the trand be twitted in the oppolite direation to the trinning til! it has acquired the fame claflicity for loying. The yarns are untwited. Suppofe to three-sourths of the length of the fiores. They ate now exerting only four-thinis of the force neccility for laying, that is, wo-this ds of what they were obliged to exert in the other calc ; ard thus we have llronger yarns when the frands are equally drained. But tiney require to \(b=\) more ftrained than the other; which, being made ol more twilled yarn, fooner acquire the elatficity lit for laying. But fince the elaticity which fits the firand for litying docs not increafe fio fall as the train or. the fibres of the jarn which produces it, it is phain, that when each lias acquised that elatheity which is proper for liying, the flrands made of the nack-twited yarn are the tlrongelt; and the yurns are allo the ftrongelt; and being fofter, the rope will clule better.

Experience confrms all this; and cordage, whole Arands are twifted in the oppolite direction to the twill of fpinning, are lound to be fronger than the otlers ia it proportion not lefs than that of 7 to 6.
such being the dificulty of making a large ftrand, and its delects when made, we lave fatlen on a method of making great cordage by laying it twice. A haw-fer-laid rope, flack furn, little hardened in the frands, and llack Jaid, is mide a ttrand of a large rope called a cable or cablet. Whe advantages of this tabric are evident. The ftrands are reduced to one-third or onefourth of the diameter which they would have in a bawler of the lame lize. Such ftrands camot have their yarns lying very obliquely, and the outer yarns cannot be much more ftrained than the inner ones. There mult thesefore be a much greater equality in the whole lubltance of cable-laid cordage, and from this we inould expest fuperior lleng:h.

Accordiagly, their tuperiority is great, not lefs than in the proportion of 13 to 9 , which is not far from the proportion of +103 . A cable is more than a fourth part, but is not a third part, fronger than a hawfer of the fame lize or weight.

They are feldom made of mone than three hawfers - of three frands each, though they are lometimes made of three four 11 randed hinfers, or of four threeftrandw. The firlt of thefe two is prefered, becaufe four tanali itrand. can be laid very clofe; whereas it is difficult to lay well four hawlots, already become very hard.
'rine fuperi rity of a cable-laid enclage being attributed entirely to the greater perledion of the frands, and the feeming to at ife entircly from their mmalle ets, it w:as natural :o expeat thill better cerdage by day, ing cables as the Atrands of nill larger pieses. It has been tried, and with eqery reguilite atten:ion. But athongh they have always equalled, they have not decidedly excelled, e mimon cables of the fame weight; alld they reguite a great deal more work. We thall not iherffore enter upon the manifulations of this fibric.
'There is only une point of the mechanical procefs of rope-making which we have not conliderced minutely; and it is an impertant one, viz. the diftribution of the
total thortening of the yarns between the hardening of the frands and the laying the rope. This is a point about which the artilts ate by no means agreed. 'l'here is eertainly a poltion of the flrands of a laid rope which puis every part in equilibrio; and this is what an elatItic, but perfecty folt rope (were fuch a thing pollible), would alfume. But this camot be difiovered by any expeiments made on large or even on firm cordage ; and it may not be thought fufficiently clear that the proportion which would be difcovered by the careful fabrication of a very fuall and folt line is the lame that will fuit a condage of any diamiter. We mult proced much on conjecture ; and we cannot fay that the argu. nents ufed by the partizans of different proportions ate very convincing.

The general practice, we believe, is to divide the whole of the intended hortening of the yarns, or the working up into three prats, and to emplay two of thefe in hardening the ftrands, and the remaining third in cloling the hawfer.

Mr Du Hamel thinks, that this repartition is injudicious, and that the gans are too much framed, and the frands rendered weak. He recommends to invert this proportion, and to fhorten one-third in the hardening of the flrands, and two-ihiads in laying the hawier. But if the tlrain of the yarns only is confidered, ore fould think that the outlide sarn of a ftrand will be more frained in laying, in propertion to the ydrn of the fame ftrand, that is, in the very axis of the rope. We can only fay, that if a very tof line is formed in this way, it will not keep its twift. This fhows that the turns in laying were more than what the clafticity or hardening of the ftrands required. "lhe experiments made on tott lines always thowed a tendency to take a greater twift when the lines were made in the firft manner, and a tendency to love their twilt when made in Mr Da Hamel's manner. We imagine that the true proportion is between thefe two extremes, and that we thall not err greatly if we halve the total hortening between the two parts of the precefs. If working up to two-thirds be inlilled upon, and if it be really too moth, Mr Du Hamel's repartition may be better, becatle part of this worling will quackly go off when the eordage is uled. But is is furely better to be right in the main ponut, the total working up, and then to adjut the diftribution of it fo that the finithed cordage thall precilely keep the form we have given to it.
'There mat be the fame uncertainty in the quadruple diltribution of the working up a cable. When a cable las its yarns thortened to two-thinds, we believe the ordinary practice has been, itt, ' 1 'o wap 180 fathoms; 2 d , 'l'o harden up the l\}rands 30 fathoms; 3 d , 'l'o lay or clofe up 13 fathoms; \(4^{\text {th }}\), 'lo work up the hawiers nine fathoms; \(s\) th, 'To cloie up eight lathoms. 'Ihhis leaves a cable of 120 . Since Mr Du Hamel's experiments have had an inlluence at Rochefort, the pratotice has been to warp 190, to harden up 38 , to lay up 12 , to work up the liawiers 10 , and then to clote up fix; and when the eable is finilhed, to thorten it two fathoms nocre, which our workmen call throwing the turn avill up. Thisleaves a cable of 122 lathoms.

As there feems little doubt of the tuperiority of cordage thortened one-fourth over cerdage fhortened onethird, the following diftibution may be adopted : warp

Rope \(\underbrace{\text { making. }}\) \({ }_{28}\) Diftribution of the total Murtening of the yarris between the hardening of the firands and laying the rope.

Rope malings. \(30^{3}\) Of the ftrains made ufe of during the operation.

190 fathoms, harden up 12, lay up th, work np the hawiers 12 , and clofe up 12 more, which will leave a
cable of 143 .

There is another queftion about which the artifts are divided in their opinions, 1 iz . the Itrains made ule of during the oparation. This is produced by the weight laid on the iledge. If this be two faall, the ftrands will not be sutticiently tightened, and will run into kinks. The fledge will keep up by Itarts; and a fnall inequality of twit in the Itrands will throw it atkew. The top will not run well withont a contiderable pref. lure to throw it from the cluing point, and theretore the cordage will neither clole fairiy nor firmly; on the other hand, it is evident, that the dram on the ftrands is a complete expenditure of fo much of their force, and it may be fo great as to break them. These are the extreme politions. And we think that it may be fairly deduced from our principles, that as great a itrain thould be laid on the ttrands as will make good work, that is, as will enable the rope to clute ncarly and completely, but no more. But can any general rule be given for this purpole?

The practice it Rochefort was to load the nedge till its weight and load were duuble the weight of the yarns when it warped 180 fathoms. A fix-inch hawfer will require about a ton. It we fuppofe the friction one-thind of the weight ; the ftrain on each ftrand will be about two hundred and a quarter weight. Mr Du Hamel thinks this too great a load, and propoies to put only five-fourths or theeereconds of the weight of the cordage; and ftill lefs if a thorter piece be warped, becaufe it does not require io much force to throw the twit from the two cranks to the middle of the ftrand. We thall only fay, that fronger ropes are made by hedvy loading the carriage, and working up moderately, than by greater [hortening, and a lighter load; but all this is very vague.

The reader will naturally afk, after this account of the manulacture, what \(i\), the general rule for computing the ftrength of cordage? It camot be expected to be very precife. But if ropes are made in a mamer perfectly fimilar, we mould expent the ftrength to be in proportion to the area of their fetion; that is, to the lquare of their diameters or circumferences, or to the number of equal threads contained in them.

Nor does it deviate tar from this rule; yet Mr Du Hamel hows, from a range of experiments made on all cordage of \(3^{\frac{1}{2}}\) inch circumierence and under, that the flrength increales a little fafter than the number of equal threads. 'Thus he iound tha: ropes of
\[
\begin{array}{lll}
9 \text { threads bore } 1014 \text { pounds, inficad of } 946 \\
12 & 1564 & 1262 \\
18 & 2148 & 1893
\end{array}
\]

We cannot pretend to account for this. We mutt alfo obferve, that the frength of cordage is greatly improved by making them of yarn fpun line. This requires firiely drelfed hemp; and being more fupple, the fibres lie clofe, and do not form fuch oblique fifirals. But all hemp will not foin equilly finc. Every falk feems to confift of a certain number of principal fibres, which fplit more cafily into a fecond fer, and thefe more dificultly into a third fet, and foon. The ultimate finenel's, therefore, which a reafonable degree of dreffing can give to hemp, bears fome propurtion, not in-
deed wery procife, to the fize of the ftilk. The Dif. tifh and Diteh ufe the bell hemp, fpin their yarn the frnelt, and their cordage is confiderably Aronger than the Frenci, nuach of which is made of their cwin hemp, and others of a coarle and harth qualiry.

The following rule for jusging of the weight which a rope will bear is not far from the truth. It fuppofes them rather too ftrong; but it is fo eafly remembered that it may be of ufe.

Mintiply the circumference in inches by itfaf, and take the firth part of the produc, i: will exprefs the tons which the rope will carry. thus, it the rope have 6 inches circumference, 6 tinies 6 is 36 , the lith of which is \(7 \frac{1}{5}\) tons; apply this to the rope of \(3_{3}^{\frac{1}{5}}\), on which Sir Charles Knowles made the experiments formerly mentioned, \(3 \frac{1}{5} \times 3 \frac{1}{5}=10,25, \frac{1}{5}\) of which is 2,\(0 ;\) tons, or 4592 pounds. It broke with 4550 .
This may fuffice for an account of the mechanical of \({ }^{32}\) arring fart of the manufature. But we have taken no no-and its citice of the operation of tarring; and our reafon was, fellsenthe that the methods pratifed in different ropc-works are Arength of fo exceedingly different, that we cou!d hardly enumerate them, or even give a general account of them. It is evidently proper to tar in the ftaic of twine or yarn, this being the only way that the bemp could be uniformly penetrated. The yarn is made to wind off one reel, and having paffed through a reffel cortaining hot tar, \(i t\) is wound up on another reel; and the fuperthous tar is taken off by palling through a hoie furrounded with fpongy oakum ; or it is tarred in fhains or hauls, which are drawn by a captern through the tar-hettle, and through a hole formed of two plates of metal, held together by a lever loaded with a weight.

It is eltablifhed beyond a doubt, thit tarred cordage when new is weaker than white, and that the difference increafes by keeping. The following experiments were made by Mr Du Hamel at Rochefort on cordage of three inches (French) in circumfcrence, nade of she be! Riga hemp.

\section*{I O P}

Mer Da Thaniel fays，that it is decided by expai－ enc，1．That whit：cordare in contimal fervice is one－ third mone carabie than tared．2．That it retains its
 the otdin ry injurie of the weather one－fourth Inngur．

Wie brote this one remarkable fatt．In 1758 the throwds and flays of the Sheer hulk at Portimouth doctyard were ovenhawled，and when the worming and rervice were taken off，they were found to be of white cordage．On examining the forekeeper＇s bools，they were foind in have been formerly the throwds and rigs－ ing of the Royal William，of 110 guns，buil：in 1715 ， and itrged in 17，6．She was thought top－heavy and unf：for fea，and unrigred and her fores laid up．Some lew years afterwards，her throwds and Itays were fitted on the sheer hulk，where they remained in conflant and very hard fervice for about 30 jears，while every tarred cope ahout her had been repeately tenewed． This information we received from Mr Brown，boat－ fwain of the Royal William during the war 1758 ，\＆c．

Whey thea do we tar cordage？We thus render it more unpliant，weaker，and lefs durable．It is chiefly ferviceathle for cables and ground taikle，which mult be continually wetted and even toaked．The refult of careful obfervation is，：That white cordage，expofed to be alternately very wet and dry，is weaker than tar－ red cordage．2．That cordage which is fuperficially tarred is conftantly fironger than what is tarred through－ out，and it refifts better the alternatives of wet and dry． N．B．The fhrouds of the sheer hulk were well tarred and blacked，io that it was not known that they were of white cordage．

Tar is a curious fubfance，mifcible completely with water．Attempts were male to anoint cordage with oils and fats which do not mix with water．This was expected to deferid them from its pernicinus effects． But it was diftinctly found that there matters made the fibres of hemp glide fo eaffily on each other，that it was hardly poifible to twift them permanently．Before they grafped each other fo hard that they could no：be drawn，they were ftrained almoft to breaking．
Attempts have been made to increafe the ftrength of cordage by tanning．But although it remains a conflant practice in the manufdeture of nets，it dnes not appear that much addition，either of Arength or durability，can be given to cordage by this means． The trial has been made with great care，and by per－ fons fully able to conduct the procefs with propriety． But it is found that the garns take fo long time in dry－ ing，and are fo much hurt by drying nowly，that the room required fir a confiderable rnpe－work would be immenfe；and the improvement of the cordage is but trifling，and even equivocal．Indeed tanning is a che－ mical procefs，and its effect depends entitely on the na－ ture of the materials to which the tan is applied．It unquellio．athly condenfes，and even flrengthens，the fibre of leather：but for any thing that we know a priori， it may defroy the cohelion of hemp and flax ；and ex－ periment alune could decide the qnenion．The refult has been unfavourable；but it does not follow from this that a tan cannot be fomen which faill produce on the texture of vegetables effects fimilar to what oak－bark and other allringents produce on the animal fibre or mem－ brane．It is well known that fome dycs increafe the

Itrenghl of fiax and cotton，netwibhanding the corro－ dion which we know：to be produced by fome of the ingredients．Thas is a futjef lighly worth the attention of the chem \(A\) and the patrint．

Rope．Dalicer．See Rope－Dancer．
Ropf－Carn，amons tailors，is the yarn of any rope untwilted，but comimnnly made up of junk；its ufe is to make fimet，matt，\＆ic．

RODUET．See Rocket．
RORIDULA，in botany：A genus of the monn－ grnia order，belonging to the pentandria clals of plants．The conolla is pentapetalnus；the calyx pen－ taphyllous；the capfule trivalved；the autherx feroti－ form at the bafe．

ROSA，the Rose：A genus of the polygamia or－ der belonging to the ienfandria clafs of plants：and in the natural methond ranking under the 35 th order，Sen－ ticofa．There are five petals；the calyx is urceolated， quinquefid，correnus，and ftraightened at the neck．The feeds are numerous，hifpid，and affixed to the infide of the calyx．

The forts of rofes are very numerous；and the bo－ tanilts find it very difficult to determine with accuracy which are fpecies and which are varieties，as well as which are varieties of the refpective fpecies．On this account Linnxus，and fome other eminent authons，are inclined to think that there is only one real feccies of rofe，which is the rofa cunina，or＂dog－rofe of the hedges，＂\＆c．and that all the other forts are acci－ dental varieties of it．However，aceording to the pre－ fent Limnata arrangement，they ftand divided into 14 fuppofed lipecies，each comprehending varieties，which in fome forts are but few，in others numerous．

The fuppofed fpecies and their varieties，according to the arrangement of modern botanifts，are as follow：

1．The camina，canine rofe，wild dog－rofe of the hedges，or hep－tree，grows five or fix feet high，having prickly－tialks and branches，pinnateJ，five or feven－ lobed leaves，with aculeated foot ftalks，fmooth pe－ dunculi，oval fmooth germina，and fmali firgle flowers． There are two varieties，red．flowered and white－flow－ ered．They grow wild in hedges abundantly all over Britain ；and are fometimes admitted into gar－ dens，a few to increafe the variety of the fhrubbery col． leation．

2．The alba，or common white－rofe，grows five or fix feet high，having a grcen ftem and branches，armed with prickles，hifpid pedunculi，oval fmooth germina， and large white flowers．The varieties are，－large double white rofe－dwarf fingle white rofe－maidens－ blufh white rofe，being large，produced in clufters，and of a white and bluth－red colour．

3．The Gallica，or Gallican rofe，\＆c．grows from about threc or four to eight or ten feet high，in diffe－ rent varieties；with pinnated，three，five，or feven－lobed leaves，and large red and other coloured flowers in dif－ ferent forts．This fpecies is very extenfive in fuppofed varieries，bearing the abnve fpecific diftinction，feveral of which have been \(f\) rmerly confidered as diftind fpe－ cies，but are now ranged aniong the vatietics of the Gal－ lican rofe，conlifting if the following noted varieties．

Common red ufficinal rofe，grows ereet，about threc or four feet high，having fmall branches，with but few prickles，and large fy reading half double dcep．red flowers．

flowers.-Rofa mundi (rofe of the world) or ftriped red rofe, is a variety of the common red roie, growing but three or four feet high, having large fpreading femidouble red fowers, beautifully ftriped with white-and deep red. -York and Lancafter variegated rofe, grows five, fix, or eight feet high, or more; bearing variegated red flowers, confifing of a mixture of red and white; alfo frequently difpofed in elegant flipes, fometimes in half of the flower, and fometimes in fome of the petals.-Monthly rofe, grows about four or five feet high, with green very prickly thoots; producing middle-fized, moderately-double, delicate flowers, of different colours in the varieties. The varieties are, common red-flowered monthly rofe-bluth-flowered-white-flowered-Ariped-flowered. All of which blow both early and late, and often produce flowers feveral months in the year, as May, June, and July; and fiequently again in Auguf or September, and fometimes, in fine mild feafons, continues till November or December: hence the name monthly rofe.-Double virginrofe, grows five or fix feet high, having greenifi branclies with fcarce any fpines; and with large double palered and very fragrant flowers.-Red damafk rofe, grow's eight or ten feet high, having greenifh branches, armed with hort aculea; and moderately-double, fine foft-red, very fragrant flowers. - White damak rofe, grows eight or ten feet high, with greenifh very prickly branches, and whitifh-red flowers, becoming gradually of a whiter colour.-Bluhh Belgic rofe, grows threc or four feet high, or more; having greenifh prickly branches, five or feven lobed leaves, and numerous, very double, bluflred flowers, with flort petals, evenl; arranged.-Red Belgic rofe, having greenifh and red fhoots and leaves, and fine double deep-red flowers.-Velvet rofe, grows three or four feet high, armed with but few prickles; producing large velvet-red flowers, comprifing femidouble and double varieties, all very beautiful rofes.Marbled rofe, grows four or five feet high, having brownih brancles, with hur few prickles; and large, double, finely-marbled, red flowers.-Red-and-yellow Aultrian rofe, grows five or fix feet high, having flender reddilh-branches, armed with fhort brownifh aculea; and with flowers of a reddifh copper colour on one lide, the other fide yellov. This is a curious variety, and the flowers affume a fingularly agreeable appearance.Yellow Auftrian rofe, grows five or fix feet high, having reddith very prickly fhoots; and numerous brightyellow flowers.-Doulle yellow rofe, grows fix or feven feet high; with brownith branches, armed with numerous large and fmall yellowifh prickles; and large very double jellnw fowers.- Frankfort rofe, grows eight or ten feet high, is a vigorous thooter, with brownifh brauches thinly armed with ftrong prickles; and produces largith double purplifh-red flowers, that blow irregularly, and have but little fragrance.
4. The centifolia, rr hundred-leaved red rofc, \&c. grows from about three or four to fix or eight feet high, in different forts, all of them hifpid and prickly; piunated three and five lobed leaves; and large very double red fowens, having very numerous petals, and of different thades in the varieties. The varieties are, -common Ditith hundred-leaved rofe, grows three or four feet high, with ercet greenifh braaches, but moderately armed with prickles; and large remarkably double red flowers, with fhort regularly arranged petals.
-Blufl handred leared rofe, grows like the cther, with large very double pale-red Howers.- Provence rofe,

Rufa. grows five or fix feet, with grecnith-brown prickly branches, and very large dnuble globular red fiowers, with large petals folding over one another, more or lefs in the varietics.- The varicties are, common red lrovence rofe, and pale Provence rofe; buth of which having larger and fomewhat looier petals than the following firt.-Cabbage Provence rofe; having the pctals clofely folded over one another like cabbagesDutclı cabbage 1 ofe, very large, and cabbages tolerably. -Childing Provence rofe-Great royal role, grows fix or eight feet high, producing remarkably laige, fomewhat loofe, but very elegant flowers.-All thefe are large double red flowers, fomewhat globular at firft blowing, becoming gradually a little ipreading at top, and are all very ornamental fragrant rofes.-Mofs Provence rofe, fuppofed a variety of the common rofe; grows erectly foar or five feet high, having brownith Italks and branches, very clofcly armed with fhore prickles, and double crimfon-red flowers; having the calyx and upper part of the peduncle furrounded with a rough moffy-like fubftance, effecting a curious fingularity. This is a fine delicate rofe, of a high fragrance, which, together with its molfy caly \(x\), renders it of great cfimation as a curiofity.
5. The cinnamomea, or cinnamon rofe, grows five or fix feet high, or more, with purplifh branches thinly aculeated; pinnated five or feven lobed leaves, having almoft inermous petioles, fmooth pedunculi, and fmooth globular germina; with fmall purpilh-red cinnamonficented flowers early in May. There are varietics with double flowers.
6. The Alpina, or Alpine inermous rofe, grows five or fix feet high, having fmooth or unarmed reddith branches, pinnated feven-lobed fmooth leaves, fomewhat hifpid pedunculi, oval germina, and deep-red fingle flowers; appearing in May. This fpecies, as being free from all kind of armature common to the other forts of rofes, is efteemed as a fingularity; and from this property is often called the virgin rofe.
7. The Carolina, or Carolina and Virginia rofe, \&c. grows fix or cight feet high, or more, having fmor,th reddifh branches, very thinly aculeated; pinnated Sevenlobed fmooth leatves, with prickly loot-ftalks; fomewhat hifpid pedunculi, globofe hifpid germen, and fingle red flowers in clufters, appearing moftly in Augult and September. The varieties are, dwarf Pennfylvania rcfewith fingle and double red flowers-American pale-red rofe. This fpecies and varieties grow naturally in different parts of North Amcricas ; they effect a fire variety in our gardens, and are in eftimation for their latcflowering propcrty, as they often continue in blow frem Auguft until Oanter; and the flowers are fucceeded by numerous red berry-like heps in autumn, caufing a variety all win'er.
8. The villof, or villofe apple-bearing rofe, grows fix or eight feet high, having frong erect brownifh fmooth branches; aculeated \{parfedly pinated fevenlobed villofe or hairy leaves, downy underneath, with prickly foot-ltalks, hifpid peduncles, a ghobular frickly germen; and large fingle red flowers, fucceeded by large round prickly heps, as big as little apples. This fpecies merits admittance into evcry collection as a chriolity for the fingularity of its fruit, leth for variety
arol nfo: for it having at hick pulp of an argreable anis whith, is cfien made intu a tolerable gond fweetnıลは
a. Thic pimporellionlia, or burnct-leaved rofe, grows ab ut :a vard hegh, aculated partadly ; fmall ne...! y 1 :mated feven-lubed leaves, hav ng ebrufe tolioles and touyln \(\mid\) ctioles, mooth peductales, a ylubular fimooth germen, and imall fingle il wers. Thire are varieties with sed \(f\) wer-and with wh te flwers. They grow whll in Lingand, \&c. and are culiwated in Mrubbetiss for variecy.
10. The fpinocillima, or moft 「pinous, dwarf bumet- \(^{\text {s }}\) lesved role, commonly called Siohb rufe, grows but two or threefeet high, vet clofly armed with [pines; intall nea:ly pinnated feven lubed leaves, with prichly toot.it:Ihs, prichly peduncuit, oval fimooth gemmen, and numere us imall fingte fowers, fucceeded by round darkputhoheps. "Ihe vanictisa are, common white Howered -rid Howered--lliped-flowerel-mable-Howered. They grow naturally in England, Soutland, SE: The fint variety biles near a yard high, the others but ore or two leer, all of which are firgle-flowered; but the flowers being numerous ali over the branches, make a pletty appeatance in the collection.
11. The eglanteria, cglantine rofe, or fucet briar, grows five or fix leet high, having gicen branches, anmed winh Arong fpines fparfedly; pinnated fevenlobed ndoriferous leaves, with acute folioles and rough root-lalks, fmooth pedunculi, globuhar fmooth germina, and imall pale-red thowes. The varieties are, crmmon lingle-flowered-iemi-double flowered-double flowe:-ad-biuth double. Howered-yellow-flowered. 'This fpecies grows naturally in fome parts of Eingland, and in Suitrorland. It claims cuiture in every garden for the odoriferons preperty of its leaves; and thould be plant. ed in the borders, and other compartments contiguous to walks, or near the habitation, where the plants will impart their refrehing fiagrance very profufely all around; and the young branches are excellent for improving the odour of nofe-gays and bow pots.
12. 'Ihe molchat:, or mulk-rofe, dippofed to be a variety only of the ever-green muk-roic, hath weak finooth green flaiks and branches, riling by fupport from fix to eight or ten feet high or more, thinly atmed with flong fpines; pinnated feven-lobed fmooth leaves, with prickly loot-falks; hifpid peduncles; oval hilpid germen; and all the branches terminated by large nmbeilate clufters of pure-white mufk-icented flowers in Auguft, sic.
13. The fempervirens, or ever-green mufk-rofe, hath a fomewhat trailing flalk and branches, rifing by fup. port five or tir feet high or more, baving a fmooth baik armed with prickles ; pinuated five-lobed finooth thining evergreen leaves, with prickly petioles, hifpid pedunculi, oval hifpid germen ; and all the branches terminated by chafters of pure-white Howers of a mulky fragrance ; appeaning the end of July, and in Augutt. The fempervirent property of this elegant Species renders it a curiolity among the nofy tribe ; it alfo makes a fine appear. ance as a flowering forub. There is one variety, the deciduous mulk-role abovementioned. This fpecies and varisty flower in Auguft, and is remarlable for producing them numerounty in cluters, continuing in fuccer. fion till OAtober or November.

Whe above 13 fecies of rofi, and their refpective va.
aieties, are of the fhrub kind; all deciduons, excopt the 1.a fort, and of hardy growth, fucceeding in any commom foil abd fitution, and tlowering antually in great abundance from May thl Ostober, in different forts ; though the gener a Howcing ficafon for the principal part of them is Jone and July: but in a full collection of the difierent feceies, the hlow is continued in cen. thant fuccethon teveral momhs, cven fometimes from Muy till near Chrithmas; producing their f.wers univerfally on the fame year's thoots, rifing from thote the ycar before, generally on long pedinculi, each ierminated by one or more rofes, which in their charafterific tate confift each of five large petals and many famina; but in the doubles, the petalsare very numerous; and infune forts, the flowers are fuccoeded by firit ripening to a red colour in antumn and winter, from the ieed of which the planis may be ratied: but the moft cercain and eligible mode of propagating molt of the fots is by fuckers and layers; and by which methods they may be increafed very expeditioufly in great abundance.

The white and red rofes are ufed in medicine. The former difilled with water yields a fmall portion of a butyraceous oil, whofe flsour eadally refembles that of the roles themfelyes. This oil and the diftilled water are veiy uleiul and agreeable cordials. There rofes alfo, belides the ecrdial and aromatic virtues which refide in their valatile parts, have a mold purgative one, which remams entire in the docoction left after dittilation. The red role, on the contrary, has an altingent and gratefully corroborating virtue.

ROSA (Salvater), an admirable painter, born at Naples in 1614 . He was firlt inltructed by Franceico Francazano, a binfinan: but the death of his father reduced him to lell drawings fketched upon paper for an!y thing he could get; one of which happening to fall into the hands of Latfranc, he took him under his protetion, and enabled him to enter the fchool of Spagnoletto, and to be taught moreuver by Daniel Filcone, a dittinguilled painter of battles at Naples. Salvator had a reatile imagination. He ttudied nature with attention and judgment; and always reprefented her to the greatelt advantage: for evcry tiee, rock, cloud, or fituation, that enters into his compofition, thows an elevation of thouglat that extorts a Imitation. He was equally eminent for panting battles, animals, fea or land llorms; and he executed thefe different fubjects in luch talte as renders his works readily dia Ainguilhable from all others. His pieces are exceedingly farce and valuable ; one of the molt capital is that reprefensing saul and the with of Endor, which was preferved at Verfalles. He died in 1673 ; and as his paintings are in few hands, he is more generally knowen by his prints; of wh ch he etched a great number. He painted landicapes more than billory; but his prints are chiefly hilturical. The capial landticape of this matter at Chifwick is a noble picture. Hwwever, he is faid to have heen ignorant of the managencnt of light, and t.) lave fometimes th ded faces in a difigrecable manner. He was however at man of undoubsed genius; of which he has given frequent fipecimens in his wotks. A roving difpolition, to which he is faid to have given full foppe, feems to have added a wildneis to all his thoughts. We are told that he fipent the carly part of his life in a troop of bandite ; and that the rocky defolate fenes

\section*{ROS}

Rofacea in which he was accuitomed to take refuge, furnifhed him with thofe romantic ideas in landfeape, of which he is fo exceedingly fond, and in the defeription of which he fo greatly excels. His roblers, as his detached figures are commonly called, are fuppofed alfo to have been taken from the life.

Salvator Rofa is fufficiently known as a painter; but until now we never heard of him as a mufician. Among the mufical manuferipts purchafed at Rome by Dr Burney, was a mufic book of Salvator, in which are many airs and cantatas of different mafters, and eight entire cantatas, written, fet, and tranfcribed by this celebrated painter himfelf. From the fpecimen of his talents for mufic here given, we make no fcruple of declaring, that he had a truer genius for this fcience, in point of melody, than any of his predeceffors or cotemporaries : there is alfo a ftrength of exprefion in his verfes, which fets him far above the middle rank as a poet. Like molt other artifts of real original merit, he complains of the ill ufage of the world, and the difficully he finds in procuring a bare fubfiftence.

ROSACEA. See Gutt.i Rofacea.
ROSACEOUS, amnng botanifts, an appellation given to fuch flowers as are comprifed of feveral petals or leaves difpofed in a fort of circular form, like thofe of a rofe.

ROSAMOND, daughter of Walter Lord Clifford, was a young lady of exquifite beauty, fine aceomplifhments, and bleft with a moft engaging wit and fiveetnefs of temper. She had been educated, according to the cullom of the times, in the nunnery of Godlow; and the popular ftory of her is as frllows : Henry II. faw her, loved her, declares his pafion, and triumphed over her honour. To avoid the jealoufy of his queen Elinor, he kept her in a wonderful labyrinth at Wordfock, and by his connection with her had William Longfword earl of Salifbury, and Geoffroy bifhnp of Lincoln. On Henry's abfence in France, however, on account of a rebellion in that country, the queen found means to difcover her, and though fruck with her beauty, fhe recalled fufficient refentment to poifon her. The queen, it is faid, difeovered her apartment by a thread of filk; but how the came by it is differentIy related. This popular fory is not however fupported by hifory; feveral writers mention no more of her, than that the queen for vented her fpleen on Rofamond as that the lady lived not long after. Other writers afert that fle died a natural death; and the fory of her being poifoned is thought to have ariien from the figure of a cup on her tomb. She was buried in the church of Godften, oppolite to the high altar, where her body remained till it was ordered to be remnved with every mark of difgrace by Hugh bifhop of Lincoln, in 1191. She was, however, by many confidered as a faint after her dea: 1 , as appears from an infcription on a crofs which Leland fiays ftood near Godfow:

> Sui meat hac aret, fignumn Salutis aloret, Uique fiti de:ur venium. Rofumunda prectur.

Grofe's. And alfo by the following fory: Rofamond, during Ant.quitice ner refidence at her bower, made feveral vifits to Godof tnluyd fow; where being freq iently reproved for the life the and Wales, led, and threatered wilh the confequences in a future pol. ive, sc. Atate, fhe always anfwered, that the knew the flould be
faved; and as a token to them, fhowed a tree which fue faid would be turned into a fone when fhe was with the faints in heaven. Soon after her death this wonderful metamorphofis happened, and the fone was thown to Arangers at Godftow till the time of the diffolution.

ROSARY, among the Roman catholics. Sce ChapLet.

ROSBACH, a town of Germany, in Saxony, famons for a vitary obtained here by the king of Pruffia over the French, on November 5. 1757, in which 10,000 of the Prench were killed or taken prifoners, with the lofs of no more than 500 Prumians. Sce Prus. \(\sin , \mathrm{n}^{0} 3 c\).

ROSCHILD, a town of Dermark, in the ine of Zealand, with a bifhop's fee and a fmall univerfity. It is famous for a treaty concluded here in 1658; and in the great church there are feveral tombs of the kings of Denmark. It is feated at the botom of a fmall bay, in E. Long. 12. 20. N. Lat. 55. 40.

ROSCOMMON, a county of Ireland, in the province of Connaught, bounded on the weit by the tiver Suc, on the eaft by the Shannon, on the north by the Curlew mountains, on the fouth and fouth-eaf by the King's county and part of Galway. Its length is 35 miles, its breadth 28. The air of the county, both on the plains and mountains, is healthy; the foil gields plenty of grafs, with, fome corn, and feeds numerous lierds of cattle. The Curlew mountains on the nortin are very high and fteep; and, till a road with great labour and difficulty was cut through them, were im. paffable.

Roscommon, which gives the title of earl to the family of Dillon, and name to the county, though not large, is both a parliamentary borough and the county town.

ROSCOMMON (Wentworth Dillon, earl of), a celebrated poet of the 17 th century, was the fon of James Dillon carl of Rolcommon; and was bern in Ireland, under the adminiftration of the firft earl of Strafford, who was his uncle, and from whom he received the name of Wentzorth at his baptifm. He paffed his :nfancy in Ireland; after which the earl of Straford fent for him into England, and placed himat his own feat in Yirkfhire, under the tuition of Dr Hall, afterwards bifhop of Norwich, who inftucted him in Latin, without teaching him the common rules of grammar, which he conld never retain in his memory, and yet he learnt to write in that language with clafical elegance and propriety. On the earl of Strafford's bcing impeached, he went to complete his education at Caen in Normandy ; and after fome years travelled to Rome, where he became acquainted with the mof valuable remains of antiquity, and in particular was well thilled in medals, and learned to fpeak Italian with fuch grace and fluency, that he was frequently taken for a native. He returned to England foun after the Relloration, and was made captain of the band of penlioiers; but a difpute with the lord prisy feal, about a part of his eftate, obliged him to refrgn his poll, and revilit his native ccuntry, where tine duke of Ormond appointed him captain of the guards. He was unhappily very fin! of gaming; and as he was returuing to his ledgings from :1 ganing-table in Dublin, he was attacked in the cark by three rifina:s, who were employed to aftidinate him..

Rofriry I
Rofeominull.

Rufort- The earl defended himfelf with fuch refolution, that r.inn. \(\underbrace{-}\)
he had difpatched one of the agyrelfors, when a gen-
teman patling that way took his part, and diarmed another, on which the third fought his fafety in flight. This generous alfiftant was a diblbanded eflicer of good family and fair reputation, but reduced to poverty; and his lordhip rewarded his bravery by retigning to him his poft of captain of the guards. He at length returised to London; when he was made malter of the horle to the duchefs of York, and married the lady Frances, eldeit daughter of Richard earl of Burlington, who had been the wife of Colunel Courtney. He herc dillinguithed himfelf by his writings: and in imitation of thote learned and polite aifemblies with which he had been acquainted abroad, began to form a fociety for refining and fixing the fandard of the Eng. lifh language, in which his great friend Mr Dryden w.ss a priscipal affiltant. This fcheme was entirely defeated by the religious commotions which enfued an king James's accefion to the throne. In 1683 he was reized with the gout; and being too impatient of pain, he permitted a bold French empiric to apply a repelling medieine, in order to give him prefent relief; which drove the diftemper into his bowels, and in a fhort time put a period to his life, in January 1684 . He was buried with great pomp in Weftminfter-abbey.

His poems, which are not numerous, are in the body of Englifh poetry collected by Dr Johnfon. His "Eflay on "Tranflated Verfe," and his tranflation of "Horace's Art of Poetry," have great merit. Waller addreffed a poem to his lordhip upon the latter, when he was 75 years of age. "In the writings of this nobleman we view (fays Fenton) the image of a mind naturally ferious and folid; richly furnifhed and adorned with all the nrnaments of art and feience; and thofe ornaments unaffectedly difpofed in the moft regular and elegant order. His imagination might probably have been more fruitful and fprightly, if his judgement had been lefs fevere; but that feverity (delivered in a mafculine, clear, fuccinet Atyle) contributed to make him fo en.inent in the didactical manner, that no man, with juftice, can affirm he was ever equalled by any of our nation, without confelfing at the fame time that he is inferior to none. In fome other kinds of writing his genius feems to have wanted fire to attain the point of perfection; but who can attain it? He was a man of an amiable difpofition, as well as a good puet; as Pope, in his 'Eflay on Criticifm,' bath teftiricd in the following lines:

Rofcommon not more learn'd than good, With manners generous as his noble blood ;
'To him the wit of Greece and Rome was known, And every author's merit but his own."
We nuft allow of Rofcommon, what Fenton has rint mentioned fo diftinctly as he ought, and, what is yet very much to his howour, that he is perlaps the Silly correct writer in verfe before Addifon; and that, if there are not fir many or fo great beauties in his compolitions as in thofe of fome contemporaries, there are at lealt fewer fauls. Nor is this his higheft praife; for Pope has celebrated him as the only inoral writer of King Charles's reign:

Unlappy Dryden! in all Charles's days, Rofommon only boants unfooted lays.

Of Rofcommon's works, the judgment of the public fecms to be right. He is elegant, but not great ; he never labours after exquifite beauties, and he feldom falls into grofs faults. His verfification is fmooth, but marely vigorous, and his rhymes are remarkably exact. He improved tafte, if he did not enlarge knowledge, nind may be numbered among the benefactors to Englifh literature.

ROSE, in botany. See Rosa.
Effence of Roses. Sce Roses Otter.
Rose of Fericho, fo called becaufe it groms in the plain of Jericho, though it did not originally grow there. It has perhaps been fo named by travellers who did not know that it was brought from Arabia Petrea. Rofe buhthes are frequantly found in the fields about Jericho; but they are of afpecies much inferior to thofe in much extolled in Scripture, the flowers of which fome naturalifts pretend to have in their cabinets.
"The rofe fhrub of jericho (fays Mariti) is a fmall Travels plant, with a bulhy root, about an inch and a half in chrough length. It has a number of ftems which diverge from the earth : they are covered with few leaves; but it is loaded with flowers, which appear red when in bud, turn paler as they expand, and at length become white entirely. Thefe flowers appear to me to have a great refemblance to thofe of the elder-wee; with this diffe. rence, that they are entirely dellitute of fmell The ftems never rife more than four or five inches from the ground. This fhrub theds its leaves and its flowers as it withers. Its branches then bend in the middle, and becoming entwined with each other to the top, form a kind of globe. This happens during the great heats; but during moif and rainy weather they again open and expard.
"In this country of ignorance and fupertition, people do not judge with a philofophical eye of the alternate fhutting and opening of this plant: it appears to them to be a periodical miracle, which heaven operates in order to make known the events of this world. The inhabitants of the neighbourirg cantons come and examine thefe fhrubs when they are about to undertake a journey, to form an alliance, to conclude any affair of importance, or on the birth of a fon. If the Atems of the plants are open, they do not doubt of fuccefs; but they account it a bad omen to fee them fhut, and therefore renounce their project if it be not too late.
"This plant is neither fubject to rot nor to wither. It will bear to be tranfplanted; and thrives without degenerating in any kind of foil whatever."

Roses Otter (or effential oil of), is obtained from rofes by fimple diftillation, and may be made in the following manner: A quantity of frefh rofes, for example 40 pounds, are put in a fill with 60 pounds of water, the rofes being left as they are with their ca. lyxes, but with the ftems cut clofe. The mafs is then well mixed together with the hands, and a gentle fire is made under the ftill; when the water begins to grow hot, and fumes to rife, the cap of the fill is pitt on, and the pipe fixed; the chinks are then well luted with pafte, and cold water put on the refrigeratory at top: the receiver is alfo adopted at the end of the pipe; and the fire is continued under the fill, neither too violent nor too weak When the impregnated water begins to come over, and the fill is very hot, the fire is Icfen-

\section*{KOS}

Rofe, Rofetio.
ed by gentle degrees, and the ditillation continued till 30 pounds of water ate come over, which is generally done in about four or five hours; this rofe-water is to be poured again on a frefh quantity ( 40 pounds) of rofes, and frcm 15 to 20 pounds of water are to be drawn by diftillation, following the fame procefs as be fore. The rofe-water thus made and cohobated will be found, if the rofes were good and frefh, and the diftillation carefully performed, highly fcented with the rofes. It is then poured into pans either of 'earthen ware or of tinned metal, and left expofed to the frefh air for the night. The otter or effence will be found in the morning congealed, and fivimming on the tup of the water ; this is to be carefully feparated and colletted cither with a thin fhell or a fkimmer, and poured into a vial. When a certain quantity las thus been obtained, the water and feces mult be feparated from the cle:rr effence, which, with refpect to the firt, will not be difficult to do, as the effence congeals with a night cold, and the water may then be made to run off. If, after that, the effence is kept fluid by heat, the feces will fubfide, and may be feparated; but if the operation las been neatly performed, thefe will be little or none. The feces are highly perfumed as the effence, and mult be kept, after as much of the effence has been fimmed from the rofe-water as could be. The remaining water thould be ufed for frefh diftillations, inftead of common water, at leaft as far 25 it will go.

The above is the whole procefs, as given in the Aliatic Refearches by lieutenant-colonel Polier *, of making genuine otter of rofes. But attempts (he fays) are ot- ten made tn augment the quantity, though at the expence of the quality. Thus the rafpings of fandalwood, which contain a deal of effential oil, arc ufed; but the impofition is eafily difcovered, both by the fmell, and becaufe the effential oil of fandal-wood will not congeal in common cold. In other places they adulterate the otter by diftilling with the rofes a freetfcented grafs, which colours it of a high clear green. This does not congeal in a flight cold. There are numerous other modes, far more palpable, of adulteration. The quantity of effential oil to be obtained from rofes is very precarious, depending on the fkill of the difiller, on the quality of the rofes, and the favourablenefs of the feafon. The colour of the otter is no criterion of its goodnefs, quality, or country. The calyxes by to means diminifh the quality of otter, nor do they impart any green colour to it. They indeed augment the quantity, but the trouble neceffary to Atrip them is fuch is to prevent their being often ufed.

Rosk-Noble, an ancient Englith gold coin, firlt Aruck in the reign of Edward III. It was formerly current at 6 s. 8 d. and fo called becaufe famped with a rofe. See Money.

Rose-Wood. See Aspalathus.
ROSETTO, a town of Africa, in Egypt, is pleafantly fituated on the well fide of that branch of the Nile called by the ancients Bolbitinum, affirmed by Herodotus to have been formed by art; the town and cafte being on the right hand as you enter that river. Any one that iees the hills about Rofetto would judge that they had been the ancient barriers of the fea, and conclude that the fea has not loft more ground than the fpace between the hills and the water.

Rofetto is efteemed one of the pleafanteft places \(R\) wr. \(\cdot\). in Egypt: it is about two miles long, and confitts Rofirionly of two or three ftreets. The country about it is mott delightful and fertile, as is all the whole Dilta on the other fide of the Nile, exhibiting the muft pleafant profpeit of gardens, orchaids, and com.n.fichts, excellently well cultivated. The cafle flands about two miles north of the town, on the wefl fide of the river. It is a fquare building, with round towers at the four corners, mounted with fome pieces of brals cannon. The walls are of brick, cafed with fone, fuppofed to have been built in the time of the holy war, though fince repaired by Cheyk Begh. At a little diftance lower, on the other fide of the river, is a platform, mounted with fome guus, and to the call of it are the falc lakes, out of which they gather great quantities of that commodlty. At fome farther diftance, failing us, the river, we fee a high mountain, on which fands an old building that ferves for a watch-tower. From this eminence is difcovered a large and deep gulph, in form of a crefcent, which appears to have been the work of art, though it be now filled up, and difovers nothing but its ancient bed. Rofetto is grown a confiderable place for commerce, and hath fome good manufactures in the linen and cotton way; but its chief bufinefs is the carriage of goods to Cairo, all the European merclandife being brought thither from Alexandria byfea, and carried in other boats to that capital; as thofe that are brought down from it on the Nile are there fhipped off for Alexandria; on which account the Eu. ropeans have here their vice-confuls and fâtors to tranfact their bufinefs; and the government maintains a beigh, a cuftomhoufe, and a garrifon, to keep all f. fe and quiet.

In the country to the north of Rofetto are delightful gardens, full of orange, lemon, and citron trees, and almoft all forts of fruits, with a variety of groves of palm-trecs; and when the fields are green with rice, it adds greatly to the beauty of the country. It is abuut 25 miles northeeaft of Alexandria, and 100 north-welt of Caire. E. Long. 30. 45. N. Lat. 31, 30.

ROSICRUCIANS, a name alfumed by a fect or cabal of hermetical philofophers; who arofe, as it has been faid, or at leaft became firft taken notice of, in Germany, in the beginning of the fourteenth century. They bound themfives together by a folemn fecret, which they all fwore inviolably to preferve ; and obliged themfelves, at their admifion into the order, to a fria obfervance of certain eftablified rules. They pretended to know all fciences, and chiefly medicine; whereof they publifhed themfelves the reflorers. Thes pretended to be malters of abundance of important fecrets, and, among others, that of the philufopher's flone; all which they affirmed to have receised by tradition from the ancient Egyptians, Chaldeans, the Magi, and Cymnofophifts. They have been diftinguifhed by feveral names, uccommodated to the feveral branches of their doatrine. Becaufe they pretend to protratt the period of human life, by means of certain noflrums, and even to relione youth, they were called Immortalis; as they pretended to know all things, they have been called \(I / l i\) minati ; and becaulic they have made no appearance for feveral years, unlefs the fect of Illuminated which lately itarted up on the continent derives its origin from them, they have been called the invifile, brothers. Their fociety is

Rofrru- frequently figned by the letters F. R. C. which fome C3as Clas = annong them interpret fratres roris cofid; it being pre-
rended, that the matter of the thilotopher's fone is dew concolled, exalted, Sec. Some, who are no friends to treemarmy, make the prefent flouriming fociery of freemajons a brancle of Roficulians; or rather the Ronlicrufians themfelves, under a new name or relation, viz. as retainers to building. And it is certain, there are fome free-mafons who have all the characters of Bofornfians; bu: how the ara and original of mafonry (fee Masosry), and that of Roficucianifm, here fixtu from Naudxus, who has written exprefily on the tu! jea, confif, we leave others to judge.

Notwidhandiras the pretended :antiquity of the Roficrucians, it is prolable that the alchemifts, Paracelfifts, ur tire-philotophers, who fpread themelves through al. molt all Eurcope about the clofe of the tixteenth century, affemed about this period the obfcure and ambighous title of Ruticucian brethren, which commarded at lirl tome degree of reffen, as it feemed to be borrowed frum the arms Luther, which were a crufs placed upnil ar rofe. But the denomination evidently appears to be derived from the fcience of chemiftry. It is not cumpounded, fays. Nofleim, as many imagine, of the two words rofis and cras, which tignify rofe and crofs, but of the latter of thefe words, and the Latin ros, which fignifies dew. Of all natural bodies, dew was deemed the moft pewerful d:folvent of gold; and the crofs, in the chemical language, is equivalent to light, becaufe the figure of a crofs + exhibits, at the lime time, the three letters of which the word hux, or light, is compounded. Now has is called, by this fect, the feed or mentruum of the ted dragon, or, in other words, that grofs and cor foreal light which, when properly digefted and modified, produces gold. Hence it tollews, if this etymology be admitted, that a Roficrucan philefopher is one who, by the intervention and af. fillance of the dew, feek for light, or, in other words, the fultance called the phitof pher's tone. The true meaning and energy of this denomination did nut efcape the peneration and fagacity of Gaffiendi, as appears by his Examen Philofophiz Fludiana, fect. 15. tom. iii. p. 261. And it was more fully explained by Renaudor, ia his Confirences Paligues, tom. iv. p. 87.

At the head of thefe fanatics were Robert Flndd, an Jinglith phyfician, Jacob Behmen, and Michael Mayer ; hut if rumnur may be credited, the prefent Illuminated have a head of higher rank. The common principics, which ferve as a kind of centre of union to the Roficrucian tocicty, are the following: They all mainrain, that the dilfolution of bodies, by the power of fire, is the orly way by which men can arrive at true wifdom, and come to difeern the firft principles of things. They all acknowledge a certain analogy and harmony between the powers of nature and the doctaines of religion; and believe that the Deity governs the kingdom of grise by the fame laws with which he rules the kingdom of nature; and hence they are led to ufe chemical denominations to exprefs the truths of religion. They all hold, that there is a fort of divine en ergy, or foul, dififurd through the frame of the univirie, which fome call the argheus, whers the univerfal fouizit, and which others mention under different appellations. Thoy all talk in the moft fuperftitious maner of whar they call the fignatures of things, of the power
of the furs over all corporeal beings, and their particular influence upon the human race, of the efficacy of magic, and the varions ranks and orders of demons. Thefe demons they divide into two ordcrs, fylphs and gnomes; which dupplied the beautiful machinery of P'ope's Rape of the Lock. In fine, the Roficrucians and all their fanatical defcendants agree in throwing out the moft crude incomprehentible notions and ideas, in the anoft obfcure, quaint, and unufual esprefions.-Mofh. Eccl. Hift. vol. iv. p. 266, \&c. Englih edition, Svo. Sce Rehmen and Theosophists.

\section*{ROSier. Sce Pllatre.}

Rosiers-aud-Saliafs, a town of France, in Lorraine, and in the bailiwick of Nancy, famous for its falt.works. The works that hing Staniflaus made here are much admired. It is feated on the tiver Muert, in E. Long. 6. 27 . N. Lat. 48. 32.

ROSKILD, formuily the royal 1 efidence and metropolis of Demmark, Itands at a fmall diftance from the Bay of lefiord, not far from Copenhagen. In its flourithing fate it was of great extent, and comprifed within its walls 27 churches, and as many cunvents.Its prefent circumference is fearcely half an Englifh mile, and it contains only about 1620 fouls. The houtes are of brick, and of a neat appearance. The only remains of its original magnincence are the ruins of a palace and of the cathedral, a brick building with two fpires, in which the kings of Denmark are interred. Little of the original building now remains. According to Holberg, it was conltructed of wood, and afterwards built with flone, in the reign of CanuteFrom an infcription in the choir, it appears to have been founded by Harold VI. who was flyled king of Denmark, England, and Norway. Some verfes, in barbirous Latin, obfcure!y allude to the principal incidents of his life; adding, that he built this charch, and died in 980 . -See Coxc's Travels into Poland, Rullia, Sweden, and Denmark, vol. ii. p. 525.

ROSLEY-hill, a village in Cumberland (England), with a fair on Whit-Monday, and every fontnight after till September 29. for horles, horned catile, and linen cloth.

ROSLIN, or Roskelyn, a place in the county of Mid Lothian in Scotland, remarkable for an ancient chapel and cafle. The chapel was founded in 1446 , by ot Clare, prince of Orkney, for a provoft, fix prebendaries, and two finging boys. The outfide is ornamented with a multitude of pinnacles, and variety of ludicrous fculpture. The infide is 69 fect long, the breadth 34 , lipported by two rows of cluftered pillars, between feren and eight feet high, with an antle on each fide. The arches are obtufely Gothic. Thefe arches are continued acrofs the fide-ailes, but the centic of the church is one continued arch, elegantiy divided into compartments, and finely ficulpiured. The capitals of the pillars are enriched with toliage, and a variety of figures ; and amidil a heavenly cuncert appears a cherubim blowing the ancient Izighland bagpipes. The calle is feated on a peninfulated rock, in a deep glen far beneath, and acceltible by a bridge of great height. This had been the feat of the great family of Sinchior. Of this houfe was Oliver, favourite of Jimes V. and the innocent caufe of the lofs of the butte of Solway Mofs, by reafon of the enyy of the nobility on account of his being preferred to the command.

Near

Near this place the Englifh received threc defeats

Ronitr, Rofmarinus. in one day under John de Segrave the Englifh regent of Scotland in 1302 . The Scots, under their generals Cummin and Frafer, had refolved to furprife Segrave; with which view they began their march on the night of Saturday preceding the firf Sunday of Lent, and seached the Englifi army by breat of day. Segrave, however, had time to have fallen back upon the other divifion which lay behind him; but, either defpifing his enemies tuo much, or thinking that he would be difhonoured by a retreat, he encountered the Scots; the confeguence of which was, that he himfelf was made prifoner, and all his men either killed or taken, except fuch as fled to the other divifion. As in this routed divifion there had been no fewer than 300 knights, each of whom brought at leaft five horfemen into the field, great part of the Scots infantry quickly furnithed themielves with their horfes; but, as they were dividing the fpoils, another divifion of the Englifh appeared, and the Sco:s were obliged to figlit thens alfo. The Englifh, after a bloody engagement, were defeated a fecond tume; which was no fooner done, than the third and moft powerful divifion made its appearance. The Scots were now quite exhaulted; and, pleading the exceffive labours they had already undergone, earneftly requefted their generals to allow them to retreat while it was yet in their power. Their two generals, who perhaps knew that to be impracticable, reminded them of the caufe for which they were fighting, the tyranny of the Englifh, Sc. and by thefe arguments prevailed upon them to fight a third time; though, previous to the engagcment, they were reduced to the cruel neceffity of putting ail the common fuldiers whom they had made prifoners to the fiword. The vistory of the Scots at this time was lefs complete than the other two had been; fince they could not frevent the retreat of the Euglifh 10 Edinhurgh, nor Segrave from being refcued from his captivity.

ROSMARINES, ROSEMARY, in botary: A genus of the monogynia neder, belonging to the dimdia clafs of plants, and in the tatural mehod ranking under the 42 d order, Verticillate. The corolla is uriequal, with its upper ip bipartite ; the filaments are long, curved, and fimple, each having a fmall dent. There are two specizs, the anguflifolis and latiolia, or marrow and broad leaved rufemary; of which the fecond has larger. flowers and a fronger feent than the other. There are 1 wo varieties; one of the firt fort with Atriped leaves, called the filver rofemary; and the other with yellow, whence it is called the goddefriped refemary. Thice plants grow taturally in the iouthern parts of France, Spain, and Italy; where, upon dry rocky foils near the fea, they thrive prodigioufly, and perfume the air in fuch a manner as to be fimelt at a great diltance from the land.However, they are ha:dy enough to bear the cold of our ordinary winters, pravided they be planted upm a poor, dry, gravclly joil, on which they will endure the cold much better than in a richer ground, where, growing more vignoofly in fummer, they are more apt to be injured by fruft in wister; nor will they have fuch a frong aromatic fient as thofe on a dry and barren foil. They are to be propayated either ly flips or cuttings.

Rofemary bas a fragrant fm. Il, and a warm pungent bitterife tafle, approaching to thofe of lavender: the leaves and tender tops are frongert; next to thefe, the
cup of the flower; the flowers themfelves are confiderably the weakell, but moft pleafan:. Aqueous liquors

Rofs. extract great fhare of the tirtues of rofenary leaves by infution, and elevate them in uiffillation; along with the water arifes a confiderable quantity of effential oil, of an agrecable flrong penetrating fmell. Pure fpirit extrats in great perfection the whole aromatic flavour of the rofemary, and elevates very little of it in difillation; hence the refinous mafs, left upon extracting the fpirit, proves an elegant aromatic, very rich in the peculiar qualities of the plant. The flowers of rofemary give over great part of their flavour in ditil. lation with pure ipirit; by watery liquers, their fragrance is much injured; by beating, deftroyed.

ROSS, in Herefordfhire, in England, iig miles from London, is a fine old town, with a good trads, on the river Wye. It was made a free borough by Henry III. It is a populous place, famous for cyder, and was noted in Camden's time for 2 manufacture of iron-wares. There are in it two charit-fchools, which lately have been enriched by a legacy of 2021 . per annum, from Mr Scott, in Dec. 1786, a fecond Man of Rofs. And its market and fairs are well fored with catte and other provilions. At the welt end of it there is a fine broad caufeway, contructed by Mr. John Kyrle, the celeb:ated Man of Rofs, who alfo raifed the fpire upward of 100 feet, and inclofed a piece of ground with a flone wall, and funk a refervoir in its centre, for the ufe of the inhabitants of the town. He died in 1714, aged 90 , with the bleffing of all who knew him, both rich and poor. 'There cannot be a pleafanter country than the banks of the \(W_{y e}\), between this town and Monmouth. W. Long. 2. 25. N. Lat. 5 I. 56.

Ross, a county of Scotland, including Tayne and Cromarty, ftetching 80 miles in length, and 78 in breadth, is bounded on the weft by the wettern fea, and part of the ifle of Sky; by Invemefs, on the fouth; Strathnavern and Sutherliand, on the north and northeaft ; and by C:omarty and the Murray-Frith on the eaf. 'l'ayne includes the greater part of Rofs, with the illes of Sky, Lewis, and Harries. Cromarty lies on the other lide of the Murray-Frith, to the nerthward of Invernefs, extending but 12 miles in length, bounded on the fouth and ealt by part of Rofs and the Frith of Murray, and by the Frith of Cromarty on the north. The flire of Rofs takes up the whole breadth of the illand; and being much indented with bays and inle:s from both feas, appears of a very irregular form. Thefe bays aftord fafe hat bours for thipping, cfpecially that of Cromarty, which is cap.cious enough to contain all the Beets of Europe, being land-locked on every fide, and is in all relpects one of the beft harbours in the known world. The Frith of Tayne, on the call ficic of the thire, suns up 25 m les from the fea, as far as the Cape Tarbat, dividing Rofs from Sutherland: it is about ficen miles broat at the meuth, but, on account of quick-fands, unfafe for navigation. The country of Rofs is encumbercd with huge mountains, on which the fnow lies for the greatelt part of the year ; thefe, however, yicld gond palture ; but on the caftern fide, next the German ocean, the ceun'ry acmits of agriculture, and produces good crops of eorm. The valleys are fertilized by feveral rivers, among "hich we reckon the Okel, the Charron, and the Braan; befides a number of frefb-water lataes, which indeed are
found.
* 10. ( It in. - - -
f 1.2 d 1 . ever! part of the country. The ralleys, or dobrandini, from whom the Borgheli inherited it. So thatis, are geuethiy covered with wood; and near Al- late as the thth century, the inhabitants of this city 1 ratg there are fusc!ls of fir 15 or 20 niles in length, vicll livihed with decr and ganme of all forts. Great tumbers ot black cattle, horlis, meep, and goats, are led upen the mounians; and the fea, rivers, and lakes, teem with titis and fowl. The fochs on the weftern coatt abound with herrings in the leaton, particularly loneh E.u, about rine miles long, and three in breadth; one part of this is formed by a bay, or inlet of the fea; and the cther is a lake of frefh water. The fides of it : re covered with wood, where formelly abundance of iron was fmelted. Though the middle part of Rofs, called Ardrefs, is mountainous and fcarce inhabited, the north eaft parts on the rivess Okel, Charron, and Frith of Tayne, are fruitful, and abound with villages. Coygach and Afsgut, two northenly ditriets, are bare and hiliy; yet they abound with deer and black cattle ; and we fee feveral good houfes towards the coalt, where there are allo promontories, and burge rocks of marblc. Ardmeanach, part of the peninfula betwixt the bays of Cromarty and Nurray, is a barony, which of old betloued a title on the king of Scotland's fecond fon. l"he diftrict of Glen-elchig, on the fouthweft, was the paternal eftate of the earl of Seaforth, chief of the clan of Mackenzie: but the laft earl of that name, having riftn in rebellion, was in the year 1719 defeated at Glenthel, in this very quarter, together with a fmall body of Spaniards by whom he had been joined. His auxiliaries were taken; and though he limfelf, with fome of his friends, efcaped to the continent, his eftate and lonours were forfeited. At the fame time, the king's troops, who obtained this victory, difmantled the caftle of Yion-donnen, fituated on an ifland in a bay that fronts the ifle of Sky. It belonged to the crown; but the office of heredicary governor was velted in the earl of Seaforth, and here he had erected his magazine. Rots is cbiefly peopled by the Mackenzies and Frafers, iwo warlike clans, who fpeak Lirfe, and live in the Highland fathion. There are fitheries carried on along the coalt ; but their chief traffic is with fheep and back cattle. The chief towns of Rofs are Channerie, Dingwall, 'layne, and Fortrofe.

ROSSANO, a ftrong town of 1 taly, in the kingdom of Naples, and in the Hither Callıbria, with an archbifloop's lee, and the title of a principality. It is pretty large, well pcopled, and feated on an eminence furrounded with rocks. "There is nothing in this archiepifcopal city that claims much notice; the buildings are mean, the ftrects vilely paved and contrived. The number of inhabitants does not exceed 6000, who fublift by the fale of their oil, the principal objed of their attention, though the tertitory produces a greal deal of grod wine and corn.

Rollano probably owes its origin to the Roman em. perors, who confidered it as a peit equally valuable for flrength and convelience of traflic. The Marlans, a family of French extraction, polfeffed this territory, with the litle of prince, from the time of Charles II. to thatt of Alphonfus II. when the laft male heir was, by that prince's order. put to death in Ifchia, where he wit confined for treafon. It afterwards belonged to Bond, queen of loland, in right or her mother labella, datghter to Alphonifus II. and at her deceafe returned to the crown. It was next in the puffeflion of the Al.
fpoke the Greck langurge, and followed the rites of the eattern church. Here was formerly the molt celchrated sendezvous of the Bafilian monks in Magna Grecia. E. Long. 16. 52. N. Lat 39. 45.

ROS-solus, Sur-diew, an agreeable ffirituous liquor, compofed of burnt brandy, fugar, cimnamon, and milkwater; and fometimes perfumed with a little mufk. It has its nume from being at firt prepared wholly of the juice of the plant ros folis, or drofera. See Drosera.

ROS'POCK, a town of Germany, in the circle of Upper Saxony, and duchy of Mecklinburg, with an Dniverfity and a very good harbour. It is the beft town in this country; and has good fortifications, with an arfenal. The duke has a ftrong cafte, which may be looked upon as a citadel. It is divided into three parts, the Old, the New, and the Middle Towns. It was formerly one of the Hamfeatic cowns, and is ftill Imperial, under the protection of the dake of Mecklenburg. It is feated on a lake where the river Varne falls into it, and carries large boats. The government is in the hands of 24 aldermen, elected out of the nobility, univerfity, and principal merchants; four of whom are burgomafters, two chamberlains, two fewards for the river, and two judges of civil and criminal matters. Thefe 24 are called the Upper Houfe, and have in a manner the whole executive power lodged in them, with the power of coining money, and electing officers. There is alfo a common council of 100 inferior citizens, who are fummoned to give their advice upon extraordinary emergencies relating to the whole community. 'The principal things worth feeing are the fortifications, the prince's palace, the ftadthoufe, the arfenal, and the public library. The town is famous for good beer, which they export in great quantities. Some years ago they had no lef́s than 250 privileged brewers, who, it is faid, brewed fo many thoufand tuns a year, befides what particular perfons brew for their own ufe. E. Long. 12. 55 . N. Lat. 54. 8.

ROSTOFF, or Rostow, a large town of the Ruffian empire, and capital of a territory of the fame name, with an archbifhop's fee, feated on the lake Coteri, in E. Long. 40. 25. N. Lat. 57. 5. The duchy of Roftoff is bounded on the north by Jaronlow, on the ealt by Sutdal, on the fouth by the duchy of Mofcow, and on the weft by that of Tucre.

ROS'IRA, in antiquity, a part of the Roman forum, wherein orations, pleadings, funeral harangues, \$c. were delivered.

ROSTRUM, literally denntes the beak or bill of a bird; and hence it has been figuratively applied to the beak or head of a thip.

ROSYCRUClans. Sce Rosicrucians.
ROT, a very fatal difafe incident to theep, arifing from wet feafons, and ton moin pafture. It is very difficult of cure, and is attended with the fingular circumfance of a kind of animals being found in the bl od-veifels. Sec Ovis and Sheep.

RO [ \(A\), the name of an ecclefiaftical court of Rome, compe fed of 12 prelates, of whom one mult be a German, another a Irenchman, and two Spaniards; the - ther cight are Italians, three of whom mult be Roman, and the orber five a Bolognefe, a Ferraran, a Midanele, a Venctian, and a 'lufean.-This is one of

ROTACE \({ }^{-1}\) (from rota, "a wheel"), the name of the 20th order in Linnxus's Fragments of a Natural Method; confifting of plants with one flat, wheel-fhaped petal, without a tube. See Воtany, p. 46 I.

ROTALA, in botany; a genus of the monogynia order, belonging to the triandria clafs of plants. The calyx is tridentate; there is no corolla; the capfule is trilocular and polyipermous.

ROTANG. See Calamus.
inition
Definition and im. terefting nature of the fubject. motion of the different parts of a folid body round an axis, and diftinct from the progreflive motion which it may have in its revolution round a diffant point. The earth has a rotation round its axis, which produces the viciffitudes of day and night ; while its revolution round the fun, combined with the obliquity of the equator, produces the varieties of fummer and winter.

The mechanifm of this kind of motion, or the relation which fubfifts between the intenfity of the moving forces, modified as it may be by the manner of application, and the velocity of rotation, is highly interefting, both to the fpeculative philofopher and to the practical engineer. The preceffin of the equinoxes, and many other aftronomical problems of great importance and difficulty, receive their folutions from this quarter: and the adual performance of our moft valuable machines cannot be alcertained by the mere principles of equilibrium, but require a previous acquaintance with certain general propofitions of rotatory motion.

It is chiefly with the view of affiling the engineer that we propofe to deliver in this place a few fundamental propofitions; and we fhall do it in as familiar and popular a manner as poflible, although this may caufe the application of them to the abltrufe problems of aftronomy to be greatly deficient in the elegance of which they arc fufceptible.

When a folid body turns round an axis, retaining its fhape and dimenfions, every particle is actually defribing a circle round this axis, and the axis paffes through the centre of the circle, and is perpendicular to its plane. Moreover, in any inflant of the motion, the particle is moving at right angles with the radius vector, or line j lining it with its centre of rotation. Therefore, in order to difertain the direction of the motion of any from the particle perpendicular to the axis \(A B\) of ro- tation. This line will lie in the plane of the circle \(\mathrm{P} m\) n of rotation of the particle, and will be its radius vechor ; and a line \(P Q\) drawn from the particle perpendicular to this radius vector will be a tangent to the circle of rotation, and will have the direction of the motion of this particle.

The whole body being fuppofed to turn together, it is evident, that when it has made a complete rotation, cach p.article has defcribed a circumference of a circle, and the whole paths of the different particles will bc in the ratio of thefe circumferenccs, and therefore of their radii ; and this is true of any portion of a whole turn, fuch as \(\frac{1}{2}, \frac{1}{4}\), or 20 degrees, or any arch whatever; therefore the velocities of the diferent particles are proportional to their radii vestores, or to their diftanices from the axis of rotaticns,

And, laftly all thefe motions are in parallel plares, Rotation to which the axis of rotation is perpendicular.

When we compare the rotations of different bodies Hows the in refpect of velocity, it is plain that it cannot be done rotazion of by directly comparing the velocity of any particle in one of the bodies with that of any particle of the other; for, as all the particles of each have different velocities, different this comparifon can eflablith no ratio. But we fami- may be liarly compare fuch motions by the number of complete com pared. turns which they make in equal times, and we fay that the fecond hand of a clock turns 60 times fafter than the minute hand; now this comparifon is equally juft in any part of a turn as in the whole. While the minute hand moves round one degree, the fecond-hand moves 60 ; therefore, as the length or number of feet in the line uniformly defcribed by a body in its progref: five motion in a proper meafure of its progrefive velocity, fo the number of degrees defcribed by any particle of a whirling body in the circumference of its circle of rotation, or the angle defcribed by any radius vector of that body, is a proper meafure of its velocity of rota. tion. And in this manner may the rotation of two bodies be compared; and the velocity is with propriety termed angular velocits:

An angle is directly as the length of the circumference on which it ftands, and inverfely as the radius of the circle, and may be expreffed by the fraction of which the numerator is the arch, and the denominator the radius. Thus the angle PC \(p\) may be expreflied by \(\frac{\mathrm{P} p}{\mathrm{PC}}\). This fraction exprefles the portion of the radius which is equal to the arch which meafures the angle ; and it is converted into the ufual denomination of degrees, by knowing that one degree, or the \(360 t h\) patt of the circumference, is \(\frac{1}{57,296}\) of the radius, or that an arch of \(57,2 y^{6}\) degrees is equal to the radins.
When a folid body receives an impulfe on any one Efeas, \({ }^{7}\) er point, or when that point is anyhow urged by a moving force, it cannot move without the other points alfo moving. And whatever is the motion of any particle, that particle mult be conceived as urged by a torce precifely on each competent to the production of that motion, by acting other. immediately on the particle itfelf. If this is not the bouring particles, or is drawn away from them; and, particles are made to exert their forces; and this gocs are excited, and the particles moved. We ficquently the body to the diffant particle; but this is not accurate. The particle is really and immediately moved by

\(\underbrace{\text { Ronrion. will greatiy allit nur cmnception of the manner in which }}\) mution is ih ss produced in a diffant particle, if we confider the partictes as fin many litele balis, connected with e.vel owher ly fiender fupial iprings like cork-ficrews. This womld comp for a mats which would he compref. fith, or which could be fretehed, \&c. And if we give an impulfe to one of there balls, we fhall fet the whole afem lase in :n tinn round any axis which we may inipofe to tuppore it. Now any one of thefe balls is rectly ind imimediarely movel by the elaticity of the

We are but little aequinted with the nature of thefe corn giane forces. It can be learned only by the phenomena which are their effect . 'Thefe are various, almor besand defeription; but the mechanieal philofopher has little t du with this varicty. The dithinctions which are the immediate caufes of Aluidity, of hardnefs, foftne's, elallicity, duaility, are not of very difficult coneeption. There is one general Sact which is fufficient ficr our prefent purpofe-the forces by which the particles of bodies act on each other are equal. This is a mitter of unexcepted expericnce; and no other foundatiun can be given to it as a law of mechanical nature.

An immediate confequence of this law is, that when two external forces \(A\) and \(B\) are in equilibrium by the intervention of a folid body (or rather when a folid body is in equilibrium between two external forces), thefe forces are equil and oppofite; for the force \(A\) is in fat in immediate equilibrium with the oppofite forces exerted by the particles tn which it is applied, and is therefere equal and oppofite to the force refulting from the combination of all the forces which connect that particle with the feries of particles immediately adjoining. This refulting force may with propriety be called the equivalent of the forces from the combination of which it refults. The ufe of this term will greatly ab. breviate language. This fin ft fet of connedting forces confits of a number of diftinet furces correfponding to each particle of the feries, and cach force has an equal and oppofite furce correfponding to it : therefore the compound frise by which the firft feries of particles ats on that to which the external force \(A\) is applied, is equal and opppifite to the comp und force which conneets this firll feries with the next feries. And the firme thing mulk be faill of each fucceeding feries of particles, till we come at lat to the particle to which the ext, rual force B i, immediately applied. The force cxe: ted by this purticle is equal and npporite to that external furce; and it is equal to the compound force exerved by the fecond feries of particles on that fide ; therefore the forees \(A\) and \(B\) are equal and oppofite.

It refults frum this propofition, that abhen any number of external forics are app'iect to a folid body, and it is in aquilit io leanven them. Wey are fuch as zonuld be in equiLu! ri if hey avere all aiplied to one print. Let the forces aA, bH. \(c \mathrm{C}\), (fig. 2.1 , be appled to three particles of the hilid body. Theretore \(a A\) is immediately in equilbrinm wirh an equal and nplp fite furce \(A \alpha\), refulting from the compolition of the force AD, which crnmes the particles \(A\) and 1 , and the force \(A\) : which ernnee? A with C . In like manner \(b l\) is immedi, tely in cquilibrin with \(B \beta\), the equivalent of the furce, \(B F\) and \(B G\); and \(c C\) is in immediate equilibrio
with the equivalent \(\mathrm{C} x\) of the forces CH and CI . We thall conceive it very cleally if we fuppofe the three forces \(\mathrm{A} a, \mathrm{~B} b, \mathrm{C} c\), to be exerted by means of threads pulling at the folid body. The connecting parts between \(\Lambda\) and \(I\), as allo between \(A\) and \(C\), are ftretched. The lines \(A B\) and \(A C\) nay be contidered as elaftic threads. Each thread is equally Aretched throngh its whele length; and therefore if we take AD to reprefent the force with which the particle \(A\) is held back by the particle \(B\), and if we would alfo reprefent the force with which \(B\) is held back by \(A\), we mutt make BF equal to AD. Now ( \(n^{\circ} 9\). ) the torces \(A 1\) ) and IJF are equal and oppofite ; fo are the forces AE and Cl ; fo are the forces CH and BG. Now it is evident, that if the fix forces \(\mathrm{AD}, \mathrm{BF}, \mathrm{BG}, \mathrm{CH}, \mathrm{CI}\). AE, were applied to one particle, the particle would be in equilibrio; for each force is accompunied by an equal and oppofite force: and if the force \(A \propto\) were applied in place of \(A D, A F\), the equilibrium would renaain, becaufe \(A \neq\) is equivalent to \(A D\) and \(A E\). The fame is true of \(\mathrm{D} \beta\) and \(\mathrm{C} x\). Therefore if the three forces \(A \propto, B \beta, C x\), were applied to one point, they would be in equilibrio. Confequently if the three forces \(a \mathrm{~A}, b \mathrm{~B}, \mathrm{C} c\), which are refpectively equal and oppofite to \(A_{\alpha}, B \beta, C R\), are fo applied, they will be in equilibrio. It is plain that this dementtratfon may be extended to any number of forses.

We may jult remark by the bye, that if three forces are thus in equilibrio, they are acting in one plane; and, if they are not farallel, they are really directed to one point: for any one of them muft be equal and oppnfite to the equivalent of the other two; and this equivalent is the diagon.l of a parallelogram, of which the other two are the fides, and the diagonal and fides of any parallelogram are in one plane; and fince they are in one plane, and any one of them is in equilibrio with the equivalent of the other two, it mult pafs thro' the fame point with that equivalent, that is, through the print of concourfe of the other two.

Thefe very fimple propofitions are the foundation of the whole theory of fatics, and render it a very fimple branch of mechanical fcience. It has been made abArufe by our very attempts to fimplify it. Many eiaborate treatifes have been written on the fundamental property of the lever, and in them all it has been thought next to an infuperable difficulty to demonftrate the equilibrium of a flraight lever when the parallel forces are inverfely as their diftances from the fulcrum.

We think the demonfrations of Archimedes, Fonfenex, D'Alembert, and Hamilton, extremely ingenious; but they only bring the mind into fuch a ftate of coneeption that it cannot refufe the truth of the propolition; and, except Mr Hamilton's, they labour under the difadvantage of being applicable only to commenfurable diftances and forces. Mr Vince's, in the PhiInfophical Tranfactions for 1,04 , is the mon ingenious of them all; and it is wonderful that it has not occured long ago. The difficulty in them all has ariten from the attempt to fimplify the matter by confidening a lever as an intexible fraight line. Had it been taken ont of this abifract form, and confidered as what it really is, a natural body, of fome fize, having its particles connefted hy equal and oppofite forces, all difficulty would have vanithed.

II Mechanical ferense has been rendered ahlitufe by attempts at finplificafimplit.

\section*{R O T}

Rotation 12 Mode of couceiving any motion is eq̧ual and oppofite to the force which
the magni- would prevent it, when applied in the fame place and in the magni- would prevent it, when applied in the fame place and in tude of any the fame line, or which would extinguith it in the fame
moving time in which we fuppofe it to be produced. Theremoviug force. the fame line, or which would extinguith it in the fame
time in which we fuppofe it to be produced. Therefore the foice which is excited and made to att on any particle of a body, by the ation of an external force en another particle, fo as to caufe it to move round an axis, is equal and oppofite to the force which, when applied to that particle in the oppofite direction, would be in equilibrio with the external force. The only diftinet nution we can form of the magnitude of any moving force is the quantity of motion tude of any moving force is the quantity of motion
which it can produce by acting unifirmly during fome given time. This will be bad by knowing the velocity
which it will produce in a body of known bulk. Thus given time. This will be had by knowing the velocity
which it will produce in a body of known bulk. Thus we know that the weight of ten pounds of matter act-
ing on it for a fecond will caufe it to fall 16 feet with we know that the weight of ten pounds of matter att-
ing on it for a fecond will caufe it to fall 16 feet with an uniformly accelerated motion, and will leave it in a fate fuch that it would move on for ever at the rate of
32 feet in a fecond; which we call communicating the fate fuch that it would move on for ever at the rate of
32 feet in a fecond; which we call communicating the velocitv of 32 feet per fecond. In the fame manner, the beft way of acquiring a difting conception of the rotatory effort of a moving force, is to determine the quantity of rotatory motion which it can produce by 14 acting uniformly during fome known time. And of the Let a folid body turn round an axis pafling through quantity and effure of rotatory motions.

That we may apply thefe propofitions to explain the motion of rotation, we snuft recollect an unqueftionable propofition in dynamics, that the force which produces the point \(C\) (fig. 3.) perpendicular to the plane of this figure: Let this rotation be fuppofed to be produced by an external force acting in the direction FP. Let this force be fuch, that if the body were free, that is, unconnected with any axis fupported by fixed points, it would, by acting uniformly during a fmall moment of time, caufe its centre of gravity \(G(A)\) to defcribe a line of a certain length parallel to FP . This we know to be the effect of a moving force atting on any folid body in free fpace. The centre of gravity will always defcribe a ftraight line. Other particles may chance to move differently, if the body, befides its progreffive motion, has alfo a motion of rotation, as is generally the cafe. Draw GI parallel in FP, and make GI to GC as the velocity which the external force would communicate to the centre of the body (if moving freely, unconnected with a fupported axis), to the velocity which it communicates to it in the fame time round the axis Vol. XVI.

Ce. Alfo let \(m\) be the number of equal particles, or the quantity of matter in the body. Then m.GI will exprefs the quantity of motion produced by this force and is a proper meafurc of it as a moving force ; for GI is twice the face defcribed during the given time with an uniformly accelerated motion.

But fince the body cannot move any way but round the axis paffing through \(C\), the centre \(G\) will begin to move with the velocity, and in the dire?tion, GH perpendicular to the line CG ( \(n^{\circ} 2\). ) And any particle \(A\) can only move in the direction \(A \mathrm{~L}\), perpendicnlar to CA. Moreover, the velocities of the different particles are as their radii vectores; and CG is actually equal to the line GH, which expretfes the velocity of a particla in C. Therefore \(C A\) will in like manner exprefs the velocity of the particle \(A\). If \(A\) exprefs its quantity of matter, \(A \cdot C A\) will exprefs its quantity of motion, and will reprefent the force which would produce it by acting uniformly during the moment of time.

We exprefled the external moping force by m.GI. part of it is employed in exciting the force \(A \cdot C A\), which urges the particle \(A\). In order to difcover what part of the external force is necelfary for this purpofe, draw CP perpendicular to FP. The preceding obfervations fhow us, that the force wanted at \(A\) is equal to the force which, when applied at P in the direction FP, would balance the force \(A \cdot C A\) applied to \(A\) in the direction LA. Therefore (by the property of the lever ACP, which is impelled at right angles at \(A\) and P) we mult have CP to \(C A\) as the force \(A \cdot C A\) to the balancing preffure, which mult be exerted at \(P\), or at any point in the line FP. This preffure is therefore \(\frac{A \cdot C A \cdot C A}{C P}\) or \(\frac{A \cdot C A^{2}}{C P}\).

As we look \(m\). GI for the meafure of the whole external force, GI being the velocity which it would communicate to the whole body moving in free fpace, we may take \(G\) i for the velocity which would be communicated to the whole body by the preffure \(\frac{A \cdot C A^{2}}{C P}\) and then this preffure will be properly expreffed by mGi. In like manner m.it may exprefs the portion of the external force employed in communicating to another particle B the motion which it acquires; and fo on with refpect to all the particles of the body.

It mult be defirable to fee the manner in which the 3 S
forces

Rotcitina.
\(\underbrace{\text { Rotctina. }}\)

\section*{R O T \\ [ 506 ] \\ R O T}

Rosation.
forces are really corcerncd in giving motion to the different particles.
Suppule the esternal force to at immediately on the external particle \(\Gamma\). The line FC connecting this pasticle with the axis in C is either feretched or comprel?ed by the effort of giving motion to a remote particle A. It is phain that, in the cireumfances reprefented in the figure, the line FC is compreffed, and the axis is puthed by it againit its fupports in the diretion Cx : and the body mult, on this ac. count. refilt in the oppolite directinn \(E \rho\). The particle -1 is dragged nut of its polition, and made to begin its motion in th:e direstion AL perpendicular to AC. 'This cammot be, unlets by the connection of the twolin.: AC, AF. \(A\) refifts by its inertia, and therefire both \(A C\) and AF are liretched by dragging it into motion. By this refittance the line AC tends to contract itfelf again, and it pulls C in the direation \(\mathrm{C} c\), and A in the direction \(\mathrm{A} a\); and if we take \(\mathrm{C}_{6}\) to reprefent the action on \(\mathrm{C}, \mathrm{A} a\) mun be taken equal to it. in like manner AF is fretched and tends to contrant, puiling F in the direation F © and A in the direstion \(A \propto\) with equal forccs. Thus the particle \(A\) is pulled in the directions \(\mathrm{A} a\) and \(\mathrm{A} \alpha\); the purticle F is pulled in the direstion F s, and puhad in the direction Ff ; and C is pulled in the direction \(\mathrm{C} c\), and pulhed ia whe direction \(C x\). A \(a\) and Aa have produced their equivalent AI ., by which A is dragred into motion: \(\mathrm{F}_{f}\) and \(F\) o produce their equivalent \(F_{g}\) by which the ex ternal force is refifted, and \(\mathrm{F} g\) is equal and oppofte io \(m, G i\); the forces \(\mathrm{C}_{6}\) and \(\mathrm{C} *\) produce their equivalent C \(d\) hy which the axis is preffed on its fupports, and this is refirted by an equal and oppofite reaction of the fupports in the dircetion \(d \mathrm{C}\). The forces therefore which excite in the body the motion A.AL are both external, viz. the impelling force \(g F\), and the fupporting foree \(d \mathrm{C}\). A , therefore is not only the immediate equivalert of \(A_{z}\) and \(A_{z}\), but alfo the remote equivalent of \(s \mathrm{~F}\) and \(d \mathrm{C}\). We may thee efore afertain the proporton of \(g \mathrm{~F}\) (that is, of \(m . \mathrm{G} i\) ) to AL (that is, of A.AC), mdependent of the propetty of the lever. gF is to \(A L\) in the ratio compounded of the ratios of \(g \mathrm{~F}\) to \(\mathrm{F}_{\phi}\) or \(A \alpha\), and of \(A \neq\) to AL. But we thall wetain it more eatily by confilering \(g \mathrm{~F}\) as the equivalent of AL and \(d \mathrm{C}\). Wy what has been demonftrated above, the directions, of the three forces \(g \mathrm{~F}, \mathrm{AL}\), and \(d \mathrm{C}\) mult meet in one point \(E\), and \(g \mathrm{~F}\) muft be equal to the diagonal \(t \mathrm{E}\) of the parallelogram E et , of which the fides \(\mathrm{E}, \mathrm{e}\). Eis are refpetively equal to AL and \(d \mathrm{C}\). Now \(t\) li is to lie as the fine of the angle \(t e\) E to the fine of the angle \(\mathrm{E}, \mathrm{te}\), that is, as the hive of CE \(\Lambda\) to the fine of CEL', that is, as C.A to CP, as we have already demonatrated by the property of the lever. We preferred that demonftration as the thortett, and as abundantly fimiliar, and as congenial with the gencral mechanim of rotatory anotions. And the inteiligent rader will ob-
five, that this other demonfration is nothing but the demonlitation by the lever expanded into its own clements. Having once made all our readers fentible of this internal procefs of the excitement and operation of the forces which connect the particles, we fhall not again have recourfe to it.

It is cvident that the fum of all the forces \(g \mathrm{~F}\), or \(m\). (ri, muf be equal to the whole moving force \(m\). GI. that \(m\). P \(p\) may be \(=m\). GI. That is, we mult have \(m \cdot G I=\int \frac{A \cdot C A^{2}}{C P}\); or, becaufe \(C P\) is given when the poftion of the line FP is given, we mult have \(m\). GI \(=\frac{\int A \cdot C A^{2}}{C P}\), where both \(A\) and \(C A\) are variable quantities.

This equation gives us \(m . G I \cdot C P=\int A \cdot C A^{2}\). Now we lean in mechanics that the energy of any force applied to a lever, or its power of producing a motion round the fulcrum, in ofpofition to any refillance whatcver, is exprefled by the product of the force by the perpendicular drawn from the fulcrum on the line of its direction. Therefore we may call \(m\). Gl.CP the momentum (в), energy, or rotatory effort, of the force \(m\). GI. And in like manner \(\int\) A.CA \({ }^{2}\) is the fum of the momerita of all the particles of the body in actual rotation; and as this rotation required the momentum \(m\). GI.CP to produce it, this momentum balances, and therefore may exprefs the energy of all the refiltances made by the inertia of the particles to this motion of rotation. Or / A.CA \({ }^{2}\) may exprefs it. Or, take \(p\) to reprefent the quantity of matter in any particle, and \(r\) to reprefent its radius vector, or diftance from the axis of rotation, \(/ \hat{p} \cdot r^{2}\) will exprets the momentum of inertia, and the equilibrium between the momentum of the external force \(m\). GI, acting in the direction FP, and the combined momenta of the inertia of all the particles of the whirling body, is exprefied by the equation \(2 \cdot \mathrm{GI} \cdot \mathrm{CP}=f \mathrm{~A} \cdot \mathrm{CA}^{2},=\) \(\int p r^{2}\). The ufu.l way of fuclying elementary mechanics gives us the habit of affociating the word equilitrium with a Aate of reft ; and this has made our knowledge fo imperfect. But there is the fame equilibrium of the actual immediate preffures when motion enfues from the aftion. When a weight \(A\) defcending raifes a fmaller weight B by means of a thread paffing over a pulley, the thre:ad is equally Itretched between the acting andrefifting weights. The flrain on this thread is undoubtedly the immediate moving force acting on \(\mathcal{B}\), and the immediate relifting force acting on A .
The fame equation gives us \(\mathrm{GI}=\frac{\int p \cdot r^{2}}{m \cdot \mathrm{CP}}\).
Now GI: \(\mathrm{CG}=\frac{\int p}{m} \cdot \frac{r^{2}}{\mathrm{CP}}: \mathrm{CG},=\int p \cdot r^{2}: m \cdot \mathrm{CP}\)
CG; but CG reprefents the velocity of the centreHeace we dorive this fundamental propofition \(\int P \cdot r^{2}\)
(B) The w.rd momeratum is very carcl. fisly ufed by our mech nical writers. It is fregucmely employed to exprefs the produe of the quantit) of matter and velocity, that \(i\), the quantity of motion; and it is alfo uled (with Hrise Ir pricty of language) to exprefs the pawer, energy, or efficacy of a force to proluce motion in the circumItanees in which it aeds. We with to confrae it to this ufe alone. Sir Ifalac Newton adhered rigidly to this cmelaymert of the torm (indeed no man cxcects him in precifion of exprefion), even when he ufed it to exIfts the chnatiry of motion: fir in thefe inffances the energy of this quantity of motion, as modified by the circtumfances of its action, "as atways in the ratio of the quantity of motion.

Rotation. : \(m \cdot \mathrm{CP} \cdot \mathrm{CG}=\mathrm{GI}: \mathrm{CG}\); or, that \(\int \cdot p \cdot r^{2}\) is tom. CP. CG as the velocity of the body moving frecly 10. the velocity of the centre of gravity round Hae axis of rotation. plied at the disface CP in the one body, and \(p\) in the other; now the angular velocities \(\frac{m \cdot G[\cdot C P}{\int P r^{2}}\) and \(\frac{m \cdot g \cdot C P}{\int P p^{2}}\) are equal by fuppo. fition. Therefore \(m\). GI: \(m\). \(\gamma=\int \rho r^{2}: \int p p^{2}\).

As in the commurication of motion to bodics in frce fpace a giren force always produces the lime quantity of motion; fo in the communication of mution to bodies obliged to turn round axes, a given force, applied at a given difance from the axes, always produces the fame quantity of momentum. Whence it may eafily be deduced (and we thall do it alierwards), that as in the comnanication of motion among free bodies the fame quantity of motion is preferved, fo in the communica-
twn of motion among whirling bodies the fame quan
Rnarinnt. tity of whirling motion is preterved.

This is a propofition of the utmot importanee in practical mechanics, and may indeed be conlidered as the lundamental propofition with refpect to all machines of the rotatosy kind when performing vork; that is. of all machines which derive their cficaty from lever, or wheels. There is a valuable fet of experiments by Mr Smeaton in the Philoft.phical Tranfations, Vo. lume LXVI. which tully confirn it. We lhall give an example by and by of the utility of the propofition, fhowing how exceedingly imperfed the ufual theories of mechanics are which do not proceed on this principle.

With refpect to the geneal propolition from which all thefe deductions have been made, we muft obferve, that the demonftration is not reftrifed to the time neceffary fur caufing each particle todofcribe an arch equal to the radius vector. W'c alfumed the radius veetor as the mealure of the velocity merely to limplify the notation. Both the progreflive motion of the free body and the rotation of the whirling body are uniformly accelerated when we fuppofe the external force to act uniformly during any time whatever; and the fpaces deforibed by each motion in the lame time are in a conftart ratio. The formulx may therefore with equal propricty reprefent the momentary accelerations in the different cafes.

It muft alfo be obfersed, that it is not neceffary io fuppofe that all the particles of the body are in one plame, and that the moving force acts in a line IP ly. ing alfo in this plane. This was tacitly allowed, merely to make the prefent inveltigation (which is addreffed chiefy to the practical mechanic) more familiar and caly. The equilibrium between the force \(A \times C A\), which is inmediately urging the p.rticle \(A\), and the force m. Gi employed at Por F, in order to excite that force at \(A\) would have been precifely the fanse allhough the lines AC and \(\Gamma P\) had been in different planes, provided only that there planes were parallel. 'lhis is known to every perfon in the lealt acquainted with the wheel and axle. But if the external moving force does not act in a plane parallel to the circies of ro:ation of the different particles, it mult be reolved into two forces, one of which is perpendicular to the fe planes, or parallel to the axis of rotation, and the other lying in a plane of rotation. And it is this left only th 't we confider as the moving force; the other tends merely to puth the body in the direction of its axis, but has no tendency to turn it round that axis. When vie come to confider the rotation of a boily perfeclly free, it will be necellary to attend particularly to this circumfance. Wut there are feverit important mechanical propofitions which do not require this.

The motion of any body is eflimated by that of its The ...un centre of gravity, as is well known. The difference tina of a between the motion of the centre of a free body and \(b_{n}\) : eitio the motion of the centre of a body turning round an mated by axis, is evidently owing to the comnecti.n which the tisat of cetre p.rts of the brdy have with this axis, and to the ac- if etavere tion of the points of fuppurt on this axis. Ithis ac- Ab. tion mult he conlidered as another ex ernal force, combined with that whish acts on the particle \(P^{\prime}\), and thercfore mur be fuch as, if combined will it, would pro. duce tide very mution which we obferve. That is, if

\section*{ROTB}

Rolsion. い N
we turpofe the bedy unconne గed with any fixed points,
but as having its ixis adied on lyy the fime forces which but as having its ixis aciecd on the frime forces which it to do, the axis remaining at reft.
Therefrere join I and H , and complcte the parallelogram GIHK. It is plain that m. GK mult reprefent the fores exerted by the axis on the fixed prints.
If therefore GI fhould coincide with GH , and the point 1 with the point H , the force GK vanifhes, and the body legins to turn round C , without eserting any preflure on the points of fupport ; and the initial inntion is the fame as if the body were free. Or, the a, is at C is then a fobotareous axis of converfion.
That this may be the cafe, it is neceffary, in the firt place, that the external force a 2 in a direction perpendicular to CG; for G1 is always parallel to FP: it being a leading propofition in dynamics, that when a moving force atts on any part whatever of a folid bods, unconncted with fixed points, the centre of gravity will proceed in a frraight line parallel to the direction of that force. In the next place GH mult be equal to CI ; that is, \(\left(\mathrm{n}^{\circ} 21\right)^{\frac{m . G I}{} \text {. CP } . \mathrm{CG}}\) is equal to CI , or \(\frac{m \cdot \mathrm{CP} . \mathrm{CG}}{\int p r^{2}}=\mathrm{I}\), and \(\mathrm{CP}=\frac{\int p r^{2}}{m \cdot \mathrm{CG}}\). The equation \(\mathrm{CP}=\frac{\int p r^{2}}{m \cdot \mathrm{CG}}\) gives us \(m . \mathrm{CG} . \mathrm{CP}\) \(=\int p r^{2},=\int A \cdot C A^{2}\). But it was fhown ( \(n^{\circ} 2_{2}\) ), that \(/ \mathrm{A} \cdot \mathrm{CA}^{2}=f \mathrm{~A} \cdot \mathrm{GA}^{2}+m \cdot \mathrm{CG}^{2}\). Therefore \(f \mathrm{~A} \cdot \mathrm{GA}^{2}=m \cdot \mathrm{CG} \cdot \mathrm{CP}-m \cdot \mathrm{CG} \cdot \mathrm{CG},=m \cdot \mathrm{CG}\) \(C P-C G),=m . C G\). GP. Therefore we have (for another deternination of the point of impulfe P fo as to annihilate all preffure on the axis) \(\mathrm{GP}=\) \(\frac{f \mathrm{~A} \cdot \mathrm{GA}}{\mathrm{m} \cdot \mathrm{CG}}\). This is generally the moft eafily obtained, the mathematical fituation of the centre of gravity being well known.
\(N \cdot B\). When \(\mathrm{CP}=\frac{\int \rho r^{2}}{m \cdot \mathrm{CG}}\), we fhall always have the erlocity of the centre the fame as if the body were free, but there will always be a preffure on the points of fapport, unlefs FP be alfo perpendicular to CG. In other pofitions of FP the preflure on the axis, or on its points of fupport, will be \(m\). GI \(\times 2\) fim. GCP.
It would be a defirable thing in our machines which, derive their efficacy from a rotatory motion, to apply the preflures arifing from the power and from the refiltance oppofed by the work in fuch a manner as to annihilate or diminith this preflure on the fupports of the axis of motion. Attention to this thcorem will point out what may be done ; and it is at all times proper, nay neceflary, to know what are the preffures in the points of fupport. If we are ignorant of this, we fhall run the rifk of our machine failing in thofe parts; and our anxiety to prevent this will make us load it with needlcfs and ill. difpofed Arengtl. In the ordinary theorics of machir.cs, dednced entiriely from the principles of equilibrium, the preflure on the points of fupport (exclufive of what proceeds from the wight of the mat chinc itfelf) is llated as the farme as if the moving and refifing furces were applied immediatcly to thefe points in their own directions. But this is in all cafes erronecus ; and, in cafes of fwifemotions, it is greatly fo. We zuay be convinced of this by a very fimple infancc.

Suppole a line laid over a pulley, and a pound weight at one end of it, and ten pounds at the other; the preflure of the axis on its fupport is eleven pounds, according to the ufual rule; whereas we fhall find it only 3 r . For, if we call the radius of the pully 1, the momentum of the moving force is \(10 \times 1-1 \times 1\), \(=\) \(n\); and the momentum of inertia is \(10 \times 1^{2}+1 \times 1^{2}\) \(\left(n^{0}, 8.\right)=11\). Therefore the angular velocity is \(\mathrm{r}^{\circ}\). But the diftance CG of the centre of gravity from the axis of motion is alio \(\frac{9}{\text { in }}\), becaufe we may fuppofe the two weights in contadt with the circumference of the pulley. Therefor the velocity of the centre of gravity is \(\mathrm{r}^{7} \mathrm{~T}, \times \mathrm{r}^{9} \mathrm{~T},=\frac{8 \pi}{\frac{2}{2}} \mathrm{r}\) of its natural velocity. It is therefore diminithed \(\frac{40}{35}\) by the figure of the axis of the pulley, and the 11 pounds prefs it with \(\frac{40}{125}\) of their weight that is, with 3 river pounds.

Since all our machines confilt of inert matter, which of knowrequires force to put it in motion, or to Itop it, or to ing the
change its motion, it is plain that fome of our natural power is expended in producing this effeet; and fince the principles of equilibrium only fate the proportion between the power and refiftance which will preferve the machine at reft, our knowledge of the actual performance of a machine is imperfect, unlefs we know how much of our power is thus employed. It is only the remainder which can be tlated in oppofition to the relitance oppofed by the work. This renders it proper to give fome general propofitions, which enable us to compute this with eafe.

It would be very convenient, for inftance, to know Andconfcfome point in which we might fuppofe the whole rota- quently the tory part of the machine concentrated; becaufe then we force necefcould at once tell what the momentum of its inertia is, fary to and what force we mult apply to the impelled point of it. the machine, in order to move it with the defired velocity.

Let \(S\), fig. 3. be this point of a body turning round the fupported axis paffing through \(C\); that is, let \(S\) be fuch a point, that if all the matter of the body were collested there, a force applied at \(P\) will produce the fame angular velocity as it would if applied at the fame point of the body having its natural form.

The whole matter being collected at \(S\), the expreffion \(\frac{m \cdot \mathrm{GI} \cdot \mathrm{CP}}{\int p r .^{2}}\) of the angular velocity becomes \(\frac{m \cdot \mathrm{GI} \cdot \mathrm{CP}}{m \cdot c S^{2}}\) ( \(n^{\circ} 22\). ) ; and thefe are equal by fuppofition. Therefore \(\int_{p} r^{2}=m . C^{3}\), and \(\mathrm{CS}=\sqrt{\frac{\int_{\rho} r^{2}}{m}}\).
This point \(S\) has been called the Centre of Gyration.

In a line or flender rod, fuch as a working beam, or the fpoke of a wheel in a machine, CS is \(\sqrt{\frac{1}{3}}\) of its length.

In a circle or cylinder, fuch as the folid drum of a capflan, \(C S=\sqrt{\frac{1}{2}}\) its radius, or nearly \(\frac{7}{7}\). But if it turns round one of its diameters, \(\mathrm{CS}=\frac{1}{2}\) radius.

In the periphery of a circle, or rim of a wheel, C S, \(=\) radius ncarly.

If it turn round a diameter, \(C S=\sqrt{\frac{1}{2}}\) radius. The furface of a fiphere, or a thin fpherical thell, turning round a didmeter, has \(C S=\sqrt{\frac{2}{3}}\) radius, or nearly \(\frac{4}{5}\) or \({ }_{5}^{5}\).
\(\AA\) folid fphere turning round a diameter has C S \(=\sqrt{\frac{3}{5}}\) radius, or nearly \(\mathrm{r}^{7}\). This is ufful in the problem axis, that if all the matter of the body were collected there, and an external force \(m\). GI applied to it in a dircetion perpendicular or any how inclined to CO , it will produce the fame angular velocity as when applied to the centre of gravity \(G\), with the fame inclination to the line C G.

In this cafe, the angular velocity mutt be \(\frac{m \cdot \mathrm{GI} \cdot \mathrm{CO}}{m \cdot \mathrm{CO}^{-2}}\) ( \(\mathrm{r}^{\circ}{ }_{22}\).), which is \(=\frac{\mathrm{GI}}{\mathrm{CO}}\). This mult be equal (by fuppofition) to the angular velocity where the fame force \(m\). GI is applied in the fame inclination to G.-
 \(\frac{\int p r^{2}}{m \cdot \mathrm{GI} \cdot \mathrm{CG}}\), and \(\mathrm{CO}=\frac{\int p r^{2}}{m \cdot \mathrm{CG}} \cdot\) Alro, as in \(\mathrm{n}^{\circ} 3 \mathrm{I}\). \(\mathrm{GO}=\frac{\int \mathrm{A} \cdot \mathrm{GA}^{2}}{n \cdot \mathrm{CG}}\).

This point \(O\) has feveral remarkable properties.
In the firft place, it is the point of a common heavy body fwinging round C by its gravity, where, if all its weight be fuppofed to be concentrated, it will per- form its ofcillations in the fame time. For while the body has its natural form, the whole force of gravity may befuppofed to be exerted on its centre of gravity. When the matter of the body is collected at \(O\), the force of gravity is concentrated there alfo; and if CG have the fame indination to the horizon in the firt cafe that CO has in the fecond, the artion of gravity will be applied in the fame angle of inclination, and the two bodies will acquire the fame angular velocity ; that is, they will defeend from this fituation to tl e vertical fituation (that is, through an equal angle) in the fame time. Thefe two bodies will therefore fcillate in equal times. For this reafon, the point \(O\) fo tiken in the line

CG , which is the radius vector of the centre of inertia,
that CO is equal to \(\frac{\int \mathrm{A}}{m} \cdot \frac{\mathrm{CA}^{2}}{\mathrm{CG}^{2}}\), or GO \(=\frac{\int \mathrm{A} \cdot \mathrm{GA}^{2}}{\mathrm{CG}}\),
is called the Centre of Osctllation of the budy is called the Centre of Oscillation of the body; and a heavy point fufpended by a thread of the length CO is called its equivalent or finchronous pendulum, or the fimple pentulum, correfponding to the body itfelf, which is confidered as a compound pendu'um, or as confifting of a number of fimple pendulums, which by their rigid connestion difturb each other's motions.

That CO may be the equivalent pendulum, and O the centre of ofcillation, 0 mult he in the line C G, otherwife it would not reft in the fame pofitinn with the body, when no force was keeping it out of its vertical pofition. The equation \(\mathrm{CO}=\frac{\int \mathrm{A} \cdot \mathrm{CA}^{2}}{m \cdot \mathrm{CG}}\) only determines the diftance of the centre of ofcillation from the centre of fufpenfion, or the length of the equivalent fimple pendulum but does not determine the precife point of the body occupied by the centre of ofillation; a circumftance alfo neceflary in fome cales.

Mathematicians have determined the fituation of this Mode of point in many cales of frequent occurrence. Huyghens, dcterminin his Horologium Ofcillatorium, and all the beft writers ing its fituof treatiles of mechanics, have given the method of in. ation. veftigation at length. The general procefs is, to multiply every particle by the fquare of its diftance from the axis of fufpenfion, and to divide the fum of all thefe products by the product of the whole quantity of matter multiplied by the diftance of its centre of gravity from the fame axis. The quotient is the diflance of the centre of ofcillation, or the length of the equivalent fimple pendulum : for \(\mathrm{CO}=\frac{\int p \cdot r^{2}}{m \cdot \mathrm{CG}}\).
a. If the body is a heavy ftraight line, fulpended by one extremity, CO is \(\frac{2}{3}\) of its length.
b. This is nearly the cafe of a flender rod of a cylin. drical or prifmatic fhape. It would be exactly fo if all the points of a tranfverfe fection were equally diftant from the axis of fulpenfion.
c. If the pendulum is an ifofceles triangle fulpended by its apex, and vibrating perpendicularly to its own plane, CO is \(\frac{3}{4}\) of its height.
d. This is nearly true of a very flender triangle (that is, whofe height many times exceeds its bafe) fwinging round its vertex in any direction.
e. In a very flender cone or pyramid fivinging from its vertex CO , is \(\frac{1}{5}\) of its height nearly.
\(f\). If a fphere, of which \(r\) is the radius, be fufpended by a thread whofe weight may be neglected, and whofe length is \(l\), the diftance between its centre of fufpen. fion and centres of of cillation is \(a+r+\frac{2}{5} \frac{r^{2}}{a+r}\); and the diflance between its centers of bulk and ofcillation is \(\frac{3}{5} \frac{r}{a+r}\). Thus, in a common fecond's pendulam, whofe length at London is about \(39^{\frac{1}{3}}\) inches, the centre of ufcillation will be found about rom an inch below the centre of the ball, if it be two inches in diameter.
g. If the weight of the thread is to be taken into the acennnt, we have the following diftance between the centre of the ball and that of ofillation, where I3 is the weight of the ball, a the diftance of the point

Rompinn，of fripenfinn and its cen：re，\(d\) the diameter of the bill，and sut the weight of the thead or rod，
 conli＇el the weibht ni the thread as an unit，and the weigh of the ball as its multiple（or as exprelfed by the momer of times it contains the weight of the threat）， \(\mathrm{CO}=\frac{\frac{1}{6} \cdot 8}{13+}\).

As the puint \(O\) ，determined as above，ly making \(\mathrm{CO}=\frac{\int n_{0}}{\mathrm{C}^{2} G}\) ，is the centre of ofcillation of the Lody turning round \(C\) ，fo \(C\) is the centre of ofcillation of the fime body turning round \(O\) ：for，refiming \(A\) ．CA in fluce of \(p r\) ，we have \(\int A . \mathrm{CA}^{2}=m . C O . C(\mathrm{C}\) ．Now IA．C． \(1^{2}=f, A . O A^{3}+\int A . O C^{2}-\int A . O C .20\) и， （ Einclid，II．12．13．），or \(m \mathrm{CO} .\left(G=\int A O A^{2}+\int A\right.\) ． \(\mathrm{OC}^{3}-\int A . O C .20\) i．But \(\int \lambda . \mathrm{OC}^{2}=m . \mathrm{OC}^{2},=m\) ． OC OC；and（by the nature of the centre of gratity） \(\int \mathrm{A} . \mathrm{OC} .20 \mathrm{~J}=\mathrm{m}\) ．OC． 2 OG ．Therefore we have \(m . \mathrm{CO} . \mathrm{CG}=\int A . O A^{2}+m . \mathrm{OC} . \mathrm{OC}-m . \mathrm{OC} .2 \mathrm{OG} ;\) and \(\int \mathrm{A} . \mathrm{OA}^{2}=m . \mathrm{OC} \cdot \mathrm{CG}+m . \mathrm{CO} .2 \mathrm{OG}-m \mathrm{COCO}\) ， \(=m \cdot \mathrm{CO}(\mathrm{CG}+2 \mathrm{OG}-\mathrm{CO})\) ．But \(\mathrm{CG}+2 \mathrm{OG}\) is equal to \(\mathrm{CO}+\mathrm{OG}\) ，and \(\mathrm{CG}+2 \mathrm{OG}-\mathrm{CO}\) is equal to OG．Theretore \(\int \lambda . \mathrm{OA}^{2}=m . \mathrm{CO} . \mathrm{OG}\) ，and \(\mathrm{CO}=\frac{\int \lambda . \mathrm{OA}^{2}}{m . O G}\), which is all that is wanted（according to \(\left.n^{\circ} 39.\right)\) to make \(C\) the centre of ofcillation when \(O\) is the centre of fulpention．

If the point of lifpenlion，or axis of rotation，be any where in the circumference of a circle of which \(G\) is the centre，the point \(O\) will be in the circumference of another circle of which \(G\) is the centre：for，by \(n^{\circ} 38\) ． \(\mathrm{CO}=\frac{\mathrm{SA} \cdot \mathrm{G} \cdot \mathrm{I}^{2}}{\% \cdot \mathrm{CG}}\) ．Now \(\int \lambda G A^{2}\) is a fixed quantity； and therefore while CG is conftant，OG will alfo be conftant．

IVe may alfo obferve that the diltance of the axis from the centre \(S\) of gyration is a mean proportional between its difance from the centre \(G\) of gravity and the centre \(O\) of ofillation：for we had（ \(n^{\circ}\) ．） \(\mathrm{CS}=\frac{\int p r^{2}}{m}\) ，and \(\mathrm{CO}=\frac{\int p-r^{2}}{m \cdot \mathrm{C} \cdot}\) ，and therefore \(\mathrm{CO} . \mathrm{CG}=\frac{\int \rho r^{2}}{m}=\mathrm{CS}^{2}\) and \(\mathrm{CO}: \mathrm{CS}=\mathrm{CS}: \mathrm{CG}\) ．

We fee alfo that the diftance \(C O\) is that at which an external free mat be applied；fo that there may not be any prellure excited in the axis upon its points of fupport，an 1 the axis may be a fpontaneous axis of converfion．＇This we learn，by comparing the value of CO with that of \(\mathrm{Cl}^{\prime}\) in atit． 30 ．＇This being the cafe， it tollows，that if an external force is applied in a direc－ tion paffing thru＇\(O\) ，perpendicular to CO ，it will pro－ duce the fame inital velocity of the centre as if the body were free：for as it exerts 110 pretlure on the points of fupport，the initial motion muit be the fame as if they were not thers．

If the exrernal force be applied at a greater difture in the line CG，the velocity of the centre will be great－ er than if the buly were free．In this rafe the pref． fure excited in the axis will be bockward，and confe． quently the \(p\) ints of fupport will re－at forward，and this redaion will be equivalent to another external
force confpiring with the one applied at 0 ． curious coniequences may be deduced from this．

It the ex：emal force be applied to a point in the why this line \(G C\), lying beyond \(C\) ，the motion of the centre will point is be in the oppofite drcetion to what it would have ta．donetines ken hod the body been free，and fo will be the pref－ fures excted by the points of fupport on the axis．

A foree m．GI applied at P＇produces the initial pro－ greflive motion m．GH；and any force applied at O， perpendicular to CG ，produces the fime motion of the centre as if the body were free．Therefore a force m．CII applied thus at O will produce a motion \(m\) ． GH in the centre，and therefore the fame motion which m．GI applied at P would prodnce ；and it will produce the momentum \(m\) ．GI at \(P\) ．Therefore if a force equal to the progretlive motion of the body be applied att O ， perpendiculaly to CO ，in the nppofite dirention，it will Hop all this motion without exciting any ftrain on the axis or points of lupports．Therefore the equiva－ lent of all the motions of each particle round \(C\) is con－ ceived as palling through \(O\) in a direction perpendica－ lar to CO ；and the blow given by that point to any body oppofed to its motion is confidered as equal to the compoanded effeet of the rotatory motion，or to the progreflive motion of the body combined with its rotation．

For fuch reafoms \(O\) has been called the Centre of Improprie－ Percussion of the body turning round C．But the ty of the name of centre of monentum，or rotatory effort，would have eerm．」 been more proper．

We can feel this property of the point \(O\) when we give a fmart blow with a ftick．If we give it a mo－ tion round the joint of the wrif only，and itrike fmart－ ly with a point confiderably nearer or more remote than \({ }_{3}^{2}\) of its length，we feel a painful thack or wrencls in the hand；but if we ftrike with that point which is pre－ cilely at \(\frac{2}{3}\) of its length，we feel no fuch difagreeable Atrain．

Mechanical writers frequently fay，that O confidered as the centre of percullion，is that with which the molt violent blow is flruck．But this is by no means true； \(O\) is that point of a body turning round \(C\) which gives a blow precifely equal to the progreflive motion of the body，and in the fame dilection．As we have already faid，it is the point where we may fuppofe the whole rotatory momentum of the body accumulated． Every particle of the body is moving in a particular di－ rection，with a velocity proportional to its diltance from the axis of rotation；and if the body were fopped in any puint，each particle tending to continue its motion endeavours to drig the ret along with it．Whatever point we call the centre of perculion thould lave this property，that when it is fopped by a fufficient foree， the whole motion and tendency to motion of every kind flould be finpped；fo that if at that inftant the fup－ ports of the axis were annihilated，the body would re－ main in ablolute rett．

The confideration of a very fimple cafe will flow Centre of that this point of ftoppage camot be taken indifferently．percufion， Suppofe a fquare or rextangular board CI）D \(C^{\prime}\) ，fisg． 4 ．low de－ advanciner in the direction GH，nerpendicular to it fited． plane，withont any rotation．let \(G\) be the centre of gravity，and the middle of the board．It is evident， that if a force be applied at G ，in the diection HG ，

Rotation, and equal to the quantity of motion of the board, all motion will be flopped: for when the point \(G\) is fopped, no reafon can be alligned why one part of the board liall advance more than another. The fame thing mult happen if the board be fopped by a fraight edge put in its way, and palfing through G : for example, in the line LGMI, or \({ }_{o n} \mathrm{G} b\). But if this edge be fo placed that the board hall meet it with the line 1 PK , then, becaufe this line does not divide it equall \(y\), and becaufe there is a greater quantity of motion in the part \(\mathrm{CIKC}^{\prime}\) than in the part IDD'K, though the progreflive motion may be ftopped, the upper part will advance, and a motion of rotation will commence, of which IK will be the axis. Now fuppofe that the board, inftead of having been moving along in the direation GH , evers patt with the fame velocity had been fivinging round the axis CC ' like a pendulum, from the polition \(\mathrm{Cd}^{\prime} d^{\prime} \mathrm{C}^{\prime}\), and that it is Aopped by a fraight edge mecting it in the line LGM parallel to \(\mathrm{CO}^{\prime}\), in the moment that it has attained the vertical polition CDD' \({ }^{\prime}\); all its motion will n ot be ftopped: for, although LGM divides the board equally, there is more motion in the lower part LDD'M that in the upper part CLMC' becaufe every particle of the lower part is defcribing larger circles and moving fwifter. Therefore when the line LGM is Itopped, there will be a ten:lency of the lower part to advance, and the pivots C and \(\mathrm{C}^{\prime}\) of the axis will be prefled backwards on their holes; and if the holes were at that initant removed, a rotation would commence, of which Lill is the axis. The board muft therefore be ftopped in fome line IPK below LGM, and fo fitnated, that the fum of all the momenta on each fide of it thall be equal. This alone can hinder a rotation round the axis 1PR. From what has been alre.ady demon?trated, it appears, that this will be prevented if the edge meets the board in a line IPK palling through \(O\) the centre of ofcilla ion, which is tithuted in the line \(g \mathrm{G} b\) pafling through the centre of gravity perpendicular to the axis \({ }^{\circ} \mathrm{CC}\). This line IOK may therefore be called the line or axis of percultion.

But any point of this line will not do. It is evident that if the board fhould mect the fixed edge in the line \(g \mathrm{GO}\) b, all motion will be ftopped, for the motions on each fide are equal, and neither can prevail. But if it be Itopped in the line \(p \mathrm{P} q\), there is more motion in the part \(p q D^{\prime} \mathrm{C}^{\prime}\) thaa in the part \(p q \mathrm{DC}\); and if the fupports at \(C\) and \(C^{\prime}\) were thai iniltant taken away, there would commence a notation round the ax's \(p q\). Confequently, if the borly were not Itopped by an edge, hat by a fimple point at \(P\), this rotation would t.ike place. The motions above and below P would indeed balance each other, but the motions on the rght and lefi lides of it would not. Tharefore it is not enough for determining the centre of perculition that we have afeertained its dittance \(g O\) from the axis of rotation by the equation \(g O=\frac{\int p r^{2}}{m \cdot g}\). This equation only gives us the line 10 K parallel to \(\mathrm{CC}^{\prime}\), but not the poine of percufion. This point (fuppole it \(P\) ) mult be fuch that if any line \(p \mathrm{P} q\) be drawn through it, and contidored as an axis round whichat ration mayy commence, it foll not commence, becaufe the fum of all the momenta round this asis on the right fide is equal to the
fum of the momenta on the left. Lect us inventigate in what manner this condition may be fecured.

Let there be a body in a fate of rotation round the axis \(\mathrm{D} d\) (fig. 5.), and let G be its centre of gravity, and CGO a line throuzh the centre of gravity perpendicular to the axis DC \(d\). At the monent under confideration, the centre of gravity is moving in the direc. tion GH, perpendicular to the radius vector GC, as alfo perpendicular to a plane palliag through the lines \(11 d\) and CG. Let O be the centre of ofillation. Draw the line \(n \mathrm{O}\) parallel to \(\mathrm{D} d\). 'I The centre of per. cuftion mult be fonlewhere in this line. For the point of percuffion, wherever it is, mult be moving in the laine direction with the progrellive mution of the body, that is, in a direction parallel to GH , that is, perpendicular to the plane DCG. And its diftance from the axis \(\mathrm{D} d\) mult be the fame with that of the centre of ofcillation. Thefe conditions require it therefore in be in fome point of \(n \mathrm{O}\). Suppofe it at P. Draw \(\mathrm{P}_{p}\) perpendicular to \(\mathrm{D} d\). P muft be fo fituated, that all the momenta tending to produce a rotation round the line p P may balance each other, or their fum trtal be no. thing.

Now let A be any particle of the body which is out of the plane DCG, in which lie all the lines CGO, \(p \mathrm{P}, n \mathrm{OP}\), \&cc. Draw its radius vector \(\mathrm{A} a\) nerpendicu ar to \(\mathrm{D} a\), and draw an parallel to CG , and therefore perpendicular to \(\mathrm{D} a\). The plane \(\mathrm{A} a n\) is perpendicular to the plane Dan (Euclid, XI. 4). Draw AL perpendicular to \(A_{a}\), and \(A / p\) prpendicular to an. Then, while the body is beginning to turn round \(D d\), the incipient motion of the particle \(A\) is in the direction AL, perpendicular to its radius vetror \(A a_{\text {. }}\) This motion AL may be confidered as compoinded of the motion \(A /\), perpendicular to the plane DCG, and the motion \(/ \mathrm{L}\) in this plane. It is evident that it is A / only which is oppofed by the external force fopping the body at \(P\), becaufe \(A /\) alone makes any part of the progreflive motion of the centre of gravity in the direstion GH.

We have hitherto taken the ralii evelores for the meafures of the velocities or motions of the particles. Thcrefore the quantity of motion or the moving force of \(A\) is \(A . A a\), and this is exerted in the direation \(A L\), and may be conccived as eserted on any point in this line, and therefore on the point L. That is, the point L might be confidered as urged in this direftion with the force A.A \(a\), or with the two forces of which the force A.Aa is compounded. The forc: in the direction AL is to the force in the directinn \(\mathrm{A} /\) as AL to Al, or as a A to al, bec:ure the tringles A/L and a/A are fimilar. Therefore, inftead of fuppoling the point I urged by the force A.A a, aning in the direction \(A L\), we may fuppofe it impelled by the force A al, aring perpendiculat]y to the line Alo or to the plane DCG, and by the force A.A! a oing in this plare, viz. in the direction I. \(n\). This laft force has nothing to do with the perculion at \(P\). Therefore we need counfider the point L as only impelied by the force A.A 1. The momentum of this forcc, or its power to urge the plane DCG forward in the direction GH, by turning it round \(\mathrm{D} d\), murt be A.al.a L. (N. \(b\). This is equal to \(\mathrm{A} . \Lambda a^{2}\), becaufe \(a l: a \mathrm{~A}=a \mathrm{~A}: a \mathrm{~L}\), and A.A \(a^{2}\), has been fhown long ago to be the ge. neral

\section*{ROT [ s 12 ] ROT}

Ko:stinn. \(\longrightarrow\)

\section*{netal exprefion of the rotatory momentum of a par-} (iicle).

Draw Lin perpendicular to \(\mathrm{P} p\). If we confider \(P_{\rho}\) as an axis about which a notion of rotation may be produced, it is plain that the momentum of the point L to produce fuch a rotation will be A.al. Lem. In lile manner, its momentum for producing a rotation round \(n \mathrm{P}\) would be A.al.Ln. In general, its momontum for producing rotation round any axis is equal to the product of the perpendicular force at L (that is, A.al) and thic diftance of L from this anis.

In order theretore that \(P\) may be the centre of percultion, the fum of all the forces A.al. Lom muft be equal to nothing; that is, the fum of the forces A.al.Lm on one fide of this axis \(P_{P}\) mult be laalanced by the fum of forces \(A^{\prime} \cdot \dot{d}^{\prime} l . L^{\prime} n^{\prime}\) on the other fide. To cxprefs this in the ufual manner, we mult have \(\int\) A.al.s \(\mathrm{P}=0\). But \(n \mathrm{P}=n \mathrm{O}-\mathrm{OP}^{\prime}\). Therefore \(\int\) A.al.n \(\mathrm{O}-\int \mathrm{A} . a l . \mathrm{OP}=0\), and fA.al.n \(\mathrm{O}=\) fA.al. O1' But OP is the fame wherever the particle \(A\) is fituated; and becaufe \(G\) is the centre of gravity, the fum of all the quantities A.al is m.GC, m being the quantity of matter of the body; that is, \(\int \mathrm{A} . a l=m . \mathrm{GC}\), and \(\int \mathrm{A} . a l . \mathrm{OP}=m . \mathrm{GC} . \mathrm{OP},=\) \(\int A . a l . n O\). Hence we derive the final equation \(\mathrm{OP}=\frac{\int \text { A.al.nO }}{m \cdot \mathrm{GC}}\).

Therefore the centre of percufion I of a body turning round the axis \(\mathrm{D} d\) is determined by thefe conditions: If, It is in the plane DCG, paffing through the axis and the centre of gravity; 2 d , It is in a line \(n \mathrm{O}\) paffing through the centrc of ofillation, and parallel to the axis, and therefore its diftance \(P_{p}\) from the axis of rotation is \(\frac{\int A \cdot A a^{2}}{m \cdot C G}\); and, 3 d , Its diltance OP from the centec of ofcillation is \(\frac{\mathrm{A} \cdot a \operatorname{l.n} \mathrm{O}}{m \cdot \mathrm{CG}}\).

In order therefore that the centres of ofcillation and Blow both centres somaide.
force acting in the oppofite direction, and fince all mn. Kotatior, tion progreflive and rotatory is ftopped by an external force applied at \(l^{\prime}\) in the dircction \(q l^{\prime}\), it follows that, if the body were at reft, and the fame force be applied there, it will fet the body in rotation round the axis Dit, in the oppolite direction, with the fame angular velocity, and without any preflure on the pivots D and d. For whatever motion of the paticle \(A\), in the diretion AL, was ftopped by a pat of the extermal force applied at P , the fame motion will be produced by it in the quiefeent particle \(A\) in the oppofite direction L.A. And as the pivots D and \(d\) had no motion in the cafe of the body turning round them, they will acquire no motion, or will have no lendency to motion, or un prefliare will be exerted on them, in the laft cafe. 'Therefore when an external force is applicd at 1 ' in a direction perpendicular to the line \(P p\), the line \(\mathrm{D} d\) will become a momentary fontancous axis of converfion, and the incipient motion of the body will perfectly 1 efemble the rotation of the famc body round a fixed axis \(\mathrm{D} d\).

There is another fet of forces of which we have as yet taken no notice, viz. that part of each force AL, which is directed along the plane DCG, and is reprefented by /L when the whole force is reprefented by AL, or by \(A /\) when the whole force is reprefented by \(A\) a. Trele forces being all in the plane DCG, and in the direction CG or GC, can have no effect on the rotation round any axis in that plane. But they tend, feparately, to produce rotation rund any axis palling through this plane perpendicularly. And the momentum of A to produce a rotation round an axis perpendicular to this plane, in Ofor inftance, muft evidently be \(A . A / . n O\), and round \(P\) it mutt be \(A\). A/.n P, \&c. We thall have occafion to confider thefe afterwards.

It is ufual in courfes of experimental philofophy to ofballs and illuftrate the motions of bodies on inclined planes and cylinders curved furfaces by experiments with balls rolling down rolling thefe furfaces. But the motions of fuch rolling balls are by no means juft reprefentations of the motions they reprefent. The ball not only goes down the inclined plane by the action of gravity, but it alfo turns round an axis. Force is neceflary for producing this rotation ; and as there is no other fource but the weight of the ball, part of this weight is expended on the rotation, and the remainder only accelerates it down the plane. The point of the ball which relts on the plane is hindered from fliding down by friction; and therefure the ball tumbles, as it were, over this point of contas, and is inftantly catched by another point of contan, over which it tumbles in the fime manner. A cylinder rolls down in the very fame way; and its motion is nearly the fame as if a fine thread had been lapped round it, and one end of it made fatt at the head of the inclined plane. The cylinder rolls down by unwinding this thread.

The mechanifm of all fuch motions (and fome of Mcehanifm them arc important) may be undertond by confidering of the fe them as follows: Let a body of any fhape be connect-motions. ed with a cylinder FCB (fig. 6.) whore axis palies through G the centre of gravity of the body. Suppofe that body furpended from a fixed point A by a thread wound round the cylinder. 'Th', body will defcend by the action of gravity, and it will alfo turn round, unwinding the thread. D-aw the horizontal

\section*{R O T}

Roration. line OGC. It will pafs through the point of contag \(C\) of the thread and cylinder, and C is the joint round which it begins to turn in defeending. Let \(O\) be its centre of ofcillation correfponding to the momentary centre of rotation C. It will begin to defcend in the fame manner as if all its matter were collefed in \(O\) : for it may be confidered, in this infant, as at pendulum furpended at \(C\). But in this c:rie \(O\) will delicend in the fame manner as if the budy were falling frecly. Tharefore the velocity of \(G\) (that is, the velocity of defcent) will be to the velocity with which a heavy body would fall as CG to CO. Now fince the points C, G, O , are always in a horiznntal line, and the radius CG is given; as alio CO ( \(n^{\circ} 48\).) the velocity of a body falling freely, and of the body unwinding from this thread, will always be in the fame proportion of CO to CG , and fo will the fpaces delcribed in any given time. And thus we can compare their motions in cvery cale when we know the place of the centre of ofcillation.

Cor. 1. The weight of the defcending body will be to the tenfion of the thread as CO to GO: for the tenfion of the thread is the difference between the momentum of the rolling body and that of the body falling freely.

Obferve, that this proportion between the weight of the body and the tenfion of the thread will be always the fance: for it has been demonftrated already, \(n^{\circ} 4^{2}\). that if C be in the circumference of a circle whofe certre is G, O will be in the circumference of another circle round the fame contre, and therefore the ratio of CG to CO is contlant.

Cor. 2. If a circular body FCB rnll down an inclined plane by unfolding a thread, or by friction which prevents all fliding, the ipace defcribed will be to that which the body would deicribe freely as CG to CO: for the tendency down the inclined plane is a determined proportion of the weight of the bods. The motion of rotation in thefe cafes, both progrellive and whirling, is uniformly accelerated.

Something of the fame kind obtains in common pendulous bodies. A ball huag by a thread not only ofcillates, but alfo makes part of a rotation ; and for this reafon its ofellations differ fiom thofe of a heavy point hanging by the fame thread, and the centre ot ofcillation is a little below the centre of the ball. A ball hung by a thread, and ofcillating between cycinidal cheeks, dues not ofcillate like a bndy in a cycloid, becaufe its centre of ofcillation is continually thifting its place. Huyghens avoided this ly fufpending his pendulous body from two points, fo that it did not change its atritude during its ofcillation. If our fpringcarriages were hung in this manner, having the four lower itaples to which the frajps are fixed as far afunder as the four upjer ttaples at the ends of the fprings, the body of the carriage woold perform its cfcillations without kicking up and dnwn in the difagreeable manner they now do, by which we are frequently in danger of friking the glaffes with our heads. The fiwings would indeed be greater, but incomparably cafier ; and we conld hold things almot as feadily in our hand as if the carriage were nct fivinging at all.

This will fuffice for an account of the rotation round fixed axes, as the foundation for a theory of machines actually performing work. The limits of our under-

Vos. XYI.
taking will not allow tis to do any mote Laan juft point Rorar.ue out the method of applying it.
I.et there be any machine of die rotatnry lind, i. e Method of compofed of levers or wheels, and let its conlbruction be applying fuch, that the vclocity of the point to which the power this thecrs is applied ("hich we Mall call the impelled foint) is to of rotaticu the velocity of the working point in the 1 atio of \(m\) to \(n\). It is well hnown that the cuergy of this machime will be the fame with tlat of an axis in peritrochio, of which the radii are \(: n\) and \(n\).
Let \(p\) exprefs the astual preffure exerted on the impelled point by the moving power, and let \(r\) be the actual proffure or reffifance exerted on the working print by the work to be performed. Let \(x\) be the inertia of the power, or the quantity of dead matter which mult move with the velocity of the impelled pnint in order that the movi:1g power may att. Thus the moving power may be the weithe of a bucket of water in a water wheel; then \(z\) is the quantity of matter in this bucket of water. Let \(y\) in like manner be the inertia of the work, or matter which mutt be moved winh the relocity of the werkingr-point, in order that the work may be performed. Thus \(y\) may be it quantity of water which mult be continually pulied along a pipe. This is quite different from the weight of the water, though it is proportional to it, and may be meafured by it.

Let \(f\) be a preflure giving the fame refiftance when applied at the working-point with the friction of the machine, and let \(a n^{2}\) be the momentum of the machine's inertia, viz. the fame as if a proper quantity of matter a were attached to the working-point, or to any point at the fame difance from the axis.

This ftate of things may be repreferted by the wheel and axle PQS (fig. 7.) where \(x\) and \(y\) and \(a\) are reprefented by weights acting by lines. \(l^{\prime}\) is the impelled point, and \(R\) the working-point; \(C P\) is \(m\) and \(C R\) is \(n\). The moving force is reprefented by \(P A\), the refifance by RB , and the frition by BF .
It is evident that the monentum of the inertia of \(x, y\), and \(a\) are the fame as if they were for a moment attached to the points \(P\) and R.

Hence we derive the following expreffions,
1. The angular velocity \(=\frac{p m-\overline{r+f n}}{x m^{2}+\overline{y+a} n^{2}}\).
2. Velocity of the working.point \(=\frac{p m n-\overline{r+f n^{2}}}{x m^{2}+\overline{y+a} n^{2}}\).
3. Work performed \(=\frac{p m n r-\overline{r+f n^{3} r}}{x m^{2}+y+a n^{2}}\). For the work is proportional to the product of the refiftance and the velocity with which it is overcome.
We thall give a very fimple example of the utility of thefe formulx. Let us fuppofe that water is to be
raifed in a bucket by the defcent of a weight, and that of thefe formula. Let us fuppofe that water is to be
raifed in a bucket by the defcent of a weight, and that the machine is a fimple pulley. Such a machine is deferibed by Defaguliers *, who fays he found it prefer- Exper. feribed by Defaguliers*, who fays he found it prefer- Exper.
able to all other machincs. The bucket dipped itfelf lhil. vo!. in the ciftern. A chain from it went over a pulley, ii. f. so3. and at its extremity was a fage on which a man cou!d and at its extremity was a flage on which a man could
ftep froms the head of a ftar. His preponderance brought down the fage and raifed the bucket, which difcharged its water into another ciltern. The man quitted the flage, and walked up fairs, and there Je found

Formula, and their ufe in prac. 05 66

\section*{ROT [514] ROT}
ranating. it rady to receive him, becaufe the cmpty bucket is mate heavior than the empty tage.

Now, if therc he no water in the bucket, it is evident, that although the motion of the machine will be the quickelt poffible, there will be no work petfornied. On the otlocr hand, if the loaded atage and the full bucket are of equal weight, which is the ufual Itatement of fuch a machine in elementary treatiles of mechanies, the machine will ftand Itill, and no work will be performed. In every intermediate ftate of things the machine will move, and work will be performed. Therefore the different values of the work performed mult be a faries of quantities which increafe from nothing to a certain magnitude, and then diminith to nothing again. The maxim which is ufually received as a fundamental propolition in mechanics, viz. that what is gained in force by the intervention of a machine is lof in time, is therefore falle. There mult be a particular proportion of the velocities of the impelled and workingpoints, which will give the greatell performance when the power and refiltance are given ; and there is a certain proportion of the power and refittance which will have the fame effect when the Itructure of the machine has previoutly fixed the velocities of the impelled and working points.

This proportion will be found by treating the formula which exprelfes the work as a fluxionary quantity, and finding its maximum. 'Ihus, when the ratio of the power and refiltance is given, and we wilh to know what muft be the proportion of the velocities \(m\) and \(n\), that we may conitruct the machine accordingly, we have only to confider \(n\) as the variable quantity in the third formula. This gives us
\[
r=m \times \frac{\sqrt{x^{2}} \times r+f^{2}+p^{2} x a+y-x+f}{p a+y}
\]

This is a fundamental propofition in the theory of working machines: but the application requires much attention. Sume natural powers are not accompanied by an inertia worth minding ; in which cale \(x\) may be omitted. Sume works, in like manner, are not accompanied by any inertia; and this is a very general cafe. In many cafes the work exerts no contrary llrain on whe machine at reft, and \(r\) is nothing. In molt infances the intenfity of the power varies with the velocity of the inpelled point, and is diminifhed when this increafes; the tefiftance or actual prelfure at the work-ing-point frequently increafes with the velacity of the worhing-point. All thefe circumltances mut be attended to; but fill they only modify the general propofition. Thefe are matters which donot come within the limits of the prefent article. We only took this opportunity of thowing how imperfect is the theory of machines in equilibrio for giving us any knowledge of their performance or jult principles of their conftruction.

One thing, however, mulf be particularly attended to in this therry. The forces which are applied to the body moveable round an axis are confidered in the theory as preffures actually exerted on the impelled points of the bedy or machine, as when a weight is ap- pended to a lever or wheel and axle, and, by defcending uniformly, acts with its whole weight. In this cale the weight multiplied by its diftance irom the axis will always exprefs its momentum, and the rotation will (cce-
teris paribus) be propotional to this product. But in Rotation. many inportant cates our machines are actuated by external inpulfions. A body in motion ltrikes on the impelled point of the machine, and caules it to turn round its axis. It is natural for us to confider the quantity of motion of this impelling body as the meafure of our moving force. Suppofing \(n\) to be its quantity of matter, and \(V\) its velocity, \(n V\) appears a very proper meafure of its intenfity. And il it be applied at the dilance CP from the axis of rotation, \(n \mathrm{~V} \cdot \mathrm{CP}\) fhould exprefs its energy, momentum, or power to turn the machine round \(C\); and we honld exprefs the angular velocity by \(\frac{n \mathrm{~V} \cdot \mathrm{CP}}{\int p r^{2}}\). Accordingly, this is the manner in which calculations are ufually mode for the conftruction and performance of the machinc, as may be feen in almof every treatife of mechanics.

But rothing can be more erroncous, as we fhall frow shown to by a very fimple inftance. It thould refult from thefe be erroneprinciples that the angular velocity will be proportional ous.
to CP. L.et us fuppofe our moving power to be a flream of water moving at the rate of ten feet per fecond, and that every fecond there paffes 100 pounds of water. We thould then call our moving force 1000. It is evident, that if we fuppole the arm of the floatboard on which it Arikes to be infinitely long, the impelled point can never move fatter than 10 feet in a fecond, and this will make the angular velocity infinitely fmall, inltead of being the greatelt of all. The rotation will therefore certainly be greater if CP be fhorter. We need not examine the cafe more minutely.

We mult therefore carefully diftinguifh between the quantity of motion of the impelling body and its moving power, as it is modified by its manner of acting. 'Che moving power is the preflure adually exerted on the impelled point of the machine. Now the univertal fact of the equality of action and reaction in the collifion of moving bodies affures us, that their mutual preffure in their col. lilion is meafured by the change of motion which each fuftains: for this change of motion is the only indication and meafure of the preffure which we fuppofe to be its caufe. A way therefire of afcertaining what is the real moving force on a machine actuated by the impulfion of a moving body, is to difcover what quantity of motion is loft by the body or gained by the machine ; for thefe are equal. Having dific vered this, we may proceed according to the propofitions of rotatory motion.

Therefore let AEF (fig. 8.) reprefent a body moveable round an axis paffing through \(C\), perpendicular to the plane of the firure. Let this body be flruck in the point \(\Lambda\) by a body moving in the disection \(F A\), and let BA1) be a tangent to the two bodies in the point of collifion. It is well known that the mutual astions of two felid bodies are always exerted in a direction perpendicular to the touching furfaces. Therefore the mutual preffure of the two bodies is in the direction AP perpendicular to AD. Therefore let the motion of the impelling body be refolved into the directions \(A P\) and \(A D\). The force \(A D\) has 10 thare in the prelfure. Therefore let \(V\) be the velocity of the impelling body eftimated in the direction \(\mathrm{AP}^{3}\), and let \(n\) be its quantity of matter. Its quantity of motion in the direction AP will he \(n \mathrm{~V}\).

Did \(A P\) pais through \(C\), it is evident that the only
cffect
\[
\mathrm{ROOT} \quad\left[\begin{array}{lll}
515 & ] & \mathrm{R} O T
\end{array}\right.
\]

Rotation. cficet would be to prefs the axis on its fupports. But AP, the direction of the peffire, being inclined to \(A C\), the point \(\Lambda\) is foiced afte, a id in fome fimall moment of time defcribes the little arch \(A\) a round the centre \(C\). The point \(P\) will therefore defcribe a fmall arch \(\mathrm{P}_{p}\), fubtending an angle \(\mathrm{PC} p=\mathrm{AC} a\). Draw - o perpendicular to AP, and ad perpendicular tu AD. The triangles \(d A_{0}, A C P\) are fimilar, and \(A a: A_{0}=\) \(\mathrm{AC}: \mathrm{CP}\). But the angles \(A C\) a, PC \(p\) being equal, the arches are as their raciv, and \(A a: \mathrm{P}_{P}=A \mathrm{C}: \mathrm{CP}\), \(=A a:\) A 0 ; therefore \(\hat{\beta}_{\hat{\prime}}=A 0\).

Now fince, in confequence of the impulfe, A deferibes \(A_{a}\) in the moment of time, it is plain that \(A_{0}\) is the face through which the impelling body continues to advance in the direction of the preffure; and if V be taken equal to the face which it defribed in an equal monnent before the tiroke, \(v\) will exprefs the remaining velucity, and \(V\) - \(v\) is the velociey loft, and \(n(\mathrm{~V}-v)\) is the quantity of motion lof by the inpeiling body, and is the true meadure of the preflure exerted. This gives us the whole circumitances of the rotatory motion. The angular velocity will be \(\frac{\left.n(\mathrm{~V}-)^{-}\right)}{j P r^{2}} \frac{\mathrm{CP}}{}\), and the vclocity of the point \(A\) will be \(\frac{n(V-v) \cdot C P \cdot C A}{\int P^{2}}\). Call this ve-
locity \(u\). The fimilarity of triangles gives us CA : \(C P=A a(o r u): A \rho(\) or \(v)\) and \(u=\frac{v \cdot C A}{C P}\). There. fore \(\frac{\mathrm{V} \cdot \mathrm{CA}}{\mathrm{L}^{\prime}}=\frac{n(\mathrm{~V}-v) \mathrm{CP} \cdot \mathrm{CA}}{f \rho^{2}}\). From this we deduce \(v=\frac{2 . V C P^{3}}{f P^{2}+1 . C P^{2}}\), and thus we have obtained the vaIue of \(a\) in known quantities; for \(n\) was given, or fuppned known; fo a! !? was \(V\) : and fince the direstion FA was given, its diftance \(C P\) from the axis is given; and the form of the body being known, we can find the value of \(\int p r^{*}\). Now we have feen that \(v\) is alio the velacity of the point \(P\); therefore we know the abfo. lute vclocity of a given point of the body or machine, and confequently the whole rotatory motion.

W'c have the angular velocity \(=\frac{n V \cdot \mathrm{CP}}{f p^{2}+n \cdot \mathrm{Cl}^{2}}\) : we flail find this a maximum when \(\int \rho r^{2}=n . \mathrm{CP}^{2}\); and in this cafe \(C P=\sqrt{\frac{\int p r^{2}}{n}}\), and \(v=\frac{\square}{2} \mathrm{~V}\). So that the
greatet velocity of rotation will be produced when the Rriking body lofes \(\frac{7}{2}\) of its velocity.

What we have now delivered is fufficient for explaining all the motions of bodies turning round fixed axes; and we prefume it to be agreeable to our readers, that We have given the inveltigation of the centres of gyration ofcillation, and percuffion. The curious reader will find the applatation of thefe theorems to the thenry of machines in two very valuable difertations by Mr Euler in the Memoirs of the Academy of Berlin, vols viii. and \(x\). and occalionally by other authors who have treated mechanics in a fcientific and ufeful manner, going beyond the fchool-hoy elements of equilibrium.

There remains a very important cafe of the rotation of budics, without which the knowledge of the motion of folid bodies, is incomplete; namely, the rotation of free bodies, that is, of bodies unconneated with any fixed points. We inurdly fee an inftance of motion of a
free bodj without fome rosation. A fore thr: :.an itcm
12 - - : * the hatad, a ball from a camoner, the plane's themf. 1re:. are oblerved nut only to advance, but altis to wint round. The famous problem af the pecettion of the equinoses depends for its folution on this ductrine ; ant the thenry of the working of thips his the fime foundation. We cata only touch on the leading propofitions.

We need not begin by demonftrating, that wisen thec dirction of the external force paffes throingh the centre of the body; the body will advance without any rotdtion. 'l'his we confider as familianly known to cwery petfon veriant in mechanics; nor is it neceffary to demonfrate, that when the direation of the moving force does not pafs through the centre of gravity, this centre will flill advance in it direction parillel to that of the moving force, and with the fame velocity as if the direction of the moving force lad paffed through it. This is the immediate confequence of the equality of ation and icaction obferved in all the mechanical phenomena oi the univerfe.

But it is incumbent on us to demonftrate, that whea the direction of the moving force does not pafs thro' the centre of gravity, the body will not only advance in the direction of the moving force, but will alfo turn round an axis, and we muft determine the pofition of this axis, and the relation fubfilting between the progreffive and rotatory motions.

The celebrated John Bernoulli was the firt who cerfidered this fubject; and, in his Difguifutiones MTechanicodynami:c, he has demonftrated feveral propofitions concerning the fpontaneous axis of converfion, and the motions arifing from eccentric external forces: and although he aflumed for the leading principle a propofition which is true only in a great number of cafes, he has determined the rotation of fpherical bodies with great accuracy.

This combination of motions will be palpable in fome fimple cafes, fuch as the following : Let two equal bodies \(A\) and 13 (fig. 9.) be connected by an inflexible rod (of which we may neglect the inertia for the prefent). Let \(G\) be the middle point, and therefore the centre of gravity. Let an external force ast on the point \(P\) in the diretion \(F P\) perpendicular to \(A B\), and let AP be double of PB. Alfo let the force be fuch, that it would hive caufed the fyitem to have moved from the fituation \(A B\) to the fituation \(a b\), in an indefinitely fmall moment of tims, had it afted immediatcly on the centre G. G would in this cafe have defcribed \(\mathrm{G} g\), A would have defcribed \(\mathrm{A} a\), and B would have deficribed \(\mathrm{B} b\), and a \(b\) would huve been parallel to \(A B\) : for the furce impreffed on \(A\) would have been equal to the force imprefed on B; but becaufe the fores aहts on \(P\), the force impreffed on \(A\) is but one half of that impreffed on B by the property of the laver: therefore the initial motion or acceleration of \(A\) will be only hall of the initial motion of \(B\); yet the centre \(B\) muft itill be at \(g\). We fhall therefore afcertain the initial motion of the fyfem, by drowing through \(g\) a line eg \(\beta\), fo that \(A\) a thall be \(\frac{1}{3}\) of \(D\). This we thall do by making \(A C=A B\), and drawing \(C\) a \(g\) 3. Then a 3 will be the poition of the fy ftenn at the end of the nonment of time. Thus we fee that the bedy mult have a motion of rotation combined with its progreffive niv. tion. How no- hotis rotion is performed round an axis palling through tion is per- a Atraight line, it is \(\mathrm{G}:\) for fince the centre deferibes formed in a forer cither above or below the thefe cales, a fundamental theorem, and ont fublequent inveitga duced to two problems: 1. To determine in what discction the axis paffes through the centre of gravity. 2. To determine the angular velocity of the :otation, or how far the centre mult advance while the body makes one turn round the axis. This eftablinhes the relation between the progreflive and rotatory motions. It will contribute to our better conception of bath thele problems to fee the refult in the prefont fimple cafc.

It is evident, in the firlt place, that the impreffions made on A and B are in lines \(\mathrm{A} a, \mathrm{~B} b\) parallel to FP and \(\mathrm{G}_{g}\); and therefore the motions of the points \(A\), \(G\), and \(B\), are made in one plane, viz. the plane FPG. The axis of rotation therefore mult be a line drawn through \(G\), perpendicular to this plane. If we give it any other pofition, one of the points \(A, B\), or both of them, mult quit this plane.

In the next place, in \(b a\) produced take \(b c=B C\). Then fuppofing \(A C\) to be a rigid line connected wilh the fyttem, it is evident that if there had been no rotation, the line BC would have kept parallel to its firlt pofition, and that at the end of the moment of tinie C would have been at \(c\). The point \(C\) therefore has had, by the rotation, a backward motion \(c \mathrm{C}\), relative to the centre \(G\) or \(g\), and this motion is equal to the progreffive motion \(\mathrm{G} g\) of the centre ; therefore if we make Gr equal to the circumference of a circle whofe radius is CG, the body will make one rotation round the centre of gravity, while this centre moves along \(G \gamma\); and thus the relation is eftablithed between the two motions.

But farther, the point \(C\) has, in fact, not moved out of its place. The incipient motion has therefore been fuch, that \(C\) has become a fpontaneous centre of converfion. It is cafy to fee that this mutt always be the cafe, whatever may be the form of the rigid body or fyltem of particles connected by inflexible and inextenfible lines. Since the fyftem both advances and turns round an axis paffing through its centre of gravity, there mult be fome point in the fyftem, or which may be conceived as connefted with it by an inflerible line, which moves backward, by the rotation, as faft as the centre advances forward. A line drawn through this point parailel to the axis muft in this inftant be at relt, and therefore muit be a fpontaneous axis of converfion. And, in this inflant, the combined motions of rotation round an axis pafing throngh the centre of gravity and the motion of progreffion, are equivalent to, and aftually confitute, an incipient fimple motion of rotation round another axis patallel to the former, whofe pofition may be iffertained. But it is necelfary to eftablifh this propofition and its converfe on clearer evidence.

Therefore let \(G\) (fig. 10.) be the centre of gravity of a rigid fydem of particles of matter, fuch as we fuppofe a folid body, to be. Let his fytem be fuppofed to turn round the axis Gg, while the axis itfelf is moving forward in the dircetion and with the velocity GI. Let the rotation be fuch, that a particle \(A\) has the direction and *elocity \(A b\). Let us firf fuppole the progralive mo-
tion GI to be perpendicular to the axis \(\mathrm{G} g\). It will therefore be paraliel to the planes of the circles defcribed round the axis by the different particles. Let C G g be a plane perpendicular to GI. It will cut the plane of the circle defcribed by \(A\) in a ftraight line \(c g\), and \(g\) will be the centre round which \(A\) is turning. Therefore A \(g\) will be the radius vector of \(A\), and \(A B\) is perpendicular to Ag. Let A \(d\) be perpendicular to \(c g\), and in Ad take Ae equal to GI or \(g i\). It is evident, that tire abfolute motion of \(A\) is compounded of the motions \(A e\) and \(A b\), and is the diagonal \(A f\) of the parallelogram \(\mathbf{A} e f b\). In the line \(g c\), which is perpendicular to \(G g\), take \(g c\) to \(g A\), as \(A c\) to \(A h\), and draw \(\sigma\) C parallel to \(g\) G, and produce \(b A\) till it cut \(c g\) in \(n\). We fay that \(C c\) is in this moment a fpontanenus axis of converfion ; for, becaufe \(\mathrm{A} n\) is perpendicular to \(\mathrm{A} g\) and \(\mathrm{A} d\) to \(\mathrm{C} g\), the angle \(c g \mathrm{~A}\) is equal to \(d A n\), or \(f b A\). Therefore, fince \(c g: g A=f b\) : \(b A\), the triangles \(c g A\) and \(f b A\) arefimilar, and the angle \(g\) A \(c\) is equal to \(b\) A \(f\). Take aw:iy the common angle \(g A f\), and the remaining angle \(c A f\) is equal to the remaining angle \(h A g\), and \(A f\) is perpendicular to A \(c\), and the incipient motion of \(A\) is the fame in refpect of direction as if it were turning round the axis \(c\) C. Moreover, A \(f\) is to \(f b\) or \(g i\) as \(A c\) to \(c g\). Therefore, both the direction and velocity of the ablolute motion of A is the fame as ifthebody were turning round the fixed axis \(c \mathrm{C}\); and the combined motion \(\mathrm{A}_{e}\) of progreffion, and the motion \(A h\) of rotation round \(G g\), are equivalent \(t 0\), and really conftitute, a momentary fimple motion of rotation round the axis \(\mathrm{C} c\) given in polition, that is, determinable by the ratio of Ae to Ah.

On the other hand, the converfe propofition is, that a fimple motion of rotation round a fixed axis \(C c\), fuch that the centre \(G\) has the velocity and direction \(G I\) perpendicular to \(C \mathrm{G}\), is equivalent to, and produces a motion of rotation round an axis \(G g\), along with the progreflive motion GI of this axis. This prop fition is demonftrated in the very fame way, from the confideration that, by the rotation round \(\mathrm{C} c\), we have \(\dot{c} \mathrm{~A}\) : \(c g=\) A \(f: g i\). From this we deduce, that A \(b\) is perpendicular to A \(g\), and that \(f b: A b=\dot{c} g: g A\); and thus we refolve the motion \(A f\) into a motinn \(A b\) of rotation round \(G g\), and a motion \(A e\) of progrefion common to the whole body.

But let us not confine the progreflive motion to the direction perpendicular to the axis Gg . Let us fuppofe that the whole body, while turning round \(G g\), is carried forward in the direction and with the velocity GK. We can always conceive a plane \(\mathrm{L} G \mathrm{C}\), which is perpendicular to the plane in which the axis \(G g\) and the direction G K of the progreflive motion are fituated.And the motion GK may be conceived as compounded of a motion G I perpendicular to this plane and to the axis; and a motion of tranflation \(G\) L, by which the axis flides along in its own direction. It is evident, that in confequence of the firlt motion \(G I\), there arifes a motion of rotation round \(\mathrm{C} c\). It is alfo evident, that if, while the body is turning for a moment round \(\mathrm{C} c_{3}\) this line be flid along itfelf in the direfton \(c \mathrm{C}\), a motion equal to GL will be induced on every particle \(A\), and compounded with its motion of rotation A F, and that if \(f \phi\) be drawn equal and parallel to \(G L, \phi\) will be the fituation of the particle \(A\) when \(G\) is in \(K\).

And thus it appears, that when the progrellive mo.

Rutation. tion is perpendicular to the axis of rotation paling through the centre of gravity, the two motions progrellive and rotatory are equivalent to a momentiry limple motion of rotation round a fpontameous axis of converfion, which is at reft: but when the prugreffive motion is inclined to the axis pating thro' the centre, the fpontaneous axis of converfion is lliding in its own direction.

We may conceive the whole of this very diftinetly and accurately by attending to the motion of a garden roller. We may fuppofe it fix feet in curcunference, and that it is dragged along at the rate of three feet m a fecond from ealt to \(w=1\), the axis of the roller lying north and fouth. Suppofe a chalk line drawn on the furface of the roller parallel to its axis. The roller will turn once round in two feconds, and this line will be in contact with the ground at the intervals of every tix feet. In that infant the line on the roller now fposen of is at rett, and the motion is the fame as if it were fixed, and the roller really turning round it. In thort, \(i\) is then a fpontaneous axis of converfion.

Now, fuppofe the roller dragged in the fame manner and in the fame direction alung a fheet of ice, while the ice is floating to the fouth at the rate of four teet in a fecond. It is now plain that the roller is turning round an axis through its centre of gravity, while the centre is carried in the direction \(\int 36^{\circ} 52^{\circ} \mathrm{W}\). at the rate of five feet per fecond. It is alfo plain, that when the line drawn on the furface of the fone is applied to the ice, its only motion is that which the ice itfelf has to the fouthward. The motion is now a motion of rotation round this fpontaneous axis of converfion, compounded with the motion of four feet per fecond in the direction of this axis. And thus we dee that any complication of motion of rotation round an axis paffing through the centre of gravity, and a motion of progretlion of that centre, may always be reduced to a momentary or incipient motion of rotation round another axis paraliel to the former, compounded with a motion of that axis in its own direction.

The demonltration which we have given of thefe two profolitions points out the method of finding the axis \(\mathrm{C}_{c}\), the incipient rotation round which is equivalent to the combined progreflive motion of the body, and the roation round the axis Gg. We have only to note the rotatory velocity \(A b\) of fome particle \(A\), and its diftance \(A_{g}\) from the axis, and the progreflive velocity GI of the whole body, and then to make GC a fourth proportional to \(A b, G l\), and \(g A\), and to place \(G C\) in a plane perpendicular to GI, whach is perpendicular to \(G_{g}\), and to place \(C\) on that dide of \(G g\) which is moving in the oppofite direction to the axis.

In the timple cafe of this problem, which we exhibited in order to give us eafy and familiar notions of the fubject, it appeared that the retrograde velocity of rotation of the point \(C\) was equal to the progreffise velocity of the centre. This mutt be the cale in every point of the circumference of the circle of which CG, fig. 9 . is the radius. Therefure, as the body advances, and turns round \(G\), this circle will apply itfelf in fucceffion to the line CK parallel to G ; and any individual point of it, fuch as C , will defcribe a cycloid of which this circle is the generating circle, CK the bafe, and CG half the altitude. The other points of the body will defcribe trochoids, elongated or contracted according as the defcribing points are nearer to or more remote from \(G\) than the point \(C\) is.

It is now cuident that all this mult obtain in cvery Kotation. cafe, as well as in this fimple one. And when we have 87 afcertained the diftance GC between the axis of rotation The appl:palling through the centre, and the momentary fponta- cation neous axis of converfion falfing through \(C\), we can then made to afcertain the relation between the moti,ns of rotation more comand prorreflion. We then know that the body will make one rotation round its certral axis, while its centre moves over a face equal to the circumference of a circle of a known diameter.

We mult therefore proceed to the methods for determining the potition of the point \(C\). This muft depend on the proportion between the velocity of the general progreflive motion, that is, the velocity of the centre, and the velucity of fome point of the body.This mult be afcertained by nblervation. In moft cafcs which are interelling, we learn the pofition of the axis, the place of its poles, the comparative progreflive velo. city of the centre, and the velocity of rotation of the different points, in a variety of ways; and it would not much increafe our knowledge to detail the rules which may be followed for this purpofe. The circumftance which chiefly interefts us at prefent is to know how thefe motions may be produced; what force is neceffary, and how it mut be applied, in order to prociuce a given motion of rotation and progreffion; or what will be the motion which a given force, applied in a given manner, will produce.

We have already given the principles on which we may proceed in this inveltigation. We have fhown the circumptances which determine the place of the ceutre of percuffion of a bndy turning round a given fixed axis. This centre of percuffion is the point of the body where all the inherent forces of the whirling body precifely balance each other, or rather where they unite and compofe une accumulated progreflive force, which may then be oppored by an equal and oppofite external force. If, therefore, the body is not whirling, but at reft on this fixed axis, and if this external force be applied at the centre of percullinn, now become a point of impulfion, a rotation will commence round the fixed axis precifely equal to what had been ftopped by this external force, but in the oppofite direction; or, if the external force be applied in the direction in which thee centre of percuffion of the whirling body w:is moving at the inllant of Itoppage, the rotation produced by this impulfe will be the lame in evcry refpect. And we fuund that in the inflant of application of this external force, either to ftop or to begin the motion, no preffure whatever was excited on the fupports of the axis, and that the axis was, in this inflant, " fpontaneous axis of converion.

Moreuver, we have thown, art. 84, that a rotation round any axis, whether fixed or fpontancous, is equivalent to, or compounded of, a rotation round another axis parallel 10 it , and paffing througls the centre \(n!\) gravity, and a progreflive motion in the dircction of the centre's motion at the inftant of impulfe.

Now, as the pofition of the fixed axis, and the known difjofition of all the particles of the body with refpect to this axis, determin s the place of the coutre of perculfion, and lurnithes all the mathematical conditions which munt be implemented in its determination, and the direction and magnitude of the force which is produced and exerted at the centre of percullion; fo, on tbe otber band, the knowledge of the magnitude ancl direction
diredios of an external force which is cserted on the boint of impulfion of a body net comnested with any fixed axis, and of the difpofition of all the parts of this body with refpect to this point of impultion, will fornilh us with the mathematical circumattances which determine the pofition of the fpontarecus axis of converfion, and therefore determine the pofition of the axis through the centre (parallel to the fpontancous axis of converion), round which the body will whirl, while its centre pro-
ceeds in the disection of the external force.
The proceis, thercfore, for determining the axis of progrefive rotation is juft the converfe of the procefs for deternining the centre of percultion.
John Bernoulli was the firt who conlidered the motion of frce bodies impelled by forces whofe line of dihe takes it for granted, and turns round an that fince the body both advances sravity, this paffing through the centre of through the direction of
point of impulfion and the centre of gravity. Other authors of the firt name, fuch as Huyghens, Leibnitz, Roberval, \&c. inave thought themfelves obliged to demonftrate this. Their demonftration is as follows :

Let a body whofe centre of gravity is \(G\) (fig. 11.) be impelled at the point \(P\) by a force acting in the direction l'Q not pafting through the centre. The inertia of the whole body will refit in the fame manner as if the whole matter were collected in \(G\), and therefore the refiftance will be propagated to the point \(P\) in the ditection GP. The particle P , therefore, is impelled in the direction PQ , and refifted in the direction PA , and muft therefore begin to move in fome direction PB, which makes the diagonal of a parallelogram of which the fides have the directions PQ and PA . The diagonal and fides of a parahlelogram are in one plane. \(P\) is therefore moving in the plane \(A P Q B\) or \(G P Q\), and it is turning round an axis which patles through G.Theretore this axis mef be perpendicular to the plane GPQ.

It would require a feries of difficult propofitions to fhow the fallacy of this reafoning in general terms, and to determine the pofition of the axis through \(G\). We thall content ourfelves with a very fimple cale, where there can be no hentation. Let A and B (fig. 12.) be two equal balls connected with the axis \(a b\) by inflexible lines \(\mathrm{A} a, \mathrm{~B} b\), perpendicular to \(a b\). Let \(\mathrm{A} a\) be 1 , and \(B b 2\). The centre of gravity \(G\) will evidently be in the line \(c G\) parallel to \(A a\) and \(B b\), and in the middle of \(a b\), and \(c G\) is \(1 \frac{1}{2}\). Let \(O\) be the centre of ofcillation. \(c O\) is \(=\frac{A \cdot A a^{2}+B \cdot B b^{2}}{A+B \cdot c G}=\frac{5}{3} \cdot-\) Draw \(A m, \mathrm{~B}_{n}\) perpendicular to \(c G\), and fuppofe the balls transiested to \(m\) and \(n\). Their centre of ofcillatiun will be fill at O ; and we fee that if the fyftem in this form were fopped at \(O\), all would be in equilibrio. For the force with which the ball A arrives (by fwinging romd the axis) at \(m\), is ats its quantity of matter and velecity jointly, that is, A. Ac, or 3. That of 13 arriving at \(n\) is \(\mathrm{B} . \mathrm{B} b\), or 2 . The arm \(m \mathrm{O}\) of the lever turning round \(O\) is \(\frac{2}{3}\), and the arm \(n \mathrm{O}\) is \(\frac{1}{3}\). The forces, thelefore, are reciprocally as the arms of the lever en which they att, and their momenta, or powers to turn the line \(m n\) round \(O\), are equal and oppofite, and that efore balance each other; and therefore, at the
inftant of Acpping, no preffure is exerted at c. Therc. fore, if any impulie is made at \(O\), the b.llis at \(m\) and \(n\) will be put in motion with velocities 1 and 2 , and \(c\) will be a jportancous cenire of converfion. Let us fee whether this will be the cafe when the balls are in their natural places \(A\) and \(B\), or whether there will be any tendency to a rotation round the axis \(c \mathrm{O}\). Tlac mamentum of \(A\), by which it tends to produce a rotarion round \(c \mathrm{O}\) is \(A\). A \(a . A m,=1 \times A m\). That of B is \(\mathrm{B} \cdot \mathrm{B} b . \mathrm{B} n,=2 \times \mathrm{B} n . \quad \mathrm{Am}\) and \(\mathrm{B} n\) are equal, and therefore the momentum of \(B\) is double that of \(A\), and there is a tendency of the fyitem to turn round \(c O\); and it, at the inflant of ftoppige, the fupports of the axis ab were removed, this rotation round \(i O\) would talic place, and the point \(b\) would advance, and \(a\) would recede, \(c\) only remaining at reit. Therefore, if an impulfe were made at \(O, a b\) would not become a fpontaneous momentary axis of converfion, and \(O\) is not the centre of percultion. This centre mult be fomewhere in the line OP parallel to \(a b\), as at \(P\), and fo fituatad that the momenta \(A . A a . A \propto\) and \(B \cdot B\) \&. \(B \beta\) may be equal, or that \(A_{ \pm}\)may be double of \(B \beta\), or ap double of \(b p\). If an impulfe be now made at P , the balls \(A B\) will be urged by forces as 1 and 2 , and therefore will move as if round the axis \(a b\), and there will be no preflires produced at \(a\) and \(b\), and \(a b\) will really become a momentary fipontaneous axis of converfion.

Now join \(G\) and \(P\). Here then it is evident, that a body or fyftem \(A, B\), receiving an impulfe at \(P\) perpendicular to the plane acG, acyuires to itfelf a fpontaneous axis of converfion which is not perpendicular to the line joining the point of impulfion and the centre of gravity. And we have hown, in art. 84. that this motion round \(a b\) is compounded of a progrellive motion of the whole body in the direction of the centre, and a rotation round an axis piffing through the centre parallel to ab. Therefore, in this fyttem of free bodies, the axis of rotation is not perpendicular to the plane pafing throngh the centre of gravity in the direction of the impelling force.

As we have already obferved, it would be a laborious Dificulty tak to afcertain in general terms the pofition of the progreflive axis of rutation. Although the procefs is the inverfe of that for determining the centre of percuflion when the axis of rotation is given, it is a mof terms. intricate bulinefs to convert the feps of this procels. The general method is this: The momentum of a particle \(\AA\) (fig. 5.) by which it tends to change the potition of the axis \(\mathrm{D} d\), has for its factors \(\mathrm{A} \propto \mathrm{Al}\), and A \(\dot{\alpha}\), which are its diltances from three planes \(D d \& s\), DCOn, and \(\mathrm{C}_{\xi} \gamma x\), given in polition. The fum of all thefe mint be equal to nothing, by the compenfation of pofitive and negative quantities. We muit find three other planes (of which only one is in fome me:afure determined in pofition, being perpendicular to \(\mathrm{DCO} n\) ), fo fituated that the fums of fimilar produts of the diftances of the particles from them may in like manner be cqual to nothing. This is a very intricate problem; fo intricate, that matsematicians have long donbted and difputed about the certainty of the folutions. Euler, d'Alembert, Frifi, Landen, and others, have at lalt proved, that every body, however irregular its Shape, has at leaft three aves palling through its centre of gravity, round which it will continue to re-

\section*{R O T}

Rotation. volve while proceeding forward, and that thefe are at right angles to each other; and they have given the conditions which nult be inplemented in the determi. nation of thefe axes. But they Ptill leave us exceedingly at a lofs for means to difcover the pofitions of the axes of a given bods which have thele conditions.
To folve this problem therefore in general terms, would lead to a difquifition altogether difproportioned to our work. We mult reftict ourfilves to thinfe forms of body and fituations of the point of impulfion which admit of the cuincidence of the centres of ofcillation and percullion; and we mult leave out the cafes where the axis has a motion in the direction of its length; that is, we thall alwars fuppofe the foontanerus axis of converfion to have no motion. Thus we thall com. prehend the phenomenat of the planetary motions, fimilar to the preceffion of our equinoctial points, and all the interefting cales of pradical mechanics. The fpeculative mathematical reader will fill up the blanks of this inveltigation by confulting the writings of Euler and D'Almbert in the Berlin Memoirs, Frifi's Cofmographia, and the papers of Mr Landen, Mr Milner, and Mr Vince, in the Philofophical Tranfactions. But we hope, by means of a beautiful propufition on the compofition of rotatory motions, to enable cvery reader to difcover the polition of the axis of progreflive rotation in every cafe which may interef him, without the previous folution of the intricate problem mentioned above.

Let ABPC piA (fig. 13.) be a fection of a body through its centre of gravity G, fo formed, that the part ABPC is fimilar, and fimilarly placed with the part A \(\& P\) C, fo that the plane AC would divide it equally. Let this body be impelled at \(P\) in the direction HP, perpendicular to the plane AC. The axis round which it will turn will be perpendiculer to \(\mathrm{G} \pi\). Suppofe itat A. Then drawing AB and Ab to fimilar points, it is plain that \(\mathrm{B} \beta, b \beta\) are equal and oppofite; thefe reprefent the forces which would raife or lower one end of the axis, as has been already ob. ferved. The axis therefore will remain perpendicular to \(G \pi\).

Let the body be fo flaped, that if the parts of the right and left of the point of impulfe \(\tau\) (the impulfe is here fuppofed not perpendicu'ar to the plane AC , but in this plane) are equal and fimilarly placed; then the momenta round AC nult ba'ance each other, and the axis EF will have no tendency to go out of the plane ABCl A perpendicular to the impuiie.

Any body whofe fhape has thefe two properties will turn round an axis perpendicular to the plane which paties through the centre of gravity in the direation of the impelling fnrce. This condition is always found in the planets when difturbed by the gravitation to a diftant planet: for they are all figures of ievolution. The direction of the difurbiny or impelling force is always in a plane palfing through the axis and the difurbing body.

With fuch limitations therefore we propofe the following problem:

Let \(G(\hat{n} \tilde{S} \cdot 14\) ) be the centre of gravity of a bndy in free fpace, which is impelled by an external force \(f\), afing in the line FP, which does not pafs thr ugh the centre. Let \(m\) be the number of equal particles in the

\section*{\(510] \quad \mathrm{R}\) O T}
bods, or its quantity of matter. Let the force \(f\) be
Rotation. fuch, that it would communicate to the body the velocity \(v\); that is, would caufe the centre to move with the velocity \(\%\). It may be expreffed by the quancity of motion which it produces, that is, by \(m v\), and it would produce the velocity \(m v\) on one particle. It is required to determine the whole motion, progreffive and rotatory, which it will produce, and the fpace which it will detcribe during one turn round its axis.
Draw GI parallel and PGC perpendicular to FP, and let GI be taken for the mcafure of the progreffive velocity \(v\).

It has been demonfrated that the centre \(G\) will proceed in the direction GI with the velority \(s\), and that the body will at the farme time turn round an axis paffing through G , perpendicular to the plane of the figure, every particle deicribing circles in parallel planes round the axis, and with velocities of rotation proportional to their diftances from it. There is therefure a certai: diftance G B, fuch that the velocity with which a particle defcribesits circumference is equal to the progreffive velocity \(\%\). Let BCD be this circumference. When the particle defrribing this circumference is in the line CGP, and in that part of it which lies beyond \(P\) from G, its abfolute velocity muft be double that of the centre \(G\); but when it is in the oppofite point C, its retrogade velocity being equal to the progrefive velocity of the centre, it mull be at reft. In every pofition of the body, therefore, that point of the accompanying circumference which is at this extremity of the perpendicular drawn through the centre on the line of direction of the impelling force is at reft. It is at that inflant a fpontaneous centre of converfion, and the Araight line drawn through it perpendicular to the plane of the figure is then a fpontaneous axis of converfion, and every particle is in a momentary flate of rotation round this ixxis, in directions perpendicular to the lines drawn to the axis at right angles, and with velocities proportioual to there diftances; and laftly, the body advances in the dircetion GI through a fpace equal to the circumference BCD , while it makes one turn round G.

Let \(A\) be one of the particles in the plane of the figure. Join AC, AG, AP. Draw Ab, Ac, Ad perpendicular to CP, CA, GA. The abfolute motion \(A_{c}\) of \(A\) is compounded of the progreflive motion \(A b\) common to the whole body and equall to GI, and the motion Ad of rotation round the centre of gravity \(G\). Therefure fince \(A b\) is equal to \(z\), and \(A c\) is the diatgonal of a parallelogrann given both in fpecies and mangitude, it is allo gimen, and (as appears alfo fronı the reafoning in art. 85.) it त्s to GI as CA to CG.

By the application of the force \(m v\) in the direstion FP , every particle of the body is uragged out of its place, and cxerts a refiltance cqual to the motion which, it acquires. A part of this force, which wa may call \(m \mathrm{t}\), is employed in communicating the \(m\) tion \(A c\) to \(A\); and, from what has been lately fhown, \(\mathrm{CG}: \mathrm{CA}=\mathrm{GI}: \mathrm{A}_{\mathrm{c}},=\mathrm{v}: \mathrm{A}\), and thercfore \(A c=\frac{v^{2} \cdot \mathrm{CA}}{C G}\). Dut futher (agreably to what was demonitrated in art 16.) we have \(\mathrm{CP}: \mathrm{CA}\) \(=A c: m v,=\frac{v C A}{C G}-m \dot{v}\), and thercfore \(m \dot{v}=\)

Fentation. \(\underbrace{\text { T. } \mathrm{CA}^{2}}\)
\(\overline{\mathrm{CG} \cdot \mathrm{Cl}^{-}}\).
Therefore the whole force employed in corrmunicating to each particle the motion it really acquires or \(m \mathrm{r}\), is equal to the fluent of the quantity \(\frac{v \cdot \mathrm{CA}^{2}}{\mathrm{CP}^{2} \cdot C G}\) or \(m v=\frac{v \cdot \mathrm{CA}^{2}}{\mathrm{CPCG}}\), and \(\mu . \mathrm{CP} . \mathrm{CG}=f \mathrm{CA}^{2}\), which by art. 23. is equal to \(\int \mathrm{GA}^{*}+m . \mathrm{CG}^{2}\). Therefore we have \(m . \mathrm{Cl}^{\prime} \cdot \mathrm{CG}-m . \mathrm{CG} \cdot \mathrm{CG}=f \mathrm{GA}^{2}, o: m \cdot \mathrm{GP} \cdot \mathrm{CG}\) \(=f \mathrm{GA}^{2}\), and finally, \(\mathrm{CG}=\frac{f \mathrm{GA}^{2}}{m \cdot \mathrm{Gl}^{1}}\).

Now the form of the body gives us \(\int G A^{2}\), and the proftion of the impelling force gives us \(m\). GP . Therelore we can compute the value of CG; and if \(\pi\) be the periphery of a circle whole radius is unity, we have T.CG equal to the fpace which the body mult defcribe in the direction GI, while it makes one rotation round its axis.

Cor. 1. The angular velocity, that is, the number of turns or the number of degrees which one of the radii will make in a given time, is proportional to the impclling force : for the length of CG depends only on the form of the body and the fituation of the point of impulfion; while the time of defcribing \(\pi\) times this length is inver(el) as the force.
2. The angular velocity with any given force is as GP: for CG, and confequently the circumference \(\pi . \operatorname{CG}\), defcribed during one turn, is inverfely as GP.
3. PC is equal to \(\frac{\int \mathrm{PA}^{2}}{m \cdot \mathrm{GP}}\) : for we have \(\int \mathrm{PA}^{2}=\) \(\int G A^{2}+m \cdot G P^{2}\). Therefore \(\frac{\int P A^{2}}{m \cdot G P}=\frac{f G A^{2}}{m \cdot G P}\) \(+\frac{m \cdot \mathrm{GP}^{2}}{m \cdot \mathrm{GP}},=\mathrm{CG}+\mathrm{GP},=\mathrm{CP}\)
4. If the point \(C\) is the centre of impulfion of the fame body. \(P\) will be a pontaneous centre of conver. dion (fee art. 41).
5. A force equal and oppofite to \(m\), or to \(f\), applied at \(G\), will ftop the progreflive motion, but will make no change in the rotation ; but if it be applied at \(P\), it will ftop all motion both progreflive and rotatory. If applied between \(P\) and \(G\), it will ftop the progreffive motion, but will leave fome motion of rotation. If applied beyond \(P\) it will leave a rotation in the oppolite direction. If applied beyond \(G\), or between \(G\) and \(C\), it will increafe the rotation. All this will be eaf. ly conceived by reflecting on its effect on the body at refl.
6. A whirling body which has no progrefive motion cannot have been brought into this flate by the adion of a fingle force. It may have been put into this condition by the fimultaneous operations of two equal and oppofite forces. The cquality and oppofition of the forces is necelfary for ftopping all progreflive motion. If one of chom has acted at the centre, the rotatory motion has been the effect of the other only. If they luve acted on oppofite fides, they confpired with each other in producing the rotation; but have oppofed each other if they acted on oppofite fides.

In like manner, it is plain that a motion of rotation, together with a progreflive motion of the centre in the direction of the axis, could not have been produced by the action of a fingle force.
7. When the Space \(S\) which a bods defcribes du- Rotation. ring one rotation has been obferved, we can difcover 103 the point of impulfe by which a fingle force may hate acted in producing both the motions of progrellion and rotation : for \(C G=\frac{S}{\pi}\), and \(G P=\frac{\int G A^{2}}{m \cdot C G},=\) \(\frac{\pi \int \mathrm{G}}{m \cdot \mathrm{~A}} \mathrm{~A}^{2}\)

In this manner we can tell the diftances from the centre wobich Applicathe fingle impulfes which gave them both their motions dontrine to of revolution in their orbits and rotation round their the heavenaxes.

It was found (art. 40.f) that the difance OG of the centre of ofcillation or percuffion of a fphere fwinging round the fixed point \(C\) from its centre \(G\), is \(\frac{2}{5}\) of the third proportional to CG , and the radius of the fphere, or that \(O G=\frac{2}{5} \frac{R G^{2}}{C G} . \quad\) Suppofing the planets to \(b=\) homoreneous and fpherical, and calling the radius of the planet \(r\), and the radius of its orbit \(R\), the time of a rotation round its axis \(t\), and the time of a relvolution inits orbit ' T , and making \(1: \pi\) the ratio of aadius to the periphery of a circle, we thall have \(\pi \mathrm{R}\) for the circumference of the orbit, and \(\pi \mathrm{R} \frac{t}{\mathrm{~T}}\) for the arch of this circumference defcribed during one rotation round the axis. This is \(S\) in the abovementioned formula. Then, diminifhing this in the ratio of the circumference to radius, we obtain \(C G=R \frac{t}{T^{\prime}}\) and \(O G=\frac{2}{5} \frac{r^{2}}{C G},=\frac{2}{3} \frac{\mathrm{~T} r^{2}}{1 R}\). This is equivalent to \(\frac{\pi \int \mathrm{GA}^{2}}{m . S}\), and ealier obtai.ued. This gives us G v
\(\left.\begin{array}{rc}\text { For the Earth } & =\frac{r}{157} \\ \text { Moon } & \frac{r}{555} \\ \text { Mars } & \frac{r}{195} \\ \text { Jupiter } & \frac{r}{2,8125} \\ \text { Saturn } & \frac{r}{2,585}\end{array}\right\}\) nearly.

We have not data for determining this for the fun. But the very circumfance of his having a rotation in \(27^{d} 7^{h} 47^{\prime}\) makes it very probable that lie, with all his attending planets, is alfo moving forward in the celeItial lpaces, perhaps round fome centre of fill more general and extenfive gravitation : for the perfect oppofition and equality or two torces, neceflary for giving a rotation withont a progrefive motion, has the odds againft it of infinity to unity. This corroboratesthe conjectures of philofophers, and the obfervations of Herfchel and other aftronomers, who think that the folar fyitem is approaching to that quarter of the heavens in which the confellation Aquila is fitnated.
8. As in the commmatication of progreffive notion among bodies, the fame quantity of motion is preferved before and alter collifion, fo in the communication of rotation

Kotation. tation among whirling bodies the quantity of rotatory momentum is preferved. This appears from the general tenor of our formulx: for if we fuppofe a body turning round an axis paling thrcugh its centre, without any progreflive motion, we mult fuppofe that the force \(m v\), which put it in motion, has becn oppofed by an equal and oppofite force. Le: this be fuppofed to have aeted on the contre. Then the whole rotation has been the effect of the other afing at fome diflance GP from the centrc. Its momentum is mu.GP. Had it acted alone, it would have produced a rotation compounded with a progreffive motion of the centre with the velocity \(v\); and the body acquires a momentary fpontaneons axis of convertion at the difance GC from the centre of gravity. The abfolute velocity AC of any particle is \(\frac{\mathrm{s.AC}}{\mathrm{CG}}\); its momentum is \(\frac{\text { v. } \mathrm{AC}}{\mathrm{GC}}\), and the fum of all the momenta is \(\frac{\int v . A C^{2}}{C G}\), or \(\frac{\pi \cdot}{\mathrm{VAC}^{2}} \mathrm{CG}^{2}\), and this is cqual to \(m r\).GP. But when the progreflive motion is lopped, \(A b\), which was a conftituent of the abfolute rnction of \(A\), is annihilated, and nothing remains but the motion Ad of rotation round (.) But the triangles \(d \mathrm{Ac}\) and GAC were demonfrated ( \(\mathrm{n}^{\circ} 8 \mathrm{I}\).) to be fimilar; and therefore AC: \(\mathrm{A} d\) \(=\mathrm{CA}: \mathrm{GA}\). Therefore the abfulute velocity of the particle, while turning round the quiefcent centre of gravity \(G\), is \(\frac{\tau . G A}{G C}\); its momentum is \(\frac{v \cdot G A^{2}}{G C}\); the fum of all the momenta is \(\frac{\mathrm{q} / \mathrm{GA}}{\mathrm{GC}}\); and this is ftill cqual to \(m\) v. Obfervc, that now \(G C\) is not the dif. tance of the centre of converfion from the centre of sravity, becaufe there is now no fucli thing as the fpontanenus axis of converfion, or rather it coincides with the axis of rotation. GC is the diftance from the centre of a particle whofe velocity of rotation is equal to \(\%\).

Now let the body be changed, either by a new diftribution of its parts, or by an addition or abftraction of matter, or by both; and let the fame force \(m v\) act at the fame ditance GP from the centre. We fhall Still have \(m v . \mathrm{GP}=\frac{\mathrm{vj}_{\mathrm{j}} \mathrm{GA}^{2}}{\mathrm{GC}}\); and therefore the fum of the momenta of the particles of the whirling body is Aill the fame, viz. equal to the momentum of the force \(m v\) acting by the lever GP. If therefore a free body has been turning round its centre of gravity, and has the diftribution of its parts fuddenly changed (the centre however remaining in the fame place), or has a quantity of matter fuddenly added or taken amay, it will turn with fuch an angular velocity that the fum of the momenta is the fame as before.
Applica- We have been fo particular on this fubject, becaufe tiou to the it affects the celebrated problem of the preceffion of problens of the equinoxes; and Sir Ifaac Newton's fclution of it is the preceffion of the equinoeses.
libration of the whole mafs, upon the fuppofition that Rotation. the quantity of motion in the libratory fipheroid is the fame with the previous quantity of mation of the libr.1ting redundant ring or thell; whereas he fhonld have compated it on the fuppofition that it was the quantity of momenta that remained unchanged.
The fame thing ob:ains in rotations round fixed axes, 25 appears by the perfect famencfs of the furmulx fus, both claffes of motions.
This law, which, in imitation of the Leibnitzims, we might call the conf(rvatio momentorum, makes it of importance to have expreflions of the value of the accumulated momenta in fuch cafes as mof frequently occur. The moft frequent is that of a fpleere or fuleroid in rotation round an axis or an eqquatorial diame. ter; and a knowledge of it is neccilary for the folution of the problem of the preceflion of the equinoxes. See Precession, \(\mathrm{n}^{\circ} 33\).

Let A Pap (fig. 15.) be a fphere turning round the diameter \(\mathrm{P}_{p}\), and let DD', dd be two circles parallel to the equator is \(a\), very near each other, comprehending between thcm an elementary flice of the fphere. I.et CA be \(=a, \mathrm{CB}=\therefore\), and \(\mathrm{BD}=\mu\), and let \(\pi\) be the circumference of a circle whofe radius is 1 . Laftly, let the velocity of the point \(A\) be \(v\). Thea
\(v \frac{y}{a}\) is the velocity at the diftance \(y\) from the asis, \(\pi z\) is the quantity of matter in the circumference whofe radius is \(y\); for it is the length of that circumference when expanded.
\[
\frac{v \pi y^{2}}{a} \text {, or } \frac{v y}{a} \times \pi y \text {, is the quantity of motion in this }
\] circumference turning round the axis \(\mathrm{P}_{\mathrm{f}}\).
\(\frac{v, \tau y^{3}}{a}\) is the momentum of the fame circumference.
\(\frac{v \pi y^{3}}{a} \underline{y}\) is the fluxion of the momentum of the circie whofe radius is \(y\), turning in its own plane round the axis.
\(\frac{v \tau y^{4}}{4^{\circ} \cdot a}\) is the fluent, or the momentum of the whole circle; and therefore it is the momentum of the circle DU'.
\(\frac{\partial \pi y^{4}}{4^{a}}\) - is the fluxion of the momentum of the hemiphere; for \(\mathrm{B} b=\dot{x}\), and this fraction is the momentum of the flice \(d\) DD' \(d^{\prime}\).
\[
y^{2}=a^{2}-x^{3}, \text { and } y^{4}=a^{4}-2 a^{3} x^{2}+x^{4} \text {. There- }
\] fore \(\frac{\partial \pi}{2 a} \times\left(a^{4} \dot{x}-2 a^{2} x^{2} \dot{x}+x^{4} \dot{x}\right)\) is the fluxion of the momentum of the whole fphere. Of this the fluent for the fegments whofe heights ase CD, or \(x\), is \(\frac{v \pi}{2 a}\) \(\left(a^{4} x-\frac{2 a^{2} x^{3}}{3}+\frac{x^{5}}{5}\right)\)

Let \(x\) become \(a\), and we have for the momentum of the whole fphere \(\frac{a x}{2 a}\left(a^{5}-\frac{2}{5} a^{5}+\frac{1}{5} a^{5}\right),=y \pi\left(\frac{a^{4}}{2}-\right.\) \(\left.\frac{a^{4}}{3}+\frac{a^{4}}{10}\right)=v-r^{4} 5 a^{4}\).

Let us fuppofe that this rotation has been produced by the ation of a force \(m u\); that is, a force which wouldcommnnicate the velocity \(n\) to the whole matter

Nosation. of the fphere, had it acted in a direation pafing through

\section*{n.} it centre-; and let us duppoie that this force acted on the equatorial point is at right angles to AC : Its mo. mentam is \(m z s\), and this is equal to \(v \pi \frac{x^{2}}{5^{5}} a^{4}\). Alfo, we linow that \(m=\frac{2}{3}+a^{3}\). 'lherefore we have \(n \cdot \frac{2}{3}\) \(\left.\pi a^{4}=v\right)^{\frac{1}{5}} \div a^{4} \frac{2}{3} u=\frac{4}{3} v^{\prime}\), and \(v=\frac{5}{2} u\).

Let EP'C \(b^{\text {be }}\) an oblate fpheroid whofe femi-axis sio \(P C\) is \(a\), antcquatorial radius EC is \(b\), and let \(\%\) b the velocity on the equator of the inferibed fplese. Then fince the momenum of the whirling circle \(D D^{\prime}\) is \(\frac{v \pi y}{4 a}\), the momenta of the fplere and fpheroid are in the quadruplicate ratio of their equatorial radii; and therctore that of the whole fineroid is \(\frac{4}{5} \pi b^{4} v\). And if \(\approx u\) be the velocity at E correfiponding to the velocity \(v\) at \(A\), fo that \(w=\frac{b}{a} v\), we have the momentum of the \(f_{p l} l\) eroid, expreffed in terms of the equatorial velo. city at the furface, \(\frac{4}{15} b^{3} a\) qu.

It we fame force \(m u\) be made to act in the fame nanner at \(E\), its momentum \(m a b\) is \(=\frac{4}{x^{5}} b^{2} a c y\), and \(r_{w}=\frac{15 m u}{4-b^{2} a}\). Therefore the angular velocities \(\frac{v, \frac{w}{a}, ~, ~, ~}{b}\), which the fame force \(m a\) adting at \(A\) or \(E\) will produce in the fpere and the fpheroid, are as \(\frac{15 m u}{4 \pi a^{+}}\)and \(\frac{15 m u}{4 \pi b^{5} a}\), that is, in the triplicate ratio of the ecquatorial difmeter 6 to the polar axis \(a\).

Latiy, if the oblate fipheroid is made to turn romad an equatorial dameter palfing through C perpendicular to the plane of the figure, it is plain that every fection parallel to the meridian EPQ \(p\) is an ellipfe finilar to this meridian. If this elliple differs very little from the inferibed circle, as is the cafe of the earth in the problem of the precellion of the equinoxes, the momentum of each el:ipfe may be confidered as equal to that of a circle of the fime ared, or whofe diameter is a mean proportional between the equatorial and polar diameters of the fpheroid. This radius is to the radius of the circumfcribed circie as \(\sqrt{b a}\) to \(b\). Therefore the momenta of the fection of the fpheroid and of the circumferibed tphere are in the conflant ratio of \(b^{2} a^{2}\) to \(b^{3}\), or of \(a^{2}\) to \(b\). And if the velocity in the equator of this circamflibed fphere be called \(\mathfrak{w}\), the momentum of the fohere is \({ }_{1}^{4}-\pi b^{\dagger} w\); and therelore that of the fpheroid is \({ }^{3}+b^{2} a^{2}\) at, agreably to what was alfumed in the aticle l'recession, \(1^{\circ} 33\).
'This value of the momentum of a fpheroid round an equatorial diameter is only a very eafy ipproximation ; an exact value may be obtained by an infinite feriss. The whole matter of the (pheroid may be confidered as miniformly ditributed on the furface of a fimilar fpheroid whofe diameter is \(=\sqrt{\frac{3}{2}}\) of the diameter of the fyheroid. It will have the fime momentum, becaufe a triangle in one of the ellipies, having an elementary arch if the circumference for its bate, and the centre of the ellipfe for its veltex, has its centre of gyration diftant fr com the vertex \(\sqrt{\frac{T}{2}}\) the length of the radius of the ellipfe, and the problem is secuced to the finding the fim of thefe lines. But even when the feries for this fum involves tice \(3 \downarrow\) power of the eccentricity, it is not more eyaft than the above approximation.

A fimilar propolition may be obtaned for a prolate fpheroid vibrating round an equatorial diameter, and
applied to the conjeftural thape of the moun, for ex. plaining her of cillations.

The reader muf have obferved that the preceding All rotao difquifitions refer to thofe motions only which refult tory mofrom the action of external forces and to the fate of tivesace incipient motion. All circular motions, fuch as thofe conyunied of rotation, are acconpanied by centrifugal forces. A contral force is neceffary for retaining cvery particle in its circular path; fuch forces mult therefore be excited in the body, and can arife only from the forces of cohefion by which its particles are held together. Thefe forces are mutual, equal, and oppolite ; and as much as a pasticle A (fg. 5.) is retained by a force in the direction \(A\) a of the line which conneats it with the fixed axis D d or in the direttion AG (fig. 10.), which connetis it with the progrefive axis ; fo much mult the point \(a\) of the axis \(\mathrm{D} d\) be urged in the oppofie direction a A , or fo much mut the whole body be urged in the direction GA. Every point therefore of the axis \(\mathrm{D} d\), or of the axis through G in fig. 10 . is carried in as vaticty of directions perpendicular to itfelf. Thefe forces may or may not balance cach other. If this balance obtains with refpect to the fixed axis, its fupports will futain no preflure but what arifes from the external force; if not, one fupport will be more preffed than the other; and if both were removed, the axis weuld change its politio:l. The fame muld be affirmed of the axis through \(G\) in fig. 10. This, having no fupport, mult change its potition.

And thus it may happen, that the axis of rotation palling through \(G\) which lias been determined by the preceding difquiftions is not permanent either in refpect of the body, or in refpect of abfolute fpace. Thefe two rotations are effentidlly different. The way to conceive both is this. Suppoie a fpherical furface defribed round the body, having its centre in the centre of gravity ; and fuppofe this furface to revolve and to proceed forward along with the body: in fhort, let it be conceived as an immaterial furface attached to the body. The axis of rotation will pals though this farface in two points which we hall call its pales. Now, we fay that the axis is permanent with refpea to the body when it has always the fame poles in this fpherical furface. Suppofe another ipherical furface defribed round the fame rentre, and that this furface alfo accompanies the body in all its progrefive motion, but does not turn with it. The axis is permanent with refpect to abfolute fpace when it has always the fame poles in this furface: it is evident that theie two falts are not infeparable. A boy's top fpins on the fime point and the fame corporeal axis, while, towards the end of its motion, we obferve it directing this round and round to different quarters of the room. And when we make an egg or a lemon fpin with great rapidity on its fide on a level table, we fee it gradually rife up, till it Aand quite on end, fpinning all the while round an axis pointing to the zer ith.

This change in the pofition of the axis is produced by the unbalanced actions of the centrifuga! forces exerted by the particles. Suppofe two equal balls \(A\) and B (fig. 16.) connelted by an inflexible rad whofe middie point is G, the centre of gravity of the balls. This fiftem may be made to turn round the material axis D \(d\), A defcribing the circl: \(\Lambda E F A\), and \(B\) deferibing the ciscle \(B H K B\). The rod \(A B\) may alfo be conceived

\section*{ROT}
\(\underbrace{\text { Rotation. }}\) moveable round the point \(G\) by means of a pin at right angles to the axis. Suppofe the balls paffing through the fituations \(A\) and \(B\); their centrifugal forces urge them at the fame time in the directicns CA and OB , which impultions confpire to make the conneating rod recede from both ends of the axis \(\mathrm{D} d\). And thus the balls, inttead of defcribing parallel circles round this axis, will defcribe parallel fpirals, gradually opening the angles DGA, \(d G B\) more and more, till the balls acquire the pofition \(\alpha\), at right angles to the axis. They will not fop there, for each came into that pofition with an oblique motion. They will pafs it; and were it not for the refiftance of the air and the friction of the joint at \(G\), they would go on till the ball \(A\) came to defrribe the circle BHK , and the ball B to defribe the circle AEF. The centrifugal forces will now have eshaufted by oppofition all the motions which they had acquired during their palfage from the pofition \(A B\) to the pofition as; and now they will again deferibe fpirals gradually opening, and then contraating, till the balls arrive at their original pofition AB, when the procefs will begin again. Thus they will continue a kind of ofcillating rotation.

Thus the asis is continually changing with refpect to the fyftem of balls; but it is fixed in refpect to abfolute fpace, becaufe the axis \(\mathrm{D} d\) is fupported. It does not yet appear that it has any tendency to change its polition, becaufe the centrifugal tendency of the balls is completely yielded to by the joint at G . The materinl axis has indeed fuitained no change; but the real axis, or mathematical line round which the rutation was foing on every moment, has been continnally fhifting i:s place. This is not fo obvious, and requires a more attentive confideration. To fhow accurately the gradual change of pofition of the real axis of rotation would require a long difcuffion. We fhall content ourfelves with eshibiing a cafe where the pofition of the momentary axis is unquefionably different from \(\mathrm{D} d\), which we may fuppofe horizontal.

Take the balls in the pofition ark. They came into this polition with a firal motion, and therefore each of them was moving obliquely to the tangents \(\alpha \varnothing, \beta \gamma\) to the circle \(\alpha \delta \beta\), fuppofe in the directions \(\alpha \theta, \beta \lambda\). They are therefore moving round the centre \(G\) in a plane \(\theta \alpha \beta \lambda\), inclined to the plane \(\phi \alpha \beta \gamma\) of the circle adjes. The momentary axis of rotation is therefore perpendicular to this oblique plane, and therefore does not coincide with Dd.
Of the eva- We cannot enter upon the invefligation of this evagation of the axis.
gation of the axis, although the lubject is both curious and important to the ipeculative mathematicians. A knowledge of it is abfolutely neceflary to a complete folution of the great problem of the preceffion. But when treating that article, we contented ourfelves with fhowing that the evagation which obtains in this natural phenomenon is foexceedingly minute, that although multiplied many thoufands of times, it would efcape the nice!t obfervations of modern aftronomers; and that it is a thing which does not accumulate, beyond a certain limit, much too fmall for obfervation, and then diminithes again, and is periodical. Euler, D'.llem. bert, Frifi, and De la Grange, have fhown the momentary pofition of the real variable axis correfponding to any given time; and Landen has with great ingenuity and elegance connched thefe momentary pofi-

523 ] R O T
tions, and given the whole paths of evagation. Mr Rotarinn. Segror was, we believe, the firt who fhowed (in a Dilfertation De Motu Turbinum, Halle, 1755), that in every body there were at lealt three lines pafing through the centre of gravity at right angles to cacli other, forming the folid angle of a cube, round which the centrifugal forces were accurately balanced, and therefore a ootation begun round either of thefe three lines would be continued, and they are permanent axes of rotation. Albert Enler gave the firf demonfration in 1760, and fince that time the invenigation of thefe axes has been extended and improved by the different authors already named. It is an cxceedingly difficult fubject ; and we recommend the fynthetical inveftigation by Frifi in his Cofmograsblia as the fitter for inftructing a curious reader to whom the fubject is new. We flall conclude this differtation with a beautiful theorem, the enunciation of which we nwe to P. Frifi, which has amazingly improved the whole theory, and gives eafy and elegant folutions of the moft dificult problems. It is analogous to the great theorem of the compofition of motions and forces.
If a hody turns round an axis \(\mathrm{AGa}^{2}\) (fig. 17.) paf- p. Frific fing through its centre of gravity \(G\) with the angular theurem. velocity \(a\), while this axis is carried round anotber axis BG \(b\) with the angular velocity \(b\), and if GD be taken to GK as \(\dot{i}\) to \(b\) (the points \(B\) and E being taken on that fide of the centre where they are moving towards the fame fide of the plane of the figure), and the line DE be drawn, then the whole and every particle of the body will be in a frate of rotation round a third axis \(\mathrm{CG}_{c}\), lying in the plane of the other two, and parallel to DE, and the angular velocity c round this axis will be to \(a\) and to \(b\) as DE is to GD and to GE.
For, let \(P\) be any particle of the body, and fuppof a fpherical furface to be defcribed round G paffing through P. Draw PR perpendicular to the plane of the figure. It is evident that PR is the common fection of the circle of rotation IPi round the axis \(\mathrm{A} a\), and the circle \(K P k\) of rotation round the axis \(B b\). Let \(\mathrm{I} i, \mathrm{~K} k\) be the diameters of thefe circles of rotation, F and G their centres. Draw the radii PF and PO, and the tangents PM and PN. Thefe tangents arc in a planc MPN which touches the fphere in \(P\), and cuts the plane of the axis in a line MN, to which a line drawn from the cemere \(G\) of the fphere through the point \(R\) is perpendicular. Let \(P\) N reprefent the velocity of rotation of the point \(P\) round the axis \(B \ell\), and \(P f\) its velocity of rotation round \(A a\). Complete the parallelogram PN \(f\). Then \(\mathrm{I}_{t}\) is the direction and velocity of motion: refulting from the compofition of PN and \(P f . \quad P t\) is in thc plane MPN, becaufe the diagonal of a parallelogram is in the plane of its fides PN and Pf.

Let perpendiculats \(f \mathrm{~F}, \mathrm{t}\) T, be drawn to the plane of the axes, and the parallelogram PNof will be orthographically projected on that plane, its projectioa being a parallelogram RNTF. (F here falls on the centre by accident). Draw the diagunal RT. It is evident that the plane PTR T is perpendicular to the plane of the two axes, becaufe PR is fo. Therefore the compound motion \(P_{t}\) is in the plane of a circle of revolution round fome axis fituated in the plane of the other two. Thereforc produce \(T R\), and draw GC cutting it at ight
andes

\section*{ROT}

Kanation. angles in H , and let LPlbe the circle, and PH a ra-dius. \(1 /\) is therefore a langent, and perpendicular to llif, and will mact 1 RT in fome point ( \()\) of the line MN. The particle \(P\) is in a flate of zotation round the axis CGr, and its velocity is to the velocities round Aa or \(B 6\) as \(P\) ito Pf or PN. The triangles PRN and OPN are fimilar. For PN the tangent is perpendicular to tise radius \(O P\), and \(P R\) is perpendicula: to \(O N\). Thereforc \(O P: P N=P R: R N\), and \(R N=\frac{1 P R . P N}{O P^{\prime}}\). But the velocity of P round the axis \(\mathrm{B} b\) is OP.t. Therefore RN \(=\frac{\mathrm{PR} . O P . b}{\text { OP }}=\mathrm{PR} . b\). In like mannet RF \(=\mathrm{PR}\). a. Therefore RF: \(\mathrm{RN}=a: l=\mathrm{GD}: \mathrm{CE}\). But NT : RN = fine NRT: fine NTR, and GD:GE \(=\) fine GED: fine GDE. Therefore fine NRT: fine N1R = fime GED : fine GDE. But RNT = EGD, for Nll is perpendicular to EG and MT (being prallel to (15) is perpendicular to DG. Thercture TR is perpendicular to ED, and Cr is parallel to \(E D\), and the rotation of the particle \(P\) is round an axis parallel to ED.

And lince RN, RF, R I', are as the pelocities \(l, a\), c. round thefe different axes, and are proportional to EG, DG, DE, we have \(c\) to \(a\) or to \(l\) as ED to GD r.s GE, and the propofition is demonftrated.

This theorem may be thus expecfied in general titnis.

If a body revolves round an axis pafing throngh its cenire of gravity with the angular velocity' \(a\), whilie this axis is calried round another axis, alfo paffing through its centre of gravity, with the angular velocity \(b\), thefe two motions compofe a motion of every particle of the body round a third axis, lying in the plane of the other 1 wo, and inclined to each of the former aves in angles whofe fines are inverfely as the angular velocities round them; and the angular velocity round this new axis is to that round one of the primitive axes as the fine of inclination of the two primative axes is to the fine of the inclination of the new asis to the other primitive axis.

When we fry that we owe the cnunciation of this theorem io l'. Fifi, we grant at the fame time that f.mething like it has been luppofed or affumed by other authors. Newton feems to have confadered it as true, and even evident, in homogencous fyheres; and this has been tucitly acquiefeed in by the authors who followed lim in the problem of the preceffion. Inferior writers have carelefsly affumed it as a truth. Thus Nollet, Gravefande, and others, in their contrivances for exhibiting experiments for illuttrating the compolition of rontices, proceeded on this alfimption. Even authors of more fermpulus refearch have fatisfied themfelves with a very imperfect proof. Thus Mr Landen, in his excellent differtation on rotatory motion, Philofophical 'Tianfuctions, Vol. LXVII. contents himfelf with fhowing, that, by the equality and oppofite directions of the motions round the axes \(\mathrm{A} a\) and \(\mathrm{B} b\), the point C will be at reft, and from thence concludes that \(\mathrm{CG} c\) will be the new axis of rotation. Wut this is exceedingly hafty (note alfo, that this differtation was many years polterior to that of P. Trifi): For although the feparate motions of the point C may be equal and oppolite, it \(\therefore\) by no means either a mathematical or a mechanical coulequence that the body will turn round the axis \(C\).
\(\mathrm{I}_{\mathrm{n}}\) order that the point C may remain at reft, it is neCeffiry that all tendencies to motion be annililated: this is not cven thought of in making the affumption. Frifi has thown, that in the motion of cvery particie round the axis C , there is involved a motion round the two axes \(\mathrm{A} a\) and \(\mathrm{B} b\), with the velocities \(a\) and \(b\); and it is a confequence of this, and of this only, that the inpulfes which would feparately produce the rotations of every particle round \(\mathrm{A} a\) and B b will, either in fuccelfion or in conjunction, produce a rotation round C . Moreover, Mr Landen's not having attended to this, has led him, as we inagine, into a miltalae refpecting the velocity with which the axis changes its pofition; and though his procefs eshibits the path of evagation with accuracy, we apprehend that it does not aftign the true times of the axes arriving at particular poimts of this path.

It follows from this propofition, that if cuery par. Conciuticle of a body, whether folid or fluid, receives in one infant a feparate impulfe, competent to the production of a motion of the particle round an axis with a eertuin angular velocity, and another impulfe competent to the production of a motion round another axis with a certain velocits, the combined effect of ail thefe inpuldions will be a motion of the whole fyftem round a thisd axis given in pofition, with an angular velocity which is alfo given: and this motion will obtain without any feparation or difunion of parts; for we fee that a motion round two axes conllituse a motion rome a third axis in every particle, and no feparation would take place although the fyftem were incoherent like a mafs of fand, except by the attion of the centrifugal forces arifing from rotation. Mr Simpfon therefore erred in his folution of the problem of the preceffion, by fuppofing another force neceffary for enabling the particles of the fluid fpheroid to accompay the equator when difplaced from its former fituation. The very force which makes the difplacement produes the accompaniment, as far as it obtains, which we fhall fee prefently is not to the extent that Mr Simpfon and other authors who treat this problem have fuppofed.

For the fame reafon, if a body be turning round any axis, and every particle in one intant gat an impulfe precifely fuch as is competent to produce a given angular velocity round another axis, the body will turn round a third axis given in pofition, with a given angular velocity: for it is indifferent (as it is in the ordinary compofition of motion) whether the forces aot on a particle at once or in fucceffion. The final mo. tion is the fame both in refpect of direction and velocity.

Lafly, when a rigid body aequires a rotation round an axis by the astion of an impulfe on one part of it, and at the fame time, or afterwards, gets an impulfe on any part which, alone, would have produced a certain rotation round another axis, the effert of the combined actions will be a rotation round a third axis, in terms of this propofition; for when a rigid body acquires a motion round an axis, not by the fimulaneous impulfe of the precifely competent force on cach particle, but ly an impulfe on one part, there has been propagated to cesery particle (by means of the conneating forees) an impulfe precifely competent to produce the motion which the particle really acquires; and when a rigid body, al-
\(\underbrace{\text { Rotation. }}\) ready turning round an axis A a (fig. 17.) reccives an impulfe which makes it actually turn round another axis \(\mathrm{C} c\), there bas bien propngate. to each proticle a force jrecifely competent to produce, not the motion, but the change of motion which takes place in that particle, this is, a force which, when compunded with the inherent force of its primitive motion, produces the new motion ; that is (by this theorem), a force which a!one would have caufed it to turn ound a third axis \(B b\), with a rotation making the other conftituent of the actual rotation round Cr.

This mult be confidered as one of the molt important propoticions in dynamics, and gives a great extenfion to the doitrine of the compofition of motion. We fee that rotations are compounded in the fame manner as other mutions, and it is exircmely eafy to difcover the compofition. We have only to fuppofe a fphere deferibed round the centre of the body; and the eyuator of this fphere correfponding to any primitive polition of the axis of rotation gives us the direction and velocity of the particles fituated in it . Let another great circle cut this equator in any point; it will be the equator of ano:her rotation. Set off an arch of edch from the point of interfection, proportional to the angular velocity of each rotation, and complete the fpherical parailelogram. The great circle, which is the diagonal of this parallelegram, will be the equator of the rotation, which is actually compounded of the other two.

And thus may any two rotations be compounded. We have given an inftance of this in the folumon of the prubiem of the Precession of the Equinoxes, Vol. XV. p. 463 .

It appears plainly in the demonftration of this theorem that the axis \(C c\) is a new line in the body. The change of iotation is not accomplithed by a transference of the poles and equator of the former rotation to a new fituation, in which they are again the poles and equator of che rntation; for we fee that in the rotation round the axis C c, the puricle of the body which was formerly the pnic A is dseribing a circle round the áxis Ce. Noth hoowing this compofition of rotations, Newton, Walmiley, Simpion, and oeher celcbrared mathematiciancermacered, that the axis of the carth's rotation remained \(t^{2}\) e fame, but chamed its polition. In this l:ey were conmmed by the coaltancy of the obferved la1 tules of places on the furface of the carth. But the a wis of the eitu's rotation really changes its place, and the poles forft throush diferent pnints of its farface; Dut thefe chtferent points are too near cach other to mak: the change fenfible to the niceft obfervation.

126
may make a great change of the pofition of the axis of rotation, as it may inake in the velocity of a rectiliteal ination. Thusalthough the rotation round \(A a\) be indefinitely fmall, if another cquallj frall rotation be impreffed round an axis Ibb perpendicular to A \(a\), the a sis will at once finift in \(\mathrm{C}_{c}\) half way between them; but a fucceflion of rotations is neceffary for carrying the primitive material axis into a ncw pofition, where it is again an axis. This transference, however, is poffible, but gradual, and muft be accomplified by a continua ion of impulfes totally different from what we would at firtt fuppotic. In order that A may pars from A to \(C\), i: is not enongh that it gets an impulfe in the direation AC. Such an impulfe would carry it thither, if the body hal not been whirling round A a by the meve perfeverance of matter in its thate of motion; but when the body is already whirling rourd \(A a\), the particles in the circle IP \(i\) are moving in the circumferences of that circle ; and fince that circle allo partakes of the motion given to \(A\), every particle in it muta be incefonsIy deflected from the path in which it is mnving. "The coatinual agency of a force is therefore necellary for thas purpofe; and if this force be difcontinued, the point A will immediately quit the plane of the arch \(A C\), al \(n g\) which we are endearouring to move it, and will ftart up.

This is the theorem which we formerly faid would enable us to overcome the difficultics in the inveltigation of the axis of rotation.

Thus we can difcover what Mr Landen calls the evagations of the poles of rotation by the action of centrifugal forces : For in fig 16 . the known velocity of the ball \(A\) and the radius \(A C\) of its circle of rotation will give us the centrifugal force by which the balls by the actend to turn in the plane DAdBD. This gives the axis \(\mathrm{E} d\) a tendency to move in a plane perpendicular to the plane of the figure; and its feparation from the poles \(D\) and \(d\) does not depend on the feparation of the conneating rod \(A B\) from its prefent inclination to \(D d\), but on the angle which the fpiral path of the ball makes with the plane of a circle of rotation round \(\mathrm{D} d\). The dillance of the re:w poles from 1) and \(d\) is an arch of a circle which menfurcs the angle made by the fpiral with the ciacle of rotation round the primitive axis. This will gradurlly increafo, and the mathematical axis of rotation will be d-foribing a fpiral round \(D\) and \(d\), graductly feparating from the?c points, and again app:oaching them, and coinciding will them ag.in, at the time tha: the bulls themielves are moft uf all ranoved from their pamitwe fitution, namely, wher \(A\) is in the place of E .

The fume theorem alfo emables \(u\) s to find the incipient axis of rotation in the complicated cafes which are almoft inscelible by means o: the clemeatary principics of rotation.

Tius, when the centres of ofriilation and percufion do not coincice, as we fuppofed in fis. 5 . and 12. Sup. pore, firf, that they do coinside, and find the pafition of the axis \(\sigma l\), and the a gular velucity of the rotation. Then find the ceatre of percullion, the aais I'p, and the momentem round it, and the ancular velocity which this momenturn wou?d produce. 'Liks w, have nbained wo rotations rouml given ax as, and whol given angular velositics. Compound thefe rotations by this. theorem, and we obtain the required polition of the

125 The evaracions of the poles centrifugal forecs,
in the body, contrary to what we experience in a thoufond familar inftances; and indeed this is impolible by any one clange. We cannot by the impulie of any one force make a tody which is turning round th: asis A a change its polition and turn round the fame material axis brought into the polition \(\mathrm{C} c\). \section*{R O' I}
ment from a cumplete knowledge of this fubject. We mean the art of seamanship. A hip, the moft admirable of machines, muft be confidered as a body in free fpace, impelled by the winds and waters, and continually moved round fpontaneous axes of converfion, and inceflantly checked in thefe novements. The timming of the fails, the action of the tudder, the very difpolition of the loading, all affect her verfatility. An experienced feaman knows by habit how to produce and facilitate thefe motions, and to check or fop fuch as are inconvenient. Experience, without any reflection or knowledge how and why, informs him what pofition of the rudder produces il deviation from the conrfe. A fort of common fenfe tells him, that, in order to make the fhip tutn lier head away from the wind, he mutt increate the furface or the obliquity of the head fails, and diminith the power of the fails near the flem. A few cther operatinns are dictated to him by this kind of common fonfe; but few even of old feamen can tell why a dhip has finch a tendency to bring her head up in the wind, and why it is fo neceffary to crowd the fore part of the fhip with fails: lewer fill know that a certain thifting of the laveling will facilitate fome motions in different cafes; that the crew of a great fhip running fuddenly to a particular place fhall enable the thip to accomplith a movement in a flormy fea which could not be done otherwife ; and perhaps not one in ten theurand cantell why this procedure will be fuccefsful. But the mathematical inguner will fee all this; and it would be a mont salwable acquifition to the puble, to have a manual of fich jropofitions, deduced from a careful and judicicus confideration of the circumatances, and freed from that great complication and inericacy which only the learned can wravel, and expreffed in a familiar manner, clothed with fuch reafoning as will be inelligible to the unlearnod ; and though not atcourate, yet perfuafive. Mr liouguer, in his Traitc du Navirc, and in his Mancuvte des \(I\) aiflounx, has delivercd at grtat deal of ulelul information on this tubject ; a.h 1 Mr Eezout has made a very ufetul abitract of thefe vouks in his Cours de Mathomatique. But the fubject
is left ty them in a form far too abftufe to lee of any general ufe : and it is unfortunatily fo combined with or founded on a falfe theory of the action and refiftance of fluids; that many of the propofitions are totally inconfiftent with experience, and many maxims of feamanthip are falfe. This has eccafioned thefe dectrines to be neglected altogether. Few of our profelional feamen liave the preparatory knowledge neceffary for improving the fcience; but it would be a work of immenfe utility, and would acquire great seputation to the perfon whofuccefsfully profecutes it.

We fhallmention under the aiticle Seamansmip the clief problems, and point out the mechanicial principles by which they may be folved.

ROTHERAM, a town in the Weft Riding of Yorkthire, leated on the river Don, near which there is a handfome fone-bridge. It is a well built flace, and the market is large for provifions. W. Lorg. i. ic. N. Lat. 53. \(25 \cdot\)

ROTHSAY, a town in the ille of Bute, of which it is the capital. It is a well-built town of fmall houfes, and about 200 families; and is within thefe few years much improved. It has a good pier, and is fated at the bottom of a fine bay, whofe niouth lies exactly oppofite to Locl Steven in Cowal. Here is a fine depth of water, a fecure retreat, and a ready ravigation down the Frith for an export trade. Magazines of goods fcr foreign parts might be molt advantagenully erected here. The wemen of this town fin yam, the men fupport themfelves by fifhing. W. Long. 5. 0. N. Lat. 55. 50.

Rothfay gives the title of Duke to the prince of Scotland, atitle which was formerly accompanied with fuitable revenues, powers, ard privileges. Ot the origin of this title we have the following account from the pen of the leamed Dr M‘Lend of Glatgow. Some time between the \(16 \mathrm{l}_{1}\) of March and the 26 th of Cctober \(139^{8}\), John of Gaunt, who is ftyled John duke of Aquitaine and Lancafter, urcle to the king of England, and David, who is ftyled earl of Carrick, eldeft fon of the king of Scotland, met for the purpofe of fettling the borders, and terminating all matters in difpute. At a fubfequent interview between the fame parties, David is Atyled Duke of Rothray. "This inmovation probably proceeded on an idca, to which the interview of the two princes might naturally give rife, that it was unfuitable, and unworthy of the Scottifh national dignity, that the princes of England fhould enjoy a title of nobility, which was efteemed to be of higher rank than that poffeffed by the hereditary prince of Scotland." And this, in the opinion of our author, was the occafion of introducing the title of Duke into Scot. land.

ROTTBCELLIA, in botany; a genus of the digynia ouder, belenging to tbe triandia clafs of plants. The tachis is jointed, roundifh, and in many cales filiform ; the calyx is ovate, lanceolated, flat, fimple, or bipartite; the florets are alternate on the winding rachis.

ROTONDO, or Retuxno, in architeCीure, an appellation giren to an! building that is round both within and without; whether it be al church, a faloon, or the like. 'The molt celebrated rotundo of the ancients is the pantheon at Rome. Sce Panthron.

ROTL'EN-stone, a mineral found in Derbyhire

Rotennefs and ufed by mechanics for all forts of finer grinding \(\underbrace{\text { Rotterdam. and polifhing, and fometinies for cutting of fones. Ac- }}\) cording to Ferber, it is a tripoli mixed with calcareous earth.

ROTMENNESS. Sec Putrlfaction.
ROTTERDAM, is a city in the province of Holland, in E. Long. 4. 20. N. Lit. 52 . lituated ont the north bank of the river Macfe, about 37 miles fouth of Amfterdam, nine \(f\) utheeaft of the Hagne, and 15 to the eallward of Bricl. It is a large and populous city, of a triangular figure, handfomely built of brick, the Arects wide and well paved. There are ten gates to the tuwn, fix of which are at the land fide and four at the fide of the Mdefc. It is fuppofed to take its name from the Roeer, or Rotlee, a litlle river that falls into the canals of this city, and from Dam, a dike. It is uncertain when it was firft built; and though it is fuppofed to be very ancient, yet we find no mention made of it befere the \(13^{\text {th }}\) century. In the year 1270 it was furrounded with ramparts, and honoured with feveral privileges; but 27 years after it was taken by the Fleming. In the year 1418, Brederode chief of the Haeks made himfelf matter of it; fince which time it has continued yearly to increafe by means of the conveniency of its harbour. Its arms are vert, a pale argent, quarterly in a chief on the firtt and third, or, a lion fpotted fable, on the fecond and fourth a lion fpotted gules.

Rotterdam is not reckoned one of the principal cities of the province, becaufe it has not been always in its prefent flourifhing condition. The Dutch call it The firf of the fecond rank, whereas it ought to be efteemed the feer ad of the filf, bsing, next to Amilerdam, the molt trading town in the United Pr vinces. Its port is very commodi us; for the canals, which run through molt paits of the town, hring the fhips, fome of 200 or 300 ton, up to the merchant's door; a conveniency for loading and unloading which is not to be found in other places. The great fhips go up into the middle of the town by the canal into which the Maefe enters by the old head, as it comes out by the new. A hanger, upon his firt entering this place, is aftonilhed at the beautiful confufion of chimneys interm:xed with tops of trees with which the canals are planted, and freamers of velfis; inomuch that he can bardly tell whether it be fleet, city, or forelt. The Harring Viet is a very fine ftreet; moft of the houfes are new, and built of hewn ftone; but the grandert as well as
Pekam's
ت3.lur thro tolland, sir.
helped by the reflefion from the trees that orerfhadow Raterdia. their houfes, which, were it not for this circumanane, would \(b=\) intolerably hot, from their vicinity to the canals. Mift of the houfes tave lonhing glafes placed on the outlides of the windows, on both fides, in order that they may fee every thing which paffes up and down the ftreet. The !lar-cafes are narrow, fteep, and come duwn almof to the door. In general, the houfes rife with enormous fteep roofs, turning the gable end to the frect, and leaning confiderably forward, fo that the top often projels near two fect beyend the perpendicular. The Bomb Quay is fo broad, that ther? are diti:ct walks fur carrages and foot-palfengers, lined and thaded with a duble row of trees.-Y(in loris over the river on fome beaut ful mealiw, and a fn: avenue of trees, which lads to the pelt-houfe: it feems to be an elegant building, and the trees round it are fo difpofed as to appear a thick wood. This firect is at leaf haif a mile in length, and extends from the old w the new liead, the two places where the water enters to fill the canals of this exteafive city. When water funs through a freet, it then allumes the name of a canal, of which kind the Hecren-flect has the pre-eminence; the houfes are of free-fone, and, very loliy; the cana! is fpacious, and covered with thops: at one end llands the Englift church, a neat pretty building, of whish the timop of London is ardinary.

This port is much more frcquented by the Britifh merchants than Amfterdam, infomuch that, after a frof, when the faa is npen, fometimes 300 fail of Britifh veffels fail sut of the hasbour at once. There is always a large number of Britifh fubje?ts who relide in this town, and live much in the fame manner as in Great Britain. The reafon of the great traffic between this place and England, is becaufe the thips can generally load and unluad, and return to England from Rotterdam, befure a fhip can get clear from Amiferdam and the Texel. Hence the Englifh merchants find it che:aper and more comnndious, after their goods are arrived at Rotterdam, to fend them in boats over the canals to Anulterdam. Annther great advantage they have hete for cormerce is, that the Miefe is open, and the paldige free from ice, much fooner in the fpring than in the 1 and Zuyder-fes, which lead to Am:lerdam.

The glats-houfe here is one of the beft in the feven provinces; it makes abundance of glals-toys and enamelied bowis, which are fent to India, and exchanged for china-ware, and cher oriental commodities.

The colicge of atmiratiy here is called the college of the Maef, the chief of all Holland and the United Provines. The licutemant-general, admiral of Holland, is obiiged to go on bard of a Rotterdam thip in the Maefe when he gocs to fea, and then he commands the fquadron of the Maefe.

On the ealt fide of the city there is a large bafon and dock, where mip-earpenters are continually employed for the ufe of the admiralty, or of the Eat Indi company. But the largeft fhips belonging to the admiralty of Rotterdam are kepi at Helvoctlluys, as the monk commudious fitation, that plase being lituated on the ocean ; for it requires both time and tronble to work a large fhip from the dock uf Rotterdam to the fea.

Rotterdam has four Dutch churches for the eftablilh.d religion. There is one thing very remarkable

\section*{ROU}

Ruterdam in refpest to the great church, that the tower which tains, though the houfes are ordinary; but the walk

Rouen. \(\rightarrow\) -
leaned on one fide was fet up fraight in the year \(\mathbf{1 6 5 5}\), as appears by the infcription engraven on brafs at the botum of the tower withinfide. In the choir of this charch are celebrated, will no fmall folemnity, the promotions made in the Latin fchools. Befides, there are two Englith clurchec, one for thofe of the church of Eingland and the other for the Preforterians; and one Scoich church; as likewife one Lutheran, two Armenian, :wo Anabaptif, four Roman Catholic chapels, and ore Jewilh fynagogue,

Though the public buildings here are not fo Itately as thofe of Amllerdam and fome other cities, yet there are feveral of them well worth feeing. The great church of St Laurence is a good old building, where are many fately monuments of their old admirals. From the top of this church one may fee the Hague, Delft, Leyden, Dort, and molt of the towns of fonth Holland. There are feveral finc market-places, as three fith-markets, the great market, the new-market, and the logs-market. The Stadthoufe is an old building, but the chambers large and fively adorned. The magazines for fitting out their fhips are very good lirnctures. The Exchange is a noble building, begun in the year 1720 , and finifhed in 1736. Upon the Great Bridge in the market-place there is a fine brafs flatue erected to the great Erafmus, who was born in this city in 1467 , and died at Bafil in Switzerland. He is reprefented in a furred gown, and a round cap, with a book in his hand. The ftatue is on a pedeftal of marble, fiurrounded with rails of iron. Juf by, one may fee the houfe where this great man was born, which is a very fmall one, and has the following diftich written on the door :

\section*{Adibus bis ortus, mundum decoravit, Erafmus, Artibus, ingenio, religione, fid:.}

Rotterdam and the whole of the United Provinces are now in the poffeffion of the French Republic. See Revolution and Unitaj Provinces.

ROTULA, in anatomy, the fmall bone of the knee. called alfo patella.

ROTUNDUS, in anatomy, a name given to feveral mufcles otherwife called teres.

RouAd. See Aradus.
ROUANE, or Roane, an ancient and confiderable town of France, in Lower Fore?, with the title of a duchy; feated on the river Loire, at the place where it begins to be navigable for boats. E. Long. 4.9. N L.at. 46. 2.

ROUCOU, in dyeing, the fame with Anotra and Bixa.
ROUEN, a city of France, and capital of Nor. mandy, had an archbithop's fee, a parliament, a mint, a handfome college, an academy, two abheys, and an old caftle. It is feven miles in circumference, and furrounded with fix fuburb; ; and contained before the revolu. tion 35 parifhes, and 24 convents for mon and women. The metropolitan church has a very handfome front, on which are two lofty tteeples, whence there is a tine bicw of the town and country. The great bell is \(t_{3}\) feet high and it in diameter. The church of the Benedigine abbey is much admired by travellers. The parlament-boufe is adorned with beautiful tapeftry and fine-piftures. There are a great number of foun-
upon the quay is very pleafant, and there are 13 gates from thence into the city. The number of the inhabitants are about 60,000 , and they have feveral wonl. len manufactures. It is feated on the river Seane; and the tide rifes fo high, that veffels of 200 tons may come up to the quay: but one of the greatell curiofities is the bridge, of 270 paces in length, fuported by buats, and confequently is higher or lower according to the tide. It is paved and there are ways for footpaffengers on each fide, with benches to lit upon; and coaches may pats over it at any hour of the day or night. It is often called Roan by Englifh hiftorians; and is 50 miles fouth weft of Amiens, and to northwell of Paris.

Though large, and enriched by commerce, Romen is not an elegant place. 'lhe ftreets are almoft all narrow, crooked, and dirty; the buildings old and irregular. It was fortified by St Louis in 1253 , but the walls are now demolifhed. The environs, more peculiarly the hills which overlook the Seine, are wonderfully agreeable, and covered with magnificent villas. E. Long. I. 10. N. Lat. 49. 26.

ROVERE, or Roveredo, a Atrong town of the Tyrnl, on the confines of the republic ot Venice; feated on the river Adige, at the foot of a mountain, and on the fide of a ftream, over which there is a bridge, defended by two large towers and a frong cafle, 10 miles fouth of Trent. The town is tolerably well built, and governed by a chief magittrate, Ayled a Podeffut. There are feveral churches and convents, that conaian nothing worthy of notice. The molt remarkable thing, and what they call the great wonder of Roveredo, is its fpinning-boufe for a manufacture of tilk, in which they have a great trade here to the fairs of Bolzano. They have alfo a very good trade in wine. Betwixt Trent and Roveredo is the ftrong fort of Belem, belonging to the houre of Aufria. It is fituated on a rock, and commands the roads at the foot of the mountain. E. Long. II. I. N. Lat. 4 G. 12 .

ROUERGUE, a province of France, in the government of Guienne; bounded on the ealt by the Cevennes and Gevaudan, on the weft by Querci, on the north by the fame and Auvergne, and on the fouth by Languedoc. It is 75 miles in length, and 50 in breadth; not very fertile, but feeds a number of cattle, and has mines of copper, iron, alum, vitriol, and fulphur. It is divided into a countr, and the upper and lower marche. Rliodez is the capital town.

ROVIGNO, a populous town of Italy, in Iftria, with two good hatbours, and quarries of fine Rone. It is feated in a territory which produces excellent wine, in a peninfula on the weflern coatt. E. Long. 13. 53. N. Lat. 45.14.

ROVIGO, is a town of Italy, in the territory of Venice, and capital of the Polefin di Rovigo, in E. Long. 12.25. N. Lat. 45. G. It is a fmall place, poorly inhabited, and encompaffed with ruinous walls. Formerly it belonged to the duke of Ferrara, but has been fubjeat to the Venetimns fince 1500 , and is famous for being the birth-place of that learned man Coelius Rhodoginus. It was built upon the ruins of Adria, anciently a noble harbour one mile from Rovign, that gave name to the gulph, but now a half-drowned village, inhabited by a few fifhermen.

ROUND.

\section*{R O U}

ROUNDELAY, or Roundo, a fort of ancient poem, derived its name, acerrding to Menage, from its form, and becaufe it fill turns back again to the firft verfe, and thus gnes romid. The common roundelay confifts of 13 verfes, eight of which are in one thyme and five in another. It is divided into couplets; at the end of the fecond and third of which the beginning of the reundelay is repeated; and that, if poffible, in an equivocal or punuing fenfe. The roundelay is a popular prem in France, but is litte known among us. Marot and Vniture have fucceeded the beft in it. Rapin remarks, that if the roundelay be not very exquifite, it is intolerably bad. In all the ancient ones, Menage obferves, that the verfe preceding has a lefs complete fenfe, and yet joins agreeably with that of the clofe, without depending neceifarily thereon. This rule, well obferved, makes the roundelary more ingenious, and is one of the finelfes of the poem. Some of the ancient writers fpeak of the roundelay or roundel as a kind of air appropriated to dancing; and in this fenfe the term feems to indicate little more than dancing in a circle with the hands joined.

ROUND-House, a kind of prifon for the nightly watch in London to fecure diforderly perfons till they can be carried before a magiftrate.

Round Houfe, in a fhip, the uppermoft room or cabin on the ftern of a thip, where the mafter lies.

ROUNDS, in military matters, a detachment from the main-guard, of an offieer or a non-commiffinned officer and fix men, who go round the rampart of a garrilon, to liten if any thing be Atirring without the place, and to fee that the centinels he diligent upon their dnty, and all in order. In Atrict garrifons the rounds go every half-hour. The centinels are to challinge at a diftance, and to reft their arms as the round paffes. All guards turn out, challenge, exchange the parole, and reft their arms, \&c.

Rounds are ordinary and extraordinary. The ordinary rounds are three: the town-major's round, the grand-round, and the vifiting-round.

Manncr of going the Rounds. When the townmilior gree his I und, he comes to the main guard, and deminds it ferjeant and four or fix men to efcort him to the next guard; and when it is dark, one of the men is to carry a light.

As foon at the fentry at the guard perceives the round coming, he fhall give notice to the guard, that they may be ready to turn out when ordered; and when the round is alvanced within about 20 or 30 paces of the guard, he is to challenge brikkly; and when he is anfwered by the ferjeant who attends the round, Tuwn major's round, he is to fay, Stand round! and relt his arms: after which he is to call nut immediately, Serjeant, turn out the guard, town-major's round. Upon the fenty) calling, the ferjeant is to turn out the guard immediately, drawing up the men in good order with fhouldered arms, the officer placing himfelf at the head of it, with his arms in his hand. He then orders the ferjeant and four or fix men to advance toward the round, and challenge: the ferjeant of the round is to anfwer, Town mejor's round; upon which the ferjeant of the guard replies, fidoance, Serjeant, with the parr'c! at the fame time ordering his men to relf their arms. The ferjeant of the rund advances alone, ard rives the ficritant of the guard the paalone, ard riva
Vos. XVI.
role in his ear, that none elfe may hear it; duriv.g R Nurfillon, which perioci the ferje.nnt of the graard holds the fpear Rouffean. of his halbert at the other's breaft. The ferjeant of the round then returns to his poft, whild the ferjeant of the guard leaving his men to kerp the round from advancing, gives the parole to his officer. This being found ighlt, the officer orders his ferjeant to return to his men; fays, Alzarice, losun-major's round! and orders the guard to reft their arms; upn which the ferjeant of the guard orders his men to wheel back from the centre, and form a lane, through which the townmajor is to pafs (the efeort remaining where they were), and go up to the officer and give him the parule, laying his mouth to his ear. The officer holds the fpear of his efponton at the town major's brealt while lie gives him the parole.

The defign of rounds is not only to vifit the guards, and keep the centinels alert; but likewife to ditcover what paffes in the nutworks, and beyond them.

ROUSSILLON, a province of France, in the Pyrenees, bounded on the ealt by the Mediterranean fia, on the welt by Cerdagne, on the north by Lower Languedoc, and on the fouth by Catalonia, from which it is ieparated by the Pyrences. It is a fertile country. ahout 50 miles in length, and 25 in bread:h, and remarkable for its great number of olive trees. Perpignan is the capital town.

ROUSSEAU (James), an eminent painter, was horn at Paris in the year \(\mathbf{I}_{630}\), and ftudied firt under Swanevelt, who had married one of his relations ; after which he improved himfelf by travelling into Itaiy, practifing folely in perfpective, architecture, and landfcape. On his return home, he was employed at Marly. He diIt nguifhed himfelf very much in painting buildings, and by his knowledge of, and attention to, thie principles of perfective. Loui, XIV. emplojed him to decorate his hall of devices at St Germaine-en-Laie, where he reprefented the operas of Lulli. But being a Proteftant, he quitted France on the perfecution of his brethren, and re:ired to Swifferland. Louis invited him back; he refufed, but fent his defigns, and recommended a proper perfon to execute them. After a thort ftay in Swifferland, he went on Holland; whence he was invited over to England by Ralph duke of Montague, to adorn his new houfe in Boomitury, where he painted much. Some of h's pifures, buth in landfape and architecture, are over donrs at Hamptoncourt; and he etched fome of his own defig: s. His perfectives having been moll commonl; applided to decorate courts or gardens, have fuffered much from the weather. Such of them as remain are monuments of an excellent genilus. The colours are durable and bright, and the choice of them moft judicious. He died in Soho-fquare, abnut the ye.ur 1693, aged 63 .

Roussbau (John Baptift), a celebrated French poet, was born at l'aris in April 1671. His f.ther, who was :t fhoemaker in gend circumfances made him flidy in the beft college ol Paris, where he diting ruithed himfelf by his abilities. He at length ap lied him. felf enticely to poetry, and fonn made hime ef known by feveral thert pieces, that were filled with lir ly and agrecable imenec, wh ch made him lought for by perfons of the firll rank, and men of the brightelt genius. He was admitted in qualiy of eices, or puril, ints the - academy of Inferiptions and Beiles Letures, in 1701,

Kouffeas. \(\underbrace{(2)}\)
and almoft all the reft of his life attached himfelf to fome of the great lords. He attended marfhall Tallard into England, in quality of fecretary, and hese contracted a fiendihip with St Evremond. At his return to Paris, he was admitted into the politelt company, lived among the courtiers, and feemed perfectly fatisfied with his fituation; when, in 1708 , he was profecuted for being the author of fome couplets, in which the claracters of feveral perfons of wit and merit were blackened by the moft atrocirus calumies. This profecution made much noife; and Rouffeau was banifhed in 1712 out of the kingdom, to which he was never more to return, by a decree of the parliament of Paris. However, he always Iteadily denied, and ever on his death.bed, his being the author of thefe couplets. From the date of this fentence he lived in foreign countries, where he found illuftious protefors. The count de Luc, ambaffador of France, in Swifferland, took him into his family, and fudied to render his life agrecable. He took him with him to the treaty of Baden in 1;14, where he was one of the plenipotentiaries, and prefented hin to prince Eugene, who entertaining a particular efteem for him, took him to Vienna, and introduced him to the emperor's court. Rouffeau lived about three years with prince Eugene; but having lof his favour by fatirifing one of his mittreffes, he retired to Bruffels, where he afterwards ufually refided, and where he met with much attention and much generofity, as we thall foon mention.-It was here that his difputes with Voltaire commenced, with whom he had become acquainted at the college of Louis the Great, who then much admired his turn for poetry. At that time Voltaire afliduoufly cultivated the acquaintance of Rouffeau, and made him a prefent of all his works; and Rouffean, flattered by his refpect, announced him as a man who would one day be a glory to the age. The anthor of the Henriad continued to confult him about his productions, and to lavilh on him the higheft encomiums, while their friendlhip daily increafed. When they agxin met at Bruffels, however, they harboured the blackeft malice againft one another. The caufe of this enmity, as Rouffeau and lis friends tell the fory, was a lecture which he had compofed from his Epitle to Julia, now Urania. This piece frightened Voltaire, as it plainly dif:overed his rage againd him. The young man, vexed at thefe calumnies, underfood the whole as thrown ont againft him. This is what Rouffeau afferts. But his adverfaries, and the friends of the poet whom he cried down, fufpected him, perhaps rather rafhly, of having cmployed farcafms, becaufe he thought that his own reputa ion was in danger of being eclipfed by that of his rival. What is very fingular, thefe two relebrated characters enceavoured each of them to prepofefs the public with a bad cpinion of the other, which they themfelves never entertained in rcality, and to fmother in their breaf that efleem for each other which, in de. fiance of all their exertions, fill held its place, Rouffeau, from the period of this difpute, always reprefented Voltaire as a buffoon, as a writer poffefing neither tufte nor judgmeit, who owed all his fuccefs to a particular mode "hich he purfued. As a poet he confidered him as irferior to Lucan, and litile fuperior to Pradun. Voleare treate 1 him Rill worfe. Roulfean, according to him, was nothing beiter than a plagiarit,
who could make fuift to rhime, but could not make Rouffeat. any refle\&ions; that he had nothing but the talent of arranging words, and that he had cven lot that in fo. reign countries. He thus addrefes him, in a piece lit. tle known:
Auffutot le Diers qui minffire
T'arracha le luthet ha lyre
Qu'avoiont défhonor's tes mains;
Tu n'es plus qu'un reptile immonde,
Rebut du Parnaffe et du monds
Enfíveli dans tes venius.

In confequence of the little efteem in which Rouffeau was held at Bruffels, he could never forget Paris. The grand-prior of Vendome, and the baron de Breteuil, folicited the regent duke of Orleans to allow him to return; which favour was oltained. But our poet, before he would make ule of the lettres de rapel iffued in his favour, demanded a review of his procets, which he wifhed to be repealed, not as a matticr of favour, but by a folemn judgment of court; but his petition was refufed. He then came over, in 1721 , to England, where he printed A Colleation of Lis Works, in 2 vols 12 mo , at London. This edition, publifhed in 1723 , brought him near 10,000 crowns, the whole of which he placed in the hands of the Oftend company. The affairs of this company, however foon getting into confufion, all thofe who had any moncy in their hands lof the whole of it, by which unfontunate event Rouffeau, when arlived at that age when he flood moft in need of the comforts of fortune, had nothing to depend upon but the generofity of fome friends. Boutct, public notary in Paris, was peculiarly generous and attentive to him. He found a fill greater afylum in the Duke d'Aremberg, whole table was open to him at all times ; who being obliged in 1733 to go into the army in Germany, fettled on him a penfion of i 500 livres. But unfortunately he foon lot his good opirion, having been imprudent enough to publiih in a Journal (of which Voltaire accufed him), that the duke d'A remberg was the author of thofe verfes for which he himfelf had been banifhed France. He was therefore difmiffed from his table, and his pride would not allow him to accept of the penfion after this rupture. Brulfels now became infupportable to him ; and the count du Luc, and M. de Senozan, receiver-general of the chunch revenue, being informed of his dif eppointments, invited him to come privately to Paris, in the hopes of procuring a diminution of the peri a of his baniflament. Some time previous to this Roufferu had publ: fhed two new letters; one to P. Brumoi, on tragedy ; the other to Rollin, on hifory. It is faid, he expected from his letter to Brumoi to get the farour of all the Jefuits; and from the one to Rollin, the patronage of the Janfemins. He had likewife written an Ode, in praife of Cardinal de Fleury, on Peace, which met with a favourable reception, althongh it was not equal to fome of his former pieces. He imugined his return to Paris would be found no difficult matter. He attempted it, and found he could not obtain: a pafs for a fingle ycar. Some fay, that Roulfent had irnitated fome perfons in power, by an all gory, calle 1 The jurgmint of Plate; in which piece he defribss one of the princip. 1 judges, where

\section*{K O U}

Roufteau, whofe ik in Pluto had caufed to be taken off, and Aretched out on the feat in the bench. This latire, joined to the fecret machinations of enemies, rendered all the attempts of his riends to procure his return abortive. After having faid three months at Paris, he returned to Brulfels in February 1740, at which place he died March 17. 15.4, Arongly impreffed with religious fentiments. Immediately before he received the viaticum, he protefted he was not the author of thofe horrid verfes which had io much embittered his life ; and tha decha. tion, in the opinion of the virtuous part of mankind, will be confidered as a futticient proof of his innocence. Some have faid that Rouffeau was profane, troubletome, capricious, froward, vindictive, envious, a fatterer, and 2 fatirif. Others again reprefent lum as a man full of candour and opennef, a faithiul and grateful |rietid, and as a Chriftian affected with a fenfe of religion.Amidft fuch widely varied accounts it is dificuit to form an opinion of his character. Such of our readers as wih to know more of this grcat poet muy confult the Dictionary of M. Chaupepić, written with as much precilion as impartiality, who endeavours to give a juft idea of his character. From what he fays, it does not appear that Rouffeau can be cleared from the accufation brought againft him of having attacked his benefactors. We believe he may be much more eafily freed from the imputation brought againlt him by fome of having difowned his father: for what occation had Rouffeau to conceal the obfcurity of his birth? It exalted his own merit.
M. Segay, in concert with M. the prince of la Tour Tallis, has given a very beautiful edition of his works, agreeable to the poet's laft corrections. It was publifhed in 1743, at Paris, in 3 vols. \(4^{\text {to }}\), and in 4 vols. 12 mo , containing nothing but what was acknow: ledged by the author as his own. It contains, 1. Four Books of Odes, of which the firlt are facred odes, taken from the Pialms. "Roulfeau (fays Freron) unites in himfelf Pindar, Horace, Anacreon, and Malherbe. What fire, what genius, what flights of imagination, what rapidity of defcription, what variety if affecting frokes, what a crowd of brilliant comparifons, what richnefs of rhymes, what happy vertification; but efpecially what inimitable exprellion! His verfes are finifhed in the higheft flyle of perfcation that French verfe is capable of affuining." The lyric compofitions of Roulfeau are, in general, above mediocrity. All his odes asc not, however, of equal merit. The moft beautiful are theie which he has addrefled to count du Luc, to Malhcrbe, to prince Eugenc, to Vendome, to the Chriftian princes; his Odes on the death of the prince de Conti, on the battle of Peterwaradin; and the Ode to Fortune, altho' there are certainly fome few weak Manzas to be met with in it. There is confiderable neatrefs in the comporition of the Ode to a Widow, in his tlanzas to the Abbe de Chaulieu, in his adảreffes to Roffignol, in his Odes to comit de Bonnsval, to M. Duche, and to come de Seazindorf; atd it is to be lamented that he wrote fo few pieces of this kind, from which his genius feemed to lead him with difficulty. 2. Two books of Epilles, in vare. Al. though thefe do not want their beanties, yet there pre. vails too much of a mifarthropic fpirit in them, which tales away greatly from their excellence. He makes too frequent mention of lis encmics and his mif-
fortunes; t.e difflays thofe principles which are fup. Rouffeag. ported lefs on the bafis of truth tham on thofe various paffions which ruled his mind at the t me. He puts forth his anger in paradoxes. If t.e be reckened cqual to Horace in his odes, ha is far inferior in his epittles. There is much more philooophy in the Roman poet than in him. 3. Cantutas. He is the father of this fpecies of poetry, in which be ftands unrivalled. His piece; of this fort breathe that poetical expreffion, that pictureique ftyle, thofe happy turns, and thre caly graces, which conftitute the true clarafler of this kind of writing. He is as lively and impetuous as lee is mild and affering, adapting limielf to the palfions of thole perions whum he makes to fpeak. "I confels (fays M. de la Harre) that I find the cantatas of Rouifean more purely lytic than his (des, although he rifes to greater leights in thele. I fee nothing in his cantatas but bold and agreeable images. He always addreffes himfelf to the imagination, and he never becomes either too verbofe or 100 prolix. On the contrars, in fome of the beft of his odes, we find fome languifhing fanzas, ideas too long delayed, and verfes of inexcufable meannefs." 4. Allegories, the molt of which arc happy, but fome of them appear forced. 5. Epigrams, after the manner of Martial and Marot. He has take:! care to leave out of this edition thofe pieces which licentioufnefs and debauchery inpiped. They bear, indeed, as well as his other pieces, the marks of genius; bat fuch productions are calculated only to difhonour their authors, and cortupt the licart of thofe who read them. 5. A book of Porms on Various Subjeds, which fometimes want both cafe and delicacy. The moft diflinguifhed are two eclogues, imitated from Virgil. 6. Four comedies in verfe; the Flatierer, whoie character is well fupported ; the Imaginary Forefathers, a piece which had much lefs fuccefs, athough it affords fufficiently good fentiment; the Capricious Minn, and the Dupe of Herfelf, pieces of very inconlidcrable ancrit. 7. Three comedies in profe; the Cof-fec-konfe, the Magic Girdle, and the Madragore, which are little better than his other theatrical pieces. The theatre was by no means his forte; he had a genius more fuit:d for fatire than comedy, more akin to Boilean's than Molicre's. 8. A Collection of Letters, in profe. In this cdition he has felcoted the moft interefting.There is a larger collection in 5 volumes. This latt has done at the fame time both injury and honour to his memner. Roulfeau in it fpeaks both in favour of and againt the very fume pertions. He appears too hafly in tearing to picces the characters of thofs who difpleafed him. We Lehold in them a man of a flady character and an elevated mind, who wifhes to return to his native country only that he might be enabled completcly to jultify lis reputation. W'c fee him again correfiponding with perions of great merit and uncommon integrity, with the Abbé d'Olivet, Racins the fon, the poors Lat Foff and Duche, the celcbrated Rollin, M. le Franc de Pompignan, 3c. Sec. We meet al!o with fome ancedotes and exact judgments of feveral writers. A bookfeller in Holiand has publifhed his port-folio, which does him no honour. There are, indeed, fome picces in this wretched collection which did come from the pen of Rouficiul ; but he is lefs to be blamed for them than they are who have drawn thefe works from that oblivion to which our great poet had \(3 \mathrm{X}_{2}\) - configned

\section*{KOU}

Roufrau. configneut tiom. A pretty grod edition of his Seleat Piscos appeared at luris in \(17+1\), in a fmall 12 mo volume. His portrait, engraved by the celebrated Aved, his old friend, made its appearance in 1778 , with the following motto from Martial:

\section*{Cerior in nglro carmine sultus crit.}

Rousseau (John-James), was born at Geneva June 28. 1712. His father was by profeflion a clock and watch-maker. At his birth, which, he fays, was the firtl of his misfortunes, he endangered the life of his mother, and he himfelf was for a long time after in a very weak and languilhing gate of health; but as his budily ftrength increafed, his mental powers gradually \(v_{i}\) ened, and afforded the happielt prefages of future grea:nefs. His father, who was a citizen of Geneva, Was a well-informed tradelman ; and if the place where le wrought he kept a Plutarch and a Tacitus, and theie authors of courfe foon became fumiliar to his fon. A rath juvenile ftep occafioned his leaving his father's houle. "Finding himfelt a fugitive, in a dirange country, and without money or friends, he changed (fays he himfelf) his religion, in order to procure a fublifence." Borncx, bilhop of Anneci, from whom he fought an afylum, committed the care r.f his edueation to Mitdame de Warrens, an iagenious aiad amiable lady, who had in 1726 left part of her wealth, and the Protellant :eligion, in order to throw lerfelf into the bofom of the church. I'his generous lady ferved in the triple capacity of a mother, a friend, and a lover, to the new profelyte, whom fhe regarded दs her fon. The neceffity of procuring for himfelf fome lettlement, however, or perhaps his unfettled dif folition, ohiiged Rouffat often to leave this tender nother.

He poffeffed more than ordinaty talents fur mufic ; and the Abbe Blanchard fattered his hopes with a place in the royal chapel, which he, however, failed in obsaining for lim ; he was therefore under the neceflity of teaching mufic at Chamberi. He remained in this place till \(17+1\), in which year be went to Paris, where he was long in very deltitute circumitances. Writing to a friend in 1743 , he thus expreffes himfelf: "Every thing is dear hare, but efpecially breits." What an expreffion; and to what may not genius be reduced! Neanwhile he now began to emerge from that obfcurity in which he had hitherto been buried. His friends placed him with M. de Montaigu, ambuffidor from France to Venice. According to his own confefion, a proud mifanthropy and it peculiar contempt of the riches and pleafures of this world, conkituted the chief traits in his character, and a miliun. deritanding foon took place between him and the ambaflidor. The place of depute, under M. Dupin, far-rier-general, a man of confidcrable parts, gave him fome iemporary rcief, and enabled him to be of fome benefit to Madame de Warrens his former benefactiefs. The year 1750 wats the commencement of his literary career. The ac:aiemy of V jon had propofed the following queftion: "Whether the reviral of the arts and foiences lias cont-buted to the refiacment of manners?" Ronfleau at hirlt inclined to fuppont the affirmative. "This is the fons ofinorum (fays a philofopher, at that time a friend of his), take the negative fide of the quention, and I'll prornifz you the greateft fuccefs."

His difcourfe againt the fciences, accordingly, ha. Rouffesu. ving been found to be the bett written, and replete with the deepeft reaioning, was publicly crowned with the approbation of that learned body. Never was a paradox fupported with more eloquence; it was not however a new one; but he enriched it with all the advantages which either knowledge or genius could confer on it. Immediately after its appearance, loe met with feveral opponents of his tenets, which he defended; and from one difpute to another, he found himlelf involved in a formidable train of correfpondence, without having ever almolt dreamed of fuch oppofition. From that period he decreafed in happinels as he increafed in celebrity. His "Difcourfe on the caufes of inequality among mankind, and on the origin of focial compads," a work full of almoft unintel. ligible maxims and wild ideas, was written with a view to prove that mankind are equal; that they were born to live apart from each uther; and that they bave perverted the order of nature in forming focieties. He bellows the higheft praife on the fate of nature, and depreciates the idea of every focial compact. This difcourfe, and efpecially the dedication of it to the republic of Geneva, are the chef-d'cuvres of that kind of eloquence of which the ancients alone had given us any idea. By prefenting this performance to the magittrates, he was received again into his native country, and reinftated in all the privileges and rights of a cituzen, after having with much difficulty prevailed on himfelf to abjure the Catholic religion. He foon, how. ever, returned to France, and lived for fome time in Pa . ris. He afterwards gave himfelf up to retirement, to efcape the fafts of criticim, and fellow after the segimen which the Atrangury, with which he was tormented, demanded of him. This is an important epoch in the hiltory of his life, as it is owing to this circumftance, perlaps, that we have the molt elegant works that have come from his pen. His "Letter to \(M\). d'Alembert's on the defign of ereating a theatre at Geneva, written in his retirement, and publified in 1757, contains, along with fome paradoxes, fome very important and well-handled truths. This letter firft drew down upon him the envy of Voltaire, and was the caufe of thole indignities with which that author never ceafed to load him. What is fingular in him, is, that although fo great an enemy to theatrical reprefentations himfelf, he caufed a comedy to be printed, and in 1752 gave to the theatre a patloral (lhe Village Conjurer), of which he compofed both the poetry and mutic, both of them abounding with fentiment and elegance, and full of innocent and rural hmplicity. What renders the Village Conjurer highly delightful to perfons of tafte, is that perfect harmony of words and mufic which everywhere pervades it ; that proper connection anoong the parties who compofe it ; and its being perfeelly correct from beginning to end. The mufician hath poken, hath thought, and felt like a poet. Every thing in it is agreeable, interefting, and far fuperior to thofe common iffected and infipis productions of our modern petit dramas. 1 is Dictionary of Mufic affords leveral excellent articles; fome of them, however, are very inaccurate. "This work (fays Mi. la Borde), in his Eflay on Mufic, has need to be written over again, to fave much trouble to thofe who with to tudy it, and prevent them from falling iato errors, which

\section*{R O U}

Rouffeat it is difficult to avoid, from the engaging manner in which Ronfeau drags along his readers." The paffages in it which have any reference to literature may be cafily dillinguifted, as they are treated with the agreeablenefs of a man of wit and the exaEnefs of a man of tafte. Roulleau, foon after the rapid liucee?s of his Village Conjurer, publified a Letter on French Mulic, or rather araingl French mulic, written with as much freedom as livelinefs. The exafperated partifins of French comedy treated him with as much fury as if he had conlpired againft the fate. A crowd of infigniticant enthufiafts frent their frength in outcries again:t him. He uas infulted, menaced, and lampooned. Iharmonic fanaticifm went even to hang him up its effigy.

That intcrefting an I tender ftyle, which is fo confipi. cuous throughout the Village Conjurer, animates feveral letters in the New Heloifd, in fix parts, publifhed 1761 , in ramo. This epiftulary romance, of which the plot is ill-managed, and the arrangenient bad, like all other worl:s of genius, has its bcauties as well as its faults. More truth in his characters and more precifion in his details were to have been wifhed. The characters, as well as their fylle, have too much fameaefs, and their language is tno affected and exaggcrated. Some of the letters are indeed admirable, from the force and warmath of expreffion, from an effervefcence of fentiments, from the irregularity of idens which always characterife a paffion carried to its height. Dut why is io affesing a letter \(f\) often accompanied with an unimportart digueflion, an infipid criticifm, or a felf-contradifing paradox? Why, after having fhone in all the energy of fentiment, does he on a fudien tu:n unaffecting? It is becaufe none of the perfunages are truly interefting. That of St Preux is weak, and after forced. Julia is an affemblige of tendernef, and fi:y, of elevation of fiul and of coquetry, of natural parts and pedantry. Wolmar is a violent naan, and almoft beyond the limits of nature. In fine, when he withes to change his fyle, and adopt that of the fpeaker, it may eafily be chferved that he does not long fupport it, and every attemptemharrafits the author and cools the reader. In the He. loild, Rouffeau's unlucky talent of iendering every thing prublematical, appears very confpicunus; as in bis arguments in favour of and againft duelling, which at. ford an apology for fuicide, and a jult condemation of it : in his tacility in palliating the crime of adultery, and his very ilrong reafons to make it abhorred: on the one hand, in declamations agdinft focial happpinefs; on the other, in tranfoets :n favour of hunamity: here, in violent rhapfodies againft phinfophers; there, by a rage for alopting their opinions: the exiftence of God atticked by fophiftry, and Atheits confinted by the nolt irrefidgable arguments; the Chrilian religion combated by the moft pecions objections, and celebrated with the moff fublime eulogies.

His Limili:a afterwards made mire noiec than the rew Hecinifa. This moral romanicc, which was publithed in 1762 , in four vills 12 mo , trea:s chicfly of education. Roufieau wihed to fillow inture in every thing; and though his fytemi i: feveral places differs frum recsived ideas, it deferves in many refpects to be put in practice, and with fome naceflary moditiontions is lias leen f0. His peccep:s are expreficd with the force and dignity of a mind foll of the leadug truth of moralay. If he has no: always been virtuous, no body at leat
has felt it more, or made it appear to more advan-
Rnuffuex. tage. Every thing which he fays againft luxury fhows the vices and conceited opinions of his age, and is worthy at once of plato or of Tacitus. His fyle is peculiar to himfelf. He fometimes, however, appears, by a kiad of affected rudencfs and afperity, to ape at the mode of Mentigne, of whom he is a great admirer, and whote fentuments and expreffions he often clothes in a new deefs. What is mott to be lamented is, that in wifhing to educate a young man as a ChriItian he has filles his third volume with objections againft ch:iftianity. He has, it mult be confelfed, given a very fublime culogium on the Gofpel, and an affelting portrait of its divine Author: but the miracles, ind the prophecies which ferve to eilablith lis milfion, he attacks without the leaft referve. Admit. ting only natural religion, he weighs every thing in the balasce of reafon; and this reafon being falie, leads him into dilemmas very uafavourable to his own repore and happinefs.

He dwelt from \(175+\) in a fmall houfe in the country near Montmorenci; a retreat which he owed to the generofity of a farmer.general. The caufe of his love for this retirement was, according to himfelf, "that invincible firit of liberty which nothing could conquer, and in competition with which honours, fortune, and reputation, could not fand. It is true, this defire of liberty has occafioned lefs pride than lazinefs; but this indolence is inconceiva'le. Every thing fartles it ; the moft inconfiderable reciprocalities of focial life are to it infupportable. A word to feeak, a letter to write, a vifit to pay, things neceflary to be done, are to me punilhments. Hear my reafons. Although the ordinary intercourle between mankind be odious to me, intimate friendhip appears to me very dear ; becaufe there are no mere ceremories due to it ; it agrees with the heart, and all is accomplifhed. Hear, again, why I have always fhunned kindneffes fo much; becaufe every aft of hindnefs requires a grateful mind, and I find my heart ungrateful, from this alune, that gratitude is a duty. Laitly, that kind of felicity which is neceflary for me, is not fo much to do that which I with, as not to do what I wilh, not to do." Rouffeau enjoyed this felicity which he fo much wifned in his retirement. Without entirely adonpting that too rigorous inode of life purfued by the ancient Cynics, he deprived himielf of cvery tbing that could in any meafure add fuel to this wihed-for luxury, which is ever the companion of riches, and which inverts evea cuitom itfelf. He might have been happy in this retreat, if he could bave forgot this public which he affected to defpife; but his defire atter a great nane got the better of his felf-love, and it w.is this thu ft after reputation which made him introduce to many dagerous paragraphs in his Emilia.
'The Fresch partiament cundemned th.: book in : 762 , and cutcred into a crinisal profecution againit the aumor, whish freed him to make a precipitate retreat. I ie dreated his Aeps towards his native corntry, whith thut its gates upou him. Proferibed in the place where he frit drew breash, ne fonght an afylum in Switerland, and foand one in the primipalty of Néuthatel. His fill care was to dere id his Emilit afaime the matdute ut the archtith op a Pais, by whont it had been amathematited. In \(177_{5}\) he pritlithed a leter, in whech he rectelibiss all bis ciaurs, lat off with

Rcuffeau. the mof animated difplay of eloquence, and in the moft \(\underbrace{2}\) infidious manner. In this letter be defcribes himfelf as" more vehement than celebrated in his refearches, but fincere on the whole, even againt himielf; fimple and gond, but fenfible and weak; often doing evil, and always loving good; united by friendflip, never by circumftances, and keeping more to his opinions than to hie interefts; requiring nothing of men, and not w: hhing to be under any obligation to them; yieldinf al more to their prejudices than to their will, and Freferving his own as free as his reafon; difputing about religion withont licentioulncts; loving neither impiety nor fanaticifm, but diliking precife people more than beld fpirit," \&s. \&c. From this fecimen, the limitations he would appoint to this portrait may eafly be difevered.

The letcer; of Lı Montaigne appeared foon after ; but this work, fir lefs eloquent, and full of envious difcufions on the magithates and elergy of Geneva, irritated the Pro"ettant minifters without effecting a recenciliation with the clergy of the Romifh church. Rouf. fean had folemnly abjured the latter religion in 5753 , and, what is fome what Arange, had then refolved to live in Franec, a Catholic country. The proteftant clergy were not fully reconciled by this change; and the protection of the king of Pruffia, to whom the principality of Neufchatel belonged, was not fufficient to refcue him from that obloquy which the minilter of MoutiersT'ravers, the village to which he had retired, had excited againt him. He preached againt Rouffeau, and his fermons produced an uproar among the people. On the night between the 6 th and 7 th September 1765 , forme fanatics, drove on by wine and the dealamations of their miniter, threw fome flones at the windows of the Genevan philofopher, who fearing new infults, in vain fought an afylum in the canton of Berne. As this Canton was connected with the republic of Geneva, they did not think proper to alinw him to remain in their city, being profrribed by that republic. Neither his broken flats of health, nor the approach of winter, could foften the hearts of thefe obdurate Spartans. In vain, to prevent them from the fear they had of the fpreading of his opinions, did he befeech them to fhut him up in prifon till the fpring; for even this favour was denied him. Obliged to fet out on a journey, in the begimning of a very inclement feafon, he reached Strafbourg in a very-deflitute fituation. He received from Marlbal de Contades, who then commanded in that place, every accommodation which could be expected from generofity, humanity, and compaffion. He waited theretill the weather was milder, when he went to Paris, where Mr Hume then was, who determined on taking him with him to England. After having made fome ftay in Paris, Rouffeau actually fet out for London in 1766. Hume, much afceted with his fituation and his misfortunes, procured for him a very agreeable fettlencont in the country. Our Gencran philofopher was not, however, 1 ng fatisfied with this new place. He did not make tueh an imprefion on the rainds of the Englifh as he had done on the French. His free difrofition, his nbdurate and melaneholy temfer, was čemed no fingularity in Eugland. Fe was there looked upon as an ordinaty man, and the perio. dical prints were fille 1 with fatires againt him. In particular, dey puilithed a irged letter frem the king
of Pruflia, holding ap to ridicule the principles and Rouffeau. conduct of this new Diogenes. Rouffeau imagined there was a plot between Hume and fome philofophers in France to deftroy his glory and repofe. He lent a letter to him, filled with the moll abufive expreftions, and repreaching him for his conduet towards him. From this time he looked upon Hume as a tricked and perfidious perfon, who had brought him to England with no other view than to expofe him to pullic ridicule; which foolifh and chimerical idea was nourifhed by felf-love and a reflefs difpofition. He imagined that the Englifh philofopher, amidd all his kindneffes, had fomething difagr ceable in the manreer of exprefing them. The bad health of Rouffeau, a ftrong and melancholy imagination, a ton nice fenfibility, a jealous difpofition, joined with philofophic vanity, cherifined by the falfe informations of his governefs, who poffeffed an uncommen power over him ; all thefe taken together, might tend to prepoffefs him with unfavourable fentiments of fome innocent freedums his benefactor might have taken with him, and might render him mngrateful, which he thought himfolf incapable of becoming. Meanwhile, thefe falfe conjectures and probabilities ought never to have had the weight with an honeft mind to withdraw iffelf from its friend and benefafor. Proofs are always neceffary in cafes of this kind; and that which Rouffeau had was by no means a certain demontration. The Genevan philofopher, however, certainly returned to France. In paffing through Amiens, he met with M. Greffet, who interrogated him about his misfortunes and the controverfieshe had been engased in. He only anfwered, "You have got the art of making a parrot fpeak; bnt you are not yet poffeffed of the fecret of making a bear fpeak:" In the mean time, the magiftrates of this city wilhed to confer on him fome mark of their elteem, which he abfolutely refufed. His difordered imagination viewed thefe flattering civilities as nothing elfe than infults, fuch as were lavified on Sancho in the illand of Barataria. He thought one part of the people lonked upon him as like Lazarille of Tormes, who, being fixed to the bottom of a tub, with only his head out of the water, was carried from one town to another to amule the vulgar. But thefe wrong and whimfical ideas did not prevent him from afpiring after a refidence in Paris, where, without doutt, he was more looked on as a fpectacle than in any other place whatever. On the fit July 1770 , Reuffeau appeared, for the firft time, at the regency coffe-houfe, drefled in ordinary clothing, having for fome time previous to this wore an Armenian habit. He was loaded with praifes by the furrourding multitude. "It is fomewhat fingular (fays M. Semebier) to fee a man fo haughty as he returning to the very place from whence he had been banifhed fo often. Nor is it one of the fmallef inconfiftencies of this extraordinary character, that he preferred a retreat is that place of which he had fpoken fo much ill." It is as fingular that a perfin under fenterice of impri:onment fhould wint to live in fo public a manner in the very place where his fentence was in fo:ce againgt hinı. Lli, friends procured for him, however, liberty of flaying, on condition that he thonld neither write on religion nor politics : he kept his word ; for he wrote none at all. He was contented with living in a calm philofophical manner, giving himfelf to hie fuciety of :a few tricd friends, fluming the

\section*{ROU}

Ruuffeau. company of the great, appearing to have given up all his whimfies, and affecting neither the clarader of a philofopher nor a bel cfprit. He died of an apoplexy at Eirmenon-ville, belonging to the marquis de Girardin, about ten leagues from Iaris, July 2.1778, aged 66 years. This nobleman has erected to his memory 2 very plain monument, in a grove of poplars, which confitutes part of his beautiful gardens. On the tomb are infcribed the following epitaphs:

- His
motto.

Es de la Verite!
Vitam impendere Vero*.
\[
\text { Hic jacent Offa } \mathcal{F} \cdot \mathcal{F} \text {. Rouffeau. }
\]

The curions who go to fee this tomb likevife fee the cloak which the Genevan philofopher wore. Above the door is infcribed the following fentence, which might afford matter for a whole book: "He is truly free, who, to accomplifh lis pleafure, has no need of the afiflance of a fecond perfon." Rouffeau, during his thay in the environs of Lyons, married Mademoifelle le Valfeur, his rovernefs, a woman who, without either beauty or talents, had gained over him a great afeendancy. She waited on him in health and in ficknefs: But as if fne had been jealous of poffefing him alone, the drove from his mind, by the mof perfidious infintations, all thofe who camc to entertain him; and when Rouffeau did not difmifs them, the prevented their return by invariably refufing them admittance. By theif means the the more eafily led her hufband into inconlifencies of condust, which the origizality of his character as well as of his opinions fo much contributed to affin. Nature had perlaps but given him the embryo of his character, and art had probably united to make it more fingular. He did not incline to alfociate with any perfon; and as this method of thinking and living was uncommon, it procured him a name, and he dilplayed a kind of funtanicalnefs in his behaviour and his writings. Like Dingenes of old, lie united fimplicity of marncrs with all the pride of genius; and a large flock of indolence, with an extreme fenfibility, ferved to render his character fill more uncommon. "An indolent mind (fays he), terrified at every application, a warm, bilious, and irritable temperament, fenfible alfo in a high degree to evcry thing that can affect it, appear not poffible to be united in the fame pcrion: and yet \(t^{\text {thefe }}\) two contrarieties compofe the cincef of mine. An a aive life has no charms for me. I would an hundred times rather confent to he idle than to do any thing againt my will; and I have an hundred tinnes thought that I would live not amifs in the Baftille, provided I had nothing to do but juft continuc there. In my younger days I made feveral attempts to get in there; but as they trere only with the vicw of procuring a refuge and reft in my old age, and, like the exertions of an indilent perfon, cnly by fits and farts, they were never attencled wiht the fmalleft fuccefs. When misfortines came, they afforded me a pretext of giving myfelt up to my ruling palion." He otten exagzerated his misturtunes to himfelf as weil as to others. He endeavoured particulaly to render intereiling by his defo iption his misfortunzs and his poverty, ilthough the fomer vocre far lefs than he imagined, and no:with-
flanding he had certain refounces againit the latter. In Rounios other refpects he was charitable, gencrous, fuber, juf, contenting himifels with what was purely neceflary, and refuring the means which might lave procured hinı wealth and offices. He cantot, like many other to. phifts, be accufed of having cften repeated with a ftudicd emphafis the word l'irtue, without infpiring th.c fentiment. When he is.fpeaking of the duties of mar. kind, of the principles noceflary to our happinefs, of the duty we owe to ourfelves and to our cquals, it is with a copioufnefs, a charm, and an impetcofity, that could ouly proceed from the heart. He faid one day to M. de Buffon, "You have afferted and proved before J. J. Rouffean that mothers ought to fuckle their chil. dren." "Yes (fays this great naturalift), we have all faid fo; but M. Rouffeas alone forbids it, and caufes himfelfto be obeyed." Another academician faid, "that the virtues of Voltaire were without heart, and thofe of Rouffeau without head." He was acquainted at an eariy age with the works of the Greek and Roman authors; and the republican virtues there held forth to view, the rigorous aufterity of Cato, Erutus, \&c. carried him beyond the limits of a fimple eftimation of them. Influenced by his imagination, he admircd every thing in the ancients, and faw nothing in his contemporaries but enervated minds and degenerated bodies.
His ideas about pulitics were almoft as eccentric as his paradoxes about religion. Some reckon his Scciut Compaa, which Voltaire calls the Uifooia! Compar, the greatell eff rt his genius produced. Others find it fell of contradistions, crrors, and cynical pallages, cbfcure, ill-arranged, and by no means worthy of his thisirg pen. There are feveral other fmall rices wrote by him, to be found in a collestion of his works publifhed in 25 vols 8 vo . and 12 mo , to which there is ippended a very intignificant fupplement in 6 vols.

The moft ufeful and moft important truths in this coilestion are picked cut in his Thoughts; in which the confident fophiit and tbe impious author difappear, and nothing is offered to the reader but the cloquent witer and the contemplative moralift. There were found in his port folio his Confeflions, in twelve books; the firtt fix of which were publifhed. "In the preface to thele memoirs, which abound with charaders well drawn, and written with warmih, with energy, and fometimes with elegance, he declares (fays M. Palifot), like a peevith mifanthrope, who boldly incroduces himfelf on the 2 uins of the worid, to declare to mankind, whom lie fuppofes affembled upon thefe ruins, that in that innumetable multitude, none could dare to fay, \(I\) a m letter then that man. This aficetation of feeing limelf alone in the univerre, and of continually directing crery thing to himfelf, may appear to fome morofe minds a faratintms of pride, of which we have no examples, at \(1=\) in fine the time of Cardan." 13ut this is :ict the noly b'am: which may be attached to the author of the Centiclion. With weafinefs we fee hinn, under the pretext of li\% cerity, difhonouring the charakier of l::s bens. fafteins Lady Warren. There are inmuendos no leis offalive againt colcure and celebrated chatasers, wh ich mught ealirely or parily in lave becn fuppreliced. A I 'r ot wit fiid, that Reulcau would have been leeld in : emer eftimation for virtue, " had he died withou: his corif: fion. Tl: fone cfinion is cotctuincd by M. Nonnc-
12..IT mi, bicr, author of the Literary Hiftory of Geneva: "His Ruut. ccafefions (hays he) : ippear to mie to be a very dangercus book, and panc Roullean in fuch colrurs as we would rever hive ventured to apply to hinn. The excellent a aly tis whel we mect with of fome fentiments, ant the de.teate anatomy which he makes of fome acti his, are not sufficient to counterbalance the deteltable mat tor whath is found in them, and the uncealing oblug ies everywhere to be met with." It is certain, that is Ruufleul has given a faithful delineation of fome prevon:, he has vicwed others through a clout, which formed in his mind perpetual fu picions. He imagined tre thought juilly and fonke truly; but the fimplef thirg in nature, fiys M. Servant, i: diftilled through his vioknt and fufpiciou-head, might become poilin. Rouifeat, in what he lajs of himielf, makes luch acknowledgments as certainly prove that there were better men than he, at leaft if we may judge him from the finf fix books of his memoirs, where nuthing appears but his vices. They ought not perhaps to be feparated from the fix laf books, where he fpeaks of the virtues which make reparation for them; or rather the work outht not to have been publithed at all, if it be true (which there can be little doubt of) that in his confeffions he injured the public manners, both by the bafenefs of the vices he dilclofed, and by the manner in which he united them with the vircues. Tue other pieces which we find in this new edition of his works are, 1. The Riveries of a Solitary Wandcrer, being a journal of the latter part of his life. In this he conleifes, that he liked better to fend his children into lofpitals deltined for orphans, than to take upon himfelf the charge of their maintenance and education; and endeavours to pal.iate this error, which nothing can exculpate. 2. Confiderutions upon the Govermment of Poland. 3. The Adventures of Lord Edauard, a novel, being a kind of fupplement to the new Heloifa. 4. Various Menuoirs and Fugtive Pieces, with a great number of letters, fome of which are very long, and written with too much lindy, but containing fome e uquent paflages and fome deep thought. 5. Emilia and S.plia. 6. The Levite of Ephraim, a poem in prote, in 4 cantos; witen in a truly ancient ityle of fimplicity. 7. Leetters to Sara. 8. At Opera and a Ciomeity. 9. Trarflations of the firll book of Tucitus's Hijiory, of the Inifode of Olinda and Sopbronia, taken from Tafo, \&c. Sic. Like all the othe varitings of Rouffat, we find in theie puthumous pieces many admirable and fome ufeful things; but they alf, abuund with contradiations, paradoxes, and ideas very unfavourable to religion. In his letters e'recially we fee a man chagrined at misfertunes, which he never attribute, to himiclf, fupicicus of ceery body about him, cailing and believing himelf a lanh in the midt of wolves; in one w od, a like Pdfal in the frength of his genius, as in his fancy of always feeng a precipice about him. This is the relletion on M. Servait, who knew him, affifed him. and careled hom daring his setieat at Grenoble in 176S. Thus masultrate having been very attentive in worving lus churatur, ought the rather to be believed, as he in pected it withont either malice, envy, or refurtment, an. 1 only from the concern he had for this phillopher, whom he loved and adnired.

ROUT, in daw, is appiied to an aficmbly of perfons
going forcibly to commit fome unlawful act, whether hiney cxecute it or not. See Riot.

ROCTE, a public road, highway, or courfe, efpecially that which military forces take. This word is alio wed tor the deteat and flight of an army.

ROWV (Nicholas), defcended of an ancient family in Devonfhire, was bun in 1673. He acquired a contplete talle of the claffic authers under the famous Dr Buby in Weftminfler fchool; but poctry was his early and darling tludy. His father, who was a lawjer, and defigned him for his own profeffion, en'ered him a ftudent in the Middle Temple. He made remarkable advances in the lludy of the law; but the love of the belles lettres, and of poetry in particular, Atopt him in his career. His firlt tragedy, the Ambitions Stepmother, meating with univerial applaufe, he laid afide all thoughts of riting by the law. He afterwards compnfed fevenal tragedies ; but that which he valued himielf moft upon, was his Tamerlane. The others are, the FuirPenitont, Ulyfers, the Royal Convert, Fine Sbore, and Lady Jane Grey. He alfu wrote a poem called the Biter, and feveral poems upon different fubjects, which have been publifhed under the title of Mifcellaneous Works, in one volume, as his dramatic works have been in two. Rowe is cliefly to be confidered (Dr Johnfon obferves) in the light of a tragic writer and a tranllator. In his attempt at comedy, he failed fo ignominioully, that his Biter is not inferted in his works; and his occafional poems and fhort compolitions are rarcly worthy of either pralfe or cenfure, for they feem the cafual foorts of a mind feeking rather to amufe it leifure than to exercie its powers. In the conilruction of his dramas there is not much art ; he is not a nice obferver of the unities. He extends time, and varies place, as his convenience requires. To vary the place is not (in the opinion of the learned critic from whom thefe obfervations are bornwed) any violation of nature, if the change be made between the acts; for it is no lefs ealy for the fpectator to fupple hemfelf at. Athens in the fecond act, than at Thebes in the firlt ; but to change the fcene, as is done by Rowe in the middle of an act, is to add more acts to the play, fince an act is fo much of the bufinefs as is traniacted withont inter. ruption. Rowe, by this licence, eatily extricates ly:mfelt from difficulties; as in Lady Jane Gray, when we have been terrificd with all the drealful pomp of public execution, and are wendeling how the heroine or the poet will proceed, no fooner has Jane pronounced fome prophetic rhimes, than- pafs and be gone-the fcene cloles, and Pembroke and Gardiner are turned out upon the ftage. I know not (fays Dr Jhanfon) that there can be fi und in his plays any deep fearch into nature, any accurate difcriminations of kindred qualities, or nice difplay of pation in its progrets; all is general and undefined. Nord es he much interelt or affect the auditor, except in J.ne Shore, who is always feen and heard win piry. Alicia is a charakter of empty wonte, with no refemblance to real iorrow or to natural madiefs. Whes ce then has Rowe his reputation? Fiom the reafondileness and propricty of fime of his fecnes, from the elegance of his diction, and the fuavity of his verfe. He feld m moves either pit) or terror, but he ofien elevates the lintiment; he teldom pierces the brealt, but he always delights the cur, and often impores the under-

Route, Rowe.

Rowe.
undeiftanding. Bing a great admirer of Shakefpeare, than the honourable Mr Thynne, who willingly took: he gave the public an edition of his plays; to which the tank upon himfelf. Her fhining merit, with the he prefixed an account of that great man's life. But c the moft confiderable of Mr Rnwe's performances was a tranflation of Lucan's Pharfalia, which he juft lived to finifh, but not to publifh; for it did not appear in print till 1728, ten years after his death.

Meanwhile, the love of poetry and books did not make him unfit for bufinefs; for nobody applicd clofer to it when occafinn required. The Duke of Queenfberry, when fecretary of fate, madc him fecretary for public affairs. After the Duke's death, all avenues were fopped to his preferment; and during the reft of Queen Anne's reign he paffed his time with the Mufes and his books. A flory, indeed, is told ofhim, which fhows that he had fome acquaintance with her minifters. It is faid, that he went one day to pay his court to the lord treafurer Oxford, who alked him, "If he underfood Spanif1 well ?", He anfwered, "No :" but thinking that his Lordflip might intend to fend him into Spain on fome honourable commiffion, he prefently added, "that he did not doubt but he could fhortly be able both to underfland and to fpeak it." The earl approving what he faid, Rowe took his leave; and, retiring a few weeks to learn the language, waited again on the Earl to acquaint him with it. His Lordihip afking him. "If he was fure he underfood it thoroughly ?" and Rowe affirming that he did, "How bappy are you, Mr Rowe," faid the Earl, "that you can have the pleafure of reading and underftanding the Hiftory of Don Quixote in the original!" On the acceffion of George 1 . he was made poet lanreat, and one of the land furveyors of the cuftoms in the port of London. The prince of Wales conferred on him the clerkfhip of his council ; and the Lord Chancellor Parker made him his fecretary for the prefontations. He did not enjoy thefe promotionslong; for he died Dec. 6.1718 , in his 45 th year.

Mr Rowe was twice married, had a fon by his firlt wife, and a daughter by his fecond. He was a handfome, genteel man; and his mind was as amiable as his perfon. He lived beloved; and at his death had the honour to be lamented by Mr Pope, in an epitaph which is printed in Pope's works, although it was not affixed on Mr Rowe's monument in Weftminfter-bbbey, where he was interred in the poet's corner, oppofite to Chaucer.

Rowe (Elifabcch), an Englifh lady, cminent for her excellent writings borh in profe and verfe, born at Ilchefter in Somerfethire in \(16 \mathbf{6} 7\), was the daughter of worthy parents, Mr Walter Singer and Mrs Elifibeth Portnel. She received the firf icrious imprefions of religion as foun as the was capable of it. There being a great afinity between painting and poetry, this lady, who had a vcin for the one, naturally had at tafe for the other. She was alfo very fond of mulic; chiefly of the grave and folemn kiad, as beft fuited to the grandeur of her featiments and the fublimity of her devotion. But poctry was her fuvourite cmploymens, her diftinguifhing exccilcnce. So prevalent was her genius this way, that her profe is all poetical. In 16 g', a collection of her poems was publifhed at the Assire of two friends. Her purapirafc on the xxxviiith chapter of Job was written at the requelt of bihop Fien. She bad no other untor for the French azd Italian languages

\footnotetext{

}
charms of her perfon and converfation, haj procured her a great many admirers. Among othcrs, it is faid, the famous Mr Prior made his addreffes to her. But Mr Thomas Rowe was to be the happy man. This geintleman was honourably defended: and his fupcrior genius, and infatiable thirt after knowledge, werc confpicuous in his earlieft years. He had formed a defign to compile the lives of all the illuftious perfons in antiquity omitted by Plutarch; which, indeed, he partly executed. Eight lives were publifhed fince his doceafe. They were tranflated into Frenc! by the abbé Bellen. ger in 1734. Ife fjoke with ealfe and fluency; had ar framk and bencvolent temper, an inexhauftible fund of wit, and a communicative difofition. Such was the man who, charmed with the perfon, character, and varitings, of our authorefs, married her in 1710, and made it his fudy to repay the felicity with which fhe crowned his life. Too intenfe an application to fudy, beyond what the delicacy of his frame would bear, broke his health, and threw him into a confumption, which put a period to his valuable life in May 1715, when he was but juft paft the 28 th ycar of his age. Mrs Rowe wrote a benutiful elegy on his death; and continced to the laft moments of her life to exprefs the higheft reneration and affection for his memory. As foon after his deceafe as her affairs would permit, fhe indulged her inclination for folitude, by retiring to Frome, in Somerfethire, in the neighbourhood of which place the greateft part of her effate lay. In this recefs it was that the compofed the moft celebrated of her works, Fiendfhip in Death, and the Letters Moral and Entertaining. In 1736, fhe publifhed, the Hiftory of Jofeph; a poem which the had written in her younger years. She did not long furvive this publication; for the died of an apoplexy, as was fuppofed, Feb. 20. 1736.7. In her cabinet were found letters to feveral of her friends, which the had ordered to be delivered immediately after her deceafe. The Rev. Dr Ifaac Wat:s, agrecably to her requeft, revifed and publifhed her devotions in 1737, under the title of Devout Excreifes of the Heart in Meditation and Soliloquy, Praife and Prajer; and, in 1739, her Mifcellanecus Works, in profe and verfe, were publifhed in 2 vols. 8 vo, with an account of her life and writings prefixed.

As to her perion, fhe was not a regular beauty, yet poffefed a large fhare of the churms of her fex. She was of a moderatc faturc, her hair of a fine colour, her cyes cf a daakifl grey inclining to blue, and full of fire. Her complexio. was very fair, and a natural bluth glowed in her cisel:s. She fpoke gracefully ; het voice Was exceedingly fweet and harmonious; and fhe had a foftels in her afpect which infired love, yet not withont fome mixure of that awe and veneration which diftinguilhed fenfe and virtua, apparent in the countemince, are wont to cicite.

ROWEL, among farniers, a kind of ifue anfwering to whith in furgery is called a fator. Sce Fsrriert, fea. \(\because\)

ROWLEY, a moak who is faid to have flousithed at Briftol in the 15 th century, and to have been and author voluminous and elcgant. Of the poems attributed to \(h i \mathrm{~m}\), and publificd fome time ago, various Y゙ (pinions

Rowley, Ruvhurgh.
opinions have been entertained, which we have noticed cliewhere. They feem now to be almof forgoten. See Chatrerton.

Rowley (William), who fands in the third clafs of dramatic writers, lived, in the reign of king Charles I. and reccived his education at the univerfity of Cambridge; but wherher he took any degree there, is not evident; there being but few particulars preferved in regard to him more than his clofe intimacy and connection with all the principal wits and poetical geniufes of that age, by whom he was well beloved, and with fome of whon he joined in their writings. Wond Atyles him "the ornment, for wit and ingenuity, of Pembroke. hall in Cambridye." In a a word, he was a very great benefactor to the Englifh fage, having, exclufive of his aid lent to Midileton, Day, Heywood, Weblter, \&c. Icft us five plays of his own compofing, and one in which even the immortal Shakefpeare afforded him fome affiflance.

ROXBURGH.shire, or Teviotdale, a county of Scotland, deriving its name from the town of Roxburgin, which is now deftroyed, and the river Teviot, that runs throngh the fhire into the Tweed, is divided into the three diltricts of Teviotdale, Liddiflite, and Eifkible, or Eufdale, fo called from their refpective rivers, l'eviot, Liddal, and Enk. It is bounded on the caft and \(f\). uthealt by Northumberland and Cumberland, on the fouth and fouth-welt by Annandale, on the weft by Tweeddale, on the nosth by the Merfe and Lauderdale; extending about 30 miles from eaft to welt, and ab ut 15 in breadth from the border of England to the Blue Cairn in Lander-mocr. The flire exhibits a rough irregular appearance of hills, mofes, and mountains interferfed, however, with narrow valieys, and watered with delightful Areams. Theugh the face of the country is bare of woods, the valleys yield plenty of corn, and the hills abound with palture for fheep and black cattle. The principal mountains of this country are known by the name of Cockraw: from whence a mange of very hige hilis runs weftward, dividing Scotland from England. On the confines of this thire are the debateable linds; the property of which was formerly difputed by the Scots and Englifh borderers, but adjudged to the Scots at the union of the crowns. Roxburghthire yields plenty of lime and frceltone, which in former times was frecly ufed by the inhabitants in building cafles to defend them from the invafions of their Englifh neighbours. The mofl diftinguifhed families in this country are the Scots and Kers, who raifed themelves to weath and honcurs by their bravery and fuccefs in a fort of paeddory war with their enenies of South Britain. The Phire is very populous; and the perple are fout and valiant. They were formerly inured to miliary difcipline and all the dangers of war, by living on dry marches comiguous to thofe of Englind; being io numcrous and alett, that this and the neighbouring fhire of Derssick could in \(2+\) hours prodace 10,000 men on horieback, well armed and accoutred. In the thire of Rosburgh we Aill mect with a gieat rumber of old caltles and feats belonging to private gentemen, whofe anceftors fignalized thenifelves in this manmer: and we fund the remains of old enc:mpments, and a Roman military way, vulgarly cailel the canfocay, rurning from Haunnn to the Tweed. The principal town, calicd Roxiurel, giving the title of
duke to the chicf of the Kers, was aociently a royal borough, containing divers parifhev, large and fourifhing, defended by a frong citadel, which was often alternately reduced by the Englith and Scotch adventurers. It was in befieging this caltle that James II. of Scotland loft his life by the burfting of a cannon. In confequence of the almoft continual wars between the two nations, this fortrefs was razed, the town ruined, and its royalty tranflated to Jedburgh, which is now a royal bornugh, fituated between the Tefy and Jed.

ROXENT'cape, or Rock of Lifbon, a mountain and remarkable promontory in Portugal, fituated in the Atlantic ocean, at the north entrance of the Tagus, 22 miles north of Libon.

ROYAL, fomething belonging to a king: thus we fay, royal family, royal affent, royal exchange, \&c.

Roral Family. The firit and moit confiderable branch of the king's royal family, regarded by the laws of England, is the queen.
1. The queen of England is either queen regent, queen confort, or queen dowager. The queen regent, regnant, or fovereign, is the who holds the crown in her own right; as the firft (and perhaps the fecond) queen Mary, queen Elifabeth, and queen Anne; and fuch a one has the fame powers, prerogatires, rights, dignities, and duties, as if the liad been a king. This is exprefsly declare 1 by ftatute I Mar. I. ft. 3. c. I. But the queen confort is the wife of the reigning king; and the by virtue of her marriage is participant of divers prerogatives above other women.

And, firt, the is a public perfon exempt and diftinct from the king ; and not, like other married women, fo clofely connected as to have loft all legal or feparate exiltence fo long as the inarriage continues. For the queen is of ability to purchafe lands and to convey them, to make leafes, to grant copyholds, and do other acts of ownerfhip, without the concurrence of her lord; which no other inarried woman can do: a frivilege as old as the Saxon era. She is alfo capable of taking a grant from the king, which no other wife is from ber hupand; and in this particular fhe agreees with the augufar or piiflima regina conjus divi imperatoris of the Roman laws; who, according to Juftinian, was equally capable of making a grant to, and recciving one from, the enperor. The queen of England hath feparate courts and officers diltinct from the king's, not only in matters of ceremony, but even of law; and her atiorney and folicitor general are entitled to a place wihin the bar of his majefly's courts, together with the king's counfel. She may likewife fue and be fued alone, without joining her hufband. She may alfo have a feparate property in goods as well as lands, and has a right to difpofe of them by will. In fhort, fhe is in all legal proceedings looked upon as a feme fole, and not as a feme covert; as a fingle, not as a married woman. For which the reafon given by Sir Edward Coke is this: becaufe the wifdom of the common law would not have the king (whofe continual care and Atudy is. for the public, and circa ardua regni) to be troubled and difquieted on accomut of his wife's domeftic affairs; and tharefore it vefts in the queen a power of tratafaing her own concerns, without the intervention of the king, as if the was an unmarried woman.

The queen ha'h alfo many exemptions, and minute prerogatives. For inlance: The pays no toll; nor is.
fre liable to any amercement in any coust. But inge. neral, unlefs where the law has exprefsly declared her exempted, fhe is upon the fame footing with other fubjects; being to all intents and purpofes the king's fubject, and not his equal: in like manner as in the imperial law, Auguflus lgibus foluus mon ofl.

The queen hath allo fome pecumiary advantages, which form her a dillinet revenue: as, in the firf place, The is intitled to an aucient perquilite called quien gold, or aurum reginz; which is a royal revenue belonging to every queen-contort during her marriage with the hing, and due from every perfon who hath made a vo. luntary offering or fine to the king, amnunting to to merks or upwards, for and in contideration of any privileges, grants, licences, pardons, or other matter of royal favour conferred upon him by the king: and it is due in the proportion to one-tenth part more, over and above the entire offering or fine made to the king, and becomes an actual debt of \(r\) ecord to the queen's majefty by the mere recording of the fine. As, if 100 merks of filver be given to the king for liberty to take in mortmain, or to have a fair, market, park, chafe, or frec-warren ; therc the queen is entitled to 10 merks in filver, or (what was formerly an equivalent denomination) to one merk in gold, by the name of queengoll, or aurum regina. But nu fuch payment is due for any aids or fubfidies granted to the king in parli.ument or convocation ; or for fines impofed by courts on of. fenders againft their will; nor for voluntary prefents to the king, without any confideration moving from him to the fubjcat; nor for any fale or contrast whereby the prefent revenues or polfeffions of the crown are granted away or diminifhed.

The original revenue of the ancient queens, before and foon alter the conquef, feems to have confifted in rertain refervations or rents out of the demenfe linds of the croms, which were exprefsly appropriated to lier majefy, diftind from the king. It is frequent in Jomefday book, after fpecifying the rent due to the crown, to add likewife the quantity of gold or other renders referved to the queen. Thefe were frequently appropriated to particuliar purpofes; to buy wood for her majefly's ufe, to purchafe oil for lamps, or to furwith her attire from head to foot, which was frequently very coflly, as one fingle robe in the fifth year of Henry II. Alood the city of London in upwards of 80 pounds: A practice fomewhat fimilar to that of the eaftern countries, where whole cities and provinces were fpecifically affigned to purchere partizular parts of the queen's apparel. And for a farther addition to her income, this duty of queen-gold is fuppofed to have been originally granted; thofe matters of grace and favour, out of which it arofe, being frequently obtained from the crown by the powerful interceffion of the queen. There are traces of its payment, though obfcure ones, in the book of domefday, and in the great pipe-roll of Henry I. In the reign of Heary II. the manner of collecting it appars to have been well underi.ood; and it forms a diftinst head in-the ancient dialogue of the exchequer writen in the time of that prince, and ufually attributed to Gervale of Tilbury From thas time downwards, it was regularly clamed and enjoyed by all the qucca-conforts of England till the death of Henry VIII.; thnugh afier the accelfion of the Tudor family, the collesting of it feems to have
been much neglected : and there being so queen confort Royal. atterwards till the accellion of James I. a period of near 60 years, its very nature and quantity then berame a matter of doubt: and being referred by the king in the chef juftices and chisf baron, their report of it was fu, very unfavourable, that his confiot queen \(A_{i n}\), thourh the clained it, yee never thought proper to exat it. In 1635, 11 Car. I. a time fertile of expedients for railing money upon dormant precedents in our olid recolds (of which thip-money was a fatal infance), the king, at the petition of his qacen Henrictta Mraia, iflued out his writ for levying it ; but afterwards purchafed it of his confurt at the price of 10,000 pounds; finding it, perhaps, too tritting and troublefome to levg. And when afterwards, at the Reforation, by the abolition of military tenures, and the fines that were confequent upon them, the lit:le that legally remained of this revenue was reduced to almoft nothing at all ; in vain did Mr Prgnne, by a treatife that does honour to his abilities as a painful and judicious antiquarian, endeavoured to eacite queen Catherine to revive this antiquated claim.

Another ancient perquilite belonging to the queen confort, mentioned by all our old writcrs, and therefore only worthy notice, is this: that on the taking a whale on the coafts, which is a reyal fifh, it fhall be divided between the king and queen; the head or:ly being the king's property, and the tail of it the qutcen's. De furgione obfervetur, guod rex illun bibehit integre:n: de balena vero fifficit, fi rex babsal caput, at regina caw. dam. The reafon of this whimfical divifion, as affignel by our ancient records, w:is, to furnith the quecu's wardrobe with whale bone.

But farther: though the queen is in all refpeets a fubject, yct, in point of the fecurity of her lif: and perfon, fhe is put upon the fame footing with the king. It is equally treafon (b) the itatute 25 Edward III) to imagine or compafs the death of our lady the king.'s companinn, as of the king himfeif; and to violite or defile the queen confort, amounts to the fame hinh crime; as well in the perion committing the fact, as in the queen herfelf if confenting. A law of Henry VIII. made it treafon alfo for any woman who was not a virgin, to marry the king without infurming him there of: but this law was foon after repealed; it trefpalfing too ftrongly, as well on natural jufice as female nindelly. If however the queen be acculed of any Species of rreisfon, the thall (whether confort dowager) lee tricd hy the peers of parliament, as queen Ann Boleyn was ia 28. Hen. VIII.

The huband of a queen regent, as prince George of Denmark was to queen Anise, is her fubject; and may be guilty of high treafon againt her: but, in the inftance of conjuzal fidelity, he is not fubjected to the fame penal reftritions. For which the reatun feems to be, that if a queen confort is unfaithful to the royal bed, this may debale or battardize the heirs to the crown; but no fuch danger can be confequent on the infidelity of the humand to a queen regent.
2. A quecn dowerger is the widnw of the hing, and as fuch enjoys moft of the privileges belonging to lier as \(\mathrm{q}_{\mathrm{i}}\) ueen con!nert. But it is not hightreaton to con. fpire her death, or to violate her chatity; for the fame reafon a; was before alleged, hecaufe the fucceffion to the crown is not thercby endangered. Yct Hill, pro

Royal. Mivaide: regrth, wo man can many a queen-dowager without fpecial licenee from the king, on pain of forfeiting his lunds and goods. This Sir Edward Ccke teils us, was cmafted in parliament in 6 Henry VI. though the flatute be not in print. But fhe, though an atien bern, thall aill be entitled to dower after the king's demife, which no nther alien is. A quecen-dowager when married again to a fubjef, doth not loie her regal dignity, as peereifes.dowager do whea they marry commoners. For Kathatine, qucen-dowiger of Henry V. though he married a private gentleman, Owen ap Meredith ap Theodrre, commonly called Owen Tudor ; yet, by the name of Katharine quets of. Erghand, maintained an attion againott the bithop of Carlile. And fo the dowager of Navarre marrying with Edmond the brother of king Edward I. maintained an action of dower by the name of queen of Naยarre.
3. The prince of Wales, or heir apparent to the crown, and aifo his royal confort, and the princefs royal, or eldeft daughter of the king, are likewife peculiarly regarded by the laws. For, By fatute 25 Ediv. III. to compars or confpire the death of the former, or to violate the clandity of cither of the latter, are as much high treafon as to confpire the death of the king, or violate the chaftity of the queen. And this upon the fame reafon as was before given; becaufe the prince of Wales is next in fucceliion to the crown, and to violate his wife might taint the bloodrogal with baftardy; and the eldelt daughter of the king is alfo alone inheritable to the crown on failure of iffue male, and therefore more refpected by the laws than any of her younger fifters; infomuch that upon this, united with other (foodal) principles, whilile the military tenures were in force, the king might levy an aid for marrying his eldeft daughter, and her only. The heir apparent to the crown is ufually made prince of Wales and earl of Chefter, by fecial creation and inveftiture ; but being the king's eldeft fon, he is by inheritarce duke of Cornwall, without any new creation.
4. The reft of the royal family may be confidered in two difirerent lights, according to the different fenfes in which the term royal fanily is ufed. The larger fenfe includes all thofe who are by any poffbility inheritable to the crown. Such, before the revolution, were all the defendants of William the Conqueror ; who had branclied into an amazing extent by intermarriages with the ancient nobility. Since the revolution and at of fettlement, it means the Proteftant iffue of the princefs Sophia; now comparatively few in number, but which in procefs of time may poffibly be as largely diffured. The more confined fenfe includes only thofe who are in a certain degrec of propinquity to the reigning prince, and to whom therefore the law Days an extraordinary regard and refpeet ; but after that degree is paft, they fill into the rank of ordinary fubjects, and are feldom confidered any farther, unlefs called to the ficceffion upon failure of the nearer lines. For though collateral confanguinity is regarded indefinitely with refpect to inheritince or fucceflion, yet it is and can only be regarded within fome ceraain limits in any other rcfipea, by the natural conflicution of things and tle diffates of pofitive law.
The youngse fons and daughters of the king, and
cther brancless of the royal family, who are not in the immediate line of fuccellion, were therefore little farther regarled by the ancient law, than to give them a celtain degree of precedence \(b=f c r e ~ a l l ~ p e e r s ~ a n d ~ p u b . ~\) lic officers as wall ecclefu!tical as temporal. 'l'his is done by the fatute \(3^{1}\) Henry Vili. c. 10 . which enacts that no perion except the king's children fhatl prcfume to fix o: have place at the fide of the cloth of eltate in the parliament chamber; and that certain grat: efficers therem named fhall have precedence atove all dukes, except only fuch as thall happen to be the king's fon, brother, uncle, neplew (which Sir Ldward Coke explains to fignity grandion or mepos), or brother's or fifter's fun. But under the defcription of the king's children, his grandfons are held to be included, without having recourfe to Sir Edward Coke's interpretation of mephices; and therefore when his late majelly ling George II. created his grandfon Edward, the fecond fon of Frederick prince of Wales deceafed, duke of York, and referied it to the looufe of lords to fettle his place and precedence, they certified that he ouglat to have precedence next to the late duke of Cumberland, the then king's youngeft fon; and that he might have a feat on the left hand of the cloth of eltate. But when, on the acceffion of his prefent majelty, thefe royal perfonages ceafed to take place as the children, and ranked only as the brother and uncle of the king, they alfo left their feats on the fide of the cloth of eftate; fo that when the duke of Gloucefter, his majefty's fecond brother, took his feat in the houfe of peers, he was placed on the upper end of the earls bench (on which the dukes ufually fit) next to his royal highnets the dulic of York. And in 1717, upon a queftion referred to all the judges by king George I. it was refolved, by the opinion of ten againft the other two, that the education and care of all the king's grandchildren, while minors, did belong of right to his majelly as king of this realm, even during their father's life. But they all agreed, that the care and approbation of their marriages, when grown up, belonged to the king their grandfather. And the judges have more reently concurred in opinion, that this care and approbation extend alfo to the prefumptive heir of the crown ; though to what other branches of the royal family the fame did extend, they did not find preciely determined. The monf frequent inflances of the crown's interpofition go no farther than nephews and nieces; but examples are not wanting of its reaching to more ditant collaterals. And the fatute 6 Henry vi. before-mentioned, which prohibits the marriage of a qreen.dowager without the confent of the king, affigns this reafon for it: "becaufe the difparagement of the queen fhall give greater comfort and example to other ladies of cfate, who are of the blood-royal, more lightly to difparage themfelves." Therefore by the ftatute 28 Hen. VilI. c. 18. (repealed, among other fatutes of treatons, hy 1 Edw. VI. c. 12) it was made high treaton for any man to contrat marriage with the king's children or reputed chill r en, his fiffers or aunts \(c x\) parte paterna, or the children of his brethren or filters; being exaclly the fame degreesto which precedence is allowed by the fatate 31 Hen. VIII. beforementioned. And now, by flatute 12 Geo . III. c. 11, no defcendant of the body of king George II. (other than the iffue of princeffes married into foreign families) is capable of con-
tracting

\section*{Royal}
tracting matrimony, without the previous confent of the difgufful to Rubens, whof natural difpofition was m.o. king fignified under the great feal; and any marriage

delt and amiable.

lond in 1630 with a commifion from the Catholic king to negociate a piece between the two crowns. He was fuccefful in his ne rociation, and a treaty was concluded. Charles I. who then filled the Britifh throne, could not receive Rubens in a public charater on account of his profelion; neverthelefs, he treated him with every mark of refpest. Having engıged him to phint fome of the apartinents of Whitehall, he not only gave him a handfome fum of money, but, as an acknowledgement of his merit created him a linight; and the duke of Duckingham, his friend and patron, purchafed of him a collection of pifures, ftatues, medals, and antiques, with the fum of L. 10,000.
He returned to Spain, where he was magnificently honoured and rewarded for his feervices. He was created a gentleman of the king's bedchamber, and named fecretary to the council of flate in the Netherlands. Rubens, however, did not lay alide his profeffion. He returned to Antwerp, where he married a fecond wife called Helena Formert, who, being an eminent beauty, helped him much in the figures of his women. He died on 30th May 1580, in the 63 d year of his age ; leaving valt riches to his children. Albert his eldeft ion fucceeded him in the office of fecretary of flate in Flanders.

As Rubens was pofiefled of all the ormaments and advantages that render a man worthy to be eftecmed or courted, lie was always treated as a perfon of confe. quence. His figure was noble, his manners engaging, and his converfation lively; his learning was univer fal. Though his favourite fludy mult have occupied him much, yet he found time to read the works of the moft celebrated authors, and efpecially the poets. He fpoke feveral languages perfectiv, and was an excellent fatesman.

His houfe at Antwerp was enriched with every thing in the aats that was rare and valuable. It contained ne fpacious apartment, in imitation of the rotunda at Rome, adorned with a choice collestion of pictures which he had purchafed in Italy ; part of whicla he fuld to the duke of Buckingham.

His genius qualified him to excel equally in every thing thit can enter into the comporition of a picture. His invention was fo fertile, that, if he had occafion to paint the fame fubject feveral times, his imagination always fupplied him with fomething flriking and new. The attitudes of his figures are natural and varied, the cirri.ge of the head is poculiarly graceful, and his expreflion noble and animated.

He is by all allowed to have carried the art of colouring to its higheft pitch; he underfood fo thoroughly the teve principles of the chiaro-furo, that he gave to his figures the utmof harmony, and a prominence refembling real life. His pencil is mellowed, his Itrokes bold and cafy, his carnation glows with life, and his drapery is fimple, but grand, broad, and hung with much fkill.

The great excellence of Rubens appears in his grand compofitions; for as they are to be viewed at a diflance, he hid on a proper body of colours with uncommon bolduefs, and fixed all lis tints in their proper phaces; fo that he never impaised their luftee by breaking or rorturing then; but touched them in fuch a manncr as to give them a hating force, heautr, and harmony.

If is generally allowed, that Rubens wanted correct-
nefs in drawing and defigning ; fome of his figures being hervy and too fhort, and the limbs in fome parts not being jullly tketched in the outline. Though he had fpent feven years in Italy in ftudying thofe antiques by which other celebrated artifts had modelled their talte; though he had examined them with fuch minute attention as not only to perceive their beauties, but to be qualified to defcribe them in a Differtation which he wrote on that fubject': yet he feems never to have divelled himfelf of that heavy fyle of painting, which, being peculiar to his native country, he had infenfibly acquired. The aftonifhing rapidity too with which he painted, made him f.ll into inaccuracies, from which thofe works that he finithed with care are entirely exempted.

Among his finifhed pieces may be mentioned the Crucifixion of Jefus Chrilt betweeen the two Thieves, which was very lately to be feen at Antwerp; but of all his works the paintings in the palace of Luxemburg beft difplay his genius and his Eyle.

It is the nbfervation of Algarotti, that he was more moderate in his movements than Tintoretto, and more foft in his cliaro-fcuro than Carravaggio; but not fo rich in his compofitions, nor fo light in his touches, as Paolo Veronefe; in his carnations lefs true than Titian, and lefs delicate than Vandyck. Yet he contrived to give his colours the utmoft tranfparency and harmony, notwithfanding the extraordinary deepnefs of them; and he had a ftrength and grandeur of ayle entirely his own.

RUBIA, madder : A genus of the monogynia order, belonging to the retrandria clafs of plants; and in the natural method ranking under the 47 th order, Stellatio. The corolla is monopetalous and campanulated; and there are two monofpermous berries. There are tirece fpeciss, of which the moft remarkable is the tincturum, or dyer's madder, fo much ufed by the dyer's and callico printers. This hath a perennial root and annual falk: the root is compofed of many long, thick, fucculent fibres, almof as large as a man's little finger ; thefe are joined at the top in a head like afparagus, and run very deep into the ground. From the upper part, or head of the root, come out many fide-roots, which extend juft under the furface of the ground to a great difance, whereby it propagates very faft ; for thefe fend up a great number of thoots, which, if carefully taken off in the fpring foon after they are above ground become fo many plants. Thefe roots are of a reddith colour, fomewhat tranfparent; and have a yellowifh pith in the middle, which is tough and of a bitterih talle. From this root arife many large fourcornered jointed ftalks, which, in good land, will grow five or fix feet long, and if fupported, fometimes feven or eight : they are armed with thort he rbaceous prickles; and at each joint are placed five or fix fpear-fhaped leaves: their upper furfaces are fmooth : but their midrib on the under fide is armed with rough herbaceons fpines, and the leaves fit clofe to the branches in whorls. From the joints of the falk come out the branches, which fuftain the flowers: they are pluced by pairs oppofite ; each pair croffing the other: thefe have a few fmall leaves toward the bottom, which are by threes, and upwards by pairs oppolite: the branches are terminated by loofe branching fpikes of yellow flowers, which are cut into four parts refembling fars. Thef appear in June, and are iometimes fucceeded by feeds,

Rubens, Rubia.

Rubininkz which feldom ripen in England. For the manner of Rubus, its cultivation and preparation for the ufe of dyers, fee \(\underbrace{}_{\text {the article Madder. }}\)

Madder-root is uled in medicine. The virtues attributed to it are thofe of a detergent and aperient ; whence it has been ufually ranked among the opening roots, and recommended in obfructions of the vifeera, particularly of the kidneys, in coagulations of the blood from lalls or bruifes, in the jaundice, and beginning droplies. It is an ingredient in the icteric decoction of the Edinburgh plarmacorœia.

It is obfervable, that this root, taken internally, tinges the urine of a deep red coluur; and in the Philofophical Tranfactions we have an account of its pro. ducing a like effert upon the bones of animals who had it mixed with their food: all the bones, particularly the more folid ones, were faid to be changed, both externally and internally, to a deep red; but neither the fleihy ner the cartilaginous parts fulfered any alterations: fome of thefe bones macerated in water for many weeks together, and afterwards Iteeped and boiled in fpirit of wine, loff none of their colour, nor communicated any tinge to the liquors. This root, therefore, was concluded to be poflelfed of great fubtilty of parts, and its medical virtues hence to deferve inquiry. 'I'he fame trials, however, made by others, lave not been found to produce the fame effects as thofe above-mentioned.-Ot late the root has come into great reputation as an emmenagogue.

RUBININSKA, one of the northern provinces of Ruflia, buunded by the province of Dwina on the north, by Syrianes on the eatt, by Beluzera on the fouth, and by the lake Onega on the weit.

RUBRIC, in the canon law, fignifies a tille or article in certain ancient law-books; thus called becaufe witten, as the titles of the chapters in our ancient bibles are, in red letters.

RUBUS, the Bramble, or Raplerry bufb: A genus of the polygamia order, belunging to the icofandria clats of plants; and in the natural order ranking under the \(35^{\text {th }}\) order, Serticofa. The calyx is quinquefid, the petals five; the terry conlifting of menofpermous acini or pulpy grains. The piincipal fpecies is the common radiperry, which, whth its varieties, demands culture in every garden for their fruit ; particularly the common red kind, white furt, and twicebeating rafpberry; all of which are great bearers: but for the general plantations, we choofe principally the common red and the white kind, as being generally the greateit bearers of all; planing alfo at thate of the twice-bearing fort, both as a curiolity and for the sike of its autumnal crops of frut, which in favourable feafous ripen in tolerable pesfection; obferving t) aliow all the forts fome open expofure in the kitchen garden, though thry will profper in almon any fituation.

The other épccies are confidered as plants of variety, fur hardy plantations in the thrubbery. Some of them are aifo sery ornamental flcwering plants; particularly the Virginian flowering rafpbery, and the doubleboffoned bramb'e, which have great merit as firniture Cor ornamental compartments; and the white herried buambie, which is a great curiolity. All the other \(\int^{5}\) ecies and varieties ferve to diverlify large culledions.

\section*{R UB}

RUBY, a genus of precious ftones of various co. lours; as, 1 . Of a deep red colour inclining a little to

Ruby purple; the carbuncle of Pliny. 2. The fpinell, of the colour of a bright corn poppy flower. 3. The balafs or pale red inclining to violet ; fuppofed to he the mother of rubies. 4. The rubicell, of a reddifi yellow. According to Cronftedt, the ruby chryftallifes into an octoedral form, as well as the diamond, from which it differs very little in hardnefs and weight, whence he concludes that they are both of the fame natute; but fome late experiments have thown that the diamond dif. fers excelively from all cther gems, in being difipable by a ftrong fire, which the others refift. 'Tivernier and Dutens inform us, that in the Eaf Indies all culoured gems are named rulies, without regard to what their coluurs may be; and that cue particular colour is added to the name of each in order to diftinguif them from one another. There are, however, fome foft Itones of this kind which they call bacan; and it is certain, that the hard and brilliant rubies named oriental, as well as the faphires and topazes, ate all the fame, excepting only the circumftance of colour. Some are partly red and partly blue, yellow, and fome quite colourlefs. The fpinell rubies are about half the value of diamonds of the fame weight; the balafs is valued at 30 fhillings per carat. Tavernier mentions 108 rubies in the throne of the great Mogul, from 100 to 200 carats, and of a round one almoll \(2 \frac{1}{2}\) ounces: there is alfo mention made by other travellers of rubies exceeding 200 carats in weight. According to Dutens a perfect ruby, if it weighs more than \(3^{\frac{1}{2}}\) ca. rats, is of greater value than a diamund of the fame weight. If it weighs one carat, it is worth 10 guineas; if two carats, 40 guineas ; three carats, 150 guineas ; if fix carats, upwards of 1000 guines.

According to the experiments of Bergman and Achard, the tcxture of the ruby is foliated like that of diamonds; it is fufible with borax in a frong and long continued heat, running into a tranfparent glafs of a pale green colour : the fame effect is produced by microcofnic falt; but with fedative falt, or mineral or vegctable alkali, the glafs is opaque and differently coloured. From the experiments of M. d'Arcet, it appears that the ruby does not lofe its colour in the greateit fire; but Henckel fiys, that, by means of a buraing glafs, he foftened it in fuch a manner as to receive the impreflion of a feal of jafper. It becomes electric by being rublucd. Its Specific gravity, according to Bergman, is from 3,1 So to 4,240 ; but Brifion tells us that it is \(4,28_{3}\). The fpecific gravity of the fpinell is 3,760 , of the Braflian ruby 3,531 .

Rubies are met with in the Cajpelan mountains of Pegu in the Eat Indies; and at Caos, Ava, Bifnagar, Calicur, Cunanor, Ceilan, and Brafil. They are found in the fands ifrivers of a red colour, in an argillaceoles earth of an hard texture and greenifh colour: fometimes they adhere to red rocks. The fpinell rubies are met with in Hungary, Silefia, Bohemia, and Braf: L The bulats conees frincipally from lbratil, thought fome are a' fo brought from the E. An Indies. 'The rubicell comes alio fiom Brafil, Lut are faid to lofe their colour in the firc. A variciy of this gem, but of a foft quality, is found in great p.eniy on the ic:-mere near Ely in Fifefbre, Scothind. There is alivaliore
wisch.

\section*{KUD}
which comes near to the ruby found near Portfoy, count of his invention to the fociety whom he addreffed, Banffshire, and at Inverary, Argylefhire, Scotland. The rulino di rocca of the Italians is a true garnet of a deep red and violet, or of the amethyf colour. What is called ruby of arfenic or of fulphur is the realgar: the ruby of zinc is the red blend; and the ruby of filver is the red filver ore.

Rubies may be artificially made from Erafilian topazes of a fmoky appearance, by giving them a gradual heat in a crucible filled with athes, until it be red. hot.

Rack Rubr, the amethyfizontas of the ancients, is fornd in Syria, Calcutta, Cananor, Cambaya, and Ethiopia. It is the molt valued of all the fpecies of garnets, and is frequently fold as a ruby under the name of rulinus Ruflcum. See Garnet and Rubv.

RUCTA'IION, a ventofity arifing from indigeftion, and difcharging itfelf at the mouth with a vely difagreable noife.

RUDBECK (Olats), a learned Swedifh phyfician, born of an aucisnt and noble family in 1630 . He became profeffor of medicine at Upfal, where he acquired great applaule by his extenfive knowledge ; and died i11 8702. His principal works are, 1. Exercitatio anotomica, exbibens duclus novos bepalios aguofos, \& vafa glandularun ferofa, in 4 to. He there allerts his claim to the difcovery of the lymphatic veffels, againft the pretenfions of Thomas Bartholin. 2. Athlantica, five Manheim, vera Fapheti pollerorum fedes ac patria, 4 vols folio, is full of Itrange paradoxes fupported with profound learning: he there endeavours to prove, that Sweden was the conntry whence all the ancient Pagan divinities and our firlt parents were derised; and that the Germans, Englith, French, Danes, Greeks, and Romans, with all other nations, originally came from thence.

RUDBECKIA, in botany: a genus of the polygamia fruttanea order, belonging to the fyngenefia clafs of plants; and in the natural method ranking under the 4 gth order, Compofitic. The receptacle is paleaceous and conical ; the pappus confilts of a quadridentate margin; the calyx of a double feries of fcaly leaves.

RUDDER, in navigation, a piece of timber turning on linges in the ftern of the fhip, and which, oppofing fometimes one fide in the water and fometimes another, turns or directs the veffel this way or that. See Helm.

In the feventh volume of the Tranfactions of the Socicty inftituted at London for the Encouragement of Arts, Manufactures, and Commerce, there is explained a method of fupplying the lofs of a fhip's rudder at fea. The invention, which is Captain Pakenham's of the royal navy, has been approved by Admiral Cornwallis, the commiffiones of the admiralty, by the fociety in whofe tanfasions the iccount of it was firlt publithed, and who frefented to Captain Pakenham their gold meda!, by the Triaity houfe, by the managing ownets of Eatt India hippine, by the duke of Sudermania the prefent regen: of sweden, and by the fociety for the improvement of naval architefure. The fubfitute here recommended for a loft rudder, fays the inventor, is formed of thofe materials without which no fhip goes *0 fea, and its conetruction is fimple and fpeed). Captuin Pakcnham, however, clid not give a paticular ac-
and to whom he fent a model of his invention, till fuch time as he had an opportunity of reducing the theory he had conceived to practice. On the 7th of July 1788, he made this trial with the Merlin of Newfoundland; and he declares that, during the different manœuvres of tacking and wearing, he could not difcover the leaft variation between the operation of the machine and that of the fhip's rudder: flie was Iteered with the fame eafe by one man, and anfwered the helm, in every fituation fully as quick. Admiral Cornwallis certifies the fame with refpeet to the Crown of \(\sigma_{+}\)guns, which loft her rudder on the Kentith Knock, when with the fubftitute the was ftecred to Portmouth with the utmolt eafe in a heavy gate, and, as the admiral afferts, it would have taken her to the Ealt Indies.

The materials and conltruction are thus defcribed in the Tranfactions. " \(\mathrm{N}^{\circ}\). a top-malt inverted; the fid-hole to hlip the tiller in, and fecured with hoops from the anchor focks; the heel forming the head of the rudder. \(\mathrm{N}^{\circ}\) 2. The inner half of a jibb-boom. \(\mathrm{N}^{\circ}{ }_{3}\). The outer half of ajibb-boom. \(\mathrm{N}^{\circ}\) 4. A fifh : the whole of thefe materials well-bolted together :-in a merchantman her ruff-tree. \(N^{\circ}\) 5. A cap, with the fquare part cut out to fit the ftern-poft, and acting as a lower gud. geon, fecured to the fern-poft with hawfers, leading from the bolts of the cap, under the thip's bottom, into the hawfe-holes, and hove well tort. No 6. A plank, or, if none on board the fhips, gangboards. N \({ }^{\circ} 7\). An-chor-ftocks, made to fit the topmat as partners, fecured to the deck, and fupplying the place of the upper gudgeon, and in a mocchant-fip the clamps of her windlafs. \(N^{0} 8\). A ftern-poft. \(N^{\circ}\) 3. Hoops from the anchor ftocks. No 10 . Pigs of ballaft, to fink the lower part. The head of the rudder to pafs through as many decks as you wilh."

On this the Captain makes the following remarks: "It might probably be fuppofed, that a difficulty would occur in bringing the jaws of the cap to embrace the Itern-polt ; but this will at once be obviated, when it is remembered that the top-chains, or hawfers, lead. ing from each end of the jaws, under the hip's bottom, are in fakt a continuance of the jaws themfelves. No: can it be apprehended that the cap, when fixed, may be impelled from its Atation, either by the efforts of the fed, or the courfe of the thip through the water, tho' even the lawfers; which confine it in the firlt infance, thould be relaxed :-the experiment proves, that the partners mult be firft torn away, or the main-piece broken off.
"Since the improved fate of navigation, notwithfanding remedies have been found in general for the molt difaftrous accidents at fea, experience \(h\) ts evinced that nothing complete, had been hitherto inverted to fupply the lofs of a rudder. The firt expedient within my knowledge were cables veered aftern, with tackles leading from them to the thip's quarters. This p:actice was faperfeded by the invention of the machisc ufually called the IPfarich machine; but the conftruction of it is complex and unwieldy, and retels are feldom found in polfetion of the materi.lls which form it. Commodore Byron, in the Journal of his Voyage round the Wold, fays, that the 1 'imer, with cvery afiltance from his own fhip, was five daysin conftucting it. Befides, like the beforc-

\section*{R U D}

Rudiiman. beforementioned fcheme, it can only operate to fleer a Ship large (and that but very wildly), and of courfe, under the circumfance of a lee-thore, defeat the mont fhilful exertions of a feaman. Scueral other expedicuts have been adopted, which I thall not mention here, as the fame defects equally appear in all.
"Thus it was apparent, that ample room rras left for the difcovery of fonse more certain refource than any of the former; and the fcheme which has fuggelled itfelf to me, will, I truft, be found fully to anfwer the purpofe intended. The materials are fuch as fearcely any Ship can venture to fea without; and the conitruction fo fpeedy, eafy, and fimple, that the capacity of the meaneft failor will at once conceive it. I need not, from mathematical principles, fhow the certainty of its effect, as it is formed and managed in the fame manner as a fhip's common rudder: and as the common rudder is certainly of all inventions the beft calculated for guiding a veffel through the water, it will of courfe follow, that whatever fubllitute the neareft refembles that, muft be beft adapted to fupply its lofs."

RUDDIMAN (Thomas), one of the moft eminent grammatians which Scotland had produced, was born in October \(167+\) at Raggel, in the parifh of Boyndie and county of Banfi. His father James Ruddiman was a farmer, and itrongly attached to the houle of Stuart.

Mr Ruddiman was infructed in the principles of Lain crammar at the parifh fchool of Boyndie, where his appication was fo viporous, and his progrefs to rapid, that he quickly furpafied all his clafs.fellows. His matter, George Morifon, who was a filful and attentive teachcr, being unwilling to chack his ardour for learning, permitted him to follow the impulfe of his genits, and to advance without waiting the flow progrefs of the ether boys.

The pleafure which the youthful mind reccives from vivid defcription, though wild and romantic, approaches to ecftacy, and often riakes an impreffion which remains indelible. While at fchool, the firlt book which charmed the opening mind of Ruddiman was Ovid's Metamorpholes; nor did he ceafe to relifh the beauties of this author when his judgment was mature, for during the reft of his life Ovid was his favourite poet.

At the age of fixteen he became anxious to purfue his Atudies at the univerity; but his father thinking him too young, oppofed his inclination. Hearing of the ermpetition trial, which was annually held at King's college, Aberdeen, for a certain number of burfaries on the foundation of that univerlity, Ruddiman's ambition was kindled. Without the knowledge of his father, and with only a fingle guinea in his pocket, which his fifter had privately given him, he fet out for that place. On the road he was met by a company of eypfeys, who robbed hint of his coat, his thoes, his flockings, and his guisea. This misfortune did not damp his enterpriling fpirit: He continued his journey to Aberdeen, prefented himielf before the prifefiors as a candidate; and though he had neither clothes to give him a decent appearance nor friends to lecommend him, he gained the firlt prize.

Alter a'tending the miverfity four years, he obtained the degree of nather of arts; an honour of which he was always proud. The thelis fays, the difputation on this occation lafted ab aurora ufiue aib erfferum, i. e.

Yol. XVI.
"from morning till night." Tho' Rudjiman wais only Reddiran. twenty jears of age when he left the univerlity, it app. pears from a book intitled Rhetoricarum Libritres, connpofed before this period, but never publifhed, that he had then read the Roman clallics with uxcommon artention and advantage.

He was foon after engaged as a tutor to the fon of \(R\)-bert Young, Eff; of Auldbar, the gre:t grandion of Sir Peter Young, who under the direation of Buchanan had been preceptor of James VI. His income here muft have been very fmall, or his fituation unpleafant; for within a year he accepted the office of fchool. matter in the parifh of Laurence-kirk. Tlle profucfion of fchoolmafter in a country-parifh at that period could open no feld for ambition, nor profpeat of great emolument; for by an aft of parliameni pafied in \(16_{33}\), the falary appropriated to this office could not be increafed above 200 merks Scots, or L. \(11: 2: 2 \frac{2}{T}\) Sterling. In difcharging the duties of this humble but important fation, it is probable that he uled Simfon's Rufimenta Grammatica, which was then originally taught in the northern fchools, and by which he limielf tad been inftructed in the prisciples of Latin grammar.

When Ruddiman had fpent three years and a half in this employment, the celebrated Dr liteairne happening to pafs through Laurence-kirk, was detained in that village by a violent form. Pitcairne wanting amufement, irquired at the hontefs if the could procure any agreeable companion to bear him company at dinner. She replied, that the fchonlmafer, though young, was faid to be learned, and, thnugh modeft, he nas fure could talk. Pi:cairne was delighted with the converfation and learning of his rew companion, invitedi him to Edinburgh, and promifed him his patronage.
When Ruddinan arrived in Edinburgh, the advocates library which had been founded cighteen yeats before by Sir George Makerzie, attraice his curic. fity and attention, and he was foon after appointed af-fiftant-keeper under Mr Spottiliwoode the principal librarian. His falary for executing this laborious oflice was L. 8:6:8. He had befides a fmall honorary prefent from thofe who were admitted advocates for correcting their thefes: he was alfo paid for copying manufcripts for the uie of the library. And the faculty, belore he had held the office two years, were fo highly pleared with his conduct, that they made him a prefent of 50 pounds Scots, or L. \(4: 3: 4\) Sterling.

Dusing the fitting of the court of feflion he attended the library from ten till three. But this corfineme:t did not prevent him from engaging in other laborious duties: A part of his time was oicupied in teaching young gentlemen the Latin language. Some he attended at their lndgings, forne waited upon him, and fome refuted in his own houle. An exatet lift of the names of thofe who attended him, exprefing the date of their entry, and the fums which he was to reeeve from cach, has been found in his pockec-book; a curious relick, which is fill preferved.

When Ruddiman's menit as a fchoiar became bete: know:, his alliflance was anxionfly f.Jicied br thofe who were engaged in literary publications. Freebaime, a refpectable bookfeller of that period, preval 1 dupna him to correct and frepare for the peefs Sir R bert Sibbald's Introduaio ad biforiam riramt al \(R\) vematis g fanrunı in ea Boroslis Brtlanmie farte ques ulta murum 32

Pintan

Ruddimin,
Fiticrangl. He reccived for his lalour L. 3 Sterling. At the sequeft of Mr Spotifivoode hbrarian, for L. 3 Sterligg he contributed his aid to the publication of Sir \(1 R\) bert Spottifivode's Practiques of the Laws of Sentland.

In 1707 he commencedansioneer, an employment not very fuitable th the dignified eharafter of a man of letters: but to this oscuration he was probably impelled by neceflity; for upon balancing his accounts at the end of the preceding ye:ar, the whole fuyplus was L. 28. 2s. with proppects of L. 236:7:6 Scots. Ruddiman lad a family : and feems to have been a franger to that foolith pride which has feduced fome literary men iato the opinion, that it is more honourable to Atarve than have recourfe to :in occupation which men of rank and opu'ence are accultomed to defpife. The fime year be publified an edition of l'olufent de fingini Trenquilitate Dial gus, to which he prefixed the lffe of Volu emus. Volufenus or Wilfon was a learned Scotiman. and liad the bonour to be patronized by Car. dimal Wolfey (fee Wilson). In 1709 he pubbifhed Yyungloni Camtici Solonomis Paraplorafis Poetica, and Fobinfoni Cuntica with notes, whicis he dedicated in Verle to his fiend and patron 1)r Pitcairne. The edition conflited of 200 copies. The expence of printing amountad to L. 5. 10 s . Sterling, and he fold them at a thilling earh copp.

The philologial talents of Ruddiman were next direated to a mose inportant object, in which they became more confpicuous and ufeful. Freebairne the bookfiller propofed to publifh a new edition of the Scotlih \(\operatorname{tranlation}\) of Virgii's Reneid by Gawin Douglas Lifhop of Dunkeld. Of the contributions which fome eminent characters of the age prefented, the mof valuable were fupplied by Ruddiman. Freebairne acknowledged in genetal terms this obligation, but has not done him the jullice to itform the reader what thefe valuable contributions were, and Ruddiman's modefty rellrained him from publickiy afferting his claim. From the focket-book which has been already mentioned, it appears that Ruddman corrected the work and wrote the gloffry; and there is frong reafon to beliese that he was the author of the 12 general rules fire affiting the reader to undeattand the hanguage of 1) uglas. To thofe who with to be acquained with the ancient langnage of this inand, the glofary, will be atreafure, as it \(f\) rms a compendious dioionary of the Anglo-Suxan. For this ehborate work Ruddiman was atio:ved L 8: 6: 8 Sterling,

The reputation of Ruddiman had now extended to a didance. He was i vied by the migitrates of Dandee to be retor of the grammar fchool of that town ; but the fecnity of adroates, anxious to retain him, angmented his falay to L. \(30: 6: 8\) Sierling, and he declined the offer.

In 1711 he affitced Tiforp Sage in publining Drommond of Hawthornden's worhs; and picrormed the hame firour to I)r Abercrombic, who was then prepaaing for the prefs his Mantial Atchicvenents.

In 1713 he was deprived of his friend Dr Pitcairne. On this occafion lee teftified all the refpect which friendfhip could infpire to the memory of his deceafed patron and furviving family. He compofed Pitcairne's epitaph, and conducted the fale of his library, which was difpofed of to Peter the Great.

In 1714 the Rudiments of the Latin tongue were publifhed. Eighteen or nineteen Latin grammars, compoled by Scotchmen, had appeared before this period; yet fuch is the intrinfic value of this little treatife, that it foon fuperfeded all other books on the fubjeet, and is now taught in all the grammar-fchools in Scotland. It has alio been tranflated into other languages.
He was next called upon to publilh the works of Buchanan. The value of thefe he enhanced much by an elaborate preface, his Tabula Regum Scotic Cbronolorica, and Profriorum Nominum Interpretatio. The interpretation of proper wames was highly requifito; for Buclanan las fo difguifed them in the Ronian drefs, that the original name is farcely difcernible; and the preface puts the reader on his guard againlt the chronological errors and factious fpirit of the billory. Ruddiman alfo added a learned differtation, intiticd 7le Metris Buchnnauxis Libellus, and fubjoined annotations critical and political on the Hiftory of Scotland. As he efpoured the caufe of Queen Mary, he raied againft himfelf an hoft of enemies, and gave occation to that celebrated controverfy which has been carried on with much keennefs and animofity, and with little intermiffion, even to the prefent times. For this work Ruddiman was promifed L. 40 Sterling.

He had now been fo long accultomed to fuperintend the prefs, that he was led to form the plan of erecting a printing-office himfelf (A). Accordingly, in the year 1715, he commenced printer in partner lhip) with his brother Walter, who had been regulanly bred to the bufinefs. Some years after he was appointed printer to the univerfity, along with Janes Davidfon bookfelle".

The firf literary fociety formed in Scotland was innituted in the year 1718 . It probably derived its origin from the fadious and turbulent fpirit of the times. The learned, anxious perhaps to find fome refpite from the p litical dilfentions of the day, endeavoured to procure it in elegantamufomert ; for one of the fundamental articles of the new alfociation was, that the "a affairs of church and fate thould not be introduced." Ruddiman and the maters of the high-fchool had the honour to found this fociety. They were afterwards jnined by Lord Kaimes.

In 1725 the firn part of his Grammatice Latinus Infitutiones, which treated of etymology, was publifhed. The fecond patt, which explained the 1rature and prin. ciples of fyntax, appeared in 1731. Fie alfo wrote a third patt on profody, which is faid to be more copiuns and correct than any other publication on the fubject. When urged to give it to the public, he faid dryly, "The age has io little tafte, the fale would not pay the expence." Of this work he publithedi an abridgement,
(A) It has long hean an object of curiofity to afcertain the time at which the art of printine was introduced intu Soolimd. Mir Robertion, the keeper of the records, has lately difcovered a patent of King James IV. which renders it certain that a prin ing-prefs was firt eftablifhed at Edinburgh during the year 1507, 30 years attir Caxton Lad brought it into England. See Printumg p. 52z.
\(\underbrace{\text { Rud liman, ment, to which he fubjoined an abflatr of his pro- }}\) fody.

Ruddiman next engaged in the management of a newfaper, an employmert for which his genius and in. duftry feemed to render him well qualifed. But thore who thould expet either much information or amufement from this publication, would perhaps be greatly difippointed. The newfpaper which he conducted was the Caledonian Mercury, and was eftablifhed in 1720 by William Rolland a lawyer. Ruddiman acted only in the capacity of printer for five years; but upon the death of Mr Rolland in 1729, the property was tranf. ferred to him, or to lis brocher Walter and him con. juncly. This paper continued in the family of Ruddiman till the year 1772, when it was fold by the truftees of his grandchildrea to Mr John Robertfon.

The Caledonian Mercury was at firlt printed three times a week, on Monday, Tuefday, and Thurfday, in a fmall to of four pages, with two columns in each page, and 50 lines in each column; fo that the whole paper contained only 400 lines. It now contains in its folio lize \(2+80\) lines.

Mr Ruddiman, after the death of Mr Spottifwoode librarian, remained for fome time in his former flation ; but was at length appointed keeper of the library, tho' without any increafe of falary; and fome years after Mr Goodal, the defender of Queen Mary, fucceeded him in the office of fub-librarian.

The alliduous application of Ruddiman, fupported by fuch learning, was intitled to wealth, which now indeed flowed upon him in what was at that period deemed great abundance. On the 1 ff of Oftober 1735 , it appeared from an exat flatement of his affairs, that he was worth L. 1882:5:2 Sterling; and on the 20th of May, the enfuing year, his wealth had increafed to L. \(1985: 6: 3\) Sterling. In 1710 he valued his effects at L. \(24: 14: 9\) Sterling.

In 1737 the fchoolmalters and teachers in Edinburgh formed themfelves into a fociety, in order to eftablith a fund for the fupport of their wives and children. Of this fcheme Ruddiman was an active promoter, and was chofen treafurer. Perhaps it was this alfociation waich in \(174^{2}\) gave the idea to the Scots clergy of forming their widows fund.

In 1739 he publiftied Scleflus Diplomatum et Numifmatum Scotir Thefaurus. This work was projected and begun by Anderfon (hence called Anderfon's Diploma1a), but was finifhed by Ruddiman. The preface, which is an excellent commentaty on Anderfon's performance, was written by Ruddiman, and dijplays a greater extent of knowledge than any of hisother productions.

As Ruddiman had imbibed from his father thofe political priaciples which attached him to the family of Scuart, he probably did not remain an unconcerned fpectator of the civil commotions which in \(17+5\) agitated Scotland. He did not, however, take any active part in the rebellion. His principles he has been heard to fay, induced him to be a quiet fubject and a good citizen. He retired to the country during the fummer of 1745 ; and while his fellow-citizens were fpilling each others blood, he was more happily engaged in writing Critical Obfervatious on Burman's Commentarics on Lucan's Pharfalia. The Caledonian Mercury was in has mean time marked with a jealous ege. His fon,
who had for fome tinse been the principal namyer of Ruluimen. that newfaper, having copied a palagraply which was .-. reckoned feditious from an Englith paper, was imp:ifoned. The folicitation of his isther procured his ic. leafe: but it was too la'e; for the unnappy young man had enntracted a diftemper in the tolbooth of Ediaburgh which brought him to his grave.

During the laf feventecn years of his life Ruddiman was almolt incelfantly engaged in controverfy. To this be was in fome meature compelled by the violent attacks which fome critics of the times had fuccelfively made upon his works. He was firft called upon by Benfon, auditor in the exchequer, to determine the comparative merit of Bucharan and Johnton as poets. He gave a decided preference to Buchanan in peripicuity, purity, and variety of fyle; but, like a candid rritic, allowed Johnflon to be fuperior in the harmony of his numbers. His next antagonift was Logan, one of the miniflers of Ediuburgh, it weak illiterate man, but an obftinate polemic. The fubject of conert was, whether the crown of Scorland was ftictly hereditary; and whether the birth of Robert III. was legitimatc? Ruddiman maintained the affirmative in both prifits, and certainly far furpaffed his antagonif in the powers of reafoning. He proved the legitimacy of Robert by the public records of the kingdom with a force of argument which admits of no reply; but in difcuffing the firft queftion (by which he was led to confider the content between Bruce and Baliol) he was not fo fucceffful: for there are many inflances in the hiffory of Scotland in which the brother fuccecded to the crown in preference to the for. He flowed, however, that the Scottilh crown was at no period properly elective; and that, according to the old licentious conflitution of the kingdom, the right of Bruce, who was the neareft in blood to the royal fock, was prefer:able to the claim of Baliul though defcended from the elden daughter.

But the labours of Ruddiman did not end when the pen dropt from the feeble hand of Logan. He was foon called upon to repel the attacks of Love, ichoolmafter of Dalkeith, who maintained, in oppofition to him, that Buchanan had neither repented of his treatment of Queen Mary, nor had been guilty of ingratitude to that princefs. That Buchanan ever repented there is reaton to doubt. Whether he was guilty of ingratitude let the unbiaffed determine, when they are alfiured by authentic records that Mary conferred on him a penfion for life of 500 pound Scots.

When Ruddiman had arrived at his cighticth year, and was almoft blind, he was allailed by James Man, mafter of an hofpital at A berdeen, with a degree of rancour and virulence, united with fome learning and ability, which muft have touched him in a fenfible manner, and alarmed his fears for his reputation after his de. ceafe. He was called a finipeed pedant, a furious calumniator, and a corrupter of Buchanan's zeverks. The venerable old man again put on his armour, entered the lifs, and gained a complete viftory. Man, with all bis acutenefs, could only point out twenty erross in two folio volumes. Sume of thefe were typographical, fome triling, and fome doubtlul. Ruddiman, with much pleafantry, drew up againt Mdn an account of 469 errors, confifting.of \(1+\) articles, of which two or three nay be produced as a fpecimen. 1. Falfehoods and prevarications, 20. 2. Abfurdities, 62. 3. Paffages from \(3 \mathrm{Z} 2 \quad \mathrm{clafic}\)
 thecruy. The nims: ? which he grined over this virulent ad. no rerfay le dill wat lon enjoy ; for he died at Edin-
buigh of the: 1gth of Jonuary 1757 , in the 83 d year of his age, and was busied in the Grey Friars chanch-yard without any nonument to dillinguilh his srave.

II was three times manied, but left behind him only coe danghe:, Alifon, who was married in rity to fancs Stewart, Eff. He is tuppofed to have died worth L. \({ }^{\text {s. }} 000\) Sie ling.

Ha was of tle mitole fize, of at thin and fraight make, and had eves remarkably piercing. Of his talents and learning his woiks afford the monf fatisfactory proofs. His memory was tenacious and exact. He could repeat lony palfares of his favourite poet Orid, to the amount of 60 lines, and without omitting a word. He was fogreat a mather in the Latin language, that lie has parhops been equalled by nore fince the days of Eurbeman.

Kudamat; has left a character unfained by vice, and difinguifhed by many ditues. His piety was exemflay. Hefpent Sunday in religicus employment ; and we aie informed had prayers read to 1 im every mornirg loy his amaruentis when the infirnitics of age requived fuch an allifant. He was fungal of his time, heither indolent nor fond of amufement ; and fo remarkably temperate, that it is faid he never was intoxicated. Thugh often forced into controverly, and treated wi.h infolence, he never defcended to fcurrility and abufe, nor cherithed refentment againt his enemies. His candour was much admired in one inftance in the favourable chatacter which he publifhed in the Caledonian Mercury of his antagonitt Love ( ), after his deceafe. Upon the whole, it mult be allowed that Ruddiman has been -f great fervice to clafical literature, and an honour to 1.is mative country.

RUDESHEIM, a rich village of the Rhinegau, lituated about five miles from the city of Mentz, contains alout 2500 inhabitants. The wine of this place is leoked upon as without comparifon the beft of the Rhinegan, and confequently of all Germany. Baron Riefbeck fays, he found it much more fiery than that of Hochheim ; but that for pleafantnefs of tafle there is 110 comparifon betwist them. The bel Radetheim, like the belt Hochheimer, fells upon the fpot for three guilders the bottle. "You can (fays our author) have no tolerable wine here for one guilder, nor any very grood for two ; at leatt I hould prefer the worf Burgundy I ever talled to any Rudedheiner I met with either here or at Mentz fnr thefe prices. Indeed the wine of our hoft (a sich eccleflaftic) was far better than any we could get at the inn. It Rands to reafon, that the fime vinatre fumithes grapes of very different degrees of goodnefs; but befides this, it is in the Rhi-
negan as evary where clfe. The bet wines are gene- Radechcias rally fent abroal by the poor and middling inhabitants, and the worft kept for internal confumption; for the expence of the carriage being the fatse in both cafes, itrangers had much rather pay a double price for the grood than have the bad. It is only rich people, fuch it our holt was, who can afford to keep the produce of their land for their nwn driuking. Upon this principle, I have eaten much better Swifs cheefes out of Switzerland than in it, and have drank much better Rhenith in the inns of the northern parts of Germany than in the country where the wine grows. The pofition of the country alfo contibutes to render the wine dearer that it would otherwife be. As the belt wine grows in its more northern parts, the eafy tranfport by the Rhine to Holland, and all parts, of the world, raifes its price above its real value. The place where the flower of the Rudefheim wine grows is precifely the nect of the land, formed by the winding of the Rhine to the north after it has run to the weftward from Ments hither. This neck, which is a rock almoft perpendicular, enjoys the firlt rays of the rifing and the laft of the letting fun. It is divided intn fmall low terraces, which are carried up to the utmof top of the hill like Reep fairs; thefe are guarded by fnall walls and eathen mounds, which are of en wafhed away by the rain. The firt vine was brought hither from France, and they flill call the beft grape the Orleannois. They plant the vine focks very low, fearce ever more than four or five feet high. This wayy of planting the vine is favourable to the production of a great deal of wine, but not to its goodnefs, as the phlegmatic and harfh parts of it would certainly evaporate more, if the fap was refined through higher and more numerous canals. This is undoubtedly the reafon why every kind of Rhenifl has fomething in it that is harfh, four, and watery. The harvell of the belt vineyards, which are the lower ones, in the aborcmentioned neck of land, is often bought before hand, at the advanced price of fome ducats, by Dutch and other merchants. It mull be a very rich flock to yield above four meafures of wine.You may eafily imagine, that the cultivation of vineyards mult be very expenfive in this country, as the dung, which is extremely dear, mult be carried up to the top of the mountains on the peafants' fhoulders."

RUDIMENTS, the firlt principles or grounds of any art or fcience, called alfo the elements thereof.

RUE, in botany. Se Rura.
Rue (Charles de la), a French orator and poet, was born at Paris in \(16+3\). He was educated at the colleme of the Jefuits, where he afterwards became a profeffor of humanity and rhetoric. At an early age his talent for poetry dificofed itfelf. In 1667, when he was only 2.4 years old, he conrpofed a Latin poem on the conquefts of Louis XIV. which was fo much efteemed by
(B) The following character of Love was publifhed in the Caledonian Mercury of the 24 th of September 3750. "On Thurfday morning died at Dulkeith, affer a lingering illnets, in the 55 th year of his age, Mr john Love, rectrr of the grammar-fonool there; whe, for his uncommon knowledge in clatical learning, his inde fatigable diligence, and mithefs of difcipline without feverity, was juftly accounted one of the moft fufficienc maflers in this country." This charafter is doubtlefs jult; though Love is now known to have been the fheolmafler fatiazed by Smoilet irt the beginaing of his Rodevic Random.

\section*{RUE}

RuR, Rucllias.
the celitrated Peicr Corneille, that he tranflated it into French, prefented it to the King, and at the fanic time patfed fo high encomiums on the fupcrior merit of the original, what the author was received into the favour of that moararch, and ever after treated by him with fingular refpect.
Deli Ruc, anxious to preach the gofpel to the Canadians, requefted leave of abfence from his fuperiors; but having deltined him fur the puipis, they refufed to comply with his requef. Accordingly he commenced preacher, and became one of the molt eminent ora:ors of his age. In hio difcourfes he would probably have been too lavilh of his wit, it he had nut been cautioned agraint it by a judicious courtier. "Continue (faid be) to preach as you do. We will hear you with pledfure as long as you reafon with us; but avoid wit. We value the wit contaned in two verfes of a fong more than all that is comtanced in moft of the femmons in Lent."

Refpsiting the delivery of fermons, he entertained an opition quite eppofite to the efablithed praftice of lis counnymen. In France it wits cullomary not to scad fermons frum the pu!pit, but to recite them from inemory. This he conlifered as a laborious tufk not compenfated by any advantiges. Oa the contrary, he was of opinion that reading fermons was preferable.The preacher, with his difourfe before him, could sead it with cafe, t:ee from that timidity and embarralliment which frequently attends the at of recollec. tion; and he would fave at couldiderable time which is ufluaily fpent in committing it to memory. In thete sentiments many will not be difpofed to acquiefce: but, without petending to determine the quettion, it may he affertc.l, that il fermon, whether sead or recited, if fpoken in a ferious manner, and with proper inflections and tores of voice, will produce ail the effects for which a ferman is calculated.

De la Rue died at Paris on the 27 th of May 1725 , at the age of \(\mathrm{S}_{2}\).

He was as amiable in fociety as he was venerable in the pulpit. Ifis converlation wis pleafant and infruc. live. His tane and knowledge enabled him to converfe with cafi, and to exprefs himielf with propriety on every fubject. He chermed his luperiors by his wit, and lis interiors by his atfobility. Though living amadt the bate of the woild, he was alway's prepatied for the toinethe ai the clotet and the actreat of the cloiter. In the raligit l.s poured forth the finelt cflufions of clo. cuence in the mont animated and imprefive menner.If publithed Panerayrics, Funeral Orations, and Sermons. Hlis bet firmon is that intited Des Cula-
 compoled on the Prince of Luxemburg. There are atif cragedics of his writing, both in Lasin and French, which wete approved by Corneille. He was one of 1.t the who publithed edtions of the claffics for the ure of the Danpln. Virgil, which fe!l to his fhare, was iublithed with notes, and a life of the Poet, in 1675 , ftr, and is a valuable and ufeful coition.

RUELIAA, in botany: A genus of the angiospermid e:der, belonging to the didgnamia clats of piants; and in the matural melhod ranking under the 4oth order, l'refonstr. The callyx is quinquepartite; the corolla fub-campanulated; the ftamina ajproaching together in pairs; the capfule fptirgirg alunder by neens cf its elatic fegrmeats.

RUFF, in ichthyology; a fpecies of Perca.
Rurr, in ornibhology, a fpecies of Tringa.
RUFPIIE ID (1) Owen), was the fon of his Majcty's baker, in Hiccadily; who buying a lottery ticket for him in his infancy, which happened to be drawn a prize of 5001 . this fum was applied to educate him tor the law. He accordingly entered in the Middie 'remple; and feconded fo well the views of his fitther, that he became a good fcholar and an acute tarritter. Whtile he was waiting for opportunities to diftinguif himfelt in lis protellion, he wrote a variety of pamphlets on temperary pelitics; and was afterwards dillinguithed by his accurate edition of The Statules at Large, in to. He now oltained good bufinef, though more as a chamber-sounfellur in framing bills fer parlidment than as a ple der ; but his clofe application to ?tu\(d y\), with the varicty of works he engaged in as an author, fo impaised his conflitution, wat after the latt exertion of his abilities to defend the corduct of adminifiration toward Mr Wilkes, by a pamphet intitled, "The Cafe of the late elceaion for the county of Middecfex confidered," le was prevented from receiving the reward of a place in the Treafury, ly dying in 1760 , at about 46 years of age. Some time befure his d:ath, bifhop Warburt n engaged him to write his long promifed I,ife of Alexancer Pope; which, however, when executed, was very far from giving general fatisfation. The author attributed his ill fuccels in the deficiency of his materials; while the public feemed rather to be of opinios that, as a lawjer, he ventured beyond his proper line, when he affumed the taks of a critic in poctry.

RUFFLING, of Ruffing, a beat on the drum. Lientenant generals have threc rufles, major-generals two, brig.diers one, and gorcrnvers one, as they pafs by the regiment, guard, S.c.

RUFINUS was born about the middle of the fouth century at Concordid, an inconfiderable town in Italy. At firlt he applied himfelf to the belles lettres, and particularly to the fludy of cloquence. To accomplifh himfelf in this elegant art, he removed to Aquileia, a town at that time fo celebrated that it was called a fecond Rome. Having made himfelf acoguanted with the polite literatute of the age, lie withdrew into a menaltoly, where he devoted himfelf to the fudy of theology. While thus occupied, St Jerome happened to pals through Aquileis. Rufinus formed an insimate friendnhip with him; but to his inexpreffible grief was foon deprived of the company of his new friend, whon continued his travels through France and Germany, and then fet out for the eaft. Rufinus, unable to bear his abfence, refolved to follow him. Accerdingyly he embarked for Lgypt; and having vilited the hermits who inhabit the deferts of that comntry, he repaired to Alex:ndria to hear the renowned Didymus. Herc le was gratified with a fight of St Melania, of whofe virtue and charity he had heard much. The fanglity of his manners foon obtained the confidence of St Melania, which continued without interruption during their refidence in the eatt, a period of 30 years. The Asians, who fwayed the ecclefiaftical feeptre in the reign of Valens, perfecuted Putinus with great cruelty. They threw him into a dungeon, loaded him with chains, and after almon farving him to death, banilhed him to the deferts of Palefinc. From this caite he was relieved by the pecuniary aid of St Melania, who emplojed l.er wealth in ranfoming thefe

Rufinus confeftors who had been condemned to prifon or baniftment.

St Jerome, fuppofing that Rufinus would immediately proceed to Jerufalem, wrote to one of his friends there, congratulating him on the profpen of fo illutrious a vifitor. 'To Jerufalem he went, and having buile a monaltery on the Mount of Olives, he there atemhled at great number of homits, whom he animated to virtue by his exhortations. He converted many to the Chriltian faith, and perfuaded more than 400 hermits who had taken part in the fehifn of Antioch to retun to the church. He prevailed on many Macedunians and Arians to renounce their errors.

His attachment to the opinions of Origen fet him at variance with St Jerome, who, being of a temper pecu. liarly irritable, not only retracted all the praites which he had lavithed upon him, but loaded him with fevere reproaches. Their difputes, which were carried to a very indecent height, tended to injure Cluritianity in the eyes of the weak. Theophilus, their mutual friend, fettled their differences; but the reconciliation was of fhort continuance. Rufinus having publifhed a trandation of the principles of Origen at Rome, was fummoned to appear before Pope Analtalius. But he made a fpecious apology for not appearing, and fent a vindication of his work, in which he attempted to prove that certain errors, of which Origen had been accufed, were perfectly confiftent with the opinions of the orthodox. St Jerome attacked Rufinus'stranflation. Rufinus compofed an eloquent reply, in which he declared that he was only the sranflator of Origen, and did not confider himfelf bound to fanction all his errors. Mof ecclefiaftical hiforians fay that Rufinus was excommunicated by Pope Andtafius; but for this no good evidence has been brought. In 407, he returned to Rome ; but the year after, that city being threatened by Alaric, he retired to Sicily, where he died in 410 .

His works are, 1. A Tranflation of Jofephus; 2. A Tranflation of feveral works of Origen; 3. A Latin Verfion of Ten Difcourfes of Gregory Nazianz.en, and Eight of Bafll's; 4. Chromatius of Aquilea prevailed on him to undertake a Tranflation of the Ecclefialtical Hiftory of Eufebius, which engaged him al. moft ten years. He made many additions to the body of the work, and continued the hiftory from the \(20 t h\) year of Conftantine to the death of Theodofius the Great. Many parts of this work are negligently written, many things are recorded as facts without any authority but common report, and niany things of great importance are eitirely omitted. 5. A Vindication of Unizen. 6. Two Apologies addrelled to St Jerome. 7. Commentaries on the prophets Horea, Joel, and Amos. S. Lives of the Hermits. 2. An Explanation of the Creed.

RUGEN, an illand in the Baltic Sea, on the coalt of Pomerania, over againlt Stralfund, about 23 miles in length and 15 in breadth, with the title of a principality. It is ftrung both by art and nature, abounds in corn and catule, and belongs to Sweden. The chief town is Pergen. E. Long. 1.f.30. N. Lat. \(5+3 z\).

RUINS, a term particularly ufed for magnificent buildners fallen into decay by length of time, and whereof there only temains a confufed heap of materials. Such are the ruins of the tower of Babel, of the tower of Belus, two days journey from Bagdat, in Syria, on
the banks of the Euphrates; which are now no more than a heap of bricks, cemented with Bitumen, and wherenf we only perceive the plan to have been fquare. Such alfo are the ruins of a famous temple, or palace, near Schiras, in Perlia, which the antiquaries will have to have been built by Ahafuerus, and which the Perfians now call Tchelminar, or Chelminar ; q. d. the to columns; becaufe there are fo many columns remaining pretty entire, with the traces of others; a great quantity of bafto-relievos, and unknown characters, fulficient to fhew the magnificence of the antique architecture. The mof remarkable ruins now exiting of whole cities are there of Palmyra and Persepolis of the grandeur of which fome idea may be formed from the views given in the plates referred to from thefe articles, to whicn may be added thofe of Herculaneum and Pompetum. The magnificent ruins flili romaining in Rome, Athens, \&c. of particular edifices, as temples, palaces, amplitheatres, aquedu\&s, baths, \&c. it were endlefs to enumerate, and beyond the pian of this work to reprefent.

RUIZIA, in Botany: A genus of the polyandri.s order, belonging to the monodelphia clafs of plants; and in the natural method ranking nader the 37 th order, Columnifere. The calyx is double; the externall ave triphyllous; the internal are parted into five. The co. roila confifts of five petals, inclining to the sight hand fide, and adhering to the ftamina, whieh are from 30 to \({ }^{\text {40 }} 0\). It has ten Atyli, and as many capfulx. Thefe are compreffed and membranous. In each capfule are two feeds. There are four fpccics, viz. I. Corlata; 2. Lobata; 3. Pahnata; 4. Lacinata, all natives ot A fia and the Cape of Good Hope.

RULE, in matters of Literature, a maxim, canon, or precept, to be obferved in any art or fcience.

Rule, in a monaftic fenfe, a fy fem of laws or regulations, whereby religious houfes are governed, and which the religious make a vow, at their entrance, to obferve. Such are the rules of the Auguftins, Benedictins, Carthufians, Francifcans, \&c. See Avgustine, \&c.

Rules of Court, in law, are certain orders made from time to time in the courts of law, which attorneys are bound to obferve, in order to avoid confufion; and both the plaintiff and defendant are at their peril alfo bound to pay obedience to rules made in coult relating to the caufe depending between them.

It is to be obferved, that no court will make a rule for any thing that may be done in the ordinary courfe; and that if a rule be made, grounded upon an affidavit, the other fide may move the court againfl it, in order to vacate the fame, and thereupon flall bring into court a copy of the affidavit and rule. On the breach and contempt of a rule of court an attachment lies; but it is not granted for difobedience to a rule, when the party has not been perfonally ferved; nor for difobeying a rule made by a judge in his chamber, which is not of force to ground a motion upon, unlefs the fume be entered.

A rule of court is granted every day the courts at Wellmintter fit, to prifoners of the King's-bench or Fleet prifons, to go at large about their private atfairs. Kule of Three. Sqe Arithmetic and Proportion. Rute, or Ruler, an infrument of wood or metal, with feveral lines delineated on it; of great ule in

Kuizia,
Rule.

\section*{R U M}
\(\underbrace{\text { Rom. }}\) practical menfuration. When a ruler has the lines of chords, tangents, innes, \&c. it is cilled a plane fale.
RUM, a fpecies of brandy or vinous ipirits, diffilled from fugar-cancs.

Rum, according to Dr Shaw, differs from fimple fugar-ipirit, in that it contains more of the natural thavour or effential oll of the fugar-cane; a great deal of raw juice anil parts of the cane itfelf being often fermonted in the liquor or folution of which the rum is prepared. The unsluous or oily flavour of rum is of en fuppofed to proceed from the large quantity of fat wied in \(b\) iling the fugar; which fat, indeed, if coarfe, will ufually give a ninking flavour to the fpirit in our diftillations of the fugar hquor or wath, from our refining fugar-houfes; but this is nothing of kin to the flavour of the rum, which is really the effert of the natural flavour of the cane.
'The mothod of making rum is this: When a fufficient flock of the materials are got together, they add watcr to them, and ferment them in the common me. thed, the ugh the fermentation is always carriel on very flowly at firlt; becaufe at the beginning of the feafon for making rum in the iflands, they want yeaft or fime other ferment to make it work: but by degrees, after this, they procure a fufficient quantity of the ferment, which rifes up as a head to the liquor in the operation; and thus they are allile afterwards to ferment and make their rum with a great deal of expedition, and in lage quantities.

When the wath is fully fermented, or to a due degree of acidity, the dillillation is carried on in the common way, and the firit is made up pronf: though fometionis it is redu ed to a much greitter llenglh, nearly approaching to that of alcohol or fpirit of wine ; and it is then called double-difilted rum. It might be eafy in rectify the firit, and bring it to much greater puity than we ufualiy find it to be of: for it brings over in the diftillation a very large quancity of the oil; and this is often fo difagrecable, that the rum muft be fuefued to lic bey a ling time to mollow before it can be mide; whereas, if well restilied, it would grow mellow much fienst, ind wuld have a much leis potent flavour.

Ite hal it te to keep rum in, both for exportation and whin ui-s, is doniticfs that of alcohol or reatificd apiat. In thes manner it would be tranfposted in ene hatf the bulk it wathatly is, and night be let down The comom proffitungth with water when neeeffars: fur the ccmmen mfe of making punch, it would
 the wifle would be cleaner, and the theageth might alvays be tegulated to a much greator exactucis than in the orvinary way.

The ouly we to which it would not fo well ferve in this hate, would be the common pratice of adulterdtion among our dittillers: for when they want to mix a large priinu of cheaper fitit wit! lhe rum, their bufiret's is to have it rithe procilithigh, and ds futh of th: Alwouritig ail us they cans, that it mof down the flavour of the finits they mix wi \(h \mathrm{it}\), and extend its own. If the bufines of acelifvin, 1 tum wat more niccly managed, it feems a very praticable ficheme to throw (at fi) mich of the cil. as to have it in the fine lis. it fiate of a cleat firit, hu: lifhly improphoied with it : in this cafe it wonld very bicarly refumbe arac, as is
proval by the mixing a very fmall quantity of it with a tatelefs fpirit, in which cafe the whole bears a very near refemblance to arac in flavour.

Kuns is ulually very much adulterated in Britain; fome are fo bare-faced as to do it with malt-fpirit; but when it is done with molaffes fpirit, the taftes of both are fo nearly allied, that it is not eatily difcoveret!. The beft method of judging of it is by feiting firc to a little of it; and, when it has burnt away all the inflammable part, examining the phlegm both by the tafte and fmell.

Rus is a confiderable ifland, one of the Hebrides, of rather one continued rock, of nearly 30 miles in circumferencc. It is the property of Mr Maclean of Coll ; containo 300 inhabitants; grazes cattle and feep; pays 2001 . rent annually: but has ncither kelp, freeflone, nor lime.

RUMELIA, in gengraphy, the fame with ancient Greece; now a part of Turkey in Europe.

RUDIEN, the paunch, or firf finmach of fuch animals as chew the cud; thence called ReMiNANT Animals. See Comparaqure Anatomy, \(\mathrm{n}^{\circ} 92\), Sic.

RUMEX, Dock, in botany; A genus of the trigynia order, belonging to the hexandria clafs of p'ants; and in the natural method ranking under the 12 therder Holorace.s. The calyx is triphyllous; there are three connivent petals, and one triquetrous feed. There are 27 fpecies; of which the moft remarkable are,
1. The patientia, commonly called patience rbubarb. This was formerly much more cultivated in the Britifls gardens than at prefent: the roots of this have been generally ufed for the monk's thubarb, and has even been thought to be the trne kind; but others fupprife the focond fort foould be ufed as fuch. The root is large, and divides into many thick fibres; their outer cover is brown, but they are yellow within, with fome reddifh veins; the leaves are broad, long, and acute-pointed; their footfalks are of a reddifh colour ; the falks rife fix or feven feet high, and divided towards the top intu feveral erect branches garniflied with a few narrow leaves terminating with loofe fpikes of large faminous flowers. Thefe appear in June, and are fucceeded by pretty large three-cernered feeds, whofe coverings are entire, which ripen in :utumn.
2. The alpinus, or monk's rlubarb, grows naturally on the \(\Lambda\) pps, but has long beencultivated in the Britilh gardens. This hath large roots which ipread and multiply by their offsets: they are thorter and thicker than the former, are of a sery dark brown en the outide, and jellow within. The leaves are of the round heart-flapl:, fianding upon long foctilalks. The ftulks rife firm two th three fect ligh; they ane thick, and have a few fmall roundith leaves on the lower patt; but the: upper part is cl fily garnithed with fpihes of white flowers fanding erect cloie to the falks. Thefe appar in the latter end of May and are fucceeded by latge triangular feeds which ripen in Auguft.
3. The anflaticus, or water-jock, grows naturally in prids, ditclics, mad lianding waters, in many patt of Britain. It is fuppofed to be the herba Britannica of the ancients. It hath large roots which Atike deep ino the loufo mad, finding out leaves which are ahcy: two feet long. The falks rife five or fix feet logh when the phats grow in water, but in dry land foldom muse than three : theic are gamifhed wilh natrow
ic..ie:,

\section*{R U N}

Ruminant. leaves among the frikes of flowers to the top. The 11 Runner. fliwers fiand upon flender footlalks, which are reflexed: they are of an herbaceous colour, appear in June, and the feeds ripen in autumn.
4. The acu:us, or tharp-pointed dock, (the oxylapathum of the thops) ; but the markets are fupplied with roots of the common docks which are indifferently gathered by thofe who collect them in the fields, where the kind commonly called lutter-dosk (from its leaves loing ufed to wrap up butter) is mucl more common than this. The roots of this are fleader, and run downright, fending out a fow fmall fibres; the falks rife abour two feet high, garnifhed at bottom with leaves four inches long, and one and an hallf broad in the middle. They are rounded at their bafe, where they are flghrly indented, but end in acute points. From the joints of the Italks cume out alternately long footfalks, which fuft.in the fpikes of flowers, which grow in fmall whorls round the falks, at about an inch diftant.

Thefe plants are but feldom cultivated; and fo eafily multiply by their numerous feeds, that they foon becone troublefome weeds where they once get an entrance.

RUMINANT, in natnral hifory, is applied to an animal which chews over again what it has eat before; which is popularly called chewing the cudt. Peyer, in a treatiie De Ruminawtibus it Kuminatione, fhows that there are fome animals which really teminate; as oxen, fhee?, deer, goats, camels, hares, and fyuirrels: ard that there are others which only appear to do fo, as moles, crickets, bees, beetles, crabs, mullets, \&cc. The latter clafs, he obferves, have their fomachs compofed of mufcular fibres, \(\mathrm{b}_{\text {; }}\) which the food is ground up and down as in thofe which really ruminate. Mr Ray cberves, that ruminants are all fourfonted, hairy, and viviparous; fome with hollow and perpetual horns, others with deciduous ones.

RUMP of the sacrifices, Mofes had ordained, that the rump and fat of the theep that were offered for
peace-offering thould be put upon the fire of the altar (Lev. iii. 9. vii. 3. viii. 25 . ix. 19.). The rump was elleemed the moft delicate part of the animal.

RUMPH1A, in botany: A genus of the monogynid order, belonging to the triandria clafs of plants; and in the natural method ranking with thofe of which the order is dubtful. The calyx is trifid; the petals three; the fruit a trilocular phom.

RUNDLET, or Runeet, a finall velfel, containine an uncertain quantity of any liquor, frora 3 to 20 gailons.

RUNGS, in a flup, the fame with the floor or ground timbers; beng the timbers which conftitute her floor; and are bolted to the keel, whofe ends are rung-he.ds.

Rovo-Heals, in a frip, are inade a little bending to difer the firecp or mold of the futtocks and naveltimbers; for here the lines begin which make the compats and bearing of the thip.

RUNIC, a term applied to the language and letters of the arcient Gohs, Danes, and other northern nati is. Sue Alphabet.

RUNNER, in the fed-languare, a rope belonging to the gract and the two bolt-tackles. It is reeved in al fringle block joined to the and of a pendant: it

\section*{52 1 R U P}
has at one end a hook to hitch into any thing; and, Running. at the other, a double block, into which is reeved the fall of the tackle, or the garnet, by which means it purchafes more than the tackle would without it,

Thrufl
Rupert.
RUNNING-thrush, among farriers. See Farriery, fect. xliv.

RUNNET', or Remset, is the concreted milk found in the ftomachs of fucking quadrupeds, which as yet have received no other nourithment than their mother's milk. In ruminating animals, which have feveral fonmachs, it is generally found in the laft, though fometimes in the next to it. If the runnet is dried in the fun, and then kept clofe, it may be preferved in perfeation for years. Not only the runnet itfelf, but alfo the fomach in which it is found, cardles milk without any previous preparation. But the common method is, to take the inner membrane of a calf's Itomach, to clean it well, to falt and hang it up in brown paper : when this is ufed the falt is walhed off, then it is macerated in a little water during the night, and in the morning the infution is ponred into the milk to curdle it. But lee more particularly the article Cheese for a proper receipt to make runnet, upon which the quality of the cheefe greatly depends-The medicinal quilities of runnet are its acrimeny, its refolvent power, and its ufefulnefs in furfeits from food of dificult digeltion.

RUPEE, a filver coin current in the Eaf Indies, worth about 2 s .6 d . Aerling.

RUPERT, ct Robert. See Robert.
Rupert, prince palatine of the Rhine, \&c. fon of Frederic prince elector palatine of the Rhine and Elifabeth daughter to king James I. of England, was bern in 1619. He g.ve proofs of his bravery at the age of 13 ; and in 1642 came over into England, and offer. ed his fervice to king Chailes I. his uncle, who gave him a command in his army. At Edgehill he charged with incredible bravery, and made a great flaughter of the parliamentarians. In 1644 he feized the town of Cirencefter ; obliged the governor of Litchfield to furrender ; and having joined his brother prince Maurice, reduced Brifol in three days, and paffed to the relief of Newark. In 1644 he marched to relieve York, where he gave the parliamentarians battle, and entirely defeated their right wing; but Cromwell charged the marquis of Newcafte with fuch an irrefirtible force, that pince Rupert was entirely defeatel. After this the prince put himielf into Brillol, which furrendered to Faiffax after a gallant refiftance. The king was fo enraged at the lofs of this city, fo contrary to his expectation, that he recalled all prince Rupert's commiflions, and fent him a pafs to go out of the kinguom. In 1648 he went to France, was highly complimented by that court, and kindly received by king Charles II. who fojourned there for the time. Alterward he was conftituted admiral of the king's novy: infelted the Dutch hips, many of which he took; and having eng.tged with De Rayter, obliged him to fly. He died in \(16 S_{2}\), and was interred in king Henry VII.'s chapel, Weftminfter, with great magnificence. Mr Grain. ger obferves, that he pollelfed in at high degree that kind of courage which is better in an attaek than a defence: and is lefs adapted to the land fervice than that of the fea, where precipitate valour is in its element. He feldom engafed but he graned the adrantage, which
he generally lof by purfuing it too far. He was better qualified to fierm a citadel, or even io \(m\) unt a breach, than patiently to fuftain a fiege; and weruld have furnifhed an excellent hand to a general of a cool. er head. This prince is celebrated for the invention of prints in mezzotinto, of which he is faid to have taken the hint from a foldier's feraping lis rofty fufil. The firt print of this kind ever publifhed was done by his higlners, and may be feen in the firf edition of Evelyn's Seulptra. The fecret is faid to have been foon after difcovered by Sherwin an engraver, who made ufe of a loaded file for laying the ground. The prince, upon feeing one of his prints, fufpected that his fervant lad lent nim his tool, which was a channeled roller; but upen receiving full fatisfaction to the contrary, he made him a prefent of it. The roller was afterwards laid afide; and an inftrument with a crenelled edge, flaped like a fhoemaker's cutting-knife, was ufed inflead of it. He alfo invented a metal called by his name, in which guns were calt ; and contrived an excellent method of boring them, for which purpofe a water-mill was erefted at Hackncy-marh, to the great derfiment of the undertaker, as the fecret died with the illuftrions inventor.

Rupres's Drops, a fort of glafs-drops with long and flender tails, which burt to pieces on the breaking off thofe tails in any part; faid to have been invented by prince Rupert, and therefore called by his name. Concerning the caufe of this furpriing phenomenon farce any thing that bears the leaft appearance of probability has been offered. Their explofion is attended in the dark with a flafh of light; and by being boiled in oil, the drops are deprived of their explofive quality.

RLIPIN, or Rapin, a town of Germany, in the marquilate of Brandenburg, and capital of a ducly of the fame name. It is divided into the Old and the New. The Old was nothing bnt an ancient calle, very well furnifhed, the late king of Prufia, before his father's death, refiding there. New Rupin is feated on a lake, and become a confiderable place of trade, with a ma. nufatiors of cloth. It is alfo noted for brewers. E. Long. 13. 23. N. Lat. 53. 0.

RUPPIA, in botany: A genus of the tetragynia order, belonging to the tetrandria clafs of plants; and in the natural method ranking under the \(15^{\text {th }}\) order, Inundatio. There is neither calyx nor corolla; but four pedicellated feeds.

RUSCUS, xnee-holly, or Butiber's Broom: A genus of the fyngenefia order, belonging to the diecia clafs of plants; and in the natural method ranking under the inth order, Sarmentacce. The male calyx is hexaphyllous; there is no corolla; the nedarium is central, ovate, and perfurated at the top. The female ea1yx, corolla, and nectarium, are the fame as in the male; thene is one ffyle, with a trilocular two.feeded berry.

The mof remarkable fecies is the aculeatus, or com. mon butcher's broom, common in the woods in many parts rf England. It has roots compofed of many thicl: filres which twine about each other; from which arife feveral fiff green falks about thrce feet high, fending out from their fides feveral fhort branches, garnithed with Riff, oval, heart- Ihaped leaves, placed alternately on every part of the ftock, ending with flarp prickly points. The flowers are produced in the nidulle, on the upper fide of the leaves; they are fnall, Voı. XVI.
and cut into fis: parts; of a purple colour, fi:ting clufe tu the midrib. They appe ir in June; and the female flowers are fuccceded by berries as large as cherries, of a fivectifl talle, which ripen in winter; when they are If a benutiful red colrur. As this plate grows wild in mof parts of England, it is rarcliz admitted into gardens; but if forme of the ronts are planted under tall trecs in large plantations, they will fpread into large clumps; and as they retain their leaves in winter, at that fealon they will have a good effect. The feeds of this plant generally lie a jear in the ground before they vegetate; and the plants fo raifed are long before they arrive at a fize big enough to make any figure, and therefore it is much better to tranflant the roots. The root of this plant is accounted aperient, and in this intention is fometimes made an ingredient in apozems and diet-driuks, for epening flight obfeructions of the vifecra and promoting the iluid feerctions. This plant is ufed by the butchers for befoms to fweep their blocks. Huckiters place the boughs round their bacon and ehecere to defend them from the mice; for they eannot make their way through the prickly leaves.

RUSH, in botany. See Juncus.
Resh-Candles. See Rubb Candras.
RUSHWORTH (John), the compiler of fome ufeful collections refpecting the affairs of fate, was born in Northumberland (England) about the year 1607, and was defended of honourable anceftors. After attending the univerfity of Oxford for fome time, he removed to Lincoln's Inn ; but the fludy of law not fuiting his genius, he foon deferted it, in order to feek a fituation where he might more eafily gratify his love for political information. He frequented the meetings of parliament, and wrote down the fpeeches both of the king and members. During the fpace of 11 years. from 1630 to 1640 , when no parliament was heid, he was an attentive obferver of the great tranfactions of Rate in the ftar-chamber, the court of honour, and exchequer chamber, when all the judaes of Eagland ar. fembled there on cafes of great emergency. Nor did he neglect to obferve with a watchful eye thofe events which happened at a diftance from the capital. He vifited the camp at Berwick, was prefent at the battle of Newborn, at the treaty of Rippon, and at the grear council of York.

In 1640 he was appointed affitant to Henry Elfynge clerk to the houfe of commons, and thus had the beft opportunities of being aequainted with their debates and proceedings. The commons co:lidered him as a perion worthy of confidence. In particular, they trufted him with carrying their meflages to the king while he remained at York. And when the parliament created Sir Thomas Fairfax their general, Rufhworth was appointed his feeretary, and difelarged the office much to the advantage of his mafter. When Fairfox refigned his commiffion, his fecretary returned to Linenln's Inn, and was foon after (in 1651.2 ) chofen one of the committee that was appointed to deliberate concerning the propriety and means of altering or new-modeliing the common law. He was elcted one of the reprefentatives for Berwick upon Tweed to the parliamient which Richard Cromwell allembled in 1658, and was re-elected by the fame town to the pariament which refored Charles II. to the crown.

After the Refleration, te delivered to the king feve. 4 A

Rurn,
Rufisvorth.

\section*{R U S}

Rushwerth, Ruffelia.
ral books of the prixy council, which he had preferved in his own polfeffion during the commotions which then agitated the country. Sir Orlando Bridgeman kecper of the great feai chofe him his feetetary in 1677, an of fice which he enjoyed as long as Sir Ortando kept the feals. In 1678 lic wras a third time chofen member for Berwick, and a fourtis time in the enfuing parliament in 1679 . He was alfo a member of the parliament which was convened at Oxford. The different oflices he had held afforded him lavourable opportunities of acquiring a fortune, or at leatt at: independence; yet, whether from negligence or prodigality, he was never pollelfed of wealth. Having tun himielf into debt, he was arrelled and commitied to the King's Bench prifon, Southwark, where he lingered for the lalt fix years of his life in the molt deplorable condition. His memory and judgment were much impaired, partly by age and partly by the ton frequent. uie of firituous liquors. He died on the 12 th of May \(16 g o\).
His "Hiterical Collections of private Paffages in State, weighty Matters in Law, remarkable Proceedings in Parliament," were publifhed in folio at different times. The firtt part, comprehending the years between 1618 and 1629 , appeared in 2659 . The copy had been entruted by Oliver Cromwell to Whitelock, with inftruations to perute and examine it. Upon perufing it, he thought it neceffary to make fome alterations and additions. The fecond part was publifhed in 1680 ; the third in 1692 ; the fourth and lat, which comes down to the year 1648 , was publifhed in 1701 ; and altogether made feven volumes. Thefe underwent a fecond edition in 1721; and the tial of the earl of Strafford was added, which made the eighth. This work has been much applanded by thofe who condemn the conduct of Charles I. and accufed of partiality by thofe who favour the caufe of that unhappy monarch. One perfon in particular, Dr John Nelion of Cambridge, in a Collection of the Affairs of Siate publifhed by the conmand of Charles 11. undertnot to prove, "that Rufhworth has concealed truth, endeavoured to vindicate the prevailing detractions of the late times, as well as their barbarous actions, and with a kind of rebound to libel the government at fecond-hand." This accufation feems to be carried too far. His principles indeed led him to fhow the king and his adherents in in unfavourable light, and to vindicate the proceedings of parliament; yet it cannot juftly be affirmed that he has mifreprefented or fillified any of the fpeeches or fack which he las admitted into lis's collection. Perhass he may have omitted fome papers merely becaufe they were unfavourable to the party which he had efpoufed; and is thercfore not to be confidered as an impartial hifcrian who relates the whole truth, but asn an honeft lawyor, who ftetes all his facts fairly and e.ndidly, but pafles over fuch as are injurious to his client's canfe.

RUSSELIA, in betany: A gemus of the trigynia order, belonging to the fentanditiclats of plants. The calyx is five leaved; the petals five above; the capfule is one-cellud and many fieded.

RUSSIA, a very large and powe: ful ling tom, parily in Europe and partly in Afia, is bounded on the north by the Northern Ocean, or Frozen Sea; on the ealt it is Situation wafhed by the Eaftern Occan, and is divided from A me- and extent. rica by Behring's (formerly Anian) Straits, which are about 73 verts (A) wide. From thence, towards the fouth, it extends along the chain of the Aloontkie iflands, which approach the north-welt conaft of America; and from Kantichatia, towards the fouth-weft, it extends, by a chain of other inlands, called liourilkie iflands, as fir as Japan; on the fouth it borders on the Black Sea, on the nations which dwell at the font of the Caucafian mountains, on a part of Perfia, the Cafpian fea, the hordes of Kirghifkaifacki, on Ziungeria, Chinefe Mungalia and Daouria (is); and on the went, on the Danifh and Swedilh Lapland, the Baltic Sea, Courland, Livonia, Lithuania, Poland, and Turkey in Europe.

Rufin occupics more than a feventh part of the known continent, and nearly the \(26 \mathrm{ch}_{\mathrm{l}}\) part of the whole globe. Its greatelt extent from weft to eaft, viz. from the \(39 \frac{1}{7}\) to \(207 \frac{1}{4}\) degree of longitude, is 168 degrees; and it the iflmds of the Eaftern Ocean be included, it will then be 185 ; fo that the continental length of Ruflia, viz. from Riga to Tehoukotlkoy Nofs, which is the eafternmoft promontory, will conתitute about 8500 verls. The greatelt extent of this empire from north to fouth, that is, from the 78 th to \(50 \frac{1}{4}\) degree of latitude, is \(27 \frac{3}{4}\) degrees. Hence the breadth of Ruflia, that is, from the Cape T'aymour, which is the northeeatern promontory, to Kiakhta, will conftitute about 3200 verfts.

The greater part of this empire lies in the temperate zone, and a part of it, viz. that which is beyond the \(66 \frac{1}{2}\) degree of latitude, lies in the frigid zone; and the whole furface contains above \(2,150,000\) fquare verts. There therefore is not at prefent, and never has been in any period, an empire, the extent of which could be compared to that of Ruffia. The length and breadth of this immenfe empire, taken in a fraight line, may be thus difonvered. Its furthermolt point or fpot on the north is the Taymour Cape, which is the molt north-eaftern promontory in the government of Tobolk, lying in the 78 th degree of latitude ; its fartheft point on the fouth is the mouth of the river Soulak, falling into the Cafpian Sea in the government of Cancafus, lying in the 43 d degree of latitude; its wefternmoft point is the inland of Oezel in the government of Riga, in the \(39 \frac{1}{4}\) degree of longitude ; and the furthermolt point of it on the ealt is the Thoukotflon Nofs, which is the moft caftern cape in the government of lrkoutik, lying in the \(207 \frac{\text { I }}{4}\) degree of longitude.

In ancient times Ruffia was inhabited by various nations; fuch as Hunns, Scythians, Sarmatians, Malf."- inlabina getes, Sclavonians, Cimbri, \&e. of whom an accumnt tants. is given under the various detached articles in this work. The origin of the Ruflians themfelves, though not prior to the ninth century, is fill covered with almoft impenctrable obfcurity ; partly owing to the ignorance and barbarity of the people, and partly to the miftaken
(A) Verfan is the ufual meafure of roads in Ruffia, is 66 yards and two feet.
( ) Dicuria is that extent of land which is traverfed by the river Amonr. It is fo called on account of the Eaouri, its ancient inhabitants, who were a rase of the Toungoofi or Manjouri.

Ruffia,
mifaken policy which yet prevails in the nation, of fupprefing all accounts of their origin, and inquiries intu their ancient flate and fituaticn; of which we have a remarkable inflan \(c\) in the fuppreflion of a work by profell r Muller, intitled Le Ortginitus Gentis et Nominis Ruf rans.

According to feveral authors of credit, the Ruffans derised t'ien origin from the Slavi or Slarenians, corruptly called the Sclavonians, who fettled firft along the banis of the Volra, and afterwards near the D.1nube, in the countries named Bu'garia and Hung.ary: but being diven trom thence by the Romins (whem the Rullius call Wolocheris, or Wolstaners), they firft removed to the siver Boryfhens, or Dneiper, then over ran P.land, and, as is reported, built the city of Fiow. Afterwards they extended their colonies farther north, to the rivers which run into the Iimen lake, and laid the loundation of the city of N ovogornd. The towns of Smolenk and Tiernikow appear alfo to have been built by them, thongh the dates of thefe events cannot be afcertained. The moft ancient inhabitants, not only of Rutid, but all over S:bcria, quite to the Lurders of China, are calied T/fudi: for profeffor Muller, on inquiring in thofe parts by whom the ancient buildings and fepulchal monuments he faw there, were erected, was eve'ywhere anfwired, that they were the works of the Tihudi, who in ancient times bad lived in that country.

In the ninth century, the Scandinavians, that is, the Danes, N..rwe ianc, and Swedes, emigrated from the north, and, crofling the Baltic, went to feek habitations in Rulia. They firt fubdued the Courlanders, Livo. nians, and Ethonians; and, extending their conquents fill farcher, they exacted tribute from the Novogorodians, fettled kings over them, and traded as far as Kiow, and even to Greece. Thefe new invaders were called Waregers; which, according to proteffor Muller, fignilies "fea-faring people ;" or, if derived from the old northern word war, it fignifies "warlike men." To thefe Waregers the name of Rufes, or Rufrans, is thought by the molt eminent authors to owe its origin: but the etymology of the word itfelf is entirely uncertain.

In the dark ages of which we are fpeaking, it is pretty certain that Ruffia was divided among a great number of petty princes, who made war upon each other with the ferocity and cruelty of wild bealts; fo that the whnle country was rcluced to the utmoft mifery; when Geftomifel, a chicf of the Novogorodians, pitying the unhappy fate of his countrymen, and feeing no other method of remedying their calamities, advifed them to offer the government of their country to the Wartgers. The propofil was readily accepted, and ihree princes of great abilities and valour were fent to govern them ; namely, Ruric, Sincus, and Truwor, generally lufpofed to have been brothers. The firit took up his refidence at Ladoga, in the principality of Grant Novogorod; the fecond at Bielo Oiero, or the White Lake; and the third kept his comt at IBorik, or, according to others, at a fmall town, then called Tsucriarg, in the principality of Plefkow. The three brothers reigned ainicably, and made confiderable additions to their dominions; all of which at length devolved to Ruric by the death of Sinsus and Truwor; but what
the conquafis of the two brothers were, we have no records to inform us of.

Ruric, to his heur, became zealous for the frict Ruric the admianthation of juftice ; and ilfued a command to all tir!k fovethe boy..rs wh: prifelfed territoric, u ded him, to exer-reign. ci.c 1 in an exad and \(u\) itorm manner. To this enl, it was n.c:liory there thould be general laws. And this natirally leals us to corj cture, that letters were not entirely unknown in lis dominions.
'Ihe Rutlin empire continued to fourith till the end of the reign of Wolodomir, who afcended the throne in the year 976. Having fettled the affairs of his empire in peace, he demanded in marriage the princefs Anne, lifter to the Greek emperor Bafilius Porphyrogenitus. His fuit was gramted, on condition that he frould embrace Chitianity. With this the Ruffion Chrifianimonarch complied; and that valt empire was thence-ty introduforward confidered as belonging to the patriarchate of \({ }^{\text {ced. }}\) Confantinople, Wolodomir receired the name of Ba filius on the day on which he was buptized; and, according to the Rufian annals, 20,000 of his fubje?s, were baptifed the fame day. Michael Syra, or Cyrus, a Greek, fent by Photius the patriarch of Conflatinople, was accepted as metropnlitan of the whole country. At the fame time, Wolodomir put away all his former wives and concubines, of whom he had upwards of Sco, and by whom he had 12 funs, who were baptized on the fame day with himfelf. 'The idols of pa. ganilm were now thrown down; churches and monaIteries were crected, towns built, and the arts began Learning to flourith. The Sclavonian letters were now firt in- and the troduced into Ruffia; and Wolodomir fent m:fionaries arts cultito convert the Bulgarians; but only three or four of vitcd. their princes came to him and were baptized. Thefeevents happened in the year 987.

Wrolodomir called the arts from Greece, cultivated them in the peaceable periods of his reign, and rewarded their profeffors with generofity, that he might difpel the clouds of ignorance which enveloped his comntry, call forth the geaius of his countrymen, and render them happy. He alfo founded public fclools, and enacted a law concerning the methods of inftruting yonth, and directing the conduct of the matters appointed to intrust them. Fie died in 1008, and, con. trary to all rules of found policy and prudence, divided 8 his empire among his 12 fons. The confequence was, A civil that they fell to making war and delloying one ann-war. ther as foon as their father was dead. Snantepolk, me of the brothers, having deftroyed and feized upon the dominions of two others, was himfelf driven out by Jariflaus, and nblized to fly to Bolellaus king of Poland. This brought on a dreadful war betwist the Poles and Ruffans; in which the former were vitorious, and the Intter loft a great part of their dominions, as h.is been related under the arricle Pozssid.

Jarillaus finding himfilf unable to oppofe the king of Poland, now turned his arms againf the reff of his brothers, all of whom he difpolfelfed of their dominions, and feized them for himfelf. He next attacked the Coffacki, over whom he gined feveral advantages. After which he ventured once more to try his fortune with Bolell:aus: but in this fecond expedition he was attended with worfe fuccels than before; being now reduced to the condition of a valial and tributary to the
viaturious monarch．Howcver，in the reign of Miecz－ flaus II．the fucceifor of Boleflatus，the Rulizons again Ihcok off the yoke，and a lafting peace was confinmed by the marriage of Micczflaus with the filter of Wolo－ domir．

Jariflatus now continued to enjoy the empire quietly， and was fo much addicted to reading，that he devoted even a part of the night to his ftudies．He invited men of letters to his court，and cauled many Greek books to be tranflated into the Ruflan language．It was he that in the year 1019，gave the people of No－ vogorod feveral laws，under the title of Gramota Sou－ debnaia，to be cbierved in the courts of jultice．Thefe are the firft laws that were reduced to witing in Ruf－ fia ；and，what renders then remarkable，is the confor－ mity they have with thofe of the other northern na－ tiens．He founded a public fchool at Novogorod， where he maintained and educated 300 children at his own expence．His court was the molt brilliant of the north，and furnifhed an afylum to unfortunate princes． He died in 1052 ；and fell into the fame error which his father had committed，by dividirg his dominions among his five fons．This produced a repetition of the bloody fcenes which had been acted by the fons of Wolodomir：the Poles took the advantage of the dif－ tracted ftate of affairs to make continual inroads and invafions；and the empire continued in the molt deplo－ rable fituation till the year 1237 ，when it was totally fubdued by the Tartars．We are not informed of any particulars of this remarkable event，further than that innumerable multitudes of thefe barbatians，headed by their khan Batto，or Battus，after ravaging great part of Poland and Silefia，broke fuddenly into Rullia，where they committed the greateft cruelties．Moft of the Ruflian princes，among whom was the great duke George Sevoloditz，were made prifoners，and racked to death；and，in fhort，none found mercy but fach as ac－ knowledged themfelves the fubjents of the Tartars．The imperious conqueror impofed upon the Ruffans every thing that is molt mortifying in flavery；infifting that they fhould have no other princes than fuch as he appro－ ved cof that they fhould pay him yearly a tribute，to be brought by the fovereigns themfelves on foot，who were to prefent it humbly to the T＇artarian ambaflador on horfeback．They were alfo so proltrate themfelves before the haughty Tartar；to nffer him milk to drink； and，if any drops of it fell down，to lick them up；a fingular marls of fervility，which continued near 260 years．
George Sevoloditz was fucceeded by his brother Mi－

\section*{The em－} pire haraff－ ed liy inter－ mal diffc．－ fions， cinel Sevoluditz Zernignufki；who oppofed the Tar－ tars，but was defeated by them，and lot his life．He left three fons，Fcodor，Alexander，and Andrew，whofe wars with each other ended in the death of them all．

John，likewife furnamed Kalita，was then made czar．Ruffia． Whis John left three fons，John，Simon，and Andrew；\(\underbrace{\text { Ruma }}\) and the eldeit of thefe，commonly called Iran Ivano－ vits，was made czar，with the approbation of the Tar－ tars，on whom he was dependent．

During thefe feve：al reigns，which fill a fpace of up－ wards of 100 years，and which all hiftorians have pafled over for want of records concerning them，the miferies of a foreign yoke were aggravated by all the calamities of inteltine diford and war；whilf the knights of Li －miss vonia，or brothers of the thort－fword，as they are fome－ times called，a kind of military order of religious，on one fide，and the Poles on the other，catching at the opportunity，attacked Ruflia，and took feveral of its towns，and even fome confiderable countries．The Tartars and Ruflans，whofe interefts were in this cafe the fame，ofen united to oppofe their common ene－ mies ；but were generally wortted．The Livonians took Plefkow；and the Poles made themfelves mafters of Black Rufid，the Ukraine，Podolia，and the city of Kiow．Cafimr the Great，one of their kings，carried his conquefts ftill farther．He afferted his pretenfions to a part of Rulfia，in right of his relation to Boleflaus duke of Halitz，who died without iffue，and forcibly poffeffed himielf of the duchies of Perzemyflia，Halitz， and Luckow，and of the diltricts of Sanock，Luback． zow，and Trebowla；all which countrics he made a province of Poland．

The newly－conquered Ruffians were ill－difpofed to brook the government of the Poles；whore laws and cultoms were more contrary to their own than thofe of the Tartars had been．They joined the latter to rid themfelves of the yoke；and allembled an army nume－ rous enough to overwhelm all Poland，but deftitute of valour and dicipline．Catimir，undaunted by this do luge of barbarians，prefented himfelf at the head of a few troops on the borders of the Vifula，and obliged his enemies to retire．

Demetrius Ivanovitz，fon of Ivan Ivanovitz，who commanded in Mofcow，made frequent efforts to rid himfelf of the galling yoke．He defeated in feveral battles Maymay lhan of the Tartars ；and，when con－ queror，relufed to pay them any tribute，and allumed the title of great duk＇e of Mufcovy．But the opprefors of the north returned in greater numbers than before ：A great ar and Demetrius，at leusth overpowered ofter a ltrure and Demetrius，at length overpowercd，after a itruggle pieces by of three years，perifled with his whole army，which，the Tar－ if we may credit hiftorians，amounted to npwards of 240，000 men．

Baflitius Demetrivitz revenged his father＇s death． He attacked his enemies，drove them out of his domi－ nions，and conquered Bulgaria．He made an alliance with the Poles，whom he could not fubdue；and even ceded to them a part of his country，on condition that they thould help him to defend the reft againft any new incurfions of the Tartirs．But this treaty was a weak barrier againt ambition．The Rulians found new ene－ mies in their allies；and the Tartars foon returned．－ Balilius Demetrivitz had a fon who was called after his name，and to whom the crown ought naturally to have delcended．But the father，fufpecting his ligiti－ macy，left it to his own brother Gregory，a man of a fevere and tyrannical difpolition，and thenefore hated by the people，who afferted the fon＇s right，and proclaim－ ed him their fovereign．The Tartars took cognizance

Ruflia.
of the dippute, and terminated it in favour of Bafilius; upon which Gregory had recourfe to arms, drove his nephew from Mofcow to the principality of Uglitz, and forcibly ufurped and kept poffefion of his throne. Upon the death of Gregory, Bafilius returned to Mofcow; but Andrew and Demetrius, fons of the late ulurper, laid fiege to that city, and obliged him to retire to the monattery of Troitz, where they took him pifoner, with his wife and fon, and put out his eyes: hence the appellation of jemnoi, "blind," by which this Bafilius is diftinguithed. The fubjects of this unfortunate prince, incenfed at the cruel treatment he had received, forced the perpetrators of it to Aly to Novogrorod, and reinflated their lawful fovereign at Mofcow, whore he died.

In the midft of this general confufinn, John Bafilovitz 1. by his invincible fririt and refined policy, became both the conqueror and deliverer ol his country; and laid the firf foundation of its future grandeur. Obferving with indignation the narrow limits of his power at his acceflion to the throne, after the death of his father Bafilius the Blind, he began immediately to revolse within himfelf the means of enlarging his dominions. Marriage, though lie had in reality no regard or inclination for women, feemed to him one of the beft expeclients he could begin with; and accordingly he demanded and obtained Maria, fitter of Michacl duke of Twir; whom he fuen after depofed, under pretence of revenging the injuries done to his fither, and added this ducly to lis own territories of Morcow. Maria, by whom he had a fon named Yoin, who died before him, did not live long; and ufor her death he married Sophia, daughter of Thomas Paleologus, who had been driven from Conftantinople, aind forced to take fhelter at Rome, where the pope portioned this princefs, in hopes of procuring thereby great adrantages to the Romifh religion ; but his expectations were trufrated, Suphia being obliged to conform to the Greek church :fter her arrival in Rulfis. What could induce Bafilovitz to feek a contert at fich a difance, is nowhere accounted for ; urlefs it be, that he lioped by this means to eflablinh a pretenfion to the empire of the ealf, to which her father was the next heir: but however that may be, the Ruffians certainly owed to this alliance their deliverance fonm the Tartar yoke. Shocked at the fervile homage exated by th. fe proud viQors, her hufland going to meet their ambal: fadors at fome diftance frem the city, and flanding to hear what they had to \(f_{4}\); whilf they were at ciinner, Sophia told him, that fhe was firprifed to find that the had married a fervant to the Tartars. Netled at this reproach, Batilovisz feigned himfelf ill when the next deputation from the Tartars arrived, and under that preterce avoided a repetition of the flipulated humiliating ceremonial. Another circumftance equally dif pleating to this princefs was, that the Tartars had, by agreement, within the walls of the palace of Mofcow, houfes in which their minifters refided; to fhow their power, and at the fame time watch the actions of the great duke. To get rid of thefe, a formal embaffy was fent to the Tartarian than, to tell lim, that Sophia having been favoured with a vifion from alonvc, ordering her to build a temple in the place where thusfe houres itcood, her mind could not be at eafe till he had fulfiled the divine command ; and therefore his leave
was defired to pull them down, ard give his people others. 'The khan confented : the houles within the Kremlin were demolithed; and no new ones beiag provided, the 'I'artas refidents were obliged to leare Morcow ; their prince not being able to revenge this breach: of promife, by reafon of a war he was then engaged in with the Poles. Dafilovitz taking advantage of this circumftance, and laving in the mean time conflderably increafed his forces, openly difclaimed all fubjection to the Tartars, attached their doninions, and made himifetf mafter of Cafan, whete he was folernnly crovned with the diadem of that lingdom, which is faid to be the fame that is nav ufed for the coronation of the Ruffian fovcreigus. The province of Perrmia, wich great part of Lapland and Aliatic Bulgaria, foon fubmitted to lim ; and Great Novogorod, :a city then fo famous that the Rufians ufed to exprefs its valt importance by the proverbial exprefion of, \(W\) loo can refift Good and the Great Novogerod? was reduced by his gencrals after a feven years fiege, and yielded him an immenie treafure ; no lefs, fay lime writers, than 300 cart loads of gold and filver, and other valuable effeets. Alexander Witenld, waiwode of Lithuania, was in poffeffion of this rich place, from which he had exacted for fome years an anmual tributc of roo,0co rubles, a prodigious fum for thofe days and for that country. When it was taken by John Bafilovitz, he, the better to fecure his conqueft, put it under the protefion of the Poles, voluntarily rendered himfelf their tributary for it, and accepted a govemor from the hand of their king Cafimir, a weak and indolent prince, from whom he well knew he had nothing to fear. The Novogorodians continued to enjoy all their privileges till abour two years alter; when John, ambitious of reigning wifhout controul, entered their city with a numeruus retinue, urder pretence of keeping to the Greck faith, he being accufed of an intention to cunbrace the Romith religion ; and with the attitance of the archbifhop Theophilus, ftripped them all of their remaining riches. He then depofed the treacherous prelate, and eltablifhed over Norogorod new magiftrates, creatures of his own ; deftroying at nnce, by this means, a whole city, which, had its liberties been protected, and its trade encouraged, might have proved to him an inexhauffible fund of weal th. All the north beheld wihh terror and alloniflment the rapid increafe of the vigor's power: foreign nations courted his alliance; and the feveral petty princes of Ruffia fubmitted to lim without refillance, achnowledging themielves his vafials.
The Poles, however, complained londly of his late breach of faith in revard to Novogorod, and threatenced revenge: upon which B:ifilovitz, elated with his fucceffes, with the riclies he had amaffed, and with the weak condition of mu, fo f his neighbcurs, fent a body of troops into Lithuania, and focn became mafter of Invaits 1:feveral of its towns. Calimir applied for aliftance to thunia and Mat thias king of Hungary: but was anfwered by this politiges the laft, that his own foldiers were quite undiféplined ; fue for that his auxiliares had latcly mutinicd for want of pay ; yeases. and that it was impolfible for him to raife a new army out of the neighbouring countries. The Polifh monarch in this diftrefs was obiiged to purchafe of John a ceffition of arms for two years, during which the Mufcovite made new acceflions to his dominions.
The dukes of Sctvia, whofe teritiories were about

\section*{\(\mathrm{R}[\mathrm{S}\) [5;8]}

RuTia.
soo miles in extent, had long thought themfelves ill
Lied by the Lithunans on account of their religion, which was thitt I the Greek church; and wanted to wi:hdraw from their luhgection in Poland, and put themblves und \(r\) the protection of Rulfia. 'The follow. ing accider: afforded them the whed-for precence. Their envogs arriving at Wilma, defired admitanace to the king's prefence: which beng retured, one of them endavouren to force lis way in ; but the porter fhut the cloor ruduly astult him, and in is doing broke one of his fingers. Tlye fervant was immedately put to death for this offence: but the Serviams, by no means furisfied with that, recurned home in a great fury, and provalied npon their countrymen to fubmit thenifelves and their country to the Mufovites. Calimir made feveral attempis to recall them, but to no purpofe.

M:r thias king of Hungary dying about this time, two of his fons, Uladiflans, then king of Bohemia, ind \(\int\) han Albcri, contended for the vacant crown. Calimir wanted to give it to the latter, whom he accordingly adifed to the utmolt of his power ; and to enable him the better fo to do, hough he was in great want of moncy as well as men, he purchafed a renewal of the truce with the Rulians, aud thereby gave John Balilovitz time to eftablilh himdelf in his new acquilitions.

Calimer died in the year 1492, and was fucceeded on the throne of Poland by his ton John Albert, who, totally difregarding the Ruffins, involved himielf unnecelfarily in a war with the brave Steplen duke of Moldavia : and, though he had at the fame time both the Tartars and 'Turks :Igainf him, his propenfity to plewiure, and his lafcivious difpofition, rendered him fo indolent, tlat he not only did not fo much as attempt to moleft Bafilowitz in any of his pofleffons, but con-
26 cluded a peace with lim on terms very advantageons
Concludes an advantagenus treaty with the l'oles. to the latter; and even entered into a treaty, by which he fipulated not to afift the Lithuanians, though they had chofen his brother Alexander for their duke, in cafe the Ruflians hould attick then, as it was fuppofed they would. Alexander thinkieg to parry the inconveniences of this agreement, and to guard againft the defigns of his enemies, demanded in marriage Ba filowitz's daughter, Helena, by his fecond wife Sophia, and obtained her. The Lithuanians then flattered themfelves with a profpect of tranquillity: but the ambitious caar, for Bafilovitz had affumed that title fince his conqueft of Cafan, aiming only at the increafe of dominion, foon found a pretence to break with his new allies, by alleging, that Polifh Rufia, as far as the river Berezina, had formerly belonged to his anceftors, and therefore fhould be his; and that Alexander, by his maraiage-contract, had engaged to build a Greek church at IVilnaw for his Ruffian confort, which he had not done, but on the contrary endeavoured to force the Polith Ruflians to embrace the religion of the church of Rome. In confequence of this plea, he fent into the territorics of his fon-in-law, by different ways nia.
three armies, which reduced feveral places, denroyed the country about Smolenko, and defeited the Lithuanim field-marlhal Oltrofky near the river Wedrafch, wherc be fell unawares into an ambuth of the Rufians. Alexander raifed is new army of Silefians, Boliemians, and Moravians; but they came too late, the Ruffians having retired with their plunder. Llated by their
duccefs againt the Lithuanians, ther invaded Livonia in the year 15-2, with 130,000 men: but Walter Von Plettenberg, of ind matter of the knights of crots, 22 Plettenberg, grind-maiter of the knights of tive crois, is defeated
with only i 2,000 men, gave them a total overthrow ; in Livonia killing 10,000 of his etuemies, with farce any lols on andobliged his own tide. Bafilovitz difpirited by this defeat, and to reare. being then engaged in a war with the Tatars, the Poles, and the city of Platkow, immediately difpitched an embalfy to Plettenbe:g, and concluded a truce with him tor 50 years. At the fame tume he begged of that general to fend to Mofcow, that he might lee him, one of the iron-drazoons, as he caled them, who had performed wonders in the late eng gement. Von Plet. tenberg readily complied; and the czar, Atruck with admiration, rewarded the cuiraliiu's accumplifhments with conliderable honours and prefents.

Alexander had been elected king of Poland upon the death of his brother John Albert, which happened in the beginning of this jear: but the Pules refuled to crown his confort Helena, becaue the adhered to the Greek religion. Provoked at this affront, and probably ftıll more ltim slated by ambition, Bafilovitz refolved again to try his fortune with them; and accordingly ordered his fon Denetrius, now the eldeft, to march againtt Smolenfko, and reduce that city. The young prince did all that could be done: but the vigorous refiftance of the befieged, and the arrival of the ling of Poland with a numerous army, obliged the Rullians to raife the fiege and return home; and the czar was glad to make a frefh truce with the Poles for lix years, upon the eafy terms of only returning the prifoners he had taken. Some writers fay, that Hying into a violent paffion with his fon the moment he faw him, and imputing the mifcarriage of this expedition to his want of courage or conduct, he gave h m a blow which laid him dead at bis feet; to which is added, that remorfe for this rafh action carried his father to his grave : but this account is not confirmed by authors whofe authority can be relied on. Certain it is, however, that neither of them long furvived this event; and that Demetrius died firft; for Suphia, who had gained an abfolute afcendant over her hufband, and wanted to give the fovereignty to her own children, perfuaded him by varicusarfful infmuations to fet alide and imprion his grandfon Demetifus, the only child of the late John, whom he had by his firt wife Maria, and reclare her then eldeft fon, Gabriel, his fuccelfor. Age and infirmities had rendered the czar fo weak, that he blindly followed the iniquitous advice; but thortly after finding his end apprcach, he fent for young Demetrius, expreffed great repentance for his barbarity towards him, and on his death-bed declared him his He dics lawful fuccefor. He died in November 1505, after a reign of 55 years; leaving behind him an immenfe territory, chielly of his own acquiring.
and is fucceeded by his fon who
The czar was no fooner dead, than his fon Gabriel takes the Ivanovitz, at the inftigation of his mother Sophia, Bafilius. put an end to the life of the young Demetrias, by confining him in prion, where he perifhed with hunger and cold; after which Gabriel was crowned by the name of Bafiius, and took the title of caar, as well as all the other titles belonging to the fovereignty. On his acceffion to the throne he expected that the Poles would be in confufion about the election of a new fovereign; but his expectations being deferted by their unanimous

\section*{R US}

Rufina.
clection of Sigifnitand I. a prince of a mild and peaceable difpofition, he fent au ariny into Lithuania, and laid fiege to Smolenko. The place made a brave refillance, till news arrived that the crown-troops of Po. land were coming to their afiftance, with the additional aid of 80,000 Crim Tartars; on which the Ruf. fians returned home with the utmo? precipitation. They were, however, quic \(k l y\) followed by the Poles, who reduced the czar to fubmit to fuch terms as they pleafed to impofe. Bafilius remained quiet till he thought himfelf capable of revenging the ii.juries he had futtained; after which, pretending to fet out upon fome other expedition, he marched with a rumerous army, and encamped in the reighbourhond of Plenkow, where the Poles, prefuming on the late treaty, received him as a friend and ally. But in the mean time the Mufoovite pristls of the Grock church preached to their hearers concerning the expediency of having a fovereign of thair own religion; and brought them to fuch a height of enthuliaim, that they murdered their magiftrates, and opened their gates to the czar, who made them all llaves, and fent them away to different parts, replacing them with Mufcovites, the better to fecure his conquelt. Soon after he took alfo the city of Smoleniko; and the Swedes, alarmed at his rapid progrefs, defincd a prolongation of the truce, at that time fubfilting between the two ftates, for 60 years longer. The duchy of Lithuania was the great object of the defigns of Bafilius; and to accomplifh his defign, he ordered Ivan Czeladin, a man of great relolution, and enterprizing even to rafhnefs, to march thither with 80,000 men. The army of the Poles did not exceed 35,000 men, but was commanded by a molt experienced general. The two armies met on the oppofite banks of the Dneiper, near Orfova, and the Poles paifed that river in fight of their enemies. Czeladin's officers advifed him to fall upon the enemy when about half of them had croffed the river; but that general, \(t 00\) confident of fuccefs, replied, thet the other half would then run away, and he was determined to gain a complete victory. The Lithuanians began the attack, but were repulfed by the Ruffians; who impradently following th:m, loft an advantageous fituation, and fuand themfelves at once expnfed to the full fire of the enemy's artillery. The Polifh cavalry then suthed in among them fword in hand, and mude dreadful havoc ; the trembling Ruflians fearce even attempting to defend themfelves. Thofe who endeavoured to Aly, fell into the Deiper and were drowned; and all the reft, including Czeladin himfelf, were made flaves.

Bafilius was at \(S m\) nlenko when he received the news of this dreadful defeat; on which he immediately Red to Mofoow, where his danger increafed daily. The Crim-Tartars ravaged his dominions, and the emperor Maximilian, with whom he had been in alliance, deferted him ; his troops were uttenly defeated in Livionia, where he was obliged to fubmit to a peace on difhonourable terms; but what thefe terms were hiforians do not inform us. In the mean time, the king of Poland firred up the Tartars to invade Ruffia, while the Ruffian monarch in his turn endeavoured to excite them to an invafion of Poland. Thefe barbarians, equally treacherous to both partics, firf invased and ravaged Podolia, a province of Poland; and
then having invaded Ruffia and defeated the armies of the czar in the year 1521, they poured in thither in fuch incredible multitudes, that they quickly made themielves matters of Molcow. An army, which had been fent to oppoie their progrefs, was defeated near the river Occa; and the czar's brother Andrew, who commanded it, was the very firf who fied. Batilius with great difficulty made his way to Norogorod; fo terriined, that he hid hinifelf by the way under a haycock, to avoid a Araggling party of the enemy. The Tartars, however, foon obeiged him to fign a writing, by which he acknowledged himfelf their valfal, and promifed to pay them a tribute of fo much a head for every one of his fubjeats. Beftes this, Machmetgerei, the commonder of the Tartirs, caufed his own itatue to be fet up at Mofonw, as a mark of his fuvereignty; compelled Bafilus to return to bis capital, to bring thither in perfon the firt payment of this tribute, and, as a token of his fubmillion, to profrate himfeif before his ftatue. Machmetgerei then left Mofow, and returned home with an immenfe booty, and upwards of 80,000 prifoners, who wcre made flaves, and fold like cattle to the Turks and other enemies of the Chrifian name. In his way back he attempted to take the city of Rezan; but was repulfed with confiderable lofs by I wan Kowen, who commanded in that place for the Ruffians. Here the Tartar general narrowly efcaped with his life, his coat being fhot through with a mu-Rket-ball; and the Mufovites pulled down his Aatue, and broke it to pieces as foon as the conquerors had left them.

The Tartars were no fooner gone, than Baflilius be. gan to taik in a ligh frain of the revenge be intended to take of them; but was never able to execute his threats. He died in 1533; and was fucceeded by his fon Ivan or John Lafilovitz, an infant of five years of age.

During the minority of the young prince, his two uncles Andrew and Genrge endeavoured \(t:\) deprive h m of the crown; but their attempts were defeated by the care and activity of his gnardians; and the Poles alfo imnediately commenced hoflilities, but could nake little progrefs. The new czar, as foon as he cutered the 19 th year of his age, flowed an inclination for refcuing his fubjects out of that defperate tate of ignoraace and barbarifm in which thicy had been hitherto inimerfed. He fpent a fplendid embaffy to the emperct Charles V. who was then at Augiburg, to defire the renewal of the treaty of friendfhip which bad been concluded with his father Maximilain; and offering to enter into a lcague with him againf the Turks, as encmies to the Chrifian religinn; for his farther informatioa \(m\) which, particularly in regard to the dotrine and ceremonics of the latin church, he requefted that his ambaffador might be allowed to ficnd from Germany to Rufias proper prielts to inftruet him and his fubjeets. With thefe he likewife defired to have fome wife and experienced Aatefmen, abie to civilize the wild people under his government : and alfo, the better to help to pol them, he requefte that he would fend mecha. nics and attilts of every kind; in rethra for all which he offered to furnifh two tons of gold ycarly, for 20 ycars together, to be employed in the war againf the Turks. The emperor readity agreed to the defire of the czar ; and the Rucian ambalfuder ascerdingly on.

\section*{RUS [ 560\(]\) RUS}

Ruff:
gaged lipwards of 300 German artilits, who were directed to repair to Luhec, in order to proceed from therce to Livoni.s. But the Lubeckers, who were very powerful it that time, and aimed at nothing lefs than the engrolling of the whole commerce of the nortib, Nopped thens, and reprefented firongly to the emperor, in the name of all the merchants in Livonia, the dancercus coifequence of thus aff rding infruations to the Ruffians, who would foon avail themfelves of it to rain their trade, and diftefs the fubjects of his imrerial majelty. The workmen and others intended for leufii were eafily prevailed upon to rerurn to their refipeaive homes; and the czar's ambafialor was antelted upon his arrival at Lubic, and imprifoned there at the fuit of the Livonians: however, he made his efcape fhortly afier; and the czar, though provoked to the laft degree at the behaviour of the Lubeckers, was obliged tor fome time to furpend his retentment.

The firf enterprife of Bafilovitz now was againt the Tatars of Cafan, who had hitherto been fuch for- proceeded to mutiny, and fell upon their comrades who were for continuing the war. Bafilovitz, alarmed at this event, rufhed in among the combatants, and with sreat dificulty parted them: but neither menaces nor intreaties, nor even a promife of giving them the whole plunder of the city if they took it, could prevail on them to continue the war. Their rage at lan prompted them to threaten the life of their fovereign; who, to provide for his own fafety, was obliged to make the beft of his way to Mofoow ; and the mutineers, no longer regarding any command, inftantly returned thither.

Batilovitz, though juftly incenfed at this infulence, took a method of punifhing it which does honour to his humanity. Having felected a guard of 2000 of his beft troops, he ordered a great fealt, to which he invited his principal nobles and officers, to each of whom, accordirg to the Ruflian cultom, he gave very rich garments. The chief of the feditions were clothed in black velvet; and after the dinner was over, he made a feech to the whole company, fetting forth the belhaviour of his troops before Catan, their contempt of his commands, and their con/piracy to take away his life: to which he added, that he was doubly forry to find the inftigators of fuch wickednefs among thole who were ftyled, and who ought to be, his faithful counfellors: and that thofe who knew themfelves to be guilty of fuch alrocious wickednefs could act do better than volnatiaily to fubmit themfelves to his mercy. Upon this, moft of them immediately threw themielves at his fect, and implored his pardon. Some of the molt criminal were executed, but the re!t were only imprifuned.

Immediately after this punifliment of the rebels, Bafilovitz marched with a frefh army to re inveft Ca. fan before the Tartars had time to recover themfelves. The befieged ftill made an obftinate defence, and the Ruffians again began to be difpiried ; upon which the czar ordered his pioneers to undermine the walls of the citadel, a practice then quite unknown to the Tartars. This work being completed, he directed his priefts to read a folemn mafs to the whole army, at the hedd of which he afterwards fpent fome time in private prayer, and then ordered fire to be fet to the powder, which afted fo effeiually, that great part of the foundation was immediately blown up, and the Mufcovites rufling into the city, flaughtered all bcfore them; while the aftonithed Tartars, crowding out at the oppofite gate, crofed the river Calanka, and fled into the forelts. Among the prifoners taken on this occation were simeon king of Cafan with lis queen ; both of whom were fent to Mofoow, where they were treated with the utmoft civility and refpect.

Encouraged by this fuccefs, Bafilovitz invaded the Afracam country of Aftracan, the capital of which he foon reduced; after which he prepared to revenge himfelf on the Livonians for their behaviour in fopping the German artifts. John Bafilovitz I. had concluded a truce with this people for 50 years; which being now expired, Iodocus, archbithop of Dorpt and canon of Munfter in Weftphalia, fenvible of the danger to which he was expofed by the vicinity of the Ruflians, requefted the czar to give him a prolongation of the truce. Bafilovitz defired him to choofe whether he Ne 35 would have a truce for five years longer, on condition tion with that all the inhabitants of his archbifhopric fhould pay the Livoto him the amnal tribute of a fifh part of a ducat for nians. each perfon, which the people of Dorpt had formerly agreed to pay to the grand-dukes of Plefkow; or, for 20 years, on this farther condition that he and the \(\mathrm{Li}-\) vonians fhould rebuild all the Rufian churches which had been demolifhed in their territories at the time of the reformation, and allow his fubjects the free exercife of their religion. Iodocus evaded an anfwer as long as he could: but finding at laft that the affair grew ferious, he levied a confiderable fum from his fubjects, and fled with it to Munfter, where he refigned his prebend and married a wife. His fucceffor, whofe name was Herman, and the deputies from Livonia, accepted of the conditions, and fwore to oblerve them; with this additional clanfe, that the priefts of the Rnmifh communion fhould be exempted from paying tribute.

But though the Livonians fwore to the obfervation Their \({ }^{3^{55}}\) of thefe terms, they were at that very time in treaty treachery. with Guftavus Vafa, king of Sweden, to join them in attacking Ruffia. The king of Sweden very readily complied with their defires; upon which Bafilowitz invaded Finland. Guftavus advanced againft him with a powerful army; but as neither the Poles nor Livonians gave him any alfiftance, he was obliged to conclude a treaty with the czar, and foon after to evacuate the country. Finland was at this time governed State of by Willi..m of Furttenberg grand-matter of the Li - Fioland. vonian knights, and the archbilhop of Riga, with fome oulaer prelates; between whom a quarril happened about this time, which foon facilitated the defigns of Bafilovitz on the country. The archbikop, ifter at- to refift, did as they were crdered; but it availed them vaged by the R.uffians.
tempting to fet himielf above the grand-mater even in civil affairs, and to periecute tho e who adhered to the confefinn of Augforg, chofe for his coadjutor in the archbilhopric of \(\mathrm{Ri}_{\mathrm{s}}\) a Chrifopher duke of Mecklenburg. lircm the abilities and haughty temper of this lord, the Livonian knights apprehended that they had reafon to lear the fame ate which had befallen the T'cutomic urder in Prullu; and the ftep itfelf was, befides, unprecedented, and contrary to the eitabithed laws of the commery. Thefe difontents were heightened by letters faid to be intercepted from the archbithop to his brother Albert duke of Prunia, inviting this lalt totally to fupprefs the order of Livonian knights, and to fecularize their p ffeftions, efpeciall; in Fimland; fo that an npen war broke out among the contending partiec, and the atchbilhop was feized and made pritonerHe wac, however, foon releated through the mediation of the empero: ot Germany and other potentates, backed by the powerful preparations of the Pruflians to avenge his caufe; Lut in the mean tume, the itrength of their conntry bsing totally exhaulted, the Livonians were obliged, intead of preparing for war, to fue to the Czar fer peace. Balilovitz replied, that he did not believe their intentions to be fincere while they kept 6coo Germans in pay; and therelore, if they meant to treat of peace, they mutt begin with difmiffing thefe troops. The livonians, having no longer any power nothing. In 1558 an arniy of 100,000 Rufians entered tine ditrict of Dorpt, and laid every thing wafte before them with the molt thocking ernelty. After this they entered the tertitories of Riga, whete they belaved with equal inhumanity ; and having at laft fatinted rlemfelves with bluod and treafire, they re. tired with an immenfe booty and a great number of priloners.

The Livonians, now thoroughly convinced of their own lolly in expoling themielves to the refentment of the exafperated Rulians, fent ambafladors to fue for peace in good earneft. Thele offered the Czar a preSent of 30,000 ducats, and prevailed upon him to grant their nation a tiuce for four months, during which they returned home to get the money. But in this interval the Livonian governor of the city of Nerva, out of an iale frolic, fired fome cannon againft Ivanogorod or Rullian Nerva, lituated on the oppolite fide of the river, and killed leveral of the Czar's fobjects who were allembled in an open place quite unarmed. The Roífians, out of regard to the tunce, did not even attempt to make reprifals; but immediately aequainted Bafilovitz with what had happened: which fo incenfed the Czar, that when the Livonian ambalfadors arrived, he told them, he looked upon their nation to be a fet of perjured wretches, who had renonaced all honelty; that they might go back with their money and propotals, and let their countrymen know that his vengeance
40
L.ivema ra-
vaged a fecund tims. sould foon overtake them.
The ambaffacors were firtce arrived in Livonia, when an army of 300,000 Ruflians cntered the ditrict of Ner- va, under the command of Peter Sifiegaledrii, who had been a famons pirate in the Euxine fea. He took the city of Nerva in nine days, and very fpedily made him. felt maller of Durp:, whete he found inmenfe treafures. Several other garrions, terrified by the approatch of fuch numbers, quitted their pofts; fo that the Ruthans becanse mallers of a great part of Livonia almuft without

Vol. XVI.
oppofition. At laf, Gothard Kettier, rrard-matier of the knights of Livoni:, intreated Chrillian III. king of Denmark to take Riga, Revel, and the eountries of Garndand, Wirrland, and Efthonia, under lis fro:ection; but the advanced age of that m march, the diAarce of the places, and the want of fufficient power to withitand fo fotent an adverfary, made him decline the offer. However, he aflitsel thom with fome morey and powder, of which they th od greatly in need. Having. then applied, without fuccers, fisf to the emperor of Germany, and then to the court of Sweden, Kettle: put himfelf under the protection of the Poles, who had hitherto been fuch formidable enemies to the Ruflians. In the mean time the latter pusfued their conquefts; they took the city of Marienburg, laid watte the diffict of Riga, deftroyed Gambland, and penetrated to the very gates of Revel. Felin, in which was the beft artillery of the whole country, became theirs by the treachery of its garrion ; and here William of Furltenberg the old grand-matter was taken, and ended his days in at prion at Mofoow. The diftracted fituation of the Livonian affairs now induced the bilhop of Oefel to fell his bithopric to Ferdinand king of Denmark, who exchanged it wi:h his brother Magnus for a part of Hol. Ptein. The diftricts of Revel and Elthonia put themfelves under the protection of Sweden; and then the grand-malter, finding himfelf deferted on all fides, fupprolled the order of which he was the chief, and accepted of the duchy of Courland, which he heid as a fief of the crown of Poland.

The Crar faw witis pleafure the divifion of I, wonia between the Swecles and Poles, which, he rightly judged, womld produce quarrels between the two nations, and thus give him the fairer npportunity of feizing the whole to himfelf. Accordingly, in 1554 , ihe Swedes offered him their aflitance againft the Poles; but he, judging himfelf to be fufficiently ftrong without them, attacked the Poles with his own forces, and was twice defeated, which checked his father operations in Livonia. In 1569 he entered into a treaty of commerce with England, captain Richard Chancollor having a fhort time before difcovered a paftige to Archangel in Rullia through the White Sea, by which that empire was likely to be fupplied with foreign goods, without the aflifance either of Poland or Livonia. To the difcoverers of this new paffage Ballovitz granted ma. ny exclufive pivilezes; and after the death of queen Mary renewed the alliance with queen Elizabeth, and which has been continued without interruption ever lince.

In the mean time, however, a prodigious army of Turks and T'artars entered Mufeovy, with a defign to fubdue the whole country. But Zercbrins, the Czar's general, h:ving attacked them in a defile, put them to flght with coniderable flaughter. Then they retired towards the mouth of the Volga, where they expected n confiderable reiaforcentent; but being clofely purfued by the Ruffins and Tartars in alliance with them, they were again defeated and forced to fly toward; Azov on the Black Sea. But when they came there, they found the city alnoot entirely ruined by the blowing up of a nowder niagazine. The Rullians then attacked their Thips there, took fome, and lunk the reft; hy which meins almof the whole army perifhed with hunger or the fword of the enemy.

From this time the cmpire of Rulla became fo fur-

Rufia, midable, that none of the neighbouring nations could hope to make a total conqueit of it. The Poles and Swedes indeed continued to be very formidable enemies ; and, by the inftigation of the former, the Crim Tartars, in 1571, :lgain invaded the country with an army of 70,0co men. The Rufians, who might have prevented their palling the Vulga, retired before them till they werc totally defeated. The Czar no fooner heard this werc totally defeated. The Czar no fooner heard this well-fortificd cloyfter; upon which the Tartars entered the city, plundered it, and fet fire to feveral churches. A violent form which happened at the fame time foon fpread the flames all over the city; which was entirely reduced to athes in fix hours, though its circumference was upwards of to miles. The fire likewife communicated itfelf to a powder-magazine at fome diftance from the city; by which accident upwards of 50 rods of the city wall, with all the buildings upon it, were deftoy. ed; and, according to the beit hiftorians, upwards of 120,000 citizens were burnt or buried in the ruins, befides women, children, and foreigners. The caftle, however, which was ftrongly fortified, could not be taken; and the Tartars hearing that a formidable army was coming againft them under the command of Magnus duke of Holflein, whom Bafilovitz had made king of Livonia, thought proper to retire. The war, neverthelefs, continued with the Poles and Swedes; and the Czar leing defeated by the latter after fome triffing The Livonians, Poles, and Swedes, having united in a league together againft the Ruflians, gained great advantages over them; atd, in 1579, Stephen Battori, who was then raifed to the throne of Poland, levied an army exprefly with a defign of invading Ruffia, and of regaining al that Poland had formerly claimed, which indeed was littlc lefs than the whoie empire. As the Poles undertood the art of war much better than the Ruflians, Bafilovitz found his undiéciplined multitudes unable to cope with the regular forces of his enemies: and their conquefts were fo rapid, that he was foon cbliged to fue for peace: which, however, was not granted ; and it is polible that the number of enemies which now attacked Ruflia might lave overcome the empire entiecly, had not the allies grown jealous of each orlier; the confequence of which was, that in 1582 a peace was concluded with the Poles, in which the Swedes were not comprehended. However, the Swedes finding themfclves unable offect any thing of moment after the defertion of thin ir lies, we efain to conclude a truce; ihortly af er which the C\%ar, having been wortled in an engagement with the Ta tars died in the year \(15^{8}+\).

This great prince was fucceeded by his fon Theodone Ivanoviz; a man of fach weak underllanding, that he was totally unfit fur government. Under him, therefure, the Ruflian affairs fell into confufion ; and Boris Gudenov, a nobleman whole fifter Theodore had marricd, found means to affume all the authority. At lat, unable to bear even the name of a fuperior, he relelved to ufurp the thronc. For this purpofe he cauled the Ca:ry's brother Demetrius, at that time only nine years of age, to be affafinated; :and afterwards, koswing that no truft could be put in an affanim, he
caufed him alio to be murdered lef he flould divulge the fecret. In 1597 the Czar himfelf was taken ill and died, not without great fufpicion of his being poifoned by Gudenov ; of which indeed the Czarina was fo well convinced, that the would never afterwards fpeak to her brother.

With Theodore ended the line of Ruric, who had governed the empire of Rufia for upwards of 700 years. Boris, who in reality was poffetfed of all the power, and would indeed have fuffered nobody elfe to reign, artfully pretended to be unwilling to accept the crown, till compelled to it by the intreaties of the people; and even then he put the acceptance of it on the iffue of an expedition which ine was about to undertake againft the Tartars. The truth of the matter, however, was, that no Tartar ammy was in the field, nor had Boris any intention of invading that country; but by this pretence he affembled an army of 500,000 men, which he thought the moft effectual method of fecuring himfelf in his new dignity. In 1600 he concluded a peace with the Poles, but refolved to continue the war againlt the Swedes; however, being difappointcd in fome of his attempis againlt that nation, he entered into an alliance with the Swedifh monarch, and even propofed a match between the king's brother and his daughter. But while thefe things were in agitation, Dreadful the city of Mofoow was defolated by one of the moft fanine az dreadful famines recorded in hiftory. Thoufands of Mufowpeople lay dead in the ftreets and highways, with their mouths full of hay, Araw, or even the molt filthy things which they had been attempting to eat. In many houfes the fatteft perfon was killed in order to ferve for food to the reft. Parents were faid to have eaten their children, and children their parents, or to have fold them to buy bread. One author (Petrius) fays, that he himfelf faw a woman bite feveral pieces out of a child's arm as the was carrying it along ; and captain Margaret relates, that four women having ordered a peafant to come to one of their houfe, under pretence of paying him for fome wood, killed and eat up both him and his horfe. This dreadfu? calamity latled three years, notwithtanding all the means which Boris could ufe to alleviate it; and in this time upwards of 500,000 people perified in the city.

In 1604 a young man appeared, who pretended to be Demetrius, whom Boris lad caufed to be murdered, as we have already feen. Being fupported by the Poles, he proved very troublefome to Bon is all lisis lifetime; and after his death deprived Thendore Boriffovitz, the new Czar, of the empire ; after which he afcended the throne himielf, and married a Polifh princefs. However, he held the empire but a fhort time, being killed in an inlirs ection of his fu'jocts; ard the unhappy Czarina was fent prifoner to Jaroflaw.

After the death of Demetrius, Zurki, who had confpired agdint him, was chofen C Lar; but rebellions continually taking place, and the empre being perpetually haralled by the Poles and Swedes, in 16 to Zufki was depofed, and Ulidifaus fon of Sig fmund king of Poland was eleAed. However, the Peles reprefenting to Sigifmund, that it wolld be more ehorious for him to be the conqueror of Rulfin, than only the father of its fovereign, he carried on the war with fuch fury, that the Ruflans in defpair fell upon the Poles, who refided in great numbers at Mufcors. The Pules being well
\(\underbrace{\text { Rufin．}}\)

The Pules
finally ex－
pelled．
however，thicy were on the point of being oppreffed by rumbers，when they fell upon the moft crucl method of enfuring their luccefs that could be devifed．This was by fetting fire to the city in feveral places；and white the diltrelied Rulians ran to fave their tamilies， th：Poles fell upon them fiword in hand．In this con－ fufion upwards of 100,000 pcople pesifhed；but the event was，that the Poles were firally driven out，and 1．It all tooting in Rufca．

The expulfion of ti：e Poles was fucceeded by the cecetion of Theodo：ovitz \(R\) manov，a young noble－ man of 17 years of age，whofe pollerity，thll the accef． fion of the prefent Emprelis，centinued to enjoy the fo－ vereignty．He died in \(1 \sigma_{\ddagger} \sigma\) ，and was fucceeded by his fon Alexis；whofe reign was a continued fcene of tu－ mult and confufion，being harafled on all fides by ex－ ternal enernies，and having his empire perpetually dif－ turbed by internal commotions．

The lources of thefe commotions werc found in the multiplicity and inconfittency of the laws at that period，and in the jarring claims of the nobles on the borilers．An emaray uknfe，or perfonal order，which is an edict of the fivereign，figned with his own hand， is the only law of Ruflia．Thefe edicts are as varions as the opinions，prejudices，paffions，or whims of men ； and in the days of Alexis，they produced endlefs con－ tentions．To remedy this evil，he made a felection， from all the ediets of his predeceffors，of fuch as had been familiatly current for a bundred years；prefuming that thofe either were founded in natural jutice，or du－ ring fo long a currency had formed the minds of the people to confider them as juft．This digeft，which he declared to be the common law of Rullia，and which is prelaced by a fort of inffitute，is the flatdard law－book at this day known by the title of the Ulogenie or Seleaion； and all edicts prior to it were declared to be obfolete． He fonn made his novelle，however more bulky than the Ulogenié ；and the additions by his fucceffors are beyond enumeration．This was undoubtedly a great and ufe－ ful work；but Alexis performed another ftill greater．

Though there are many courts of judicature in this widely extended enpire，the emperor has always been lord paramount，and could take a caufe from any court immediately bcfore himfelf．But as feveral of the old nobles had the remains of principalities in their families， and held their own courts，the fovcreingn or his minif－ ters，at a diftance up the couutry，frequently found it diflicult to bring a culprit out of one of thefe heredita－ ry feudal jurifdiations，and try him by the laws of the empirc．＇I＇his was a very difagreeable limitation of im－ pcrial power；and the more fo，that fome families claim－ ed even a right to repledge．A lucky opportunity of－ fored of fettling this difpute；and Alexis embraced it with great ability．
Some families on the old frontiers were taxed with their defeoce，for which they were obliged to keep re－ giments on foot；and as they were but fantily indem－ nified by the ftate，it fometimes required the exertion of authority to make them keep up their levies．When the frontiers，by the comqueft of Cafin，were far extend－ ed，thofe gentleman found the regiments no longer bur－ denfome，becaufe by the help of falif mufters，the former feanty allowance much more than scimburfed them for the expence of twe eftablifhment．The confe－
quence was，that difrutes arofe from them si，eut the right of guarding certain ditricts，and have－fuits vere neceffary to fett！e their refpettive claim．Thefe wer： tedrous and intricate．One clatmant thowed the order of the court，illued a century or two bact：，to his an－ celtor for the marching of his men，as a plouf that the right was then in his family．His opponent proved， that his anceftors had been the real lords if the marches； but that，on account of their negligence，the court had illued an emmanoy ulafe to the other，only at thes par－ ticular period．＇The emperor ordered all the fansily ar． chives to be brought to Mofoow，and all documents oil both fides to be collected．A time was fet fur the examination；a fine wooden court－hon！c was built； every paper was lodged under a good guard；the day was appointed when the court thould be opened and the claims heard；but that morning the houle，with all its contents，was in two hours confumed by fire． The emperor then faid，＂Gentlemen，henceforward your ranks，yont privileges，and your courts，are the nation＇s，and the nation will guard itfelf．Your ar－ chives are unfortunately lof，but thofe of the nation remain．I am the keeper，and it is my duty to ad－ minifer juitice for all and to all．Your ranks are not private，but national ；attached to the fervices you are attually performing．Henceforward Colonel Buturlin （a private gentleman）：anks before Captain Viazenı\｛y （an old prince）．＂

This conflitution，which eflablifhed the different Alexis＇s ranks of Ruflia as they remain to this day，is by conftitu－ Voltaire afcribed to Peter：but it wats the work of tion with Alexis；who，when the fituation of himfelf and his refpect to country is confidered，mutt be allowed to have been ranks frins a great and a good man．He died in 1676 ，and was Rufiz． fucceeded by his fon Theodore Alexiovitz；who after an excellent reign，during the whole of which he ex－ erted himfelf to the utmof for the good of his fubjects， died in 1682 ，having appointed his brother Peter I．Acceffon commonly called Peter the Griat，his fuccelior．See of Peter Peter I．

} ．

Theodore had another brother nansed Fobn；but as he was fubject to the falling－ficknefs，the Czar had pre－ ferred Peter，though very young，to the fucceffion．But through the intrigues，of the princefs Sophia，fitter to Theodore，a ftrong party was formed in favour of John； and foon after both John and Peter were proclamed fovereigns of Ruffia under the adminiftration of Sophia herfelf，who was declared regent．However，this admi－ nillation did not continue long；for the princefs regent having confpirel againt Peter，and hasing the misfor－ tune to be difoovered，was confined for life in a convent． From this time allo John continued to be only a nomi－ nal fovereign till his death，which happened in 1696 ， Peter continuing to engrofs all the power．

It is to this emperor that Ruffia is univerfally al－ lowed to owe the whole of her prefent greatneis．The private charater of Peter himself feems to have been but very indifferent．Though he lad been married in bis eighteenth year to a young and beautiful princef＇s， he was not fufficiently reffrained by the folemn ties of wedlock；and he was belides fo much addicted to feaft－ ing and drunkennefs，the prevailing vice of his country， that nobody could have imagined him capable of effect－ ing the reformation upon his fubjects which be aqually accomplifhed．In fpite of all difadvastages，however， Selectinn of tice laws of Rufira made by Alexis．

Statc of courts of judicature， and power of old f3－ milics．

Addecis o Aleris in gettitg rid cf this daft evil．

Rubin. le apphed himelf to the military art and to civil go vermont. He lid aldo a very fingular natural defect, which, had it not been conquered, would have rendered him for ever incapable of accomplithing what he af towards did. This was a vehement dread of water which is thus accounted for. When he was about five years of age, his mother went with him in a coach, in the faring feafon; and paling over a dam where there was a confiderable waterfall, while he lay afleep in her lap, he was fo fuddenly waked and frightened by the subbing of the water, that it brought a fever upon him; and after his recovery he retained foch a dread of that (lament, that he could not bear to fee any flanding wa ier, much left to hear a running ftream. This avertion, however, lie conquered by jumping into water; and afterwards became very fond of that element.

Being aflame of the ignorance in which he had been brought up, he learned almoft of himfelf, and without a matter, enough of the High and Low Dutch languages to Speak and write intelligibly in both. He looked upon the Germans and Hollanders as the molt civilized nations; thecaufe the former had already erect. ad tome of thole arts and manufactures in Mofoow, which he was defirous of lipreading throughout hisemfire; and the later excelled in the art of navigation, which he confidered as more necellaty than any other. Baring the adminittration of the prices Sophia, he lid formed a defign of eftablifhing a maritime power in Rufia; which he accomplifhed by the means which we
have recorded in his life.

Having reformed his army, and introduced new dir. cipline among them, he led his troops again the Turks; from whom, in 1696, he took the fortress of Azov, and had the fatisfaction to fee his fleet defeat that of the enemy. On his return to Mofcow were flruck the frt medals which had ever appeared in Ruffia. The legend was, "Peter the first, the aug ul emperor of Ruffing." On the reverie was Azov, with there words, I'ilorious by fire and sumter. Notwithfanding this fierefs, however, Peter wis very much chagrined at hathem to Venice, and the reft of Leghorn, in order to lean the method of confuting their galleys. Forty mamore were font out by his direction for Holland, with an intent in inflict thanfelves in the art of building and working large flips: others were app inted for Germany, io rene in the landforces, and to learn the military disco, line of that nation. At lat he reSolved to travel through different comeries in perfon, that he might have the opportunity of profiting by his own cblervation and experience. Of this journey we lave given a hort account elsewhere; and hall here coly add, that in executing lis great defign, he lived and waked like a common earpemer. He laboured bard at the forges, rope-yaros, and at the feveral mills for the fawning of timber, manufacturing of paper, wiredrawing, \&c. In acquiring the art of a carpenter, he lieg.in with purchasing a Lott, to which he made a rat himiflf, and by digress le executed every part of the contraction of a flip.
wing this flips all built by foreigners; having befides as great an inclination to have an harbour on the Baltic as on the Euxiac Sea. These coufferations determined him to fend forme of the young mobility of his empire into foreign countries, where they might improve. In I697 he font 60 young Rulims inti. Italy; mot of
: fill built by foreigners; laving be

 Mecklenburgh was alice. Her reign was extremely profperous; and though the accepted of the crown un-

Befides this, Peter frequently went from Sweden to Amfterdam, where he attended the lectures of the celebrated Ruyfch on anatomy. He alfo attended the lestares of burgomalter Witfen on natural philofophy. From this place he went for a few days to Utrecht, in order to pay a vifit to King. William 111. of England; and on his return rent to Archangel a 60 gun this, in the building of which he had affifted with his own hands. In 1698 he went over to England, where he employed himfelf in the fame manner as he had done in Holland. Here he perfected limfelf in the art of Chip building; and having engaged a great number of

der limitations that fome thought derogatory to her
\(\underbrace{\text { Rufla. }}\) dignity, yet fhe broke them all, afferted the prerogative of her anceftors, and punithed the alfpiring Dolgorucki family, who had imporied upon her limilations, with a view, as it is faid, that they themielves might \(g\) vvern. She raife her favourate Biron to the duchy of Courland; and was ubliged to give way to many fevere ex. ecutions on his account. Upon her death in 1740, John, the fon of her niece the princefs of Mecklenburgh, by Antony Ulric of Brunfwic Woifenbuttel, was, by her will, intitled to the fucceffion: but being no more than two years old, Biron was appointed to be adminiftrator of the empize during his nonage. This dentination was difagreeable to the prince fo of Mecklenburgh and her huband, and unpopular among the Ruffians. Count Munich was empl.,yed by the princets of Mecklenburgh to arrefl Biron; who was tied, and
66 Jlizaheth daughter of Beterl (u)tans the srown. condernned to die, but was fint in cxile to Siberia.
The adminiftration of the princets Annc of Mick!er. burgh and her hufband was, upon \(m\) aiy aicomet, hu: particularly that of her German conneation, difigreeable not oaly to the Rufians, but to other powes of Europe; and notwithldanding a profecrums war they carried in with the Swedes, the princels Elizabeth, daughter by Catharine to Peter the Great, firmed luch a party, that in one night's time the was declared and proclaimed emprefs of the Rullias; and the princefs of Meeklenburgh, her hußand, and ion, were made prifoncrs.

Llizabeth's reign may be faid to have been more glodous than that of any of her predeceflors, her father excepted. She abolifhed capital punifhments, and intreduced into all civil and military proceedings a mode- ration till her time unkizown in Rufla : but at the fame time the punithed the coumts Munich and Oferinan, who lad the chiet management of affairs during the late adminiftration, with exile. She made peace with sweden; and fetled the fucceffion to that crown, as well as to her own dominions, upon the molt equitable foundation. Having glurioufly finifhed a war, which hiad be en itirred up againt her with Sweden, the seplaced the naturnl order of fueceffion in her own fa1.fily, by declaring the duke of Holfein-Gutterp, who was defienden irom her claer fiffer, to be her heir. She siave him the title of grand duke of Rutit; and foon :.frer her acceltion tu the throse; fle called him wher - out; wherelie ren muced the fuccelion to the crown of sweden, whith undoubceliy belenged to him, crnbraced the Greck rel gion, and married a princefs of snhalt Zoubet, by whim te h.ud a foa, who is now heir ts the Rullian empire.

Jew priaces lidve had a more minterrupted career of glory thin Elizwoth. She was completely vicinrinus - Ce the Sweces. Her alliance was couted by Great Bhitinate the expence of a larye fubfidy; but many 1. aisicai, atd fome ;inate reafons, it is faid, determined l.er to t.he part whth tice lioufe of Auftria agdint the ling therafia in 1755 . Fler arms al me ate a turn to the fuccel's of the war, whoh whe in diefavour of I'ruiia, now witht atding that monarch's amazing abili\(t\) tiss both in the fivla and cabinet. Her conqucits were fult as partended the encire dettroction of the Pruftan fower, wich was ferinp, faved (aly by her critical ceath un Jomary 5. 1762.

Dizabelh was fucuecued by Peter III. grand priace

\section*{RUS}
of Ruflid and duke of Holitein; a prince whofe conduct has been varioufly reprefented. He mounted the throne poffefled of an enthufiaftic admiration of his 68 Prulfian majeft's virtues; to whom he gave peace, and of her fucwhofe principles and practices he feems to have adopted ceflor Peter as the directuries of his future reign. He might have furmounted the effeas even of thofe pcculiarities, unpopular as they then were in Rufia; but it is fait, that he aimed at reformations in his doninions, which even Peter the Great durl not attenpt; and that he even ventured in cut off the beards of lise clergy. He was certainly a weak man, who had no opinions of his own, but childithly adopted the fentiments of any perfon who took the trouble to teach him. His chiel amufement was buffoonery; and he would fil for hours looking with pleafure at a merry-andrew fing. ing drunkeat \(\mathrm{m}^{\text {a }}\) t vulgar fongs. He was a franger to the \(=d\) ar, \(i_{1}\) inl. Abitants, and their manners; and furionel at intli to be perfuaded by thofe about him, That the Ruillians were forls and beafts unworthy of Lis attent:nn, excert to make them, by means of the Ficulian difcipline, good fighting machines. Thefe in atments regulated his aiole conduct, and prepared the way for that revolution which improprieties of a different kind tended to haften.

Becoming attached to one of the Vorontzoff ladies, fifer to the princefs Dathkoff, he difguted his wife, who was then a lovely woman in the prime of life, uf great natural tatents and great acquired accomplifh. ments; whill the lads whom he preferred to her was but one degree above an idiot. The princefs Dafhkoff, who was married to a man whofe genius was not fuperior to that of the emperor, being dame d'honneur and lady of the bed-chamber, had of courfe much of the emprefs's company. Similarity of fituations knit thefe two illultrious perionages in the clofeft friendhig. The princefs being a zealous admirer of the French aconomifer, could make her converfation both amufing and inflructive. She retailed all her fatiftical knowledge; and finding the emprefs a villing hearer, the fpoke of her in every company as a prodigy of know. ledge, judgment, and phidathropy. Whilt the emperor, by his bufmaery and attachment to foreign man. ners, was daily incurring more and more the odium of 1:is fubjeats, the populatity of has wife was rapidly increafing; and fome perfons about the court exprefled their pegret, that in much knuwledge of government, fuch lue of inmorrity, and fuch ardent withes for the prolperity of Ruffia, flould ouly furnith coaverfations with Catharina Kimanoma *. The cmprefs and her favourite did not let thefe exprellions pafs unobierved: they continued their fludies in concert; and whilt the former was employed on her farnous code of laws for a great empire, the later always reported progrefs, till the midlling circles of Mofon and St l'eterfurgh began to peak fumiliarly of the Lleffings whith they might enjoy if thefe fpeculations could be realized.

Meanwhile Peter III. was giving f.efh caue of dif. content. He had recalled from Siberia couat Munich, Feter's unwho was indeed a fenfible, brase, ar.d worthy man; fopuar but as lie was fmarting under the effels of Ruftan del- coudue at poil \(m\), and had grounds of refentment againit in of of the gra:t familits, he did not much difcouraze the empetor's unpopu'ar conduel, but caly thied to irodea: e it and give it a fifcm. Pe:er, however, vas impatent.

\(\qquad\)

Rutha. He publicly ridiculed the exercife and evolutions of the Rufian troops and haftily adopting the lruflian dif. cipline, withont digetting and fitting it for the conftution of his own furces, he complutely ruinad himfelf by difguting the army.

What he 1 It was toon and cafily gained by the emiflimics of Cathanine. Four regiments of guards, amounting to 8coo men, were inttantly brousht over by the tlirec brothers Onloff, who had contrived to ingratiate themfelves with t!cir officars. 'The people at harge were in a flate of indifference, out of which they were rouled by the following means. A little manulcipt was handed about, containing principles ot legillation for Ruma, founded on matural lights, and on the claims of the different clafles of people which had infentibly been formed, and become fo fambliar as to appear natural. In that performance was propoied a convention of deputies from all the clafies, and from every part of the empire to converfe, but without authority, on the fubjects of which it treated, and to ioform the fenate of the refult of their deliberations. It pafied for the work of her majelfy, and was much admired.

While Catharine was thus high in the public efteem and affection, the emperor took the alarm at her popuin the put- larity, and in a few days came to the refolution of con-licellima- : fining her for life, and then of marrying his favourite. tion. The iervants of that favourite betrayed her to her lifter, who imparted the intelligence to the emprefs. Cathasine faw her danger, and inftantly formed her refolution. She mult either tamely fubmit to perpetual imprifonment, and perhaps a ciuel and ignominious death, or contrive to hurl her huband from his throne. No other alter native was left lier ; and the confequence was what undoubtedly was expected. The proper Iteps were taken ; folly fell before abilities and addrefs, and in three days the revolution was accomplifhed.
quickly ac- When the emperor faw that all was loft, he attemptcumplified, ed to enter Cronftadt from Oranienbaum, a town on the gulph of Finland, 39 verits, or near 26 miles from Peterfurg. The fentinels at the harbour prefented their mulkets at the barge ; and though they were not loaded, and the men had no cartridges, he drew back. The Englith failors called from thip to fhip for fome perfon to head them, declaring that they would take him in and defend him; but he precipitately withdrew. Munich received him again at Oranienbaum, and exhorted him to mount his horfe and head his guards, fwearing to live and die with him. He faid, "No: I fee it cannot be done without fhedding much of the blood of my brave Holftenians. I am not worthy of the facrifice." The revolution was fettled, and Catharine declared awtocratrix. The crown was faid to be
prefled upon her, and her fon was proclaimed ber heir, and as fuch great duke of all the Rullias.

She behayed wilh macmanimity and moderation. re 74 tamed Munich ; even pardoned countefs Vorontzoff the nanimous emperon's fovoutite; and afterwards, on her marriage and modewith Mr Paulotky, made a handfome fettlement on rate behathem. She allowed the expectations of golden days and a philofophical grovernment to become the fubjeet of fafhionable converfation; and the princefs Dafhkoff (c) was completely happy. The convention of deputies was even refolved on; and as they were not to be elected by the people, except here and there for the fhow, Prince Galizin and Count Panin, whom the had completely gained over, and who had the greateft abilitics of any Ruflians about court, were at immenfe pains in appointing a proper fet. In the mean time, a great number of ihowy patriotic projects were begun. A she intiograve Englifh clergyman was invited over to fuperin-tu es tend the inflitution of fchools for civil and moral edu. fchools. cation ; and the emprefs was mof liberal in her appointments. This inftitution failed, however, to produce the effects expected from it. The clergyman appointch, though a moft excellent charakter and real philanthropilt, had views too contracted for the fphere in which he was placed; and Mr Betfony, the Ruffian Mecanas, to whom the enpref's referred him for inftructions, preferred declamation, and ftage-playing, and ballets, to all other accomplifhments.

In the mean time, elegance of all kinds was introduced before the people were taught the principles of
morals. The nobles were fert a travelling ; and as the Rullians more eafily acquire foreign larguages than the people of moft other nations, have great vivacity without flippancy, and in gencral underftand play, thefe travellers were everywhere well reccived, efpecially at Paris, where reafons of ftate contributed not a little to procture to them that attention with which they were treated. They were ravifhed with the manners of foreign courts, and imported fafhions and fineries without bounds. The fovereign turned all this to her own account, by encouraging a diflipation which rendered court favouts neceflary, and made the people about her forget their Utopian dreams.

The convention of deputics at laft afembled in the capital. The emprefs's book of inftructions (D) came forth; and by fome great things were doubtlefs expected. The moft confequential of the deputies were privately inllructed to be very caltious, and informed that carriages and guards were ready for Siberi.. There was a grand proceffion at their prefentation. Each had the honour of killing her majelcy's hand and receiving a gold medal. They met in form to recognife one another,

78

\section*{Patriotic} endearuurs of the cn:[refs.
other, then parted, and have never met fince. The thing melted away without notice; and the princefs Dathkofl was handiomely given to undertand, that her counfels were no louger neceflary, and that the could not do better than take the amufements of the tour of Europe. She was libcrally fupplied, and has ever fince been treated with great kindnefs, but kept amufed with fomething very different from legillation.

In the mean time, many patriotic things were really - done. Taxes were frequently remitted where they were burthenfome. Every perfon was declared free who had ferved government without pay for two years. No man was allowed to fend boors from his cultirated eftates to his mines in Siberia, nor to any diflant eftates, but for the purpofes of agriculture. Many colonies of German peafants were in various places tettled on the crown-lands, to teach the natives the management of the dairy; a branch of iural economy of which the Rudians were till that period fo completely ignorant, that there is not in their language an appropriated word for butter, or checfe, or even for cream.

The Ruflians hoped to be likewife indructed in agriculture ; but the colonifts were poor and ignorant; and this part of the project came to nothing, like the great national fchools. Other improvemears however took place in favour of commerce; for all barriers were removed, and goods fuffered to pafs through the empire duty-free. The emprefs with grat liberelity encouraged the introduction of auts and manufactures. An academy was inftituted of fculpture, painting, and architecture, \&cc. a magnificent and elegant bulding was erected for it, and many éleves fupported in it at the expence of the crown. Several very promifing youths have been educated in that academy; but as the Ruffians are childifhly fond of finery, and cannat be perfuaded that any thing fine was ever done by their own countrymen, the fudents are all, on leaving the acaJemy, fuffered to ftarve.

The emprefs, who has a very jutt tatte in architecture, has herfelf defigned feveral buildings equally ufeful nidurnamental to her capital (fee Neva and Petersburgh) ; and while the has thus diligently cultivated the arts of peace, the has not neglexted thofe of "ar. She put her tleets on the mont refpectable footing, and procured ar rumber of Britifh officers to indruet her feamen in the fcience of naval tactics. By land, her fuccelfes againtt the Turks, the Swedes, and the Poles (fee Turkey, Sweden, and Poland), compel us to believe, that her troops are better difeiplincJ, and her generals more fillful, than any whom the greatelt of her precieceflors could bring into the field; and perhaps it is not too much to fay, that the empire of Ruffia, theugh the poople are but jult emerging from a ttate of barbation, is at this day the moft powerful in Europe.
Ruilia is divited into two great parts by a range of mountains called Oural, or the Biit, which, through the whole oreadth of it, form one continual uninterepted barrier, dividin, \(S\) beria from the remaining Ruliai, That part of Rultia which lies on this fide of the Oural mountains prefents al vers extenfive plain verging weltward by an eafy defcent. The vatt extent of this plain has a great variety of different climates, foils, and products. The northem part of it is very woody,

Rulia abcurds in diferent kind's of srain, hemp, fax,
marfhy, and but little fit for cultivation, and has a fen. fible declivity towards the White and the lirozen Seas. The other part of this valt plain includes the whole ex. tent along the river Volga as far as the deferts, extending by the Calpian and the Azov Seas, and conftitutes the finelt part of Ruflia, which in general is very rich and fruitful, having more arable and meadow land than wood, ma: hes, or' barren deferts.

The parelying on the other fide of the Oural mountains, known by the name of Siberia, is a flat traat of land of confiderable extent, declining imperceptibly towards the Glacial Sca, and equally by imperceptible degrees rifing towards the fou:h, where at laft it forms a great range of mountains, conRituting the boders of Ruffia on the fide of China. Between the rivers Irtith Obè, and the Altay mountains, there is a very extenfive plain, known by the name of Barabingkay Stepe, viz. the deferts of Baraba, the northern part of which is excellent for ag:iculture; but the fouthern part, on the contrary, is a defert full of fauds and marfies, and very unft for cultivation. Between the rivers Obè and Enifey there is more woodland than open ground; and the cther fide of the Enificy is entirely covered with impervious woods, as far as the lake Baical; but the foil is fruitful everywhere; and wherever the trouble has been taken of clearing it of the wood, and of draining it from unnecelfary water, it proves to be very rich, and Fi for cultivation; and the country beyond the Baical is furrounded by ridges of high fony mountains. Proceeding on farther towards the ealt, the climate of Siberia becomes by degrees more and more fevere, the fummer grows fhorter, the winter longer, and the frofts prove more intenfe.

With refpect to the variety of climates, as well as Faricty of the produce of the earth, Rulia naturally may be di- climates vided into three regions or divifions, viz. into the northern, midule, and fouthern divifions.

Thefe were about 20 years ago fubdivided into dif-
ferent governments, for the better adminiftration of jutAtice.

The morthern divifion, beginning from the 57 th degree of latitude, extends to thic end of the Ruffian dominions on the north, and includes the governments of St Peterfurgh, Riga, Revel, Yyborg, Proov, Norogorod, Tver, Olonetz, Archargel, Vologda, Yaronavl, Kofroma, Vintka, Perme, and Tobolik. The middle divifion is reckoned from the 57 th to the 5 cth degree of latitude, and includes the governments of Nofeow,
Smolenk, Puloth, Mioghicev, Tchernizov, NovororodSmolenk, Pulotk, Moghilev, Tchernigov, NovogorodSieverfkriy, Kharkov, Voronez, Kourlk, Oiel, Salouga. Toola, Riazane, Vladim:r, Niznei-Novogorod, Tambov, Sarutiv, Penza, Sinbitk, Kazane, Ouf., Karnbov, Sarativ, Penza, Sinbitk, Kazane, Ouf., at the 50 th degree of latitude, and extends to the end of Rufiaa on the louth, including the gcvernments of
Kiev, Lhatherimofary, Caucafis, and the province of of Rufiaa on the douth, including the gcvernments of
Kier, Lh, Taurida. To this may be added the habitations of the Cofince of the D n.

The northern divifion, though defivient in grain, \(\frac{\ell^{2} 3}{}\) fruit and garden vegetables, bas the prefereuce before of the no:the other two ia the abundance of animals, rare and thern, michvaluable for their Kins; in lithes of parti ular furts, very ufful fur differcnt purpoles of life; in cattle, and metals of inferior kinds, \&cc. The midjle divifion of

catile, fifh, bees, timber proper for every ufe, different kinds of wild beatls, metals, both of fuperior as well as of inferior kind, different precious fones, \&ic. This divition is likewife molt convenient for the habitation of minkind, on account of the temperature and pleafantnefs of the air. The fouth divifion has nut that abundance of grain, but has the preference in different delicate kinds of fruit, quantity of fifh, eattle, and wild animals, amongt which there are feveral fpecies different from thofe which are found in the midalle divifion. It exceeds greatly both the other divifions in plants and roots fitior dying and for medical purpofes, as well as for the table ; neither is it deprived of precious flones, as well as different metals.
The products of theie three divifinns conflitute the permanent and inevhanfible riches of Kuliz; for, befides what is neceffary for home confumption, there is a great quantity of thofe products exporicd yearly into foreign countries to the amount of feveral millions of rubles. Thefe productions are brought from different paces to fairs, eftablifhed in different parts of Ruffia, where the merclanis buy them up, and forward then to different ports, and other trading towns, for exportation into toreign kingdoms. Thefe fairs are likewife the places where a confiderable quantity of goods imported from foreign kingdoms is difpofed of. The principal yarmankes, that is, fairs, are the yarmank. Maka ie vikaya, Korennaya, and Irbitkaya.

The external commerce of Ruliia may be divided into two different branches: Itt. 'Ihe eomnerce with the European nations, which is carried on by buying and felling goods either for ready money or upon credii. 2d. The commeree with the Aflatic nations, which is conducted by barter or exchange of goods.

The principal ports belonging to the firf part of Ruflia ate on the Baltic fea, St Peterfourgh, Riga, Vyborg. Revel, Narva, Fredericklham, and the Baltic port; Archangel on the White fea, and Cola on the Northern Ocean ; Taganrog on the fea of Azov; Kherfon, Scvallopole, Balaklava, Soudak, Theodofia, Kerche, and Phanagoria on the Black fea, befides others of frmaller note. In thefe ports commerce is carried on, as well as in feveral trading towns fituated on the frontiers of Poland, Sweden, and Turkey.

The produtis of Ruflia exported into the different European kingdoms confilt chiefly in hemp, flax, different kinds of grain, tallow, hides, fail cloth, iron, tim. ber, linfeed, buiter, hemp-oil, train-oil, wax, potathes, tar, tobaeco, briftles, linens, peltry, and other goods, the greatelt part of which is exportecl chicfly by way of St Peterfourgh, Riga, and Archangel : and in return from the European kingdoms they receive woollen cloths, different kinds of goods made of worfted, filk, cotton, and thread; wines and beer, white and moitt filgars, filks, cotton muwrought, and yarn; French brandy, liquors, arrack, thrub, different irnn tools, and toys; gold and filver in bare, in foreign money, and in other timess; brilliants, pearls, galanteric goods, enffee, colours; peltry, vi九. beaver and otter fkins; herrings, ftock-fifh, falt, tobacen, diflerent trees, oil, horfes, ehina and earthen ware, \&c. The greitelt part of thefe goods is imported through the ports of St Peterfurgh and Riga, but a confiderable quantity is likewife adnitted by land through differcht frontier cufomhoules.

The principal goods exported into Afia are partly the products of Rulia, and partly imported from other European kingdoms, and contist of peltry and hides. 86 The other gooils are woollen cleths, bays, borax, bottles, printed linens, iron, and differents kinds of ironware, cal.mancos, kerleys, glue, finglafs, cochineal, indigo, laura, tinfl, gold ano hilver lace, frap; all kinds of arms, as piftol, guns, fibres; different kinds of linens, primted and glazed, fliped linen, ticking, pallock. crath, \&c. From the Atiatic kingdoms they impnrt different filk goods, raw hilk, cotton, filk-wwe fiuff, gold and filver in bars and in coin, eattle, horfes, \&c.

The mountains within Ruflia, as well as thofe on is M frontiers, abound with minerals of various kinds. Gold filver, quickfilver, copper, lead, iron-ore, very powerful loadit nes, \(m\) untain-e: yltal, amethyit, topazes of different forts, agates, corneiian, beryl, chalcedony, onyx, porphyry, antimony, एyrites, aqumariues, ehryfolites, ophites, and lapis lazuli, are found in them, belides marble, granite, trappe, maria or Mufcovy :lats, of remarkable fize and clearnefs, bafaltes, and coal, 2 c ; and in every part of Siberis, but particularly in the plains of it, are found bones of anmals uncommonly large, mammoth's teeth (fee Mammote), and other follits.

In the Ruflan empire are many lakes of very large Lakcs. cxtent. 1. The Ladoga, anciently called Neva, is the largeft lake in Europe, extending in length 175 and in breath 105 verts; or it is 116 Englifh miles long and near 70 broad. It lies between the governments of St Peterfburgh, Olonetz, and Vyborg; and communicates with the Baitic fea by the river Neva, with the Onega lake by the river Svir, and with the Ilmen lake by the river Volkov. Several confiderable rivers fall into it, as the Patha, Sias, Oyat, and others. The Ladoga canal is made near this lake. 2. The Onega lake is fituated in the government of Olnnetz. It is above 200 verfls long, and the greateft width of it does not exceed 80 vents. 3. The Tchnde lake, or Peipus, lies between the governments of St Peterfourgh, Picov, Revel, and Riga. It is near 80 verfts long and 60 broad. It joins to the lake of Pfor by a large neek of water. The length of this lake is 50 and the width about 40 verfts. The River Velikaya flows into it. The river Narova comes out of the lake Peipus, which by the river Embakha communicates with the lake Wirtz-Erve, and from this latter flows the river Fellin, and runs into the bay of Riga. 4. The Ilmen lake, anciently called Maijk, lies in the government of Novogorod. Its lengh is 40 and width 30 verfts. The rivers Mita, Lovate, Shelone, and others, fall into it; and only one river Volkov, runs out of it, by which it is joined with the Ladoga lake. 5. The Bielo-Ozero, that is, the White Lake, lies in the government of Novogorod. It extends 50 verlts in length, and about 30 in width. There are many fmall rivers which run into it ; but only one river, Shekfna, comes nut of it, and falls into the river Volga. 6. The Altin, or Altay lake, otherwife c. Iled the Telcts Lake, is fituated in the goverrment of Kolhivane. It extends in length 126 and in width about 84 vafts. The river Biya comes nut of it, which being joined to the river Kitonny:, conflitute the river Obe. 7. The Baical Lake, otherwife called the Baical Sea, and the Foly Sea, lies in the government of Irkoutk. Its extent in leng,th is 600 , and in width from

\section*{RUS}

Ruffis.

30 to 50 verft , and in the wideft places as far as 70 verlls. 8. The Tchani Lake lies in the deferts of Bdraba, between the rivers Obè and Irtith. It joins with a great many fmailer lakes, occupies a vaft trat of land, and abounds very much in fifh. 9. Between the Gulf of Finland and the White Sea there are feveral lakes which estend from 50 to 70 verts in length; and befides thefe there are many other falt lakes in different parts of Ruffia, fuch as the Ozero, that is, the lake Eltonkoye, Bogdo, Inderkoye, Ebele, Koryakowikoye, Yamifhevikoye, Borovye, and others; and the f.llt which is got from them ferves for the ufe of the greateft part of the empire. To thefe may be added the Calpian, which, though called a fea, is more properly a lake, as it has no communication with the ocean either vifible or fubterraneous. See Caspian-Sea, and Paeumatics, \(\mathrm{n}^{0} 277\).

Rulfia boafts likewife of a confiderable number of large and famous rivers. Of the Dvina or Dwina, the Neva, Dneiper of Neiper, the Don, the Volga, the Irtis, the Onega, the Oby, and the Lena, the reader of this work will find fome account under their refpective names ; but in this valt empire there are many other rivers worthy of notice, the' not perbaps of fuch minute defcription. Among thefe the Boug, or, as it is fumetimes written, Bog, rifes in Poland; then directing its courfe to the fouth-ealt, it divides the government of Ecatherinonav from the deferts of Otchakov, now belonging to Ruffia, and falls into the Lim.tn, which communicates with the Black Sea.

The Kubane confifts of many fprings or rivulets runnirg out of the Caucafian mountans, and divides itfelf into two branches, the one of which falls into the Azov Sea, and the other into the Black fea. This river, from its fource to the end of it, contlitutes the frontier of Rullia.

The Oural, formerly Yaik, takes its rife in the Oural mountain:, in the government of Oufa, which it divides from that of Caucafus, and extends its courfe about 3000 verfts. It reccives many rivers, the principal of which are the Or, Sakmara, Yleck, and Ter-koul.-The Kouma rifes in the Caucafan mountains, and runs through the plains between 'lerek and Volga, and at laft lofes itfeli in the fands, before it comes to the Cafpian fea. The Terek originates in the Cancafian mountains, runs between them, and then coming cut, extends its curfe to the Cafpian Sea, and receives feveral rivers, as the Malkd, Soonja, Bakfan, and Ackfily.

The Bolfhaya Petchora, that is, the great Petchora, rifes in the Oural mountains, in the government of Vologda, ruis acrols the whole breadth of the government of Arciangel, and falls in:o the Icy fea. It receives in is courte feve:al rivers, the principal of which are the Outcha and the Elma. The E. iffey is furmed by the jundion of two rivers, the Ouloukema and the Baykem.ı, which rife in the Altay mountains in Mungalia. It runs through the whole extent of Sibcria, and falls into the Icy lea. The extent of the Eniffer is about 2500 vcrits. It receives in its courfe feveral rivers, the principal of which are the Abakan, Elogooy, Podkamennaya Tungouka, Niznyaya Tungoulka, and Tourookhan. The Yana, the Indighiria, and the Kolhima, are likewife no incorfiderable rivers in the government of \(I_{i} k\) nuth. The firt rifes in the mountains

Vol. XVI.
which overfiadow the banks of the river Lena on the right hand, and extends its courfe 800 verfts. The two lall take their fources in the mountains which exterid on the coalts of the Eaftern fea. The length of the Indighirka is 1200 and that of Kollima 1500 verfs.The laft, near its mouth, is divided into two branches, and reccives the rivers Omolon and Onoos. The Amadir: is the eafternmof of all the rivers in Siberia. It rifes out of the like Ioanko, in the diffrict of Okliotin, and runs through the eaftern part of it, and then falls into the Eaftern ocean. The Amour is formed by the junction of two confiderable rivers, the Shilka and Argoonya, which are joined \(j n\), by the frontiers of China. It runs through the Chinefe dominions, and at laft falls into the Eattern ocean. The Kamtichatka runs through the peninfula of the fame name, extending its courfe from the Vakhney to Nizuey Oftrog, that is, from the upper to the lower fort, and falls into the Eaftern ocean. The Penjina rifes in the Yablonnoy ridge of mountains, and Jalls into the Penjinkaya Gooba, that is, the gulph or the fea of Penjina.

In fuch a vaft extent of country, firetching from the \(5 a^{20} 0\) temperate fo far into the frigid zone, the climate the weamult vary confidera'ly in different places. In the ther. fouthern parts of the Ruffian empire, the longeft day docs not exceed fifieen hours and a half; whereas in the moft northern, the fun in fummer is feen two months ab-ve the horizon. The country in general, though lying under different climates, is exceffively cold in the winter. Towards the north, the country is covered near three quarters of the year with fnow and ice; and by the feverity of the cold many unfortunate pertoris are maimed, or perifh. This furt uf weather commonly fets in about the latter end of Augult, and continues till the month of May; in which interval the rivers are frozen to the depth of fisur or five feet. Water thrown up into the air will fall down in icicles; birds are frozen in their flight, and travellers in their fledges. In fome provinces the heats of fummer are as forching as the winter colds are rigorous.

The foil of Mufcovy varies fill more than the cli- Soil, \({ }^{91}\) mate, according to the influcnce of the fun and the fituation of the country. I:1 the warmer provinces, the procefs of vegetation is fo rapid, that corn is comnionly reaped in turn months after it begins to appear abovc the furfice of the ground. Hence the great variety of mulhrooms produced fpontaneouny in Rulia, which may be confidered as a comfortable relicf to the poor, while they appear as delicacies at the tables of the richAbove 1000 waggon-loads of them ufed to be fold annually in Mofiow. Perlaps it is on account of the fearcity of provifinns that fuch a number of falts are iantituted in the Mofenvite religion.

Belides the protuaims already mentionca as peculiar Ans ve;e to each of the three grcat natural diviions of the em- the propire, Mufcovy yields rhubarb, Пax, hemp, pafure for du Qionscattle, was, and hiney. Among other vegetabies, we find in Rufia a particular kind if rice called \(A\) Jouthe, plenty of excellent melons, and in the neighbou:hood of Afracan the fumous zoophytun, or animal plant, whioh the Mufcovites call bonnarel, ur lambse:n, from its rcfemblance to a lim's. Sec the anticle Scythian LAmb.
Agriculture in genetal is bat litule underllood, and stat if lefs profecuted in this comntry. The moll coufderable afiacu! articles in the economy of a Ruflan farm are vas and ture

\footnotetext{

}

\section*{R U S}
ioner, by whilh the peafant is ofven enriched. He cuts cown a great number of trees in the forett, and fawing the trunks i:nn a number of parts, bores each of thefe, and fonps in the hollow at both ends, leaving only a little hulefor the admittance of the bees; thus the honey io iceured from ail the attempts of the bear, who is extremely fond of it, and tries many different experiments for making limiclf mafter of the lufcions treafure. Of this honey the Ruffims make a great quantity of ftrong metheglin for their urdinary drink. They like. wife extract from rye a fpirit, which they prefer to brandy.

The wild beafts in the Northern parts of Ruffia are the fame with thofe we have mentioned in the articles of Norway and Lapland: fuch as rein-deer, bears, foxes, ermins, martens, fables, hares, and fquirrels. In the more fouthern provinces the Muicovites breed black cattle, fmall but hardy horfes, fheep, goats, and camels. The breed of eatlle and horfes has been enlarged by the eare and under the protection of Peter and fueceeding fovereigns. The whole empire abounds with wild-fowl and same of all forts, and a varicty of birds of prey; belides the different kinds of poultry, which ate raifed in this as well as in other countries. The ex. ternal parts and provinces of Mufenvy are vell fupplied with feu-fith from the Northern ocean, the Baltic, or gulph of Finland, the White fea, the Black fea, and the Cafpian; but the whole empire is plentifully provided with frefh water filh from the numerous lakes and rivers, yielding immenfe quantities of falmon, trout, pike, fturgeon, and belluga: the lait being a large fifh, of whofe roe the beft eaviare is made. Innumerable infects, like thofe of Lapland, are hatched by the fummer's heat in the fand, moraffes, and forefts, with which this ennire abounds; and are fo troublefome as to render great part of the country aitogether uninhabitable.

The Ruffian empire is inhabited by no lefs than 16 different nations, of which our limits will hardly permit us to give the names. The firlt are the Sclavonic nations, comprehending the Ruflians, who are the predominant inhabitants of the whole empire, and the Poles, who befides occupying the countries lately wrefted from the republic, live in the governments of Polatik and Moghiley, as well as in the diftrict of Salenghink and along the river Irtith. 2. The Germanic nations, comprehending the Germans properly fo called, who inhabit Ethonia and Livonia; the Swedes inhabiting the Ruffiau Finland, as well as fome of the iflands on the Baitic fea; and the Danes, who inhabit the inlands of the Baltic feil, the Worms, and Grofs or Great Roge. 3. The Lettonian or Livonian nations, under which are claffed the origiual or real Lettonians or Letifhi, inhabiting Livonia; and the Lithuanians, who live in the government of Polatik and Moghilev. 4. The Finns, or Tchudi, nations who inhabit the governments of Viberg and St Peterfburgh, with many other difricts of the empire, being branched out into no fewer than 12 different tribes. 5. The 'Tartarian nations, who are all either Mahometans or idolators. The Mahome. \(\tan\) Tartars, commonly called by the Rufians Tartare, dwell in Kazane, and the places adjacent ; at Kelimov; at Oufe, in the government of Parma; it Tomfs and its neighbourhood, and are in general a fober, induitrivus, cleanly, and generous people. The other Tartars
inhabit diffetent parts of Siberia, and are intermixed with Rufia. fill different races, called after the towns, rivers, and other places to which their habitations are neareit. They are, as we have faid, idolators, and governed by dhamens. (Sie Shamen.) Befides thefe, there are in the Rntian dominions the Nagay Tartars; the Crim'lartars, inhabiting the Crimea, who, tngether with tha land belonging to then, came under the fubjection of Rutha in 1783 ; the Metcheraki ; the Batheirs; the Kirghiftzi or Kirghiskaifaks; the Yakouti; and the white Kalmuks. 6. The Calicaftan nation, which are fix in number, and are each fubdivided into many different tribes, of which it is probable that tew of our readers have ever hearcl the names, except of the Circalflans, who live in different fettlements bordermg on tie river Kubare. 7. The Samoyeds or S:moeus, comprehending the Oltiacks*. There inhabit the northern- * Sce Oftimoft part of Ruffia, along the enaft of the lcy 「ea.- acks.
8. The Mungalian nations, comprelending the original Mungals, who are chielly difperfed in the delerts of Gobey : the Bourati, who live on the banks of the Baikal, and other places in the government of lrkoutk; and the Kalmuks, comfiting of four diferent trib s.All thefe hortes fpeak the Mungalian language, oberve the religion of Lama and the Kalmuks live in targe tents. 9. The Tongoofi, a very populous tribe, difperfed from the river Eniffey as far :is the fea of Okhoth, and from the Penjinfaya Goeba beyond the Chinefe frontier. They are all idolators, and live by hunting and fifhing. Io. The Kamtchadels. II. The Koriaki. 12. The Kouriltzi. Of thefe three nitions we have given fome account under the article Kamr. sehatka. 13. The Aleouti, who dwell in the iflands between Siberia and America, and very much refemble the Efquimaux and the inhabitants of Greenland. They live in large huts, and feem to be idolators.14. The Arintzi, it very numerous people feattered in the government co Kolhivane. 15. The Yukaghiri, who are difperfed on the coafts of the Glacial fea, about the rivers Yana, Kolhima, and Lena, and as far as the fource of the Anadir. 16. The Tchouktehi, who occupy the north-eaftern part of Siberia, between the rivers Kolhima and Anadir. Belides thefe fixteen different nations, there are fcattered through the Ruflian empire vait numbers of Buckharian Tartars, Perfians, Georgians, Indians, Greeks, Servians, Albanians, Bulgarians, Moldavians, Valekians, Armenians, and Jews.

96

The empire of Ruffia is fo widely extended, that Populationa notwithftanding the number of nations which it comprehends, it muft be confidered as by no means populous. At the laft revifion it was found to contain 26 millions of fouls; but it is to be obferved, that the nobility, clergy, land as well as fea forces, different officers, fervants belonging to the court, perfons employed under goverument in civil and other offices; the fudents of different univerfities, aeademies, feminaries, and other fehools; hofpitals of different denominations; likewife all the irregular troops, the roving hordes of different tribes, foreigners and colonits, or fettlers of different nations-are not inclufed in the abovementioned number: but with the addition of all thefe, the population of Rufla, of both fexes, may be fuppofed to come near to 28 millions.

Ruffia.
'To Sech a raft variety of people, nations, and languages, it is needlefs to ob.erve, that no general character can with truth be applied. The native Rullians are ftigmatifed by their neighbours as ignorant and brutal, totally religned to floth, and addicted to druakennefs, even in the moft beallly excefs; nay, they are accufed of being arbitrary, perfidious, inhuman, and detlitute of every focial virtue. There is nut a phrafe in their languare analogous to ours, "the manners or the fentiments of a gentleman ;" nor does genticman with them exprefs any thing moral. Indeed they have no fuch diltinction. Cumning is profefed and gloried in by all ; and the nobleman whom you deteet telling a lie is vexed, but not in the lealt athamed. In the whole reglement of the marine by Peter the Great, there is not one word addreffed to the honour, or even to the probity, of his officers. Hopes of reward, and the conilant fear of detcetion and punifhment, are the only motives touched or:. In every thip of war, and in every regiment, there is a fifcal cr authurized P py, a man of reSpectable rank, whofe letters muft not be upened but at the rift of the great knout (fee Knout) ; and he is required by exprefs flatute to give monthly reports of the behaviour of the officers and privates.

Such regulations we cannot think well adapted to improve the morals of the people; yet we believe they have been improved by the care, alliduity, and example of tome of their late fovercigns. Centain it is, the vice of drunkenneis was fo univerfally prevalent among them, that Peter 1. was obliged to reftrain it by very fevere edict, which, however, have not produced much effect. They numbered in the city of Nofoow no fewer than 4000 brandy-fhops, in which the inhabitants ufed to tot away their time in drinking firong liquors and fmoking tobacco. This lait practice became fo dangerous, among perfons in the molt beaftiy fate of intoxication, that a very fevere law was found necelfiry to prevent the pernicic us confequences, otherwife the whole city might have been confumed by conflagrations. The nobility were heretofore very powerful, each commanding a great number of vallals, whom they ruled with the molt defpotic and barbarous authority : but their poficifions have been gradually circumferibed, and their power transferred in a great
lirth; the third, your excellunce; the fourth, jour ligh excellence; then came jour briliancy and !igh brillizncy. Highnefs and majely were referved tor the gicat cuke and czar.

Thefe titles and modes of addrefs were ordered with all the regularity of the manual exercife; and the man who thould omit any of them when focaking to his fuperior might be lawfully beaten by the offended boyar. Befure this period, it was polite and courtly to fpeak to every man, even the heir apparent, by adding his father's name to his nwn; and to the great duke, Paul Petrovitz was perfcetly refpectiul, or a fingle word, fignifying dear father, when he was not named. 'Thu' pompous titles were unknown among them before the era of Peter, the fubordination of ranks was more complete than in any other European nation; but with this limplicity peculiar to them and the Poles, that they had but three ranks, the fovereign, the nobleffe or gentry, and the ferfs. It was not till very lately that the mercantile rank formed any diftinction ; and that diftinction is no more than the freedom of the perfon, which was formerly a transferable commodity belonging to the bnyar. Notwithfanding this fimplicity, which put all gentlemen on a level, the fubscription of a perfon holdirg an inferior office was not fervant, but flave; and the legal word for a petition in form was ichelobitii, which lignifies, "a beating with the forehead," i. c. Itriking the ground with the forchead; which was actually done. The father of Alexis abolifhed the prattice; but at this day, when a Ruffian petitions you, he touches his forehead with his finger; and if he be very earnett, he then puts his finger to the ground.

The Ruffian nobles formerly wore long beards, and long robes with firait fieeves dangling down to their ancles : their collars and thirts were generaily wrought with filk of different colours: in lieu of hats, they covered their heads with furred caps; and, inftad of hoes, wore red or yeliow leathern bukins. The drefs of the women nearly refembled that of the other fex; with this difference, that their garments were more loofe, their caps fantaftical, and their thift-fleeves three or four elis in length, gathered up in folds from the fhoulder to the fore-arm. By this time, however, the French fafhions prevail among the better fort througho out all Mífcovy:

The common people are generally tail, healthy, and Mannatio robult, patient of cold and hunger, inured to hard- and cu.hips, and remartiably capable of bearing the moft fud. toms. den tranlition from the extremes of hot or cold weather. Nothing is more cuftomary than to fee a Ruf. flim, who is over-heated and fiveating at every pore, ftrip hindelf naked, and plunge into a river: nay, when their pores are all opened in the hut-bath, \(t\) which they have d.tily recoutfe, they either pratice this im. mortion, or fubjeat themielves to a difcharge of fome pailuls of collu water. This is the cuftom of both men and womer, who eutcr the baths promifcuouny, and appear naked to cach other, wihhout feruple or heftation.

A Rulfian will fubfit for many days upon a little oatmeal and water, and cven raw roots: an onion is a regale; but the food they gen-rally ufe in their journeys is a hind of rye-bre:ad, cutinto fmall fquare picece, and dried again in the oven: thefe, when they are hungy, they foak in water, and cat as a very com\(+C=\) ancoj!

\section*{RUS [ 572 ] RUS}

Ruff: fortabic repitt. Both fexes are remarkably healily and robult, and accuitom thenifelves to fleepevery day after dimer.

The Rulian women are renarkably fair, comely, frong, and well-haped, cbecient to their lordly hulbands, and patient under difcipline: they ate even faid to be fond of corrextion, which they confider as an infallitile mark of their hufound's conjugal atfection ; and they pout and pine if it be with-held, as if they thought themfeives treated with contenme and difergard. Of this negleet, however, they have very little caufe to complain ; the Ruffan hufband being very well difpofed, by nature and inebriation, to exert his arbitrary power. Some writers obferve, that, on the wedding. day, the bride prefents the bridegroom with a whip of her own making, in token of fubmilion; and this he fails not to employ as the inftrument of his authority. Very little ceremony is here ufed in match-making, which is the work of the parents. Perhaps the bridegroom never fees the woman till he is juined to her for life. The marriage being propofed and agreed ti., the lady is examined, ftark-naked, by a certain number of her female selations; and if they find any bodily deleet, they endeavour to cure it by their own \(\mathbb{k i l l}\) and experience. The bride, on her wedding-day, is crowned with a garland of wormwood, implying the bitternefs that often attends the married ftate. When the prieft has tied the nuptial knot at the altar, his clerk or fexton throws upon her head a landful of hops, willing that the may prove as fruitful as the plant thus icattered. She is mufled up, and led hone by a certain number of eld women, the parifh-prieft carrying the crofs before; while one of his fubalterns, in a rough goat-1kin, prays all the way that fhe may bear as many children as there are hairs on his garment. The new-married couple, being feated at table, are prefented with bread and falt; and a chorus of boys and girls fing the epithalamium, which is always grofsly obfcene. This ceremony being performed, the bride and bridegroom are conducted to their own chamber by an old woman, who exhorts the wife to obey her hulband, and retires. Then the bridegroom defires the lady to pull off one of his bufkins, giving her to underfand, that in one of them is contained a whip, and in the other a jewel or a purfe of money. She takes her choice; and if the finds the purfes interprets it into a good omen; where. as fhould fhe light on the whip, the conflues it into an unhappy prefage, and inftantly receives a lafh as a feecimen of what fhe has to expect. After they have remained two hours together, they are interrupted by a deputation of old women, who come to fearch for the ligns of her virginity : if thefe are apparent, the young lady ties up her hair, which before confummation hung loofe over her fhoulders, and vifits her mother, of whom the demands the marriage portion. It is generally agreed, that the Mufcovite hurbands are barbarous even to a proverb; they not only adminitter frequent and fevere correction to their wives, but fometimes even torture them to death, without being fubject to any punifhment for the murder.

The canon law of Mufcovy furbids the conjugal commerce on Mondays, Wednefdays, and Fridays; and whoever tranfgreffes this law, mult bathe himfelf before be enters the church-porch. Ho that marries a fecond
wife, the fint being alive, is not admitted farther than Ruffa. the church-door: and if any man efpoufes a third, le is excommunicated: fo that though bigamy is tolerated, they neverthelefs count it intamous. If a woman is barren, the hufband generally perfuades her to retire into a convent : il fair means will not fucceed, he is at liberty to whip her into condefcenfion. When the czar, or emperor, has an inclination for a wife, the moft beautiful maidens of the empire are prefented to him for his choice.

The education of the czarovitz, or prince royal, is intruited to the care of a dew perfons, by whom he is Itrictly kept from the eyes of the vulgar, until he hath attained the 15 th year of his age : then he is publicly expoled in the market-place, that the people, by view. ing him attentively, may remember his perfon, in order to afcertain lis identity; for they have more than once been deccived by impolters.

Such is the flavery in which the Mufcovites of both Authority fexes are kept by their parents, their patrons, and the emperor, that they are not allowed to dipute any match that may be provided for them by thefe directors, however difagreeable or odious it may be. Officers of the greateit rank in the arniy, both natives and foreigners, have been faddled with wives by the fovereign in this arbitrary manner. A great general fome time ago deceafed, who was a native of Britain, having been preffed by the late czarina to wed one of her ladies, faved himfelf from a very difagreeable marriage, by pretending his conftitution was io unfound, that the lady would be irreparably injured by his compliance.

In Ruffia, the authority of parents over their chil. dren is almof as great as it was among the ancient Romans, and is often exercifed with equal feverity. Stoould a father, in puninning his fon lor a fault, be the immediate caufe of his death, he could not be called to a count for his conduct ; he would have done nothing but what the law authorifed him to do. Nor does this legal tyranny ceafe with the minority of chuldren; it continues while they remain in their father's family, and is often exerted in the moft indecent manner. It is not uncommon, even in St Peterfourgh, to fee a lady of the higheft rank, and in all the pomp and pride of youthful beauty, ftanding in the court-yard with her back bare, expofed to the whip of her father's lervants. And fo little difgrace is attached to this punthment, that the fame lady will fit down at table with her father and his guefts immediately after the has fuffered her flogging, provided its feverity has not confined her to bed.

The Mufcovites are fund of the bagpipe, and have Mulic and a kind of violin, with a large belly like that of a lute : dancing. but their mulic is very barbarous and detective. Neverthelefs, there are public fchools, in which the children are regularly taught to fing. The very beggars afk alms in a whining cadence, and ridiculous fort of recitative. A Rufian amballador at the Hague, ha= ving been regaled with the beft conrert uf vocal and inftrumental mufic that could be procured, was atked how he liked the entertainment ? he replied, "Perfealy well: the beggars in my country fing juft in the fame manner." 'The warlike mufic of the Ruffans confifts in kettle-drums and trumpets: they likewife ufc hunting loorns; but they are not at all expert in the performance

103
formance. It has beenfaid, that the Ruffans tiaink it his conmands, hiou did Titus Lifius, Thucydides, beneath them to darce, and that thay call in their Polith o: Tartarian flaves to divert them with this exercife in their hours of dilipation. Such may have been the cafe formerly, or may be to now, in the dilant and moft barbarous provinces of the empire ; but at St Peterburgh dancirg is at preient much relilhed, and a minuet is nowhere fugraccfully performed in Europe as by the fallionable people in that metropolis.

We have eltewhere ibferved, that the Rufim languare is a dialect of the Sclavonic, and the purelt perhaps that is now any"here to be found (ice Philolo. gy, Sect. ix. § 3.) ; but they have nothing aucient written in it, except a tranflation of Chryfottom's Offices for Ealter, which are at this day grod Rulfian, and intelligible to every boor, though certainly not leis than 800 years oid. There is no Ruflian poetry which there is reafon to believe 200 years old "and the cldeft tra flatinn of the Seriptures into that language is but a late thing, and come to them from Koningiberg. Sciznce his made but a very fmall progrefs among them; ard the repuiation of the imperial academy at St Peterfourgh has been hitherto fupported by the pxertions of fireigners. For antiquarian rencarch they have as little relith as for fcientific itveftigation. Every thing, to pleafe, mutt be new; and the only elu. cidations which we have of their antiquities are the performances of Germans and other foreigners, fuch as profeffors Bayer, Muller, and Gmelin. One native has
 lie can of theirmoft ancient poetry; but in his refearchprofefors Bayer, Muller, and Gmelin. One native has
indeed fhuw fone defire to recover and preferve what
lie can of theirmof ancient pnetry; but in his refearch-
es, he feems more indehted to an exquifitely nice ear
than to any erudition. Erudition indeed they hold in
the mof fnvereign contempt. No gentleman is ever
taught Latin cr Greek; and were it Rufian franger
in compang to give any hint of his p fiffing fuch
knowledge, every man with a fword would draw away
his chair, and fet him down for a charity-boy. Peter
the Great and the prefentemprefs have done what fove-
reigns could do to difpel thefe clouds of ignorince,
by infituting fchools and culleges, and giving the ma.
fters and profefors military rank; but all in vain. One
of the moft accomplifhed fcholars of the age, after ha-
ving made himlelfextremely agreeable to a company of
ladies, by means of his tafte in mufic, and a fwerd at
his fide, was infanty deferted by them upon fome per-
fons whifpering through the room that be was a man
of learnirg; and before his fuir companions would be
reconciled to him, he was obl god to pretend thit he
was a lieutenaut-colonel to:ally illiterate.
The two firf fentences of Prince Shtchcrbatofis than to any erudition. Erudition indeed they hold in

 in compang to give any hint of his \(p\) ffeling fuch knowledge, every man with a fword would draw away

 dedication of his Hiftory of Ruffia, which was pr nted in three volumes 4 to, in 1770 , afford an admirable fpecimen of Ruftian literature. "The hittory of the human underfanding (fays this dedicator) alfures us, that everywhere the fciences have followed the progrefs of the proferity ard the ftrength of kingdums. When the Grecian arms had overthrown the greatet monarchy then in the world, when they had the famous generals Miltiades, Themiftocles, Asiftides, Conon, and Alcibiade:, at the fame time flourifhed among them Anaximander, Anaxigoras, Archytas, Sncrates, and Plito. And uhen Auguftus had conquered the world, and lad Shut the gates of the temple of Janns, and the proud Romans, under his hap?s government, chcerfully obeyed

Virgil, and Horace, adorn his court, and celcbrate his glory:"-A palfage fo replete as this with blunders and anachronifms it would furcly be difficult to find in any cther author.

Ihe Rulians were converted to the Chriftian reli-Religion. gion towards the latter end of the tenth century, as has been already related. Since that period they have flelh, elk, veal, hare, rabbit, ats's milk, mare's milk, and Yenice treacle, becaufe the flef of vipers is an ingredient ; alfo every thing that contains even the imalleft quantity of mufk, civer, and caltor: yet they hase no averfion to fwire's Helh; on the contrary, the country produces exceilent bacon. They celebrate 15 grand feftuals in the jear. On Palm-Sundsy there is a magnificent procefliun, at which the czar atifts in perion and on foot. He is apparsiled in cloth of g ld ; his train is borne up by the frime of the nobility, and he is attended by his whole court. He is inmediately preceded by the officers of his houfehold, one ot whom carries his handkerchief on his arm, lying upon another of the richelt embroidery. He laalts at a fort of platform of frec-itone, where, turring to the calt, and beading his body almuft double, he pronounces a Chort prayer: then he procecds to the church of Jerufalem, whire he renews bis devotion. This exercife being performed, he returns to his palace, the bridle of the patriarch's horfe retting upon his arm. The horfe's head being covered with white linen, is held by fome nobleman; while the patriarch, fiting fidewife, and holding a crofs in his land, diftributes benedictions as he mo.es alnng : on his head he wears a cap edged with ermin, adorned with lorps and buttons of gold and precinus fones: before him are difplayed banners of confecrated iturf, in a varicty of colours. Above 500 priefts walk in the proceflion; thofe who are near the patriarch bearing pictures of the Virgin Mary, richly oinmmented with gold, jewels, and pearls, together whit crolles, relics, and religicus books, including a copy of the Gofpels, which they reckon to be of in-

confelfed the articles of the Greek church, mingled with certain fuperititious ceremonies of their own. They do not believe in the pope's infallibility or fupremacy, or even hold communion with the fee of Rcme: they ufe auricular confeflion, communicate in both kinds, adopt the Athanafian creed, and adhere to the efta lifhed liturgy of St Bafil. They worfhip the Virgin Mary, and other faints; and pay their adorations to croffes and relics. They obferve four great fafts in the year, during which they nether talte fith, Reth, nor any animal production: they will not dri:k after a man who has eaten flelh, nor ufe a kuife that has cut meat in lefs than 24 hours after it has been ufed; nor will they, even though their health is at ftake, touch any thing in which harthorn or any animal fubfance has been infured. While this kind of Lent continues, they fubfilt upun cabbage, cucumbers, and rye-bread, drinking nothing ftronger than a fort of fmall beer called quafi \(\dagger\). They likewife lat every Wedneiday and Fri-tSee Pea-day. Their common penance is to abfain from every fant. fpecies of fuod and drink, but bread, falt, cucumbers, and water. They are ordered to bend their bodies, and continue in that panful pofture, and between whiles to ttike their head againt an image.

The Mufcovites at all times reject as impure, horfe-

Rufin. eftimable ralue. In the the middt of this proceffion is borne a triumphal arch; and on the top an apple-tree covered with fruit, which feveral litule boys inclofed in the machine endeavour to gather. 'The lawyers and laity carry branches of willow; the guards and the fpectators proftrate themfelves on the ground while the procifion halts; and after the cercmony, the patiarch prefents a purfe of 100 rublcs to the czar, who perhaps invitcs him to dine at his table. During the feaIon of Eafter, the whole empire is filled with mirth and rejoicing: which, however, never fails to degencrate into heat and debauchery ; even the la lies may indulge themfelves with frong liquors to intoxication without fcandal. When a lady fends to inquite concerning the health of her gueft whom fhe entertained over-night, the ufual reply is, "I thank your miftrefs for her good cheer : by my troth, I was fo merry that I don't remomber how I got home."

During thefe carnivals, a great number of people, in reeling home drunk, fall down and perifh among the frow. It is even dangerous to relieve a perfon thus avertaken; for, thould he die, the perfon who endeavoured to affit him is called before the judge, and generally pays dear for his charity.

The Mufoovite priens ufe exorcifms at the adminifration of baptifm. They plunge the child three times ower head and ears in water, and give it the facrament of the Lord's Supper in one fpecies, until it hath attained the age of feven; after which the child is indulged with it in both kinds. They likewife adminifer the facrament to dying perfons, together with extreme unction ; and if this be neglected, the body is denied Chrillian burial. Soon as the perfon expires, the body is depofited in a coffin, with a luncheon of bread, a pair of fhoes, fome fer pieces of money, and a certificate figned by the parifh-prieft, and directed to St Nicholas, who is one of their great patrons. They likewife hold St Andrew in great veneration, and ridiculounly pretend they were converted by him to Chriftianity. But next to St Nicholas, they adore St Anthony of Padua, who is fuppored to have failed upon a mill-ftone through the Mediterranean and Atlantic, and over the lakes Ladoga and Onega, as far as Novogorod. Every houfe is furnihhed with an image of St Nicholas, carved in the moft rude and fantaftic manner ; and when it becomes old and worm-eaten, the owner cither throws it into the river with a few pieces of coin, faying, "Adiel, brother ;" or returus it to the maker, who accommodates him with a new image for a proper confideration. The good women were very careful in adorning their private St Nicholafes with rich clothes and jewels; but on any cmergency, thefe are lefumed, and the faint left as naked as he came from the hand of the carpenter.

There are monafteries in Ruffia; but neither the monks nor the nuns are fubject to fevere reftrictions. The friars are either horfe-jockeys, or trade in hops, wheat, and other commodities; the filters are at liberty to go abroad when they pleafe, and indulge themfelves in all manner of freedons.

Heret fore libeit of confcience was denied, and every convided heretic was committed to the flames ; but lince the reign of Peter, all rcligions and fects are tolerased hro ighout the emire. Roman Catholics, Lutherans, Calvinifts, A:menians, Jews, and Mahometans, enjoy the froc exercife of their refpedive forms
of worfhip; though it was not without great difficulty, Ruflia. and by dint of extraordinary folicitation from different powers, that the Romifh religion was allowed. Peter knowing the dangerons tenets of a religion that might fet the fpiritual power of the pope at variance with the temporal power of the emperor, and being well acquainted with the meddling genius of its profeffors, held out for fome time againit the interceffion of Germany, France, and Poland; and though at length he yielded to tbeir joint interpofition, he would by no means fuffer any Jefuit to enter his dominions.

106
The government of Ruffia is mere defpotifm. The Gover:whole empire is ruicd by the arbitrary will and plea-ment. fure of the fovereign, who is flyled the czar or tzar, a title which is probably a corruption of Cefar. Heretofore he was fiyled grand duke of Mufcovy: but fince the reign of Peter, he is dignified with the appellation of emperor of \(R u / f i a\); and the prefent fovereign is A yled cmprefs of all the Ruflas. The emperor is abfolute lord, not only of all the eftates in the empire, but alfo of the lives ot his fubjects; the greatelt noblemen call themfelves his \(\Omega_{\text {uves, }}\) and execute his commands with the moft implicit nbedience. The common people revere him as fomething fupernatural; they never mention his name, or any thing immediately belonging to him, without matks of the moft profound refpect and awful veneration. A man akking a carpenter at work upun one of the czar's warehoufes, what the place was intended for ? anfivered, "None but God and the czar knows."

The nobility of Rufia were formerly rich and pnwerful, and ruled defpotically over their inferiors: bat we have feen how the father of Peter the Great contrived to Arip them of their privileges, and they are now venal dependants on the court. They fill retain the titles of their ancefors, though many of them are in the moft abject poverty and contempt.
All the peafants in the empire are confidered as immediate flaves belonging to the czar, to the boyars, or to the monafteries. The value of eflates is computed, not by the extent or quality of the land, but from the number of thofe peafants, who may be fold, alienated, or given away, at the pleafure of their mafters. The number of thefe hufbandmen, whither living in villages or in the open country, being kinown, the czar, hy requiring a certain proportion of each lord or proprictsr, can raife 300,000 men in lefs than 40 days.

The adminiltration is managed by a grand council, calted dumnoy loyarch, or "council of the boyars," who are the grandees of the empire, and act as privy counfellors. To this are fubfervient fix inferior chambers and courts of judicature, provided each with a prefident. The firt regulates every thing relating to ambaffadors and foreign negociations; the fecond takes cognizance of military affairs; the third mandges the public revenues of the empire; the bufinefs of the fourth is to encourage, protect, and improve trade and commerce. The two lant hear and determine in all cables, whether civil or criminal.

Peter divided the empire into the eight governments of Mofcow, Archangel, Afpph, Cafan, Afracian, Chiont and the Ukraine, Siberia, Livonia, comprehending Ingria, Plefcorr, and Norogorod, Smolenike, and Veronitz. The governors or waivodes were vefted with power to difpofe of all employments civil and military, and secsive the revenues. They were directed to

Reflia. defray all expences in the reflective governments, and Hers fend a certain yearly funds to the great trcafury. In a w. rd, they enjoyed abloute power in every thing but what related to the regular troops, which, though quartered in their jor dictum, were neither paid nor direacted by them, but received their orders immediately from the czat or mos generals.

In 1775 the 1 relent carrels made a complete newmodelling of the internal government in a furn of great implicitly and unitormity. By this reglement the di- vidud the whole empire into 43 governments, as we lave already mentioned, placing over each, or where they are of tess extent, over two contiguous governments, a governot-general with very contiderable powers. She iubdivided each government into provinces and dif. tricks ; and for the better administration of justice erected in them various courts of law, civil, criminal, and commescal, analogous to those which are found in other counties. She eftablithed likewife in every governmelt, it not in every province, a tribunal of confience, aud in every diftrif a chamber for the protection of orphans. A audit fo many win inftitutions a chamber fur the administration of her imperial majefty's revenoes was not torgutten to be eftablifhed in each govermment, nor a tribunal of police in each diftrif. The duty of the governor-general, who is not properly a judge, tut the guardian of the laws, is to take care that the various tribunals in his government discharge their relpcative duties, to protest the oppreffed, to enforce the adminiftration of the laws; and when any tribunal fall appear to have pronounced an irregular lenience, to fop the execution till he make a report to the fenate and receive her majefty's orders: It is his bufinefs likewife to fee that the taxes be regularly paid; and, on the frontiers of the empire, that the proper number of troops be kept up, and that they be attentive to their duty.

This reglement contains other inftitutions, as well as many directions for the conducting of law-fuits in the different courts, and the adminiltration of juftice, which do her majefty the highell honour ; but the genesal want of morals, and what we call a fenfe of honour, in every order of men through this raft empire, mut male the wifeft regulations of little avail. Ruffia is perhaps the only nation in Europe where the law is not an incorporated profeffion. There are no feminarises where a practitioner mut be educated. Any man who will pay the fees of office may become an attorney, and any nan who can find a client may plead at the bar. The judges are not more learned the n the pleaders. They are not fitted for their offices by any kind of edo aton; nor are they neceffarily chosen from thole who have frequented courts and been in the practice of pleading. A general. from a fuccefsful or an equivocal campaign, may be inftantly fer at the head of a court of juice; and in the absence of the imperial court from St Peterburgh, the commanding officer in that city, whoever he may be, prefides ex officio in the high court of justice. The other courts generally change their preidents every year. Many inconveniences mut rife from this fingular conftitution ; but fewer, perhips, than we are apt to imagine. The appointment to fou many inferior governments makes the Ruffian nobility aeq sainted with the grots of the ordinary buffnets of law -court:; and a fatute or imperial edict is law in every cafe. The great obfacles to the admi.
nitration of julie are the contrariety of the laws and the venality of the judges. From inferior, to fupcrior courts there are two appeals ; and in a great proportion of the causes the revelfal of the fentence of the inferior courts fubjects its judges to a heavy fine, unless they can produce an edit in full point in fupport of their diction. This indeed they feldom find any difficulty to do; for there is hardly a cafe fo fimple but that edicts may be found clear and precife for both parties; and therefore the judges, fencible of their fafety, are very feldoms incorruptible. To the principle of honours, which often guides the conduct of judges in other na: tons, they are fuch absolute firangers, that an officer has been feer fitting in fate and diftributing juftice from a bench to which he was chained by an iron collar round his neck, for having the day before been detented in conniving at finagling. This man feemed nut to be afhamed of the crime, nor did any one avoid his company in the evening.

Few crimes are capital in Ruff : murder may be atoned by paying a fun of money; nay, the civil magiftrate takes no cognizance of murder, without hasing previoufly received information at the fit of forme individuals. Criminals were punifhed with torture and the molt cruel deaths till the reign of the illuftrious Catharine I. when a more merciful fyftem took place, and which the prefent empress has fence confirmed by law. See the articles CAthARINE I. of Rabia, and Elizabeth Petrowna.

We have already mentioned the traffic of the Ruff. We have already mentioned the traffic of the Rus. Trade ans
flans with the different nations both of Afia and Eu- sevenuc. rope, and specified iron as one of the articles which they export. We may here add, that in 1792 there were in the government of Parma alone, which lies in

 the empire and benefit of her fubjeets.
The funding army of Ruflia is computed at 250,000 men; befides the fe, the Ruffians can affenble a body

Kunt of 40,000 irregulars, Calmucks, Colfacks, and other Ruta. 'Tartars, who live under their domimon. But the number may be doubled on any emergency. The czarina
has likewife a confiderable fleet in the Baltic, and a great number of formidable galleys, frigates, fire-1hips, and bomb-ketclies.

RUST, the flower or cals of any metal, procured by corroding and diffolving its fuperficiai parts by fome menfruum. Water is the great inftrment or agent in producing ruft : and hence oils, and other fatty bodies, fecure metals from ruft; water being no mentfruum for oil, and therefore not able to make its way through it. All metals except gold are liable. to rult; and even this alfo if expofed to the fumes of fea-falt. For remedies againft ruft, fee Iron, par. ult.

RUSTIC, in architecture, implies a manner of building in imitation of nature, rather than according to the rules of art. See Architecture.

Rusfic Gods, dii ruflici, in antiquity, were the gods of the country, or thofe who prefided over agriculture, \&c. Varro invokes the 12 dii confentes, as the principal among the ruftic gods; viz. Jupiter, Teilus, the Sun, Moon, Ceres, Bacchus, Rubigus, Flora, Minerva, Venus, Lympha, and Good Luck. Befides thefe 12 arch-ruftic gods, there were an infinity of leffer ones; as Pales, Vertumnus, Tutelina, Fulgor, Sierculius, Mellona, Jugatinus, Collinus, Vallonia, Terminus, Sylvanus, and Priapus. Struvius adds the Satyrs, Fauns, Sileni, Nymphs, and even Tritons; and gives the empire over all the ruftic gods to the god Pan.

Rustic Order, that decorated with rufic quoins, ruftic work, \&c.

Rusgic Work, is where the fones in the face, sic. of a building, inftead of being finooth, are hatched, or picked with the point of a hammer.

RLSTRE, in heraldry, a bearing of a diamond thape, pierced through in the middle with a round hole. See Heraldry.

RUT, in hunting, the venery or copulation of deer.
RUTA, RUE: A genus of the monogynia order, belonging to the decandria clafs of plants; and in the natural method ranking under the 26 th order, Multefiliqua. The calyx is quinquepartite ; the petals concave; the receptacle furrounded with 10 melliferous pores; the capfule is lobed. In fome flowers, a fifth part of the number is excluced. There are feveral fpecies; of which the moft remarkable is the hortenfis, or common broad-leaved garden rue, which has been long cultivated for medicinal ufe. This rifes with a fhrubby ftalk to the height of five or fix feet, fending out branches on every fide, garnifhed with decompounded leaves, whofe fmall lobes are wedge-fhaped, of a grey colour, and have a ftrong odour. The flowers are produced at the end of the branches in bunches almoft in the form of umbels: they are compofed of four yellow concave petals which are cut on their edges, and eight yellow Itamina which are longer than the petals, terminated by roundifh fummits. The germen becomes a roundifh capfule, with four lobes pur.ched full of holes containing rough black feeds.

Rue has a llrong ungrateful fmell, and a bitterifh penctrating tafte: the leaves, whin full of vigour, are extremely acid, infomuch as to in:firme and blifer the flin, if much handled. With acrard to their medicinal virtues, they are powerfully itimulating, attenuating, and detergent ; and hence, in cold phlegratic habits,
they quicken the circulation, diffolve tenacious juices, open obtructions of the excretory gland:, and promote the fluid fecretions. The writers on the materia medica in general have entertained a very ligh npinion of the virtues of this plant. Boerhaave is full of its praifes; particularly of the effeatial oil, and the diftilled water cohobated or re difilled feveral times from freth parcels of the herb. After extravagant. \(y\) commending other waters prepared in this manner, he adds, with regard to that (f rue, that the greateft commendations he can beftow upon it fall fhurt of its merit : "What medicine (fays he) can te more efficacious for promoting fweat and perfiration, for the cure of the hy:teric paffion and of epileplies, and for expelling poifon?" Whatever fervice rue may he of in the two laft cafes, it undoubtedly has its ufe in the others: the cohobated water, however, is nct the moft efficacious preparation of it. An extract maje by rectified fpirit contains in a fmall compas the whole virtues of the rue; this menfruum taking up by infution all the pungency and flavour of the plait, and elevating nuthing in difillation. With water, its peculiar flavour and warmth arife; the bitternefs, and a confiderable fhare of the pune ency, remaining behind.
Ruqa Baga, or Swedili turnip. See Husbandry, p. 761.

Book of RUTH, a canonical bnok of the Old Teftament; being a kind of appendix to the bonk of Judges, and an introduction to thofe of Samuel; and baving its title from the perfon whofe fonty is here rrincipaily related. In this fory are obiervable the ancient rights of kindred and redemption ; and the manner of buying the inheritance of the decealed, with other particulars of great note and antiquity. The canonicalnefs of this book was never difputed; but the learned are not agreed about the epucha of the hiftory it relat-s. Ruth the Moabitefs is found in the genealogy of our Saviour. Matth. i. 5 .

RU'TiLUS. See Cyprinus, \(n^{\circ} 6\).
RUTHERGLEN, or by contraction Ruglen, the head borough of the netherward of Lanarkthire in Scotland, is fituated in N. Lat. \(55^{\circ} 51^{\prime}\), and W. Long. \(4^{\circ}{ }^{1} 3^{\prime}\); about two miles fouth-ealt of Glafgow, and nine weft of Hamilton. Few towns in Scotland can lay greater claim to antiquity than Rutherglen. Maitland, in his Hifory of the Antiquities of Scotland, vol. i. p. 92. tells us, that it was founded by a king Rcuther, from whom it derived its name; and a tradition of the fame import prevails anoong the inhabitants. But without laying any ilrefs on the authority of tradition, which is often falfe and always duubtful, we find, from feveral original charters full preferved, that it was erected into a royal borough by king David I. about the year 1126.

The territury under the jurifdiation of the borough was extenfive, and the inhabitants eujoyed many diftinguifhed privileges, which were however gradually wrefteal trom them, by political infuence, in favour of Glafgow, which in later times rofe into confequence by trade and manufactures. The ancient dimenfions of the place are now unknown; but in the fields and gardens towards the ealt the foundations of howles are occafionally difcovered. It is now of a very reduced fize, confling but of one priscipal Rreat and a few lanes, and containing about 1631 inhabitants.

About 150 yards to the fouth of the main ftreet

\section*{R U T \\ [ 577 \\ R U Y}

Ruthre gho.
is a kind of lane, known by the name of Dizs-dylyes. A circumfance which befel the undurtunate quecn Mrry, inmediately atier her forces were routed at the battle of Limgride, has ever fince crntinued to charazerife this place with an indelible mark of oppre brium. Her maj uy, din wing the battle, ilood on a riting ground about a mle from Ruthergle n. She no fooner finv her army defeated than the to. \(\mathrm{k}^{\text {a }}\) her precipitate flight to the fouth Dins-dykes unfortun ttely lay in her naj. Thwo rultics, who were at that inftant cutting grats hard by, feeing hee majelty fleceing in lome, rudeIy attempted to interecp: her, and th catened to cut her in pieces with their icythes if fhe prefumed to pro. ceed a ttep firther. Neither beauty, nor even reyalty it!eif, can at all times fecure the unfortunate when they have to do with the unfecling or the revengeful. Relief however was at hand; and her majelty proceeded in her Hight.

Adjoinine to a lane called the Back-roze Atond the calle of Rutherglen, originally built at a period coeval, it is reported, with the fundation of the town. This ancient fortrefs underwent feveral fieges during the unhappy wars in the days of king Robert Bruce, and it remained a place of firength until the batte of Langfide; foon alter which it was deftroyed by order of the regent, to revenge himielf on the Hamilton family, in whole cultody it then was. The foundations of the buildings are now erafed, and the fite converted into dwelling houfes and gardens.

The kiok of Rutherglen, an ancient building of the Saxon. Gorhic figle, was rendered famus by two tranfactions, in which the fate of Sir William Wallace and his count:y was deeply concerned. In it a truce was concluded between Sisotla:d and England in the year 1297 (Henry's Life of Wallace, Book VI. verfe 862.), and in it Sir John Monteath bargained with the Englifh to betray Wallace his friend and companion (Life of Wallace, Book XI. verfe 796). This ancient building, having become incommodious, was, in 1794 , pulled down, and one of a mojern Ayle was erected in its place. Buried in the area were fisund valt quantities of human bones, and fome relics of antiquity.

No borough probably in Britain puffeffes a political confitution or fett more free and unembarralfedthan Rutherglen. It was anciently under the influence of a felfelected magiftracy, many of whom lived at a diftance from the borough, and who continued long in office withont interruption. Negligence on the onchand, and \(2 n\) unduc excrtion of power on the other, at length excited the burgeffes, abrut the middle of the laft century, to apply an effectual remedy to this evil. The community who, at that period, poffefled the power of reforming the abufes that had long prevailed in the management of the borough, were much alithed in their exersions by a Mr David Spcirs town-clerk, a gentleman unbialifed by falie politics, and who was animated with a ligh degree of true patriotifn. Great oppofition was at firt made to the reform ; but the plan adopted by the burgelifes was wiei, laid, and was profecuted with unremitting afiduity. They were proof againll the influence and bribery of a party that flruggled to continue the old practice; and having at length furmounted every difficulty, they formed a new conflithtion or fett for the borcugh, which :in 1671 , was ap-

Vol. XVI.
provel of by ail the inhabitants of the town, and afterward, infiried in the records of the gencrul convention of the roval breoughs of sicathat.

Rutiand-
thire, Ruydh.

Rutherylen, in conjustion wi!h Glifgow, Reafrew, and Dumbinton, fends a member to the Brit th parianment. The fuirs of this town are generally well attendcul, and have long been famous for a great thow of horles, nf the Limarkthire breed, which are efteemed the beft draught-lonries in Britain. The inhabitants of this borough flill retain fome cuftoms of a very remote antiqui)y. One of thefe is the making of Rutherglen jour cukes. The operation is attended with fome peculiar rites, which lead us to coaclude that the practice is of Pagan origin. An account of there rites is given in Ure's Hifory of Rutherglen and Kilbride, p. 94.; from whence we have taken the above account of this phace, and which we do not hefitate to recommend to the attemtion of fuch of our readers as are fond of natural and local hiftory, being perfuaded that they will find it to be both an ufeful and entertaining performance.

RUTLANDSHIRE, is the lealt county in Erglan 1, it being but to miles in circumference; in which arc two towns, \(4^{8}\) parifhes, and \(32 \sigma_{3}\) houfes. However, for quality it inay be compared with any other county : the air being good, and the foil fertile both for tillage and paftures; and it not only affords plenty of corn, but feeds a great number of horned cattle and fheep. It is well watered with brooks and rivalets; and the principal rivers are the Weland aud the Wafh. It is bounded on the ealt by Lincolnflire; on the fouth by the river Weland, which parts it from Northamptonfhire; and on the weft and north by Leicelterfhire. It has only two narket-towns; namely, Okeham, where the affizes and feffions are held, and Uppingham.

RUYSCH (Frederic), one of the moft emiment anatomifts of which Holland can boaft, was born at the Hague in \(1 \sigma_{3} 8\). After making great progrefs at home, he repaired to Leyden, and there proiecuted the fudy of anatomy and botany. He fudied next at Francker, where lie obtained the degree of ductor of phyfic. He then returned to the Hague; and marying in 1661 , dedicated his whole time to the Pudy of his profeffion. In 1665 he publifhed a treatife, entitled Dilucidatio valvorlarum de variis lymphaticis of latais; which raifed his reputation fo high, that he was chofen profeflor of anatomy at Amfterdam. This honour he accepted with the more pleafure, becaule his fituation at Amlterdam would give him eafy accefs to every requifite help for cultivating anatomy and natural hiftory. After he fettled in Amfterdam, he was perpetually engaged in diffecting and in examining with the moft inquifitive eye the various parts of the haman body. He improved the fcience of anatomy by new difcoveries; in particular, he found out a way to preferve dead bodies many years from putrefaction. His anatomical colle \(\begin{aligned} \text { tion was wis curinus and valuable. }\end{aligned}\) He had a feries of lectufes of all fizes, from the length of the little finger to that of a new born infant. He had alto bodies of full grown perfons of all ages, and a vat number of animals alnu \(\AA\) of every fpecies on the globe, belides a great many other natural cu: riofities. Peter the Great of Rufla, in his tour through Holland in the year 1698 , vifited Ruyfch, and was fo charmed with his converfation, that he

4 D
paffed
paffed whole days with him; and when the hour of departure came, he left him with regret. He fet fo high a value on Ruyfch's cabinet of curiofities, that when be returned to Holland in 1717, he purchaled it for \(30,=00\) florins, and fent it to Peterfourgh.

In 1685 he was made profeffor of medicine, an office which he difcharged with great ability. In 1728 he got his thish-bone broken by a fall in his chamber. The year befure this misfortune happened he had been deprived of his fon Henry, a youthef talents, and well fkilled in anatomy and botany. He had been created a doetor of phylic, and was fuppofed to have affilfed his fatherin lis difcoveries and publications. Ruyfch's family now eoufited only of his youngelt daughter. This lady hatd been early infpired with a paflion for anatnmy, the favourite fcience of her father and brother, a:d had ftudied it with fuccefs. She was therefore well qualified to affit her father in forming a fecond collec. tion of curiofities in natural hiftory and anatomy, which le began to make after the enuperor of Rullia had purchafed the firft. Rusfor is faid to have been of fo heal. thy a contitution, that though he lived to the age of 93, yet during that long perind he did not labour under the infirmities of difeale above a month. From the time he broke his thigh he was indeed diabled from walking without a fupport ; yct he retained his vigour both of mind and body without any fentible alteration, till in 1731 his frength at once deferted him. He died on the 22d of February the fame year. His anatomical works are printed in + vols 4 to.

The Ityle of his writings is fimple and concife, but fometimes inaccurate. Inftruction, and not oftentation feems to be his only aim. In anatomy he andubtedly made many difcoveries; but from not being fufficiently converfant in the writings of other anatomifts, he publifhed as difcoveries what had been known before. The academy of fciences at Paris in 1727 elected him a member in place of Sin Ifaac Newton, who was lately deceafed. He was alfo a member of the Royal Society of London.

RUYTER (Michael Adrian), a diftinguiflsed naval officer, was born at Fleflingue, a town of Zealand, in 1607. He entered on a fei-faring life when he was unly II years old, and was firft acabin-boy. While he advanced fucceflively to the rank of mate, mafter, and captain, he acquitted himfelf with ability and honour in all the ee employments. He repulfed the Irifh, who attempted to take Dublin out of the hands of the Englifh. He made eight voyages to the Weft Indies and ten to Brazil. He was then promoted to the rank of rear admiral, and fent to affit the Portuguefe againft the Spaniards. When the enemy came in fight, he advanced buldly to meet them, and gave fuch unqueltionable pronfs of valour as drew from the Portuguefe monarch the waimelt applaufe. His gallantry was ftill more conipicu us before Sblee, a town of Barbary. With one fingle veltel he failed through tre roads of that place in defiance of five Algerine Corfairs who came to attack him.

In 1653 a fquadron of feventy veffels was difpatelied againt the Englith under the command of Van 'Tromp. Kuyter, who accompanied the admiral in this expedition, feconded him with great fkill and bravery in the three battles which the Englith fuglorioufly won. He bias aftetwards Ratiuned in the Mediterranean, where
he captured feveral Turkifh velfels. In 1659 he re. ceived a commitfion to join the king of Denmark in his war with the Swedes; and he not only maintained his former reputation, but even raifed it higher. As the eward of his fervices, the king of Denmark ennobled him and gave him a penfion. In 1661 he ran allure a veffel belonging to T'unis, releafed 40 Chillian flaves, made a treaty with the Tunifians, and rejuced the Algerine corfairs to fubmifion. His country as a teltimony of her gratitude for fuchilluftrious fervices, raifed lims to the rank of vice-admiral and commander in chief. To the latter diguity, the higheft that could be conferred upon him, he was well intitled by the fignal vietory which he obtained over the combined fleets of France and spain. This battle was fought in 1672 about the time of the conçueft of Holland. The fight was maintained between the Englith and Dutch with the obflinate bravery of nations which were accuftomed to difpute the empire of the main. Rnyter having thus made himfelf mafter of the fea, conducted a Heet of India:nen fafely into the Texel; thus defending and enriching his country, while it was become the prey of hoftile invaders. The next year lie had three engagements with the fleets of France and England, in which, if polible his bravery was ftill more diftinguilhed than ever. D'Ellrees the French vice-admiral wrote to Colhert in thefe words: "I would purchafe with my life the glory of De Ruyter." But he did not long enjoy the trimmphs which he had fo honourably won. In an engagement with the French fleet off the coat of Sicily, he loft the day, and received a mortal wound, which put an end to his life in a few days. His corpfe was carried to Amfterdam, and a magnificent monument was there erected by the command of the fates-general. The Spanifh council beftowed on him the title cf duke, and tranfmitted a patent invefting him with that dignity; but he died before it arrived.

When fome perion was congratulating Louis XIV. upon De Ruyter's death, telling him he had now got rid of une dangerous enemy; he replied, "Every one mul be forry at the death of fo great a man."

RYE, in botany. Sce Secale.
Rre-Grafs. Sec Agriculture, \(n^{\circ} 179\).
Rye, a town in Suffex, with two markets on Wednefdays and Saturdays, but no fair. It is one of tive cinque-ports; is a handfome well built place, governed by a mayor and jurats, and fends two members to parliament. It has a church built with ftone, and a rownhall; and confilts of three ftreets, paved with itone. One fide of the town has been walied in, and the other is guarded by the fea. It has two gates, and is a place of confiderable trade in the thipping way. From thence large quantities of corn are experted, and many of the inhabitants are fifhermen. It is 34 moles fouth-eaft by fouth of Tunbridge, and 64 on the fame puint from London. The mouth of the harbour is of late choaked up with fand; but if well opened, it would be a good Pation for privatcers that cruize againft the French. E. Long. O. \(5^{\circ}\). N. Lat. 51.0 .

RYMER (Thomas), Eifq ; the author of the Foidera, was born in the north of England, and educated at the grammar fchool of North.illerton. He was admitted a fcholar at Cambridge, then became a member of Gray's Inn, and at length was appointed hiftoriographer to King William in place of Mr Shadwell. He wrote A

View of the Tragedies of the laft Age, and afterwards publithed a tragedy named Edjar. For a critic he was certainly not well qualified, for he wanted candour; nor is his judgment much to be relied on, who could condemn Shakefpar with fuch rifid feverity. His tragedy will thow, that his talents for poetry were by no means equal to thofe whofe poems he has publicly cenfured. But though he has no title to the appellation of poet or critic, as an antiquarian and hitorian his menory will long be preferved. His Fadera, which is a collection of all the public tranfactions, treatics, \&c. of the kings of England with foreion princes, is efteemed one of the moft authentic and valuable records, and is oftener referred to by the bett Englith hittorians than perhaps any other book in the language. It was pub. luthed at Loncion in the beginning of the prefent century in 17 volumes filio. Three volumes more were added by S.inderfon after Rymer's death. The whole were reprinted at the Hague in 10 vols in 1739. They were abridged by Rapin in French, and inferted in Le Clerc's Bibhioth:que, a tranillution of which was made by Stephen Whatey, and printed in 4 vols \(8 \mathrm{vo}, 1731\).

Rymer died 14th December 1713, and was buried in the parilly church of St Clement's Danes. Some ipecimens of his poetry are preferved in the fift volume of Mr Nichol's Select Collection of Milcellancous Poems, 1780 .

RYNCHOPS, in ornithology, a genus belonging to the order of anferes. The bill is Atraight; and the fuperior mandible much fhorter than the inferior, which is truncated at the point. The fpecies are two, viz. the nigr: and fulva, both natives of America.

RYOTS, in the policy of Hindoftan, the modern name by which the renters of land are diftinguifhed. They hold their polfeffions by a leafe, which may be confidered as perpetual, and at a rate fised by ancient
furveys and valuations. This arrangement has baen fo long eftablifhed, and accords fo well with the ideas of the natives, concerning the diftinction of cafts, and the functions allouted to each, that it has been invariably maintuined is all the provinces fubject either to Af.aho metans or Europeans; and to both it ferves as the bitfis on which their whole fyttem of finance is founded.

Refpecting the precire mode, however, in which the ryots of Hindoftan held their poffefions, there is much diverfity of opision; the chief of which are very impartially delineated in note is. to the Appendix of Robertion's Hiforical Difquifition, scc. concerning Indir, p. 3+5. to which we refer fuch of our readers as are interetted in this fubjeft of finance.

RYSCIIf 1 , in botany: A genus of the monogynia order, belonging to the pentandria clafs of plants; and in the natural method ranking with thofe that are doubtful. The calyx is pertaphyllous; the corolla is pentapetalous; and the apices turned back, about three times the length of the calyx; the filaments are five, awl-fhaped, avd fhorter than the petals. The feedvellel is quadrilocular, and contains many feeds. Of this there are two fpecies, viz. the Claufifolia and Souroubea.

RYSWICK, a large village in Holland, feated between the Hague and Delft, where the prince of Orange has a palace, which ftands about a quarter of a mile farther. It is a very noble ftructure, all of hewn flone, of great extent in front, but perhaps not proportionably high. It is adorned with a marble ftair-cafe, marble floors, and a magnificent terrace. There is a good profpect of it from the canal between Delft and the Hague. This place is remarkable for a treaty concluded here in 1697 between England, Germany, Holland, France, and Spain. E. Long. 4. 20. N. Lat. 52. 8.

\section*{S.}

S\(f\), or \(s\), the 18 th letter and 1 th confonant of our , alphabet ; the found of which is formed by driving the breath through a nirrow palfage between the palate and the tnggue elevated near it, together with a motion of the lower jaw and teeth towards the upper, the lips being a little way open; with fuch a configuration of every part of the mouth and larynx, as renders the voice fomewhat fibilous and hiffing. Its found, however, varics; being firong in fome words, as this, thus, sec. and foft in words which have a finale, as mufe, avife, \&c. It is generally doubled at the end of words, whereby they become hard and harth, as in kifs, lefs, \&e. In fome words it is filent, as ife, ifanh, vif. co:nnt, \&c. In writing or printing, the long character \(f\) is generally ufed at the beginning and middle of words, but the thorts at the end.
In abbreviations, \(S\) flands for focietas or focius;
R.S. S. for rezice focietalis focius, i. e. fellow of the royal fociety. In medicinal preferiptions, S. Ufed as a numeral \(S\) anciently denoted feven; in the Italian mulic, S fignibies fols: And in books of navigation, S. ftands for fouth; S. E. for fouth-eaft ; S. W. for fouth-welt ; S. S. E. for fouth fouth-eaft; S. S. W. for fouth fouth welt \&ec.

SAAVEDRA (Michacl de Cervantes), a. celebrated Spanifh writer, and the inimitable anthor of Don Quixote, was born at Madrid in the year 1549 . From 4 D 2
sanvedre, his iafaney he was fond of books; but he apptied himfelf wholly to bouks of emertainment, fuch as novels and poetry of all kinds, efpecially Spanilh and Italian authors. From Spain he went to Italy, either to derve Cardinal Aquiviva, to whom he wa, chamberkain at Rume; or clis to follow the profefion of a toldier, as he did fome years under the viforious brnuers of Marco Antori, Celoma. He was pretent at the battle of Lepanto, fouglt in the year 1571 ; in which he either loft his left hand by the fhot of an harquebus, or had it fo maimed that he lolt the ufe of it. After this he was taken by the Moors, and carried to Al giers, where he continued a captive five years and a half. Then he seturned to \(\mathrm{Sp}_{\mathrm{p}} \mathrm{in}\), and applicu hinfelf to the writing of comedies and tragedies; and he compofed feveral, all of which were well received ty ine public, and acted with great apoluufe. In the year \(158+\) he publifhed hiis Galatea, a nevel in fix books; which he prefented to Afcanio Colonna, a man of high rank in the church, as the firft fruits of his wit. Bui the work which has done him the greateft honour, and will immortalize his name, is the liftory of Don Quixote; the firlt part of which was printed at Madrid in the year 1605 . This is a fatire upon books of knight-errantry; and the principal, if not the fole, end of it was to deftroy the reputation of thefe books, which h.td to infatuated the greater part of mankind, efpecially thofe of the Spanilin na. tion. This voork was univerfally read; and the mift eminent painte: \(s\), tapeftry-workers, engravers, and fculptors, have been employed in reprefenting the hiftory of Don Quixote. Cervantes, even in his lifetime, obtained the glory of having his work receive a royal approbation. As King Philip III. was flanding in a balcony of his palace at Madrid, and viewing the country, he obferved a fudent on the banks of the river Manzanares reading in a book, and from time to time breaking off and beating his forehead with extrandinay tokens of pleafure and delight: upon which the king faid to thofe about him, "That fcholar is either mad, or reading Don Quixote:" the latter of which proved to be the cafe. But viitus laudatur et aglit: notwithfanding the raft applaule his buok every where met with, he had not interelt enough to precure a finall penfion, but had much ato to kesp himfelf from ftarving. In the year \(\mathbf{1 6 1 5}\), he publifhed a fecond part; to which he was patly moved by the prefumption of fome licribbler, who had publifhed a continuation of this work the year before. He wrote alfo feveral novels; and among the ref, "The Troubles of Perfiles and Sigimunda." He had employed many years in wriling this novel, and finifhed it but juft before his death ; for he did not live to fee it publifhed. His ficknefs was of fuch a nature, that he himfelf was able to be, and actually was, his own hithorian. At the end of the preface to the Trocbles of Perfiles and Sigifmunda, he reprefents himfelf on hor feback upon the riad, and a fluclent, who had overtaken him, engaged in converfation with him: "And happening \(t\), talle of my illnefs (Gays he), the fudent foon let me know any doom, by faying it was a dropfy \(I\) had got; the thirft attending whith all the water of the oct:n, though it were not falt, would not fiffice to quench. Therefore Sener Cervantes, fays he, you mult driak nothing at all, but do not forget to eat; for this alone will recoyer you without any other phyfic. I have been told the fame by others, anfwered I;
but I can no more forbear tippling, than if I were born t.) do nothing elfe. My life is drawing to an end ; and from the daily journal of my pulfe, 1 hall have finithed my courfe by next Sunday at the farthelt. - But adieu, my merry friends all, for I am going to die; and I hope to fee you ere long in the other world, as ha py as heart can wifh." His dropfy increaled, and at latt proved futal to him; yet he continued to fay and to write bon mots. He received the latt facrament on the 1Sth of April 1616; yet the day after wiote a Dedication of the 'Troubles of Perthis and Sigifnuuda to the Condé de Lemos. The particular day of his dea \(h\) is not known.

SABA, a lutch ifland near St Euftatia in the Weft Indies. It is a teep rock, on the fummit of which is a little grounci, vely pruper for gardening. Frequant rains, which do not lie any time on the foil, give growth to plante of an exquifie flavour, and cabbages of an extrandinary fize. Fifty European families, with abrut one hundred and fifty flaves, here ratile cotton, ipin it, make flockings of it, and fill them to other colonies for as much as ten crowns \({ }^{*}\) a pair. Throughont Annerica there is no blood fo pure as that of Saba; the women there preferve a frefhrefs of complexion, which is not to be found in any other of the Caribbee illands. Happy colony! elevated on the top of a rock between the fky and fea, it enjoys the benefic of both elements without dreading their forms; it breathes a purc air, lives upon vergetables, cultivates a fimple commodity, from which it derives eafe without the temptation of riches: is emplojed in labours lefs troublefome than ufetul, and poffeffes in peace all the bleffings of muderation, health, beauty, and liberty. This is the temple of peace from whence the philofopher may contemplate at leifure the errors and pafions of men, who come, like the waves of the fea, to Atrike and dath themfelves on the rich coafts of America, the fpoits and poffieflion of which they are perpetually contending for, and wrefting from each other : hence may he view at a diftance the nations of Eurobe bearng thunder in the midf of the ocean, aud burning with the flames of ambition and avarice under the heats of the tropics; devouring gold without ever being fatisfied; wading through feas of blood to ..mafs hofe metals, thofe pearls, tho e diamonds, which are ufed to adorn the oppreffors of mankind; loading innmerable thips with tione precious cafks, which iurnith luxury with purple, and from which flow plealure:, eff minacy, cru:ly, aud debauchery. The tranquil iulbabitant of Saba views this mafs of follies, and ipiss his cotton in peace.
SADFANS. See Sabians.
SABAZIA, in Greek antiquity, were meturnal my feries in honour of Jupiter Sabazius. All the initiated had a golden derpent put in at their biealts, and taken out at the lower part of their garments, in memory of Jupiter's ravifhing Proferpma in the orm of a ferpent. There were alfo other deats and facrifices diflinguithed by this appell.tim, in honour of Mithras, the deity of the Perians, and uf Barchus, who was thus denominated 'ry the Sabians, a people of Thrace.

SABBATARIANS, or seventh day baptists, a fect of anabaptifs; taus called, becanc they obferved the Jewih or Saturday-Sabbath, from a periualion that it was never abrogated in the New Tellament by the inftitutions of any other.

SABBATH,

Salbath.
SABBATH, in the Hebrew language, fignifies ref. The feventh day was denominated the Sabhath, or day Defintion. of refl, becaufe that in it God had relled from all his works which he created and made. lions that time the feventh day feems to have been fet apart for religious fervices; and, in confequence of a particular injuttion, was afterward, oblerved by the Hebrews as an holyday. 'Tles w're commanded to fet it apart for facred purpoles in honour of the creation, and likewife in memorial of their own redemption from Egyptian bondaçe.
Inportance The importance of the iuftitution may be gathered of the infti- from the different laws relpecting it. When the ten tution and early ceremon:es. conmandments were publifhed from Momt Sinai in tremendous pomp, the baw of the Subbath held a place in what is commonly called the firlt table, and by fub. fequent fatute the violation of it was to be punthed with death. Six days were allowed for the ufe and fervice of man: but the feventh day God referved to himfelf, and appointed it to be obferved as a ttated time for holy office, and to be fpent in the duties of piety and devotion. On this day the minilters of the temple entered upon their week; and thote who had attended on the temple fervice the preceding week went out at the fame tinue. New loaves of thew-bread were placed upon the golden table, and the old ones taken away. 'Two lambs for a burnt-offering, with a certain proportion of fine four, mingled wihh nil, for a breal-offering, and wine for a libation, were offered. The Sabbath, as all other feftivals, was celcbrated from evening to evening. It began at fix i: the evening on Friday, and ended at the lame time the next day.

Concerning the time at which the Sabbath was firft Time nf its Concerning the tome at which inftituted, different opinims have been held. Some have maintained, that the fanctification of the feventh day, mentioned in Gell. ii. is only there fp ken of Six mponety or by anticipation; and is to be underftood of the fabbath afterwards \(n j\) ined the chideren of Itrael at the commencement of the Mofaic difpenfation. But without entering into a paricuar examinan on of all the arguments alduced to lupp ui this opininn, a few obfervations, it is prefumed, will be futficient to fhow that it relts on no folid foun lation.

It canrot eafily be luppofed that the infpired pen. man would have mentioned the fanctivation of the feventh day amengit the prineeval tranticions, if fuch fand fication had not taken, lace until 2;00 ycars afterwards. Writers, ambitivus of that artiticial cles ance whach the rules of criticitm have eltablithed, often brugg together in their nairatives events which were themfelves far diftant, for the fate of giving form to the \(r\) difeourle; but Mofes appears to have delpifed all fich finnfy refinements, and to h ve conitrueted his narrative in great conformity to the feries of cuents.

From the accounts we hasc of the religinus fervice practifed in the patriarchal age, it appears that, imm.diately after the fall, when diam w s reftored to \(\mathrm{f}_{\mathrm{d}}\) vour through a Mediator, a Atated forms of puolic worthip was inthituted, which man was required to nbforve in tentimony, not ouly of his dependence on the Creator, but alfo of his fieth and bofe in the promife made to our firlt parents, and feen afir off Ol an intitution then fo grand ard important, no circumilance would be omitted that is necefiary to preferve it, or that contri. butes to render the obfervance of it regular and frolemin.
'I'hat detcrmined times are necefiary for the due ce. lebration of divine fervice, cannot be denied. Such is the confitution of man, that he mult howe parricular times fet apart for particular fervices. He is dornied to toil and labour ; to earn his bread in the tweat of Neceflisy his face; and is caprable of perlorming religious du- of Raiod ties only in fuch a manner as is confiltent with his fitu- daye for ation in the world. If itated tianes for religious folem- fous pertrities had not been enjoined, the confequence would have been, that fuch folcmnities wothl have been altogcther neglected; for experience thows, that if mankind were Iclit at liberty when and how ofen they the uld perform religious offices, thete offices would not be performed at all. It is the obfervation of huly times that preferves the pratice of holy ferrices; and without the irequent and regular returns of hallowed days, man wou'd quicily forget the duty which he owes to God, and in a finort time no vellige ofreligion troula be found in the world.

Amoreg the ordinances which God vouchfafed his Obiedions anciant people, we find that the pious obfervation of bolydays was parimlarly infilted upon; and the Sabbuth was enjoined to be kept holy, in the mott fitemn manner, and under the feverell penlatice. Can it then abath be fuppofed that He would faffer mankind, from the creation of the world to the Mofaic era, to romain with. out an indlitution fo expedient it itfelf, and as well fited to anfwer the end propofed by it, under the one difpenfation, as ever it could be minder the cher? No; we have cuery imaginable reafon to conclude, that when religions fervices were enjoined, religious times were appointed alfo; for the ons neceflarily impines the other.

It is no objection to the early inflitution of the Sabbath, that there is no mention of it in the hiltory of the patrarchal age. It would have fwelled the Bible to a molt enormous fize, had the facred hiftorian given a particular accuunt of all the tranfactions of thofe times; betides, it would have anfwered no end. When Moles wrote the book of Genelis, it was unencefiary to relate minutely tranfactions and inftitutions already well known by tradition: zecordingly we fee, that his nar. rative is everywhere very concile, and calculated only \(t\), preferve the nemory of the moft important facts. However, if we take a view of the church-fervice of the patiarchal age, we thall find that what is cailed the ? gal vifentation, at leat the liturgic part of it, was ho new tilem, but a collestion of inltit:tions obferved from the begiming, and republithed in form by inoses. The Scriptures inform us that Cain and Abel offered facrinces; and the accomit winch is given of the acceptance of the onc, and the rejection of the o her, evidently thows that thated laws refpecting the ferrice had then taken place. "In proc \(\mathrm{S}_{\mathrm{s}}\) of time", "t the cad of the ciays, "Abel bruught an offerive" Heic was prief, alt ir, maticer of facrifice, appointird sime, mosive to facrifie, aronement maie, and aceepted. The dittinction If animals into c'ean and uncleaubefore the flond, and Noah' lacratice immediately afier his deliverance, without any new direction, is an unanfererabe proof of the fame twh\%. It is teftificd of \(\Lambda\) braham, by God himfelf, that he kept his charge, his commantments, his firtules, and his icus. Thele exprefions comprehend the varous branclics, into whic! the law given at Sinai was divided. They contain the moral preceps, afirmative and negative, the matter of seligious fervice, a body of

\section*{\(S A B \quad[582] \quad S A B\)}

Sabith．laws to direct obedience，and to which man was to con－ －-2 form lis condust in cvery part of duty．Agreeably to this，we hind that ficrifices were offered，altars and places of worihip e．nteerated，and the Sabbath allo mentioned is a well known tolemmity，before the pro－ mulgation of the law．It is expretsly taken notice of at the fall of mamaz；and the inctucntal manmer in which it is then mentoned，is a convinciny proot that the Iraelites were no itrangers to the inititution：for had it been at revone，it muth have been enjuined in a poditive and particular manner，and the nature of it mult have been laid open and explaned，otherwile the term wuld have conveyed no ineaning．
7 The divilion of time into avecks，or periods of feven

\section*{シーロ}
＊ven．
days，which obtained to early and almolt univertally，is a dtrong indication that one day in leven was always dif－ tinguithed in a particular manner．\(W_{c i} k^{*}\) ，and feven days，are in foripture language fynonymous terms．God cunimaded Noah，feven days betcre he entered the ark， to introduce into it all forts of living creatures．When the waters of the flood began to abate，Noah fent forth a dove，which，finding no ruft fur the bole of her toot， returned to him．Aiter feoen days he ient forth the dove a lecond time，and again the returned to the ark． At the expiration of other foven ways he let go the dove a third time：and a queek is pokea of（Gen．xxix．）as a well known fpace of time．

This leptenary divifion of time has been，from the earlielt ages，uniformly obferved over all the ealtern world．＇The Itraclites，Allyrians，Egyptians，Indans， Arabians，and Perfians，have always made uie of a week，confifting of feven days．Many vain attempts have been made to account for this uniformity；but a practice io general and prevalent could never have taken place，had not the feptenary diftribution of time been inllituted from the beginning，and handed down by tradition．

From the fame fouree alfo mult the ancient beathens have derived their notions of the facrednets of the fe－ venth day．That they had fuch notiuns of it is evident from feveral paliages of the Greck poets quuted by Ariltobulus，a learned Jew，by Clement of Alexan－ dris，and Eufebius．

\section*{i6dıин，ispor íцар．Hefiod． \\ The feventh，the facred day．}
Afterwards came the feventh，the facred day．
Again：
\[
\begin{aligned}
& \text { On the feventh day all things were completed. }
\end{aligned}
\]
 All things were made perfect on the fiventh day．
＇That they likewife held the number feven in high ef－ timation has been thown by a learned，though fometimes fancilul，author＊，with fuch evidence as to entorce con－ viction．The Pythagoreans call it the venerable num－ ber，बibasus \(\alpha \xi \cos\) ，worthy of veneration，and held it to be perfict and moft proper to religion．They denominated it fortane，and alfo ityled it vcice，found，mufe，becaufe，no duubt，feven diftinst notes comprehend the whole feaic of mufic，beyond which neither voiee not inltrument can go， but mult return from the feventh，and begin again anew． They likewife defigned it rensopopos，leading to the ent．

Seren，in the Hebrew language，is cxpreffed by a word that primarily lignifies fuinefs，completion，fuficiency，and is applied to at cued，or feven diys，becatufe that was the full time employed in the work of creation；to the Sublath，becaule on it all things were completed；and to an oath，becaule it is fufficint to put an end to all frife． This opening of the Hebrew roct will enable us to come at the meaning of thofe expreffions of the hea－ thens，and alfo let us fee whence they derived their deas and modes of fpeaking，and that the knowleuge of the iranactions at the creation，though much perverted， was never entirely loft by them．

It has been fuppofed by fome，that the heathens bor－ rowed the notion of the facrednefs of the feventh day from the Jews．But this opinion will not readily be admitted，when it is eonfidered that the Jews were held in the greateft contempt by the furrounding nations， who derided them no lefs for their fabbaths than for their circumcifion．All forts of writers ridiculed them on this account．Seneea clarged them with fpending the feventh part of their time in floth．Tacitus faid， that not only the feventh day，but alfo the feventh year， was unprofitably walted．Juvenal brings forward the fame charge；and Perlius upbraided them with their re－ cuita fabbata．Plutarch faid that they kept it in honour of Baechus．Tacitus affirmed，that it was in honour of Saturn ；but the moft abominable affertion of all is that of Apion，who faid that they obferved the Sab－ bath in memory of their being cured on that day of a thameful difeafe，called by the Egyptians fablo．

Some perceiving the force of this objection have con－ tended，that time was divided into weeks of feven days，that each of the planetary gods，the Sun，D Loon， Mereury，Venus，Mars，Jupiter，and Saturn，who were the Dii majorum gentiun，might have a day appropriated to his fervice．But if fuch was the origin of weeks， how came the great and ancient goddefs Tellus to be omitted？She was worfhipped by the early idolaters as well as the other planets，and mult furely have been deemed by them as worthy of a particular day fet apart to her honour as the planet Saturn，who was long un－ difcovered，afterwards feen but occalionaily，and at all times confidered as of malign afpect．（See Rem－ PHAN．）

Others have fuppofed，that as the year was divided in－ to lunar months of fomething more than 28 days，it was natural to divide the month into quarters from the different phafes of the moon，which would produce as many weeks of feven days．But this fuppofition is lefs tenable than the former．The phafes of the moon are not fo precifely marked at the quarters as to attract to them any particular notiee，nor are the quarterly ap－ pearances of one monch commonly like thole of another． We cannot，therefore，conceive what fhould have induced the earliett oblervers of the phafes of the moon to divide the month into four parts rather than into three，or five， or feven Had the ancient week conlifted of 14 days， it might have been inferred，with fome degree of plat－ fibinty，thast its length was regulated by the phafes of the moon，becaufe the thape of that luminary，at the end of the fecond quaiter，is very precifely marked； but thace is nothing whieh，in the prefent hypothefis， could have every where led mankind to make their weeks confift of feven days．This divifion of time，therefore， can be accounted for only by admitting the primeval in－ fitution

\section*{S A B}
fitution of the Sabbath, as related by Mofes in the book of Genefis. That inllitution was abfolutely necellary to preferve among men a fenfe of religion; and it was renewed to the Jerrs at the giving of the law, and its obfervance enforced by the leverelt penalties. It was accordingly obferved by them with more or teis Atrictnefs in every period of their commonwealth, and thene is none of the inflitutions of their divine lawgiver which, in their prefent flate of difperlion, they more highiy honour. They regard it, indced, welt a fuperilitious reverence, call it their fpoufe, their detight, and fpeak of it in the molt magnificeut terms. They have often varied in their opimons of the manner in which it ought to be kept. Ita the time of the Maccabecs, they carried their refpeet for the fabbath to very high, that they would not on that day defend thomfelves Irom the attacks of their enemies. But afterwards, they did not firuple to ftand up.on their necellary delence, although they would do nuthing to prevent the enemy from carrying on their operations. When our tavour was on earth, it was no fin to lonfe a boalt from the flall, and lead him to water; and if he had chanced to fall into a ditch, they pulled him out: but now it is abfolutely unlawtul to give a creature in that fituation any other allitance than that of food; and if they lead an animal to water, they mult take care not to let the bridle or halter hang loofe, otherwife they are tranfrefliors.

As the law enjoins reft on that day from all fervile employments, in order to comply with the injunction, they undertake no kind of work on Friday bat iuch as can eafily be accomplithed before evening. In the atternioon they put into proper piaces the meat that they have prepared to eat the day following. They afterwards fet ont a table covered with a clean cloth, and place bread upon it, which they alfo cover with another cloth; and during the fabbath the table is never moved out of its place. Abaut an hour before fimfer, the women light the fabbath lamps, which hang in the places whe e they eat. TI Cy then Atreteh forth their hands to the light, and prorounce the following benediation. "Bleffed be thou, O God, king of the world, who haft en oired us, that dre tanctilied by thy comm.ndments, to light the fabb.th lamp." Thefe lamps are two or mus in number, according to the lize of the chamber in which they are du1, e de \(i\), and continue to burn during the greatelt part of the night. In order to begin the fablath well, they wath th.ir hunds and faces, trim their hant, and pare their nato, beginning at the fourth finger, then going t the fecond, then the fifth, then the third, and ending with the thumb. If a Jew calts the pairings of his nalls to the ground, he is rafoat, that is, a wuiched man; for batan hats great power uver thole p.irings if ails; and it leems they are of great ufe to the wrzards, who know how to en:ploy them in their e:chentenents. If he buries them in the earth, he is izedic, tha: is, a juff man, it he burns them in the fire, he is chefifl, that is worthy of honour, an holy man. When they hive peiformed thete preparatory ceremonies, they repair to the fynagogue, and enter upon their devoions. As tonn a prayers be \(\sin\), the departed fruls ipring out of the purgatoriat Hames, and have liberty to cool then,feives in water while the fabhath latts; for which reaton the Jews prolong the continuance of it as much as they can; and the Rabbins have frictly commanded them net to exhault
all the water on the falbath day, left thofe miferable
Sallation fouls thould by that means be deprived of the refrething clement. When they have endect their prayers, hey return home, and falute one another, by withing a good fablath. They then fit down to table. The malter of the family takes a cup full of win:, and lifting up his hand, fiyss, " Blefficd be thon, O Gind, our Lord, king of the world, who halt created the fruit of the vine.Blefied be thun, O God our Lord, king of the werld, who haf fanctified us by thy commandments, and givern us thy holy fabbath; and of thy good will and pleallure haf left it to us as in inheritance, the memorial of thy works of creation. For it is the begimning of the congre ation of fants, and the memorial of the coming out of Egrpt. And thou haft alfo chofen us from all othe: people, and fanctificd us, and with love and pleafure hall left thy holy fabbath an inheritance. Bleffed be thou, O God, who fandified the fabbath." After this benediction is etuded, he drinks, and gives the cup to all tibat are prefent. He then removes the cloth, and taking bread, fays, "Bieiled be thou, O God our Lord, king of the world, who bringer bread out of the catth." 'Then he breaks off \(a\) bit, and eats, and alfo gives a piece of it to every one of the company.

On the morning of the fabbath, the Jews do not rife fo early as they do at other times. Thinking, the greater pleafure they take on tha: day, the more devoully they keep it. When they come into the fymagogue, they pray as ufual, only the devorions are fomewhat longer, being intermingled with pfalmody, in honour of the fablath. The pentateuch is then produced, and feven fections of it are read in order by feven perfons chofen for the purpofe. Severalleffons are likewife read out of the prophets, which have fome relation to what was read out of the law. After morning prayers they icturn to their houfes, and eat the fecond fabbathmeal, fhewing every token of joy, in honour of the feftival. But a one has feen any thing omincus in his fleep; if he has dreamed that he burnt the book of the law; that a beam has come out of the walls of his honte; that his teeth have fallen out;-then he tafts until very late at night, for all fuch dreams are bad ones. In the afternoon they go again to the fynagogue, and perfurm the evening fervice, adding to the ordinary prayers fome leffons that refpect the fablath. When the devutioul duties are ended, they return home, and light a candle refembling a torch, and again lit down to eat. I'hcy remain eating until near fix, and then the mater of the family takes a cup, and ponring wine into it rehearfes fome benedictions; after which he pours a little of the wine upon the ground, and fays, "Blefed be thou, O Lord, ling of the world, who haf created the finit of the vine." Then hulding the cap in his left hand, with the right he takes a box of fwect fices, and fays. "Bieffed be thou, O Lorl God, who hat created varoons kinds of fweet fpices." He fmells the fpices, and holds them out to the reft, that they m.yy do the frome. He then takes the cup in his right hand, and \(g\) ring to the candle vicws the left very narrowly, and pronounces a blelfing. With the cup in the lets hand, he eximines the right in the fome manner. Again, holding the cup in his right hand, he rehearies another benediction, and at the fame time pours fome of the wine on the gronad. After this he drinks alittle of it, and then hands it about to the rett of the family, who finifh

Sablath. \(\rightarrow\) what remains. In this manner the fabbath is ended by the Jews, and they may retun to their ordinary employments. Thofe whon meet pay thcir cumpliments, by withing one another a lappy week.

The Rabins have reckonal up nine and thirty primaty prohibitions, which unght to be oblerved on the fatbutic feftival; but their circumlanees and dependen's, which are alfo obligatory, are airnolt innumerable. The 39 articles are, Not to till the ground; to fow; to reap; to hay; make to bind up thenves of corn; to threlh; to winnow; to grind; to fift meal: to knead the dough; to bake; to thear; to whiten; to comb or card wool: to fpin ; to twine or twill; to warp; to dye; to tie; to untie; to few; to tear or pull in pieces; to build; to puil down; to beat with a hammer; to hunt or fill ; to kill a beall ; to flay it ; to drefs it ; to ferape the fkin; to \(\tan i t\); to cut leather; to write; to feratch ont; to rule paper for writing ; to kindle a fire; to extinguith it; to carry a thing from place to place; to expole any thing to fale. Thefe are the primary prohibitions, and each of thefe has its proper confequences, which amount to an incredible number; and the Jews themfelves fay, that if they could kecp but two hibbaths as they ought, they would foon be delivered out of all their troubles.

If a Jew on a journey is overtaken by the febbath in a wood, or on the highway, no matter where, nor under what circumftances, he lits down; he will not fir out of the fpot. If he falls down in the dirt, he lies there; he will not rife up. If he thould tumble into a privy, he would reft there: he would not be taken out (a). If he fees a flea fkipping upon his clothes, he muat not catch it. If it bites him, he may only remove it wihh his hand; lie mult not kill it ; but a loufe meets with no fuch indu!gence, for it may be deftroy. ed. He muft not wipe his hands with a towel or cloth, but he may do it very lawfully with a cow's tail. A frcth wound mutt not be bound up on the fabbath-day ; a plafter that had formerly been applied to a fore may renain on it; but if it falls off, it mult not be put on anew. The lame may ufe a ftaff, but the blind mult not. Thefe patticulars, and a great many more of the fane nature, are obferved by the Jews in the flrictelt manner. But if any one withes to know more of the prafice of that devoied race, he may confult Buxtorf's Fudaica Synugoga, chap. x. xi. where he will find a complete detail of their cuftoms and ceremonies on the labbath; and likewife fee the primary prohibitions branched cut into their refpective circumitances.
Inítitution uf sinnday or the
1.ord's
day.
\(A\); the feventh day was obferved by the Jewifh church, in memory of the reft of God after the works of creation, and their own deliverance from Pha. raoh's cyranay; to the firt day of the week has always been obferved by the Chrillian church, in memory of the refurreation of Jefus Ciritt, by which he completed the work of man's redemption on earth, and refcued him from the dominion of him who has the power of death.

This day was denominated by the primitive Chif- Eabbatin tims the Lorl's day. It was alfo fometimes called Sundiy; which was the name given to it by the beathens, who dedieated it to the fun. And indeed, although it was origina:ly ealled Sumday by the heathens, yet it may very properly retain that name among Chriftimes, becaule it is dedicated to the homour of "The true light," which lighteth every man that cometh into the world, of Hin who is ftyled by the prophet "The Sun of righteoufnefs," and who on this day arofe from the dcad. But although it tas, in the pimitive times, indifferently called the Lord's diy or Sun lay, yet it was never denominated the \(\int\) abbaib; a name conttantly appropriated to Saturday, or the fiventh day, both by facred and ecclefiafical writers.

Of the change from the feventis to the firlt day of the week, or even of the inflitution of the Lord's day fenival, there is no account in the New Tefament. However, it may be fairly inferred from it, that the firt day of tanient ace. ime time fnr public wormip. On this day the apofles were ailembled, when the Holy Ghof came down fo vifibly upon them to qualify them for the converfion of the world. On this day we find St Paul preaching at Troas, when the difciples came to break bread: and the direetions which the fame apofle gives to the Corinthians concerning their contributions for the relief of their fuffering brethren, plainly allude to their religinus affemblies on the firlt day of the week.

Thus it would arpear from feveral paffiges in the New Teflament, that the religious obfervation of the firf day of the week is of apofolical appointment; and may indeed be very reafonably fuppofed to be among there directions and inftrutions which our bleffed Lord himfelf gave to his difciples, during the 40 days between his refurrection and afcention, whercia he converfed with them, and fpoke of the things pertaining to the kingdom of God. Still, horrever, it mult be owned that thofe palfages, although the plainelt that occur, are not fufficient to prove the apofolical inftitution of the Lord's day, or even the actual obfervation of it. In order, therefore, to place the matter beyond all controverfy, recourfe muit be had to ecclefiatical tellimony.

From the confentient evidence and uniform practice of the primitive church, and allo from the atteftation of Pliny, an heathen of no mean figure both in learning and power, we find that the firft day of the week was obferved in the earlieft ages ats an holydaj or feltival, in henour of the refurrection of Chrif. Now there are but two furces whence the cuftom could poffibly have arifen. It mult have been inttituted cither by buman or divine authority: by buman authority it was not influt:u; for there was no general council in thofe early times, and without the decree of a gene:al council it was impoffible that any ecclefiafical inftitution cculd have been univerlilly ellablifned at once. It remains, therefore, that it mult have been inflituted by
( 1 ) 'Chis, it feems, was once really the cafe. A Jew of Magdeburg feil into a privy on a Saturday. He might have been taken out; buc he told thofe who offered him theri- afitance to give themfelves no trouble, for there he was determined to kecp holy the fabbath day. 'The binh p, when he heard of it, refolved that he fhould danetify the next day alfo in the fame place; and fo, betwixt them, the peor Jew lof his life.

S.abbath.

I4
Purpufefor which the I. ord's day was inftituted.
divine authority: and that it ieally was fo , will farther appear from the following confiderations. It is certain that the apolles travelled over the greatelt part of the world, and planted churches in the remotcf parts of it. It is certain alfo that they were all led by the fame fpirit; and their defire was, that unity and uniformity thould be ohferved in all the churches which they had foundec. It is not therefore furprifing that, in the primitive times, the fame doctrine, the fame worfhip, the fame rites and cuftoms, fhould prevail all over the Chiftian world; nay, it would have been unaccountable had the cafe been otherwifc. For this reafon we may conclude that every cuftom, univerfally obferved in the early ages of the Chriltian church, and not infituted by a general council, was of original appointment.

As the Lord's day is fendified, that is, fit apart to Chriflians for the worfhip and fervice of God, their Creator, Redeemer, and Santifier, a little confideration will eafily difcover how it ought to be obferved. Alchongh a day feparated from worldly buliners, yet it is in no fenfe a day of illenefs, but a featon appropriated to the works of falvation and labours of charity.

In the primitive times this holy day was obferved in the moft folemn naaner. From the monuments of thofe early ages we learn, that it was fpent in a due and conitant attendance on all the uffices of divine worthip. On it they held their religious aliemblies, in which the writings of the :lpoltles and prophets were read to the people, and the dogrines of Chriftanity further preffed upon them by the exhortations of the clergy. Solemn prayers and praifes were offered up to God, and hymnsfung in honour of Chrift; the Lord's fupper was eonilantly celebrated; and colletions were made for the maintenance of the clergy and the relief of the poor. On this day they abftained, as much as they could, from bodily lil ons. They looked upon it as it clay of jor and gladnefs; and therefore all fafting on it was prohihited, even during the feafon of lent, their great annual falt.-Such was the zedl of thofe times, that nothing, no not the fevereft perfecutions, hindered them from celebrating holy nffices on this day. They were often befet and betrayed, and as often flaughtered in confequence of cruel edicts from empernes, thofe very emperors for whofe happinefs and proiperity they always offered up their fervent prayers. For this caufe, when they could not meet in the daytime, they affembled in the monning before it was light; and when fick, in exile, or in prifon, nothing troubled them more than thit they could not attend the fervice of the ehurch. No trivial pretences were then admitted for any one's abfence from puiblic worthip; for fevere cenfures were palled upon all who were abfent whithout tome urgent neceffity. When the empire became Chriftian, Conftantine and his fuccelfors made daws for the more folemn obfersation of the Lo d's day. They prolubited all profecutions and pleadings and other juridical matters to be tramficied on it, and alfo all minccellidry labour; not that it was lookedupon as a Jewifl fabbarh, bu: becaufe thele things were confidercid as incomfitent with the duties of tha fentival.

But although the primitive Chrifiaus did not indulge theniflues in the practice of unn-celfary labour or triting amufements, yet they did n:t wholly abitain from woiking, if great necelity required it. The Vol. XV'I.
conncil of Laodica enjoined that men fhould abftain \(\underbrace{\text { S.hbath. }}\) from work on the Lord's day if pafill: but if an: riere found to judaiar, they were io be cenfured as great tranfgreffors. So circumf peet were the primitive Chrilians about their conduet on this fentival, that on the one hand they avoijed all things which tended to profane it, whild on the other they cenfured all thofe who infifted it fhould be obferved with Pharifaical rigour.

The primary duty of the Lord's day is fuhlic avor- Advantz-乃ip. The nature and delign of the Chrifian religicn ges refukfulficiently thows the necellity and importance of af ing from fembling for the duties of devotion. The whole ficope vation of of Chiltianity is to bring us to an urion with Gud, it. which cannot be obtained or preferved without frequent communications with lim; and the reafons which fhow religious interconfle to be the indifpenfable duty of Chriftians in a private eapacity, will bind it witl: equal or more furce on theni confidered as a community.

The advantages of public worfhip, when duly per. formed, are many and great. There are two, however, which deferve to be conlidered in a particular manner. It gives Chrintians an opportunity of openly profeflirg their faith, and tellifying their obedience to their Redeemer in the wifeft and beft manner; and in an age when athcifm has arifen to an alarming height, when the Son of God is crucified afrefh, and put to open flame, every man, who has any regard fir religion, will cheerfully embrace all opportunities of declaring his abhorrence of the vicious courfes purfued by thole degenerate apollates. He will with pleafure lay hold on every occalion to teltify that he is neither afraid nor afhamed to confefs the truth; and will think it his indifpenfable duty openly to difavow the fins of others, that he may not incur the gmilt of partaling of them.

Public worfhip preferves in the minds of men a fenfe of religion, without which fociety could not exift. Nothing can keep a body of men together and urite them in promoting the public good, but fuch principles of astion as may reach and govern the heart. But thefe cun be derived onis from a fenfe of redigious duties, which can never be fo ftrongly impreffed upon the mind as by a conftant attendance upon public worlhip. Nothing can be more weak than to neglect the public wormip of God, under the pretence that we can employ curfelves as acceptably to our Maker at home in our clofets. Both hinds of worthip are indeed necelfary; but cine debe cannot be pais by the difcharge of another. By publifh wo: fhip every man profefles his belief in that God whom he adores, and appeals to Him for his fincerity, of wh.ch his neighbour cannot judge. By this appell he endears himelf nore or lefs to others. It creates confidence; it roots in the heart benevolence, and all other Chrnfian virtues, which produce, in common life, the fruits of mutual love and general peace.

People in general ate of rpinion that the duties of the Lord's day are over when public worlhip is ended. But they feem to \(f\) rgzi for what purpoics the day was fet apar: It is not only appropriated whe duties of nulic worlhip, but alio finctified to nus intprovement is the kno vledge of tiee dedrines of Chriflamity. It is an inflitution calculared os alleviate the condition of the laborious clafles of mankind, and, in
cuale.
swhith. confequence of that, to afford relt to leafs alfo. It Corr is proper, it is necellary, that man fould reflect on his conditon in the world, that he fhould examine the flate of his foul, and inquire what progrefis he has: .ade in that work which was given him to do. Thofe that have children or fervants are obliged to look after their interntion as weil as their own. Thefe are the ends which the infitution of Sunday was defigned to anfieer. Every man mult allow that thefe things mult be done at fome tme or other; but unlefs there be fet times for doing them, the generality of mankind would wholly negleat them.

Fiffiting and travelling (though very common) are enomous profanations of this holy day. Families are thereby rubbed of their time; a lofs for which no amends can ever be made them: Servants, inftead of having leifure to improve themfelves in fpiritual knowledge, are burdened with additional labour: And in a man of any humanity, it muft excite many painful fenfations, when he refleas how often the ufeful horfe on that dity experiences all the anguith of hunger, torn dides, and battered knees. Every kind of anufement, every kind of common labour, is an encroacliment on the particular duties of the Lord's day; and confequently men profane the day by fipending it in any amufements, or undertaking upon it any ordinary employment unleis it be a work of abfolute necellity.

Sabzath-Breaking, or profanation of the Lord's day, is punithed by the municipal laws of England. For, belides the notorious indecency and feandal of permitting any fecular bufinefs to be publicly tranfacted on that day in a country profeffing Chrifianity, and the corruption of morals which ufually follows its profanation, the keeping one day in teven holy, as a time of relaxation and refrefhment, as well as for public worthip, is of admirable fervice to a fate, confidered merely as a civil inftitution. It humanizes, by the help of converfation and fociety; the manners of the lower clafes; which would otherwife degenerate into a lavage ferocity fordid and felfifhnefs of lpirit: it enables the indufrious workman to purfue his occupation in the enfuing week with health and cheerfulnefs: it imprints on the minds of the people that fenfe of their duty to God to neceflary to make them good citizens; but which yet would be worn out and defaced by an unremited cuntinuance of labour, without any fated times of recalling them to the worthip of their Maker. And therefore the laws of king Athelttan forbad all merchanoizirg on the Lord's day, under very fevere penalties. And by the Itatute 27 Hen. VI. c. 5 no fair or market thall be held on the principal feftivals, GoodFiday, or any Sunday (except the four Sundays in har. velt), on pain of forfeicing the goods expofed to fale. And, finse by the ftatute 1 Car. I. c. 3. no perfors fhall affemble, out of their own parifhes, for any fort whatfoever, upon this day; nor, in their pariftes, thall ufe any bull or bear beating, interludes, plays, or other unlawful exercifes or paftimes ; on pain that every oftender thall pay \(3^{\text {s. }} 4\) d. to the poor. This flatute does not prohibit, but rather impliedly allows, any innceent recreation or amufement, within their refpective parilhes, even on the Lord's day, after divine fervice is over. But by fatute 29 Car. II. c. 7. no perfon is allowed to work on the Lord's day, or ufe any boat or barge, or expofe any goods to fale, except neeat in
public houfes, milk at certain hours, and works of ne. ceffity or charity, on forfciture of 5 s . Nor fhall any drover, carrier, or the like, travel upon that day, under pain of 20 s .

SABELLIANS, a fect of Chritians of the 3 d century, that embraced the opinions of Sabellius, a philofopher of Egypt, who openly taught that there is but one perfon in the Godhead.

The Sebelliaus maintained, that the Word and the Holy Spirit are only virtues, emanations, or functions of the Deity; and held, that he who is in heaven is the Father of all things, that he defeended into the virgin, became a child, and was born of her as a fon; and that having accomplifhed the myftery of our falvation, he diffured himfelf on the apoltles in tongues of fire, and was then denominated the Holy Ghof. This they explained by refembling God to the fun, the illuminative virtue or quality of which was the Word, and its warming virtue the Holy Spirit. The word, they taught, was darted, like a divine ray, to accomplifh the work of redemption; and that being re-afcended to heaven, the influences of the Father were commuwicated after a like manner to the aponles.

SABIANS, an early fect of idolaters, which continues to this day, and worfhips the fun, moon, and ^ars. See Polytheism, no 10 , if, 12.

SABINA, a province of ltaly, in the territories of the church ; bounded on the north by Umbria, on the eaft by Farther Abruzzo, on the fouth by the Campagna of Rome, and on the wett by the patrimony of St Peter. It is 22 miles in length, and almoft as much in breadth; watered by leveral fmall rivers, and abounding in oil and wine. There is no walled town in it, and Magliano is the principal place.

SABINUS (George), a celebrated Latin poet, born in the electorate of Brandenburg in 5508 . His poem Res gefla Cafarum Germanorum, fpread his reputation all over Germany, and procured him the patronage of all the princes who had any regard for polite literature: he was made profeffor of the belles lettres at Frankfort on the Oder, rector of the new academy of Koning fourg, and counfellor to the elector of Brandenburg. He married two wives, the firlt of which was the eldeft daughter of the famous reformer Melancthon; and died in 1560. His peens are well known, and have beell often printed.

SABLE, or S SAELE Arimal, in zoology, a creature of the weafel-kind, called by authors muffela zibellina. Sce Mlstela, \({ }^{\circ}{ }^{\circ} 6\).

The chafe of thefe animals, in the more barbarous times of the Rufian empire, was the employ, or rather tafk, of the t:nhappy exiles in Siberia. As that country is now become more popuious, the fables have in a great meature quitted it, and retired farther north and eaft, to live in defert forells and mountains: they live near the banks of rivers, or in the little iflands in them; on this account they have, by fome, been fuppofed to be the Jabipicy of Arittotle (Hiff. Ar. Ril. viii. c. 5.), which he clalfes with the animals converfant among waters.

At prefent the hunters of fables form themfelves into troops, from five to to each: the laft fubdivide into leffer parties, and each choofes a leader; but there is one that directs the whole: a fmall covered boat is provided for each party, loaded with provifions, a dog and net for every two men, and a veffel to bake their bread in: e.sch party has alio an interpreter for the country they penetrate into. Every party then fets out according to the courfe their chief points out: they go againlt the fream of the rivers, drawing their boats up, till they arrive in the hunting country; there they fop, build huts, and wait till the waters are frozen, and the feafon commences : before they begin the chace, their leader affembles them, they unite in a prayer to the Almighty for fuccefs, and then feparate: the firlt fable they take is called God's fable, and is dedicated to the church.

Then they penetrate into the woods; mark the trees as they advance, that they may know their way back; and in their hunting-quarters form liuts of trees, and bank up the finow round them : near thefe they lay their traps; then advance farther, and lay more traps, ftill building new huts in every quarter, and return fucceffively to every old one to vifit the traps and take out the game to kin it, which none but the chief of the party mult do: during this time they are fupplied with provifiens by perions who are employed to bring it on iledges, from the places on the road, where they are obliged to form magazines, by reafon of the impracticability of bringing quantities through the rough country they mult pafs. The traps are a fort of pitfall, with a looie board placed over it, baited with fifh or flefin: when fables grow fearce, the hunters trace them in the new-fallen fon to their holes; place their nets at the entrance; and fometimes wait, watching two or three dajes for the coming out of the animal: it has happened that thefe poor people have, by the failure of their provifions, been fo pinched with hunger, that, to prevent the cravings of appetite, they have been reduced to take two thin boards, one of which they applied to the pit of the fomach, the other to the back, drawing them tight together by cords placed at the ends: fuch are the hardihips our fellowcreatures undergo to fupply the wantonnefs of luxury.

The feafon of chace being finifhed, the hunters reafifmble, make a report to their leader of the number of fables each has taken; make complaints of offenders againft their regulations; punifh delinquents; fhare the boots; then continue at the head-quarters till the rivers are clear of ice; return home, and give to every church the dedicated furs.

Sabs. Cape, the moft foutherly prorince of Nova Scotia, in North America, near which is a fine cod-fifhery: W. Long. 65.34 . N. Lat. 43. 24.

Sable Iflc is adjoined to this cape, and the coafts of both are molt commodioufly fituated for fifheries.

Sable Trade, the trade carried on in the fkins or furs of fables; of which the following commercial hiflory was tranllated by Mr J. R. Forller from a Ruffian performance en that fubjest by Mr Muller.
"Sable, folle, in Rulian; a cbel in German. Their price varics from 11. to 101 . Sterling, and above: fine and middling fable fkins are without bell.es, and the coarfe ones are with them. Forty fkius make a collegion callcd zimmer. The fineft fables ate fold in pairs perfectly limilar, and are dearer than fingle ones of the fame giodncfs; for the Ruffians want thofe in pairs for facing caps, cioks, tippets, *c. the blackeft are reputed the beft. Sables are in ieafon from November
to February; for thofe caught at any other time or the year are fhort-haired, and then called nedofoboli. The hair of fables differs in length and quality: the long hairs, which reach far beyond the inferior ones, are called os; the more a fkin has of fuch long hairs, the blacker it is, and the more valuable is the fur; the very bett have no cther but thofe long and black hairs. Motchia is a technical term ufed in the Ruffian furtrade, exprefling the lower part of the long hairs; and fumetimes it comprehends likewife the lower and Gorter hairs: the abovementioned beft fable furs are faid to have a black motchka. Below the long hairs are, in the greater part of the fable-furs, fome fhorter hairs, called pordjie, i. e. under-os; the more podofie a fur has, it is the lefs valuable: in the better kind of fables the podofie has black tips, and a grey or rufty motchka. The firt kind of motchka makes the middling kind of fable furs; the red one the wort, efpecially if it has but few os. Between the os and podofie is a low woolly. kind of hair, called podfada. The more podfada a fur has, the lefs valuable: for the long hair will, in fuch cafe, take no other direction than the natural one; for the charasters of fable is, that notwithftanding the hair naturally lics from the head towards the tail, yet it will lie equally in any direction as you ftrike your hand over it. The various combinations of thefe charafers, in regard to os, motchka, podofie, and podfada, make many ipecial divifions in the goodnefs of furs: befides this, the furriers attend to the fize, preferring always, cateris paribus, the biggeft, and thofe that have the greatelt glofs. The fize depends upon the animal being a male or a female, the latter being always fmaller. The glofs vanihes in old furs: the frefh ones have a kind of bloomy appearance, as they exprefs it ; the old ones are faid to have done blooming : the dyed fables always lofe their glofs; become lefs uriform, whether the lower hairs have taken the dje or not; and commonly the hairs are fomewhat twifted or crifped, and not fo ftraight as in the natural ones. Some fumigate the fkins, to make them look blacker; but the fmell, and the crifped condition of the long hair, betrays the cheat; and both ways are detected by rubbing the for with a moift linen cloth, which grows black in fuch cafes.
"The Chinefe have a way of dyeing the fables, fo that the colour not only lafts (which the Rafian cheats cannot do), but the fur keeps its glofs, and the crifped hairs only difcover it. This is the reafon that all the fables, which are of the beft kind, either in pairs or feparate, are carried to Ruilia; the reft g ? to China. The very beft fables come from the environs of Nertchitk and Yakutk; and in this latter diftrict, tle country about the river Ud affords fumetimes fahics, of whom one fingle fur is eften fold at the rate of 60 or 70 mbles, 121 . or \(1+1\). The bellies of fables, wh h are fold in pairs, are about two fingers breath, and are tied together by 40 pieces, which are fold from I 1 . to 2 1. Sterling. Tails are fold by the hundred. The very belt fable-furs muft have their cails; but ordinary fabies are often cropfed, and 100 fold fram 41. to sl. Secrling. The leg, or feec of fables are feldom fid fusrately; white fables are rare, and in common meathandize, but bought only as curiofities: fome ale yellowith, and are bleachad in the firring on the Inow."

\section*{\(S \wedge C\)}

Sable, in heraluly, fignifies ". blach;" and is bor rosed from thic lirench, as are mott tems in this fcicince: in engrasing it is erprefed ly borh honizontal and perpendicular lines extiong each cther. Sable of itielf fignitios conlancy, learning, and grief; and ancient heralus will have it, that when it is compounded with

The oceafion that int:oduced this colour into heraldry is the selated by Alexander Nebit, p. 8. The duke of A.j.u, king of Sicily, after the lofs of that king. don, afpeared at a tournament in Germany all in Wlack, with his hield of that tincture, fonce de larmes, i. e. beprintled with dreps of water, to reprefent tears, indicating by that both his grief and lofs.
S.1DLESTAN, or SAELUSTAN, a province of Afia, in Perlia, on the frontiers of Indoftan; bounded on the north by Ktorafau ; on the ealt, by the mountains of Balk and Cindahar; on the fuuth, by Sageltan or Sereflan; ard on the weit, by Heri. It is a mountainous counry, very little kucurn to Europeans; nor is ce:tain which is the capital town.

SABLRE, a kial of fwod or femitar, with a very hroad and heary blade, thick at the batk, and a little fulca:ed or c:ooked towards the point. It is the ordinary weapon worn by the Tuks, who are faid to be very expert in the ufe of it.

SABURRA, in mcdicine, wfinally denotes any colleation of hall putid indigefted matter in the ftomach and inteltines, by which the operation of digeftion is impeded.

SABURRR, GRITTS, in naturai hifory ; a genus of foflils, found in minute maffes, forming together a hind of powder, tise feveral particles of which are of no determinate lhape, nor have any tendency to the figuse of chryfal, but feem rudely bruken fragments of larger mafles; not to be diffulved or difunited by water, but retaining their figure in it, and not cohering by mearis of it into a mafs; confiderably opake, and in many fecies firmenting with acids; cften fouled with heterogen:e matters, and not unfrequently taken in the cuarifer funy and mineral or metalline particles.

Grits are of various colours, as, 1 . The fony and fpariy gritt, of a bright or greyilh white colour. 2. The red fony gritts. 3. The green fony gritts, compofed of homogere frary particles. 4. The yelin whith, of which there is only one fpecies. 5. The black and tlackith gritt:, compofed of fony or talky particles.

SACEA, a fea? which the ancient Babylonians and other orientals held anrually in hunour of the deity Anaitis. The Sacrea were in the Eaft what the Saturnollia were at Rome, viz. a fenit for the flaves. One of the ceremonies was to choofe a prifoner condemned to dcath, and allow him ali the pleafures and gratifications he weuld wifh, before he were carried to execution.

SACCADE, in the manege, is a jesk more or lefs violent, given by the hurfomen to the \(h\) rie, in pulling or twichling the reins of the bridle all on af fudden

\section*{SAC}
and with one pull, and that when a horfe lies heavy Saccriotal upon the hand, or obitinately arms himfelf.

This is a correftion ufed to make a horle carry well; Sucheverel. but it ought to be ufed difcreetly, and but fcldom.

SACERDOTAL, fomething belonging to priefts.
See Priest.
SACCULUS, in anatomy, a diminutive of faccus, fignilies a little big, and is applied to many parts of the body.

SACCHARUM, Sugar, or the Surar-Cane, in botany: A genus of the digynia order, belonging to the triandria clafs of plants; and in the natural method ranking under the \(4^{\text {th }}\) order, Grami:a. There is no calyx, but a long down ; the cosolld is bivalved. There is but one fpecies of this genus, viz. the officina. It is a native of Africa, the Ealt Indies, and of Brazil; from whence it was introduccd into the Weft India iflands foon after they were lettlul. The fugar-canc is the glory and the pride of thofe iflands. It amply rewards the induftrious planter, enriches the Britilh merchant, gives bread to thoufands of manufacturers and feamen, and brings an immelle revenue to the crown. For the procefs of making fugar, fee Sugar.

Sugar, formacrly a luxury, is now become one of the necellaries of life. In crop-time every negro on the plantations, and every animal, even the dogs, grow fat. This fufficiendy points out the nourithing and healthy qualities of fugar. It has been alleged, that the eating of fugar fooils the colour of, and corrupts, the teeth: this, however, proves to be a mildake, for no people on the eath have finer teeth than the negroes in Jamaica. Dr Alton, formerly profeffor of botany and materia medica at Edinburgh, endeavoured to obviate this vulgar opinion: he had a fine fet of teeth, which he afribed folcly to his eating great quantities of fugar. Externally too it is often uffeful: mixed with the pulp of roafted oranges, and applied to putrid or ill-difpoted ulcers, it proves a powerful correzor.

SACCHI (Andrea), a celebrated painter, born at Rome in 1594. He was the difciple of Francifo Albano, whom he afterwards firpaffed in tafte and correftnefs. He diftinguifhed himfelf in a very enninent degree by his paintings in frefoo; ard a ftrong cmulation fubfilting between him and Pietro de Cortona, they each arrived at a degree of perfection that nether of them might have known without fuch a compctition. The works of Sacchi have fuch intrinfic merit, and are finifhed with fuch uncommon care and fk ill, as will always fecure the applaufe of the judicious, and precerve their true value. He died in 1663 .

SACHLVEREL, (Dr Henry), a famous clerg) man of the 'I'ory faction in the reign of queen Anne; who diftinguifhed himfelf by indecent and icurrilous fermons and writings again!t the difenters and revolution principles. He owed his conf quence, however, to being indififeetly profecuted by the houfe of lords for his altizefermonat Derby, and his 5 th of November fermon at St laul's in 1709 ; in which he afierted the ductrins of non-refiftance 10 guvernment in its utmur extent; and reflefted fevcrely on the aft of toleration. The high: and low church parties were very violent at that time; and the trial of Sacheverel inflamed the highchurch party to dangerons riots and exceffes: he was, however, fuipended for three years, and his fermons burned by the common hangman. The Tories being
in admimitation when Sacheverel's fufpenfion expired, he was freed with every. circumttance of honour and public rejoicing; was ordsred to preach before the cemmons on the \(2 y\) th of May, had the thanks of the hoafe for his diffourfe, and obtained the raiuble reetory of St Andrew's, Helbern.

S:ICK, a wine ulid by our anceftors, which fome have taken to be Rhenitn and fome Canary wineVenner, in his Tia Kenhs ald Vitar: Lor:amm, printed in 1628, fays that fack is "compietcly not in the third degree, ard that fome atfen to dink hask with fugar and fome wilhout; and upon so other ground, as I think, hut as it is be!t pleating to their palate." He gues on to fily, "that fack, tule:a by itfelf, is very hot and very peatrative; being taken with fugar, the heat is both fomen tat aliayed, and the penerative quality thereof alfo retarded." He adds further, that Rhenith, \&c. decl ne ater a twelvemonth, but fuck and the other for taper wines are beit whea they are tw, or three years clu. It appears to be highly probable that ack was not a fiscet wine, from its being taken with fugar, and that it did not receiv- its name from having a faccharine fldvour, but frem its bei:g originaly hored in facks or boraciins. It dnes nct appear to have bean a Frencin wine, but a thong wire the prodution of a hot climate. Probaidy it was what is caled dry mountain, or fone Spaninh wine of that kind. This conjecture is the more plaufible, as Howell, in his Fren h and Engl:th Dientonary, printed in the jear \(165=\), tramaties fack by the words vind'Efprgne, rin foc.

Suck of Wool , a quantity if wool containing junt 22 flone, and every fone \(1+\) pound. In incolland, a fack is \(2+\) fone, cach itone cun aining 16 pounds.
S.ock of Cobton Weol, a quantity trom one hundred - and a half to four hundred wer hat.

Slecks of Earth, in fort fixaticn, are canvas bays filled with carin. They are ufed in making retrenchments in hatte, to plave on parapets, or the head of the breaches, \&e. in repair them, when beatea down.

SACKBUT , a mulical inftument of the wind kind, being a fort of trumpt, though different from the commok trumptet bethe: form and five; it is fit to play a huis, and is contived the drawn out or fhortened, accurding to the tone required, whether grave or acutc. The Italians call it trombore, and the Latins tula diseail's.
S.ACKVILLE (Thomas, Lard Dukhurf, and ear of Dertet), a fhateman 2 and peet, the fon of Kichard Sackr:lle, Eq; of Luekhurf, in the patith of Within in Sufes, was hom in the year 1535 . He was Set uHar-hall in Oxio d, in the later ent of the reigu of Ldward II, whence he removed to Cambride e, where he took a maR.r of ar:s ciegres, and th. nice to the Iuner Tompie. He ron: appid.d himfelf to the Itudy of the law, and was called to t. e bar. We aic told that be commenced poet whif at the univerfities, and that there his juvenile prodocions were much admired, none of which, hovever, have been preferved.In the fourh and fith year of quen Mary, we find him a inember of the houfe of cormons ; shout w ich time, in 155 , he wate a pretical piece, intitled Tie In. dudion, or The Mirror of Marifrats. This late wis me int to compreherd ail the unf rtur ate Great from the beginuing of Englith hitery; but ihe defign beng droppod, it was inferted in the body of the work. The

Mirror of Mrizrates is formed en a dramatic pian ; Sakville in which the per ons are introduced fseaking. The Induction is written much in the Atyie of Spencer, who, with some probability, is fuppoted to have imitated this auther.

In 1; 5r, his tragcdy of Gorbsiuc was acted before queen Elifabeth by the gentemen of the Inner Temple. This was the frit toletable tragedy in our language. The Compmion to the Playhoufe tells us, that the three firf ats werc written by Mr 'Tho. Norten. Sir Philip Sidrey, in lis Aplogy for Poctry, fays, "it is full of ftarely fpeches, and well-founding phrafes, climbing 10 t.e leight of Seneca in his tlyle, sic. Rymer paks highly in its commendation. Mr Spence, atite inlligation of Mr Pope, republithed it in 1735, with a pompous preface. It is faid to be our firft dramatic piece written in verfe.
In the frit parliament of this reign, Mr Sackwille was member for Suffex, and for Bucks in the fecond. In the mean time he riade the tour of France and Italy. and in 1505 was imprifoned at Reme, when he was inform:d of his tather's death, by which he became polielled of a very conliderable fortune.

Having now obeained his liberty, he returned to England; and beivig fisf knighted was created Lord Buakurf. In 1570 he was fent ambaliador to France. In 1586 he was one of the commifioners appointed to try the nnfortunate Mary queen of Scots; and was the meffenger employed to report the confirmation of her fentence, and to fee it executed. The year following he went ambaffador to the States General, in confequence of their complaint againt the earl of Leicefter; who, dilliking lis impartiality, prevailed on the queen tu recall lim , and confine him to his houfe. In this flate of confinement he continued about 10 months, when Leice.ter dying, he was reflored to fasour, and in 1580 was initalled knight of the garter: but the mo: i.:cont-c vertible proot of the queen's partiality for lord Backhurf appeared in the year 1591, when fhe caufed him to be elected chancellor in the univerfity of Oaford, in orpofition to her favourite Efiex. In 1508, on the death of the treafurer Burleigh, In:d Buckhurf fuccee led thim, and by virue of his olfice became in effct prime miniter; and when, in 1601 , the earls of Lifex and Sonhampton were broughe in trial, he fat as hed high Reward on that awfol occaficn.

On the acceftion of Jan.cs I. he was gracioufy received, had the olice of lord high treafurer contirmed to lim for life, and was created earl of Dorfet. He continued in high faveur with the king till the day of his death; which happened fudden!y, on the igth of April 1608, in the council chenber at Whatehall, Ile was interred wit! great folemnity in Wellnsinater abbey. Hie was a good poet, an able minitter, and an honeit man. Trom him is defended the prefent noble famiily of the Dorfets. "It were needief" (fays ivir Walpeie) 10 add, that he was the patrianch of a race of genius and wit."

Sackrizle (Chatlex, eari of Derfet), a celebrated wit and poet, deicended from the toregning, was Ln:n in 1637 . He was, like villiers, Rachenter, Sedler, \&c. one o: the libertinss oi king Charles's court, and fometimes indulged himfolf in inexcufable excelfes. He openly difcomitenaticed the violent neeafucs of James 11 . and engaged early for the prince if

Orange:

\section*{S A C [ 500\(] \quad\) S A C}
\(\underbrace{\text { Sacrament. Orange, by whom he was made lord chamberlain of }}\) the houfehold, and taken into the privy-council. He dic」 in 1706, and left feveral poetical pieces, which, though not confiderable enough to make a volume by themfelves, may be found among the works of the minor poets, publifhed in 1740 .

SACRAMENI is derived from the Latin word facramentum, which fignifies an oath, particularly the oath taken by foldiers to be true to their country and general. The words of this oath, according to Polybins, were, oltempsraturas fum et facturus quicquid mandabitzu ab inperatorijus juxta vires. The word was adopted by the writers of the Latin church, and employed, perhaps with no great propriety, to denote thofe ordinances of religion by which Chriftians came under an obligation, equally facred with that of an oath, to obferve their part of the covenant of grace, and in which they have the affurances of Chrift that he will fulfil his part of the fame covenant.

Of facraments, in this fenfe of the word, Proteftant churches admit of but two; and it is not eafy to conceive how a greater number can be made out from Scripture, if the definition of a facrament be jult which is given by the church of England. By that church, the meaning of the word facrament is declared to be "an outward and vifible fign of an inward and fpiritual grace given unto us, ordained by Chritt himfelf as a means whereby we receive the fame, and a pledge to afure us thereof." According to this definition, baptifm and the Lord's Supper are certainly facraments; for each confifts of an outward and vifible fign of what is believed to be an inward and fpiritual grace; both were ordained by Chrift himfelf, and by the reception of each does the Chriftian come under a folemn obligation to be true to his divine mafter, according to the terms of the covenant of grace. (See Baptism and Suppir of the Lord.) The Remanilts, however, add to this number confirmation, penance, exireme unction, ordination, and marriage, holding in all feven facraments; but two of thofe rites not being peculiar to the Chriftian church caunot pofibly be Chriffian facraments, in contradift nction to the facraments or obligations into which men of all religions enter. Marriage was inflituted from the beginning, when God made man male and female, and commanded them to be fruitful, and multiply and replenith the earth ; and penance, as far as it is of the fame import with repentatice, has a place in all religions which teach that God is merciful, and men fallible. The external feverities impofed upon penitents by the church of Rome (fee Penance) may indeed be in fome refpects peculiar to the difcipline of that church, though the penances of the Hindons are certanly as rigid ; but none of thefe feverities were crdained by Chrift himfelf as the pledge of an inward and fpiritual grace; nor do they, like battifm and the Lord's Supper, bring men und or obligations which are fuppofed to be analogous to the meaning of the word facromintum. Confirmation has a better title to the appellation of a falcrement than any of the other five popith rites of that name, though it certainly was not conlidered as fuch by the earlieft witers of the Chriftian church, nor does it appear to have been ordained by Chrift himfelf, (fee Confirmation;- Ordination is by many churches conlidered as a very important rite ; but as it is not adminifered to all men, nor has any particular form ap-
propriated to it in the New Teftament, it cannot be Sacrament contidered as a Chriftian facrament conferring grace generally neceffary to falvation. It is rather a form of authorifing certain perfons to perform certain offices, which refpect not thenifelves but the whole church; and extreme unction is a rite which took its rife from the miraculous powers of the primitive church vainly claimed by the fucceeding clergy. (See Ordination and Extrome Unction.) Thele confiderations feem to have fome weight with the Romifh clergy themfelves; for they call the encharift, by way of eminence, the boly facrament. Thus to expofe the holy facrament, is to lay the confecrated hof on the altar to be adored. - The proceffion of the boly facrament is that in which this hoft is carried about the church, or about a town.

Numerous as we think the facraments of the Komifh church, a feet of Chriftians fprung up in England eariy in the current century who increafed their number.The founder of this feet was a Dr Deacon, we think, of Manchefter, where the remains of it fubfifted very lately, and probably do fo at prefent. According to thefe men, every rite and every phrafe in the book called the Apoflolical Conftitutions were certainly in ufe among the apofles themjelves. Still, however, they make a diftinction between the greater and the leffer facraments. The greater facraments are only two, baptifm and the Lord's fupper. The leffer are no fewer than ten, viz. five belonging to baptifm, exorcifm, anointing with oil, the white gurnent, a tafle of milk and boney, and anointing with chrifm or ointment. The other five are, the fign of the crofs, impofition of bands, unaion of the fick, boly orders, and matrimony. Of the nature of thefe leffer facraments, or the grace which they are fuppofed to confer, our limits will permit us to give no account.Nor is it neceffary that we fhould. The fect which taught them, if not extinguifhed, is certainly in its laft wane. It has produced, however, one or two learned men; and its founder's Full, True, and Comprehenfive View of Chriftianity, in two Catechifms, is a work which the Chriftian antiquary will read with pleafure for information, and the philofopher for the materials which it contains for meditation on the workings of the human mind. It was publifhed in 8 vo , in the year 1748.

Congregation of the Holy Sacrament, a religious eftablifhment formed in France, whofe founder was Autherius, bithop of Bethlehem, and which, in 1644, received an order from Urban VIII. to have always a number of ecclefiaftics ready to exercife their miniftry among pagan nations, wherever the pope, or congregation \(d c\) propaganda, fhould appoint.

SACRAMENTARIANS, a general name given to all fuch as have pul-lifhed or held erroneous doctrines of the facrament of the Lord's Supper. The term is chiefly applied among Roman Catholics, ly way of reproach, to the Lutherans, Calvinift, and other Proteftants.

SACRAMENTARY, an ancient Romifl churchbook, which contains ali the prayer, and ceremonies practifed in the celebration of the facraments.

It was wrote by pope Gelatius, and afterwards revifed, corrected, and abridgeti, by St Gregory.

SACRE, or \(\mathrm{Sakzr}^{\text {, in ornithology, the name of a }}\) fpecies of falcon, called by authors falco facer, and differ-

\section*{S A C}
ently defcribed by different authors, but by all agreed to be an extremely bold and attive bird. It is a native of the northern regions of Lurope ; and a varicty calleu by fome whiters the fipclled partridge bawd is found at Hudfon's bay, North Amoricis.

SACRED, fomething holy, or that is folemnly offered and confecraied to God, with benedictions, unctions, \&c.

Kings, prelates, and priefts, are recloned facred perfons; abbots are only blefled.-The deaconhood, fub. deaconlood, and prieftiond, are all facred orders, and are faid to imprefs a facred indelible charaster. The cuffom of conlecrating hings with holy oil is derived (tirys Gutliagius) from the Hebrews ; among whom, he agrees with Crotius, it wats never ufed but to kings who had not an evilent right by fuccellion. He adds, that the Chriftian emperors never ufed it before Juftin the younger; from whom he takes it to have pdfed to the Coths, sec.

Sacrlv is alfo applied to things belonging to God and the church. Church-linds, ornaments, Sic. are heled facred.-The facred college is that of the cardi1.als.

SacRen Mlajefy, is applied to the emperor and to the ling of Englana ; yet Loyfeau fays it is blafphemy. See Majesty. The ancients held a place fluck with thunder as facred. In the civil law, facred place chiefly denotes that where a perion deceafed has been interred.

\section*{Sifafd E/ixir. Sce Elixir.}

SACRIFICE, an offering made to God on an altar, by means of a regular minifter, as an acknowledgment of his power, and a pajment of homage. Sacrifices (though the term is fometimes ufed to comprehend all the offerings made to God, or in any way devoted to his fervice and honour) differ from mere oblations in this, that in a facrifice there is a real deftuction or change of the thing offered; whereas an oblation is only a fimplenfering or gift, without ang fuch charge at all: thus, all furts of tythes, and firferuits, and whatever of men's woridly fubthance is confictared to God, Sor the fupport of his worfip and the mantenance of his miniters, are of felings or oblations: and thef, under the Jewith law, were either of living creatures er other things : but facrifices, in the more peculiar fenfe of the term, were either wholly or in a part confumed by fure. They Bave by civines been civided into bloody and unolvody. Blondy facrifices we:e made of living creatures; unbloody of tine truits ot the earth. They have alfo been
 frit limd were ufred io obsain of God lorgivenefs of lins; the feconc', to procure iome favour; and the third, to expreis thankfulnets for favous already re. ceived. Under one or nther of thele hedds mily all facrifices be arranced: though we are told, that the Ligyrtians had 666 diferent kinds, a number furpaffing all credibility.

Concerning the origin of facrifices very various opinions lave been held. By many, the Phesticians are fuppefed to have been the authors of them; though Porphyry attributes their invention to the Egjptians; and Ovid imagines, from the import of the name viaim and toflia, that no bloody facrifices were offered till wars prevailed in the wurid, and nations obtained rinories
over their encmics. Thefe are mere hypothefes, con. triticted by the moot authentic records of antiquity, and entitled to no regard.

By modern deitis, facrifices are faid to have had their origin in fuperfition, which operates much in the fame way in every country: It is therefore weak, according to thofe men, to derive this praftice from any particular people; fince the fame mode of reafoning would lead various nations, without any istercourfe with cach other, to entertain the fame opinions reipecting the nature of their gods, and the proper means of appealing their anger. Men of grofs conceptions imagine their deitics to be like themielves, covetous and cruel. They are accuftomed to appeafe an injured neighbour by a compolition in money; and they endeavour to compcund in the fame manner with theil gods, by rich offerings to their temples and to their prietts. The moft valuable property of a fimple people is thacir cattle. Thefc offered in facrifice are finppofed to be fed upon by the dirinity, and are actually fed upon by his pricils. If a crime is committed which requires the punithment of death, it is accounted perfently fair to appeafe the deity by offering one life for another; becaufe, by favages, punifhmert is confidered as a debt for which a man may compound in the beft way that he can, and which one man may pay for another. Hence, it is faid, arofe the abfurd notions of imputed guilt and vicarious atonement. Among the Egyptians, a white bull was chofen as an expiatory facrifice to their god Apis. After being killed at the altar, his head was cut off, and calt into the river, with the following execration: "May all the evils impending over thole who perform this facrifice, or over the Egyptians in general, be averted on this head *."

Had facrifice never prevailed in the world but among fuch grofs idolaters as worlhipped departed heroes, who were fuppofed to retain in their flate of deification: all the pallions and appetites of their mortal fate, this account of the origin of that mode of wormip would have been to us perfectly fatisfactory. We readily admit, that fuch mean notions of their gods may have aclually led far dittant tribes, who could not derive any thing from each other through the channel of tradition, to imagine that beings of luman pafinns and appetites might be appeafed or bribed by coftly offerings. But we know from the on \(\cap\) incontrovertible authority, that ficritices of the three kinds that we have mentioned were in ufe anong people who worthipped the true God, and who mult have had very correct notions of his attributcs. IVow we think it impoffible that luch notions colld have led any man to fancy that the taking atway of the life of a harmlefs animal, ir the burning ot a cake or other fruits of the earth in the fire, would be acceptable to a Being felfexifent, omnipotent, and omnifcient, who can neither be injured by the crimes of his creatures, nor receive any acceflion of happinefs from a thoufand worlds.

Senfible of the force of fuch ralfoning as this, fome perfons of great name, who admit the atthenticity of the Jewif and Chrifian facrifices, and firmly rely en the atonement made by Chrit, arc get unwilling (it is difficult to conccive for what reafon) to allow that focrifices were originally inflituted by God. Of this way of thinking were St Chryfoftom, Spenctr, Grotius, and Warbition, as vere lisewife the Jews Mamonides, R.

Suerifice. \(\underbrace{\sim}\) Levi, Ien Gerfon, and Ababanel. The greater part of thefe witers maintain, that facrifices were at lirft a himazn inftution; and that God, in order io prevent their being oflered to idols, introduced thent into his fervice, though he dad not approve of than as good in themeives, or as proper rites of worlhip. That the infinitely wite and grod God thould introdace into his fervice improper rites of woilhip, appears to us fo extremel) insprobable, that we cannot but wonder how fuch an upinion thould wer hare tound its way into the minds of fuch \(m\) as thute who held it. War. burton's theory of facrifice is much nore plaufible, and be ng monre laiely publilhed, is worthy of particular examination.

According to this ingenious prclate, ficrifices had their mi, in in the fentonents of the human heart, and in the atwient mode of converting by action in aid of words. Gratitude to God for tenefits received is natural to the mind of man, as well at his bounden duty.
* Divine
L.cg. b.i. c. 2. "This duty (fays the bithop *) was in the mof eally times difcharged in exprellive actions, the lealt equivocal of which was the offerer's bringing the firt fruits of palturage or agriculture to that fequallered place where the Deity ufed to be more folemnly involed, at the fiatedtimes of public worthip; and there prefenting them in homage, with a demud which poke to this purpofe. -'I do hercby acknowledge thee, \(O\) my God! to be the author and giver of all good: and do now, with lumble gratitude, return my warmett thanks for theie thy blethings particularly befowed upon me."-Things thus dernted became thenceforth facred : and to prevent their defceration, the readieft way was to fend them to the table of the prieft, or to confume them in the fire of the altar. Such, in the opinion of our author, was the origin of eucharitical facrifices. Impetratory or frecative facrifices had, he thinks, the fante origin, and were contrived to exprefs by action an invocation for the continuance of God's favour. "Expiatory facrifices (fays the learned prelate) were in their own nature as intelligible, and in practice as rational, as either of the other two. Here, inftead of prefenting the firft fiuits of agriculture and pafturage, in corn, wine, oil, and wool, as in the euchariltical, or a portion of what was to be fown or utherwife propagated, as in the impetratory; fome chofen animal precious to the repenting criminal, who deprecates or is fuppofed to be obnoxious to the Deity who is to be appeafed, was offered up and flain at th: altar, in an action which, in all languages, when trandated into words, lpeats to this purpofe :-'I confefs my tranfiguftions at thy footltool, O my God! and with the deepeft conntion implore thy pardon; confulling that I deferve death for thufe my offences.'Whe laster part of the confefion was more forcibly exprolied by the afion of friking the devated animal, and depriving it of life; which, when put into words, concluded in this matner.- 'And I own that I myelf deferve the death which I now inflig on this animal.'

This fyftem of ficrifice, which his lordihip thinks fo well fupported by the naclt early movements of fimple nature, we adnit to be ingenious, but by no means fa. tisfatoy. That mantiud in the earlier ages of the workl were accultomed to lipply the deficiencies of their language by exprefive geiticulations we are not inclined to controvert: th.e cult m prevails among fawage nations, or nations half civilized, at the prefent day. His
lordhip, however, is of opinion, and we heartily agree sacrifice. with him, that our firft parents were inftructed by God [) make articulate founds tignificant of ideas, notions, and things (iee Language, \(n^{\circ} 6\).), and not left to fabricate a language for themfelves. That this heaventaught language could be at firlt copious, no man will fuppore who thiraks of the pauety of ideas which thoic Who fpoke it had to esprefs; but when ve confider its origin, we cannot entertain a duubt but that it was prscife and perfpicuous, and admirably adapted to all the real purfofes of life. Among there purpoies muit furely be included the worlhip of God as the mott import ant of ahl. Every fentiment therefore which enters into worhip, gratitudc, invocation, confellion, and deprecition, the progenit rs of mankind were undoubtedly tanght to clothe in words the molt fignifican: and unerquivocal; but we know from Mries, whofe divine legation the bihop furely admitted, that Cain and Abcl, the eldef childrea of nur firt parents, worflipped God by the rites of facrifice : and can we fupfole that this practice occurred to tocm from their having fo far forgotien the language taught them by their tather, as to be under the neceffity of denoting by action what they could not exprefs by words? it this fuppofition be adnsitted, it will ferce another upon us fill more extrava; \({ }^{\text {ant. }}\). Even Adam himlelf mult, in that cafe, have become dumb in contequenc: of his fall ; for it is not conccivable, that as long as he was able to utter atticulate founds, and affix a meaning to them, he would ceafe, in the prefence of his fanily, to confels his fims, implore furgivenefs, and exprefs his gratitude to God ior all his mercies.

The right reverend writer, as if aware of fome fuch objection as this to his theory, contends, that if facrifices had arifen from any other fource than the light of reafon, the Scripture would not have been tilent concerning that fource; "efpecially tince we find Mofes carefully recording what God immediately, and not nature, taught to Adam and his family. Had the original of facrifice, fays he, been prefcribed, and direetly commanded by the Dcity, the facred hiltorian could never have omitted the expreis mention of that circumItance. The two capital obfervances in the Jewifh ritual were the Sabbath and Sacrifices. To imprefs the higheft reverence and vcueration on the Salldath, he is careful to record its divine original : and can we fuppofe that, had facrifices had the fame original, he would have neglected to eftablifh this truth at the time that he recorded the other, fince it is of equal ufe and of equal importance? I ihould have faid, indecd, of much gieater ; for the muldifarious facrifuct of the Law had not only a reference to the forfiture of Adam, but likewife prefigured onr redemption by Jefus Chrift."

But all this reafoning was forefeen, and completely anfwered belore his lordhip gave it to the public. It is probable, that though the difinction of weeks was well hnown over all the eaftern world, the Hebrews, during their refidence in Egypt, were rery nog!igent in their obfervance of the Sabbath. To enforce a religious obfervance of that facred day, it became neceflary to intorm them of the time and occafion of its frnt infitution, that they might keep it holy in memory of the creation; but, in a country like Egypt, the people were in dancer of holding facrifices rather in tou highthan too low vencration, fo that there was not the fame ne-
cefiity for mentioning explicitly the early infitation of them．It was fufficient that they knew the divine in－ fitution of their own facrifices，and the purpofes for which they were offered．Befides this，there is reafon to believe，that，in order to guard the Ihebrews from the infection；of the heathen，the rite of dacrificing was loaded with many additional ceremonies at its fecond in thtution under tales．It maght，therciore，be impro－ Der to relate its criginal fimplicity to a rebelli us people， who would think themfelves ill－ufed by any alditional burdens of trouble orexpence，however really necelfary to their happincts．Bithip Warbarton fees clearly the neceflity of concealing frem the Jews tle fpiritual and renaed nature of the Chrillian diperfation，lett fuch a backliding people thould，frem the contempla＇ion if it， have held in contempt their own economy．This，he thinks，is the reaton why the prophets，feralling of the reign of t．e Meffiah，borrow their mages from the Mo－ faic difpenfation，that the people living under that difpen－ dation might rot difpife it from perceiving its end；and we think the reafon will hold equally good for their law－ giver conceal：ng from them the fimplicity of the firtt facrifices，lelt they thould be tempted to mumur at their own multifatious ritual．

But his lordibip thinks that facrifices had their ori－ gin from the light of naturnl realfon．We thould be ghad to know what light natural reaton can throw upno luch a fubject．That ifnorant pagans，adouing as gods departed herocs，who fill retained their fenlian appetites，might naturally think of appeafing fuch be－ ings with the fat of icd bealls，and the ferfume；of the altar，we have already admited；but that Cain and Abel，who kncw that the Gni whom they adored has nei．her body，parts，nor paffions ；that he creuted and fuftains the univerfe；and that from his very narure he mult will the happinefs of all his creatures，fhould be led by the light of matur．ll reafon to think of appea－ fing him，of obtining favours from him，by putting to death harmlefs aninals，is a polition which no aigu－ ments of his lordhis can ever compel us to admit．That Abcl＇s facrifice was indeed accepied，we Inow；but it was not accop－d becaufe it procceded frim the move－ mints of the luman mird，and the deficency of the ori－ ginal language，but becante it was ofered through frith．The light of natural，tenfion，however，does not generaic faith，bu：fcience；and when it fails of that， its offepring is abrir Jity．＂Faith is the fubfiance of th：nfos hoped for，the evidence of thing not feen，＂and comes not by reafoning but by heating．What things then were thasy of trich Abel had heatd，for which he boped，and in the faith of wish he offered facrifice？ Trid ubtedly it was as reforation to that immertality which was forieited by the trangreliza of his parents． Oi fuch redenption an whome imtimation had been given to Adam in the rromife that the feed of the wo． man thould bruife the lead of the ferpent；and it was Aublefs \(t\) imprefs upra his mind in mere ftriking on lours the manner in which this was to be douc，that blondy facrifices were frit inflituted + ．Aslong as the import of fuch rites was th：： undertood，they conlti－ tu：ed a peafcitly raticnal worhip，as they thered the people that the wares of tin is death ；but when me： fink into idoatry，and lot all hopes of a refur reation trone the deau，the thughering of aminals to appeafe in－i deites vale a präice grofsly fuperfitious．It ren－ Vol．XV゙た。
ed in iffolf witiont peinting to any further crid，and the grovelling worthippers believed that by Usir facrifices they purchafed the favour of their deities．When once this notion vas entertained，human facrificeswere foon in－ troduced；for it natur：llly occurred to thofe who offered them，that what they mift valued themfilucs wowid be muit acceptable to their offended gods，（fec the nes： aricle）．Bv the Jewidh law，the fe abominable offer－ ings were ftrictly forbidden，and the whole ritual of facti－ fice re！tored t，its original purity，though not fimplicity．

All Chiltian churches，the Socinian fucieties or churches，not excepted，have till very lately agreed in believing that the Jewifh facrifices ferved，amongth nther ufe，for types of the dcath of Chritt and the Chillian worlhip，（fee Typf）In this belief all f．ber Clırilians agree nill，whill many are of opi－ hion that they were likewtle foderal rites，as they cer－ tainly were contidered by the ancient Remans＊．

Of the various kinds of Jewith facrifices，and the fub． ordinate ends for which they were offered a full ac． count is given in the books of Mofes．When an If． raclite oflered a loaf or a cake，the prief broke it in two parts ；and fetting affe that half which he referved for himfelf，broke the other into crumbs，poured oil， wine，incenfe，and falt upon it，and furead the whole upm the fire of the altar．If thefe off．ri＇gs weere ac－ companed with the facrifice of an animil，they were thrown upon the viexim to be confumed along wi．h it． If the offerings were of the ears of new corn，they were parched at the fire，rubbed in the hand，and then of－ fered to the priell in a veifel，over which he poured oil， incenfe，wine，and falt，and then burnt it upon the al－ tar，having firl taken as much of it as of right belong－ ed to himielf：

The pritcipal factifices anoong the Hebrews confin－ cd of bullocks，theep，and foats；but doves and turdes were accepted from thofe whu were not able to bring the other：there beafts were to be perfef，and without blinifh．The rites of facrificing were various；all of whect are very minut idy defcibed in the bocks of Mures．

The manner of facrificing among the Grecks and Romans was as follows．In the choice of the victim， they took care that it was without blemift or imper－ fefion ；its ail was not to be too fmall ai the cnd： the tungue nit black，nor the ears cleft；and that the bu 1 wis one that had never been yoked．The victim being fitched upen，they gilt his ferehcad and horns， cfpecaliy if a bull，heifer，or cow．Tha head they alio a lornoll with a garland ni Howers，it woollen i：：－ fula or ho！fillet，weace hent two rows af chaple：s with twilled ribands；and an the midale of the body a kind of thole，pretiy large，hun thown on each lide： the leter viginas werc oniy adnomed with gariants and bundes of flowers，tighter with white tats or wreths．

The viatims shas preared weec irr ught before the altur；the lefer buing diven to the place，and the ：Treater leal by an laniter ；when，if tray maszan itruggle，or refurd \(t\) ，the refltace was faten for an ill omen，and the facrefice ieccuently fet alide．Th： viktim thes bocughe wals catcility comat cd，to de that there was nodecer in is：then the pri．th，chat in his
 nind othe：attendints，and being linthed and purified ac．
cording to the ceremonics prefcribed, turned to the right hand, and went yound the altar, fprinkling it witls meal and holy water, and allo befprinkling thofe who were Whetent. Then the crier prochamed with a loud voice, gond. The prielt then havi:gy exhouted the poople to join with him by faying, Iet us pray, conferfed his own unworthinels, ackinowletging that he had been guilty of divers fins; for which he beaged pardon of the gods, hoping that the; would be pleafed to grant his requelts, accept the oblations offered them, and fend them all health and happinels; and to this general form added petitions for fuch paticular favours as were then delired. I'rayers being end d, the prielt took a cup of wine; and having tatled it himfelf, caufed his affitants to do the like; and then poured forth the remainder between the horns of the vistim. Then the prieft or the crier, or fometimes the molt honourable perfon in the company, killed the beat, by knocking it down or cutting it, throat. If the facrifice was in honour of the celeftial gods, the throat was turned up towards heaven, but if they facrificed to the heroes or infernal gode, the viation was killed with its throat towards the ground. If by accident the bealt efcaped the ftroke, leaped up after it, or expired with pain and difficulty, it was thought to be unacceptable to the gods. The beaft being killed, the priell infpected its entrails, and made predictions from them. They then poured wine, together with frankincenfe, into the fire, to increafe the flame, and then laid the facrifice on the altar ; which in the primitive times was burnt whole to the gods, and thence called an bolocauf; but in after times, only part of the viatim was confumed in the fire, and the remantder referved for the facrificers; the thighs, and fometimes the entrails, being burnt to their honour, the company fatted upon the rett. During the facrifice, the prieft, and the perfon who gave the facrifice, jointly prayed, laying their hind upon the altir. Sometimes they played upon mufical inflruments in the time of the facrifice, and on fome occafions they danced round the altar, linging facred hymns in honour of the god.

Human Sacrifices, an abominable practice, about the origin of which different opinions have been formed.The true account feems to be that which we have given in the preceding article. When men had gnne \(f, f\) far as to indulge the fancy of bribing their gods by facrifice, it was natural for them to think of enhancing the value of fo cheap an atonement by the colt and rasity of the offering; and, opprefled with their malady, they never refted till they had got to that which they conceived to be the moft precious of all, a human facrifice. "It was cuftomary ( Gays Sanchoniathon \(\dagger\) ), in ancient times, in great and public calamities, belore things became incurable, for princes and magillrates to ofler up in facrifice to the avenging dromons the deareft of their offspring," Sanchosiathon wrote of.Plocnicia, but the practice prevailed in every nation under heaven of which we hare received any ancient account. The Egryptians luad it in the early part of their monarchy. The Cretans likewife had it, and retaned it for a longer time. The nations of Arabia did the fame. The people of Pumah, in particular, facrificed every year a cbild, and buried it underneath an altar, which they made ufe of inftead of an idol; for they did not ajmit of images.

The Perfinms buried pcople alive. Amentris, the wife sarrife. of Xerxes, entombed is perfons quich under ground for the good of hai foul. It would be endlef, to enu. merate every city, or every province, where thefe dire practices obtained. The Cyprians, the Rhodians, the Panceans, the Irnians, thrie of Chios, Lefbos, 'Teredos, all houl human facrifices. The matives of the Taturic Cherfoncius offered up to Dianal evely Atranger whom chance threw urou their coalt. Hence arofe that juft expoltulation in Euripices upun the inconliflency of the proceedirg; wherein much good reafoning is implied. Iphisema wonders, as the goduefs delighted in the blood of men, that every villain and murderer fhould be privileged to efcape, naty be driven from the threthold of the temple; whereas, if an honelt and virtuous man chanced to ftray thither, he emy was feized upon, and put to death. I'ce Pdaryi, in a lime cF fcarcity, vowed the tenth of all that ihould be burn to them for a facrifice, in or 'er to pucure platy. Ariftomenes the Meflenian flew 300 in ble Lacedemowians, among whom was Theoprompus the king of Spata, it the altar of Jupiter at Ithome. Wilhout doubt the Lacedemonians did not fail to make ample returns ; for they were a fevere and revengeiul people, and offered the like victims to Mars. Their feltival of the Dianafigolis is well known; when the Spartan boys were whipped in the fight of their parents with fuch feverity before the altar of Diana Orthia, that they often expired under the torture. Phylarchus affums, as he is quoted by Porphyry, that of old every Grecian flate made it a rule, before they marched towards an enemy, to folicit a bleling on their undertakings by human victims.

The Romans were accuftumed to the like facrifices. They both devoted themfelves to the infernal gods, and contrained others to fubmit to the fame horrid doom. Hence we read in Titus Livius, that, in the confulate of Emilius Paulus and Terentius Varo, two Gauls, a man and a woman, and two in like manner of Greece, were buried alive at Rome in the Ox-market, where was a place under ground, walled round, to receive them; which had before been made ufe of for fuch cruel purpofes. He fays it was a facrifice not properly Roman, that is, not originally of Ruman inftitution; yet it was frequently practiied there, and that too by public anthority. Pluarch makes mention of a like intance a few years before, in the confulhip of Flaminius and Furius. There is reafon to th nk, that all the principal captives who graced the triumphs of the Romans, were at the confe of that cruel pageantry put to death at the alar of Jupiter Capitelinus. Caius Marius offered up his own danghter for a victim to the Dii Averrunci, to procure fuccefs in a battle againit the Cimbsi; as we are informed by Dorotheus, quoted by Clemens. 1t is Jikewife attefted by Plutarch, who fays that her name was Calpurnia. Marius was a man if it four and blocdy dupotition; and had probably heard of fuch lacrificus being offered in the enemy's camp, among whon they were very common, or he might have beheld them exhibited at a dillance; and therefure murdered what was neareft, and fhen!d have been deateft to him, to countcract their tearful fpells, and outuo them \(i .\). their viched mashnery. Cíccro, making mention of this cuftom being common in Gaul, idds, that it provatild among that people cven at the

\section*{SAC}
sucritice.
time he was ipealing: from whence we maj be led to infer, that it was then difcontinued among the Romans. And we are told by Piny, that it had then, and not very long, bean difcouraged. For thare was a lave enåed, when Lentulus and Crantis were confuls, fo late as the 6 joth year of Rnome, that there thould be no more buman facrifices: for till that tinns thofe horsid rice, had been celebrated in brodd day without any malk or coneroul; whict, had we not the beit evicence for the fact, would appear fearec credible. And hawever they may have been difiontinned for a time, we find that they were again renewed; tho' they became nut fo public, nor fugeneral. Finr not very lueg after this, it is reposied of Augultus Cefar, when Pe:ufia furrendered in the time of the fecond triumvisaie, that belides multitudes executed in a military manner, he offered up, upun the Ides of March, 300 chofen perfons, both if the equeltrian and fenatorial order, at an altar dedicated to the manes of his uncle Julius. Even at Rome itfelf this cultom was revived: and l'orphyry affares us, that in his time a man was every feis facrificed at the thrine of Jupiter Latialis. Heliogabalus offered the like victims to the Syrian deity which he introduced amorer the Romans. The fame is faid of Aurelian.

The Gauls ar.d the Germans were fo devoted to this fh-cking cufton, that no bulinefs of any moment was tranfacted among them without being preia:ed with the blood of men. They were offered up to various gods; but particularly to Hefus, Taranis, and Thautates. Theie deilies are mentioned by Lucan, where he enumerates the various nations who followed the fortunes of Cæfar.

The altars of thefe gods were far removed from the commen refort of men; being gencrally fituated in the depth of woods, that the gloom might add to the horror of the operation, and give a reverence to the place and proceeding. The peifous devnted were led thither by the Druids, who prefided at the folemnity, and performed the crtel ofices of tbe facrifice. Tacitus tikes notice of the cruclty of the Hermurduri, in a war with the Catti, wherein they had greatly tle advantage; at the clofe of which they made one general ficrifice of all that was taken in battle. The poor remains of the legions under Varus fuffered in fome degree the fame fate. There were many places dellined for this purpofe all over Gaul and Germany; but efpecially in the mighty woods of Arduenna, and the great Hercynian foreil; a bild that extended above 30 days journey in length. The places fet apart for this folemnity were held in the utmolt reverence, and only approached at paricular feafons. Lucan mentions a grove o! this fort near Mallilia, which even the Roman fildicts were aftraid to violate, though commanded by Cæfir. It was one of thofe fet apart for the facrifices of the country.

Claudian compliments Silicho, that, among other advantages accruing to the Roman armies through his conduct, they could now venture into the awful torelt of Heresnia, and fillow the chafe in thole fo much dreaded woods, and otherwife make nfe of tham.

Thefe practices prevailed among all tise penple of the north, of whatever dernmination. The Maffigetx, the Seythians, the Getes, the Sarmatians, all tle various nations upo the Bultic, particularly ilie

595 S A C
Suevi and Scardinavians, leld it as a lixed prinziple
Sucritic. that their hatppinefs and fecurity could not be nbtained but at the expence of the lives of uthers. Their chitf gods were Thor and Woden, whom they thought they couid never fufficiently glut with blood. They had many very celehtated places of worthip ; efpecially in the infand Rugen, near the mouth of the Oder: and in Zealand: fome, too, very tamons amuang the Semnones and Naloarvalli. But the nolt reverenced of all, and the moit frequented, was at Upfal; where there was every year a grand celebrity, which enntinued for nine days. During this term they facrificed aninals of all forts: but the mof acceptable victims, and the mof numerous, fere men. Of thefe facrifices none vere efteemed fo aufpicious and f.lutary as a facrifice of the prince of the country. When the lot fell for the king to die, it was received wiih univerfal acelamations and every exprefion of joy ; and it once happened in the time of a famisc, when they caft loss, and it fell to kiig Domalder to be the people's vict m: and lie was accordingly put to death. Olaus Tretelger, another prince, was burnt alive to W Wden. They did not fare their own children. Harald the fon of Gunild, the firf of that name, flew two of his children to whain a foorm of wrad. "He did not let (fiys Verlegan) to facrifice two of his fons unto his idols, to the end he might nhtain of them fuch a tempelt at \(f=a\), as fhonld break and diperfe the thipping of Harald kinig of Dermark." Saxo Gramma icus mentions a like fact. He cails the kirg Hiquin ; and fpeaks of the perfons put to death as two very h peful young princes. Another king flew nine fors to prolong his own life; in hopes, perhaps, that what they were abridered of would in great meafure be added to himfelf. Such intances, however, occur not often, but the common victıms were without end. Adan Bremenfis, freaking of the awful grove at Upfal, where thefe horrid utes were celebrated, fays, that there was not a fingle trce but what was reverenced, as if it were gifted with fome protion of divinity: and all this becaufe they were fained with gore and foul with human putrefadina. The fame is obferved by Scheiffer in his account of this place.

The manier in which the viotims were flaughtered, was diverfe in different places. Some of the Gaulifh nations chincd them with a Aroke of an ax. The Celtre placed the man who was to be offered for a fac:ifice upon a hlock, or an altar, with his breaft upwards, and with a fword fruck him forcibly acrofs the Aemum; then tumbling him to the ground, from his agonies and corvultions, as well as from the effufion of blood, they firmed a judgment of future events. The Cimbri ripped open the bowels; and from them they pretended to divine. In Norway they beat men's brains out with an ox-yoke. 'The fame operation was performed in Iceland, fov dathing them againt an altar of fone. In many places they transfixed them with arrows. Alter they were dead, they fuppanded them upon the tress, and lett them to putrefy. One of the writers above quoted mentions, that in his time 70 earcales of this fort were found in a wood of the Seevi. Ditimar of Merburgh, nn author of nearly the fame age, freaks of a plaee cailed Lcuiur in Zcaland, whe:e there were cvery yoar 99 perfons factificed to the god Swantowite. S.rifice. \(\cdots\) juy rievailed, and banquats were mof rnyally ferved. - ney fed, caroufed, and gave a lore to indulgence, which at other times was not permitted. They im. cined that there was fomething my:lerious in the numher rine: for which reafon thete fealls were in fone flaces ccicbrated every ninth year, in others cvery rinth mosth; and continued for nine day-. When ail was ended, they wanfled the image of the deity in a pool; and then dimified the affembly. Their fervants were numerous, who attended during the term of thair feallin: and pattook of the b.mquet. At the clofe of all, they were finothesed in the tame pool, or otherwile made away with. On which Tacitus remarls, how great an atre this circumitance mult necelfiriIs infife into thofe who were not admitted to thefe menferies.

Thefe accounts are handed down from a variety of authors in different ages; many of whom were ratives of the countries whilh dhey defribe, and to which they feem ftrongly attached. They would not therefore have brought fo finl an imputation on the part of the world in favour of which they were each witing, nor could there be that concurrence of teitimuny, were not the hiftory in gencral true

The like cultom prevailed to a great degrec at Mexico, and even under the mild government of the Peruvians ; and in molt parts of America. In Africa it is ftill krpt up; where, in the inland parts, they tacrifice fome of the captivestaken in war to their fetiches, in order to fecure their favour. Snelgrave was in the king of Dahoome's camp, after his inroad in:o the countries of Ardra and Whidaw; and fays, that he was a witnefs to the cruelty of this prince, whom he faw facrifice multitudes to thed eity of his na:ion.

The fame abominable worfhip is likewife practifed occalionally in the iflinds vifited by Captain Cook, and other circumnavigators, in the South Sea. It feems indeed to have prevailed in every country at one petind of the progrefs of civilization, and undoubtedly had the origin which we have afligned to it.

The factifices of which we have been treating, if we except fome few inftances, confifted of pertions donmed by the chance of war, or adigned by lot, to be offered. But among the nations of Canaan, the vittims were peculiarly chofen. Their own children, and whatever was neareft and deareft to them, were deemed the moft worthy offering to their god. The Carthaginians, who were a colony from Tyre, carried w the them the religion of their mother-cnuntry, and inflituted the fame worfhip in the parts where they fettled. It comrifted in the adoration of feveral deities, but particisurly of Kronus; to whom they offered human facrifices, and efpecially the blood of children. If the parents were not at hand to make an immediate offer, the magifrates did not fail to make chnice of what was mott fair and promifing, that the god might not be defrauded of his dues. Upon a check being received in Sicily , and fome other alarming circumllances happening, Hamilcar without any hefitation laid hold of a boy, and offered lim on the fot to Kronus; and at the fame time diowned a number of priefts, \(t\) appeafe the deity of the fea. The Curthaginians another time, upon a great defeat of their ammy by Agathocles, imputed their mifcarriages to the anger of this god, whofe fervices had been neglected. Touched with this, and fecing the
 of the prime nobility, and (fered them in public for :t fucrifice. Three hundred more, being petions who were fomchow obnoxious, jielded themelves viluntarily, and were put to death with the others. The neglect of which they accufed themfelves, confined in facrificing children purchafed of parents among the pootcr iort, who teated them for that gurpofe, ard not delering the molt promiong, and the inst honour. able, as had been the cullum of old. In thort, there were purticular clild:en br molt up for the altar, as fheep are fattened for the thanb'es; and they were bought and butchered in the fame minsler. But this indifiminate way of proceeding was hoonght to lave given offerce. It is rem.akable, tha: the Egyptians lookes ou: for the mof fipeci us and handf me perfon to be facififed. The Albanians pit hed upon the belt man of the community, and made him fay fur the wickednefs of the reft. The Cathagmians ct fe wat they theught the moft excelint, and at the fame time the mof dea: to them : which made the lot fall heavy upno their children. This is taken nutice of by Silius Italicus in his fourch book.

Fronus, to whom thefe facrifices were cxlibited, was an oriental deity, the god of light and fire; and therefore always worlhiped with fome reference to that element. See Phoenicia.

The Greeks, we find, called the deity to whom the e offerings were mude Ayraulos; and fcigned that fhe was a woman, and the daughter of Cecrups. Bu: how came Cecrops to have any connection with Cy prus? Agraulos is a corruption and tranfpufition of the origin:l name, which thould have been rendered Uk El Aur, or Uk El Aurus; but has, like many other oriental titles and names, been Atrangely fuphifticated, and is here changed to Agraulos. It was in reality the god of light, who was always worfhipped with fire. This deity was the Moloch of the Tyrians and Canaanites, and the Melech of the Ealt ; that is the great and principal god, the god of light, of whom fire was efleemed a fy mbol ; and at whofe flarine, inflead of viler victims, they offered the blood of men.

Such was the Kronus of the Greeks, and the Moloch of the Phoenicians: and nothing can appear more thocking than the facrifices of the Tyrians and Carthaginians, which they performed to this idol. In all emergencies of ftate, and times of gencral calamity they devoted what was moit necelfary and valuable to them for an offering to the gods, and particularly to Moloch. But befides thefe undetermined times of bloodhed, they had particular and preferibed feafons every year, when children were choten out of the moft 1 mble and reputable families, as before mentinned. If a perfon had an only clild, it was the more liable to be put to death, as being elfeemed more acceptable to the deity, and more efficacious for the general go d. Thufe who were factificed to Kronus were thrown into the arms of a molten id ll, which ftool in the midit of a large fire, and was red with heat. 'The arms of it were Itretched out, with the lands turned upwards, as it were to receive them; yet floping downwards, io that they dropt from thence into a ghowing funace below. To other gods they were otherwife h.ughtered, and, as it is implied, by the very hands of their parents. What ean be more horrid
sacrifice. Hornid to the imagination, than to fuppore a father Jeading the dearelt of all his fons to fuch an infernal fhrine? or a mot.er the mon engaging and affectionate of her dustuters, juft ring to maturity, to be flughiered at he altar of Aflutath or Baat? Juftin cescribes this u:natural cuftom very pathetically: 2.ipse bonines, ut vidimas, immulabans: "t impuberes ( \(q\).e atis 1.3 zitum mifertior fiam provocat) aris admovebavat ; fuem junzuine eorum expofcentes, pro quorunn wihd Dii \(r\) giri maxime folns. Such was their blind zeal, that this was continually pratifed; and fo much of natural affertion fill left unexingu thed, as to render the licene ton times more flocking from the tenderaefs which thay feemed to exprel:. They embraced their children with great fondnefs, and encouraged them in the gentlelt terms, that they might not be appalled at the fight of the hellith procels; begging of then to fubmit with cheerfulnels io this tearful operation. If there was any appearance of a tear rifing, or a cry unawares efiaping, the mother fmothered it with her killes, that there might not be any fhuw of backwarduefs or confraint, but the whole be a freewill offaing. Thefe clusl endearmen sover, they llabbed them to the heart, or otherwite opened the fluices of life; and with the bhod wam, as it ran, befmeared the altar and the grim vifage of the idol. Theie were the cultoms which the Ifraelite, learned of the penple of Canaan, and for which they are upbraided oy the Pfalmitt: "They did not deltroy the navons, concerning wh m the Lord commanded them; but were mingled among the heathen, and learned their works: yea, they fac-ifice 1 heir \(f\) in, and their daughters unto devils, and faed inn cent blood, even the blond of thear fons and of their daughters, whom they lacriticed unto the idols of Canaan; and the land was polluted with blond. Thus were they defiled will their own works, and went a-wh ring with their own inventions."

Thele cruel rites, practifed in fo many nations, made Plutarch debate with himielf. "Whether it would not have been butter for the Ga'ate, or for the Scythians, to have had no tradi ion or conception of any fuperior beings, than to hive furmed to thernfelves nutions of gods who deighted in the blood of men; of gods, who elleered human visums the mof acceptable and perfect facrifice? Wouid to not (fays he) have been more c'igible for the C.rthasg nians to have bad the atheitt Critias, or Diaguras, their lawgiver, at the commencement of their polity, and to have been taught, that there was neither god nor demon, than to have facrificed, in the manner they were wnat, to the god whish they adored? Whersin they acted, not as the Ferfon cid whom Eimpedocles deliribes :n fome poetry, where he expotes this umatural cutom. The fire there with many idie vows offers up unwitingly liis fon f r a farrifie; but the youth was io changed in feature ans figure, that his father did n \(t\) k...ow him. Thefe peuple u'ed, knowingiy ald wilfully, to go through this blonly work, and fluehter their own offpring. Even they who were chiljlef would not be eximpted from this curf d tribute; but purchated child. su, \(t\) a price, of the poorer fort, and plithem to death ryith as lietle remorfe as one wou'd x.ll a lamb or . .heken. The mothe;, whe faterficed her child, foold by, withoui any feeming fenfe of what the was lofing, and without uttering a groun. If a figh did
by chance cfape, fie loft all tha h innur which for swalege propofed to herfelf ia the ollowing, and the chil! was notwithatanding flain. All the sime of this cercmony, Suldue e. while the ch:Idren were murdenit , there was a ncite of clarions and tators inounding belose the idol, that the cries and fhricks of the viatims might: not be heard. "'rell me now (fays Plu:dreh) if the macniters of old, the 'Typhons, and the giants, were to expel the gad, and to rule the world in their fead; could they require a fervice more hornid than thefe infernalsites and lucrifices?"

SACRILEGE. sacribegium, the crime of profaning lacred thing:, or thangs devoted to God; or of aliatating to laymen, or conmon purpofes, what was given to religious \(p=\pi \int\) as and prous ufes.
SACRISIAN, a charch-olicer, otherwife called Sexton.
SACRISTY, in church-hifory, an apartment in a church where the facred utemils were kept, Leing the fame with our Vestry.

SADDLE, is a teat upon a horfe's back, contrived for the conveniency of the rider.

A hunting.faddle is cumpofed of two bows, two bands, fore-bollicrs, pannels, and faddle-ltraps; and the great faddle has, befides thefe parts, corks, hind-bcilisu!, and a trouliequin.
The \(p\) manel is common to both.
SADDUCEES, were a famous fen amorg the athcient J=ws, and corifited of petfuns of great quality and opulence. Relpecting their origia there are vatinus accounts and various opinions. Enpiphanius, and after him many ott:er writers, contenu, that they rook their rife frum D tithen, a fectary of Samaria, and their name from the Hebrew word fac, ufl or jufice, from the great jutice and equity which shey fho:sd in all thenr actions; a derivation which nsither furts die word Sadduree nor the gereral charikiter of the feat. They are thought by fome con to have been Samaritans; but this is by no means probatle, as they diwdys attended the worlhip and facrfices at Jerufalem and never at Gerizzim.

In the Jewifh Talmud we are thid that the Siddu. cees derived their name rom Sadoc, and that the fert arofe about 260 years before Chritt in the time of Antigonus a S cho, prefidemt of the Sinhedim at Jerufalem, and teacher of the law in the principal divinity fohool of that city. He lad often in his lectures, it feems, taught his foholars, that they ough not tofirve God:as flaves do their manters, from the hepes of a reward, but merely out of fild love trib his onn lake; from which Sadnc and Baithus inferred that there were no rewards at all after this life. They therelore leparated from therr malter, and tanght that there was no refurrection in r furure flate. This new doterite quickly fpread, and gave rife to the left ot S.dducees, which in many refpects refembled the Epicureans.
Di Prideaux thinks, that the Sadducecs were at firt no more than what the Caraites are now; that is, they would not recc.ve the traditions of the elders, but tuck to the written word only ; and the Pharifeen being gt. at promoters of thofe traditions, hacice thefe two fects became direaly oppolite to e.rch (ther. See Pridaux's Corno part. if b. 2 and 3. and fee alio Pharisers and CaRaitfs.

Afterwards the Saducees imbited other de Arines, whic'

\section*{3 A D}

Sadisees. which rendered them a fect truly impious; for they denied the refurrection of the dead, and the exiftence of angels, and of the firits or fouls of men departed (II.t. xxii. 23 . Acts sxiii. 8.) They hild, that there is no \{piritual being but God only; that as to man, this world is his all. T'ney did not deny but that we lad restonable fouls: but they maintuined this foul was mertal ; and, by a neceflary confequence, they denied the rewards and punilhmints of another life. They pretended alfo, that what is faid of the exiltence of angels, and of a future refurrection, are nothing bui illulions. St Epphamius, and after him St Auttin, have advanced, that the Sudducees denied the Huly Ghoft. But neither Jofephus nor the evangelifts accufe them of any er-L- Jor like this. It has been alfo imputed to them, that they thought God corporeal, and that they received none of the prophecies.

It is pretty difficult to apprehend how they could deny the being of angels, and yet receive the books of Mofes, where iuch frequent mention is made of angels and of their appearances. Grotius and M. Le Clerc obferse, that it is very likely they looked upon angels, sint as particular beings, fubfifing of themfelves, but as powers, emanations, or qualities, infeparable from the Deity, as the fun-beams are infeparable from the fon. Or perhaps they held angel; not to be fpiritual but mortal; jut as they thought that fubltance to be which animates us and thinks in us. The ancients do not tell us how they folved this difficulty, that might be urged againtt them from fo many paffages of the Pentateuch, where mention is made of angels.

As the Sadducees acknowledged neither punifhments nor recompenfes in another life fo they were inexorable in their chaftiting of the wicked. They obferved the law themfelves, and caufed it to be obferved by others, with the utmof rigour. They admitted of none of the traditions, explications, or modifications, of the Pharifees; they kept on!y to the text of the law; and maintained, that only what was written was to be obferved.

The Sadducees are accufed of rejecting all the books of Scripture except thofe of Mofes; and to fupport this opinion, it is obferved, that our Saviour makes ufe of no Scripture againft them, but paffages taken out of the Pentatench. But Scaliger produces good proofs to vindicate them from this reproach. He obferves, that they did not appear in Ifrael till after the number of the holy books were fixed; and that if they had been to choole out of the canonical Scriptures, the Pentateuch was lefs favourable to them than any other book, fince it often makes mention of angels and their apparition. Befides, the Sadducees were prefent in the temple and at other religions aflemblies, where the books of the prophets were rad indifferently as well as thofe of Mofes. They were in the chief employs of the nation, many of them were cyen priefts. Would the Jews have fuffered in thefe employments perfons that rejected the greateft phat of their Scriptures? Nenaffeben-Ifrael fays exprefsis, that indeed they did not reject the prophets, but that they explained them in a fenle very different from that of the other Jews.

Juferhus affures us, that they denied deftiny or fate ; alicging, that thefe were only founds void of fenfe, and that all the good or evil that happens to us is in confe.
quence of the good or evil fide we have taken, by the Sadducee free choice of our will. They faid alfo, that God was far removed from doing or knowing evil, and that man wis the abfolute mafter ot his own adtions. This was roundly to deny a providence; and upnn this footing I know not, fiys F. Calniet, what could be the religion of the Sadducces, or what influence they could afcribe to God in thiugs here below. However, it is certain they were not only tolerated among the Jews, but that they were admitted to the high-prielthood itfell. John Hircanus, high-prieft of that nation, feparated himfelf in a fignal manner from the fect of the Pharifees, and went over to that of Sadoc. It is faid alfo, he gave ftrict crmmand to all the Jews, on pain of death, to receive the maxims of this fect. Ariltobulus and Alexander Jannæus, fon of Hircanus, continued to favour the Sadducees; and Maimonides affures us, that under the reign of Alexander Jannens, they had in poffeflion all the offiees of the Sanhedrim, and that there only remained of the party of the Pharifees, Simon the fon of Secra. Caiaphas, who condemned Jefus Chrift to death, was a Sadducee (Acts, v. 17. iv. 1.) ; as alfo Ananus the younger, who put to death St James the brother of our Lord. At this day, the Jews hold as heretics that fradl] number of Sadducees that are to be found among thenn. See upon this matter Serrar. Tiikaref. Menale ben-Ifrcel; De Refurreaiune moriurvann; Ba'rntyee's Hiflory of the Firus, Er.; and Calmet's Differtation upon the Suds of the Gerus beion the Commentary of St Mlark.

The fect of the Sudducees was much reduced by the deftrustion of Jerufalem, and by the differfion of the Jews; but it revived afterwatds. At the beginning of the third century it was fo formidable in Egypt, that Ammonim, Origen's malter, when he faw them propagate their opinions in that country, thought himfelf obliged to write againft them, or rather againtt the Jews, who trlerated the Sadducees, thuugh they denied the fundamental points of their religion. The emperor Juftinian mentions the Sadducees in one of his novel, banifhes them out of all the places of his dominions, and condemns them to the feverell punifhments, as penple that maintained atheiftical and impious tenets; denying the refurrection and the laft judgment. Annus, or Ananus, a difciple of Juda, fon of Nachman, a famous rabbin of the 8th century, declared himfelf, as it is faid, in favour of the Sadducees, and Itremuonfly pro. teeted them againft their adverfaries. They had alio a celebrated detender in the 12 th century, in the perfon of Alpharag a Spanifh rabbin. This doctor wrote againft the Pharifees, the declared enemies of the Sadducees; and maintaned by his public writings, that the purity of Judaifm was only to be found among the Sadducees; that the tracitions avowed by the Pharifees were ufelefs; and that the ceremonies, which they had multiplied without end, were an unfupportable yoke. The rabbi Abraham-ben-David Italleri replied to A!pharag, and fupported the fect of the Pharifees by two great arguments, that of their univerfality and that of their antiquity. He proved their antiquity by a continued fucceffion from Adam down to the year 1167 ; and their univerfality, becaufe the Pharifecs are fyread all the world over, and are found in all the fynagogues. There are ftill Sadducees in Africa and in fivesal other places. 'They deny tise immortality of the loul, and

Sadler the refurreation of the boity: but they are rarely found, at le if there are but few who declare themfelves for there opini \(n\) :.

SADLER ( \(J\) hn), was defeended from an ancient family in Shuplhre; boon in 1615; and educated at Cimbrid, e, where be became eminent for his great lnowlede in the oriental linguages. He removed to L.meoln's-I: n, were he made no imall progrefs in the fudy of the l.w and in \(16+t\) was admitted one of the m.tters in chancery, is alfo one of the two mafters of requefts. In 1649 he was chofen town-clerk of London and the fame year publifhed his Rights of the lingdom. He was greally elleemed by Oliver Cromwell, by whofe fpecial wartant he was continued a mafter in Chancery, when their number was reduced to fix. By his intereft it was that the Jew obtained the privilege of building for themfelves a fynagogue in London. In 16,8 he was made member of parliament for Yar, mouth ; and next year was appointed firf commiffoner under the great feal with Mr Taylor, Mr Whitelocke, and others, for the probate of wills. In 1660 he publifhed his Olbia. Sinon after the Reforation, he loft all his emplyments. In the fire of London in 1666, he was a great futerer ; which obliged him to retire to his fent of Warmwell in Dorfethire, where he lived in a private manner till 1674 , when he died.

SADOC, a fime us Jewith rabbi, and founder of the fert of the Sadnucees.

SADOLET (James), a pelite and learned cardinal of the Romifh church, born at Modena in 1477. Leo X. made him and Peter Bembus his fecretaries, an - fife for which they were both well quallified; and Sadnlet was foon after made bith p of Carpentras, near Avignon: he was made a cardinul in 1536 by Panl III. .nd employed in feveral riegociations and emb dfies. He died in 1547, not without the fufpicion of poiton, for correfponding too familiarly with the Proteltants, and for telifying ton much regard for come of their doconrs. His works, which are all in Latin, were collefted in 1607 at Mentz, in one volume 8 vo. All his contemporarics fpoke of him in the higheft terms.

SAIE-GUARD, 2 protection formerly granted to a franger who ferred villence from fome of the king's fuljocts for eeking his righi by courfe of law.

SAFE Conduft, is a fecurity given by a prince under the great teal, to a ftranger for his fafe-coming into and pafling nut of the realm; the form whereof is in Reg. Or.g. 25. There are letters of fafe conduct which muth be enrolled inchancery; and the perions to whom granied mult have them ready to fhow: and tonching which there are feveral fatutes. See Prerogative.

SAFFRON, in the miteria medic., is formed of the figmata of the crocu, officinalis *, dried on a kiln, and - Sce Cro-prefied toncether into cakes. Of this there are two cus.

The faffron ground is felcom above three acre-, or lefs than one; and in choofing, the principal thing they have regard to is, that they be well expoied, the fuil not poir, nor a very ftiff clay, but a temperate dry mould, fuch as commonly lies upon chalk, and is of an hazel colour ; though, if every thing elie anfwers, the colour of the monld is pretty much negle?ed.

The ground being made choice of, about Lady-day or the beginning of April, it muft be carefnlly ploughed, thee furrows being drawn much clofer together, and decper if the foil will allowit, than is done for any kind of corn; and accordingly the charge is greater.

About five weeks after, during any time in the month of May, they lay between 20 and 30 loads of duar upon each acre, and having fpread it with great care, they plough it in as before. The fharteft roten dung is the beft; and the farmers, who have the conveniericy of making it, fpare no pains to make it good, being fure of a proportionable price for it. Aboutmidfummer they plough a third time, and between every 16 feet and an half they leave a broad furrow or trench, which ferves both as a buundary to the feveral parcels, and for throwing the weeds into at the proper feafon. The time of planting is commonly in the month of July. The only inftrument uled at this time is a fmall uarrow fpade, commonly calld a dpit-lbovel. The method is this: One man with his fhovel raifes abont three or four inches of earth, and throws it before him about fix or more inches. Two perfons, gencrally women, fullow with roots, which they place in the fatheft edge of the trench made by the digger, at about three inches from eachother: As foon as the digger has g ne once the breadth of the ridge, he begins agaia at the otier ticce; and, digging as before, covers the roots laft fot, which makes room fur another row of rots at the fame diftance from the firit that they are from one another. The only dexterity necefrary in digging is, to leave fonte part of the firtlltratum of earth untouched, to lie under the ro:ts: ans, in fetting, th place the roots cii. rectly upon their bottom. The quanti,) o: roos planted on an acre is generally about 16 quarters, or 128 buthels. From the time of planting till the beginnirg of September, or \(f\) metimes later, there is no ninte labour required; but at that teme they begin to vegetate, and ate ready to thew themelves alsove ground, which may be known by diggring up a few of the ror ts. The graund is then to be pared with a thap loo, and the weeds raked ino the furrws, otherwie they would hinder the growth of the fiffurn. In \(f\) me time afiter, the flowers appear.

They are gathered befure they are full blown, as well as after, and the proper time !or it \(i\) e eally in the morning. The owners of the dalliron fields get t g-ther a futticient number of hands, who pull iff the whole flowers, and throw then by handfuls ino a b iket, and fo continue till abour 11 , 'clock. Hung then carried home the flowers, hey immedinely lall to 1 if \(k-\) ing rut the fligmata (r chives, and \(t\) getter with item a pretty large proportion of the fylu, ittelf, or thir,\% to which they are ittached: the reit of the fower they throw away as ufelefs. Next morning they :cturn to the field, without regarding whether the wat? er be wet or dry ; and fo on daily, even on Sundays, till tiee whale crop is grathered. The next labour is to dey the clives on the kiln The kiln is built tyion a thick
plank, that it may be moved from place to place. It is fupperted by four thurt legs; the outfide confilts of cight pieces of wood of three inches thick, in form of a quadrangular frame, about 12 inches fquare at the bortom on the infide, and 22 on the upper pait; which lal is likewife the perpendicular height of it. On the forefide is left a hole of about eight inches fquare, and fiear inches above the plank, through which the fire is put in ; over all the reft laths are laid prety thick, cloce to one another, and nailed to the frame already mentioned. They are then plaftered over on both tides, as are alfo the planks at bottom, very thick, to lierve for an hearth. Over the mouth is laid a hairclatil, fixed to the edges of the kiln, and likewife to (wra rollers or moveable pieces of wood, which are turn. at by wedges or ferew; in crder to Itretch the cloth. lattead of the hair-cloth, fome penpie ufe a ner-work of iror-wire, by which the faffron is fooner dried, and with lefi fiel; but the difliculty of preferving it from bunning makes the hair-clothpreferred by the beit judges. The kiln is placedin a light purt of the houfe; and they begin with putting five or fix theets of white paper on the haircloth, and upon thefe they l.is out the wet faffrom two or three incles thick. It is then covered with tiome other fheets of paper, and over thefe they lay a coarfe blanket five or fix times doubled, or inltead of this, a canvas pillow filled with Itraw; and after the fire has been lighted for fome time, the whole is covered with a board having a confiderable weight up nit. At firlt they apply a pretty Arong heat, to make the chives fweal ths they call it; and at this time a great deal of care is neceifiry to prevent burning. When it has been thons dried about an hour, they torn the cakes of faffrum upfide dowa, putting on the coverings and weight as before. If no finiter accident happens suying thefe frit two hours, the danger is thought to be over ; and noching more is requilite than to keep up a very gentle fire for 24 hours, turning the cake every half hour. That fuel is beft which yiclds the leat fmoke; and for this reafon charcoal is preterable to all others.

The quantity of fuffron produced at a crop is uncert.ii:). Sometinies five or fix poends of wet chives are yol from one rood, fometimes not above one or two ; ard lometimes not fo much as is fufficient to defray the expence of gathering and drying. But it is always obierved, that about five pounds of wet faffron go to make one pound of dry for the firlt three weeks of the crop, and fix pounds during the laft week. When the heads are planted very thick, two ponds of dry faiftem may at a medium be allowed to an acre for the firt crop, and 24 pounds for the twor remaning ones, the third heiner confiderably larger than the fecons.
'1's obtain the feennd and third crops, the labour of hoeing, gathering, picking, \&ic. already mentioned, mult be repeated; and about midfummer, after the third crop is eathered, the ro ts malt all be taken up and trant. phined. For taling tep the roots, femetimes the plough is made ure of, and fomatimes a forket hoe ; and then the fround is harrowed once of tuive over. During a!! the tirue of ploughins, harowing, \(\$ 5.15\) or more porfe w:ll find work enough to folluw and gather the houts as they are turned up. The tonts are next to be c.reed to the hetufe in facks, shere they are cleaned at et :asud. This labeur coultas in cleaning the routs
thoroughly from earth, decayed old picces, involucra, or escrefcences; after which they become fit to be planted in new ground immediately, or they may be kept for fome time, without danger of fpoiling. The quantity of roots taken up in proportion to thofe planted is uncertain ; but, at a medium, 24 quarters of clean roots, fit to be planted, may be had from each acre.There fometimes happens a remarkable change in the roots of faffron and fome other plants. As foon as they begin to fhoot upwards, there are commonly two or three large tap.roots fent forth from the fide of the old one, which will rur two or three inches deep into the ground. At the place where thefe bulbs firf come out from, the old one will he formed fometimes, though not always, and the tap-root then decars. The huib increatles in bignefs, and at laft talls quite off; which commonly happens in April. But many times thefe tap-ructs never produce any buibs, and remain barren for ever after. All fuch rocts therefire fhould be thrown away in the making a new piantation. This degencracy of the roots is a difeafe for which no cure is as yet known.

When faffron is offered to fale, that kind ought to be chofen thich has the broatell blades; this being the mark by which Englifh faffron is uillinguifhed from the foreign. It ought to be of an orange or fiery-red colour, and to yield a dark yel'ow tincure. It fhould be cholen frefl, not above a year old, in clofe cakes, neither dry nor yet very moint, sough and firm in tearing, of the fame colour within as without, and of a Arong, acrid, diffufive fmell.

This crug has been reckoned a very elegant and ufeful aromatic. Befides the vitues it has in common with other tubitances of that clafs, it has been accounted one of the higheft cordials, and is fait to exhilarate the fpirits to fuch a degree as, when taken in large dofes, to occafion immoderate mirth, involuntury laughter, and the ill effeets which follow from the abufe of piritwous liquors. This medicine is parzicularly ferviceable in hyteric deprefions proceading from a cold caufe or obdruction of the uterine fecreti ns, where other aromatics, even thofe of the more generous kind, have little effect. Safiron imparts the whole of its virtue and colour to rectified fririt, proof-lpirit, wire, vinegar and water. A tincture drawn with vinegar lofes greatly of its colour in keeping; the watery and vinous tinstures are apt to grow four, and then lote their colour alfo: that made in pure fpirit keeps in perfection for many years.

\section*{Meadou-Shifrov. See Colichicum.}

SAGAN, in frripture-hilery, the fuffragm or deputy of the Jewith high prielt. Accordng to fome waters, he was only to officiate for him when he was rendered inc pable of attending the fervice throngh ficknefs or legal uncleannefs on the day of expiation; or, according in others, he was to aifit the high-priell in the care of the affeirs of the temple and the iervice of the prielts.

SAGAPENUM, in pharmacy, \&ic. a gumerfin brought to us in two forms; the finer and parer is in luole gramules or tingle drops; the coarecr kind is in maffes compofed of thefe drops of various fizes, cearentcd together by a mater of the fame hind. In either rafe, it is of a firm compact fubfance, conliderabi'y heavy, and of a reddith colour on the outfide, browning w:thin, within, and fpotted in many places with fmall yeilowifh or whitifh fpecks. Its fmell is ftrong and difagreeable ; its tafte acrid and mopleafint.

It is brought to us from Perfia and the Eaft Indies. The plant which produces it has never been deferibed; but is fuppofed to be, as Diofeorides fars, of the ferula kind, from the feeds and fragments of the ftalks fumetimes met with in the body of it.

Sagapenum is a very great attenuant, aperient, and difcutient. It is good in all diforders of the breaft that owe their origin to a tough phlegm. It has alio been found to difcufs tumers in the mervous parts in a remarkable manner ; and to give relief in habitual headachs, where alnoof all things elfe have failed. It: dofe is from ten grains to two fcruples; but it is now feldom given alone. It has teen found, however, to do great things in afthmas; in obfrudions of the vifcera, particularly the fpleen; in nervous complaints; and even in epileplies. It alfo promotes the menfes, and expels the fecundines; and is an ingredient in the theriaca, mith. ridate, and cther of the thop compofitions.

SAGE, in botany. See Salria.
Sage (Alain Rere), an ingenious French romancewiter, was born at Ruys in Brittany in the year 1667. IHe had a fine How of imayination, was a cumplete mafter of the French and Spanifh languages, and wrote feveral admired romances in imitation of the Spatilh authors. The'e were, The Bachelor of Sulamanca, 2 vols 12 mn ; New Adventures of Don Quixote, 2 vols 12 mo ; The Devil on Tiwo Sticks, 2 vols 12 mo ; and Gil Blas, 4 vols 12 mo . He produced alio fome comedies, and other pieces of picafantry; and died in 1747, in a little houfe near Paris, where he fupported himelf by writing.

Sise (the reverend John), fo jufly admired by all who knew him for his clafieal learning and reafoning powers, was born, in 1652 , in the patifh of Creich and county of Fife, North Britain, where his ancettors had lived for feven generations with great refpect though with little propercy. His father was a captain in Lord Duffus's regiment, and fought for his king and country when Monk formed Dundee on the 30 th of Auguft 165 t .

The iftue of the civil wars, and the loyalte of captain Sage, left him nothing to beftow apon his fon but a liberal education and his own prineiples of piety and virtue. In thofe days the Latin language was taught in the parorhial fehools of Scotland with great ability and at a trifing expence; and after young Sage had acquired a compctent knowledge of that language at one of thofe ufful \(f \in\) minaries, his futher, without receiving from an ungrateful court any recompence for what he had I:ft in the caufe of rovalty; was ftill able to iend him to the univerfity of St Andrew's, where having remained in college the ufual number of terms or feffions, and performed the exercifes required by the ftatutes, he wa; admitted to the degree of mater of arts, the highe! honour which it afpears he ever received from any univerfity.

During his relidence in St Andrew's he fudied the Greet and lioman authors with great diligence, and was likewife inftructed in logic, metaphyfics, and fuch other branches of philofophy as then obtained in the fehools, which, thnugh we affer to finile at them in this enlightened age, he always fooke of as highly ufe-
ful to him who would underitand the poets, hiftorims, and orators of ancient Grcece, and cven the fathers of the Chriftian church. In this npinion crery man will agree with him who is at all acquainted with the ancient metaphyfies, and has read the writings of Cl mens Alexandrinus, Origen, Tertullian, Chryiofome, and other fathers of great name; for each of thofe writers adopted the principles of fome one or ather of the philofophical feets, reatoned from thair notions, and often made ufe of their terms and phrafee.

When Mr Sage had taken his mafter's degree, the narrownefs of his fortune compelied him to accept of the firlt literary emplorment which was offored to him; and that happened to be nothing better than the office of fchoolmatter in the parifh of Bingry in Fiiefinire, whence he was foon removed to Tippermuir in th: county of Perth. In thefe humble itations, though he wanted many of the neceffaries and almoft all the comforts of life, he profecuted his fudies w:th grest fuccefs; but in doing fo, he u: happily imbibed the feeds of feveral difeafes which afficted him through life, and notwithftanding the native vigour of his conftitution impaired his health and Chortened bis days. From the miferable drudgery of a parifh-fchoolmater, he was relieved by Mr Drummond of Cultmalurdie, who invited him to fuperintend the education of lis fons, whom he aecompanied firft to the public fchool at Perth, and afterwards to the miverfity of S: Andrew's. This was ftill an employment by no means adequate to his merit, but it was not wholly without advantages. At Perth he gained the friendithip and efteem of Dr Rofe, afterwards lord bifhop of Edinburgh, and at St Andrew's of every man capable of propelly entimating genius and learning.

The education of his pupils was completed in 168.4, When he was left with no determinate objed of purfuit. In this moment of indecilion, his friend Dr Rofe, who had been promoted from the parfonage of Perth to the profelforfhip of divinity in the univerfity which he was leaving, recommended him fo effectually to his uncle then archbifhop of Glafgor, that he was by that prelate admitted into orders and prefented to one of the churches in the city. He was then about \(3+\) years of age, had Itudied the Scriptures with great atfiduity, was no Aranger to ccclefiaftical hiftory, or the apologies and other writings of the ancient fathers, was thorough matter of fehool-divinity, had examined with great ac. curacy the modern controverfics, efpecially thofe between the Romifh and reformed churches, and between the Calvinits and Remonfrants; and it was perlaps to his honour that he did not fully approve of all the articles of faith fubferibed by any one of thefe contending fects of Clriftians.

A man fo fur advanced in life, and \(f\), thornughly accomplifhed as a fcholar, would maturally be looked up to by the greater part of the clergy as foon as he became one of their body. This was in faet the cafe: Mr Sage was, immediarely on his admition into orders, appointed clerk to the fynod or prefbrtery of Glafgow ; an office of great truft and refpectability, to which we know nothing fimilar in the church of England.

During the eftablifhment of epifcopacy in Scotland, from the reftoration of Charles II. till the year 1690, the authority of the bifhops, though they pifified the
sige.
fole power of ordination, was vers limited in the go. vernment of the church. They did every thing with the confent of the prefbyters over whom they prefided. Diocefian fiynods were held at ftuted times for purpofes of the fume kind with thofe which employ the meetings of prelbyteries at prefent (iee Presbyterians), and the only prerogative which the billop feems to have cujoyed was to be permanent prefident, with a nega. tive voice over the deliberations of the affembly. The ąts of each fynood, and fometimes the charge delivered by the bilhop at the opening of it, were regiftered in a book kept by the clerk, who was always one of the moll eminent of the diocefan clergy.
Mr Sage continned in this office, difcharging in Glafgow all the duties of a clergyman, in fuch a inanner as endeared him to his flock, and gained lim the efteem even of thofe who were diffenters from the eftabliftment. Many of his brethren were trimmers in eccle. fiaftical as well as in civil politics. They had been republicans and preflyterians in the days of the covenant ; and, with that ferocious zeal which too often charaaterizes interefted converts, had concurred in the feverities which, during the reign of Charles II. were exercifed againf the party whom they had forfaken at liis relloration. When that party again raired its head during the infatuated reign of James, and every thing indicated an approaching change of the ellablifhment, thofe whofe zeal for the churcla had fo lately incited them to perfecute the diffenters fuddenly became all gentlenefs and condefcenfion, and advanced towards the preflyterians as to their old friends.
The conduat of Mr Sage was the reverfe of this. He was an epifcopalian and a royalif from conviction : and in all his difenurfes public and private he laboured to inltil into the minds of others the principles which to limfelf appeared to liave their foundation in truth. To perfecution he was at all times an enemy, whillt he never tamely betrayed through fear what he thought it his duty to maintain. The confequence was, that in the end of the year 1688 he was treated by the rabble, which in the weflern counties of Scotland rofe againt the eflablifhed clurch, with greater lenity than his more complying brethren. Whilt they, without the fimalleft apprehenfion of their darger, were torn from their tamilies by a lawlefs force, and many of them perfecuted in the cruelelt manuer, he was privately warned to withdraw from Glafgow, and never more to return to that city. So much was confiftency of concuot and a teady adherence to principle refipetted by thofe who feemed to refpect nothing elfe.

Mr Sage relired to the metropolis, and carried with him the fynodical book, which was afterwards demanded by the preflytery of Glafgow, but not recovered till about three or four years ago, that, on the death of a nephew of Dr Rofe the laite eltabliflted bithop of Edinburgh, it was found in his poffeflion, and reftored to tie prefbytery to which it belonged. Mr Sage had detained it and given it to his diocelan and friend, from the fond larpe that epificopacy would foon be re-ellablithed in Scotland; and it was doubtlefs with a viewz to contribute what he could to the realifing of that hope, that, immediately on his being olliged to leave Gl.sfow, he commenced a keen polemrical writer. At Edinturgh he preached a while, till refuting to take Lhe oathis of allegiance when required by the govern-
ment, he was obliged to retire. In this extremity, he found protection in the houfe of Sir William Bruce, the fheriff of Kinrofs, who approved his principles and admired his virtue. Returning to Edinburgl, in 1695, he was obferved, and obliged to ablcond. Yet he returned in 1696, when his friend Sir William Bruce was imprifoned as a fufpected perfon. He was foon forced to look for refurge in the hills of Angus, under the name of Jackfon.

After a while Mr Sage found a fafe retreat with the countefs of Callendar, who egmployed him to inAruct her family as chaplain, and her fons as tutor. Thefe occupations did not wholly engage his active mind: for he employed his pen in defending his order, or in expofing his oppreffors. When the countefs of Callendar had no longer fons to inffruct, Sage accepted the invitation of Sir John Stuart of Garntully, who wanted the help of a chaplain, and the converfation of a feholar. With Sir John he continued till the decency of his manners, and the extenfivenefs of his learning, recommended him to a higher Itation. And, on the 25 th of January 1705, he was confecrated a bifhop by Paterfon the Archbithop of Glafgow, Rofe the bithop of Edinburgh, and Douglas the bifhop of Dumblain. But this promotion did not prevent ficknefs from falling on him in Nuvember 1706. After lingering for many months in Scotland, he tried the effect of the waters of Bath in 1709, wihout fuccefs. At Bath and at Lendon he remained a twelvemonth, recognifed by the great and careffed by the learned. Yet though he was invited to ftay, be returned in 1710 to his native coun'ry, which he defired to fee, and where he willed to dic. And though his body was debilitated, he engaged, with undiminifhed vigour of mind in the publication of the works of Drummond of Hawthornden, to which the celebrated Ruddiman lent his aid. Bihop Sage died at Edinburgh on the \(7^{\text {th }}\) of June 1711 , lamented by his friends for his virtues, and feared by his adverfaiies for his talents.

His works are, ift, Two letters concerning the Perfecution of the Epifípal Clergy in Scotland, which with other two by different authors were printed in one volume at London in 1689. 2dly, An Account of the late Elablithment of Prefbyterian Government by the Parliament of Scotland, in 1690 , London, 1693 . 3 dly, The Fundamental Charter of Prefoyters, London, 1695. 4thly, The Principles of the Cyprianick Age with regard to Epifcopal Power and Jurifdiction, London, I695. Sthly, A Vindication of the Principles of the Cyprianick Age, London, 1701 . 6thly, Some Remarks on the Letter from a Gentleman in the City, to a Miniller in the Country, on Mr David IVilliamfon's Sermon Lefore the General Allembly, Edinburgh, 1703. 7thly, A Bief Examination of fome Things in Mr Muldrum's Sermon, preached on the 16 th of May 1703, againf a Tolcration to thofe of the Epifcopal Petfuafion, Edinburgh, 1703. Sthly, The Rearonablenefs of a Tolcration of thofe of the Epifcopal Perfuafon inquired into purely on Church Principles, Edinburgh, 1704. gthly, The Life of Gawin Donglas, in 1710 . 10 othly, An Introduation to Drummond's Hitory of the Five Jamefes, Edinburgh, 1711. Of the principles mantained in thefe publications, different readers will think very differcntly ; and it is probable that the acrimony diflaycd in fonic of them will
sagene be generally condemned in the prefent day; whilf the
fally acknowledged and admired by all who can ditin-
guilh merit in a friend or an ady erlary.
SAGENE, a Rulian long meafure, 500 of which make a verlt : the fagene is equal to feven Einglifh feet.
SAGINA, in bo:any: A genus of the tetragynia order, belonging to the tetiandria clafs of plants; and in the natural method ranking under the 22 d order, Caryphyllei. The caljx is tetraphyllous; the petals four ; the capfule is unilocular, quadrivalved, and polyfpermous.
SAGITTARIA, ARROW-hEAD: A genus of the polyandria order, belonging to the muncecia clars of plants ; and in the natural method ranking under the firth ord er, Tripelaioilex. The male calyx is (ry)phillous; the corolla triptalous; the filaments gencrally about 14 ; the female calyx is triphyllous ; the corolla tripetalous; many piltils; and many naked feeds. There are four fpecies of which the moof remarkable is the fagittifolia, growing naturally in many parts of England. The root is compored of many frong fibres, which ftrike into the mud; the footlallks of the leaves are in length proportionable to the depth of the water in which tucy grow; fo they are fometimes almoft a yard long: they are thick and fuigous; the leares, which float upon the water, are thaped like the point of an arrow, the two ears at their bare fpreading wide afunder, and are very fharp-pointed. The flowers are produced upon long falks which rife above the leaves, fitanding in whorls round them at the joints. They confif of three broad white petals, with a clufter of hamina in the middle, which have purple fummits. There is always a buib at the lower part of tie root, growing in the folid earth beneath the mud. This bulb conlituteo a confiderable part of the fond of the Chinefe; and upon that aeconnt they cultivate it. Horfcs, goats, and fiwine eat it ; cows are not fond of it.
SAGIITARIUS, in aftronomy, the name of one, of the 12 figns of the zodiac.

SAGO, is fimple brought from the Eaf Indies, of confiderable ufe in diet as a refterative. It is produ. ced from a fpecies of palm-tree (Cricas circinulis, L.) grnwing fpontaricoufy in the Eatt Indies without any culturc. The progreis of iss vegetation in the carly nages is ver) flow. At firt it is a mere flhub, thick fei with thoras, which makes it difficult to come ne:r it ; but as foon as its flem is noce formed, it rifes in a thort time to the height of 30 feet, is abont fix feet in circumference, and imperceptibls lofes its thorns. Its ligneous bark is about an inch in thicknels, and covers a multitude of long fibres; which, being interworen one with another, envelope a mafs of a gummy kind of meal. As foon as this tree is ripe, a whitith dult, which tranfpires through the pores of the lenves, and adheres to their extremitics, proclaims is maturity. Thee Malais then eut them down near the root, divide them into feveral fenions, which they tplit into quarters: they then fenop out the mafs of mealy fubitanee, which is enveloped by and adheres to the fibres; they dilute it in pure water, and then pats it through a fiaining bag of tine cloth, in order to feparate it from the fibres. When this patte has loft part of its moifure by craporitimn, the M.lasis throw it into a kind of eat then vellils, of different Anapes, where they allow it to dry and bard-
en. This pafte is wholefome nourifing food, and preferves for many years. The Indians eat it diluted with water, and fometimes baked or briled. Through a principle of humanity, they referve the fineft part of this meal for the ayed and infirm. A \(j\) dlly is fometimes made of it, which is white and of a delicions fiavour.
SAGUM, in Roman antiquity, a military labit, open fromit top to bottom, and ufually faltec:ed on the tight thoulder with a buckle or clafy. It was not different in flape fiom the clllamys of the Gree's and the falutumentume of the generals. The only diffeience betwren them was, that the paludamentum was made of a richer ituff, was generally of a purple colour, and both longer and fuller than the fagum.
SAGUNTUM, an ancient tolvn of Spain, now called Morvedro, where there are fill the ruins of: Roman amphitheatre to be feen. The new town is feated on a river called Mhorvedro, 15 miles to the north of Valeneia, in E. Long. o. 10. N. Lat. 39. 38. It was taken by Lord Peterborough in 5706 .

SAICK, or Saleve, a Turkifh veffel, very com. mon in the Levant for carrying merchandize.
SAIDE, the modern name of Sidon. See Sidor.
SAlL, in navigation, an affemblage of feveral breadths of canvas fewed together by the lifts, and edged round with cord, faftened to the yards of a faip, to make it drive before the rind. See SHip.
The edges of the cloths, or pieces, of which a fail is compofed are generally fewed together with a double feam; and the whole is firted round at the edges with a cord, called the boll-rope.
Although the form of fails is extremcly d:fferens, they are all neverthelefs triangular or quadrilateral figures; or, in other words, their furfaces are contained either between three or four fides.
The former of thefe arc fometimes fipread by : yard, as lateen-fails; and otherwife by a Ray, as flay-tials; or by a maft, as thoulder-of-mutton fails; in all which caies the foremoft leech or edge is attached to the faid yard, manf, of flay, throughout its whole length. Tile latter, or thofe which are four-fided, are either extended by yards, as the principal fails of a fhip; or by yards and booms, as the fudding-fails, drivers, ringtails, and all thote fails which are fet occafionally; or by galfs and bnoms, as the main-fails of floops and brigantines.
The principal fails of a fhip (Platc CCCCXIIV. fig. 2.) are the courfes or lower fails \(a\); the top-fails \(b\), which are nest in order above the courfes; and the topgallai:t fails \(c\), which are expanded abore the top-faits.
The courfes are the main-fäil, fire-fail and mize:t, maia fay-fail, fore fter-fail, and mizen flay-fail: but more partieularly the hifee frrt. The main-lay fial is rarely ufed except in fmall velfels.
In all quadranjular fails the upper edge is called the kead; the fides or firits are called lieclics : and the bottom or lower edge is termed the foot. Tf the he:id is parallel to the foot, the two lower corners are denominated chuss, and the upper corners carings.
In :ill triangular fails, an! in thefe foar-fided fails wherein the head is nnt p.arallhl to the foot, the forcmont corner at the foot is callicd the tuck, zand the aftur lower corner the clue; the foremolt perpendicuiar or floping edge is called the forc locol, ard the hendmofe the aftir lactos.
\[
{ }_{4} \mathrm{G}=
\]

The heads of all four-fided fiils, and the fore leeches of liteer-fails, are attached to their refpeative yard or gaff by a number of fmall cords called robands; and the extremities are tied to the yard-arms, or to the peck of the gaff, by earings.

The flay-fils are exterded upon fays between the matts, whereon they are drawn up or down occafionally, as a curtain flides upon its rod, and the lower parts are fectulied out by a tack and theet. The clues of a topfail are drawn out to the extremities of the lower yard, by two large ropes called the top-Gail fieets; and the clues of the top-gallant fails are in like manner extended upon the top-fiil yardarms, as exhibited by fig. 2.

Tle fluduing-fails are fet beyond the leeches or frites of the main-fall and fore-fail, or of the top-fails or tep-gallant fails of a thip. Their upper and lower edges are accordiagly extended by poles run out beyond the entremitiss of the yards for this purpofe. Thofe fails, however, are only fet in favourable winds and moderate weather.

All fails derive their name from the maft, yard, or fay, upon which they are extended. Thus the principul tail exiended upon the main-matt is called the nainfui', \(d\); the nest above, which fands upon the maintop, maft, is termed the main-top fail, e; and the higheft, which is fpread acrofs the main-top-gallamt matt, is n:med the main:top gallant fuil, \(f\).

In the fame manner there is the fore-fail, \(g\); the fore top-fail, \(b\); and the fore-top-gallant-fail, \(i\); the mizen, \(k\); the mizen top-fail, \(l\); and mizen top-gal-lant-fail, \%. Thus alfo there is the main-ftay-fail, o; main-top-rnaft flay-fail, \(p\); and main top-gallant fayfail, \(q\); with a middle ftay-fail which fands between the two laf.
\(N . B\). All thefe flay-fails are bctween the main and fore-malts.

The flay-fails between the main-matt and mizen-malt are the mizen fay-fail, \(r\); and the mizen top-maft Itay-fail,s ; and fometimes a mizen top-gall:ant flay-fail above the latter.

The tlay-fails between the foremaft and the bow\(f_{p}\) rit are the fore ftay-fail, \(t\); the fore top-mant flay-fail \(u\); and the jib, \(i\). There is befides two fquare fails cxtended by yards under the bow-fprit, one of which is called the \(\sqrt{P}\) rit-fail, \(y\); and the other the Jprit-fuil 10. \(\cdot\) full , .

The ftudling-fails being exten led upon the different yards of the main malt and fore-matt, are likewite najoed accorting to their flations, the lower, top-maf, - r ton:gallant fuldding fails.
"lie repis by" wh ch the lower yards of a fhip are loifted "P, to their proper height on the matts, are called the jears. In all other fails the ropes employed for this purpofe are called haliards.

The principal fails are then expanded by haliards, theets, and bowlines; except the courfes, which are al. vasa flretched out below by a tack and fhect. They are drawn up together, or trufied up, by bunt-lines, clue lines, \(d\) d; leecl-dines, ee; recf-tackles, \(f f\); inab. line, \(y\); and fpiling lines. As the bunt-lines and leechlines pars on the nther fice of the fail, they are expreffect by the dotted lires in the figure.

This courfes, top. Pails, and top-gallant fails, are whecied about the mail, to as to fuit the various direc-
tions of the wind by braccs. The higher fludding fails, and in general all the fay-fails, are drawn down, fo as to be furled, or taken in, by downhauls.

Some experienced fail-makers contend, that it would be of much advantage if many of the fails of fhips were made of equal magnitude ; in which cafe, when neceffity required it, they could be interchangeably ufed. For example, as the mizen top-fail is now made nearly as large as the main top-gallant fail, it would be eafy to make the yards, mafts, and fails, fo as mutually to fuit each other. The main and fore-top fails differ about two feet at head and foot, and from one to three feet in depth. Thefe likewife could be eafily made alike, and in fome cafes they are fo. The fame may be faid of the main and fore top-gallant fails, and of the mizen top-gallant fail, and main fore-royal. The main-fail and iore-fail might alfo, with refpect to their head, bc motde alike; but as the former has a gore at the leach, and a larger gore at the foot for clearing it of the grallows, boats, \&c. which the latter has not, there might be more dificulty in arranging them. The difficulty, however, appears not to be infurmountable. Thefe alterations, it is thought, would be extremely ufeful in the event of lofing lails by frefs of weather. Fewer fails would be thus neceflary, lefs room would be required to fow them, and there would be lefs danger of confufion in taking them out. But perhaps the utility of thefe alterations will be more felt in the merchant-fervice than in the navy, which latter has always a large fore of fpare fails, and fufficient room to flow them in order. Thus, too, fpare yards and mafts might be confiderably reduced in nuniber, and yet any calual danages more eafily repaired at fea. Top-matt fudding fails are occafionally fublituted for awnings, and might, by a very little attention in planning the rigging of a fhip, be fo contrived as to anfwer both purpofes. See Shipbuilding.
Sail is alfo a name applied to any veffel beheld at a diftance under fail.

To fit SHIL, is to unfurl and expand the fails upon their refpective yards and flays, in order to begin the action of fail:ng.

To Make SAIL, is to fpread an additional quantity of fail, fo as to increafe the flip's velocity.

To fborten SAIL, is to reduce or take in part of the fails, with an intention to diminifh the fhip's velocity.

To Strike Sail, is to lower fuddenly. This is particularly ufed in faluting or doing homage to a fuperior force, or to one whom the law of nations ac. knowledges as fuperior in certain regions. Thus all forcign veffels frike to a Britifh man of war in the Dritilh feas.

SAILING, the movement by which a veffel is wafted along the furface of the water, by the action of the wind upon her fails.

When a flip clanges her fate of re? into that of motion, as in advancing cut a liarbour, or from her ftation at anchor, the acquires her motion very gradually, as a body which arrives not at a certain velocity till after an infinite repctition of the action of its weight.

The firf imprefion of the wind greatly affeets the velocity, becaufe the refifance of the water might deAroy it; fince the velocity being but fmall at firit, the

Siil．
refiftance of the watcr which depends on it will be very feeble：but as the thip increafes her motion， the force of the wind on the fuils will be diminithed； whereas，on the contraly，the refiftance of the wa－ ter on the bow will accumulate in proportion to the velucity with which the vefiel advances．Thus the repctition of the degrees of force，which the attion of the fuils adds to the motion of the Thip，is perpetually decreating；whilf，on the contrary，the new degrees added to the effort of refiftance on the bow are always augmenting．The vel ocity is then accelerated in pro－ fortion as the quantity added is greater than that which is fubtracted；but when the two powas become equal； when the impreffion of the wind on the fails has lon fo much of its force，as only to aft in proportion to the oppofite impulfe of refiltance on the bow，the thip will then acquire \(n\) a additional velocity，but contime to fail with a centatit uniform motion．The great weight of the faip may indecd prevent her from acquiring her greateft velocity；but when fie has attained it，the will i：山却解 by her own intrinfic \(m\)－tion，wihout gaining any new derree of velocity，or leffening what the has acquitcu．She moves then by her own proper force in racu：，without being afterwards fubjea cither to the cifort of the wind on the fails，or to the refiftance of the water on the bow．If at any time the impulfion of the water on the bow flould deftroy any part of the ve－ locity，the effort of the wind on the fails will revise it， fo that the motion will coutinue the fame．It muft， however，be obfirved，that this fate will only fubfift when thefe two powers at upon each other in direct oppofition；otherwite they will mutually deffroy one another．The whole thenry of working Mips depends on this counter－action，and the perfect equality which faould lubfilt between the elfurt of the wind and the impultion of the water．

The cfect of failing is prociuced by a judicious ar－ bangemint of the fails to the direction of the wind． Acceralingly the vartious modes of failing are derived from the different degrecs and fituations of the wind vith tegard to the cou：fe of the velicl．See Seam．．n－ ： 1 ip ．

To illuftare this obiervation by examples，the plan of a mumber ol hiops preceeding on watinus courfes are reprefonced ly fir．3．Which calitios the ？ 2 pnints of the compars，if whach \(C\) is the centre；ithe dircution of the wind，which is 2.0 ortherly，being exptofed by the arrns：

I：in？been onserved in the article Coosm－IIazlen＇， Hat a fiip in that fiteration will fail reariy wi hin lis
 in aled；the former being on the laronard tach，feer－ ing 1E．N．E．and the latter on the farboard tack，tait－ ing W．N．W．wi：h iheir yasds a braced obliquely，as fuitable to that manner of falling．The line of batte on the larboard tack would accordirgly be expatfed by \(C B\) ，and on the farboard by \(C y\) ．

Fihen a fhip is ncither cl te－hauled，ner feering affore the wind，fle is in general faid to be failing large． The rclation of the wind to her cun：fe is precifely de－ termined by the number of pints between the laster and the courfe clure－haulce．＇Thus the thips \(c\) and \(x\) have the wind one point largo，the former feeming I． 6 N．and the latier W． 6 N．The yards remain a！－
moft in the fume pofition as in \(B\) and \(y\) ；the bowlines and fheets of the fails being on？a little fackened．

The thips \(d\) and \(u\) have the wind two points large， the one fieering eaft and the other weft．In this man－ mer of failng，however，the wind is more particularly faid to be upon the beam，as being at right angles with the keel，and cuinciding with the pofition of the thip＇s beams．The yards are now more acrofs the fhip， the bowlines are caff off，and the ficets more relixed； fo that the effort of the wind being applied nearer to the line of the Chip＇s courfe，her velocity is greatly augmented．
In \(e\) and \(t\) the fips have the wind three points large， or one point abaft the beam，the courfe of the fome：－ being E．\(\angle\) S．and that of the latter W． 6 S．The fheets are ltill more flowing，the angle which the jatds make with the keel furtler diminithed，and the courfe accele－ rated in proportion．

The thips \(f\) and \(f\) ，the firt of which neers E．S．E． and the fecond W．S．W．have the wind four points large，or two points abaft the beam．Ing and \(r\) the wind is five points large，or three points abaft the heam，the former failng S．E． 6 E．and the latter S．W． 6 W ．In both thefe fituations the fheets are fill farther flackened，and the yards laid yet more athwart the flip＇s length，in proportion as the wind approaches the quarter．

The flips \(b\) and \(q\) ，fleering S．F．，and S．W．have the wind fix points large，or more properly on the quar－ ter；which is confidered as the moll favourable manner of failing，becaufe all the fails co－operate to increafe the fhip＇s velocity：whereas，when the wind is right aft，as in the hip \(n\) ，it is evident that the wind in its palfige to the foremoft fails will be intercepted by thofe which are farther aft．When the wind is on the quarter，the fore－tack is brought to the cat－head；and the main－tack being caft off，the weather－clue of the main－fail is hoifted up to the yard，in order to let the wind pafs freely to the fore－fail；and the yards are dif－ pofed fo as to make an angle of abnut two points，c： 1：early \(2^{\circ}\) ，wh the keel．

The fhips i and \(p\) ，ot which the former fails S．E． 6 S． and the laties S．W． 6 S are fuid to have the wind three points on the larboard or farboard quarter：and thore exprelfed by Land o，two poists；as feering S．S．E． and S．S．W．in both which poltions the yaris make nearly an ang．c of \(16^{\circ}\) ，or about a point and an half， with the fhip＇s leregth．
When the wind is one point on the quarter，as in the Thips \(I\) and s：，whofe coulfes are S．\(l\) F．．．and S．\(l \mathrm{~W}\) ． the fituation of the yards ard fails is very lietle diffe－ rent from the lant mentioncd；tlee angle which they makc with the keel being fomewhat lets than a pcint， and the fay faits being rendered of very little fervice． The ！lip in frils right afore the wind，or with the wind right aft．In this polition the ：ards are laid at right argles with the lhip＇s length：the Aay－fails being tio tirely welefs，are landed down；and the main－fail is drawn up in the brails，that the fore－fail may rperate； a meature which conliderably facilitates the \｛teetage， or effor：of the heim．Asthe wind is then interecptat by the main－top fal and main top galant－fit，in is palage to the foretop－fail and lore－top－galiant－fail， thefe laiter are by confonucmee entiroly becalmed；a＋d
might therefore be furled, to prevent their being fretted by Happing againt the mat, but that their effort contributes greatly to prevent the fhip from broaching-to, when fhe deviates from her courte to the right or left thereof.

Thus all the different methods of failing may be divided into four, viz. clofe-hauled, large, quattering, and afore the wind; all which relate to the dirention of the wind with regard to the bip's courfe, and the arrangement of the fails.

Sailing alfo implies a particular mode of navigation, formed on the principles, and regulated by the laws, of trigonometry. Hence we fay, Plain Sailing, Mercator's, Middle-latitude, Parallel, and Great-circle Sailing. See the article Navigation.

SAIL-making, the art of making fails. See Sail and Shipebuilding.

SAILOR, the fame with Mariner and Seaman.
SAINT, means a perfon eminent for piety and virzue, and is generally applied by us to the apofles and other holy perfons mentioned in Scripture. But the Romanits make its application much more extenfive. Under the word Canonization we have already faid romething on their praftice of creating faints. Our readers, however, will not, we truft, be difpleafed with the following more enlarged account, which they themfelves give of the matter. The canonization of faints, then, they tell us, is the enrolment of any perfon in the canon or catalogue of thofe who are called fuints; or, it is a judgment and fentence of the church, by which it is declared, that a deceafed perfon was eminent for fanctity during his lifetime, and efpecially towards the end of it; and that confequently he mult now be in glory with God, and deferves to be honoured by the church on earch with that veneration which the is wont to pay to the bleffed in heaven.

The difcipline with regard to this matter has varied. It would feem that in the fi:ft ages every bifhop in his orm diocefe was wont to declare what perfons were to be honoured as faints by his people. Hence St Cyprian, about the middle of the third century, B. 3 . ep. 6. requires that he be informed of thofe who fhould die in prifon for the faith, that fo he might make mention of them in the holy facrifice with the martyrs, and might honour them afterwards on the anniverfary day of their happy death. This veneration continued fometimes to be confined to one country; but fometimes it extended to diftant provinces, and even became univerff all over the church. It was thus that St Laurence, St Ambrofe, St Auguftine, St Bail, and many others, appear to lave been canonized by cuftom and univerfal perfuafion. In thofe ages none were reckoned faints but the apofles, the martyrs, and very eminent confefiors, whule fanctity was notorious every. where.

Afterwards it appears that canonizations were wont to be performed in provincial fynods under the directicn of the metropolitan. It was thus that St Ifidore of Scille was canorized in the 7 th century, by the Sth council of Toledo, 14 years after his death. This huanner of canonization continued occafionally down to the \(12 \mathrm{t}_{1}\) century. The laft imftance of a faint canonized in that way, is that of St Walter abbot of Pontoile, who was declared a faint by the archbifhop of Roucn in the year 1153.

In the 12 th century, in order to prevent miftakes in fo delicate a matter, Pope Alexander III. judged it proper to referve this declaration to the holy fee of Rome exclufively; and decreed that no ore fhould for the future be honoured by the church as a faint without the exprefs approbation of the pope.

Since that time, the canonization of faints has bcen carried on in the form of a procets; and there is at Rome a congregation of cardinals, called the congregation of holy riles, who are affilted by feveral divines under the name of confultors, who examine fuch matters, and prepare them for the decifion of his holinefs. When therefore any potentate, province, city, or religious body, think fit, they apply to the pope for the canonization of any perfon.

The firt juridical ftep in this bufinefs muft be taken by the bifhop in whofe diecefe the perfon for whom the application is made had lived and died, who by his own authority calls witnelles to attelt the opinion of the holinefs, the virtues, and miracles, of the perfon in queftion. When the decealed las relided in different diocefes, it may be neceffary that different bilhops take fuch depolitions; the originals of which are preferved in the archives of their relpective churches, and authentic copies fealed up are fent to Rome by a fpecial meffenger, where they are depofited with the congregation of rites, and where they muft remain for the fpace of ten years without being opened. They are then opened, and maturely examined by the congregation, and with their advice the pope allows the caule to go on or not as he thinks proper. The folicitors for the canonization are then referred by his holinefs to the faid congregation, which, with his authority, gives a commifion to one or more bilhops, or other refpectable perfons, to examine, on the fpot and in the places where the perfon in queftion has lived and died, into his character and whole behaviour. Thefe commilfioners fummon witneffes, take depofitions, and \(c \cdot l l e c t ~ l e t t e r s ~ a n d ~\) other writings of the venerable man, and get all the intelligence they can concerning him, and the opinion generally entertained of him. The report of there commiffioners is confidered attentively and at length by the congregation, and every part of it difcuffed by the confultors, when the congregation determines whether or not they can pernit the procefs to go on. It it be allowed to proceed, a cardinal, who is called ponent, undertakes to be the primcipal agent in that affair. The firl queftion then that comes to be examined is, whether or not the perfon propofed for canonization can be proved to have been in an eminent degree endued with the moral virtues of prudence, jultice, fortitude, and temperance; and with the theological virtues of faith, hope, and charity? All this is canvafled with great deliberation; and there is a dittinguilhed ecclefialtic called the promotio of the holy faith, who is fivom to make all reationable objections th the proofs that are adduced in favour of the canonization. If the decifion be favourable, then the proofs of miracles dune to thow the finctity of the perion in queftion are permitted to be brought forward; when two miracles mult be verified to the fatisfaction of the congregation, both as to the reality of the facts, and as their having been truly above the power of nature. If the decifion on this comes out likewife favourable, then the whole is laid

. 風

Thiotincme,
before the pope and what divines he choofes (A). Public prayer and fafting are likewife preferibed, in order to obtain light and dircetion from heaven. After all this long procedure, when the pope is refolvad to give his approbation, he illucs a bull, firt of leatificalion, by which the perfon is declared blefed, and afterwards another of fanaifcution, by which the name of faint is given him. 'Thetc bulls are publifhed in St Peter's church with very great folemnity.

A perion remarkable for holinefs of life, even before he is canonized, may be venerated as fuch by thofe who are perfuaded of his eminent virtue, and his prayers may be implored: but all this muft reft on private opinion. After his canonization, his name is inferted in the Martyrology, or catalogue of faints, of which the refpective portion is read every day in the choir at the divine office. A day is alfo appointed for a yearly commemoration of him. His name may be mentioned in the public church fervice, and his interceffion with God belought. His relics may be enflirined : he may be painted with rays of glory, and altars and churches may be dedicated to \(G\) od in honour of him, and in thankfgiving to the divine goodnefs for the bleflings beflowed on him in life, and for the glory to which he is raifed in heaven.

The affait of a canonization is neceffarily very expenfive, becaufe fo many perfons mult be employed about it; fo many journeys muft be made; fo many writings for and againt it munt be drawn out. The expence altogether amounts to about 25,000 Roman crowns, or L. 6000 Sterling. But it is generally contrived to canonize two or three at a time, by which means the particular expence of each is tery much leffened, the folemnity bcing cummon.

It often happens that the folicitors for a canonization are anfucceffful. Thus the Jefuits, even when their intereft at Ronse was greateft, could not obtain the canonization of Bellarmine; and it is remarkable, that the objection is faid to have been, his having defended the is direct power of the pope over Chriftian princes even in temporals.

Several authors have written on canonization, and particularly Profper Lambertin', afterwards pupe under the name of Benedict XIV. who had held the office of promober of the faith for many years. He publifhed on it a large work in feveral volumes, in folio, of which there is an abridgment in French. In this learned performance there is a full hiftory of the canomization of faints in general, and of all the particular proceffes of that kind that are on record: an account is given of the manner of proceeding in thefe extraordinary trials; and it is fhown, that, belides the aflifance of Providence, which is implored and expected in what is fo much connected with religion, all prudent human means are made ute of, in order to avoid mitakes, and to obtain all the evidence of which the matter is fufceptible, and which muft appear more than fufficient to every impartial judge. See Pupe, Popery, Scc.

SAlivit.Foin, in botany, a fpecies of the hedyfarum. See Medysarum; and Agriculture, \(\mathrm{n}^{\circ} 180\).

Saint Fanuarius's Blood. See Chemistry, no 8oo. Soine SAINI'ES, an ancient and conliderable town of France. It is the capital of Saintonge, and before the revolution was a bifhop's fee. It contained likewifc feveral convents, a Jcfuits college, and an abbey remark. ablc for its Ateeple, built with imall ftones, which admits the light. It is feated on an eminence, 37 miles fouthcaft of Rochelle, and 262 fouth fouth-weft of Paris. W. Long. 0.34 . N. Lat. \(45 \cdot 45\). The caftie is feated on a rock, and is reckoned impregnable.

This city was a Roman colony; and thofe conquerors of the earth, who polifhed the nations they fubdued, have left belaind them the traces of their magnificence. In a hollow valley between two mountains, and almoft adjoining to one of the fuburbs, are the ruins of the amphithaatre. Though now in the laft fage of decay, its appearance is augult and vencrable. In fome parts, fcarce any of the arches are to be feen; but the eaft end is fill in a great degree of prefervation. From its fituation in a valley, and from the ruins of an aqueduct which conveyed water to the town from near three leagues diftance, it has been fuppofed that Naumachiz were reprefented in it; hut this amounts only to conjecture. A triumphal arch, on which is an infeription in Roman letters, merits likewife attention. It was ered. ed to Germanicus, on the news of his death, fo univerfally lamented throughout the empire. The river Charente furrounds this city, as the Severne does that of Shrewbury, defcribing the form of a horfe-fhce.

Except the remains of Roman grandcur yet vifible at Saintes, the place contains very little te detain or amufe a traveller. It is built with great irregularity ; the Atreets are narrow and winding, the houfes mean, and almoft all of them are fome centuries old. The cathedral has been repeatedly defaced and deftroyed by Normans and Huguenots, who made war alike on every monument of art or piety. One tower only efcaped their tage, which is faid to have been built as early as the jear 800 by Charlemagne. It is of an enormous magnitude, both as to height and circumference. Thefe circumitances lave probably conduced more to its prefervation during the fury of war, than any veneration for the memory of its founder, or for the fanclity of its inftitution.

SAINTONGE, a province of France, bounded on the ealt by Angumois and Perigord, on the north by Poitou and the territory of Aunis, on the weft by the ocean, and on the fouth by Bourdelois, and Giron, about 62 miles in length and 30 in breadth. The riyer Charente runs through the middle of it, and renders it one of the finert and moft fertile provinces in France, abounding in all forts of corn and fruits; and they make the beft falt here in Europe.

The SAINTS, threc lcagues diftant from Guadzloupe, are two very fmall indads, which, with another yet fmaller, form a triangle, and have a tolerable harb \(u\) ur. Thirty Frenchmen were fent thither in 1648 , but were foon driven away by an excelive drought, which dried up their only fpring before they had time to make any refervoirs. A fecond attempt was made in 1652, and
(1) His holinefs generally apponts three confiftorics; in the firft of which the cardinuls only alliut, and give their opinton; in the fecond, a preacher pronounces a feech in praife of the candidate before a numerous audience; to the chird, not only the cardinals, but all the Lilhops who are at Rome, are invited, and all of them give. their vote by word of mouth.

Sifrate- and lafting plantations were eftablifhed, which now wendra yiel.d \(; 0,000\) weight of coffes, and 100,000 of cotII Silamance ton.
SAKRADAWENDRA is the name of one of the Ceylonefe deities, who commands and governs ail the rel?, and formerly anfwerad the prayers of his wormippers; but according to the fabulous account which is given of him, the golden chair, on which he fat, and the foot of which was made of wax, that was fotened by their prayers and tears, and funk dommard, fo that he could take nctice of their requelts and relieve them, being difpofed of among the poor, they no longer derive any bencfit from him, or pay him any reverence. SALADIN, a famous fultan of Egypt, equally renowned as a warrior and legiflator. He fupported himfelf by his valour, and the influence of his amiable character, againt the united efforts of the chief Chriftian potentates of Europe, who carried on the molt unjult wars againft him, under the falfe appellation of \(H_{o}\) 'y Wars. See under the articles Egypt and Croisade.

SALAMANCA, an ancient, large, rich, and populous city of Spain, in the kingdom of Leon, fituated on the river Tormes, about 75 miles weft from Madrid. It is faid to have been founded by Teucer the fon of Telamnn, who called it Salamis or Salmantica, in memory of the ancient Salamis. Here is an univerlity, the greatel in Spain, and perhaps inferior to none in the whole world, in refpert at leaft to its revenues, buildings, number of feholars, and matters. Here are alfo many grand and magnificent palaces, fquares, convents, churches, colleges, chapels, and hofpitals. The bifhop of this country is fuffrayan to the archbifhop, of Compotelli:, and has a yearly revenue of 1000 ducats. A Roman way leads from hence to Merida and Seville, and there is an old Roman bridge over the river. Of
the collcges in the univerfity, four are appropriated to young men of quality ; and near it is an infimary for poor tick fcholars. W. Leng, 6. ro. N. Lat. 4t. o. SALAMANDER, in zoology. See Lacirta.
SALAMIS, an inand of the Archipelagn, fituated in E. Long. 34. O. N. Lat. 37. 32. - It was famous in antiquity tor a bittle between the Greek and Perfian fleets. In the council of war held among the Perfians on this occ.fion, all the commanders wore for engaging, becaufe they knew this advice to be mort agreeable to the king's inclinations. Qucen Artemifia was the only perfon who oppofed this relolution. She was queen of Halicarnaflas; and followed Xerxes in this war with five flips, the befl equipped of any in the flest, except thofe of the Sidnnians. This princefs diftinguifhed leerfelf on all occafions by her fingular courage, and fitl more by her prudence and conduct. She repreiented, in the council of war we are fpeaking of, the dangerous confequences of engaging a people that were far more expert in maritime affairs than the Perfians; alleging, that the lofs of a battle at fea would be attended with the ruin of their army; whereas, by fpinning out the war, and advancing into the heart of Greece, they would create jealoulies and divifions among their enemics, who would feparate from one another, in order to defend each of them their own country; and that the king, might, almeft without friking a blow, make himfelf malter of Greece. This advice, though very prudent, was not followed, but an engagement unanimoully refolved upon. Xerxcs, in order to enconrage his men by his prcience, caufed a throne to be ereted on the top of in eminence, whence he might fately behold what ever happened; having fever.al icribes about him, to write down the names of fuch as fhould fignalize themfelves againt the enemy. 'The approach of the Perfian flect, with the news that a ferong detachment from the army was marching againd Cleombrotus, who defended the iflhmus, Aruck fuch a terror into the Pe . loponnefians, that they could not by any intreaties be prevailed upon to ftay any longer at Salamis. Being therefore determined to put to fea, and fail to the ifthmus, Themifocles privately difpatched a trufty friend to the Perfian commanders, informing them of the intended flight ; and exhorting them to fend part of their fleet round the illand, in order to prevent their efcape. The fame meffenger affured Xerxes, that Themiftocles, who had fent him that advice, defigned to join the Perfians, as foon as the battle began, with all the Athenian flips. The king giving credit to all he faid, immediate1 y caufed a Arong fquadron to fail round the ifland in the night in order to cut off the enemy's flight. Early next morning, as the Pelopomefians were preparing to fet fail, they found themfelves encompaffed on all fides by the Perfian fleet; and were againft their will obliged to remain in the ftraits of Salamis and expore the:mfelves to the fame dangers with their allies. 'The Grecinn fleet confifted of 380 fail, that of the Perfians of 2000 and upwards. Themiftocles avoided the engagement till a certain wind, which rofe regularly every day at the fame time, and which wats entirely contrary to the encmy, began to blow. As foon as he found himfelf favoured by this wind, he gave the fignal for battle. The Perfians, knowing that they fonght under their king's eye, advanced with great refolution; but the wind blowing direaly in their faces, and the largenefs and

\section*{S \(\wedge\) L}

Salamis, Salary.
number of their nuips embarraffing them in a place fo Itrait and narrow, their courage fion abated ; which the Greeks obferving, ufed fuch efforts, that in a fhort time breaking into the Perfian fleet, they eutirely difordered them; fome flying towards ! halarns, where their army lay encamped; others faving themfelves in the harbours of the ncighbouring iflands. The lonians were the firt that betnok themfelves to flight But queen Artemilia diftinguithed herfelf above all the reft, her thips being the laft that fled: which Xerxes obferving, cried out that the men behaved like women, and the women with the courage and intrepidity of men. The Athenians were fo incenfed againft her, that they offered a reward of 10,000 drachmas to any one that fhould take her alive: but he, in fpite of all their effors, got clear of the flips that purfued her, and arrived fafe on the coatt of Afia. In this engagement, which wats one of the moft memorable actions we fud recorded in hiftory, the Grecians loft 40 hips; and the Pertians 200, befides a great many more that were taken, with all the men and ammunition they carried.

The ifland of Salamis is of a very irregular flape ; it was reckoned 70 or So fladia, i. e. 8 or 10 miles long, reaching weftward as far as the mountains called Kerata or The Horns. Paufanias informs us, that on one lide of this ifland food in his time a temple of Diana, and on the other a trophy for a victory obtained by Themiftocles, together with the temple of Cychrcus, the fite of which is now thought to be occupied by the church of St . Nicholas.

The city of Salamis was demolifhed by the Athenians, becaufe in the war with Caflander it furrendered to the Macedonians, from difaffection. In the fecond century, when it was vifited by Paufanias, fome ruins of the Agora or market-place remained, with a temple and image of Ajax; and not far from the port was hown a fone, on which, they related, Telamon fat to view the Salaminian fhips on their departure to join the Grecian fleet at Aulis. The walls may fill be traced, and it has been conjectured were about four miles in circumference. The level face within them was now covered with green corn. The port is choked with mud, and was partly dry. A mong the fcattered marbles are fume with infcriptions. One is of great antiquity, before the introduction of the Ionic alphabet. On another, near the port, the name of Solon occurs. This renowned lawgiver was a native of Salamis, and a Atatue of him was erefted in the marker-place, with one hand covcred by his veft, the modell attitude in which he was accufomed to addrefs the people of Athens. An infcription on black marble was alfo copied in 1676 mear the ruin of a temple, probably that of 0 jax. The ifland of Salamis is now inhabited by a few Albanians, who till the ground. Their village is called smpeclaki, "the Vineyard," and is at a diftance from the port, ftanding more inland. In the church are marble fragments and fome inferiptions.

SALARY, a recompenfe or confideration made to a perfon for his pains and induftry in another man's bufinefs. The word is ured in the flatute 23 Edw. III. cap. 1. Salarium at firtt fignified the rents or profits of a fale, hall, or houfe (and in Gafcnigne they now call the feats of the gentry fala's, as we do balls); but afterwards it was taken for any wages, Ripend, or annual allowance.

Vel. XVI.

SALACIA, in botany; a genius of the irig? nia order, belonging to the gynandria clafs of plante. The calyx is quinquefid ; the corolla gquiquepetalous ; the an:here fitting on the top of the germ.

SALE, is the exchange of a commodity for money ; barter, or permutation, is the cechange of one comanodity for another. When the bargain is concluded, an obligation is contracted by the buyer to pay the valuc, and by the feller to delive: the commodity, at the time and place agreed on, or immediately, if no time be fpecified.

In this, as well as other mercantile contracts, the fafety of commerce requires the utmolt good faith and veracity. Therefore, although, by the laws of England, a fale, above the value of 101 . be not binding, unlefs carveft be paid, or the bargain confirmed by writing, a merchant would lofe all credit who refufed to periorm his agreement, although thefe legal requilites were omitted.

When a fpecific thing is fold, the projerty, even before delivery, is in fome refpect vefted in the buycr; and if the thing perifhes, the buyer mult bear the lofs. For example, if a horfe dies before delivery, he mult pay the value: but if the bargain only determines the quantity and quality of the goods, without fpecifying the identical articles, and the feller's warchoufe, with all his goods, be burned, he is intitled to no payment. He muit alfo bear the lofs if the thing perifh through his fault ; or when a particular time and place of delivery is agreed on, if it perinh before it be tendered, in terms of the bargain.
If a perfon purchafe goods at a thop without agree. ing for the price, he is liable for the ordinary marketprice at the time of purchafe.

If the buyer proves infolvent before delivery, the feller is not bound to deliver the goads without payment or fecurity.

If the importation, or ufe of the commodities fold, be prohibited by law, or if the buyer knows that they were fanggled, no attion lies for delivery.

The property of goods is generally prefumed, in favour of commerce, to belong to the poffeffor, and cannot be clallenged in the hands of an onerous purchaler. But to this there are fome exceptions. By the Scots law, folen goods may in all cajes be reclaimed by the proprietor, and alfo by the Englifh law, unlefs they were bought bona fide in open market; that is, in the accuttomed public places, on flated days in the country, or in a hop in London; and horfes may be reclaimed, unlefs the fale be regularly. entered by the book-keeper of the market. In all cafes, if the goods be evicted by the lawful proprietor, the feller is liable to the purchafer for the value.

Actions for payinent of flop-accounts, as well as other debts not conttituted hy writiag, are limited in England to fir years. The teltimony of one witnefs is admitted: and the feller's Looks, although the perion that kept them be dead, are good evidence for one year. In sicutland, merchants' books may be proved within three years of the date of the latt article, by onc witnefs, :nd the creditor's books and oath in fupplement. Atter three years, they can only be proved by the oath or writ of the debtor. A merchan's books are in all cafes good evidence againft him.

SALEP, in the materia medica, the dried root of a fpecies of orchis. See Orchis.

\section*{S A L}

Several methods of preparing falep have been propofed and praxiced. Geoffroy has delivered a very judicious procefs for this purpofe in the Hifluire de l'Acddemie Royale des Sciences, 1740; and Retmus, in the Swedilh Tranfastions \({ }^{176}{ }^{6}\), has improved Geoffroy's method. But Mr Moult of Rochdale has lately favoured the public with a new manner of curing the orchis root ; by which falep is prepared, at leaft equal, if not fuperior, to any brought from the Levant. The new root is to te wathed in water; and the fine brown thin which covers it is to be feparated by means of a fmall brufh, or by dipping the root in hot water, and rubbing it with a coarfe linen cloth. When a fafficient number of roots have been thus cleaned, they are to be fpread on a tin-plate, and placed in an oven leated to the uftual degree, where they are to remain fix or ten minutes, in which time they will have lof their milky whitenefs, and acquired a tranfparency like horn, without any diminution of bulk. Being arrived at this fate, they are to be iemoved, in order to dry and harden in the air, which will require feveral days to effect; or by ufing a very gentle heat, they may be finifhed in a few hours.

Salep thus prepared, may be afforded in thofe parts of England where labour bears a high value, at about eight-pence or ten-pence per pound : And it might be fold liill cheaper, if the orchis were to be cured, withcut feparating from it the brown \(\mathbb{\&}\) in which covers it; a troubletome part of the procefs, and which does not contribute to render the root either more palatable or falutary. Whereas the foreign falep is now fold at five or fix fhillings per pound.

Salep is faid to contain the greateft quantity of vegetable nourifhment in the fmalleft bulk. Hence a very judicious writer, to prevent the dreadful calamity of fa. mine at fea, has lately propofed that the powder of it thould conftitute part of the provifions of every fhip's company. This powder and portable foup, diffolved in boiling water, form a rich thick jelly, capable of fup. porting life for a confiderable length of time. An ounce of each of thefe articles, with two quarts of boiling water, will be fufficient fubfitence for a man a day; and as being a mixture of animal and vegetable food, muft prove more nourifhing than double the quantity of ricecake, made by boiling rice in water: which laft, however, failors are often obliged folely to fubfift upon for feveral months; efpecillly ' in voyages to Guinea, when the bread and flour are exhautted, and the beef and pork, having been falted in hot countries, are become unfit for ufe.
"But as a wholefome nourifmment (fays Dr Perci-
- Eflaỵ

Medical
and Expe rimental.
val*), rice is much inferior to falep. I digetted feveral alimentary mixtures prepared of mutton and water, beat up with bread, fea bifcuit, falep, sice-flour, fagopowder, potato, old cheefe, \&c. in a heat equal to that of the human body. In 48 hours they had all acquired a vinous fmell, and were in brifk fermentation, except the mixture with rice, which did not emit many air-bubbles, and was but little changed. The third day feveral of the mixtures were fweet, and continued to ferment ; others had lof their inteftine motion, and were four; but the one which contained the rice was become putrid. From this experiment it appears, that sice as an aliment is flow of fermentation, and a very xcas corrector of putrefaction. It is therefore an im-
proper die for hofpital-patients ; but more particularly for failors in long voyages; becanfe it is incapable of preventing, and will not contribute much to check, the progrefs of that fatal difeafe, the fea-feurvy. Under certain circumftances, rice feems difpoied of itrelf, without mixture, to become putrid; for by long keeping it fometimes acquires an offenfive foctor. Nor can it be confidered as a very nutritive kind of food, on account of its difficult folutility in the Romach. Experience confirms the truth of this conclufion; for it is obferved by the planters in the Weft Indies, that the negroes grow thin, and are lefs able to work, whilt they fubfift upon rice.
"Salep has the fingular property of concealing the talte of falt water ; a circumfance of the highef importance at fea, when there is a Ccarcity of freth water. I diffolved a dram and a half of common falt in a pint of the mucilage of falep, fo liquid as to be potable, and the fame quantity in a pint of fpring-water. The falep was by no means difagreeable to the talte, but the water was rendered extremely unpalatable. This experiment fuggefted to me the trial of the orchis root as a correstor of acidity, a property which would render it a very ufeful diet for childten. But the folution of it, when mised with vinegar, feemed only to dilute like an equal proportion of water, and not to cover its fharpnefs. Salep, however, appears by my experiments to retard the acetous fermentation of milk; and confequently would be a good lithing for milk-pottage, efpecially in large. towns, where the cattle being fed upon four draff mait yield acefcent milk.
"Salep in a certain proportion, which I have not yet been able to afcertain, would be a very ufeful and profitable addition to bread. I directed one ounce of the powder to be diffolved in a quart of water, and the mucilage to be mixed with a fufficient quantity of flour, falt, and yeaft. The flour amounted to two pounds, the yealt to two onnces, and the falt to 80 grains. The loaf when baked was remarkably well fermented, and wcighed three pounds two ounces. Another loaf, made with the fame quantity of flour, \&c. weighed two pounds and 12 ounces; from which it appears that the falep, though ufed in fo fmall a proportion, increafed the gravity of the loaf fix ounces, by abforbing and retaining more water than the flour alone was capable of. Half a pound of flour and an ounce of falep were mixed together, and the water added according to the ufual method of preparing bread. The loaf when baked weighed 13 ounces and an half; and would probably have been heavier if the falep had been previoufly diffolved in about a pint of water. But it fhould be remarked, that the quantity of flour ufed in this trial was not fufficient to conceal the peculiar tafte of the falep.
"The reftorative, mucilaginous, and demulcent qualities of the orchis root, reader it of confiderable ufe in various difeafes. In the fea-fcurvy it powerfully obtunds the acrimony of the fluids, and at the fame time is eafily affimilated into a mild and nutritious chyle. In diarrhoeas and the dyfentery it is highly ferviceable, by fleathing the internal coat of the intelines, by abating irritation, and gently correcting putrefaction. In the fymptomatic fever, which arifes from the abforption of pus from ulcers in the lungs, from wounds, or from amputation, falep ufed plentifully is an admirable demul-

\section*{S A L}

Saterno cent, and weil adapted to refift the diflolution of the cratis of the blood, which is fo cvident in thefe cafes. And by the fame mucilaginous quality, it is equally cflieacious in the ftrangury and dyfury; efpecially in the latter, when arifing from a vencreal caufe, becaufe the difcharge of urine is then attended with the molt exquifite pain, from the ulceration ahout the neck of the bladder and through the courfe of the urethra. I have found it alfo an ufeful aliment for patients who labour under the fone or gravel." The ancient chemitts appear to have entertained a very high opinion of the orchis root, as appears from the fecrefa fecrelorum of Raymund Lully, a work dated \(1 ; 65\).

SALERNO, an ancient and coufiderable town of Italy, in the kingdom of Naples, and capital of the Hither Principato, with an archbilhop's fee, a caltle, harbour, and an univerfity chiefly for medicine. It is feated at the bottom of a bay of the fame name. E. Long. 14. 43. N. Lat. 40.45.

SALET, in war, a light covering or armour for the head, anciently worn by the light-horfe, only different from the calque in that it had no cieft and was little more than a bare cap.

SAL.1ANT, in fortification, denotes projecting. There are two kinds of angles, the one faliant, which have their point outwards; the other re-entering, which have their points inwards.

Saliait, Salient, or Saillant, in heraldry, is applied to a lion, or other beaft, when its fore-legs are railed in a leaping pofture.

SALIC, or salique, Law, (Lex Salica), an ancient and fundamental law of the kingdom of France, ufually fuppofed to have been made by Pharamond, or at lealt by Clovis; in virtne whereof males only are to inherit.

Some, as PoRellus, would have it to have been called Salic, q. d. Gallic, becaufe peculiar to the Gauls. For Montanus infitts, it was becaufe Pharamond was at firf called Saicus. Others will have it to be fo named, as laving been made for the falic lands. Thefe were noble fiefs which their firf kings ufed to beflow on the fallians, that is, the great lords of their falle or court, without any other tenure than military fervice; and for this reafon, fuch fiefs were not to defcend to women, as being by nature unfit for fuch a tenure. Some, again, derive the origin of this word from the Salians, a tribe of Franks that fettled in G.al in the reign of Julian, who is fid to have given them lands on condition of their perfonal liervice in war. He even paffed the c) nditions into a law, which the new conquerors acquicfeed ia, and called it falic, from the name of their former countrymen.
